CONTAINING

A full, accurate, authentic and intereſting Account and Deſcription

OF

Europe, Aſia, Africa, and America;

AS CONSISTING OF

CONTINENTS, ISLANDS, OCEANS || SEAS, RIVERS, LAKES || PROMONTORIES, CAPES, BAYS || PENINSULAS, ISTHMUSSES, GULPHS, &c.

AND DIVIDED INTO

Empires, Kingdoms, States, and Republics.

TOGETHER WITH

Their Limits, Boundaries, Climate, Soil, Natural and Artificial Curioſities and Productions Religion, Laws, Government, Revenues, Forces, Antiquities, &c. Alſo the Provinces, Cities, Towns, Villages, Forts, Caſtles, Harbours, Sea-ports, Aqueducts, Mountains, Mines, Minerals, Foſſils, Roads, Public and Private Edifices, Univerſities, &c. contained in each:

And all that is intereſting relative to the

Cuſtoms, Manners, Genius, Tempers, Habits, Amuſements, Ceremonies, Commerce, Arts, Sciences, Manufactures, and Language of the Inhabitants. With an accurate and lively Deſcription of the various Kinds of Birds, Beaſts, Reptiles, Fiſhes, amphibious Creatures, Inſects, &c.

INCLUDING

The Eſſence of the moſt remarkable Voyages and Travels that have been performed by the Navigators and Travellers of different countries, particularly the late Diſcoveries in the South Seas, and the Voyages towards the North Pole; with every curioſity that hath hitherto appeared in any Language reſpecting the different Parts of the Univerſe.

LIKEWISE

Many curious and intereſting Circumſtances concerning various Places, communicated by ſeveral Gentlemen to the Authors of this Work.

ALSO

A Compendious HISTORY of every EMPIRE, KINGDOM, STATE, &c. with the various Revolutions they have undergone.

To which will be added,

A New and Eaſy Guide to Geography, the Uſe of the Globes, &c. with an Account of the Riſe and Progreſs of Navigation, its Improvements and Utility to Mankind.

The whole embelliſhed and enriched with upwards of One Hundred and twenty moſt elegant and ſuperb Copper Plates, engraved in ſuch a Manner as to do infinite Honour to the reſpective Artiſts by whom they are executed. Theſe Embelliſhments conſiſt of Views, Maps, Land and Water Perſpectives; Birds, Beaſts, Fiſhes, &c. as alſo the various Dreſſes of the Inhabitants of different Countries, with their ſtrange Ceremonies, Cuſtoms, Amuſements, &c. &c.

By CHARLES THEODORE MIDDLETON, Eſq.

Aſſiſted by ſeveral GENTLEMEN eminent for their Knowledge in the Science of Geography.

To know the World, from Home you need not ſtray;
Sit at your Eaſe, and ev'ry Clime ſurvey:
Here Empires, Kingdoms, States, and Realms are ſhown:
Men, Manners, Cuſtoms, Arts and Laws made known:
Here ev'ry Page your Wonder ſhall excite,
And give Improvement, while it gives Delight.

GEOGRAPHY.

BOOK III.

EUROPE.

EUROPE, though the ſmalleſt diviſion of the globe, is ſuperior in many reſpects to the other three grand diviſions, or quarters.

It is uncertain from whence this part of the world received its name, but it was anciently known to the Romans, as it is at preſent to the Italians, and Spaniards, by the name of Europa. The Engliſh and French call it Europe. The Turks diſtinguiſh it by the names of Rumeli, or Alfrank. The Georgians give it the appellation of Frankoba; and all the other Aſiatics call it Frankiſtan.

Europe is bounded on the north by the Frozen Ocean, or Icy Sea, on the ſouth by the Mediterranean, on the weſt by the Weſtern and Northern Ocean, and on the eaſt by Aſia.

It lies between 9 deg. 35 min. weſt, and 72 deg. 25 eaſt long. and between 35 and 72 deg. of north lat.

From cape St. Vincent, to the mouth of the river Oby, it is near 3600 miles in length; and from cape Matapatam, in the Morea, to the North Cape in Lapland, it is about 2200 miles in breadth.

The reaſon why Europe maintains a preheminence over the other parts of the globe is, becauſe the human mind hath here made the greateſt progreſs; and the arts and ſciences in general, whether uſeful or ornamental, have been carried to a higher degree of perfection, than in the other diviſions of the terraqueous world. Hence the European literati are more extenſive and deep in their reſearches, the mechanics are more ingenious and expeditious in their contrivances; the military are more ſkilful and intrepid in their operations, and the legiſlators more equitable, and liberal in their deciſions, than thoſe of either Aſia, Africa, or America.

Europe is likewiſe bleſſed with many natural advantages, in particular, no part of it is ſituated within the torrid, and but a ſmall portion within the frigid zone. Add to this, the difference of its face, or variety of its ſurface, ſuch as ſeas, rivers, mountains, &c. which are at once innumerable, and beneficial; ſerving both to check the progreſs of deſpotiſm, and to facilitate the commercial intercourſe of the different nations and ſtates. A late writer ſays, "There is no part of Europe ſo diverſified in its ſurface, ſo interrupted by natural boundaries, or diviſions, as Greece; we have ſeen that it was in Greece the human mind began to know, and to avail itſelf of its ſtrength, and that many of the arts ſubſervient to utility, or pleaſure, were invented, or at leaſt greatly improved. What Greece therefore is with regard to Europe, Europe itſelf is with regard to the reſt of the globe. The analogy may even be carried farther, and it is worth while to attend it. As ancient Greece (for we do not ſpeak of Greece, at preſent under the unnatural tyranny of Barbarians) was diſtinguiſhed above all the reſt of Europe for the equity of its laws, and the freedom of its political conſtitution; ſo has Europe, in general, been remarkable for ſmaller deviations, at leaſt from the laws of nature and equality, than have been admitted in other quarters of the world."

Moſt of the European governments are monarchical, yet their adminiſtrations are far leſs arbitrary, and their ſovereigns much leſs deſpotic, than thoſe of Africa and Aſia. Excluſive of theſe monarchies, in which one man only bears ſway; here are ariſtocracies, or governments of the nobles, ſuch as Venice, &c. and democracies, or governments of the people, of which Holland, Switzerland, and ſome of the Italian ſtates, are examples. Superior to all theſe, is the mixed form of government, which partakes of all the benefits, and rejects the inconveniences of the other three claſſes; and of this ſort the principal, and moſt ſhining example, is the government of Great Britain.

A General INSPECTION TABLE for EUROPE.

Excluſive of which are the electorates of Germany, and about 300 ſmaller ſovereignties in Germany, Italy, &c. the ſovereigns of which are either ſpiritual, as archbiſhops, &c. or temporal, as princes, landgraves, dukes, marquiſſes, counts, margraves, hoſpodars, &c.

Excluſive of the circumſcribing oceans and ſeas: Europe contains

1 Ocean	viz. The	German Ocean		Between Germany and England
5 Seas		Mediterranean	Seas	Europe and Africa
		Adriatic -		Italy and Turky
		Black -		Europe and Aſia
		White -		Ruſſia, Sweden, Lapland, &c.
		Baltic -		Sweden, Denmark, and Poland
2 Channels		Engliſh -	Channel	England and France
		St. George's		England and Ireland
1 Bay		Bay of Biſcay		France and Spain
3 Gulphs		Bothnian -	Gulph	Norway and Finland
		Finland -		Sweden and Ruſſia
		Venetian -		Turky and Italy

The languages of Europe are derived from ſix radical ones, viz.

1. Latin, of which the Italian, French, and Spaniſh, are dialects.

2. Teutonic, from whence proceed the German, Dutch, Swediſh, Daniſh, and Engliſh tongues.

3. Sclavonian, which reigns in different dialects in Poland, Muſcovy, Bohemia, and a great part of Turkey in Europe.

4. The Celtic, of which there are remaining dialects in Wales, Ireland, the Highlands of Scotland, Brittany in France, and Lapland.

5. Greek, of which ſeveral dialects are ſpoken in the Morea, and the iſlands of the Levant.

6. Gothic, ſome remains of which are preſerved in the iſlands of the Baltic, and the ſouthern parts of Sweden.

To this we may add the languages ſpoken in Turkey and Little Tartary as European languages.

The principal rivers of Europe are, the Danube and the Rhine in Germany; the Volga and Divina in the Ruſſian empire; the Loire and Seine in France; the Thames and Severn in England, &c. &c.

The chief lakes are Conſtance in Germany; Geneva and Guarda in Italy; Wener in Sweden; Ladoga and Onega in Ruſſia; Loquabar in Scotland; Neagh in Ireland.

The principal mountains are, the Pyrenean mountains between France and Spain; the Alps between France and Italy; the Doſrin hills in Sweden; the Grapach hills in Hungary; ſome hills in the Highlands of Scotland; and ſeveral, particularly Snowdon, in Wales.

Europe produces but little gold and ſilver, and abounds leſs in precious ſtones. It contains fewer wild beaſts than the other quarters of the globe; but through the induſtry of the inhabitants, and the ſuperiority of cultivation, it is more fruitful in, and has a greater abundance of, corn, wines, fruits, ſheep, oxen, horſes, and all kinds of luxuries, as well as neceſſaries. It does not naturally produce ſugar or ſpices; nevertheleſs its extenſive commerce, and the ſkill of its inhabitants in navigation, make the productions of all the other parts of the globe its own.

Fearleſs the merchant now purſues his gain,
And roams ſecurely o'er the boundleſs main;
Now o'er his head the Polar bear he ſpies,
And freezing ſpangles of the Lapland ſkies;
Now ſwells his canvas to the ſultry line
With glitt'ring ſpoils, where Indian grottos ſhine;
Where fumes of incenſe glad the Southern ſeas,
And wafted citron ſcents the balmy breeze,
And here the ore whoſe melted maſs ſhall yield,
On faithful coins, each memorable field;
Which, mix'd with medals of immortal Rome,
May clear diſputes, and teach the times to come.

This part likewiſe is fuller of cities, towns, and villages, and the buildings are in general more ſtrong, elegant, and commodious. The inhabitants are better featured, and better made, than either the inhabitants of Africa, or the Aſiatics; and are all whites, though their complexions have different degrees of delicacy, according to their ſituation, and other local circumſtances.

Europe was peopled after the flood, as is generally believed, by the poſterity of Japhet, who came from Aſia Minor over the Helleſpont into Greece; though ſome ſay, that thoſe of Shem, paſſing by land between the Caſpian Sea and the Palus Mæotis, went through Tartary and Scythia into Scandia, and thence afterwards into France, Germany, &c. Which of theſe opinions is moſt to be credited, we know not: but be that as it will, Europe hath for many ages been exceeding populous, and her inhabitants illuſtrious for their courage, wiſdom, and virtue; by which they conquered the greateſt part of Aſia and Africa, and ſubjected them to the two empires of Greece and Rome: and, in theſe latter ages, almoſt one half of the earth that was formerly unknown, hath been diſcovered by Europeans, and poſſeſſed by the colonies they have ſent hither.

The Chriſtian religion is profeſſed throughout all Europe, except that part of it poſſeſſed by the Turks, But, by reaſon of the innovations made by the church of Rome, the weſtern church is divided; Italy, Spain, France, part of Germany, and the Netherlands, with part of Poland, ſtill follow the doctrine of the church of Rome; whereas England, Scotland, Ireland, Denmark, Sweden, Norway, great part of Germany, the United Provinces, Swiſſerland, &c. have embraced the reformation, and profeſs the proteſtant religion. And in Muſcovy, ſome parts of Poland, in Walachia, Moldavia, Podolia, Volhinia, and Greece, the doctrine of the Eaſtern or Greek church is followed.

Hence Europe may claim preheminence over the reſt of the world, by having the doctrines of Chriſtianity profeſſed throughout the greateſt part of it, and being enlightened by a religion at once pure, majeſtic, chearful, and ſecuring the eternal felicity of its profeſſors.

Sudden religion on the wond'ring blaze,
From heav'n's broad concave burſt the rapid blaze;
At once deſcending from the realms on high
An angel ſhape arreſts the dazzled eye:
Looſe o'er her limbs the floating garments roll'd
Her ſparkling pinions flam'd with beamy gold;
Her eyes like light'ning glanc'd a piercing ray,
And all th' illumin'd æther glean'd with day!
Near as ſhe came, ſuperior tho' reſign'd,
Her form majeſtic aw'd the dubious mind;
With heighten'd grace her bloomy features glow'd
Free on her robe the mazy ringlets flow'd;
Her balmy breath ambroſial ſcents perfume,
And o'er her cheeks was pour'd celeſtial bloom.
Pale ſorrow brighten'd as religion came,
And ſlow-pac'd time ſtood trembling at the name;
Rage drag'd in triumph ſwell'd her ſolemn train,
And death behind her grin'd and clank'd his chain.

CHAP. I.

GREENLAND.

UNDER the general name of Greenland, we comprize two countries, viz.

Groenland, Weſt Greenland, or Old Greenland.

Eaſt Greenland, and New Greenland, or the country of Spitzbergen.

GROENLAND.

THIS country begins in 59 deg. 50 min. north lat. the eaſtern coaſt is ſuppoſed to extend as far northward as Spitzbergen or Eaſt Greenland; and the weſtern part is only ſeparated by a channel of 40 miles in breadth. The weſtern ſhore has been diſcovered higher than the 70th deg. of north lat. but whether the whole is a large iſland, or a part of the continent contiguous to North America, remains ſtill doubtful. "This queſtion (ſays a celebrated author) cannot be decided, until ſome adventurers ſhall have penetrated to the bottom of Davis's Streights, or rather Baffin's Bay, which is a continuation of theſe ſtreights; and here it may not be amiſs to obſerve of the ſtreights of Forbiſher in Greenland, that the Rev. Mr. Egede, who reſided fifteen years in this country, and ſeems to have taken great pains in extending his enquiries, declares, that he could find no ſuch ſtreights; nor any place like the Bear Sound on the coaſt of Greenland, though theſe are laid down in all the ſea charts, as forming two large iſlands adjacent to the main land. If we may believe what information has been glean'd from thoſe natives who inhabit the moſt northern parts of Groenland, there is but a very narrow paſſage between this country and America. They affirm, they have ſpoken with the people of the other ſide, whoſe language reſembles their own; and they alledge, the ſtreight is ſo contracted, in one place, that two perſons can ſhoot at the ſame fiſh from oppoſite ſides of the channel. In all probability, however, this ſtreight is no more than a ſmall body of water, that divides Groenland from one of the leſſer iſlands; and that if there is no north-weſt paſſage towards the bottom of Baffin's Bay, Groenland itſelf is part of the American continent."

This country is exceeding mountainous; and the mountains are ſo very high, that they may be diſcerned at ſea at the diſtance of 30 leagues. The inland mountains and hills are perpetually covered with ſnow; but the low-lands on the ſea ſide are, in ſummer, cloathed with verdure. The coaſt is difficult of acceſs, on account of the great number of rocks with which the ſurrounding ſeas, and the mouths of the Groenland rivers abound, independent of the vaſt mountains of floating ice which ſeem to threaten the adventurous navigator with deſtruction.

SECT. I.

The Diſcovery and firſt Settlement of GROENLAND.

THE Daniſh and Iceland chronicles furniſh us with the following curious account of the firſt diſcovery of Groenland: "A gentleman of Norway, named Torwald, and his ſon Erick, ſurnamed Raude, or the Red-haired, having committed a murder in his country, fled over to Iceland, where Torwald died. His ſon Erick, being a cholerick man, ſoon committed another murder in Iceland; ſo that to eſcape the ſeverity of the law, he reſolved to ſeek for ſhelter in a country, which one Gundebairne had told him he had ſeen to the weſt of Iceland. Erick landed, by his direction, in a certain harbour made by two capes or points of land, one at the end of an iſland oppoſite to the continent of Groenland, and the other on the continent. The cape of the iſle was named Huidſerken, and that of the continent Huarfs, having between both a very good harbour called Sanſtaffin, where ſhips may ride ſafely at anchor, even in the greateſt ſtorm.

"Huidſerken is a prodigious high mountain, without compariſon much bigger than Huarfs. Erick called it Mucla-jokel, i. e. the Ice-Mountain: but it has ſince been named Bloſerken, that is, the Blue-ſhirt, and a third time Huidſerken, i. e. White-ſhirt. The reaſon of theſe laſt alterations ſeems to be founded upon the change of its colour; for the ice that melts and freezes at the ſame time, appears of a blueiſh colour. But when, by a long continued ſnow, vaſt heaps are gathered, the ice becomes extraordinary thick, and returns to its former colour, and natural whiteneſs.

"Erick, before he would venture on the continent, thought it adviſeable to land on the iſle, to which he gave the name of Erickſand, i. e. Erick's Iſle, and continued there all the winter. In the ſpring he paſſed over to the continent, which he called Groenland, i. e. the Green Country, from the verdure of its paſtures and trees. To the place where he landed, he gave the name of Ericksfiorden, i. e. Erick's Haven, at a ſmall diſtance from which he built certain habitations called Oſtraburg, i. e. eaſt-borough or plantation. Next autumn he went to the weſtern ſide, where he erected another plantation called Weſtreburg. But whether the air of the continent ſeemed to him colder and ſharper than that of the iſland, or whether he found it leſs ſecure, he went back the next winter to Erickſand; yet returned from thence the next ſummer to the continent, taking his courſe towards the north to the foot of a great rock, which he called Sneefiel, or the Snow-Rock, and thence to a certain harbour, upon which he beſtowed the name of Ravensfiorden, or Raven's Harbour, from the great number of thoſe birds he found there. Ravensfiorden lies directly oppoſite to the north ſide of Ericksfiorden, which is ſeated on the ſouth ſide, being divided only by a branch or arm of the ſea. About the end of autumn Erick returned to his iſland, where he paſſed the third winter. In the ſpring he reſolved to go in perſon to Iceland, to engage the inhabitants of that iſle, with whom he had a good correſpondence, to follow him into Groenland. He was not backward in telling them wonders of this new diſcovered country, of its plenty of large and ſmall cattle, excellent paſtures, fiſh, and all ſorts of game. His rhetoric proved ſo prevailing, that a great number of people croſſed the ſea with him into Groenland. Erick had a ſon named Leiffe, who accompanied him to Iceland, and from thence croſſed over into Norway, where the chronicle of Iceland tells us, he gave a favourable account to king Olaus Trugger of the country diſcovered by his father. The king of Norway, having then but lately embraced the Chriſtian religion, cauſed Leiffe to be inſtructed in the ſame, and to be baptized, who continued at his court all the winter. The next ſummer he ſent him back to his father, into Groenland, accompanied by a certain prieſt, to inſtruct Erick and his people in the Chriſtian faith, who, by Leiffe's perſuaſion, were all baptized. This happened, according to La Peirere, about the year 770, of the Chriſtian Æra.

"The Daniſh chronicle informs us, that, as the ſucceſſors of Erick increaſed in number, in Groenland, they ventured deeper into the country, and met with a fruitful ſoil, meadows and rivers, in the valleys between the mountains. They divided the country into eaſt and weſt Groenland, according to the different ſituation of the two boroughs, Oſtreburg and Weſtreburg, built by Erick. In the eaſt they laid the foundation of a town named Garde, whither the Norwegians tranſported divers merchandizes, and ſold them to the inhabitants.

Their

Their poſterity went farther, and built a city, to which they gave the name of Albe, and, as their zeal increaſed, they built a monaſtery upon the ſea-ſhore, dedicated to St. Thomas. The city of Garde was the reſidence of their biſhops, and the church of St. Nicolas (the patron of ſeamen) the cathedral of Groenland.

"In the year 1256 Groenland revolted, and refuſed to pay tribute to king Magnus of Norway; which induced king Erick of Denmark, at the requeſt of king Magnus, who had married his niece, to equip a fleet againſt them: But they no ſooner ſaw the Daniſh flags diſplayed on the coaſt of Groenland, but they were ſeized with ſuch fear, that they ſued for pardon, and deſired peace. The king of Denmark, in reſpect to the love he bore his niece and her children, would not take any advantage of the weakneſs of the king of Norway, but left him in full poſſeſſion of Groenland."

A conſiderable commerce was carried on between Norway and Groenland, and a regular intercourſe maintained till the year 1406, when the laſt biſhop was ſent over to Groenland. "But, from that period, ſays Dr. Smollet, all correſpondence was cut off, and all knowledge of Groenland conſigned to oblivion. This ſtrange, and abrupt ceſſation of trade and intercourſe, has been aſcribed partly to the change, and tranſlation of the Norwegian government in the reign of queen Margaret, partly to the enſuing wars between Denmark and Sweden, which could not fail to interrupt the maritime commerce, and partly to the difficulty and danger which attended the navigation to Groenland. But the moſt probable cauſe of ſuch a ſudden privation is found in another event. The inland colony, from its firſt ſettlement, had been haraſſed by the Aborigines of Groenland, a ſavage barbarous people, agreeing in cuſtoms, garb, and appearance with thoſe Americans, who have ſince been found to the northward of Hudſon's Bay. This nation, called the Schrellings, at length prevailed againſt the Iceland ſettlers, who had choſen their habitation in the weſtern diſtrict, and exterminated them in the 14th century, inſomuch, that when their brethren of the eaſtern diſtrict came to their aſſiſtance, they found nothing alive but ſome cattle, and flocks of ſheep running wild about the fields and meadows. Perhaps they themſelves afterwards experienced the ſame fate, and were totally deſtroyed by thoſe Schrellings whoſe deſcendants ſtill inhabit the weſtern parts of Groenland, and, from tradition, confirm this conjecture. They affirm, that the houſes and villages, whoſe ruins ſtill appear, were inhabited by a nation of ſtrangers whom their anceſtors deſtroyed. There are ſome reaſons, however, for believing, that there may be ſtill ſome deſcendants of the ancient Iceland colony remaining in the eaſtern diſtrict, though they cannot be viſited by land on account of the ſtupendous mountains perpetually covered with froſt and ſnow, which divide the two parts of Groenland; while they have been rendered inacceſſible at ſea, from the vaſt quantity of ice driven from Spitzbergen, and other northern coaſts upon the eaſtern ſhore, to which it adheres, forming an inſuperable barricade. One would imagine there muſt have been ſome conſiderable alteration in the terraqueous globe ſince the 15th century, in conſequence of which, thoſe coaſts became inacceſſible, that were anciently viſited without much peril. The reader too will naturally aſk, by what means the people of the eaſtern colony ſurmounted the abovementioned obſtacles when they went to the aſſiſtance of their weſtern friends; how they returned to their own country, and in what manner hiſtorians learned the ſucceſs of their expeditions. All that we gather from authentic records is, that Groenland was divided into two diſtricts, viz. Weſt Bygd, or the weſtern diviſion, Eaſt Bygd, or the eaſtern diviſion. The weſtern diviſion contained four pariſhes, and one hundred villages; and the eaſtern diviſion was ſtill more flouriſhing, as being nearer to Iceland, ſooner ſettled, and more frequented by ſhipping from Norway. That this colony is not yet extinct has been conjectured from various circumſtances, and the opinion of ſeveral voyagers.

About a century after all intercourſe had ſubſided between Groenland and Norway, many ſhips were ſucceſſively ſent by the Engliſh and Danes, in order to rediſcover, and again ſettle this country, but all their attempts proved unſucceſsful. Some of the moſt conſpicuous of theſe voyages are, thoſe made by the Engliſh under the command of captain Martin Forbiſher; of which take the following brief account:

"In the year 1557 Martin Forbiſher ſet ſail from England, to endeavour the diſcovery of Groenland, which he got ſight of at laſt; but, by reaſon of the vaſt quantities of ice, and the approaching winter, not being able to come near the ſhore, he was forced to return home, where he gave an account of his voyage to queen Elizabeth. This great queen ſent him the next following ſpring with three ſhips, to purſue the former deſign, when he got ſafe to Groenland. But the inhabitants, at the approach of the Engliſh, leaving their huts, retired among the rocks, from whence ſeveral of them precipitated themſelves into the ſea. The Engliſh, after they had in vain endeavoured to mollify theſe ſavages, went to their huts, where they met with no living creature, except an old woman with a child in her hand, which they took from her, and ſhe made a moſt terrible outcry for the loſs of it. From thence they ſailed along the coaſt, where they ſaw a ſea-monſter's head above water, with a horn about three or four feet long. They landed again, and found the ſurface of the earth rocky, but very good ground beneath it: they alſo met with great ſtore of glittering ſand, containing gold, of which they took 300 tons along with them. They uſed their utmoſt endeavours to enter into diſcourſe with the ſavages, who ſeemingly ſhewed no great averſion to them, and gave them to underſtand, by certain ſigns, that, if they would row up higher in the river, their expectation ſhould be anſwered. Accordingly Martin Forbiſher got a boat with ſome ſoldiers, and, having ordered his ſhip to follow him, went up the river; but, ſeeing a great number of the ſavages poſted among the rocks, he did not think fit to expoſe himſelf by approaching too near the banks. At laſt three of the ſavages, who appeared ſomewhat better than the reſt, having made a ſignal for him to land, he reſolved to do it, all the reſt being at a conſiderable diſtance: but his boat ſcarce touched the bank of the river, when the ſavages began to appear in great numbers, which made him chooſe the ſtream again. Nevertheleſs the ſavages endeavoured to perſuade them, by ſigns, to come aſhore, throwing to them ſome raw fleſh. But, finding the Engliſh miſtruſtful, they reſolved to draw them thither by the following ſtratagem: They laid one of their men upon the bank, who pretending to be lame, they ſuppoſed the Engliſh would come to take him, whilſt they made a ſhew of retiring at a farther diſtance, being all out of ſight behind the adjacent rocks. But the Engliſh, being aware of the ſnare, diſcharged a gun at him, which made him ſoon recover his legs; and the ſavages, coming to his aſſiſtance, pelted the Engliſh in the boat with ſtones and arrows, but were ſoon diſperſed by their great guns.

"Forbiſher, however, landed in another place, took poſſeſſion of the country in the name of queen Elizabeth; and, beſides his glittering ſand, brought away a great deal of a black ſtone which contained gold ore, and likewiſe two of the natives, a male and a female, whom he contrived to kidnap."

A third armament was afterwards fitted out, and the command given to the ſame Forbiſher, who was now elevated to the dignity of an admiral. This armament conſiſted of 15 ſail, on board of which were many ſoldiers, miners, ſmelters, carpenters, bakers, &c. who were to remain all the winter near the mines, or the places which produced the gold ſand, and black ſtones that contained gold ore. They carried with them all the materials neceſſary to erect a wooden fort; which might be put together as ſoon as they landed, the different pieces having been properly prepared in England. They, however, met with boiſterous weather, impenetrable fogs, and prodigious ſtrong currents, on the coaſt of Groenland, which retarded their operations till the ſeaſon was too far advanced; they likewiſe had loſt part of their wooden fort, at ſea, and had neither fuel or proviſions ſufficient to ſubſiſt thoſe who were appointed to be left there during the winter. On theſe accounts the admiral determined to procure as much ore as he poſſibly could, and then to return to England without leaving any perſon behind him.

Agreeable to this intention, they traced out a mine, to which they gave the name of the counteſs of Suſſex, and from

from which they procured a great quantity of ore, having erected a houſe of lime and ſtone, provided with ovens, and many other conveniences, for their reſidence and ſecurity during their ſtay. And in order to attain the notice, and gain the affection of the natives, they left behind them looking-glaſſes, beads, knives, bells, leaden pictures, and other things, with ſome loaves of bread, &c.

Before their departure, they ſowed corn, and other grain, peas, &c. by way of experiment, to eſſay how they would thrive, and aſcertain what the country would produce, on their return the enſuing year. They likewiſe buried the remaining part of the wooden fort, in ſuch a manner as to be able eaſily to find it again; and, having taken theſe neceſſary precautions, they ſet ſail from hence in the commencement of September, and, after a diſagreeable paſſage of a month, arrived ſafe in England. This noble deſign was, however, dropt by the Engliſh; but the Danes took it up, and endeavoured, in ſeveral expeditions, to complete it. The firſt of theſe was undertaken under the command of Godſke Lindenow, with three ſhips. And, as the hiſtory tells us, Lindenow with his ſhip arrived upon the eaſt coaſt of Groenland, and found none but wild uncivilized people there. He ſtaid three days, during which time the wild Groenlanders came to trade with him, changing all ſorts of furs and ſkins, with pieces of precious ſtones, for all kinds of ſmall trifling iron-ware, as knives, ſciſſars, needles, &c. common looking-glaſſes, and other ſuch trifles. When he ſet ſail from thence, there were two Groenlanders remaining in the ſhip, whom he carried off, and brought home with him. The other ſhips, that ſet ſail in company, and under the command of Lindenow, after they had doubled Cape Farewell, ſteered directly for the ſtreight of Davis; in which navigation they diſcovered many fine harbours and delightful green meadow-lands; but all the inhabitants along the coaſt were wild and ſavage, as before. 'Tis pretended alſo, that in ſome places they found ſtones, which contained ſome ſilver ore, that they took along with them, and of which 100 pound-weight yielded twenty-ſix ounces of ſilver. Theſe two ſhips alſo brought four ſavages home with them to Copenhagen.

With reſpect to the practice of kidnapping the natives of remote parts, which hath been ſo univerſally given into by the navigators of all thoſe countries which are uſually reputed by others, and in general eſteemed by their own inhabitants, civilized nations, a late eminent writer very juſtly obſerves, that "nothing can be more repugnant to the dictates of common juſtice, than this practice of tearing away poor creatures from their country, their families, and connexions, unleſs we ſuppoſe them altogether deſtitute of natural affection: that this was not the caſe with thoſe poor Groenlanders, ſome of whom were brought alive to Copenhagen, appears from the whole tenor of their conduct, upon their firſt capture, and during their confinement in Denmark; when firſt captivated, they rended the air with their cries and lamentations, they even leaped into the ſea, and when taken on board, for ſome time refuſed all ſuſtenance. Their eyes were continually turned towards their dear country, and their faces always bathed in tears. Even the countenance of his Daniſh majeſty, and the careſſes of the court and people, could not alleviate their grief. One of them was perceived to ſhed tears always when he ſaw an infant in the mother's arms; a circumſtance from whence it was naturally concluded that he had left a wife with a young child in Groenland. Two of them went to ſea in a little canoe, in hopes of reaching Groenland, but one of them was retaken; two more made the ſame attempt, but were driven by a ſtorm on the coaſt of Schonen, where they were apprehended by the peaſants, and re-conveyed to Copenhagen. One of them afterwards died of a fever, caught in fiſhing for pearl during the winter for the governor of Kolding. The reſt lived ſome years in Denmark; but at length, ſeeing no proſpect of being able to re-viſit their native country, ſunk into a kind of melancholy diſorder, and expired."

The ſecond expedition was made in the year 1606, with five ſhips, under the command of the above-mentioned admiral Lindenow. But this time he directed his courſe to the weſtward of Cape Farewell, ſtanding for the Streight of Davis, where coaſting along, he took the ſurvey of ſeveral plans, and returned home again.

The third expedition proved abortive on account of the ice. The fourth, under captain John Munk, in the year 1626, was not made for the diſcovering of Groenland, but to find out a paſſage between Groenland and America to China.

Beſides theſe four expeditions, at the king's coſt, a fifth was undertaken, by a company of merchants ſettled at Copenhagen, in the year 1636. They fitted out two ſhips, which, directing their courſe to the weſtward of Groenland, fell in with the Streight of Davis, where they traded for a while with the ſavages; but this was not the main concern of the commander, who was acquainted with a coaſt whoſe ſand had the colour and weight of gold, which he accordingly did not miſs, and filled both the ſhips with the ſame. After his return to Copenhagen, the goldſmiths were ordered to make a trial, whether this ſand would yield any gold or not. But they, not being ſkilful enough to make ſuch a trial, condemned it to be all thrown overboard; which was done accordingly by order of the high-chancellor, preſident of the company. Some part of this ſand was, however, kept as a curioſity, out of which a ſkilful artificer, who afterwards came to Copenhagen, did extract a great deal of pure gold. The honeſt and well-meaning commander, who went upon this adventure, was turned out of favour, and died ſoon after of grief; whereby not only the treaſure he had brought home, but alſo the knowledge of the place where it was to be found, was entirely loſt, as he kept this a ſecret to himſelf.

After ſome other unſucceſsful expeditions, the Danes, it ſeems, laid aſide all thoughts of Groenland, till the year 1721, when after many well-meant invitations and projects propoſed by Mr. Egede to the Groenland company at Bergen in Norway, approved and authorized by king Frederic IV. the company reſolved not only to ſend ſhips, but alſo to ſettle a colony in Groenland, on the river Boalt, in latitude 64. Mr. Egede himſelf went over thither, and continued there fifteen years. During his ſtay, he endeavoured to get all the intelligence he could procure, both by ſea and land, of the preſent ſtate of the country, and did not loſe his labour; for he met with ſome places that formerly were inhabited by the old Norwegians, on the weſtern ſhore.

But his main drift and endeavour having been all along to diſcover the eaſtern diſtrict of Groenland, which was always reckoned the beſt of the Norwegian colonies, he reſolved to make the voyage in perſon; and accordingly he coaſted along ſouthwards as far as the States Promontory (called Staten-Hoeck in the maps) in latitude 60, looking out for Forbiſher's Streight, which would have been his ſhorteſt way, according to thoſe charts, which lay the ſtreight down in this place; but ſuch a ſtreight he could not find. He obſerves in another place, that in all ſea charts you will find laid down Forbiſher's Streights and Bear- Sound, which, they pretend, form two large iſlands, adjacent to the main land; but he thinks they are not to be found, at leaſt not upon the coaſt of Groenland; for he could not meet with any thing like it, though he went as far as the 60th degree that way. But at preſent, adds he, the charts lay them down, the northern in 63, and the ſouthern in 62. Some of the ancients, whom Thormoder follows in his Groenland hiſtory, places them between 60 and 61 degrees. But our author himſelf, in the map perfixed to his natural hiſtory of Groenland, places a ſtreight between Staten-Hoeck or promontory, in latitude 60, and a large iſland, the ſouthernmoſt point of which is Cape Farewell. Now that ſtreight, though not mentioned by our author, may be Forbiſher's; or perhaps it may lie a little more to the eaſtward, which was the reaſon why our author could not meet with it. For he tells us, that it grew too late in the year for him to proceed further, the month of September being near at an end, when the winter ſeaſon begins in thoſe parts, accompanied with dreadful ſtorms. Since we have mentioned Forbiſher's Streight, we ſhall add here, that he diſcovered it in the year 1578, in 62 degrees of north lat. and forcing his way through the ice, he arrived at a place, which he called the Counteſs of Warwick's Sound, where he deſigned to build a fort, having brought timber from England: but part of it being loſt in another ſhip, he returned home loaded with glittering ſand, which he imagined to be gold, and was perhaps of the ſame nature with that mentioned above. In the year 1724, the

directors of the Bergen company fitted out a ſhip to attempt a landing on the eaſtern ſhore, which lies oppoſite to Iceland; but the ſurpriſing quantity of ice which barricaded the coaſt, made that enterprize prove abortive, as many others had. As there was no poſſibility for ſhips to approach this ſhore, the king, in the year 1728, reſolved to have horſes tranſported to this colony, in hopes that, by their help, one might travel by land to the eaſtern diſtrict. But nothing was more impoſſible than this project, on account of the impracticable, high, and craggy mountains, perpetually covered with ſnow, which never melts. All theſe difficulties, and continual diſappointments, have made moſt people loſe all hopes of ſucceeding in this attempt. Nevertheleſs, Mr. Egede flatters himſelf to have hit luckily on an expedient, which to him ſeems not impracticable, though hitherto not tried, or but lightly executed: namely, to coaſt the land from the States Promontory, or (as the Danes now call it), Cape Chriſtian, northwards. The information which Mr. Egede had of ſome Groenlanders, who, with their boats, have coaſted a great part of the eaſt ſide, confirmed him in his opinion. For although an incredible quantity of ice yearly comes from Spitzbergen, along this coaſt, and paſſes by the State Promontory, which hinders the approaching of ſhips, as far as the ice ſtretches, whereabout the beſt part of the Norwegian colony was ſettled; yet there are found breaks and open ſea near the ſhore, through which boats and ſmaller veſſels may paſs. And, according to the relation of the Groenlanders, as well as agreeable to our author's own experience, the currents that come out of the bays and inlets, always running along the ſhore ſouth-weſtwards, hinders the ice from adhering to the land, and keeps it at a diſtance from the ſea-ſhore: by which means the Groenlanders, at certain times, without any hindrance, have paſſed and repaſſed part of this coaſt in their kone-boats (ſo they call their large boats), though they have not been ſo far as where the old Norway colony had their ſettlement. Furthermore, Mr. Egede has been credibly informed by Dutch ſeamen, who frequent theſe ſeas, that ſeveral of their ſhips have, at times, found the Eaſt ſide of Groenland clear of ice, as far as the 62d degree; and they have tarried ſome time among the out-rocks of that coaſt, where they carried on a profitable trade. And Mr. Egede himſelf, in his return from Groenland homewards, in the year 1736, found it to be ſo, when they paſſed the States Promontory, and Cape Farewell, and ſtood in near the ſhore; where, at that time, there was no ice to be ſeen, which otherwiſe is very uncommon. But as this happens ſo ſeldom, it is very unſafe for any ſhip to venture ſo far up under the eaſtern ſhore. But it is more practicable to coaſt it from the promontory along the ſhore in ſmall veſſels, eſpecially if there be a lodge erected in the latitude of between 60 and 61 degrees: and it would be ſtill more convenient, if there could be a way and means found to place a lodge on the eaſtern ſhore, in the ſame latitude. For, according to all the accounts the ancients have left us of Groenland, the diſtance of ground that lies uncultivated between the weſt and eaſt ſide, is about 12 Norway miles by water; or, according to later computation, it is a voyage of ſix days in a boat. And as the ruins of old habitations, which Mr. Egede has diſcovered between 60 and 61 degrees, are without doubt, in the moſt ſoutherly part of the weſt ſide; it follows, of neceſſity, that the diſtance cannot be very great from thence to the moſt ſouthern parts of the eaſtern ſide. Now, if it ſhould be found practicable, at certain times, to paſs along the ſhore with boats or ſmall ſhips, to the eaſt ſide, to the latitude of 63 or 64 degrees, little lodges might be ſettled here and there with colonies; by which means a conſtant correſpondence might be kept, and mutual aſſiſtance given to one another, though large ſhips could not yearly viſit every one of them, but only touch at the moſt ſoutherly.

We ſhall now proceed to deſcribe Modern Groenland, or thoſe parts which are at preſent known to, and viſited by the Danes and Norwegians.

SECT. II.

Natural Hiſtory of GROENLAND.

FROM the moſt ſoutherly part of Groenland, to the 68th deg. of north lat. the climate is not ſo ſevere as might at firſt be imagined. The ſummer includes the latter end of May, the whole of June, July and Auguſt, and half the month of September; during which the weather is generally warm, and ſometimes even hot; and while the wind blows eaſterly, the ſky is always ſerene, but when it veres to the other points, ſtorms are ſure to enſue. The ſea coaſt is generally infeſted with unhealthy and diſagreeable fogs, which are, however, ſo fattening to the land that the ſhores are covered with verdure; but the inland mountains are perfectly capped with ſnow.

To the northward of the 68th deg. the weather is much more ſevere, and the cold ſo very intenſe, that even in the midſt of ſummer, the very ſtrongeſt ſpirituous liquors will freeze cloſe to the fire ſide. The winter in this part continues from September to May, and ſometimes June, during which time the ſea is covered with vaſt mountains of ice." Nothing (ſays an eminent writer) can exhibit a more dreadful, and at the ſame time a more dazzling appearance than thoſe prodigious maſſes of ice that ſurround the whole coaſt in different forms of rocks, caſtles, towers and ſpires, reflecting a variety of colours according to the nature of the concrete, and floating from place to place, as if the whole ſcene was illuſion, or enchantment; ſuch are the proſpects they yield in calm weather, but when the winds begin to blow, and the ſea to ſwell in vaſt ſucceſſive billows, the conflict of thoſe congregated bodies of ice encountring, daſhing, cracking, burſting, and ſhivering into ten thouſand fragments, fills the eye and ear with terror and aſtoniſhment. Thunder and lightening ſeldom diſturb the air of Groenland, which, however, is ſubject to many other natural phœnomena, ſuch as rainbows, ſhooting ſtars, and in particular the aurora borealis, or northern lights. In the ſpring of the year, and about the new moon, this phœnomenon appears ſo univerſally bright over the face of the whole northern ſky, darting its rays, and glaring with ſuch radiancy, as to afford ſufficient light to read by.

At the ſummer-ſolſtice there is no night, and thoſe who reſide here have the pleaſure to ſee the ſun turn about the horrizon all the twenty-four hours: but in the depth of winter they have but little comfort in that planet, the nights being proportionably long; yet they can ſee to travel up and down the country, though ſometimes it is neither moon-ſhine, nor ſtar-light. But, ſays Mr. Egede, the ſnow and ice, with which both land and ſea are covered, enlighten the air; or the reaſon may be fetched from the nearneſs of the horizon to the equator: but theſe two reaſons, alledged by our author amount only to one; for when the ſun is in the tropic of Capricorn, which makes the longeſt night, he is not many degrees below their horizon; ſo that his rays may ſtill be reflected by the high mountains covered with ice and ſnow, and that affords them a kind of continual twilight.

The temperature of the air is not unwholeſome; for if you except the ſcurvy, and the diſtemper of the lungs, they know nothing here of the many other diſeaſes, with which other countries are plagued; and theſe pectoral infirmities are not ſo much the effects of the exceſſive cold, as of that naſty foggy weather, to which this country is very much ſubject. From the beginning of April to the end of July is the foggy ſeaſon; and from that time the fog daily decreaſes. But as in the ſummer-time they are troubled with fogs, ſo in the winter-ſeaſon they are plagued with the vapour called froſt-ſmoak, which, when the cold is exceſſive, riſes out of the ſea, as the ſmoak out of a chimney, and is as thick as the thickeſt miſt, eſpecially in bays, where there is any opening in the ice.

We muſt not omit mentioning here a wonderful harmony and correſpondence, which is obſerved in Groenland between fountains and the main ſea; namely, that at ſpring-tides in new and full-moon, when the ſtrongeſt ebbing is at ſea, the hidden fountains or ſprings of freſh-water break out on the ſhore, and diſcover themſelves often in places, where you would never expect to meet with any ſuch, eſpecially in winter, when the ground is covered with ice and ſnow; yet at other times there are no water-ſprings in thoſe places.

The hills of Groenland are barren, and indeed frozen all the year; the Lowlands are of a rich ſoil, and

tolerably fertile, particularly towards the ſea. We are informed by the chronicles of the northern countries, that formerly a great quantity of cattle were bred in Groenland, which enabled the inhabitants to export to Norway great quantities of butter and cheeſe, which were ſo much eſteemed for their peculiar excellencies, that they were purchaſed principally for the king's houſehold.

We are likewiſe informed that ſome parts of Groenland formerly produced excellent wheat, the woods afforded game, the paſtures cattle, and the bays and rivers abounded with fiſh, both for home conſumption and commerce. At preſent, however, the country is deſtitute of corn and cattle, though the marks of ploughed land ſtill remain, and the paſtures are excellent. Mr. Egede ſowed ſome barley in a bay adjoining to the Daniſh colony, where it ſprang up ſo faſt that towards the latter end of July it was in the full ear, but being nipped by a night froſt, it never arrived at maturity.

The oak trees here were very ſtately, and brought forth acorns as large as apples; few, however, of thoſe remain, and thoſe few are only found in the ſouthern parts near the States Promontory.

The meadows are rich in graſs; turnips and coleworts are eaſily raiſed, and excellently flavoured: underwood, which grows to a great height, is plentiful; birch, elm and willows are not ſcarce, and juniper trees grow in abundance.

The herb angelica grows wild, and is found in great profuſion, it is endued with a turpentine flavour, and yields an aromatic oil, which is extracted by diſtillation. The ſhores abound with a pleaſant and ſalutary kind of ſcurvy graſs, and the mountains near the bays and creeks are covered with wild thyme. A ſpecies of graſs bearing yellow flowers, the herb tormentil, and many other undeſcribed plants, herbs, and vegetables, abound in this country. We muſt not, however, omit to mention that the fruits of Groenland are bramble-berries, bil-berries, * blue-berries, and juniper-berries.

Groenland doubtleſs produces various metals; to the ſouthward of the Daniſh colony, copper ore is found. Mr. Egede informs us that he once received a lump of ore from a Groenlander, and he himſelf found calamine of a yellow colour. He likewiſe ſent a conſiderable quantity of yellow ſand mixed with vermilion ſtreaks to the Bergen company, who, by letter, requeſted him to procure as much as poſſible of that commodity; he could not, however, execute his commiſſion as he was never after able to find the place where he got the firſt ſpecimen; it was it ſeems one of the ſmalleſt among a great cluſter of iſlands, and the mark he had ſet up was blown down by a ſtorm, ſo that he could not a ſecond time trace out the ſpot.

Rock chryſtals, both red and white, are the produce of this country; and a baſtard marble, of various colours, is very plentiful about the Daniſh colony, which is known by the name of Good Hope; of the latter the natives make bowls, lamps, pots, and crucibles. The ſeas and bays, beſides a variety of beautiful ſhells, yield great quantities of excellent coral. But one of the greateſt natural curioſities of this country is the aſbeſtos or amianthus, which hath the vulgar appellation of earth-flax, and is a fibrous, flexible, and mineral ſubſtance, compoſed of ſhort and abrupt filaments. It is a ſtony concrete, of the talcky kind, though differing from talc in its external appearance. It is neither ſo bright, ſo ſmooth, nor ſo unctuous, and is not compoſed of leaves or plates, but of long filaments, like flax. It has been ſpun into cloth, and formed into paper, both of an incombuſtible nature, and not to be conſumed by fire. Some kinds have filaments that are rigid and brittle, and others more flexible; the firſt cannot be ſpun, or formed into cloth, the latter may, but not without difficulty. This manufacture appears to have been known to the ancients, who, according to Pliny, wrapped the bodies of the dead in cloth made of earth-flax, to preſerve their aſhes ſeparate from thoſe of the funeral pile, an uſe to which this kind of cloth is ſtill applied by ſome of the Tartarian chiefs.

Groenland is not infeſted with any ravenous animal, the great white bear excepted, which, however, very ſeldom appears near the Daniſh colony.

The quadrupedes of Groenland are, dogs, foxes, hares, and rein-deer. The dogs are large and rough, white or ſpeckled; and their ears ſtand upright, which is a peculiarity belonging to curs in general in all cold climates. Theſe dogs are timorous and ſtupid; do not bark, but, at times, make a moſt diſmal howling. In the northern parts they are rendered of infinite ſervice, as the natives there yoke them to ſledges, which, when heavy laden, they are able to draw upon the ice at the rate of 70 miles a day. Theſe poor uſeful animals are, however, very ill-rewarded for their ſervices, being left to provide for themſelves, except when their owners happen to be ſucceſsful in taking a great number of ſeals; at which times their maſters condeſcend, perhaps, to gratify them with a meal compoſed of the entrails and blood.

The foxes appear of different colours, white, grey, and blueiſh; but they are neither ſo hairy, or ſo large as thoſe of Denmark and Norway.

Hares are found in Groenland in great abundance; they are of a white colour, very fat in ſummer, and of an exquiſite flavour.

Rein deer feed in great herds, and are hunted all the ſummer by the natives, who are uſually accompanied by their wives and children in theſe excurſions, and penetrate very far into the country in purſuit of their game.

Some writers have affirmed, that wolves, martens, ſables and ermines, abound in Groenland; but as none of theſe animals were ever ſeen, or even heard of there, by the reverend Mr. Egede, whoſe account of this country appears to be the beſt, and moſt authentic, and whoſe long reſidence in Groenland enabled him to be better acquainted with the productions of the place than moſt others, we ſhall, with him, reject the notion of any of thoſe animals being natural to Groenland.

Serpents, lizards, toads, newts, &c. are unknown in Groenland; but gnats ſwarm in the ſummer-time, and are exceedingly troubleſome.

Partridges, which are white in winter, and grey in ſummer, abound here; as do ſparrows, linnets, ſnow-birds, and ice-birds.

A great number of ravens hover about the huts of the Groenlanders; as near the habitations of thoſe people, the ground is uſually ſtrewed with the offals of ſeals, and other fiſh. Groenland likewiſe abounds with eagles and falcons of a prodigious ſize, and large ſpeckled owls. The inſects of this country are bees, waſps, ſpiders, and flies; the people, however, are not plagued with beetles, ants, rats, or mice.

The Groenlanders are fond of the ſeal, which contributes at once to their ſubſiſtence, and conveniency. There is ſome difference in ſeals, but the moſt remarkable ſpecies is that called the clap-miſs, which appellation it receives from the cap, or cawl, with which it covers its head occaſionally. The head itſelf reſembles that of a dog with cropped ears; his ſnout is bearded like a cat, his eyes are large, and his teeth ſharp; his ſkin is covered with a ſhort thick fur, white, black, brown, or tawny; he is web-footed, which is a great convenience to him in ſwimming; and he ſeems to drag himſelf along, rather than walk.

Seals are from five, to eight feet in length; the fat of this creature furniſhes the Groenlanders with oil, the fleſh with food, the ſkin with cloathing, and with coverings for their huts and boats.

Beſides ſeals, the Groenland ſeas abound with turbot, cod, haddock, ſcate, ſalmon, holybut, cat-fiſh, roe-fiſh, ſtents, whiting, bream, muſcles, crabs, ſhrimps, &c.

With reſpect to thoſe ſingular, and aſtoniſhing creatures with which theſe ſeas abound, we ſhall refer them to the articles of Spitzbergen, or New Greenland, and Norway; where their deſcriptions will be inſerted with

* It is to be obſerved when any thing is ſaid relative to the fertility of Groenland, that the ſouthern parts are only meant; for with reſpect to the northern parts, they are deſtitute of herbs and plants. The wretched people who reſide in this deſolate country, cannot find graſs enough to ſtuff in their ſhoes, that their feet may be kept warm, but are obliged to buy it from the more ſouthern inhabitants.

HABITS of the GROENLANDERS.

greater propriety, and under which heads we ſhall treat of them in a very ample manner.

With reſpect to ſea-fowl, the principal, in Groenland, is the edder-fowl, ſwarms of which, at times, ſeem to cover the whole ſurface of the ocean. In the winter ſeaſon, infinite numbers of them hover about the Daniſh colony, every evening, and take their flight to the ſea, regularly, the enſuing morning. In the ſpring they retire to the iſlands to lay their eggs, and hatch their young, and return to the continent about June or July. The Groenlanders are very fond of their eggs and their young; but make no manner of uſe of their fine downy feathers, which are excellent in their kind, and to be found in large quantities in and about their neſts.

There are three ſpecies of ducks, which are found in, or frequent Groenland. The firſt, which is of the tame-duck kind, has fine ſpeckled feathers, and lays and hatches its eggs in the iſlands, returning afterwards with its young to the continent.

The ſecond ſort is ſmaller, has a long pointed bill, frequents only freſh waters, and builds its neſt in the flags or reeds of rivers.

The third kind, which is the largeſt of all, has the appellation of the wood-duck, and is diſtinguiſhed by a black breaſt and grey belly.

The alkes is another kind of ſea fowl, which the Groenlanders are fond of feeding on; it is leſs than a duck, and of a rancid taſte. But the moſt beautiful ſea-bird, of theſe parts, is the tungoviarſek; this bird is not bigger than a lark, but its feathers are uncommonly elegant. Swarms of wild geeſe come to the northern parts of Groenland, from more ſouthern climates, in the ſpring, to breed; and quit the place at the commencement of winter. Many ſea-mews build in the rocks and cliffs; and ſea-terns lay their eggs on the iſlands about Groenland. Lundes, or Groenland ſea-parrots, are common here, as are ſea-ernes and ſea-ſnipes.

SECT. III.

Of the Inhabitants of Groenland, their Cuſtoms, Manners, Habits, Language, Religion, Commerce, &c.

THE native Groenlanders are, without doubt, deſcended from the Schrellings, who formerly exterminated the Iceland ſettlers. "Theſe people (ſays a learned author) bear a near reſemblance to the Laplanders and Samoides, in their perſons, complexions, and way of life. There will always be found a ſtrong affinity between the cuſtoms of different nations living in the ſame kind of climate, expoſed to the ſame wants and neceſſities, and involved in the ſame ignorance and brutality." The Groenlanders are ſhort of ſtature, thick made, and inclined to fat; their faces are broad, their lips thick, and their noſes flat. They have black hair, black eyes, and yellow complexions, poſſeſs health and vigour, but have very ſhort lives. Their principal diſeaſes are of a ſcorbutic nature, and they are greatly accuſtomed to weak eyes, which latter diſorder is occaſioned by the ſharp piercing winds incident to the country, and the white glare reflected from the ice and ſnow with which the whole country is covered ſo great a part of the year. The ſmall-pox being brought among theſe people in the year 1734, from Copenhagen, made great havock. With reſpect to ſurgery or phyſic, they are extremely ignorant; their greateſt ſpecific plaiſter, for all kinds of wounds, is a compoſition of the bark of a tree, burned moſs, and train oil: and all their inſtruments of ſurgery conſiſt in a common knife, fiſh-hook, and a needle.

Their cloaths are, for the moſt part, made of reindeer, or ſeal-ſkins; as alſo of bird-ſkins, nicely dreſſed and prepared. The mens habits are, a coat or jacket, with a cape or hood ſewed to it, to cover the head and ſhoulders. This coat reaches nearly to the knees. Their breeches are very ſmall, not coming above their loins, that they may not hinder them in getting into their boats; and the hair of the ſkins the coat is made of is turned inward, to keep them warm. Over this coat they put on a large frock, made of ſeal-ſkins dreſſed and tanned, without hair, in order to keep out the water; and thus they are dreſſed when they go to ſea. Between the leathern frock and the under-coat, they wear a linen ſhirt, or, for want of linen, one made of ſeals-guts, which alſo helps to keep out the water from the under-coat. Of late they appear ſometimes in more gaudy dreſſes; as ſhirts made of ſtriped linen, and coats and breeches of red and blue ſtuffs or cloth, which they buy of the Daniſh or Dutch merchants, but faſhioned after their own way. In theſe they make parade, and feaſt, when they keep holidays on ſhore. The hoſe they wore formerly were made of rein-deer or ſeal-ſkins; but now they like better our ſort of worſted, of different colours, white, blue, and red; which they buy of the Danes. Their ſhoes and boots are made of ſeal-ſkins, red or yellow, well-dreſſed, and tanned: they are nicely wrought, with folds behind and before, without heels, and ſit well upon the feet. The only difference between the dreſs of the men and the women is, that the womens' coats are higher on the ſhoulders, and wider than the mens, with higher and larger hoods. The married women, that have got children, wear much larger coats than the reſt, moſt like gowns, becauſe they muſt carry their children in them, upon their backs. They wear drawers, which reach to the middle of the thigh, and over them breeches. The drawers they always keep on, and ſleep in them. Their breeches come down to the knee; theſe they do not wear in the ſummer, nor in winter, but when they go abroad; and as ſoon as they come home, they pull them off again. Next to their body they wear a waiſtcoat made of young fawns-ſkins, with the hairy ſide inward. The coat, or upper garment, is alſo made of fine coloured ſwansſkins (or, in defect of that, of ſeal-ſkins) trimmed and edged with white, and neatly wrought in the ſeams, and about the brim, which looks very well. Their hair, which is very long and thick, is braided, and tied up in a knot. They commonly go bare-headed, as well without as within-doors; nor are they covered with hoods, but in caſe of rain or ſnow. Their chief ornament and finery is, to wear glaſs beads, of divers colours, or coral, about their necks and arms, and pendants in their ears. They alſo wear bracelets made of black ſkin ſet with pearls, with which they trim their cloaths and ſhoes: ſome have, beſides this, another ſort of embelliſhment: they make long black ſtrokes between the eyes on the forehead, upon the chin, arms, and hands, and even upon the thighs and legs; theſe they make with a needle and thread made black. They keep their cloaths pretty clean, though in other things, eſpecially in their victuals, they are not ſo nice: chiefly the women who have got children, are very dirty and ſlovenly, well knowing that they cannot be repudiated. But thoſe wretches that are barren, or whoſe children are dead, and do not know the moment they may be ſent away, are obliged to take more care to be cleanly, that they may pleaſe their huſbands.

The Groenlanders are good-natured and orderly, but indolent, dull, and phlegmatic; they live peaceably without laws, and act with regularity without diſcipline.

In caſes of murder, which however ſeldom happen, no cognizance is taken of the murderer, unleſs the neareſt relation to the deceaſed thinks proper, perſonally, to revenge his death. Old women, who, from the natural malice of their tongues, or their ill-natured and evil diſpoſitions are ſuppoſed to be witches, they kill, by the unanimous conſent of the neighbourhood.

They think all the productions in nature meant for mankind in general, and therefore deem every thing common property; this naturally prevents the idea of robbery, as none can ſteal, where he has a right to take whatever he happens to lay his hands on. But this idea they extend to ſtrangers, and take as freely from them, as from their own neighbours; which occaſions them to have a worſe name than they deſerve; as the notions they are brought up in, excuſes, in ſome meaſure, their ſuppoſed delinquency.

Fornication and adultery are unknown to the Groenlanders, except upon particular occaſions, when certain ceremonials, at which both ſexes attend, admit of promiſcuous intercourſe; and theſe permiſſions do not proceed ſo much from vice as arbitrary cuſtom, for in general the Groenlanders are modeſt, civil, generous, and hoſpitable. Only married people are admitted to the above mentioned feſtivals, for the unmarried of both ſexes are remarkable for their modeſty and continency: to confirm this aſſertion, Mr. Egede ſays, he never ſaw any of them entertain any looſe or ſlippery converſation, or ſhew the leaſt inclination to it, either in words or deeds.

deeds. During fifteen full years that he lived in Groenland, he did not hear of more than two or three young women who were gotten with child unmarried; becauſe it is reckoned the greateſt of infamies.

The worſt fault of the Groenlanders is their being ſo exceeding dirty, for they are ſlovens to a degree of beaſtiality. The men are ſo fond of dirt, that they never waſh themſelves with clean water, but juſt in the manner of cats, lick their fingers, and clean their faces as well as they can with their ſpittle. They even eat their victuals in the ſame bowls and platters that have been licked by their half-ſtarved dogs, without the leaſt idea of making them clean. The women think they are never ſo ſweet as when they waſh themſelves in urine, that being deemed their grand perfume; and a female ſo cleaned, imagines her ſmell to be peculiarly grateful, and even the men adopt this opinion ſo far as to compliment a woman after having been thus ſcowered, with the title of niviarſiar ſuarneaks, or maidenly ſweet. Company never hinders either ſex from complying with the calls of nature; and the utenſils for thoſe purpoſes being always in the ſame room as the family, a diſagreeable effluvia ariſes, which is extremely offenſive to any but thoſe who are by long uſe familiarized to ſuch ſtenches. Many of theſe people ſoak raw hides in thoſe very utenſils, which contributes conſiderably to the nauſeous ſmell of the place, and renders a Groenlander's habitation almoſt inſufferable.

The Groenlanders feed upon the fleſh of ſea partridges, hares, ſeals, rein-deer, and whales. Their fleſh-meat they eat either boiled, dried in the ſun or wind, or raw. Their fiſh they either boil or dry thoroughly; indeed it is by perfectly drying that they preſerve their ſalmon, holybut, or ſtents, which are caught in the ſummer, and laid up for winter ſtore; for theſe people, with all their ignorance, are as careful as the ant in providing for future exigencies. Seals are only to be caught in the ſummer, unleſs they happen, in the winter, now and then to meet with a few floating upon the ice; the mode of preſerving theſe animals is by burying them under the ſnow, from whence they are dug out as occaſion requires, and eaten without further preparation. They are as naſty in eating as other things, for they never clean either platters, pots, or kettles, and the dirty ground ſerves them for table and table cloth: but they act wiſer than many more poliſhed nations, by not eating ſet meals at particular hours, but gratifying the calls of hunger when the craving appetite requires. The women uſually eat by themſelves; but when the Groenlanders return from ſea, they make merry together and regale ſumptuouſly.

As theſe people are not delicate in their appetites, they are not very particular in times of ſcarcity, with reſpect to their food, as they will feed upon pieces of rotten ſkins, ſea weeds, flags, any kind of roots, whale's fat, train oil, &c. In ſummer time they uſe wood as fuel to dreſs ſuch victuals as they do not chuſe to eat raw, but in winter time they uſually boil their food over their train oil lamps. Their kettles are made either of braſs, copper, or marble, and in general manufactured by themſelves; their method of kindling a fire, is by the friction of a piece of hard wood upon a dried fir tree block.

It was a conſiderable time before the Danes could bring the Groenlanders to taſte their proviſions; ſome, however, at length came to be fond of bread and butter: but very few have as yet overcome their ſtrong averſion to ſpirituous liquors, and none can be perſuaded to chew or ſmoak tobacco.

The men are commonly contented with one wife; there are ſome, indeed, but very few, that keep two or three, or four wives; but theſe paſs for heroes, or more than ordinary men: becauſe, by their induſtry, they are able to maintain ſo many wives and children. What is remarkable, before the arrival of the Danes, there was never heard of ſuch a thing as jealouſy among thoſe wives; but they agreed very well together, though the firſt wife was reckoned the miſtreſs. But ſince the Danes have informed them of the word and will of God, importing, that in the beginning the all-wiſe Creator made one man and one woman, to live in matrimony as huſband and wife, there has been ſome reſentment in the wives, when their huſbands have had a mind to take any others beſide them: and they have applied to Mr. Egede, deſiring him to put a ſtop to ſuch a proceeding. Alſo, when he has inſtructed them in their catechiſm, they have always put him in mind not to forget fully to inſtruct their huſbands in the duty of the ſeventh commandment. They refrain from marrying their next relations, even in the third degree; taking ſuch matches to be unwarrantable, and quite unnatural. It is likewiſe reckoned blameable, if a lad and a girl, that have ſerved and been educated in one family, ſhould deſire to be married together; for they look upon them as brother and ſiſter.

The ceremonies uſed in their marriages are as follow: when a young man likes a maiden, he commonly propoſes it to the parents and relations on both ſides; and, after he has obtained their conſent, he gets two or more old women to fetch the bride (and, if he be a ſtout fellow, he will fetch her himſelf). They go to the place where the young woman is, and carry her away by force: for though ſhe ever ſo much approves of the match, yet, out of modeſty, ſhe muſt make as if it went againſt the grain, elſe ſhe will be blamed, and get an ill name, as if ſhe had been a love-ſick wench. After ſhe is brought to the bridegroom's houſe, ſhe keeps, for ſome time, at a diſtance, and ſits retired in ſome corner, upon a bench, with her hair diſhevelled, and covering her face, being baſhful, and aſhamed; in the mean while, the bridegroom uſes all the rhetorick he is maſter of, and ſpares no careſſes to bring her to a compliance with his ardent wiſhes; and the good girl, being at length perſuaded, yields kindly to his embraces, and then they lie down together, and ſo the wedding is over.

Matrimony is not of ſo undiſſolvable a nature among them, but that the huſbands often repudiate their wives, if either they don't ſuit their humours, or if they are barren (which they hold to be very ignominious), and for many other reaſons: but if they have got children by them, they keep them for life.

The women are of a very hardy and ſtrong conſtitution, which they chiefly ſhew in their child-bearing; for as ſoon as it is over, they will go to work, and do their ordinary buſineſs; but ſometimes they pay dear for this bravery, it coſting them their lives. They have a very tender love for their children; and the mother always carries her infant about her, upon her back, wrapped up in her coat, where-ever ſhe goes, or whatever buſineſs ſhe has in hand; for they have no cradles for them. They ſuckle their children till they are three or four years old, or more; becauſe, in their tender infancy, they cannot digeſt the ſtrong victuals that the reſt muſt live upon. The education of their children is what they ſeem little concerned about; for they never make uſe of whipping, or hard words, to correct them when they do any thing amiſs, but leave them to their own diſcretion. Notwithſtanding which, when they are grown, they never ſeem inclined to vice or roguery. It is true, they ſhew no great reſpect to their parents in any outward forms, but are always very willing to do what they order them; though ſometimes they will bid their parents do it themſelves. They are under the care of their parents, boys as well as girls, till they are married; afterwards they ſhift for themſelves, yet ſo, that they continue to dwell in the ſame houſe, or under the ſame roof, with their fathers, together with other kindred and relations; and what they get they all enjoy in common.

On the death of a Groenlander, all his property is thrown away as impure and unfortunate; and all who reſide in the ſame houſe are obliged to carry whatever belongs to them into the open air to purify, but in the evening they fetch their effects back again. They dreſs the corpſe in its beſt apparel, bend the legs under the back, wrap the whole up in rein dear and ſeal ſkins, and bury it under a heap of ſtones. All who are concerned in the funeral are for ſome time deemed unclean; and the mourners, to teſtify their grief, make moſt hideous howlings. A corpſe is always conveyed out of the back part of a hut, but never through the door; and at the funeral, a woman lights a ſtick, and waving it round her head, pronounces the words "Pikleruk pok," which implies, here is no more to be procured.

Upon the burial place of a young child they fix a dog's head, for this curious reaſon, that as a child is deficient in point of underſtanding, it would not be able to find its way to the land of ſouls without a faithful dog to run before and guide it.

The principal amuſements of the Groenlanders are ſinging in a very harſh untuneable manner, dancing after a very ruſtic kind of faſhion, running, wreſtling, foot-ball, &c. They very ſeldom quarrel with each

other, not having indeed in their language any ſcurrilous words, or ſuch as are calculated to expreſs anger or reſentment: and they never are known to fight; but when a Groenlander conceives himſelf aggrieved or affronted, he challenges the aggreſſor to a trial of ſatirical ſkill, or to bandy ſarcaſm with him; the two parties meet accordingly, when the challenger begins firſt, and in a humorous poetical manner taxes his antagoniſt with having affronted him, and likewiſe recapitulates whatever other faults or follies he has been guilty of. The perſon challenged replies in a ſimilar ſtrain, exculpates himſelf as well as he can, and retorts by recounting the errors of the challenger. In this war of words, if the challenger has the advantage, his antagoniſt is obliged to apologize for having affronted him; but, on the contrary, if he is out-ſatiriſed, he muſt confeſs himſelf wrong, and beg pardon for having made the accuſation: however, let the ſatirical conteſt conclude how it will, a reconcilation is ſure to take place, and the day to conclude with the utmoſt mirth and feſtivity. In this manner terminates the quarrels of the Groenlanders, and ſuch is their ſevereſt reſentment. We wiſh that nations which pretend to greater politeneſs and benevolence would terminate their differences in a like ſenſible and friendly manner, without having recourſe to that Gothic, unchriſtian, and inhuman practice of duelling, or appealing to the ſavage brutality of blows. The ſongs which are ſung at their aſſemblies are likewiſe ſatires againſt their neighbours follies, or rather good-natured poetical documents and reprehenſions of each others faults: the perſon who ſings always beats a little drum with his finger, as an accompanyment to his verſes, and likewiſe makes ſtrange geſticulations for the greater entertainment of thoſe preſent.

The greateſt part of the year is employed by theſe people either in hunting or fiſhing.

The principal game they hunt is the rein-deer. To purſue this animal, they penetrate into the interior parts, accompanied by their whole families. Having found a herd of rain-deer, a number of Groenlanders ſurround them at a conſiderable diſtance, and then with ſhouts and hideous yellings drive them into a narrow compaſs, by contracting the circle they have formed round them. The animals being thus cooped up become an eaſy prey, and may be killed with great facility. The Groenlander's hunting weapons are, fir tree bows, wound about with the twiſted ſinews of animals, and ſtrung with the ſame, or with ſlips of ſeal ſkins. The arrows are near ſix feet in length, and bearded with iron or ſharp pointed bone; but thoſe they ſhoot birds with are blunt pointed, that they may not tear the fleſh, the blow being ſufficient to kill the bird, without mangling it. In killing ſea fowls, they uſe lances, which they throw with aſtoniſhing dexterity, and very ſeldom miſs the mark.

Their method of whale fiſhing, is different from what is practiſed by other Europeans. When they ſet out upon thoſe expeditions, they go in a large long boat called *kone-boat*, becauſe it is rowed by women, for the word *kone* implies a *woman*. About fifty perſons go in one of theſe boats, and when they find a whale, the men ſtrike him with their harpoons, to which are faſtened, with very long lines, blown ſeals ſkins filled with wind like bladders. Theſe artificial bladders are of infinite uſe to the Groenlanders in their whale fiſhing, for by floating on the furface of the ſea, they not only diſcover the track of the whale after he is wounded, but hinder him from diving under the water for any length of time. When the whale loſes his ſtrength, and is exhauſted by fatigue, the Groenlanders again attack him with ſpears and lances till he expires.

On this occaſion they are clad in ſkin-coats, conſiſting of only one piece, with boots, gloves, and caps, ſewed and laced ſo tight together, that no water can penetrate them. In this garb they jump into the ſea, and begin to ſlice the fat all round the whale's body, even under water; for in theſe coats they cannot ſink, as they are always full of air; ſo that they can ſtand upright in the ſea: nay, they are ſometimes ſo daring, that they will get upon the whale's back, while there is yet life in him, to make an end of him, and cut away his fat.

Seals are taken by various methods, ſuch as ſtriking them with harpoons, ſimilar in form to thoſe uſed in whale fiſhing, but much ſmaller; watching them when they come to breathe at the air holes in the ice, and ſtriking them with lances, approaching them, diſguiſed like their own ſpecies, that is, covered with a ſeal ſkin, creeping upon the ice, and wagging the head in the very ſame manner as a ſeal; by which means the Groenlander approaches the animal without ſuſpicion, and kills him with his lance. Previous to the falling of the ſnow, theſe people can ſee the ſeals through the tranſparent ice, and trace them to the openings, where they are eaſily killed. They are likewiſe ſurprized, while they baſk themſelves in the ſun, either upon rocks or floating pieces of ice. The Groenlanders angle with lines made of whalebone cut very ſmall, and generally catch a great many fiſh. The holybut is caught with lines of hemp, or ſeal ſkin. Salmon and roe fiſh are taken by the means of weirs or ſtone encloſures, into which the tide carries them at flood, and at low water leaves them on dry land. Stent fiſh are caught by the means of netting extended upon poles; they are dried upon the rocks in the open air, and ſerve for part of the natives winter proviſion, being dreſſed in melted fat, or train oil.

They have two ſorts of boats; the one, which the men alone make uſe of, is a ſmall veſſel, and ſharp pointed at both ends, three fathoms in length, and, at moſt, but three quarters of a yard broad, with a round hole in the middle, juſt large enough for a man's body to enter, and ſit down in it: the inſide of the boat is made of thin rafts tacked together with the ſinews of animals, and the outſide is covered with ſeal-ſkins, dreſſed, and without hair. No more than one can ſit in it, who faſtens it ſo tight about his waiſt, that no water can penetrate it. In theſe ſmall boats they go to ſea, managing them with one oar a fathom long, broad at both ends, with which they paddle about, in the moſt ſtormy weather, to catch ſeals, and ſea fowls; and if they happen to be overſet, eaſily raiſe themſelves, and recover their boats by the means of their paddles. The kone boat is made in the ſame manner, but more durable, and longer, being 60 feet in length, and hath likewiſe a maſt, with a triangular ſail made of the membranes and entrails of ſeals, and managed with the help of braces and bowlings. The women build, repair, and row theſe boats, and likewiſe build all the Groenlanders huts; the whole mechanic employment of the men being to make hunting implements, and fiſhing tackle.

This country is but thinly peopled, the huts the inhabitants reſide in, during winter, are low, and built of ſtone and turf; the windows are on one ſide, made of the bowels of ſeals dreſſed and ſew'd together, or of the maws of holybuts; and are white, and tranſparent: on the other ſide their beds are placed, which conſiſt of ſhelves or benches, made up of deal boards, raiſed half a yard from the ground: their bedding is made of ſeals or rein-deer ſkins. Several families live together in one of theſe houſes or huts, each family occupying a room by itſelf, ſeparated from the reſt by wooden poſts, by which alſo the roof is ſupported. Before theſe poſts there is a hearth or fire-place, in which is placed a great lamp, in the form of a half-moon, ſeated on a trevet: over this are hung their kettles of braſs, copper, or marble, in which they boil their victuals. Under the roof, juſt above the lamp, they have a ſort of rack, or ſhelf, to put their wet cloaths upon; they burn train oil in their lamps, and moſs ſerves them as an apology for wick. The hut door is low, that as little cold as poſſible may be admitted. The houſe within is lined with old ſkins, and ſurrounded with benches. The men and women ſit to work with their backs to each other. In the ſummer the Groenlanders dwell in tents made of long poles fixed in a conical form, covered with deer-ſkins within, and outwardly with ſeal-ſkins dreſſed, ſo that rain cannot pierce them.

Theſe people traffic with the Danes by exchanging

Whalebone	for	Coats
Blubber		Shirts
Train Oil		Stockings
Horns of Sea Unicorns		Knives
Rein deer-ſkins		Hand-ſaws
Seal ditto		Needles
Fox ditto		Angling-hooks
		Cheſts
		Boards
		Looking glaſſes, toys, &c.

The language of the Groenlanders is guttural, and full of conſonants; the alphabet is without theſe letters, C, D, Q, X; and they have a great number of polyſyllables, like the people of North America.

Theſe people treat the Daniſh miſſionaries with great reſpect, attend to what they preach with the utmoſt patience; but, at the ſame time, hear them with the moſt mortifying indifference; ſo that thoſe gentlemen make but few proſelytes, or at leaſt if any are converted, they ſeldom long remember what has been ſaid to them. Thoſe who remain in their original ſuperſtition believe in the immortality of the ſoul, but have very confuſed, and inadequate ideas of the Deity, whom they call Torngarſeck; and ſuppoſe that he reſides either in the bowels of the earth, or in the ſea. They likewiſe believe in another ſpirit, whom they call Innirirrirſok, or the reſtrainer, becauſe they fancy that he prevents them from eating or drinking what is pernicious, and from doing wrong in other things. A third ſpirit called Erloerſortok, or the gutter, they repreſent as a monſter, and imagine he lives upon the entrails of the dead. They ſuppoſe all the elements to be filled with ſpirits; and believe that their prieſts, whom they call Angekuts, have each one of theſe ſpirits as an attendant or familiar; and this ideal, familiar ſpirit, they call Torngah; and fancy, that he always comes, with great readineſs, to the angekut, when ſummoned.

When an angekut pretends to invoke the great ſpirit, Torngarſeck, he retires to ſome unfrequented place, where none of the people dare follow him; and, on his return, makes them believe, that he had invoked Torngarſeck, who anſwered his invocation by appearing in ſuch a horrid form, that he was overcome by terror, ſickened, ſunk into a trance, and remained without ſigns of life, for the ſpace of three days; when he recovered, and found himſelf endued with the ſpirit of conjuration.

Theſe angekuts are very great impoſtors; and, by a great variety of artifices, maintain an entire aſcendency over the poor deluded people.

The Groenlanders are utterly ignorant of natural philoſophy, and, indeed, of ſcience in general, a ſmall ſmattering of aſtronomy excepted; for they have made ſufficient obſervations on the ſtars, to be able to ſteer by them at ſea. And time they meaſure by months, commencing the year at the ſun's firſt riſing above the horizon in the winter; and by every month they are preciſely acquainted with the proper times for killing, or taking, the ſeveral ſpecies of fiſhes, fowls, animals, &c. So that their little aſtronomy ſerves to direct all their avocations, ſuch as remaining at home to do their little domeſtic and mechanic works; going abroad to hunt, fiſh, &c.

CHAP. II.

GREENLAND.

BEFORE we enter upon the deſcription of Greenland, or, as others term it, New Greenland, Eaſt Greenland, or Spitzbergen, we ſhall enter into a detail of the firſt diſcovery of this country, and the ſubſequent voyages to it upon various occaſions; which will include an account of the ſeveral attempts that have been made to diſcover a north-eaſt paſſage to China and Japan; and a north-weſt paſſage to the Great Pacific Ocean.

SECT. I.

Of the diſcovery of Greenland, and the various voyages which have been undertaken in order to find out the north-eaſt paſſage, and to make diſcoveries towards the north-pole, particularly the late expedition made by the order of his preſent majeſty, by the honourable commodore Phipps and captain Lutwidge.

THE firſt who attempted the diſcovery of a north-eaſt paſſage was, the celebrated Sir Hugh Willoughby. This gentleman, ſo early as the year 1553, with three ſhips, ſailed to the latitude of 75 deg. north, within ſight, as it is imagined, of Greenland, which was afterwards re-diſcovered by the Dutch, and named Spitzbergen. Being driven back by a ſtorm, he was compelled to winter in the river Arzena, in Lapland, where himſelf, and his whole company were unfortunately frozen to death. Upon his table he left a ſuccinct, but conciſe account of his diſcoveries.

Captain Burroughs, comptroller of the navy to queen Elizabeth, ſucceeded Sir Hugh Willoughby in attempting this diſcovery. He paſſed the north cape in the year 1556, penetrated to the 78th degree of north lat. diſcovered the wygate, or ſtreight, which ſeparates the country of the Samoides from Nova Zembla; and then returned to England, contented with having proceeded much farther than his predeceſſor.

The report made by captain Burroughs occaſioned queen Elizabeth to fit out two ſtout veſſels to perfect the diſcovery. Theſe were put into commiſſion, and the command given to captain Jackman, and captain Pett, who, A. D. 1580, paſſed the ſtreight which captain Burroughs had diſcovered, and entered the eaſtern ſea; but there the mountains of ice were ſo dreadful, and the weather was ſo tempeſtuous, that captain Pett, with his ſhip and crew, were loſt; and captain Jackman returned to England. The bad ſucceſs of this expedition occaſioned the ardour of the Engliſh, at that time, to ſubſide with reſpect to the main enterprize, viz. the diſcovery of a north-eaſt paſſage. The Engliſh, however, had no ſooner laid down the ſpirit of adventuring, than the Dutch took it up, and a Dutch man, named John Cornelius, was the firſt of that country who made the attempt in the year 1595. But nothing worth noticing can be ſaid with reſpect to the ſucceſs of his voyage, ſince the relation he publiſhed of it was too lame and imperfect to merit the leaſt attention.

William Barents, an experienced Dutch navigator, and able mathematician, being ſupplied with every thing neceſſary, by prince Maurice, undertook the voyage in 1606. Having proceeded in the courſe previouſly pointed out by the Engliſh navigators, and paſſed the Wygate, he met with the impediments which had prevented the ſucceſs of others, and returned home fully convinced, that the deſired paſſage was not to be found in that direction. In 1607 he entered upon a ſecond voyage, which he determined to proſecute upon a different plan, by ſteering to the northward of Nova Zembla; but when he had reached the 77th deg. of north latitude, his ſhip was forced, by the floating ice, upon the rocks, and there cruſhed to pieces. Captain Barents, and the greateſt part of his crew got ſafe to land; but there they experienced the moſt excruciating miſeries, by being obliged to winter in a place where the ſeverity of the weather cauſed the fleſh to periſh upon the bones of ſome, and put an end to the exiſtence of others, by afflicting their limbs with the moſt tormenting pains. The ſurvivors, however, with great ingenuity and fortitude, framed a pinnace from the wrecks of the ſhip; and, at the commencement of the ſummer, ſet ſail in it for Lapland, but the captain died before their arrival at Coln,

in that country, and with him periſhed the hopes of perfecting the diſcovery at that time.

Though all theſe adventurers had miſcarried in the main deſign of their expedition, namely, the diſcovery of a north-eaſt paſſage, yet their voyage proved beneficial in ſome meaſure to their reſpective countries, by introducing them to the knowledge of ſeal-fiſhing, whale-fiſhing, &c.

In 1610, the celebrated Henry Hudſon, who diſcovered the ſtreight and bay that ſtill bear his name, attempted the north-eaſt paſſage, but was as unſucceſsful as thoſe that had gone before.

From this time the deſign was laid aſide by the Engliſh till the year 1676, when two ſhips were fitted out by the order of king Charles II. and at the expence of the king himſelf, the duke of York his brother, and ſeven other courtiers. The command of theſe ſhips was given to that excellent navigator and mathematician captain John Wood, and captain Hawes, the former being appointed to act as principal, and direct the expedition in the capacity of commodore.

Things being thus ſettled, the two ſhips ſet ſail May 28, 1676, and proceeded to the Northern Ocean. On the 15th of the enſuing month, they entered the polar circle, and on the 29th of the ſame month, the ſhip named the Speedwell, which captain Wood ſailed in, was unfortunately wretched on ſome rocks in the icy ſeas. After having ſtruck, the captain gives the following affecting and animated deſcription of the diſtreſſes of himſelf and his crew. "Here (ſays he) we lay beating upon a rock, in the moſt frightful manner for the ſpace of three or four hours, uſing all poſſible means to ſave the ſhip, but in vain; for it blew ſo hard, that it was wholly out of our power to carry out an anchor capable of doing us any ſervice. At length we ſaw land cloſe under our ſtern, to the great amazement of us all, which before we could not ſee for the foggy weather; ſo I commanded the men to get out the boats before our maſt came by the board, which was done. I ſent the boatſwain towards the ſhore in the pinnace, to ſee if there was any poſſibility of landing, which I much feared, becauſe the ſea ran ſo high.

"In half an hour he returned with this anſwer, that it was impoſſible to land a man, the ſnow being in high cliffs, and the ſhore inacceſſible. This was bad tidings, ſo then it was high time to think on the ſafety of our ſouls, and we went all together to prayers, to beſeech God to have mercy on us; for now nothing but inevitable ruin appeared before our eyes. After prayers, the weather cleared up a little; and looking over the ſtern, I ſaw a ſmall beach directly where I thought there might be ſome chance of getting on ſhore. I therefore ſent off the pinnace a ſecond time, with ſome men in her to be firſt landed, but ſhe durſt not venture to attempt the beach. I then ordered out the long-boat, with twenty men in her to land, who attempted it, and got ſafe on ſhore. They in the pinnace ſeeing that, followed, and landing their men likewiſe, both veſſels returned to the ſhip without any accident.

"The men on ſhore deſired ſome fire arms and ammunition, for there were many bears in ſight. I therefore ordered two barrels of powder, ſome ſmall arms, ſome proviſions, with my own papers and money, to be put on board the pinnace, but as ſhe put off from the ſhip's ſide, a ſea overſet her, ſo that all was loſt, with the life of one man, and ſeveral others taken up for dead. The pinnace was likewiſe daſhed to pieces, to our great ſorrow, as by that diſaſter one means of eſcaping from this diſmal country, in caſe the Proſperous (which was the ſhip that ſailed from England in our company) deſerted us, was cut off. The long-boat being on board, and the ſea running high, the boatſwain and ſome others, would compel me and the lieutenant to leave the ſhip, ſaying, it was impoſſible for her to live in that ſea, and that they had rather be drowned than I; but deſired me when I came aſhore, if poſſible, to ſend the boat again for them. Before we had got half way to the ſhore, the ſhip overſet, ſo making all poſſible haſte to land the men we had on board, I went off to the ſhip again, to ſave thoſe poor men who had been ſo kind to me before. With great hazard I got to the quarter of the ſhip, and they came down the ladder into the boat, only one man was left behind for dead, who had been caſt away in the pinnace; ſo I returned to the ſhore, though very wet and cold. We then hauled up the boat, and went up the land about a muſquet ſhot, where our men were making a fire and a tent with canvaſs and oars, which we had ſaved for that purpoſe, and in which we lay all night wet and weary. The next morning, the man we left on board having recovered, got upon the mizzen-maſt, and prayed to be taken on ſhore; but it blew ſo hard, and the ſea ran ſo high, that, though he was a very pretty ſailor, none would venture to bring him off.

"The wind continuing to blow, with extreme fogs, froſts, ſnow, and all the ill compacted weather that could be imagined put together, we built more tents to preſerve ourſelves; and the ſhip breaking to pieces, came all on ſhore to the ſame place where we landed, which ſerved us for ſhelter and firing; beſides, there came to us ſome hogſheads of brandy and flour in good ſtore, which was no little comfort in our great extremity. We now lay between hope and deſpair, praying for fair weather, that captain Hawes might find us, which it was impoſſible for him ever to do while the weather continued foggy; but fearing at the ſame time leſt he might be caſt away as well as we. Suppoſing we were never to ſee him again, I was reſolved to try the utmoſt to ſave as many as I could in the long-boat. In order there unto we raiſed her two feet, and laid a deck upon her, to keep the ſea out as much as poſſible; and with this boat and thirty men, for ſhe would carry no more, I intended alternately to row and ſail to Ruſſia; but the crew not being ſatisfied who ſhould be the men, began to be very unruly in their mind and behaviour, every one having as much reaſon to ſave himſelf as another, ſome holding conſultations to ſave the boat, and all to run the like fortune. But here brandy was our beſt friend, for it kept the men always fox'd (ſuddled), ſo that in all their deſigns I could prevent them. Some were in the mind to go by land; but that I knew was impoſſible to any man; neither had we proviſions, nor ammunition to defend us from the wild beaſts; ſo the paſſage by land being impracticable, and no paſſage by ſea to be attempted till forty men were deſtroyed, I will leave it to the conſideration of any, whether we were not in a moſt deplorable condition, without the interpoſition of Divine Providence.

"The weather continued ſtill very bad, with fogs, ſnow, rain, and froſt, till the ninth day of our being on ſhore, which was the eighth day of July, when in the morning it cleared up, and, to our great joy, one of our people cried out, a ſail! which proved captain Hawes; ſo we ſet fire to our town, that he might ſee where we were, which he preſently diſcovered; ſo came up, and ſent his boat to us. But before I went off, I wrote a brief relation of the intention of the voyage, with the accident that had befallen us, put it into a glaſs bottle, and left it in the fortification I had there built. By twelve of clock we all got ſafe on board; but left all on ſhore that we had ſaved from the ſhip, for we much feared that it would prove foggy again, and that we ſhould be driven once more on this miſerable country; a country, for the moſt part, covered perpetually with ſnow; and what is bare being like bogs, on whoſe ſurface grows a kind of moſs, bearing a blue and yellow flower, the whole produce of the earth in this deſolate region. Under the ſurface, about two feet deep, we came to a firm body of ice, a thing never heard of before; and againſt the ice cliffs, which are as high as either of the Forelands in Kent, the ſea has waſhed underneath, and the arch overhanging, moſt fearful to behold! ſupports mountains of ſnow, which I believe hath lain there ever ſince the creation." Being all on board the Proſperous, they ſet ſail for England, where they arrived in 45 days.

The expectations of the Engliſh government, and the hopes of the Britiſh navigators, with reſpect to the diſcovery of a north-eaſt paſſage, ſubſided with the iſſue of this unfortunate expedition; and many mariners ſeriouſly began to think that no ſuch paſſage exiſted; notwithſtanding the Dutch, but a few years before this expedition, ſailed very near that open ſea which the Ruſſians at preſent navigate with facility; and might, without any manner of doubt, have eaſily have reached the coaſts of China and Japan, had they perſevered in their undertaking.

Soon

Soon after theſe enterprizes, the aſtoniſhing genius of Peter the Great, czar of Muſcovy, not only humanized, and poliſhed his ſubjects, who where before but a ſmall remove from ſavages, but impelled them to great and noble undertakings. Hence the Ruſſians, who ſcarce had any veſſels larger than a ſmall bark, began not only to build ſhips of a conſiderable burthen, but to attempt new diſcoveries. Theſe arduous undertakings occaſioned the vaſt and almoſt deſert country of Siberia to be explored, Kamtſchatka to be diſcovered, and the ſeas on the north of Aſia to be traverſed. Theſe attempts were began by captain Beering, who, on February 5, 1725, received orders from count Apraxim, admiral of Ruſſia, to begin his journey into Siberia. By his inſtructions, ſigned by the czar, he was obliged to inform himſelf of the north-eaſtern frontiers of that country, in order to diſcover whether they were contiguous to, or what might be their diſtance from the continent of North America; and if any paſſage could be obtained that way by ſea. He travelled through Siberia, partly by land, partly in boats by rivers, till he came to Lower Kamtſchatka, in the 56th deg. of north lat. and about long. 94. 30. eaſt from London. It ſtands on a river of the ſame name, which runs to the eaſt, and about 120 miles from the town falls into the Sleeping Sea, as it is called in the map annexed to captain Beering's voyage, in the ſecond volume of F. Du Halde's deſcription of China. Captain Beering ſailed from the river Kamtſchatka the 14th of July 1728, and the 8th of Auguſt found the latitude to be 64 deg. 30 min. On the 15th the lat. was 67. 18. and the captain thought proper not to proceed, as he could not obſerve that the land reached farther northward, and was apprehenſive leſt ſome contrary winds might prevent his return to Kamtſchatka before the end of ſummer. There was a ridge of mountains covered with ſnow all along the ſhore, from Kamtſchatka to this place, which appeared at ſea like a wall. September the 7th, the captain returned to the river of Kamtſchatka, and wintered in Lower Kamtſchatka: June the 5th, 1729, he ſailed again from that river, and ſteered eaſtwards, being informed that land might that way be diſcerned at ſea in clear weather. But having made 200 werſtes, or 144 Engliſh miles, and no land appearing, he changed his courſe along the coaſt of Shatzick, to double the point of the continent of Kamtſchatka, which was before unknown. That point lies in lat. 51. and about long. 90. 10. eaſt from London. About 80 miles to the north of it is the mouth of Bolſkhaya, from whence captain Beering croſſed the ſea to Okbotſki, in lat. 58. 30. and long 78. and thence he returned by land into Siberia, and ſo to Peterſburgh, where he arrived March 1, 1730. In the account of this voyage he gives us a ſhort deſcription of that part of Siberia and Samoieda, through which he travelled. In this voyage he, however, made no conſiderable diſcoveries: but he afterwards made another voyage, and periſhed in the attempt.

With reſpect to Beering's ſecond voyage, we know little more than that he began it about the year 1740, penetrated as far as the iſle of Japan, and then ſailed eaſtward about 80 leagues, after which he was ſhipwrecked upon an iſland hitherto unknown, where he and moſt of his company periſhed through cold, hunger, and fatigue. The news was brought by Mr. Stoller, a botaniſt, and aſſociate of the Academy of Sciences at Peterſburg, who accompanied captain Beering. Mr. Stoller, with the aſſiſtance of ſome of his companions, found means to build, out of the ruins of their great ſhip, a little ſhallop, in which himſelf, and nineteen others, after running through a thouſand perillous adventures, arrived at Kamtſchatka. The ſame gentleman reports, that captain Tſcherſbow, who accompanied captain Beering in that expedition, had been more lucky, and had even diſcovered the coaſt of America, but his men were beaten off by the ſavages.

From the ſecond enterprize, however, and from ſome ſubſequent voyages of the Ruſſians, the reality of a north-eaſt paſſage is aſcertained; that is, by ſumming up the courſes run by the Engliſh and Dutch; by ſome Ruſſians who ſailed ſince Beering, and by Beering in his laſt voyage, the whole amount to an abſolute paſſage from Europe, by the north eaſt to Japan and China; for the Engliſh and Dutch have repeatedly ſailed to Wygatz, or the ſtreights of Nova Zembla; the Ruſſians have ſailed from thence to the North Cape of Aſia; and Beering ſailed from the ſaid North Cape, to the iſles of Japan. Hence the voyage hath been completely performed, though not throughout by the ſame perſons. Yet theſe inconteſtible proofs, and the late voyage of commodore Phipps (now lord Mulgrave) clearly evinces, that although a north-eaſt paſſage really exiſts, yet it is uſeleſs with reſpect to commercial purpoſes. For, though the paſſage from Europe to China, or Japan, is much ſhorter this way than by the uſual track, yet, from the innumerable impediments, three years would be required to make the voyage, which hath hitherto been performed, by doubling the Cape of Good-Hope, in leſs than one. We ſhall, however, for the gratification of our readers, give a conciſe, but ſuccinct account of commodore Phipps's voyage, as it is not only the lateſt and moſt important, but one of the moſt entertaining that hath been publiſhed by thoſe who have explored, or attempted to explore, the North Seas.

An account of an expedition undertaken by order of his preſent majeſty, for making diſcoveries towards the North-pole, and conducted by the honourable Conſtantine John Phipps (now lord Mulgrave) one of the lords of the admiralty, a captain of the royal navy, and member of parliament for Huntingdon.

An application having been made by the Royal Society to the earl of Sandwich, firſt lord commiſſioner of the admiralty, for an expedition to be made, in order toaſcertain how far navigation was practicable towards the North-pole, his lordſhip communicated the ſame to his majeſty, who was graciouſly pleaſed to countenance the propoſal, and order the expedition to be undertaken with every aſſiſtance, and encouragement that could give it ſucceſs.

It is but juſtice to the firſt lord of the admiralty, to ſay that every neceſſary was amply provided which could promote the deſign of the enterprize, or give convenience or comfort to thoſe engaged in it. The veſſels choſen for the expedition were two bomb-ketches, which, of all others, are the beſt adapted for ſuch voyages, as they are uncommonly ſtout, and not over large. Theſe veſſels, whoſe names were the Racehorſe and Carcaſe, to encreaſe their natural ſtrength, had a ſheathing of ſeaſoned oak plank, three inches thick, and were furniſhed with a double ſet of anchors, cables, ſails, rigging, ice-poles, &c.

For the comfort and conveniency of the officers and men, he ordered a great quantity of prime beef and pork to be cured in the very beſt manner poſſible; an hundred buts of porter to be double brewed from the beſt hops and malt, plenty of coals to be ſtowed in the ſhips for firing; peaſe, oatmeal, rice, molaſſes, ſpirituous liquors, wine, vinegar, oil, muſtard, portable ſoup, tea, ſugar, &c. &c. in great abundance; and that warm cloathing might not be wanting, beſides what was uſual, every man was provided with jackets made of that warm ſtuff called ſearnought, two milled caps, two pair of ſearnought trowſers, four pair of milled ſtockings, an excellent pair of boots, two cotton ſhirts, two handkerchiefs, and a dozen pair of milled mits.

Every thing being ready, the honourable Conſtantine John Phipps, as commodore, went on board the Racehorſe, of 350 tons burthen, mounted with eight ſix-pounders and fourteen ſwivels; and captain Skiffington Lutwidge went on board the Carcaſe, of 300 tons burthen, mounting four ſix-pounders and fourteen ſwivels; when the wind being fair, they ſet ſail on the 3d of June, 1773.

On the 21ſt of the ſame month they ſaw a whale, which was the firſt they had yet ſeen in the North Seas. The ſame day they met with a homeward bound Hamburgh whaling ſnow, when Mr. Wyndham, a gentleman of fortune, who had deſigned to proſecute the voyage with the commodore, not being pleaſed with the heavy ſeas, and foul weather, which he had already ſeen, and finding his health decline, went on board the Hamburgher in order to return home. On the 29th, they met with a Greenland-fiſhing veſſel, called the marquiſs of Rockingham, from the captain of which they learned, that the day before, three whalers had been cruſhed to pieces by the ice.

Nothing particular happened till the eighth of July, when both ſhips were in great danger, from being almoſt ſurrounded

ſurrounded ſuddenly by the ice; the commodore gave orders to ſtand to the ſouthward, but this being ſoon found impoſſible, by the continual accumulation of the ice, both ſhip's companies were obliged to have recourſe to their ice-anchors and ice-poles, in order, if poſſible, to extricate themſelves from the imminent danger with which they were nearly enveloped; but this they found impoſſible till the evening, when the ice beginning to open, they hoiſted out their long-boats, and towed the ſhips round a prodigious large cape of ice; in doing which, both veſſels, however, received ſome damage.

On the 9th of July they loſt ſight of each other, but joined company the next day; when the weather being intenſely cold, it was agreed by the officers, that every man ſhould be allowed daily two quarts of porter, and a pint of brandy.

They now ſailed through vaſt mountains of floating ice, and were continually in imminent danger of being cruſhed to pieces. At the ſame time it was generally agreed among the officers, that no diſcovery could be made towards the North-pole in that direction; they therefore changed their courſe, and on the 11th of July, having worked themſelves out of the moving mountains of ice, they began to coaſt a vaſt icy continent, if we may be allowed the expreſſion. This prodigious maſs of ice extended towards the north-eaſt, to an immenſe diſtance, and they had a tolerably clear ſea till the 13th, when they came to anchor in Smearingburgh harbour, in Greenland, or Spitzbergen. This harbour was firſt diſcovered by the Dutch, who here erected proper buildings, and convenient ſheds for boiling the oil from the fat of whales, inſtead of barreling up their fleſh to be boiled at home. They likewiſe erected a village, and endeavoured to fix a colony here, but every individual of the ſettlers periſhed in the enſuing winter. The fragments of this village are ſtill to be traced, and the impreſſion of the ſtoves, kettles, cauldrons, troughs, ovens, &c. remained in their proper ſhapes in the ice long after the things themſelves were decayed. The Ruſſians lately attempted a ſimilar ſettlement; but in this attempt likewiſe ten out of fifteen perſons periſhed in the winter of the year 1772, notwithſtanding the natural hardineſs of thoſe who were choſen to try the experiment. Yet both Engliſhmen and Ruſſians have wintered in this inhoſpitable climate, (though not through choice but neceſſity) and afterwards returned into their own country, as we ſhall have occaſion hereafter to relate.

Though the ice ſet in apace, they found the weather hot in proportion as they were at a diſtance from the water; for in the cabin, the thermometer was at only 56 degrees; at ſome diſtance from the ſhore, in the open air, it roſe to 90; and being carried to the top of a high mountain, the quickſilver aſcended 10 degrees higher. Having taken in their water, they ſet ſail on the 19th of July.

On the 27th of July, they found themſelves enveloped by immenſe ſhoals and mountains of ice; and on taking a view from the maſt-head, they diſcovered a vaſt icy continent and ſeven ſmall iſlands, being then in 80 deg. 47 min. north lat. and 21 deg. 10 min. eaſt long. "Here, ſays the journal, the whole proſpect was more pleaſing and pictureſque than they had yet beheld in this remote region. The very ice in which they were beſet looked beautiful, and put forth a thouſand glittering forms; and the tops of the mountains, which they could ſee like ſparkling gems at a vaſt diſtance, had the appearance of ſo many ſilver ſtars illuminating a new firmament. On the ice were many bears, ſome of which came ſo near the ſhips as to be ſhot dead with ſmall arms. Theſe bears are very good eating; and, where no better is to be purchaſed, the whalers account them as good as beef. They are many of them as large as the largeſt oxen, and weigh heavier. In many parts of their body they are muſquet proof; and unleſs they were hit on the open cheſt, or on the flank, a blow with a muſquet ball will hardly make them turn their backs. Some of the bears killed in theſe encounters weighed from ſeven to eight hundred weight."

In theſe ſeas they found the water leſs ſalt than they had ever before experienced ſea-water to be; and when they melted the ice, it produced excellent freſh-water; they likewiſe filled their water-caſks by this method. In places where the ſnow lay thick upon the ſurface of the ice, they dug pits, which immediately filled with clear, ſoft, ſweet water.

On the firſt of Auguſt, the commodore being deſirous of ſurveying the weſternmoſt of the ſeven iſlands before-mentioned, ordered the ſhips to be made faſt to the main body of ice with ice-anchors; a method frequently practiſed by the Greenland fiſhing veſſels: this being effected, a party ſet forward upon the excurſion, conſiſting of the principal officers and gentlemen, the pilots, and ſome prime ſailors ſelected from both ſhips. They continued their progreſs, ſometimes rowing the boat, and ſometimes drawing it over the ice, and at length, with ſome difficulty, reached the land; where they found a fine herd of deer, ſo tame that their approach did not in the leaſt intimidate them. "A proof, ſays the journaliſt, that animals are not naturally afraid of man, till, by the fate of their aſſociates, they are taught the danger of approaching them; a proof too, that animals are not deſtitute of reflection, otherwiſe, how ſhould they conclude, that what has befallen their fellow animals, will certainly happen to them, if they run the like riſque?" They aſcended the higheſt hill, but were diſappointed in the proſpect they expected by the hazineſs of the weather. On returning to the ſhips, they found, to their great ſurprize, that by grappling to the ice they were in the moſt imminent danger of loſing them both; for the looſe ice had cloſed ſo faſt round them, that it was deemed impracticable to diſengage them, and they had great reaſon to fear that both the ſhips would be cruſhed to pieces. To prevent, if poſſible, ſo dreadful an accident, the commodore prudently ordered a great number of men to form a dock in the ſolid ice, ſufficiently large to moor both ſhips; and by the performance of this arduous undertaking with amazing alacrity and expedition, both veſſels and crews were almoſt miraculouſly preſerved. No ſooner were the ſhips thus ſecured, than a general council was ſummoned of all the officers, pilots, and maſters of both ſhips, to conſult what ſteps were to be taken in this emergency; the reſult of which was, that they muſt either winter upon the neighbouring iſlands, or drag their boats over the ice, and launch them into the open ſea (which was now, by the continual accumulation of large quantities of ice) at a very conſiderable diſtance. A deſperate attempt was firſt made to extricate the ſhips, by cutting open a channel to the ſea towards the weſtward; but this was ſoon given up as a chimerical and impracticable attempt. On the third of Auguſt, it was unanimouſly determined to drag the long-boats belonging to both the ſhips over the ice, and then attempt to launch them into the open ſea, when they hoped in them they might reach Spitſbergen before the whaling ſhips were all departed.

While the boats were getting ready, they killed ſeveral bears, who, being attracted by the ſmell of the food dreſſed on board the ſhips, came over the ice to viſit them; they likewiſe killed a ſea-horſe, in the deſperate engagement with which, the ſecond lieutenant of the Carcaſe was in imminent danger of loſing his life.

We cannot help tranſcribing the following paſſage, which happened while the ſhips remained in the ice, as it is rather remarkable; though, at the ſame time, we cannot boaſt, that it contains any eulogium on the feelings of ſome of our countrymen.

"Early in the morning (of the 5th of Auguſt) the man at the maſt-head of the Carcaſe gave notice, that three bears were making their way very faſt over the ice, and that they were directing their courſe towards the ſhip. They had, without queſtion, been invited by the ſcent of the blubber of the ſea-horſe killed a few days before, which the men had ſet on fire, and which was burning on the ice at the time of their approach. They proved to be a ſhe-bear and her two cubs; but the cubs were nearly as large as the dam. They ran eagerly to the fire, and drew out from the flames part of the fleſh of the ſea-horſe that remained unconſumed, and eat it voraciouſly. The crew from the ſhip, by way of diverſion, threw great lumps of the fleſh of the ſea-horſe, which they had ſtill left, out upon the ice, which the old bear fetched away ſingly, laid each lump before her cubs as ſhe brought it; and, dividing it, gave each a ſhare, reſerving but a ſmall portion to herſelf. As ſhe was fetching away the laſt piece they had to beſtow, they levelled their muſquets at the cubs, and ſhot them both

dead; and, in her retreat, they wounded the dam, but not mortally. It would have drawn tears of pity from any but unfeeling minds, to have marked the affectionate concern expreſſed by this poor beaſt in the dying moments of her expiring young. Though ſhe was ſorely wounded, and could but juſt crawl to the place where they lay, ſhe carried the lump of fleſh ſhe had fetched away, as ſhe had done the others before, tore it in pieces, and laid it down before them; and when ſhe ſaw that they refuſed to eat, ſhe laid her paws firſt upon one, and then upon the other, and endeavoured to raiſe them up. All this while it was pitiful to hear her moan. When ſhe found ſhe could not ſtir them, ſhe went off; and, when ſhe had got at ſome diſtance, looked back and moaned, and that not availing her to entice them away, ſhe returned, and ſmelling round them, began to lick their wounds. She went off a ſecond time, as before, and having crawled a few paces, looked again behind her, and, for ſome time, ſtood moaning. But ſtill, her cubs not riſing to follow her, ſhe returned to them again; and, with ſigns of inexpreſſible fondneſs, went round one, and round the other, pawing them, and moaning. Finding, at laſt, that they were cold and lifeleſs, ſhe raiſed her head towards the ſhip, and, like Caliban in the tempeſt, growled a curſe upon the murderers; which they returned by a volley of muſquet-balls, when ſhe fell between her cubs, and died licking their wounds."

On the 7th of Auguſt, the boats being ready, and properly fitted with weather-cloths to keep off the cold, if they ſhould be ſo fortunate as to launch them; every man was furniſhed with a bag, containing bread for twenty-five days, and what neceſſaries he choſe to take; the other requiſite proviſions, liquors, utenſils, &c. being ſtowed in the boats. Having made theſe preparations, a detachment of fifty men, under their reſpective commanders, was ordered from each ſhip, to begin the arduous and difficult undertaking of dragging the boats thus laden over the ice. The commodore took upon himſelf the direction of theſe two parties, and left captain Lutwidge to take care of the ſhips with the remaining part of their crews.

Previous to their ſetting out, a ſtrict order had been given, that no man whatever ſhould encumber himſelf with more cloaths than what he wore upon his back; which prohibition occaſioned the following whimſical circumſtances: The officers, in order to provide themſelves with habits ſuitable to the extremity of cold which they might probably experience, had thrown off their own cloaths, and put on warm flannel garments. The men obſerving this, and thinking it a great pity that ſuch good laced cloaths ſhould be loſt, rejected their own, and put on the cloaths of the officers, that they might at leaſt be fine in the midſt of their difficulties. Hence the two bands, when properly harneſſed to draw the boats, made a moſt motly, and whimſical appearance; nor were they in the leaſt afflicted; they had the ſhip's muſic to play before them; not a gloomy countenance was to be ſeen, but, inſtead of appearing terrified at the dangers that ſurrounded them, they, to a man, were as jovial and merry as if they were in perfect ſafety, and drinking with each other in old England.

After exerting the greateſt induſtry, and labouring with aſtoniſhing aſſiduity, they had proceeded but one mile at the expiration of ſix hours, which was the time the commodore had ordered the dinner for himſelf and the officers to be brought after them. The head cook having dreſſed it, ſet out with his mates to bring the different diſhes, under covers, towards the boats; but having unluckily ſwallowed too much brandy, in order to fortify themſelves againſt the cold (which they imagined would aſſail them with double rigor after juſt coming from the fire ſide) they could not conveniently ſteer ſtrait, but were ſometimes very near boarding each other. Having proceeded about half way, they came to a chaſm, or parting of the ice, which they were obliged to leap. The mates vaulted over pretty well, and balanced themſelves tolerably, conſidering their drunken condition; but, after making the beſt effort he was able, down came the head cook; when diſh, cover, meat, and the commodore's ſervice of plate, fell through the aperture into the ſea, and diſappeared in a twinkling. This accident, in ſome meaſure, ſoberized the poor cook; who, after ſcratching his head, very ſignificantly ſaid, "Rat it, now am I quite puzzled to know, whether I had beſt jump into the ſea after the plate, or go and let the commodore know what a confounded accident I have met with." After mature deliberation upon this weighty matter, it was at length agreed, that the cook ſhould throw himſelf upon the commodore's mercy, and truſt to his good-nature, "For (obſerved one of the mates) "his honour is a kind-hearted gemman, and will never take away a man's life for a ſlip upon the ice; beſides, it was a great jump for a fat man, and commodore would rather loſe all the plate in the great cabin, than loſe cooke." This curious mode of reaſoning, in ſome meaſure, comforted the cook; he did not, however, chooſe to go to the commodore, till he had diſpatched the mates firſt to carry the remainder of the proviſions, and to inform that gentleman of the diſaſter which had befallen him. When the commodore had heard the tale, he aſked where the cook was.—"He's blubbering and crying behind, an pleaſe your honour," ſays one of them. When the cook came up, "Cook, ſaid the commodore, bring me your dinner, I will dine to day with my comrades." "My dinner," ſaid the cook, "a pound of the fleſh next my heart, if your honour likes it." This reply, uttered with the voice of ſincerity, pleaſed the commodore more than the moſt ſumptuous entertainment would have done.

Soon after dinner, word was brought, that the whole maſs of ice had changed its ſituation, and was parting; and that the ſhips were afloat. The men were inſtantly ordered to the ſhips to aſſiſt in working them. This joy was, however, ſhort-lived; for the ice reaſſumed its former ſituation, and, what was worſe, the ſhips, from having been ſet a-float, were in more danger of being cruſhed to pieces than before. The crews of both ſhips now thought their condition more deſperate than ever; none could go back to the boats, as it was neceſſary that all hands ſhould be employed in defending the ſhips from immediate deſtruction with their ice-poles. But when all were exhauſted with fatigue, and very little hope ſeemed to remain, providence, on a ſudden, relieved them. A briſk wind ſprung up, the ice ſuddenly ſeparated and broke aſunder, with a noiſe which exceeded the loudeſt clap of thunder; ſome fragments formed themſelves, almoſt inſtantaneouſly, into huge mountains, and others coaleſced into plains, while various channels opened between the diſuniting parts of the late tremendous barrier of congealed waters. Every countenance cleared up, all hearts revived, and the ſails were ſpread with alacrity. A party was diſpatched to regain the boats, which the men effected with great difficulty. "And now," ſays the author of the journal, "they had time to admire the ice which had parted from the main body, as it no longer obſtructed their courſe; the various ſhapes in which the broken fragments appeared were, indeed, very curious and amuſing. One remarkable piece deſcribed a magnificent arch, ſo large and completely formed, that a ſloop of conſiderable burthen might have ſailed through it without lowering her maſt. Another repreſented a church, with windows, and pillars, and domes; and a third, a table, with icicles hanging round it like the fringes of a damaſk table-cloth. A fertile imagination might here find entertainment enough; for, as has already been obſerved, the ſimilitude of all that art or nature has ever yet produced, might here be fancied."

Both ſhips now determined to ſteer immediately for England, and nothing worth recording happened tillt he 11th of September, when the ſhips parted in a ſtrong gale of wind, and did not come into company again till the 26th of the ſame month, when they met off Harwich, and four days after came to anchor at Deptford.

SECT. II.

An account of the attempts made to find out a north-weſt paſſage to America.

IT has been generally ſuppoſed, and with reaſon, that the Hudſon's Bay company, though bound by their charter to promote the diſcovery of a north-weſt paſſage, hath taken every method to prevent the accompliſhment of it. And it is notoriouſly known, that captain Middleton, who, in 1740, was ſent by government upon that ſervice, was publicly charged with having received

5000l.

5000 l. as a bribe from the members of that company, to defeat the undertaking, or at leaſt to conceal the ſucceſs of it. But to ſpeak regularly of the attempts made to diſcover this paſſage; Sebaſtian Cabot was the firſt navigator who undertook the enterprize, and made two voyages in conſequence of it, in which he diſcovered Newfoundland and the coaſt of the Eſquimeaux Indians. Indeed he penetrated to the 64th degree of latitude, when his crew mutinied, and obliged him to return home.

The next navigator who undertook this diſcovery was Sir Martin Forbiſher, the diſcoverer of Greenland. He was unſucceſsful in his enterprize, made about the year 1576; but, like his predeceſſor, Sebaſtian Cabot, inſiſted upon its poſſibility and practicability.

In 1583, Sir Humphry Gilbert, by the direction of Sir Francis Walſingham, principal ſecretary of ſtate, ſailed upon the ſame deſign to Newfoundland, and the great river St. Lawrence in Canada, took poſſeſſion of the country in the name of queen Elizabeth, and ſettled a fiſhing-trade there. This voyage was made upon the ſuggeſtion of a certain Greek mariner, who poſitively affirmed to ſome Engliſh gentlemen, that himſelf had paſſed through a great ſtreight to the north of Virginia from the north-weſt ocean, and offered to be the pilot for the diſcovery, but died before he came into England.

In 1583, Mr. John Davis, having undertaken, with two barks, to ſearch out the north-weſt coaſt, made farther diſcoveries in theſe parts, and named the land he came to Cape Deſolation, being a part of Groenland; where he found many pieces of fur and wool like beaver's, and exchanged ſome commodities with the natives, who often repaired to him in their canoes, bringing ſtag-ſkins, white hares, ſmall cod, muſcles, &c. Afterwards he arrived in lat. 64, 15, where he found a great quantity of ſuch ore as Forbiſher had before brought into England.

In 1586, he made a ſecond voyage to the ſame coaſt, ſearching out many places towards the weſt; and the next year, in a third voyage, he came to the lat. 72. 12. the compaſs varying 82 degrees to the weſtward. He gave the name of London Coaſt to the land, which is part of Groenland: and the ſtreight, being 40 leagues wide, was from him called Davis's Streight.

In 1610, that famous navigator Mr. Henry Hudſon, who had in vain attempted to find a north-eaſt paſſage, was appointed to make a trial in the north-weſt. He proceeded 100 leagues farther than any had done before, and gave ſeveral denominations to certain places; as Deſire provokes, Iſle of God's Mercy, Prince Henry's Cape, King James's Cape, Queen Anne's Cape, &c. beſides the ſtreights and bays that ſtill bear his name. But the ice hindered him from continuing his courſe farther, and the ſedition of his men from returning home.

In 1611, Sir Thomas Button, ſervant to Henry prince of Wales, eldeſt ſon of king James I. being enjoined by that renowned young prince to purſue the north-weſt diſcovery, paſſed through Hudſon's ſtreight, and, ſailing above 200 leagues to the ſouth-weſtward, over a ſea above 80 fathoms deep, diſcovered a large continent, which he called New-Wales. Afterwards, having endured great fatigues in his wintering at port Nelſon, notwithſtanding the loſs of many of his men, he ſearched out the whole bay, which is known by his name, and found out the large tract of land, which he named Cary's Swan's Neſt.

In the years 1612, 1615, 1616, James Hall and William Baffin proceeded much farther in theſe north-weſt parts, and impoſed names on divers places diſcovered by them: beſides that, the Engliſh merchants, perceiving theſe northern voyages to be very profitable, by reaſon of the great quantity of rich furs that were brought from thence, increaſed their number of ſhips to 13 or 14 yearly, under the conduct of Poole, Fotherby, Edge, Hely, and other ſkilful pilots; from whom ſeveral ſounds, bays, promontories, &c. have received their reſpective names.

The Danes alſo made ſeveral attempts to diſcover a north-weſt paſſage, but with no ſucceſs. In the year 1612, John Munck, or Munick, was ſent out with two ſhips, which arrived ſafely at Cape Farewell, from whence this pilot ſailed to lat. 63, 20, where he wintered; called this place Munck's Winter Harbour, and the continent New-Denmark: but of all his company, which conſiſted of 46 in a ſhip, and 16 in a pinnace, ſcarce ſo many were left alive as were able to bring the pinnace, through extreme danger, to their own country.

We do not read of any more voyages from England to find out a north-weſt paſſage, ſince the laſt expedition of William Baffin in 1616, until the reign of king Charles I. when captain Luke Fox was ſent upon the ſame deſign in 1630, in his majeſty's pinnace named the Charles, victualled for 18 months. He traced Forbiſher, Hudſon, Davis, Button, and Baffin; meeting with whales, much ice, and fowls. He built a pinnace in port Nelſon, where he found ſeveral remains left by Sir Thomas Button, but no natives or inhabitants; though in other parts of thoſe ſeas he ſaw ſome ſavages.

In the year 1631, captain Thomas James, being employed by the merchants of Briſtol for the like purpoſe, ſailed from cape Farewell, by the iſland of Reſolution, to Milli and Nottingham iſles, as alſo thoſe of Manſfield; from whence he ſteered over a large bay to the weſtward of port Nelſon, and named the land New-South-Wales: hereabouts meeting with captain Fox, they congratulated each other, but were ſoon ſeparated by foul weather. Captain James ſtill continued roving up and down, and giving names to divers places; ſuch as cape Henrietta Maria, Lord Weſton's iſland, the earl of Briſtol's iſland, Sir Thomas Roe's iſland, earl of Danby's iſland, Charlton iſland, &c. In this laſt he wintered, in lat. 52, 3, and having built a little pinnace out of his ſhip, paſſed over to Cary's Swan's Neſt, whence he returned to cape Charles, and Saliſbury iſle, and arrived on the coaſt of England in 1632.

The next attempt was made by captain Middleton, as already mentioned; and many imagine that he really found the paſſage ſo long ſought for, but by ſiniſter means was prevented from revealing the diſcoveries he had made, and even by the influence of bribery, was induced to publiſh a falſe journal of his voyage. So much does private avarice prevent the ſucceſs of public diſcoveries.

The legiſlature being made ſenſible of theſe proceedings, paſſed an act for the encouragement of adventurers, to attempt the diſcovery of the north-weſt paſſage, offering, at the ſame time, ſo liberal a reward, as would probably preclude the effects of bribery in preventing the ſucceſs of any future expedition. The words of the act are, "That whereas a diſcovery of a north-weſt paſſage through Hudſon's ſtreight, to the weſtern ocean, would be of great benefit and advantage to this kingdom, and that it would be of great advantage to the adventurers to attempt the ſame, if a public reward was given to ſuch perſons as ſhould make a perfect diſcovery of the ſaid paſſage: It is therefore enacted, that if any ſhips or veſſels belonging to his majeſty's ſubjects, ſhall find out and ſail through any paſſage by ſea between Hudſon's bay and the Weſtern Ocean of America, the owners of ſuch ſhips, or veſſels, ſhall be entitled to receive, as a reward for ſuch diſcovery, the ſum of 20,000 l.

SECT. III.

The Natural Hiſtory of GREENLAND, *commonly called* EAST-GREENLAND, *or* SPITZBERGEN.

THIS country was diſcovered by Sir Hugh Willoughby, in the year 1553, and by him called Greenland, the appellation of Spitzbergen, which ſignifies ſharp mountains, was afterwards given to it by the Dutch. It extends from the 76th to the 82d deg. of north lat. but the whole of its boundaries are not known. However, on the weſt it has the northern ocean; on the ſouth the ſame ocean between it and the Ruſſian Lapland, and the northernmoſt part of Norway, over-againſt which it lies; on the eaſt it has an undiſcovered country, to which it is joined by an iſthmus. On the weſt ſide of Spitzbergen lies Charles Iſland, which is divided from the main land by a narrow ſtreight called Foreland-Ford; between which, and Muſcle-Haven, are the higheſt mountains, moſt of which are of a red colour, and reflect the ſun's beams ſo as to ſeem all on fire: but ſeven of the mountains, all of a remarkable ſharpneſs, are of a fine ſky-blue. South-Haven is the moſt commodious place on the iſland, affording all the conveniences neceſſary for repairing leaky or damaged ſhips; and is ſo large, that 30 or 40 ſail may ride at anchor there very conveniently: here alſo may be had freſh water, from the melting of the ſnow; for as to the rivers they are brackiſh, as far as hitherto they have been

been diſcovered; and no ſprings or wells have yet been found. The mountains about South-Haven are very high, eſpecially on the left; and in the midſt of the harbour is an iſland called Dead-man's Iſland, becauſe ſuch as die in the voyage are uſually buried there. The next capacious haven is that called by the Dutch, Maurice bay, where ſome of them have wintered; near this place were a few cottages, built by the Dutch for the conveniency of making their oil: and this place they call Smearburg, or Smearingburg, or the Haerlem Cookery. In the north bay there is an iſland called Vogel-Sang by the Dutch (i. e. Bird-Song), from the great noiſe which the fowls make when they take their flight. Deer-Sound is ſo called from the abundance of deer which feed about it, though the ſoil ſeems to be all ſlates ſet edge-wiſe (Harris's collection.) Muſcle-Haven lies at the mouth of the Waygate, north of which, Martens ſays, he ſailed to 81 degrees, and ſaw ſeven iſlands, but could not approach them becauſe of the ice: the loweſt part of that country lies about this harbour. The Waygate, mentioned here, muſt not be miſtaken for the famous ſtreight of that name, which lies between Nova Zembla and the main land of Samoieda. Waygate here meant is a harbour, of which the Dutch voyagers ſay they do not know whether it goes through the country. They call it by this name becauſe of the winds which frequently blow there; and about this place, they tell us, the country is low, and adorned with ſmall hills. Rocfield harbour is ſo called becauſe it abounds with deer. Alderman Freeman's inlet, called by the Dutch, Walter Thymen's Fort; is the large mouth of a river which is not yet diſcovered. The voyages mention alſo the Engliſh, Daniſh, Hamburg, and Magdalen havens; with one called the Bay of Love, but not ſo diſtinctly as to enable us to judge whether they be different from thoſe already mentioned, with Dutch or Engliſh names. But we muſt not forget to mention Bell-Harbour, on the weſtern coaſt of this country, where, in the year 1630, eight Engliſh ſailors wintered, and ſuffered very great hardſhips, during 9 months and 12 days, the ſingular circumſtances of which we ſhall relate hereafter.

The above is from the concurrent teſtimonies of moſt voyagers, previous to the late expedition under commodore Phipps. The account given by the writer of that voyage, corroborates what they have ſaid, and adds ſome new particulars, for which reaſon we ſhall tranſcribe it. "This country (ſays the journaliſt) is ſtony, and as far as can be ſeen, full of mountains, precipices, and rocks. Between theſe are hills of ice, generated as it ſhould ſeem, by torrents that flow from the melting of the ſnow on the ſides of thoſe towering elevations, which being once congealed, are continually encreaſed by the ſnow in winter, and the rain in ſummer, which often freezes as ſoon as it falls. By looking on theſe hills, a ſtranger may fancy a thouſand different ſhapes of trees, caſtles, churches, ruins, ſhips, whales, monſters, and all the various forms that fill the univerſe. Of the ice hills, there are ſeven that more particularly attract the notice of ſtrangers. Theſe are known by the name of the Seven Icebergs, and are thought to be the higheſt of the kind in that country. When the air is clear, and the ſun ſhines full upon theſe mountains, the proſpect is inconceivably brilliant. They ſometimes put on the bright glow of the evening rays of the ſetting ſun when reflected upon glaſs at its going down: ſometimes they appear of a bright blue like ſapphire, and ſometimes like the variable colours of a priſm, exceeding in luſtre the richeſt gems in the world, diſpoſed in ſhapes wonderful to behold, all glittering with a luſtre that dazzles the eye, and fills the air with aſtoniſhing brightneſs."

When every object is new, it is not eaſy for a ſtranger to fix which firſt to admire. The rocks are ſtriking objects; before a ſtorm, they exhibit a fiery appearance, and the ſun looks pale upon them, the ſnow giving the air a bright reflection. Their ſummits are almoſt always involved in clouds, ſo that it is but juſt poſſible to ſee the tops of them. Some of theſe rocks are but one ſtone from top to bottom, appearing like an old decayed ruin. Others conſiſt of huge maſſes, veined differently like marble, with red, white, and yellow, and probably were they to be ſawed and poliſhed, would equal, if not excel the fineſt Egyptian marble we now ſo much admire. Perhaps the diſtance and danger of carrying large blocks of ſtone, may be the reaſon that no trials have been made to manufacture them. On the ſoutherly and weſterly ſides of thoſe rocks, grow all the plants, herbs, and moſſes peculiar to this country. On the northerly and eaſterly ſides, the wind ſtrikes ſo cold when it blows from theſe quarters, that it periſhes every kind of vegetable. Theſe plants grow to perfection in a very ſhort time. Till the middle of May the whole country is locked up in ice; about the beginning of July the plants are in flower, and about the latter end of the ſame month, or the beginning of Auguſt, they have perfected their ſeed. The earth owes its fertility, in a great meaſure, to the dung of birds, who build and breed their young here in ſummer, and in the winter retire to more favourable climates.

The rocks and precipices are full of fiſſures and clefts, which afford convenient harbour for birds to lay their eggs, and breed their young in ſafety. Moſt of theſe birds are water-fowls, and ſeek their food in the ſea: ſome indeed are birds of prey, and purſue and kill others for their own ſuſtenance, but theſe are rare; the water-fowl eat ſtrong and fiſhy, and their fat is not to be endured. They are ſo numerous about the rocks, as ſometimes to darken the air when they riſe in flocks; and they ſcream ſo horribly, that the rocks ring with their noiſe.

"The air about Spitzbergen is never free from icicles; if you look through the ſun-beams tranſverſely as you ſit in the ſhade, or where you ſee the rays confined in a body, inſtead of dark motes as are ſeen here, you ſee myriads of ſhining particles that ſpangle like diamonds; and when the ſun ſhines hot, as it ſometimes does ſo as to melt the tar in the ſeams of ſhips when they lie ſheltered from the wind, theſe ſhining atoms ſeem to melt away, and deſcend like dew."

It is ſeldom that the air continues clear for many days together in this climate, but when that happens, the whalers are generally ſucceſsful. There is no difference between night and day in the appearance of the atmoſphere about Spitſbergen, one being as light as the other; only when the ſun is to the northward, you may look at him with the naked eye, as at the moon, without dazzling. The fogs here come on ſo ſuddenly, that from bright ſunſhine, you are preſently inveloped in ſuch obſcurity, that you can hardly ſee from one end of the ſhip to the other."

The cold of this country is generally very intenſe, but in the extremity of winter it is intolerable, particularly when the wind blows from the north or the eaſt. The air is tolerably calm during the months of June, July, and Auguſt; not but the wind ſometimes blows incredibly cold even at this ſeaſon, and the froſt continues without intermiſſion. The ſea-water here is leſs ſalt than in ſoutherly climates, and changes its colour with the ſky, that is, in a clear air it appears blue, when the atmoſphere is overcaſt with clouds, it ſeems green, during fogs it is yellow, and quite black in ſtormy weather.

The ſun uſually appears in this country about the beginning of February, and diſappears about the firſt of October. From May to Auguſt he continues above the horizon without ſetting, and then the night and day are diſtinguiſhable only by his appearing either in the eaſtern or weſtern parts of the heavens. The face of this country exhibits ſcarce any thing but rugged rocks and barren mountains that riſe into the clouds, or vallies choaked up with ſtones and ice that fall from thoſe mountains. About Deer Sained and Muſcle Haven there are ſome detached pieces of low lands, which are uſually covered with ſnow; but in a fine ſummer, when that diſſolves, a coat of heath and moſs is ſeen interſperſed with a few plants. No ſprings have been hitherto found here, and the rivers are all brackiſh; but thoſe inconveniencies are ſufficiently recompenced by the great plenty of ſnow-water, which is at once healthful and pleaſant.

The vegetables of Spitſbergen are, excellent ſcurvy-graſs, ſorrel, wild lettuce, mouſe-ear, ſnake-root, ground-ivy, hearts-eaſe, limeworth, ſea-bugloſs, wild ſtrawberries, wall-pepper, and houſeleek. "Theſe, ſays a learned author, are conſidered as effectual remedies ſupplied by the hand of providence for the cure of the ſcurvy, and other diſeaſes incident to the adventurers who yearly viſit this inhoſpitable country. The ſcurvy-graſs here, as in many other northern climates, has no pungency to

the taſte, but is mild and eſculent, grateful to the palate, and ſuch an excellent anti-ſcorbutic, that the ſeamen term it the *Gift of God*. Although the ſhips employed in the whale-fiſhery are, of all others, the beſt ſupplied with good proviſions, and plenty of freſh-water, yet the mariners are in theſe northern latitudes much more ſubject to the ſea-ſcurvy than in any ſouthern voyage. The attack of the malady is here more ſudden, and the progreſs of it more rapid. The patient feels its ſymptoms encreaſe as he advances nearer the pole; nor does he enjoy the leaſt alleviation until the weather ſoftens in the month of July, which is very moderate, and indeed the only interruption of winter. Then the ſcurvy-graſs appears in plenty as an infallible cure, and performs wonders, reſtoring, in a few days, to health and vigour, thoſe who were ſeemingly in the laſt mortal ſtage of the diſtemper."

The other vegetable productions of this country are, poppies, helebore, dandelion, mountain-heath, ſaxifrage, dwarf-willow, &c. but all are ſmall and ſtunted in their growth; the natural conſequence of a ſcanty ſoil and inclement ſky.

Here is an aquatic vegetable peculiar to this country, called the rock plant; the leaves are ſhaped like a man's tongue, about ſix feet long, of a dull yellow colour, the ſtalk is round and ſmooth, and of the ſame colour with the leaf, it riſes tapering, and ſmells like muſcles. It grows in the water, and riſes in height, in proportion to the depth of water in which it is found.

In the year 1737, a well known Greenland captain, named Cracraft, brought to England ſeveral pieces of gold, which he found accidentally in a hunting excurſion among the rocks of Spitzbergen. This diſcovery, however, was not proſecuted. Alabaſter, Selenites, and Lapis Spicularis are found here; and naturaliſts conjecture that the country abounds in iron ore.

Few land-birds are ſeen in this country, except partridges, a few birds of the ſnipe kind, ſome ſmall birds that, even in this dreary climate, ſometimes warble ſweetly, the ſnow-bird and the ice-bird; the latter is a ſmall but very beautiful bird; in ſize and ſhape it reſembles the turtle-dove, but the plumage, when the ſun ſhines upon it, is of a bright yellow, like the golden ring in the peacock's tail, and almoſt dazzles the eye to look upon it.

The Greenland fox differs but little in ſhape from thoſe we are acquainted with; but, in colour, there is no ſimilitude, for the body is white and the head black. Foxes are ſeen here in great plenty; they are exceeding ſwift, and very ſubtle; ſo that it is a difficult matter to catch them. The author of commodore Phipps's voyage ſays, "The Dutch ſeamen report, that when they (the foxes) are hungry, they will feign themſelves dead; and when the ravenous birds come to feed upon them, they riſe and make them their prey."

The deer of this country are large, grey, and ſhaggy, with branching horns, ſhort tails, and long ears. Their fleſh is of an admirable flavour; and, in the ſummer ſeaſon, they are exceeding fat, which is owing to their feeding on the yellow moſs; this natural ſtore of fat enables them to ſubſiſt during the winter; many of them are, however, ſtarved to death; and all in general appear extremely thin and meagre in the ſpring. On this occaſion a learned gentleman ſays, "In all probability theſe animals ſleep in caverns, during the winter, like the bears in Norway. Perhaps the abundance of poppies in this country may diſpoſe them to a lethargy, which ſeems neceſſary for their preſervation, as little or no nouriſhment is required for animals that have no exerciſe, and a languid circulation." Theſe deer fly at the ſight of a human creature, but immediately ſtop when their purſuers ſtop, and thus are ſhot with facility.

The bears here have long ſnouts, and bark in a huſky manner, like dogs that are hoarſe. They are large, white, lean, ſwift, and fierce. Some have been found that were ſix feet high, four long, and which yielded an hundred weight of fat. The largeſt kind are termed water-bears, becauſe they are fond of ſubſiſting chiefly on the productions of the ſea, and have been ſeen near twenty miles from the ſhore. When a bear is attacked, he makes a dreadful roaring, and his companions, who are within hearing, immediately run to his aſſiſtance. A ſhe-bear will ſuffer herſelf to be killed, rather than abandon her cubs; notwithſtanding which attachment, when a bear is found dead, his fellows will eat him without the leaſt ſcruple. Theſe creatures are ſo ſtimulated with hunger, that they frequently venture to attack whole armed crews, and have been known to take to the water, and attempt to board large veſſels. They are ſo tenacious of life, that they ſometimes eſcape with many ſhots in their bodies. They are attacked with muſquets and lances; and, when at bay, riſe on their hind legs, and frequently break the lances of the aſſailants; ſo that they are not aſſaulted without imminent danger; they take to the water naturally, and ſometimes, when attacked in that element, dive like an otter.

Here are innumerable ſwarms of water-fowl, ſuch as are common to all the northern countries of Europe, and ſeals, ſea-horſes, whales, &c. Of the latter, and the manner of taking them, we ſhall treat in the ſucceeding ſection.

SECT. IV.

Of the Greenland *Whale, and Whale-Fiſhery.*

AS for the fiſh on this coaſt, they deſerve notice, becauſe the taking them is the ſole motive that brings ſhips into thoſe ſeas, where the whale-fiſhing is carried on with great profit. The true large whale differs from the reſt of the fiſh ſo called, by his having no teeth, inſtead of which, on each ſide of the upper jaw, grows the whale-bone, in four or five hundred different blades, at equal diſtances, ſome exceeding twelve feet in length, and a foot broad at bottom, growing narrow upwards, like the ſticks of a fan inverted, the largeſt of them weighing about twenty pounds. He contracts and dilates the diſtances of thoſe blades at the ſhutting and opening his mouth, making them ſerve as ſtrainers, to ſeparate the water from the ſhrimps, prawns, and ſuch ſmall fiſh as his food conſiſts of; and for the ſame purpoſe, on the inſide of the bone, next to the tongue, grows a quantity of hair, to make ſtill a finer percolation, or ſtraining; which is the more neceſſary, becauſe, notwithſtanding the bulk of a whale's body, the throat of the largeſt is not above a foot wide. The head makes near a third part of the whole body, with very ſmall eyes in the midſt of it, conſidering the ſize of the creature, and the eye-lids are fringed with hair like thoſe of a man. Inſtead of the ears, appear on the outſide only two holes, ſo ſmall, that they can hardly be found out, and will ſcarce admit of a ſingle ſtraw; but within the head they have a larger orifice, and are formed like ears, which afford them a ſharp hearing. On the top of the head he has two pipes, for the drawing in and out of the air, and diſcharging the water which he ſwallows in his mouth, and which is forced out through theſe holes in a vaſt quantity, and to a great height. The tongue is very large; in ſome whales of the ſize of an ordinary wool-pack, and will yield near ſix hogſheads of oil. His bones are hard, like thoſe of four-footed beaſts; but, inſtead of having one large cavity in the middle, are porous, and full of marrow. His belly and back are quite red; his fleſh is coarſe and hard, like that of a bull, mixed with many ſinews, and is very dry and lean, becauſe the fat lies between the fleſh and the ſkin. The fat is mixed with ſinews, which holds the oil as a ſponge does water: the other ſtrong ſinews are about the tail, with which he turns and winds himſelf, as a ſhip is guided by a rudder. He ſwims with great celerity, and makes a track in the ſea like a large ſhip under ſail. Beſides the uppermoſt thin ſkin, there is another almoſt an inch thick, but neither of them are very ſtrong, which is believed to be the reaſon why the whale does not exert that great force, that might be expected from a fiſh of its ſize. They are mightily tormented with lice, which makes them ſometimes ſpring out of the ſea in an agony. It is alſo believed that they feel great pains in their bodies before a ſtorm, which makes them twiſt and tumble violently, while the wind blows from the eaſt; they are, however, harmleſs, unleſs provoked, and rather of a timorous nature, though ſome of them will now and then approach very cloſe to a ſhip. The middle ſort of them are from fifty to ſixty feet long, and yield from ſeventy to an hundred barrels of blubber; though ſometimes they are much larger. Martens mentions one that yielded an hundred and thirty hogſheads. This blubber lies immediately under the ſkin, and is extremely valuable.

The method of catching whales is thus: as ſoon as a ſhip arrives at a large field of ice, as it is termed, three or four boats are put out to watch for the whale's coming from beneath the ice, which is judged of by the noiſe they make in approaching and riſing. When the whale gains the ſurface of the water, the harpooner ſeizes the opportunity to dart the harpoon either into his body, or near his ſpout, for there is no ſtriking into the bone of his head. When the whale is ſtruck, the other boats which are near at hand approach to give aſſiſtance, and an oar is put up at the head of the harpooner's boat, who wounded the animal, and they cry out, *fall! fall!* upon which token other boats from the ſhip join thoſe already concerned, to render every needful help as exigences may require. As ſoon as the whale is ſtruck, they take care to give him rope enough, for otherwiſe, when he goes down, as he frequently does, he would inevitably ſink the boat; and this rope he draws ſo quick, that if it were not well watered, it would ſet the boat on fire. The line faſtened to the harpoon is ſix or ſeven fathom long, and is called the forerunner: it is made of the fineſt and ſofteſt hemp that it may ſlip the eaſier; to this they join a heap of lines, of ninety or an hundred fathom each; and when there are not enough in one boat, they borrow from another. The man at the helm obſerves which way the rope goes, and ſteers the boat accordingly, that it may run exactly out before; for the whale runs away with the line as faſt as the wind, and would overſet the boat if it were not kept ſtrait: during which the other boats row before, and obſerve which way the line ſtands, and ſometimes pull it: if they feel it ſtiff, it is a ſign the whale ſtill pulls in ſtrength; but if it hangs looſe, and the boat lies equally high, before and behind, upon the water, they pull it in gently, but take care to lay it ſo, that the whale may have it eaſily again, if he recovers ſtrength: they take care, however, not to give him too much line, becauſe he ſometimes entangles it about a rock, and ſo gets looſe. When this happens, however, if he is afterwards taken by the crew of another ſhip, he is returned to thoſe who firſt wounded him, as that is known by the harpoon, which is always diſtinguiſhed by a peculiar mark. They begin to ſtink as ſoon as they expire, and their fleſh ferments, creating ſuch a ſteam, as inflames weak eyes. When they ſee him ſpout out blood, they know that he draws towards his end, and then prepare for cutting him up. In order to this, they hawl him cloſe to the ſhip-ſide, and with great knives ſlice his ſides, raiſing the blubber by a hook and a pully, which they lift up as they cut: and in this work they muſt be extremely expeditious, otherwiſe the ſharks which abound here will have a greater ſhare of the fleſh than the whalers themſelves. Of the great flakes of fleſh they uſed formerly to make their oil upon the ſpot, but at preſent the blubber is barrelled up, and brought to England, Holland, &c. to be boiled at leiſure, the huts at Spitzbergen being rather neglected; and ſome ſhips even return from the whale fiſhery without ſeeing that country, ſuch veſſels proceeding no farther than a certain latitude, and there fiſhing without being moleſted by a lee ſhore, ice, or currents. The ſhips that uſe this trade uſually carry from 30 to 50 men, ſix or ſeven boats, and from 400 to 800 hogſheads of blubber. Their arms conſiſt of ſixty lances, ſix ſea-horſe lances, forty harpoons, ten long harpoons for ſtriking whales under water, ſix ſmall ſea-horſe harpoons, and thirty lines of ninety or an hundred fathoms each.

Seal-catching alſo makes a valuable branch of the fiſhing practiſed in theſe ſeas; 300 ſeals yield near as much blubber as a middling ſize whale. The ſeals are not harpooned, but generally knocked on the head with clubs; and many bears are likewiſe ſhot, killed with lances, &c. upon the ice. The ſhips ſet ſail in February for the ſeal fiſhery, and in April for the whale fiſhery, government allowing a bounty to theſe ſhips of 40s. per ton, as far as 300 tons, ſo that a ſhip of ſuch a burthen receives 600l. bounty money. If a ſhip is clear of the ice after the firſt of June, and goes back again, or if it is known that ſhe carries out with her leſs than ſix months proviſions, ſhe forfeits her bounty.

Within the body of the whales is ſeldom found any thing but ten or twelve handfuls of a kind of ſmall black ſpiders, and ſome ſmall quantity of green herbs, torn up from the bottom of the ſea, which are ſuppoſed to be the food upon which the whales chiefly live: the ſea hereabouts is ſo covered with theſe inſects, that it appears quite black; which is a ſign, to thoſe who go about catching of whales, that they are like to make a good booty. The whales generally delight in that part of the ſea which produces theſe inſects.

Of the whale kind there are alſo the dragon fiſh, long, thin, grey and glittering, with two fins on his back, and two holes, through which he ſpouts the water.

The Butſhorf, or laced head, is ſixteen feet long, with a ſpout-hole in his neck, a brown back, and a white belly.

The white-fiſh is as long as the butſhorf, but much fatter.

The ſea-unicorn whale is from ſixteen to twenty feet in length, with a ſpout-hole in his neck, and projecting from his ſnout a fine wreathed horn, for which he is principally valued. The throne of his Daniſh majeſty is entirely compoſed of theſe horns, which were formerly deemed ſpecifics againſt poiſon.

The Fin-fiſh whale is as long as the blubber, or whalebone whale, but it is not above a third part as bulky; it is known by the fin on the back near the tail, and by the ſpouting up of the water more violently, and higher than the other whale. The back is ſtraighter than that of a whale, and the lips are of a browniſh colour, appearing like a twiſted rope. The whalebone hangs from the upper lip, as it does in the whale, but not out of the mouth at the ſides, as in that animal. The inſide of the mouth, between the whalebones, is all over hairy, and is of a blue colour, that is, when the bone begins to grow; for the other is brown with yellow ſtreaks, which are thought to be the oldeſt. The colour of this fiſh is like that of a tench; and the ſhape of the body is long and ſlender. The tail is flat like that of the whale, and he ſeldom appears till the whales are gone. All theſe creatures ſwim before the wind, and are obſerved to tumble immediately before ſtorms; a circumſtance from which ſome naturaliſts have concluded, that from the change in the atmoſphere they are ſeized with the cramp in their bellies.

The whale is harraſſed by a variety of enemies, beſides the vermin which adhere to his body like lice; he is purſued by the ſaw-fiſh, or ſword-fiſh, ſome of which are twenty feet long. This fiſh is ſhaped like a man's arm, and his eyes are remarkably prominent, his ſword projects from his ſnout, of different lengths, according to the different ſizes of the fiſh, ſometimes ſmooth and ſharp, like a real ſword, ſometimes indented like a ſaw; hence the creature is called either ſword-fiſh, or ſaw-fiſh. A very few of theſe animals will attack and maſter a great whale; yet when they have ſlain him, they eat no part of him but the tongue. In calm weather the fiſhermen lie upon their oars as ſpectators of this combat, until they perceive the whale at the laſt gaſp, then they row towards him, and his enemies retiring at their approach, the fiſhermen enjoy the fruits of the victory. There is another more deſperate enemy of the whale, known by the name of the hay, which is of the ſhark kind; they are of different ſizes, from one to three fathoms long. The hay is ſo voracious, that it tears large pieces of fleſh from the whale as if they had been dug with ſhovels. The liver of this fiſh abounds in oil, and is exceſſively large. The fleſh on their backs, when dried ſome days in the air, is accounted tolerable proviſion, either boiled or roaſted, and the leſs the fiſh, the better. They are caught by a large hook, baited with fleſh, and faſtened to a long iron chain; and, if men fall overboard by accident, the hays in their turn devour them.

The whale, in ſcripture, is called leviathan. In the book of Job it is particularly mentioned; ſome part of the paraphraſe on which, by Dr. Young, we ſhall here preſerve:

" His bulk is chang'd with ſuch a furious ſoul,
" That clouds of ſmoke from his ſpread noſtrils roll,
" As from a furnace, and when round his ire,
" Fate iſſues from his jaws in ſtreams of fire:
" The rage of tempeſts, and the roar of ſeas,
" Thy terror, this thy great ſuperior pleaſe.
" Strength on his ample ſhoulders ſits in ſtate;
" His well-join'd limbs are dreadfully complete;
" His flakes of ſolid fleſh are ſlow to part,
" As ſteel his nerves, as adamant his heart:

" Large

" Large is his front, and when his burniſh'd eyes
" Lift up their lids, the morning ſeems to riſe.
" His paſtimes, like a cauldron, boil the flood,
" And blacken ocean with the riſing mud.
" The billows feel him as he works his way;
" His hoary footſteps ſhine along the ſea:
" The foam, high wrought with white, divides the green;
" And diſtant ſailors point where death has been."

SECT. V.

A curious narrative of the expedients made uſe of by eight ſeamen, who wintered in Greenland, to preſerve their exiſtence; and of their happy deliverance and return to their own country.

IT was not thought poſſible to live the year round in Greenland, until ſome ſhips were fitted out from England in the year 1630, of which the Salutation was one. This ſhip ſet ſail from the Thames on the firſt of May, and arrived there the 11th of the next month: the Salutation being in want of proviſions the latter end of the year, ſent eight men on ſhore at a place pretty much frequented by rein-deer, to kill veniſon, leaving them a boat, and orders to follow the ſhip to Green-Harbour, which lies to the ſouthward of the place where they went aſhore. Theſe men, having killed fourteen or fifteen deer, lay that night aſhore, and propoſed next day to have gone on board a ſhip; but a great quantity of ice driving towards the ſhore, obliged the ſhip to ſtand out ſo far to ſea, that when they came to Green-Harbour ſhe was out of ſight. However, the ſhips being to rendezvous in Belſound, further to the ſouthward, and being to leave the country within three days, our huntſmen began to be very anxious, leſt the ſhipping ſhould be gone from thence too before they arrived. They thought it proper therefore to fling their veniſon into the ſea, in order to lighten the boat, and make the beſt of their way to Belſound, diſtant from thence about ſixteen leagues: but none of them knowing the coaſt very well, they overſhot their port about ten leagues, when, ſenſible of their error, they returned to the northward; but one of their company being ſtill poſitive Belſound lay further to the ſouth, they were induced to ſail to the ſouthward again, till they were a ſecond time convinced of their miſtake; and then they turned their boat to the north again, and at length arrived at Belſound; but had ſpent ſo much time in rowing backwards and forwards, that the ſhips had actually left the coaſt, and were gone for England, to their great aſtoniſhment, being provided neither with cloaths, food, firing, or houſe to ſhelter themſelves from the piercing cold they were to expect in ſo rigorous a climate. They ſtood ſome time looking on one another, as men amazed at the diſtreſs they were on a ſudden reduced to; but their conſternation being a little abated, they began to think of the propereſt means to ſubſiſt themſelves during the approaching winter; and the weather being favourable, they agreed, in the firſt place, to go to Green-Harbour, and hunt for veniſon; having two dogs with them very fit for their purpoſe. On the 25th of Auguſt, therefore, they went in their boat to Green-Harbour, where they arrived in twelve hours, being 16 leagues to the northward of Belſound. Here they ſet up a tent made with their boat's-ſail, the oars ſerving for poles; and, having ſlept a few hours, went early next morning to their ſport, killing ſeven or eight deer and four bears, and the day following they killed twelve deer more, with which they loaded their boat; and, finding another boat which had been left there by the company, they loaded that with the greaves of whales (being the pieces which remain in the coppers, after the oil is drawn from them) and returned with their booty to Belſound. Here happened to be ſet up a large ſubſtantial booth, which the coopers worked in at the fiſhing ſeaſon: it was 80 feet long, and 50 broad, covered with Dutch tiles, and the ſides well boarded. Within this booth theſe ſailors determined to build another of leſs dimenſions, being furniſhed with boards and timber, by pulling down a booth which ſtood near the former; and from the chimnies of three furnaces, uſed for the boiling of oil, they got a thouſand bricks: they found alſo four hogſheads of very fine lime, which, mingled with the ſand on the ſea-ſhore, made excellent mortar. But the weather was now grown ſo cold, that they were obliged to have two fires to keep their mortar from freezing. They perſiſted, however, in their work, and raiſed a wall of a brick thickneſs againſt one of the ſides of their innermoſt booth; but wanting bricks to finiſh the reſt in like manner, they nailed thick boards on each ſide the timbers, and filled up the ſpace between with ſand; by which means it became ſo tight and cloſe, that the leaſt breath of air could not enter in; and their chimney's vent was in the greater booth. The length of this leſſer booth, or rather houſe, was twenty feet, the breadth ſixteen feet, and the height ten; their ceiling being made of deal boards five or ſix times double, and ſo overlaid, that no air could poſſibly come in from thence. Their door they did not only make as ſtrong and cloſe as poſſible, but lined it with a bed which they found there; and for windows they made none, except a little hole in the tiles of the greater booth, by which they received ſome little light down the chimney of the leſſer: the next work was to make them four cabbins, chuſing to lie two in each cabbin. Their bedding was the ſkins of the rein-deer, the ſame the Laplanders uſe; and they found them exceeding warm; and for firing they took to pieces ſome caſks, and ſeven or eight of the boats which were left behind (for it ſeems they uſe a great many boats in whale-fiſhing, which they leave in the country every winter, rather than be at the trouble of carrying them backwards and forwards.) Our ſailors ſtowed their firing between the beams and the roof of the greater booth, in order to make it the warmer, and keep out the ſnow, which would have covered every thing in the greater booth if it had nor been fot this concontrivance. Upon the 12th of September, obſerving a piece of ice come driving towards the ſhore, with two morſes (or ſea-horſes) aſleep upon it, they went out in their boat with a harping iron and ſpears, and killed them both; and on the 19th of the ſame month another, which was ſome addition to their food. But taking a very narrow ſurvey of all their proviſions, they found that there was not half enough to ſerve them the whole winter; and therefore they ſtinted themſelves to one meal a day, and agreed to keep Wedneſdays and Fridays as faſting-days, allowing themſelves then only the fritters or greaves of the whales; which, as has been obſerved already, are only the ſcraps of the fat of the whale, which are flung away after the oil is gotten out of them, and is very loathſome food. By the 10th of October, the nights were grown long, and the weather ſo cold, that the ſea was frozen over; and having no buſineſs now to divert their thoughts, as hitherto, they began to reflect on their miſerable circumſtances; ſometimes complaining of the cruelty of the maſter of the ſhip, in leaving them behind; and at others, excuſing him, and bewailing his misfortunes, as believing him to have periſhed in the ice. At length, putting their confidence in heaven, which only could relieve them, in their great diſtreſs, they redoubled their prayers for ſtrength and patience to go through the diſmal trial, and received great ſatisfaction from their devotions, which were, no doubt, as ſincere and fervent, as ever were offered up to the deity.

And now having ſurveyed their proviſions again, they found that the fritters of the whale were almoſt all mouldy, having taking ſome wet; and of their bear and veniſon there was ſcarce enough left to afford them five meals a week; whereupon it was agreed to live four days of the week upon the mouldy fritters, and the other three to feaſt upon bear and veniſon. And leſt there ſhould want firing hereafter, to dreſs their meat, they thought it proper to roaſt every day half a deer, and ſtow it up in hogſheads; and with this kind of food they filled three hogſheads and a half; leaving ſo much raw as would ſerve to roaſt every Sunday a quarter, and a quarter for Chriſtmas-day. It being now the 14th of October, the ſun left them, and they ſaw it no more, till the third of February; but they had the moon all the time, both day and night, though very much obſcured by the clouds, and foul weather. There was alſo a glimmering kind of day-light for eight hours, the latter end of October, which ſhortened every day till the firſt of December; from which time, to the 20th of the ſame month, they could perceive no day-light at all. It was now one continued night, there appearing only in clear weather a little whiteneſs like the dawn of day towards the ſouth. On the firſt of January they found their day a little to

increaſe

increaſe. They counted their days, it ſeems, in the dark ſeaſon, by the moon, and were ſo exact, that at the return of the ſhipping, they were able to tell the very day of the month on which the fleet arrived. As for light within doors, they made them three lamps of ſome ſheet lead they had found upon one of the coolers; and there happened to be oil enough to ſupply them left in the cooper's tent; for wicks, they made uſe of rope-yarn; and theſe lamps were one of the greateſt comforts to them in that long continued night. But ſtill their miſery was ſuch, that they could not forbear uttering haſty ſpeeches againſt the authors of their misfortunes; at other times, reflecting on their former ill-ſpent lives, they looked upon this as a juſt puniſhment of their offences, and at other times they hoped they were reſerved as a wonderful inſtance of God's mercy in their deliverance, and continued conſtantly to fall down on their knees two or three times a day, and implore the protection of the Almighty.

With the new year the cold encreaſed to that degree, that it raiſed bliſters in their fleſh ſometimes, as if they had been burnt, and the iron they touched ſtuck to their fingers. When they went abroad for water, the cold often ſeized them in ſuch a manner that it made them ſore, as if they had been ſeverely beaten. Their water, the firſt part of the winter, iſſued from a bay of ice, and ran down into a kind of baſon or recepticle by the ſea-ſide, where it remained with a thick ice over it, which they dug open at one certain place with pick-axes every day. This continued to the 10th of January, and then they drank ſnow water melted with a hot iron until the 20th of May following: and now they took another review of their proviſions, which they found would not laſt them above ſix weeks longer; but to alleviate their miſery, on the third of February they were cheared again with the bright rays of the ſun, which ſhone upon the tops of the ſnowy mountains with an inconceivable luſtre; to them at leaſt this afforded the moſt delightful ſcene that was ever beheld; and after a night of many weeks or months, what could be imagined more glorious or pleaſing to a mortal eye? as an addition to their joy, all the bears began to appear again, on the fleſh of which animal they had made many hearty meals. But as the writer of this narrative obſerves, the bears were as ready to devour our countrymen, as they were the bears, and being pinched with hunger in this barren place, came up to their very door. One of theſe creatures, with her cub, they met at the entrance of their apartment, and gave her ſuch a reception with their pikes and lances, that they laid her dead upon the ſpot, and the young one was glad to make his eſcape; the weather was ſo cold that they could not ſtay to flay her, but dragged the beaſt into their houſe, and there went to work, cutting her into pieces of a ſtone weight, one of which ſerved them for a dinner, and upon this they fed 20 days, eſteeming her fleſh beyond veniſon, only her liver did not agree with them; for upon the eating it, their ſkins peeled off; though one of the company, who was ſick, attributes his cure in part to the eating of it. If it be demanded how they kept their veniſon and bear's fleſh without ſalt, it is to be obſerved, the cold is ſuch that no corpſe or carcaſe ever putrifies. Fleſh needs no ſalt to keep it here; and that was their happineſs. Had they been ſtocked with ſalt proviſions, they had infallibly died of the ſcurvy, as others did who were left on ſhore, much better provided with liquors and other neceſſaries than theſe poor men were. By that time they had eaten up this bear, others came about their booth frequently, to the number of 40 and more, of which they killed ſeven (one of them ſix feet high at leaſt) roaſting their fleſh upon wooden ſpits, having no other kitchen furniture, except a frying-pan they found in one of the booths; and having now plenty of proviſions, they eat heartily two or three times a day, and could find their ſtrength encreaſe apace.

It was now on the 16th of March, and the days of a reaſonable length, and fowls, which in the winter time were fled to the ſouthward, began to reſort to Greenland again in great abundance; here they live and breed in the ſummer, feeding upon ſmall fiſh. The foxes alſo, which had kept cloſe in their holes under the rocks all winter, now came abroad and preyed upon the fowls, of which our countrymen having taking ſome, baited traps with their ſkins, and caught fifty foxes in them, which they roaſted and found to be very good meat, at leaſt in the opinion of men who had fed hitherto pretty much on bear's fleſh. Thus they continued taking fowls and foxes, till the firſt of May, meeting with no further misfortunes, except the loſs of one of their two maſtiff dogs, which went from their houſe one morning, in the middle of March, and was never ſeen afterwards, being overpowered probably, and eaten by the bears.

The weather beginning to grow warm in May, they rambled about in ſearch of willocks eggs, a fowl about the bigneſs of a duck, of which they found ſome, being a change of diet they were very much pleaſed with: and now the ſeaſon coming on for the arrival of ſhipping, they went ſome of them every day almoſt to the top of a mountain to ſee if they could diſcern the water in the ſea, which they had no ſight of till the 24th of this month, when it blowing a ſtorm, and the wind ſitting from the main ocean, broke the ice in the bay, and turning about ſoon after eaſterly, carried great part of the ice out to ſea; but ſtill the water did not come within three miles of their dwelling. The next morning, the 25th of May, none of their men happened to go abroad; but one of them being in the outward booth, heard ſomebody hail the houſe, in the ſame manner as ſailors do a ſhip, to which the men in the outward booth anſwered in ſeamens terms, they were then juſt going to prayers, and ſtayed but for the man in the outward booth to join with them. Sure no ſailors were ever ſo devout: but even ſailors will addreſs themſelves to heaven in their diſtreſs, when no human aid can help them, as ſick men ſend for the prieſt when the phyſician hath given them over. The man who hailed them was one of the boat's crew that belonged to an Engliſh ſhip juſt come from England, which our religious ſailors no ſooner underſtood, but they put off their devotions and ran out to meet their countrymen, looking upon them as ſo many angels ſent from heaven to their relief; and certainly the tranſport of joy they felt on this occaſion, if it may be conceived, can never be expreſſed; but there was one mortification ſtill in ſtore, which no man would have expected: one of the ſhips which now arrived was commanded by the ſame maſter, which left theſe poor wretches on ſhore; and he, barbarous brute, in order to excuſe his own inhumanity, began to revile and curſe them, calling them rogues and runaways: and this ſame man, it ſeems, had left ſeven or eight other men in Greenland two years before, which were never heard of afterwards; for which, no doubt, he richly deſerved the gallows, though our laws take but little notice of offences of this kind. But notwithſtanding the barbarity of their own captain, the commander and officers of the other ſhip took care they ſhould be kindly uſed, and brought to England, when the ſeaſon for whale fiſhing was over, where they received a gratuity from the Ruſſia company, and were otherwiſe well provided for by them. And perhaps there is no inſtance in hiſtory of a company of men in ſo exquiſite a diſtreſs, who ſhewed more courage and patience, or made a wiſer proviſion for their preſervation than theſe did. And as the writer of this narrative obſerves, Greenland belongs to the crown of England now by double right; for we not only firſt diſcovered it, and began the whale fiſhery there, but theſe our countrymen did in a wondrous manner, a ſecond time, take ſeiſin of the country for the king's uſe, being the firſt that ever inhabited it for a whole winter together. Before we conclude this account, may not be improper to record the names of theſe eight heroic Engliſhmen, not one of whom loſt either his life or limbs, though left deſtitute of all neceſſaries, in a country within twelve degrees of the pole, viz. William Fakeley, gunner; Edward Pelham (the writer of the narrative) gunner's mate; John Wiſe and Robert Goodfellow, ſeamen; Thomas Ayers, whale-cutter; Henry Bett, cooper; John Dawes and Richard Kellet, landmen.

SECT. VI.

Singular adventures of four Ruſſian ſailors, who remained ſeveral years in Greenland or Spitſbergen.

IN the year 1743, one Jeremiah Okladmkof, a merchant, of Meſen, a town in the province of Jugovia, and in the government of Archangel, fitted out a veſſel carrying

carrying 14 men; ſhe was deſtined for Spitzbergen, to be employed in the whale or ſeal fiſhery. For eight ſucceſſive days after they had ſailed, the wind was fair; but on the ninth it changed, ſo that inſtead of getting to the weſt of Spitzbergen, the uſual place of rendezvous for the Dutch ſhips, and thoſe of other nations, annually employed in the whale fiſhery, they were driven eaſtward. After ſome days, however, they approached within two Engliſh miles of the ſhore, when their veſſel was ſuddenly ſurrounded by ice, and they found themſelves in an extreme dangerous ſituation.

In this alarming ſtate a council was held; when the mate, Alexis Himkof, informed them, that he recollected to have heard, that ſome of the people of Meſen, ſome time before, having formed a reſolution of wintering here, had accordingly carried from that city timber proper for building a hut, and had actually erected one at ſome diſtance from the ſhore.

This information induced the whole company to reſolve on wintering there, if the hut, as they hoped, ſtill exiſted; for they clearly perceived the imminent danger they were in, and that they muſt inevitably periſh if they continued in the ſhip. They diſpatched, therefore, four of their crew in ſearch of the hut, or any other ſuccour they could meet with. Theſe were, Alexis Himkof, the mate; Iwan Himkof, his godſon; Stephen Scharapot, and Feodor Weregin.

As the ſhore on which they were to land was uninhabited, it was neceſſary that they ſhould make ſome proviſions for their expedition. They had almoſt two miles to travel over looſe ridges of ice, which being raiſed by the waves, and driven againſt each other by the wind, rendered the way equally difficult and dangerous; prudence therefore forbad their loading themſelves too much, leſt, being overburthened, they might ſink in between the pieces of ice, and periſh.

Having thus maturely conſidered the nature of their undertaking, they provided themſelves with a muſquet, and a powder-horn containing twelve charges of powder, with as many balls, an axe, a ſmall kettle, a bag with about 20 pounds of flour, a knife, a tinder-box and tinder, a bladder filled with tobacco, and every man his wooden pipe. Thus accoutred, theſe four ſailors quickly arrived at Spitzbergen, little ſuſpecting the misfortunes that would befal them.

They began with exploring the country; and ſoon diſcovered the hut they were in ſearch of, about an Engliſh mile and a half from the ſhore. It was thirty-ſix feet in length, eighteen feet in height, and as many in breadth. It contained a ſmall anti-chamber, about 12 feet broad, which had two doors, the one to ſhut it up from the outer air, and the other to form a communication with the inner room; this contributed greatly to keep the larger room warm when once heated. In the large room was an earthen ſtove conſtructed in the Ruſſian manner; that is, a kind of oven without a chimney, which ſerves occaſionally either for baking, for heating the room, or, as is cuſtomary among the Ruſſian peaſants, in very cold weather, for a place to ſleep upon.

The ſailors were exceeding glad at having diſcovered the hut, which had, however, ſuffered much by the weather, it having been built a conſiderable time; but, bad as it was, they contrived to paſs the night in it. Early the next morning they haſtened to the ſhore, impatient to inform their comrades of their ſucceſs; and alſo to procure from their veſſel ſuch proviſions, ammunition, and other neceſſaries, as might better enable them to paſs through the winter.

The reader may more eaſily conceive, than it is poſſible for words to deſcribe, the aſtoniſhment and agony of mind theſe poor people muſt have felt, when, on reaching the place of their landing, they ſaw nothing but an open ſea, free from the ice, which, but a day before, had covered the ocean. A violent ſtorm, which had ariſen during the night, had certainly been the cauſe of this diſaſtrous event. But they could not tell whether the ice, which had before hemmed in the veſſel, agitated by the violence of the waves, had been driven againſt her, and ſhattered her to pieces; or whether ſhe had been carried by the current into the main, a circumſtance which frequently happens in thoſe ſeas. Whatever accident had befallen the ſhip, they ſaw her no more; and as no tidings were ever after received of her, it is moſt probable that ſhe ſunk, and that all on board of her periſhed.

This melancholy event depriving the unhappy wretches of all hope of ever being able to quit the place, they returned to the hut full of horror and deſpair.

Their firſt attention was employed, as may be eaſily imagined, in deviſing means for providing ſubſiſtence, and for repairing their hut. The twelve charges of powder which they had brought with them ſoon procured them as many rein-deer; the country, fortunately for them, abounding in thoſe animals.

It has been already obſerved, that the hut had ſuſtained ſome damage, which was this; there were cracks in many places between the boards of the building that freely admitted the air. This inconvenience, however, was eaſily remedied, as they had an ax, and the beams were ſtill ſound, ſo that it was eaſy for them to make the boards join again; beſides, moſs growing in great abundance all over the country, there was more than ſufficient to ſtop up the crevices, which wooden houſes muſt always be liable to. Repairs of this kind coſt the unhappy men leſs trouble, as they were Ruſſians; for moſt Ruſſian peaſants are known to be good carpenters.

The intenſe cold which makes theſe climates habitable to few ſpecies of animals, renders them equally unfit for the production of vegetables. No ſpecies of tree, or even ſhrub, is found in Spitzbergen; a circumſtance of the moſt alarming nature to theſe ſailors. Without fire it was impoſſible to reſiſt the rigour of the climate; and without wood, how was that fire to be produced or ſupported? Providence, however, has ſo ordered it, that in this particular the ſea ſupplies the defects of the land. In wandering along the beach, they collected plenty of wood, which had been driven aſhore by the waves, and which at firſt conſiſted of the wrecks of ſhips, and afterwards of whole trees with their roots, the produce of ſome more hoſpitable, but to them unknown, climate, which the overflowing of rivers, or other accidents, had ſent into the ocean.

Nothing proved of more eſſential ſervice to theſe unfortunate men during the firſt year of their exile, than ſome boards they found upon the beach, having a long iron hook, ſome nails of about five or ſix inches long, and proportionably thick, and other bits of iron fixed in them; the melancholy relicts of ſome veſſel caſt away in thoſe remote parts. Theſe were thrown aſhore by the waves at a time when the want of powder gave our men reaſon to apprehend that they muſt fall a prey to hunger, as they had nearly conſumed thoſe rein-deer they had killed. This lucky circumſtance was attended with another equally fortunate; they found, on the ſhore, the root of a fir-tree, which nearly approached to the figure of a bow.

As neceſſity has ever been the mother of invention, ſo they ſoon faſhioned this root to a good bow, by the help of a knife; but ſtill they wanted a ſtring and arrows. Not knowing how to procure theſe at preſent, they reſolved upon making a couple of lances to defend themſelves againſt the white bears, whoſe attacks they had reaſon to dread.

Finding they could neither make the heads of their lances nor of their arrows without the help of a hammer, they contrived to form the large iron hook, beforementioned, into one, by beating it, and widening a hole it happened to have about its middle with the help of one of their largeſt nails; this received the handle, and a round button at one end of the hook ſerved for the face of the hammer. A large pebble ſupplied the place of an anvil, and a couple of rein-dear horns made the tongs. By means of theſe tools they made two heads of ſpears; and after poliſhing and ſharpening them on ſtones, they tied them as faſt as poſſible with thongs made of rein-deer ſkins to ſticks about the thickneſs of a man's arm, which they got from ſome branches of trees that had been caſt on ſhore.

Thus equipped with ſpears, they reſolved to attack a white bear; and, after a moſt dangerous encounter, they killed one, and thereby made a new ſupply of proviſions. The fleſh of this animal they reliſhed exceedingly, as they thought it much reſembled beef in taſte and flavour. They ſaw, with much pleaſure, that the tendons could, with little or no trouble, be divided into filaments of what fineneſs they thought fit. This, perhaps, was the

moſt fortunate diſcovery they could have made; for, beſides other advantages, they were hereby furniſhed with ſtrings for their bow.

The ſucceſs of theſe people in making their ſpears, and the utility they produced, encouraged them to proceed, and to forge ſome pieces of iron into heads of arrows of the ſame ſhape, though ſomewhat ſmaller in ſize than the ſpears. Having ground and ſharpened theſe like the former, they tied them, with the ſinews of the white bear, to pieces of fir, to which, by the help of fine threads of the ſame, they faſtened feathers of ſea-fowl, and thus became poſſeſſed of a complete bow and arrows. Their ingenuity in this reſpect was crowned with ſucceſs far beyond their expectation; for, during the time of their continuance here, they killed no leſs than 250 rein-deer, beſides a great number of blue and white foxes. The fleſh of theſe animals ſerved them alſo for food, and their ſkins for cloathing and other neceſſary preſervatives againſt the intenſe coldneſs of a climate ſo near the pole.

They killed, however, only ten white bears in all, and that not without the utmoſt danger; for theſe animals, being prodigiouſly ſtrong, defended themſelves with aſtoniſhing vigour and fury. The firſt they attacked deſignedly, but the other nine they killed in defending themſelves from their aſſaults: for ſome of theſe creatures even ventured to enter the outer room of the hut, in order to devour them. It is true, all the bears did not ſhew equal ferocity, either owing to ſome being leſs preſſed by hunger, or to their being by nature leſs carnivorous than the others: for ſome of them which entered the hut immediately betook themſelves to flight on the firſt attempt of the ſailors to drive them away. A repetition, however, of theſe attacks, threw the poor men into great terror and anxiety, as they were almoſt in perpetual danger of being devoured. The three different kinds of animals before-mentioned, viz. the rein-deer, the foxes, and the white bears, were the only food theſe wretched mariners taſted during their continuance in this dreary abode.

They were for ſome time reduced to the neceſſity of eating their meat almoſt raw, and without either bread or ſalt, for they were quite deſtitute of both. The intenſeneſs of the cold, together with the want of proper conveniencies, prevented them from cooking their victuals in a proper manner. There was but one ſtove in the hut, and that being ſet up agreeable to the Ruſſian taſte, was more like an oven, and conſequently not well adapted for boiling any thing. Wood alſo was too precious a commodity to be waſted in keeping up two fires; and the one they might have made out of their habitation to dreſs their victuals, would in no way have ſerved to warm them. Another reaſon againſt their cooking in the open air was, the continual danger of an attack from the white bears.

To remedy, in ſome degree, the hardſhip of eating their meat half raw, they bethought themſelves of drying ſome of their proviſion, during the ſummer, in the open air, and afterwards of hanging it up in the upper part of the hut, which was continually filled with ſmoak. This meat, ſo prepared, they uſed for bread, and it made them reliſh their other fleſh the better, as they could only half dreſs it. Finding this experiment anſwer, in every reſpect, their wiſhes, they continued to practiſe it during the whole time of their confinement in the country, and always kept up by that means a ſufficient ſtock of proviſions. Water they had in ſummer from ſmall rivulets that fell from the rocks; and in winter from the ſnow and thawed ice; this was of courſe their only beverage; and their ſmall kettle was the only veſſel they could make uſe of for this and other purpoſes.

It is well known that ſea-faring people are extremely ſubject to the ſcurvy; and this diſeaſe increaſes in proportion as we approach the poles, which muſt be attributed to the exceſſive cold, or ſome other cauſe yet unknown. However that may be, the ſailors, ſeeing themſelves quite deſtitute of every means of cure, in caſe they ſhould be attacked with ſo fatal a diſorder, judged it expedient not to neglect any regimen generally adopted as a preſervative againſt this impending evil. Iwan Himkof, one of their number, who had ſeveral times wintered on the coaſt of Spitzbergen, adviſed his unfortunate companions to ſwallow raw and frozen meat broken into ſmall bits; to drink the blood of rein-deer warm as it flowed from their veins immediately after killing them; to uſe as much exerciſe as poſſible; and laſtly, to eat ſcurvy graſs, which grows in this country.

Experience proved theſe remedies to be effectual, for three of theſe ſailors, who purſued this method, continued totally free from all taint of the diſorder. The fourth, Feodor Weregin, on the contrary, who was naturally indolent, averſe to drinking the rein-deer blood, and unwilling to leave the hut when he could poſſibly avoid it, was, ſoon after their arrival, ſeized with the ſcurvy, which afterwards became ſo bad, that he paſſed almoſt ſix years under the greateſt ſufferings: in the latter part of that time he became ſo weak, that he could no longer ſit erect, nor even raiſe his hand to his mouth; ſo that his humane companions were obliged to feed and tend him, like a new-born infant, to the hour of his death.

We have before obſerved that they brought with them a ſmall bag of flour. Of this they had conſumed about one half with their meat; and the remainder they employed in a different manner, though equally uſeful. They ſoon found the neceſſity of keeping up a continual fire in ſo cold a climate, and perceived that if it ſhould unfortunately go out, they had no means of lighting it again; for though they had a ſteel and flints, yet they wanted both match and tinder.

In their excurſions through the country they had met with a ſlimy loam, or a kind of clay, out of which they found means to form an utenſil that might ſerve for a lamp; and they propoſed to keep it conſtanly burning, with the fat of the animals they ſhould kill. This was certainly the moſt rational ſcheme they could have thought of; for to be without a light, in a climate where, during winter, darkneſs reigns for ſeveral months together, would have added much to their other calamities. Having therefore faſhioned a kind of lamp, they filled it with rein-deers fat, and ſtuck in ſome twiſted linen ſhaped into a wick. But they had the mortification to find, that as ſoon as the fat melted, it not only ſoaked into the clay, but run through on all ſides. It was therefore neceſſary to deviſe ſome means for preventing this inconvenience, not ariſing from cracks, but from the ſubſtance of which the lamp was made, being too porous. They therefore made a new one, dried it thoroughly in the air, then heated it red hot, and afterwards quenched it in their kettle, wherein they had boiled a quantity of flour down to the conſiſtence of thin ſtarch. The lamp being thus dried, and filled with fat, they now found, to their great joy, it did not leak. But for greater ſecurity, they dipped linen rags in their paſte, and with them covered all its outſides. Succeeding in this attempt, they immediately made another lamp, for fear of an accident, that in all events they might not be deſtitute of light; and when they had made theſe two, they thought proper to ſave the remainder of their flour for ſimilar purpoſes.

As they had carefully collected whatever happened to be caſt on ſhore to ſupply them with fuel, they had found among the wrecks of veſſels ſome cordage, and a ſmall quantity of oakum, which ſerved them to make wicks for their lamps. When theſe ſtores began to fail, their ſhirts and drawers were employed to make good the deficiency. By theſe means they kept a lamp burning without intermiſſion, from the day they firſt made them, until that of their embarkation for their native country.

The neceſſity of converting the moſt eſſential parts of their clothing, ſuch as their ſhirts and drawers, to the uſe above ſpecified, expoſed them the more to the rigour of the climate. They alſo found themſelves in want of ſhoes, boots, and other articles of dreſs; and, as winter was approaching, they were again obliged to have recourſe to that ingenuity which neceſſity ſuggeſts, and which ſeldom fails in the trying hour of diſtreſs.

They had ſkins of rein-deer and foxes in abundance, that had hitherto ſerved them for bedding, and which they now thought of employing in ſome more eſſential ſervice; but the queſtion was how to tan them. After deliberating on this matter, they took the following method. They ſoaked the ſkins for ſeveral days in freſh water, till they could pull off the hair tolerably eaſy;

they then rubbed the wet leather with their hands till it was nearly dry, when they ſpread ſome melted rein-deer's fat over it, and again rubbed it well. By this proceſs the leather became ſoft, pliant, and ſupple, proper for anſwering every purpoſe to which it was intended. Thoſe ſkins which they deſigned for furs they only ſoaked for one day, to prepare them for being wrought, and then proceeded in the manner before-mentioned, except only that they did not remove the hair. Thus they ſoon provided themſelves with the neceſſary materials for all the parts of dreſs they wanted.

But here another difficulty occurred. They had neither awls for making ſhoes or boots, nor needles for ſewing their garments. Theſe wants, however, they ſoon ſupplied, by means of the bits of iron they had occaſionally collected. Out of theſe they made both; and by their induſtry even brought them to a certain degree of perfection. The making eyes to their needles gave them, indeed, no little trouble; but this they alſo performed with the aſſiſtance of their knife; for having ground it to a very ſharp point, and heated red hot a kind of wire, they pierced a hole through one end, and by whetting and ſmoothing it on ſtones, brought the other to a point, and thus gave the whole needle a very tolerable form.

The next material matter wanted was a pair of ſciſſars to cut out the ſkins; but this deficiency was ſupplied by their knife; and though there was neither taylor nor ſhoemaker amongſt them, yet they contrived to cut out their leather and furs well enough for the purpoſe. The ſinews of the bears and the rein-deer ſerved them for thread; and thus provided with the neceſſary implements, they proceeded to make their new cloaths.

Their ſummer dreſs conſiſted of a kind of jacket and trowſers made of ſkins prepared as above; and in winter they wore long fur gowns, like the Samoiedes, or Laplanders, furniſhed with a hood, which covered their head and neck, leaving only an opening for the face. Theſe gowns were ſewed cloſe round, ſo that to put them on, they were obliged to bring them over their heads like a ſhirt.

When our mariners had paſſed near ſix years in this diſmal place, Feodor Weregin, whoſe illneſs has been already mentioned, and who all along had been in a languid condition, died; after having, in the latter part of his life, ſuffered the moſt excruciating pains. Though they were thus freed from the trouble of attending him, and the grief of being witneſſes to his miſery, without being able to afford him any relief, yet they were greatly affected at his death. They ſaw their number leſſened, and every one wiſhed to be the firſt that ſhould follow him. As he died in winter, they dug a grave in the ſnow as deep as they could, in which they laid the corpſe, and then covered it over in the beſt manner they could to ſecure it from the bears.

At the time when the melancholy reflections occaſioned by the death of their comrade when freſh in their minds, and when each expected to pay this laſt duty to the remaining companions of his misfortunes, or to receive it from them, they unexpectedly got ſight of a Ruſſian ſhip. This happened on the 15th of Auguſt 1749. The veſſel belonged to a trader of the ſect called by its adherents Stara Vieva, that is, The Old Faith, who had come from Archangel, and propoſed wintering in Nova Zembla; but the contrary winds they met with on their paſſage made it impoſſible for them to reach the place of their deſtination. The veſſel was driven towards Spitzbergen, directly oppoſite to the reſidence of our mariners, who, as ſoon as they perceived her, haſtened to light fires on the hills neareſt their habitations, and then ran to the beach, waving a flag made of rein-deer's hide faſtened to a pole. The people on board ſeeing theſe ſignals, concluded that there were men on the ſhore who implored their aſſiſtance, and therefore came to an anchor not far from the land.

It is almoſt impoſſible to deſcribe the joy of theſe poor people at ſeeing the moment of their deliverance ſo near. They ſoon agreed with the maſter of the ſhip to work for him on the voyage, and to pay him eighty rubles on their arrival for taking them on board, with all their riches, which conſiſted in fifty pud, or 2000 pounds weight of rein-deer fat; in many hides of theſe animals, and in ſkins of the blue and white foxes, together with thoſe of the ten white bears they had killed. They took care not to forget their bow and arrows, their ſpears, their knife and axe, which were almoſt worn out; their awls and their needles, which they kept carefully in a bone box very ingeniouſly made with the knife only; and, in ſhort, every thing they were poſſeſſed of.

Our adventurers arrived ſafe at Archangel on the 28th of September 1749, having ſpent ſix years and three months in their rueful ſolitude.

The moment of their landing had nearly proved fatal to the loving and beloved wife of Alexis Himkof, who, being preſent when the veſſel came into port, immediately knew her huſband, and ran with ſo much eagerneſs to his embraces, that ſhe ſlipped into the water, and very narrowly eſcaped being drowned.

All three on their arrival were ſtrong and healthy; but having lived ſo long without bread, they could not reconcile themſelves to the uſe of it, and complained that it filled them with wind; neither could they bear any ſpirituous liquors, and therefore drank nothing but water.

However aſtoniſhing the above recital may appear, the truth of theſe adventures is ſufficiently authenticated. When theſe unfortunate ſailors arrived at Archangel, they were examined by Mr. Klinſtadt, chief auditor of the admiralty of that city, who minuted down all the particulars, which exactly correſponded with each other. Mr. Le Ray, profeſſor of hiſtory in the Imperial Academy, ſome time after ſent for two of the men, viz. Alexis Himkof, and Himkof his grandſon to Peterſburg, from whoſe mouths he took the before-mentioned narrative, which alſo agreed with Mr. Klinſtadt's minutes. The original was publiſhed in the German language at Peterſburg, in the year 1769, and tranſmitted from thence to the ingenious Mr. Banks, who, with ſeveral other members of the Royal Society, were ſo well pleaſed with the account, that they directed a tranſlation of it to be made into Engliſh, for the gratification of the curious.

CHAP. III.

LAPLAND.

THIS country is divided into three parts, on account of its being ſubject to three diſtinct ſovereignties, namely, Denmark, Sweden, and Ruſſia. As each of theſe diviſions are the ſame in moſt particulars, we ſhall confine ourſelves to the deſcription of Swediſh Lapland, that being by far the moſt conſiderable, and beſt peopled; obſerving, however, in general, that all the country, which lies above the Gulph of Bothnia, along the coaſt of the north ſea, even to the White Sea, is called Lapland.

The name of Lapland, or Lappia, was unknown to the antients, who called the people of this country Scritofinni: they at firſt inhabited Finland, from whence they were driven more northwards, after which they were called

called Lappes, which, in the Finick tongue, ſignifies perſons baniſhed from their country, and driven to the moſt remote places. But the inhabitants look upon that name as reproachful, and therefore call themſelves Sabmienladſi.

Swediſh Lapland is bounded on the eaſt by Ruſſia Lapland; on the weſt by a ridge of mountains that ſeparate it from Norway; on the north by Daniſh Lapland; and on the ſouth by Bothnia, Angermania, and Sempterland. Its greateſt extent, from eaſt to weſt, is about 360 miles; and in breadth, it extends from 65 deg. 30 min. to 69 deg. of north latitude. It is divided into ſix provinces, or diſtricts, the names of which are as follow, viz. Angermanland-Lapmark, Uma-Lapmark, Pitha-Lapmark, Lula-Lapmark, Torno-Lapmark, Kimi-Lapmark.

Theſe provinces, each of which receives its name from the chief river that waters it, are again ſubdivided into ſmaller diſtricts called Biars, and theſe contain a certain number of families, called by the Swedes rekars. Every rekar, or family, is allowed a conſiderable track of land, with foreſts, lakes and brooks, for the maintenance of their families and cattle; but their lands are not incloſed, ſo that the property of one is often converted to the uſe of another.

SECT. I.

Natural Hiſtory of LAPLAND.

LAPLAND is ſituated ſo near the pole, that the ſun neither ſets in ſummer, or riſes in winter. In the latter ſeaſon the cold is ſo intenſe, that none but the natives are able to bear it. The moſt rapid rivers are then frozen up, and the ice is two or three, and ſometimes four or five feet thick. In ſummer the weather is as ſultry as it is cold in winter; for autumn and ſpring are unknown in this climate. The exceſſive heat, however, is qualified by the vapours that riſe from the ſea, and by the ſnow that continues all the ſummer on the tops of the mountains, and in ditches that are ſheltered from the ſun. It ſeldom rains in the ſummer, but in winter the whole country is covered with ſnow.

The beſt deſcription we have of the climate of this country is given by Monſ. Maupertuis, who, with ſeveral other aſtronomers, was ſent hither by order of the king of France, to diſcover the figure of the earth at the polar circle. "In December, ſays he, the ſnow continually falling, or ready to fall, for the moſt part hid the ſun the few moments he might have appeared at mid-day. In the month of January the cold was increaſed to that extremity, that Mr. Reaumur's mercurial thermometer, which at Paris, in the great froſt of 1709, it was thought ſtrange to ſee fall to fourteen degrees below the freezing point, were now got down to thirty-ſeven. The ſpirit of wine in the others was frozen. If we opened the door of a warm room, the external air inſtantly converted all the vapour in it into ſnow; whirling it round in white vortexes. If we went abroad, we felt as if the air was tearing our breaſts in pieces; and the cracking of the wood, of which the houſes are built, as if ſplit by the violence of the froſt, continually alarmed us with an increaſe of cold; and in this country you may often ſee people who have loſt an arm or leg by the froſt. The cold, which is always very great, ſometimes increaſes by ſuch violent and ſudden fits, as are almoſt infallibly fatal to thoſe who are ſo unhappy as to be expoſed to it; and ſometimes there riſe ſudden tempeſts of ſnow that are ſtill more dangerous. The winds ſeem to blow from all quarters at once, and drive about the ſnow with ſuch fury, that all the roads are in a moment rendered inviſible. Dreadful is the ſituation of a perſon ſurprized in the fields by ſuch a ſtorm: his knowledge of the country, and even the mark he may have taken by the trees, cannot avail him: he is blinded by the ſnow, and if he attempts to find his way home is generally loſt. In ſhort, during the whole winter, the cold was ſo exceſſive, that on the ſeventh of April, at five in the morning, the thermometer was fallen to twenty diviſions below the point of freezing, though every afternoon it roſe two or three diviſions above it: a difference in the height not much leſs than that which the greateſt heat and cold felt at Paris uſually produce in that inſtrument. Thus in twenty-four hours we had all the variety felt in the temperate zones in the compaſs of a whole year."

Though the nights in winter are very cold, long, and tedious, yet thoſe inconveniences are, in ſome degree, mitigated by the ſerenity of the ſky, the brightneſs of the moon and ſtars, and the refulgent light of the *aurora borealis*, which is reflected from the white ſurface of the earth covered with ſnow, from all which ſuch a light is produced, that the inhabitants are enabled to diſcharge their ordinary occupations. Monſ. Maupertuis, in ſpeaking of theſe nocturnal lights, ſays, "The days are no ſooner cloſed, than fires of a thouſand figures and colours light up the ſky, as if deſigned to compenſate for the abſence of the ſun. Theſe fires have not here, as in more ſouthern climates, any conſtant ſituation. Though a luminous arch is often ſeen fixed towards the north, they ſeem more frequently to poſſeſs the whole extent of the hemiſphere. Sometimes they begin in the form of a great ſcarf of bright light, with its extremities upon the horizon, which, with a motion reſembling that of a fiſhing-net, glides ſoftly up the ſky, preſerving, in this motion, a direction nearly perpendicular to the meridian; and moſt commonly after theſe preludes, all the lights unite at the zenith, and form the top of a crown. Ares, like thoſe ſeen in France towards the north, are here frequently ſituated towards the ſouth; and often towards both the north and ſouth at once. Their ſummits approach each other; the diſtance of their extremities widens towards the horizon. I have ſeen ſome of the oppoſite arcs whoſe ſummits almoſt joined at the zenith; and both the one and the other have frequently ſeveral concentric arcs beyond it. Their tops are all placed in the direction of the meridian, though with a little declination to the weſt; which I did not find to be conſtant, and which is ſometimes inſenſible. It would be endleſs to mention all the different figures theſe meteors aſſume, and the various motions with which they are agitated. Their motion is moſt commonly like that of a pair of colours waved in the air, and the different tints of their light gives them the appearance of ſo many vaſt ſtreamers of changeable taffety. Sometimes they line a part of the ſky with ſcarlet. On the eighteenth of December I ſaw a phenomenon of this kind, that in the midſt of all the wonders to which I was now every day accuſtomed, raiſed my admiration. To the ſouth a great ſpace of the ſky appeared tinged with ſo lively a red, that the whole conſtellation of Orion looked as if it had been dipped in blood. This light, which was at firſt fixed, ſoon moved, and changing into other colours, violet and blue, ſettled into a dome, whoſe top ſtood a little to the ſouth-weſt of the zenith. The moon ſhone bright, but did not in the leaſt efface it. In this country, where there are lights of ſo many different colours, I never ſaw but two that were red; and ſuch are taken for preſages of ſome great misfortune. After all, when people gaze at theſe phenomena with an unphiloſophic eye, it is not ſurprizing if they diſcover in them armies engaged, fiery chariots, and a thouſand other prodigies."

The ſoil of this country is, in general, exceeding bad, being ſo intermixed with ſtones, that hardly any thing will grow in it; but in ſome places it is very moiſt, owing to the number of marſhes and brooks with which it abounds.

The whole country is full of rocks and mountains: thoſe called the Dofrine mountains, which ſeparate Lapland from Norway, are of a prodigious height, and the high winds that blow there prevent all trees from taking root. Beneath theſe mountains are large marſhes and extenſive foreſts, where there are many trees, though they ſtand at a great diſtance from each other. At the bottom of the hills are very pleaſant vallies, which are the moſt fertile parts of the country, being well watered by an infinite number of ſprings and brooks.

Moſt of the rivers riſe from the mountains of Norway, and fall into the Bothnian Gulph. The chief of theſe are, the Uma, Lula, Rima, and Torna. The Uma is greatly increaſed by the waters that flow into it from the rivers Vendilor and Skialfre. The Lula and Rima are both very conſiderable, and are ſwelled, in their courſe, by great numbers of leſſer ones. The Torna receives twenty-nine rivers, one of which is a Swediſh mile in breadth. When the ſnow melts all theſe rivers overflow their banks; and the chief part of them have ſtupendous

and frightful cataracts. Beſides the rivers, here are alſo many lakes, which, as well as the former, abound with various kinds of fiſh.

The foreſts of Lapland produce a great number of trees, among which are the birch, pine, and fir. Some parts of it alſo produce the ſervice-tree, the willow, the poplar, the elder, and the corneil. They have ſeveral ſorts of plants, but the moſt uſeful are the angelica, and ſorrel, which are greatly eſteemed by the natives, who uſe them in their food. They have likewiſe different kinds of graſs, heath and fern; but the moſt plentiful, as well as moſt uſeful, vegetable is the moſchus, or moſs; of which there are ſeveral ſpecies, either adhering to trees, or growing on the ſurface of the earth. The rein-deer is almoſt wholly ſuſtained by this vegetable, which indeed he prefers to all others, and without which he cannot ſubſiſt. The natives not only uſe it as forage for their cattle, but boil it in broth as a cordial and reſtorative.

Here is alſo great plenty of berries, ſuch as black currants, the Norwegian mulberry, which grows upon a creeping plant, and is much eſteemed as an antiſcorbutic; raſberries, cranberries, and bilberries. Juniper-berries are alſo very plentiful, and ſome of the trees grow to a conſiderable height.

The animals of this country are, ſtags, bears, wolves, foxes of ſeveral colours, ſquirrels, ermines, martens, hares, glittens, beavers, otters, elks, and rein-deer; but the laſt of theſe is the moſt uſeful to the wretched natives, who, without them, could not poſſibly preſerve their exiſtence; for theſe animals not only afford them food and garments, but alſo ſupply the place of horſes, and travel in thoſe parts where the latter animals would be entirely uſeleſs.

The rein-deer is a kind of ſtag, with large branched horns, whoſe tops bend forward like a bow. He is larger, ſtronger, and ſwifter than the ſtag; and his hair changes colour according to the ſeaſon of the year. His hoofs are cloven and moveable, for which reaſon he ſpreads them abroad as he runs along the ſnow, to prevent his ſinking into it. The horns are very high, and divide into two branches near the root. On each horn are three branches, one above another, which are again ſubdivided into ſmaller ones; inſomuch, that no horned beaſt whatever has the like, either for bulk, branches, or weight. The horns are of a light colour, and there are veins, or blood-veſſels run along them, under which there are furrows. When the beaſt runs he lays theſe horns upon his back, but there are two branches that always hang over his forehead, and almoſt cover his face. Moſt of theſe animals are wild, but ſome of them are tame, and exceeding ſerviceable to the natives: thoſe which are produced between a tame doe and a wild buck are not only the largeſt, but by far the ſtrongeſt.—Theſe animals are of the moſt infinite uſe to the Laplanders; for, without ſubjecting them to the leaſt expence, they ſupply them with almoſt every neceſſary of life. From theſe creatures they are furniſhed with milk and cheeſe, as alſo fleſh, which they lay up for winter ſtore. The ſkins afford caps, cloaths, boots, ſhoes, bedding, thongs, and many other articles. The nerves and ſinews are twiſted into thread: their bows and arrows are tipped with the bones, and their boxes inlaid with the horn, which is likewiſe formed into curious ſpoons, toys and utenſils. Theſe animals are likewiſe uſed as beaſts of draught and burthen; and, far from demanding any proviſion or provender, dig with their feet among the ſnow for the moſs, which they prefer to every other kind of food.

The dogs here are very ſmall, not being above a foot in height: they turn up their tails, which are ſhort, and their ears ſtand erect like thoſe of wolves; they are of a red colour, and are very ſerviceable in hunting.

The birds of Lapland are ſwans, geeſe, ducks, lapwings, ſnipes, moſt ſorts of water-fowl, heath-cocks, ſtock-doves, woodcocks and partridges. Beſides theſe, they have two kinds of fowl peculiar only to this country. The firſt is called the kniper, and is a kind of ſnipe, black on the head, back, and wings, but the breaſt and belly are white: it has a long red beak ſet with teeth, and ſhort red feet reſembling thoſe of water-fowl. The other is called the loom, and is never ſeen on the ground, but either in the water, or flying. The partridges here are as white as ſnow, and, inſtead of feathers, their bodies are covered with a kind of wool. The rocks and mountains are frequented by eagles, hawks, faulcons, kites, and other birds of prey.

The chief inſects here are flies, which, in the ſummer, are hatched in the moraſſes and woods, and are frequently ſo numerous as to obſcure the light of the day. They are venomous, and exceeding troubleſome, inſomuch, that the rein-deer fly to the tops of the mountains for ſhelter; and the inhabitants move to the ſea-ſide, theſe parts being the leaſt infeſted by theſe peſtilent vermin. Monſ. Maupertuis ſays, that while he was here the flies were ſo troubleſome, that even the Finland ſoldiers, who are counted the moſt hardy troops in the ſervice of Sweden, were obliged to cover their faces with the ſkirts of their coats from the attacks of theſe animals; which ſwarmed to ſuch a degree, that the moment a piece of fleſh appeared, it was blackened all over. Some of theſe flies are very large, with green heads, and draw blood from the ſkin wherever they ſtrike.

The rivers and lakes abound with delicious ſalmon which come from the Gulph of Bothnia; as alſo trout, bream, and perch, all of which are of exquiſite flavour, and amazing magnitude.

In ſome of the diſtricts are mines of ſilver, lead and copper, together with excellent veins of iron; but they are not at preſent worked to any conſiderable advantage, their ſituation being almoſt inacceſſible. In the diſtrict of Torno there is a vein of gold and ſilver mixed, another of lead and ſilver, and a third of copper; and here they have both copper works and a foundery. They have alſo furnaces in the province of Lula, where they melt the ſilver which they dig in that part of the country. Theſe mines, however, are only worked for a ſhort time in the ſummer, the climate being ſo ſevere for the principal part of the year, as to prevent the engines from performing their offices.

In the rivers and lakes are found beautiful chryſtals, of a prodigious ſize, and ſo hard and fine, that, when poliſhed, they appear like real diamonds. Here are likewiſe a great variety of curious ſtones, ſome of which bear the reſemblance of animals, trees, &c. When the natives find theſe, they place them in ſome conſpicuous place, and worſhip them as deities.

SECT. II.

Of the Perſons and Dreſs of the Laplanders; *their Manners, Buildings, Employments, Methods of travelling, &c. &c.*

THE Laplanders are remarkably ſhort in ſtature, the generality of them not being above four feet and a half high, and ſome of them even under that ſize; the reaſon of which is attributed to the ſeverity of the climate, and the poorneſs of their living. They are, in general, very diſagreeably formed, having a large head, a broad forehead, hollow and bleared eyes, a ſhort and flat noſe, and a broad face, with ſhort, black, and rough hair. They have broad breaſts, ſlender waiſts, and ſmall legs; but they are ſtrong, hardy, and active, inſomuch that they will bear incredible fatigue; and it is remarked, that the ſtouteſt Norwegian is not able to bend the bow of a Laplander. The women, however, are much leſs homely than the men; and many of them are noted for having a delicate and florid complexion.

In their diſpoſitions they are very honeſt and hoſpitable; but they are ſo timorous, that they will fly the moment they perceive a veſſel at ſea, or the leaſt footſtep of a ſtranger. They are naturally haſty and paſſionate, and, when once provoked, not eaſily appeaſed. They indulge themſelves in lazineſs to ſuch a degree, that they neither plow nor ſow, but leave their ground totally uncultivated; neither will they ſeek for provender either by hunting or fiſhing, till they are compelled to it from mere neceſſity. It hath been obſerved, that when they have been tranſported to more moderate climates, they have ſoon died, though in their own country they live to a great age. It is no uncommon thing to ſee a Laplander, upwards of an hundred years of age, hunting, fowling, ſkaiting, and performing all the ſevereſt exerciſes, with the moſt aſtoniſhing agility.

Their houſes, or rather huts, are made of pieces of

timber, or rafters, joined together, and covered with turf, or the branches of pine trees and coarſe cloth. Some of them are built upon trees to prevent their being overwhelmed with ſnow, and to ſecure them from the wild beaſts. Their huts have two doors, at the leſſer of which no woman muſt enter, becauſe from thence the men go to hunt, and ſhould they meet the woman at going out, it would be conſidered as a bad omen. They have no other chimnies than a hole at the top of their huts, which ſerves to let the ſmoak out, and the light in. Their ſtorehouſes are built in trees, to ſecure their proviſions from bears and other wild beaſts.

Their dreſs in ſummer conſiſts of a cloſe garment, reaching to the middle of the legs, and faſtened round the waiſt with belts. They have not any linen, and their cloaths are made of a coarſe wool of a dark grey colour. The richer ſort have the cloaths of various colours, but red is the moſt univerſally eſteemed. At their girdles they hang a Norway knife and a pouch, the latter of which contains flints, matches, and tobacco, with other neceſſaries; the girdle itſelf being decorated with braſs rings and chains. Their night-caps are made of the ſkins of the bird loom, with the feathers on; and their ſhoes of the ſkins of rein-deer, with the hair outwards. In winter they are totally caſed up in coats, caps, boots, and gloves, made of the rein-deers ſkins with the hair inwards. The womens apparel differs but little from that of the men: they hang to their girdles many rings, chains, toys, and knives, with a needle-caſe and other trifles. Their thread is made of the ſinews of rein-deer; and in winter they lie in their ſkins. In ſummer they all cover themſelves at nights with large pieces of coarſe cloth, to ſecure them from being ſtung by the flies and gnats.

The Laplanders make all their own furniture, their boats, their ſledges, and their bows and arrows. The boards with which they make their boats are faſtened together with twigs, the nerves of rein-deer, or the ſmall roots of trees twiſted together like ropes; and they caulk them with moſs to keep out the water. They make boxes of their birch planks, which they neatly inlay with the horns of rein deer; and they are very dextrous at making baſkets of the roots of trees, ſlit in long thin pieces, and twiſted together. Some of theſe are made ſo neat that they will hold water; and they are particularly admired by the Swedes.

Theſe articles are made by the men, who alſo perform the office of cooks, by dreſſing victuals for the family. The women are employed as taylors and embroiderers: they make cloaths, ſhoes, and boots, and harneſs for the rein-deer: they ſpin thread with fur, and knit it into caps and gloves, which are very ſoft and warm: they likewiſe draw tin into wire through a horn, and with this they cover their thread, which they uſe in embroidering on their caps and girdles, the figures of beaſts, flowers, trees, ſtars, &c.

The mountaineers live chiefly on the fleſh and milk of the rein-deer; the former of which they dry, and from the latter they make great quantities of cheeſe. Thoſe who live in the low country feed on veniſon and fiſh. They have neither bread nor ſalt; but inſtead thereof uſe the inner rind of the pine tree, dried and ground, and dried fiſh reduced to powder. They make broth of fiſh and fleſh boiled together; and their uſual drink is water heated in a kettle, which in winter hangs continually over the fire: but their greateſt dainty is bear's fleſh, which they eat on all particular feſtivals. On theſe occaſions likewiſe they indulge themſelves with brandy, and never think themſelves ſo happy as when they can enjoy a pipe of tobacco. Theſe commodities the better ſort purchaſe at Norway, as alſo a few cows and ſheep for their winter ſtore. They make confections and decoctions of berries, angelica, and ſorrel, which they are not only fond of, but alſo deem them excellent preſervatives againſt all ſcorbutic diſorders.

Beſides their domeſtic buſineſs, the Laplanders employ themſelves in hunting, in which excurſions they travel through the ſnow with aſtoniſhing expedition. They wear a pair of ſkaits, or ſnow ſhoes, which are made of fir boards covered with the rough ſkin of the rein-deer: one of theſe is uſually as long as the perſon who wears it, but the other is about a foot ſhorter. The feet are placed near about the middle, and the ſhoes are faſtened to them with ſtrings, or thongs made with the ſinews of the rein-deer. When the Laplander travels in this manner he carries a long pole in his hand, near the end of which is a round ball of wood; and this not only ſecures him from penetrating too deep into the ſnow, but alſo enables him to ſtop himſelf when occaſion requires.

A Laplander will travel in his ſnow ſhoes at the rate of ſixty miles a day without being fatigued. But the moſt expeditious method of travelling in this country is with a ſledge drawn by the rein-deer. This carriage, which is called by the natives pulkha, is made in the form of a ſmall boat, with a convex bottom, that it may ſlide the more eaſily over the ſnow: the head of it is ſharp and pointed, but the hinder part is quite flat. The traveller ſits, or rather lays with his back againſt the end of the ſledge, and holds a ſtick in his hand, with a large wooden ball at the end of it, with which he diſengages the ſledge from ſuch obſtructions as he may happen to meet with in the courſe of his journey. He muſt likewiſe take care to properly balance the carriage with his body, otherwiſe he will be ſubject to be overturned. The traces by which the ſledge is faſtened to the rein-deer, are fixed to a collar about the animal's neck, and run down over the breaſt, between the fore and hind legs, to be connected with the prow of the ſledge; the reins are tied to the horns, and the trappings are furniſhed with little bells, the ſound of which is very pleaſing to the animal. The rein-deer is ſo fleet that he will run with this carriage upwards of 100 miles a day. Before a Laplander ſets out on his journey, he whiſpers in the ear of the animal the way he is to go, and the place at which he is to halt, from a perſuaſion that the beaſt underſtands his meaning; but, in ſpite of this intimation, he frequently ſtops ſhort, and ſometimes overſhoots the mark by ſeveral miles.

Though this method of travelling is exceeding expeditious, yet it is far from being eaſy, the perſon being continually in a confined poſture; neither is it exempted from the moſt imminent danger, on account of the uncertainty of the roads, and the drifts of looſe ſnow, which, if the wind blows high, are driven about with incredible fury.

As ſoon as the winter commences, the Laplanders mark the moſt frequented roads by ſtrewing them with fir-boughs; and indeed theſe roads are no other than path-ways made through the ſnow by the rein-deer and ſledges: their being frequently covered with new ſnow, and alternately beaten by the carriage, conſolidates them into a kind of cauſeway; which is the harder if the ſurface has felt a partial thaw, and been cruſhed by a ſubſequent froſt. It requires great caution to follow theſe tracks; for if the carriage runs either on one ſide or the other, the traveller is thrown into an abyſs of ſnow. In leſs frequented parts, where there is no ſuch beaten road, the Laplander directs his courſe by certain marks which he has made on the trees; but, notwithſtanding all his caution, the rein-deer very often ſinks up to his horns in ſnow; and ſhould a hurricane ariſe, which is ſometimes the caſe, the traveller would be in great danger of his life, were he not provided with a kind of tent, to ſcreen him in ſome meaſure from the fury of the tempeſt.

The rein-deer in winter is rather weak and diſpirited, ſo that he cannot travel with the like alacrity as in ſummer. In this ſeaſon the traveller is obliged to halt at different times, that the animal may reſt himſelf; and in theſe intervals he is fed with a kind of cake, made of moſs and ſnow, which ſerves him both for drink and provender.

The principal employment of the Laplanders, excluſive of their domeſtic affairs, conſiſts in hunting and fiſhing. Thoſe who practiſe the latter have ſmall boats, ſo lightly conſtructed that they can carry them on their ſhoulders, which they frequently do when interrupted on the rivers by whirlpools, or cataracts. The boats are of different ſizes, from two to ſix yards in length, managed with oars, and caulked with moſs ſo tight, as effectually to keep out the water. They ſteer with amazing dexterity, even among the rocks, and down the moſt rapid water falls; but when they go againſt the ſtream, and meet with a cataract, they take out their boat, and carry it on their ſhoulders till they have paſſed it, when they launch it again, and renew their buſineſs.

The

The Laplanders who employ themſelves in hunting, perform it various ways. In ſummer they hunt wild beaſts with ſmall dogs trained to the diverſion. In winter they purſue them by their tracks upon the ſnow, ſkaiting with ſuch velocity that they frequently run down their prey. They catch ermines in traps, and ſometimes with dogs. They kill ſquirrels, martens, and ſables, with blunt darts, to avoid injuring the ſkins. Foxes and beavers are killed with ſharp pointed darts and arrows, in ſhooting of which they are accounted the beſt markſmen in the world. The larger beaſts, ſuch as bears, wolves, elks, and wild rein-deer, they either kill with fire arms, or elſe enſnare by digging pits in thoſe parts where they moſtly reſort.

They have particular laws relative to the chace, which they obſerve with great punctuality. The beaſt becomes the property of the man in whoſe ſnare or pit he his caught; and he who diſcovers a bear's den has the excluſive privilege of hunting him to death. The conqueſt of a bear is the moſt honourable atchievement that a Laplander can perform; and the fleſh of this animal they think more delicious than that of any other whatever. The bear is always diſpatched with a fuſil, ſometimes laid as a ſnare, ready cocked and primed; but more frequently by the hands of the hunter, who runs the moſt imminent danger of his life ſhould he miſs his aim.

The killing of a bear is celebrated by the Laplanders with great rejoicings. The carcaſe is drawn to the cabin, or hut of the victor, by a rein-deer, which, on this account, is afterwards kept a whole year without doing any work. The bear is ſurrounded by a great number of men, women, and children, who recite a particular ſong of triumph, in which they thank the vanquiſhed enemy for having allowed himſelf to be overcome, without doing any miſchief to his conqueror: after this they addreſs themſelves to providence, acknowledging the ſingular benefits they receive from his having created beaſts for their uſe, and endowed them with ſtrength and courage to attack and overcome them. The conqueror is ſaluted by the women, and is feaſted by the men of the village for three ſucceſſive days; beſides which, he is ever after diſtinguiſhed from the reſt, by having laces round his cap, wrought with tin wire.

SECT. III.

Of the marriages of the Laplanders; their method of bringing up their children; their diſeaſes, funeral ceremonies, &c.

THE marriage ceremonies of the Laplanders are very remarkable and ludicrous. When a young man has made choice of a female, he employs ſome friends as mediators with the girl's parents; and theſe being provided with ſome bottles of brandy, the ſuitor accompanies them to the hut of his intended father-in-law, who invites the mediators to enter: but the ſuitor is left without, until the liquor be drank, and the propoſal diſcuſſed. After this he his called in, and entertained with ſuch fare as the hut affords, but without ſeeing his miſtreſs, who, on this occaſion, is obliged to retire. The ſuitor having at length obtained leave to make his addreſſes to the girl in perſon, he goes home, puts on his beſt attire, and then returns to the hut, when his miſtreſs appears, and he ſalutes her with a kiſs; after which he preſents her with the tongue of a rein-deer, a piece of beaver's fleſh, or ſome other kind of proviſion. The girl at firſt declines the offer, it being made in the preſence of her relations; but at the ſame time ſhe makes a ſignal to the lover to follow her into the fields, where ſhe accepts the preſents. Thus encouraged, he begs permiſſion of her to let him ſleep with her in the hut; if ſhe conſents, ſhe keeps the preſents; but if not, ſhe throws them with contempt on the ground. When the lovers are agreed, the youth is permitted to viſit his miſtreſs as often as he thinks proper; but every time he comes he muſt purchaſe this pleaſure with a freſh bottle of brandy, a perquiſite ſo agreeable to the father, that he often poſtpones the celebration of the nuptials for two or three years. At length the ceremony is performed at the neareſt church, by the prieſt of the pariſh; but even after this, the huſband is obliged to ſerve his father-in-law a whole year, at the expiration of which he retires to his own habitation with his wife, and then receives preſents from all his relations and friends. From this time he ſequeſters his wife from the company of all ſtrangers, eſpecially of the male ſex, and watches over her conduct with the moſt jealous vigilance.

When a lover goes to pay a viſit to his miſtreſs, during his journey through the fenny moors, he uſually diverts himſelf with a ſong, which he addreſſes to his rein-deer. A tranſlation of one of theſe from the original, which profeſſor Scheffer obtained from Olaus Matthias, a native of Lapland, we ſhall preſerve for the entertainment of the reader. The circumſtances that ſucceſſively preſent themſelves to him during his journey, are naturally interwoven. The anxiety of abſence, the gloominеſs of the roads, and his reſolution of frequenting them, as thoſe only can carry him to the object of his wiſhes; the diſſatisfaction he expreſſes even at the great ſwiftneſs with which he is carried, and his joyful ſurprize at the unexpected ſight of his miſtreſs, as ſhe is a bathing, are all beautifully deſcribed in this compoſition.

A Laplanders's Song to his Rein-deer.

HASTE, my rein-deer, and let us nimbly go
Our am'rous journey thro' this dreary waſte;
Haſte, my rein-deer! ſtill, ſtill thou art too ſlow;
Impetuous love demands the light'ning's haſte.

Around us far the ruſhy moors are ſpread:
Soon will the ſun withdraw his chearful ray:
Darkling and tir'd we ſhall the marſhes tread,
No lay unſung to cheat the tedious way.

The wat'ry length of thoſe unjoyous moors,
Does all the flow'ry meadow's pride excel;
Thro' theſe I fly to her my ſoul adores;
Ye flow'ry meadows, empty pride, farewel.

Each moment from the charmer I'm confin'd,
My breaſt is tortur'd with impatient fires;
Fly, my rein-deer, fly ſwifter than the wind,
Thy tardy feet wing with my fierce deſires.

Our pleaſing toil will then be ſoon o'erpaid,
And thou, in wonder loſt, ſhall view my fair,
Admire each feature of the lovely maid,
Her artleſs charms, her bloom, her ſprightly air.

But lo! with graceful motion there ſhe ſwims,
Gently removing each ambitious wave;
The crowding waves tranſported claſp her limbs
When, when, oh when ſhall I ſuch freedoms have!

In vain, ye envious ſtreams, ſo faſt ye flow,
To hide her from a lover's ardent gaze;
From ev'ry touch you more tranſparent grow,
And all reveal'd the beauteous wanton plays.

The above tranſlation is taken from the Spectator; to which we ſhall ſubjoin a Laplander's love-ſong, the original having been procured by profeſſor Scheffer, from the ſame Olaus Matthias, a native of Lapland. The tranſlation, however, has never before appeared in print, and is the performance of a nobleman lately deceaſed, whoſe genius, politeneſs, and literary accompliſhments, were the admiration of all the courts in Europe. His heir having obliged the authors of this work with a copy of this elegant poem, they thought it their duty to lay it before the public, both for the entertainment of their readers, and to honour ſo diſtinguiſhed a character, who very recently adorned the Britiſh court.

A Laplander's Love-ſong.

SOURCE of my daily thoughts, and nightly dreams,
Whoſe captivating beauties I adore,
O may the radiant ſun's refulgent beams,
Shine on the charms of lovely *Orra Moor*.

I'd climb the ſummit of the lofty pine,
Could I my *Orra Moor* at diſtance view;
No labour, danger, care, would I decline,
To ſee my charmer, and to find her true.

Could ſhe be wafted to terreſtrial bow'rs,
And there in pleaſant ſhades induc'd to ſtay;
Or range enamell'd fields of ſweeteſt flow'rs,
Charm'd by the birds that warbled on each ſpray.

Enrag'd, thoſe pretty birds I would deſtroy,
Pluck up the flowers that beautify the fields,
Cut down the bow'rs that rob me of my joy,
And from my view my *Orra*'s beauties ſhields.

O that I could but ſoar into the ſky,
And wing my paſſage thro' the ambient air,
Swift as the feather'd race could I but fly,
I'd ſoon be with my captivating fair.

But vain, alas! my wiſhes are in vain,
No ſtork, nor raven will a pinion lend;
Fated to feel unmitigated pain,
With ſcarce a hope my paſſion to befriend.

So long my bliſs can *Orra Moor* delay?
Reflect, the ſummer's ſun now brightly gleams;
Short are our ſummers—haſte, then haſte away,
And, with thy love, enjoy his glad'ning beams.

Alas! unkindly you delay the time;
Our ſhort-liv'd ſummer wears away apace:
You've tortur'd me, and dally'd with your prime,
'Till frowning winter ſhews his rugged face.

Still, ſtill my lovely charmer I'll purſue,
And ſcorn all danger to reveal my pains;
For what can love, all-pow'rful love ſubdue?
He laughs at tempeſts, and deſpiſes chains.

Love! mighty victor, triumphs o'er mankind,
Brings ev'ry thought beneath his own controul,
Enſlaves the heart, puts fetters on the mind,
And captivates the haughty human ſoul.

But, hark! ſtern reaſon whiſpers in my ear,
Friend, you are wrong, thus to pour oil on fire,
Raſhly to follow what you ought to fear,
And ruſh into a whirlwind of deſire.

A thouſand things adviſe you to deſiſt,
A thouſand dread examples bid you view
The fate of thoſe whom love's deluſive miſt
Hath ſlily blinded, ſadly to undo.

Reaſon, avaunt! to paſſion I ſubmit,
And will not hear thy diſimpaſſion'd tone;
Others, thy thouſand counſellors may fit,
But I'll attend the voice of love alone.

As ſoon as a child is born in Lapland, it is waſhed all over with ſnow or cold water, except the head, which muſt not be touched with water till after the child has been baptized. The woman does not remain in child-bed above four or five days, and in fourteen is generally quite recovered. She then carries the child to be baptized; but before ſhe can reach the reſidence of the prieſt, ſhe is often obliged to traverſe large foreſts, mountains, lakes, and wide extended waſtes of ſnow. The infant is faſtened in a hollowed piece of wood, ſtretched naked on a bed of fine moſs, covered with the ſkin of a young rein-deer, and ſlung by two ſtraps to the back of the mother, who always ſuckles her own child. At home this little cradle is hung to the roof of the hut, and the child is lulled aſleep by ſwinging it from one ſide to the other.

When the children grow up, their parents are very careful in teaching them moſt kinds of work; but they have a great averſion to ſchools. The boys, from their infancy, are taught to practiſe the bow; and they are not allowed to break their faſt till they have hit the mark. The female children are early initiated in the buſineſs peculiar to their ſex.

The Laplanders have not any phyſicians among them, neither, indeed, have they occaſion for any, not being ſubject to thoſe diſtempers common in other countries. The diſorder they are moſt ſubject to is ſore eyes, occaſioned by the ſmoak of their huts, and the fire to which they are almoſt continually expoſed. They are ſometimes afflicted with rheumatic pains, and the ſcurvy; and a few are ſubject to the vertigo and apoplexy. To cure all inward diſorders, they uſe a drink made with the root of a certain ſpecies of moſs, which they call jerth; and when that cannot be procured, they boil the ſtalk of angelica in the milk of the rein-deer. When they feel a pain in any part of the body, they take a kind of muſhroom, which grows upon the birch tree like a cake; and having ſet fire to it, they apply it, burning hot, to the part affected; and this produces a bliſter, which is ſuppoſed to draw off the peccant humour. They have no other plaiſters for wounds but the roſin which drops from fir trees. When they have any member frozen, they put a red-hot iron into a cheeſe made of rein-deers milk, and with the fat that drops from it, like a kind of oil, they rub the part, which by that means is almoſt inſtantly cured.

When a Laplander is ſuppoſed to be on his death-bed, his friends exhort him to die in the faith of Chriſt, and bear his ſufferings with reſignation, by remembering the paſſion of our Saviour. But thoſe who have no great zeal for the Chriſtian religion, forſake the dying perſon, and think of nothing but the funeral entertainment. As ſoon as the breath is out of the body, moſt of the company leave the hut, being of opinion they ſhall receive ſome injury from the ſpirit or ghoſt, which they believe remains with the corpſe, and takes all opportunities of doing miſchief to the living. The deceaſed is wrapped up in linen or woollen, according to his circumſtances, and depoſited in a coffin by a perſon ſelected for that purpoſe; but this office he will not perform till he receives a conſecrated braſs ring, which is placed on his left arm, and which he imagines ſecures him againſt receiving any injury from the ghoſt of the deceaſed.

Before the Laplanders embraced the Chriſtian religion, they uſed to bury the dead in the firſt place they happened to think of, which they ſtill do when they are very far from any church. Many of them alſo preſerve the rites of heatheniſh ſuperſtition; for with the body they put in the coffin an axe, a flint and ſteel, a flaſk of brandy, ſome dried fiſh, and veniſon. With the axe the deceaſed is ſuppoſed to hew down the buſhes or boughs that may obſtruct him in the other world; the ſteel and flint are to furniſh him with a light, ſhould he find himſelf in the dark; and the proviſion is for him to ſubſiſt on during his journey.

Before the body is carried to the place of interment, the friends of the deceaſed kindle a fire of fir-boughs near the coffin, and expreſs their ſorrow in tears and lamentations. They walk in proceſſion ſeveral times round the body, demanding, in a whining tone, the reaſon of his leaving them on earth: they aſk whether he was out of humour with his wife? whether he was in want of meat, drink, cloathing, or other neceſſaries? and whether he had not ſucceeded in hunting or fiſhing? Theſe, and other ſuch interrogations, are intermingled with groans and hideous howlings; and between them the prieſt ſprinkles the corpſe and the mourners alternately with holy water. After theſe ceremonies are over, the body is conveyed to the place of interment, in a ſledge drawn by a rein-deer, and followed by the friends and relations, who ſhew their concern for the loſs of the deceaſed, by dreſſing themſelves in the worſt garments they have, and keeping a continual howl during the proceſſion. As ſoon as the ceremony is over, the people retire; and the ſledge, with the cloaths which belonged to the deceaſed, are left as the prieſt's perquiſite. Three days after the funeral, the relations and friends of the defunct are invited to an entertainment, where they eat the fleſh of the rein-deer which conveyed the corpſe to the grave. The animal being made a ſacrifice to the manes of the deceaſed, the bones of it are collected together, put into a baſket, and interred with great ceremony.

The effects of the deceaſed are divided between the brothers and ſiſters, the former having two-thirds, and the latter one; but the lands, lakes, and rivers, are held jointly by all the children of both ſexes, according to the diviſion made by Charles IX. of Sweden, when he aſſigned a certain tract of land to each family.

With reſpect to the language of the Laplanders, it is altogether a very barbarous tongue, and varies in different parts of the country, according to the correſpondence which the natives maintain with the different nations; ſuch as the Norwegians, Swedes, Finlanders, and Ruſſians. The greater part of them are totally ignorant of letters; and it may be ſaid alſo, of arts, except ſuch as neceſſity has taught them for their own preſervation.

SECT. IV.

Of the Religion of the Laplanders.

IT is uncertain at what period chriſtianity was firſt propagated in this country; but it is ſuppoſed to have been introduced by St. Erick, about the year 1300. Be that as it may, however, no material progreſs was made in the eſtabliſhment of it till the laſt century, when miſſionaries were ſent for that purpoſe from Norway, Sweden, and Ruſſia. Several churches were built in different parts of the country, and ſupplied with miniſters from Sweden and Ruſſia. Guſtavus Adolphus founded two ſchools, one in the province of Pitha, and the other in that of Ulma, for inſtructing the children of the Laplanders in the Chriſtian religion and in letters. He alſo ordered ſeveral good books to be tranſlated from the Swediſh, into the Lapland language; ſuch as the catechiſm, with ſome prayers, and the manual, containing the pſalms of David, the proverbs of Solomon, &c. And that they might be encouraged to ſend their children to ſchool, an annual revenue was allotted to maintain the ſcholars both in victuals and cloaths. Hence Lapland now produced ſome preachers which greatly promoted their knowledge of chriſtianity in that country; for, heretofore, their clergy having been Swedes, whoſe language the people did not underſtand, it could not be reaſonably ſuppoſed that they ſhould profit much by their inſtructions. Since that time, however, the greateſt misfortune hath been, that many Laplanders, at preſent, intermix too much idolatry with the pure profeſſion of chriſtianity, and from local cuſtoms, the ridiculous fondneſs for omens; particular times and ſeaſons, diſtinguiſhed by the names of black and white days, &c. &c. retain many of their former ſuperſtitions. They ſuppoſe the exiſtence of a good and evil principle, and imagine that theſe, when at variance, occaſion the happineſs or miſery of mankind. Perhaps theſe principles may be reaſon, and the paſſions by which the warfare of the mental and corporeal faculties is maintained.

" For all ſubſiſts by elemental ſtrife,
" And paſſions are the elements of life."

With reſpect to the Pagan ſuperſtitions ſtill remaining, they adore the gods Thor, Storjunkar, and Bacwe, whom they worſhip under the ſymbols of ſtones, trunks of trees, and fire.

They have ſome notion of the doctrine of the Metempſychoſis, or the tranſmigration of ſouls; for they not only reſpect the manes of their departed relations and friends, but dread them as being miſchievous, till they imagine the ſpirits of the defunct have re-animated other bodies. They believe there are fairies that wander about among the rocks, mountains, rivers, and lakes; and give them alſo a ſhare of their devotion. They own one ſupreme God, whom they arm with thunderbolts: they make the rainbow his bow, and have the ſame notion of him that the old Pagans had of their Jupiter. They have another ſubordinate god, to whom they acknowledge they owe all the bleſſings of life, and never fail to worſhip him. The ſun is another of their divinities, becauſe of his influence on the bodies of men and beaſts. They have temples and images conſecrated to each of their gods. Their idols are either the trunks of trees rudely carved, or of ſtone. One of theſe is preſerved in the royal cabinet of antiquities at Upſal. All their women are excluded from worſhip. They anoint the idol with the heart's-blood of the ſacrifice; and when they cannot reach the top of a mountain conſecrated to Storjunkar, one of their deities, they dip a ſtone in the blood of the ſacrifice, throw it up to the mountain, and ſo conclude their devotion.

The Laplanders were formerly deemed great magicians, and the credulous ſuppoſed them to be mightily ſkilled in divination. Of their impoſitions, Monſ. De La Motraye hath given the beſt account; we ſhall, therefore, ſelect from him, all that is worthy of notice on this ſubject. In his travels through Lapland, this gentleman enquired what notion the people then had of witchcraft and magic: to which one of them anſwered, that the profeſſors of the black art were to be found moſt commonly in Kimi Lapmark and Finland; that they converſed with the devil, and knew every thing that was done: and if they were provoked by any one, or hired to do a man miſchief, they could inflict diſeaſes on him, his wife, children, or cattle. He pretended to inſtance ſome whom they had ſtruck blind, and others whoſe cattle were killed by their ſorcery; adding, that there were ſome of them who could remove the diſeaſes which they themſelves, or others, had inflicted: and that they had done ſo on their being treated with good liquors, or receiving handſome preſents from the ſufferers. They gave our traveller an inſtance of a young and wealthy Laplander, who, upon breaking his word with a girl he courted, was ſtruck blind by her mother, who was ſkilful in the black art, and would not reſtore him to his ſight, till he agreed to marry her daughter. It is certain, that the poor ignorant Laplanders have a very great veneration for thoſe pretenders to magick, and by all imaginable means avoid their anger. La Motraye hired a perſon to carry him to the tent of one of theſe conjurers, in the moſt northerly part of Lapland, having firſt given him all poſſible aſſurances that he would not betray him to the government (the laws againſt witchcraft being as ſevere in Sweden as they were formerly with us). He found the wizard in a poor hut, and in as wretched circumſtances as thoſe people are uſually repreſented to be in this part of the world: upon which he made the common obſervation, that if theſe people had really any intereſt with the devil, he would ſurely reward them better. The conjurer gave our traveller his hand, and ordered him to follow him to the top of a high mountain, that lay to the eaſtward of his hut, where he deſired him to ſtand till he fetched his drum, and other utenſils neceſſary to the acting his part. Soon after the man returned with his drum, which he had hid among ſhrubs and ſtones, for fear of a diſcovery. It was of an oval form, and had but one head; there was faſtened to it a chain, with ſeveral braſs rings. Before the operation began, the wizard demanded if they had any brandy; and half a pint being preſented to him, he immediately drank two thirds of it; then putting the chain and rings into the inſide of his drum, and turning the bottom upwards, he beat upon it with a forked piece of a reindeer's horn (the head was covered with a tranſparent parchment, wretchedly painted with the celeſtial ſigns); he beat upon it for a few minutes, the rings all the while jumping about, and making a jingling noiſe: then he laid himſelf down flat on his back, ſetting the head of his drum upon his bare breaſt, and, having ſhut his eyes, ſeemed to be in a trance, not breathing for ſome time; and, having fetched a deep ſigh, he gently raiſed the drum above his head, and looked upon the rings, which he could eaſily diſcern through the parchment; and having conſidered their poſition, and diſtance from the celeſtial figures, he fixed his eyes upon our traveller, and declared, that he would run a great hazard on the water, as he returned in his ſledge; and again in going down the cataracts, or water-falls, in a boat: that he would have another great eſcape from fire; that his life ſhould be long and healthful, after he had overcome two great fits of illneſs, both which would ſeize him within the ſpace of two years. And as for the interpreter, who led La Motraye to his cell, he directed him to go out a fiſhing, on the 20th, 22d, 24th, 26th, and 28th days of that month; and the 3d, 6th, 9th, 12th, 16th, 20th, 24th, and 28th of the next; and he ſhould return home loaded with fiſh: and the ſame days in the months of September, October, and November, would be equally fortunate to him in hunting. When he had finiſhed his predictions, La Motraye aſked if he could tell whether he was a bachelor, or a married man; into what countries he had travelled, beſides Torno Lapmark, &c. but our conjurer was too wiſe to gueſs at things that were paſt, in which he knew his ignorance might be too eaſily diſcovered. La Motraye afterwards made the poor fellow a preſent of half a crown, with which he ſeemed extremely ſatisfied, as the guide was with the predictions concerning his ſucceſs in fiſhing and hunting. So exceſſively credulous theſe poor Laplanders are, and ſo prepoſſeſſed in favour of their conjurers, that they implicitly follow their directions. If theſe pretended wizards tell them, that on ſuch a day they ſhall take plenty of fiſh or game, they will not fail to go out that day; and as there is moſt commonly abundance of both in this country, they uſually verify the prediction, by coming home loaded whenever they go out in ſearch of game. And if

the wizards mark another day as unfortunate, they infallibly make it ſo, by not going abroad in queſt of any thing.

SECT. V.

Government, Trade, Revenue, &c.

THE three powers to which Lapland is now ſubject depute different governors or prefects to preſide over their reſpective diſtricts. The Laplanders, however, had kings of their own till the year 1277, when the Swedes conquered part of the country, and the Ruſſians and Norwegians ſoon after followed their example, and ſubdued the reſt.

In Swediſh Lapland, which is the moſt conſiderable diſtrict of the three, the laws of Sweden are obſerved; and three tribunals, or courts of juſtice, are erected: one for Angermanland-Lapmark; a ſecond for Uma, Pitha, and Lula-Lapmark; and the third for Torno and Kimi-Lapmark; in each of which courts there is a prefect, who determines all cauſes. They adminiſter juſtice in the king's name, and in the preſence of the prieſt.

The Laplanders, who live near the mountains which part Norway from Sweden, trade with the inhabitants of thoſe countries. Such as are at a greater diſtance from thoſe mountains trade only with the Swedes; and thoſe who are ſituated towards the north and eaſt, trade with the Ruſſians and Finlanders. The commodities they receive from thoſe nations are, rixdollars, woollen ſtuffs, linen, copper, tin, flour, ſalt, hides, needles, knives, ſpirituous liquors, and eſpecially tobacco, of which they are extremely fond. They give, in return, rein-deer and fiſh, of the latter of which they take ſuch large quantities, that they ſtock whole reſervoirs with them, and put them afterwards into barrels, which they carry to the neighbouring countries; namely, the north of Bothnia, and White Ruſſia. They alſo trade in fine ermines, the ſkins of ſeveral wild beaſts, dried pikes, and cheeſe made of the milk of their rein-deer.

The tribute paid by the Laplanders conſiſted formerly in ſkins of wild beaſts; but now they conſiſt in a certain coin, rein-deer, and in ſkins, either dreſſed for certain uſes, or raw; and are proportionable to the extent of land poſſeſſed by each head of a family. The largeſt are ſtiled intire territories, or territories of a full tribute; and the owner is obliged to pay yearly two rixdollars, in coin, to the crown of Sweden. They who poſſeſs a territory, or land of half a tribute, pay only one rixdollar. But as it happens very often, that many of them have no rixdollars, they are allowed to give ſkins of foxes or ſquirrels inſtead of coin. Fifty ſquirrels ſkins, or one fox's ſkin, with a pair of ſhoes, after the faſhion of Lapland, are valued at one rixdollar: beſides which, every head of a family is obliged to give yearly a white fox's ſkin, or a pair of ſhoes; and if he cannot procure thoſe things, he muſt give half a pound of dried pikes. Part of theſe taxes is employed for the maintenance of the prieſts who live in that country, to inſtruct the Laplanders. The inhabitants of the other diſtricts of Lapland trade much in the ſame commodities; and pay their revenues in a ſimilar manner to the reſpective ſtates to which they belong.

CHAP. IV.

NORWAY.

THIS country received its name from its ſituation towards the north-pole; for the Latin Norvegia, the Engliſh Norway, or the Nordway of the language of the country itſelf implies the way to the north. Some of the Daniſh antiquaries indeed pretend that it took its name from a perſon named Norus, who firſt eſtabliſhed it into a kingdom; but unluckily, like other antiquaries, after having made this round aſſertion, they are at a loſs to tell who this Norus was, or during what period he lived. Adam Bremenſis likewiſe calls it Normannia, as deeming it the utmoſt extremity of the world towards the north.

Norway is ſituated between the 57th and 72d deg. of north lat. and between the fourth and 15th degree of eaſt long. ſo that it extends about 5 deg. 30 min. within the polar circle. The length from Lindaſnoes, in the dioceſe of Chriſtianſand, to the North Cape at the extremity of Finmark, is about 1000 miles. Its breadth, from the frontiers of Sweden weſtward, to the Cape Staff, is better than 300 miles; but from thence the country narrows towards the north, and becomes much leſs in different parts. On the north and weſt this country is bounded by the Northern Ocean, on the eaſt it is divided from Sweden by a long ridge of high mountains, and on the ſouth it is bounded by the Schagenrack, or Cate-gate, which is the entrance into the Baltic Sea. The coaſt extends near 400 leagues, and is ſtudded by many iſlands, which afford paſture for cattle, and fiſhermen.

The barriers of rocks and narrow channels formed by theſe iſlands, render Norway inacceſſible to naval attacks. Nor is the North Sea the leaſt impediment, for it is extremely difficult to navigate, contains many dangerous hidden rocks, and is ſubject to the moſt violent ſtorms. But above all, the terrible currents, and dreadful whirlpools, are great objects of fear to thoſe who navigate theſe ſeas.

The principal of theſe whirlpools is called the Moſkoeſtrom, or vulgarly the Malſtrom, receiving its appellation from the ſmall iſlands of Moſkoe and Moſkoenas, between which it is ſituated. This current runs ſix hours from north to ſouth, and returns from ſouth to north in the ſucceeding ſix hours, like the ebbing and flowing of the ſea, but in direct oppoſition to the motion of the tides; for during the flood, which runs from ſouth to north, the Moſkoeſtrom runs from north to ſouth; and during the reflux, or ebb, when the ſea runs from north to ſouth, this current impetuouſly returns from ſouth to north. It runs with a ſurprizing rapidity, eſpecially between the iſland Moſkoe, and the extremity of the iſland Moſkoenas, where the tides riſe higheſt; but gradually abates its impetuoſity as it approaches the iſlands of Werroe and Roſt.

The Moſkoeſtrom never runs in a direct line like other currents, but whirls about in a circular manner. For when it is half flood in the ſea, the current here runs to the ſouth-ſouth-eaſt; as the tide riſes it winds ſouthward, then proceeds towards the ſouth-weſt, and afterwards due weſt. As ſoon as it is high water the current runs on to due weſt. When it is high water out at ſea, the current of the Moſkoeſtrom alters its courſe to the north weſt, and ſo gradually on to the north, where its impetuoſity is at a ſtand for about three quarters of an hour. This interval is obſerved twice a day, after which the motion

tion begins again. The appearance and effects of the Moſkoeſtrom have been deſcribed as very dangerous and dreadful, but, it muſt be owned, not without ſome exaggeration. M. Bing, who had ſeen it, informs us that it has no whirlpool or vertex; but that it is formed by the colliſion of an aſſemblage of foaming waves, riſing as it were pyramidically to a great height, and with a prodigious noiſe. According to Schelderup's account the Meſkoeſtrom is full of vortices, or terrible whirlpools, in the form of inverted cones, and about two fathoms deep from the baſe to the apex, and, as ſome relate, four fathoms in diameter: however, both accounts may, in ſome meaſure, be reconciled. This is certain, firſt, that the Moſkoeſtrom is not agitated with equal violence at all times; that about the new and full moon, the equinoxes, or in ſtormy weather, it rages with the greateſt impetuoſity; and that at other times it is more moderate, and twice a day quite calm. Secondly, that the navigation in that part of the ſea is not abſolutely impeded by it, as at half flood a veſſel can ſafely go from Moſkoenas to Werroe or Roſt, and at half-ebb may ſafely return to Moſkoenas; that the ſtreight betwixt Moſkoenas and Werroe is twice a day quite ſmooth and navigable for three quarters of an hour: and that the inhabitants of thoſe iſlands accordingly row in their boats to Moſkoe, which lies in the middle of it, to look after their ſheep which feed on that iſland, and the fiſhermen ſound the bottom of it. After theſe intervals, the ſwiftneſs of the current gradually increaſes to its uſual boiſterous rapidity and violence. Sometimes the waves in this current are not larger than thoſe that are ſeen at ſea in a hard gale of wind; but when its agitations are at the height, ſhips that ſail on either ſide of it keep at the diſtance of two or three Norway miles; for otherwiſe they would be abſorbed by it, and entirely deſtroyed. It is diſcernable indeed at a great diſtance at ſea, and even within a quarter of a Norway mile of the continent; but this does not render the ſea unnavigable at ſuch a diſtance; for large veſſels and ſmall barks ſail very ſecurely within half a league of the iſland of Werroe. I ſhall not engage in a particular diſquiſition into the cauſes of this phenomenon, but it is probable, that it does not proceed from any cavern or abyſs under the water, but from its impetuous oppoſition to the current of the tides, and the colliſion of the waves.

Charles Douglas, Eſq. F. R. S. and captain of his majeſty's ſhip the Emerald, in the year 1769, addreſſed a letter to the Royal Society, in which he informed that learned body, that during the time of his being in the North-Seas, he made particular enquiries concerning the Moſkoeſtrom, without being able to obtain any ſatisfactory information, till he met with the maſter of a Norwegian veſſel, who being a very intelligent perſon, gave him the following account; "That at high water it is perfectly ſmooth, and ſafe to paſs over; but as the tide, either at ebb or flood, gathers ſtrength, it becomes in proportion exceedingly agitated and dangerous, which extreme agitation and whirling (ſays Mr. Douglas) I preſume, muſt be owing to the unevenneſs of the rocky bottom, over which the current rolls with vaſt rapidity, being confined in a narrow paſſage; for this Norwegian told me, that at very low water, pointed rocks, reaching then above the ſurface, have been ſeen between the iſlands. No wonder then that ſuch veſſels may have been turned upſide down, as have been drawn by the tide, in its moſt rapid ſtate, into this gulph. The ſimple agitation of the water would ſufficiently account indeed for the loſs of open boats. Imperfect as it is, in my humble opinion, this account, if true, which I believe it ſo to be, unravels, in ſome meaſure, the myſtery of the Norwegian whirlpool; which I however regret not having myſelf, conſiſtently with my orders, had it in my power minutely to examine."

Thus have we given the ſeveral opinions of thoſe who have written with moſt preciſion on this ſurprizing phœnomenon. That of captain Douglas appears to be the moſt rational, and ſeems to be confirmed by the following circumſtances, related by a learned gentleman, from the concurrent teſtimonies of others. "The ſurface exhibits different vortices, and if in one of them any ſhip or veſſel is abſorbed, it is whirled down to the bottom, and daſhed to pieces againſt the rocks. Theſe violent whirlpools continue without intervals, except for a quarter of an hour at high and low water in calm weather, for the boiling gradually returns as the flood or ebb advances. When its fury is heightened by a ſtorm, no veſſel ought to venture within a league of it: Whales have been frequently abſorbed within the vortex; and hawled, and bellowed hideouſly in their fruitleſs endeavours to diſengage themſelves. A bear, in endeavouring to ſwim from Lofaden to Moſkoe, was once hurried into this whirlpool, from whence he ſtruggled in vain for deliverance, roaring ſo loud as to be heard on ſhore; but notwithſtanding all his efforts, he was borne down and deſtroyed. Large trees, being abſorbed by the current, are ſucked down, and riſe again all ſhattered into ſplinters.

SECT. I.

Natural Hiſtory of NORWAY.

THE atmoſphere of Norway is greatly varies in different parts, on account of the aſtoniſhing varieties and inequalities in the ſurface of the country; hence the climate materially differs in ſeveral parts of the kingdom. At Bergen, and its vicinity, the winter is remarkably moderate. On the eaſtern parts of the kingdom it ſets in about the middle of October, and continues till towards the latter end of April, with uncommon ſeverity, during which time the ſurface of the country, in thoſe parts, is covered with ſnow, and the waters all frozen. On the mountain of Ruden or Tydal, in this diſtrict, a moſt dreadful affair happened in the year 1719. A body of Swedes, being ordered to attack Drontheim, attempted to paſs this mountain for that purpoſe, but being overtaken by a violent ſtorm of ſnow and hail, they were bewildered and overwhelmed; and by thus having their march impeded, upwards of 7000 men, many officers, and the generals Labarre and Zoega periſhed miſerably. They were ſoon after found frozen to death, by a body of two hundred Norwegian ſledgmen under the command of major Emahus, who diſcovered theſe unfortunate victims to the ſeverity of the weather, in various poſtures, ſome ſitting, ſome prone on the earth, and others in a praying attitude. It appeared that, in order to preſerve their lives as long as poſſible, they had cut to pieces their muſquets, and burned the wood they afforded them.

The northern parts of Norway is ſtill more intenſely cold during the winter; but the ſummer is always warm, and often exceſſively hot, throughout moſt parts of the kingdom. By the reverberation of the ſun's beams from the ſides of the mountains, the weather in the valleys is rendered ſultry; add to this, that the ſun is ſo very ſhort a time below the horizon, that the atmoſphere and mountains have not hours enough to become cool. Hence vegetation is remarkably quick; and the ſummer, by rendering vegetation exceedingly expeditious, ſeems to make ſome amends for the horrors of winter.

The longeſt day, at Bergen, conſiſts of nineteen, and the ſhorteſt of ſix hours. In the beginning of the ſummer the light encreaſes with vaſt rapidity, and declines, with equal celerity, at the commencement of winter; which phœnomena are owing to the earth's inclination towards the pole. At the northern extremity of Norway, the ſun is, for a conſiderable time, continually in view, keeping always above the horizon, circulating daily round the pole, and gradually enlarging and contracting his orbit, until he at length quits that hemiſphere. When this happens, all the light perceived at noon, for ſome weeks, is but very faint; and a winter's day can, at beſt, be deemed but a glimmer; but, happily for the inhabitants, the portion of time called night, is brighter than that denominated day; for what with the exceſſive glare of the moon, ſtars, and aurora borealis, or northern lights, &c. the atmoſphere is ſufficiently illuminated to admit of the following their ordinary occupations at midnight without the aſſiſtance of any artificial lights.

The air of Norway is in general healthy, except towards ſome parts of the ſea-coaſt, where the moiſt exhalations are hurtful; indeed ſome perſons of conſumptive diſpoſitions prefer ſuch ſituations on account of the greater eaſe with which a moiſt atmoſphere acts on the lungs in reſpiration.

The

The great number of rivers, lakes, creeks, ſprings, &c. with which Norway abounds, and the melting of ſnow, in ſummer time, occaſion frequent rains, which often cauſe floods. But the inhabitants are expoſed to the greateſt evils from ſudden thaws, and the vaſt quantities of ſnow and ice which are thereby looſened from mountains and precipices; and overwhelm in their fall, men, cattle, houſes, boats, and even ſometimes whole villages, and hamlets. Somewhat more than two centuries ago, a whole pariſh, near Hardanger, was deſtroyed by the fall of a prodigious maſs of ſnow; this being converted into ice, ſtill accumulated, and afterwards formed a frozen mountain, beneath which, a rivulet ran through a kind of ſubterranean paſſage, and, for ſome time, its waters frequently brought with them many of the utenſils and fragments of the pariſh which had been ſo overwhelmed.

The northerly winds here are the frozen winds; the ſoutherly bring warmth; the eaſterly winds are ſtormy, and the weſterly partake of the nature of trade winds, particularly on the coaſt of Bergen. It muſt be imagined, that the ſeas near this country are ſubject to a variety of ſqualls, hurricanes, &c. indeed they are frequently dreadful. Nor is the dangerous phœnomenon of the water-ſpout uncommon.

The freſh water of Norway is heavy and impure, full of particles of iron and okar; yet it is not ſo unhealthy, or unpleaſant as might be imagined.

The principal rivers of this country are, the Nied, Sule-Ely, Gulen, Offeroen, Syre, Nid, Sheen, Tyre-fiord or Drammoe, Laven, Glaamen, or Stor-Elven.

Of theſe rivers all the circumſtances worth remarking are, that the river Gulen, in the year 1344, buried itſelf under-ground, from whence it again burſt forth with ſuch violence, that the earth and ſtones thrown up by the eruption filled a valley near it, and formed a dam, which afterwards burſt, through the force of the water, and occaſioned the deſtruction of a few churches, forty-eight farm-houſes, and two hundred and fifty perſons. That the rivers Nid and Sheen have had their paſſages diverted by immenſe labour and canals, cut through the rocks for the convenience of navigation, and the greater facility of tranſporting timber to various places. And that the river Glaamen is the largeſt in Norway.

The chief freſh-water lakes of Norway are, Ryſvand, Shaaſen, Selboe, the greater, and leſſer Mioes, Sluie-vand, Sperdille, Rand and Veſtn, Saren and Modum, Lund, Norſoe, Huidſae, Fariſvand Oeyavand.

"Wars (ſaith an ingenious writer) have been maintained on theſe inland ſeas, in ſome of which are ſmall floating iſlands, or parcels of earth with trees on them, ſeparated from the main land, and probably preſerved on compact maſſes by the roots of trees, ſhrubs, and graſs, interwoven in the ſoil. In the year 1702, the family ſeat of Borge, near Frederickſtadt, being a noble edifice, with lofty towers and battlements, ſuddenly ſunk into an abyſs one hundred fathoms in depth, which was inſtantaneouſly filled with a piece of water forming a lake three hundred ells in length, and about half as broad. Fourteen perſons, with 200 head of cattle, were deſtroyed by the river Glaamen precipitating itſelf down a water-fall near Sarp, and undermining the foundation. Of all the water-falls in Norway, this of Sarp is the moſt dangerous for its height and rapidity. The current drives 17 miles, and roars along with ſuch violence, that the water, daſhed, and comminuted among the rocks, riſes in the form of rain, where a beautiful rainbow may be always ſeen when the ſun ſhines. In ancient times this cataract was uſed for the execution of traitors, and other malefactors; they were thrown down alive, that they might be daſhed in pieces on the points of rocks, and die in a dreadful commotion analogous to thoſe they had endeavoured to excite in the community.

The ſoil of rocky, mountainous, and low ſituations muſt, of courſe, materially differ. The mountains of Norway are bare and barren, but the ſoil waſhed down from them by torrents of ſnow and rain, greatly encreaſe the worth of the valleys, by fertilizing them to a prodigious degree. The earth conſiſts of unequal ſtrata of black mould, ſand, loom, chalk, and gravel; the former, which lies uppermoſt, being extremely rich, and fit to nouriſh all kinds of vegetables. In ſome parts of the kingdom clay is found, of which a tolerable kind of earthen ware is made. Thoſe parts which are deformed by ſwamps and marſhes are exceeding dangerous to travellers; a narrow wooden cauſeway, in the dioceſe of Chriſtianſand, is extended above a mile over one of theſe ſwamps; in paſſing which, if either man or horſe make a falſe ſtep, it is certain deſtruction.

The Norwegian mountains are aſtoniſhingly high, dreadful to travel over, and tremendous to behold.

That ſtupendous chain of thoſe mountains which extends through Norway from north to ſouth, and is indifferently called Rudfield, Sudefield, Skarsfield, and Scareberg, receives different appellations at different parts. In particular, the principal names of the reſpective diviſions of this chain are, Dofrefield, Lamsfield, Sagnefield, Tilefield, Halnefield, Hardangerfield, Jocklefield, Byglefield, Hicklefield, and Hangfield. The heighth and breadth of the whole vary as this extenſive chain runs; that part called Dofrefield is ſuppoſed to be higher than any other mountain in Europe. In ſome places a traveller goes about ſeventy, and in others leſs than fifty miles to paſs the huge ſummit of this aſtoniſhing chain. Bridges are thrown over many dreadful cataracts and other tremendous vacancies, and ſome of theſe are but very indifferently faſtened to the ſteep rocks on the other ſide.

The road over that part called Tilefield is named the King's, or Poſt-Road; and, as guides, all the way poſts are fixed, at the diſtance of 200 paces, to direct the traveller. This road extends 50 miles, and the only places of refreſhment, throughout the whole, are two houſes, or mountain-ſtoves, as they are called, which are maintained at the public expence for the reception of travellers, and well furniſhed with kitchen utenſils, firing, &c.

Imagination cannot conceive, or language expreſs, more diſmal ſcenes than preſent themſelves to thoſe who paſs theſe dreary mountains. Continually ſurrounded by dangers, and perpetually beholding ſights of horror, the moſt hardy traveller muſt ſhudder, the moſt courageous be aſtoniſhed, and the more timid be abſolutely terrified.

There is a ſingle defile * by which a perſon may go from Sweden to Nordensfield without paſſing this chain, that is, where the whole is interrupted by a very long deep valley, extending from Romſdale to Guldbranſdale.

Independent of this aſtoniſhing chain of mountains, there are a great number of others detached over the face of the whole country, and exhibiting a great variety of uncommon appearances. "The vaſt mountains and rugged rocks that deform the face of this country (ſays an able writer) are productive of numberleſs inconveniences. They admit of little arable ground; they render the country, in ſome parts, impaſſable, and every where difficult to travellers. They afford ſhelter to wild beaſts, which come from their lurking-holes, and make terrible havock among the flocks of cattle.

"They expoſe the ſheep and goats, as well as the peaſants, to daily accidents of falling over precipices.

"They occaſion ſudden torrents and falls of ſnow, that deſcend with incredible impetuoſity, and often ſweep away the labours of the huſbandman.

"They are ſubject to dreadful eruptions, by which huge rocks are rent from their ſides, and hurling down, overwhelm the plains below with inevitable ruin.

"The peaſants frequently build their houſes on the edge of a ſteep precipice, to which they muſt climb by ladders at the hazard of their lives; and when a perſon dies, the corpſe muſt be let down with ropes before it can be laid in the coffin.

"In winter the mail is often drawn up the ſides of ſteep mountains, and even in the king's road, travellers are expoſed to the frequent riſques of falling over thoſe dreadful rocks, for they are obliged to paſs over narrow pathways, without rails, or riſing on the ſides, either

* In the year 1612, a body of 1000 Scots, commanded by Sinclair, and ſent over as auxiliaries to the Swedes, were put to the ſword, in this defile, by the peaſants of Guldbrandſdale, who never give quarter to any whom they deem foes.

ſhored

ſhored up with rotten poſts, or ſuſpended by iron bolts, faſtened in the mountains. In the narrow paſs of Naeroe is a remarkable way of this kind which, upwards of ſix centuries ago, king Suerre cauſed to be made for the paſſage of his cavalry."

Similar to the laſt mentioned road is another difficult and dangerous way between Vaug and Shogſtadt; it winds by the ſide of a ſteep mountain, and, in many parts, is ſo narrow, that if two travellers ſhould meet in thoſe places, they would find it impracticable either to paſs each other, or turn their horſes; ſo that they muſt both inevitably periſh, unleſs one conſents to throw his horſe down the precipice, and then clings cloſe up to the rock till the other paſſes him.

When a ſheep or goat falls down a rock, the owner hazards his life to regain his animal. For which purpoſe he is let down tied to the end of a long rope, and ſitting a-croſs a ſtick; when he gets to the bottom, he faſtens the creature to the ſame cord, and thus both are drawn up together. Sometimes the rope breaks, and at other times the aſſiſtants above are dragged down from the top, when all fall down the precipice, and uſually periſh together.

When a man or horſe falls from a very high precipice, it has been obſerved that the breath is not only ſtopped, by the repercuſſion of the air, but the body always burſts before it reaches the ground.

The trees of Norway conſtitute a very principal part of its trade and commerce; beſides the vaſt quantities uſed at home in building houſes, bridges, piles, moles, fences, ſhips, boats, &c. very large ſums are received for firs and pines exported to various parts. The floating maſts and large beams down the rivers, and dividing other timber into boards, at the ſaw-mills, employ a vaſt number of hands, and contribute greatly to the revenue, for a tenth of all ſawed timber appertains to his Daniſh majeſty.

The ploughed lands in Norway, with reſpect to thoſe parts which are mountainous, boggy, covered with foreſts, &c. is only as one to eighty; it cannot, therefore, be ſuppoſed, that the kingdom produces near a ſufficiency of grain to ſupply the inhabitants. Peas, hops, hemp, flax, &c. are cultivated in ſome parts, but to no conſiderable advantage; the paſturage of the meadows, however, is very rich, and nutritive to cattle.

The Norwegians formerly had garden-ſtuff, pot-herbs, &c. imported from England and Holland; for ſome years paſt, however, they have paid ſuch attention to the cultivation of thoſe articles, that they can now ſupply themſelves.

Here are many wild plants, the infuſion of one of which ſome of the inhabitants drink in the manner of tea, and deem an admirable pectoral.

As the ſcurvy is a prevalent diſorder in Norway, nature hath bountifully ſupplied that country with a great profuſion of antiſcorbutic herbs, ſuch as angelica, roſewort, gentian, creſſes, trefoils, ſorrel, ſcurvy-graſs, &c. But to counterbalance theſe conveniences, Norway abounds in many nauſeous and poiſonous herbs and plants that are prejudicial both to men and cattle.

An admirable graſs grows here, that botaniſts call viola camina, and which was rendered particularly famous, by having, in the year 1652, contributed, in a moſt aſtoniſhing manner, to the preſervation of two Norway youths: the ſtory of this tranſaction is as follows:

Two brothers, on the firſt day of Auguſt, in the ſaid year, made an excurſion of about ſeven leagues from their father's houſe to take their pleaſure in hunting, ſhooting, fiſhing, &c. After having enjoyed the diverſion of fiſhing for the ſpace of four days, in the lake Riff, they rowed, in a ſmall ſkiff, to a very ſmall iſland on the ſaid lake. While they ſtaid here, a ſudden ſquall of wind occaſioned the ſkiff to break looſe, and drive to the ſhore, where their dog ſtood waiting for them.

As neither of the youths could ſwim, they ſaw themſelves ſuddenly abandoned to famine, on a deſolate iſland, and ſequeſtered from all intercourſe with mankind. Their firſt care was to build a kind of hut, with ſmall ſtones, that they might, in ſome degree, be ſcreened from the inclemency of the weather. Towards the cloſe of the ſecond day, their appetites being whetted to the keeneſt ſenſe of hunger, they induſtriouſly ſought ſome vegetable food, and ventured to eat the viola camina, each, to the amount of an ounce twice a day; and this was all that they could find at one ſearch. Their ſtomachs were eaſed, their ſpirits refreſhed, and the acute pains which had begun to ſeize their arms and ſhoulders immediately abated. Eleven days did they ſubſiſt on this vegetable, but it failed on the twelfth, and they were reduced to the brink of deſpair; when they accidentally found a little ſpot overgrown with ſorrel, which they conſumed at one meal: nevertheleſs, it was re-produced in leſs than 24 hours, and the devout young men, with tears of gratitude to heaven, owned it as an interpoſition of Providence in their behalf. During the firſt days of their ſuffering, they had called and beckoned to their dog, and uſed every poſſible allurement to induce that animal to ſwim over, that they might kill him for their ſubſiſtence, but he would not obey their ſignals. They were now reduced to ſuch a weak condition, that they could not ſtand; and hardly made ſhift to creep from their hut in queſt of the ſorrel. The eldeſt was ſeized with a violent palpitation of the heart; and the youngeſt carved upon a piece of timber their names, and a ſhort account of the ſad accident they had met with, pointing out, at the ſame time, a text of the pſalms, on which he requeſted that their funeral ſermon might be preached. Then having joined in fervent prayer, they embraced each other, and became perfectly reſigned to their approaching fate.

In the mean time their dog, having tarried eight days with their baggage on the ſhore, returned to their father's houſe, where he refuſed food, and inceſſantly moaned in a moſt diſmal manner. Hence the parents concluded, that their ſons had met with ſome misfortune, and diſpatched a man in ſearch of them. The meſſenger arriving at the lake, found their baggage, and concluding they were drowned, returned with the melancholy tidings. On the 13th day of their being on the iſland, and after having reſigned every hope of relief, they heard the trampling of horſes feet, and exerting their utmoſt efforts, they called out loud enough to be heard. The travellers immediately came to the ſhore, and finding the ſkiff, humanely put off to the iſland, where they found the brothers almoſt exhauſted. The eldeſt, when food was offered him, could ſcarce bear the ſmalleſt portion; and, after being conveyed to his father's houſe, remained for ſome time in great danger; but at length recovered, and ſurvived this diſaſter 37 years. The younger recovered his ſtrength ſomewhat ſooner, and afterwards drew up this narrative as a pious acknowledgment of God's providence.

Common fruit-trees grow tolerably well here; but the ſuperior ſort but very indifferently. Norway, however, produces a great variety of excellent berries, ſuch as

Juniperberries,	Corianderberries,
Sunberries,	Raſberries,
Gooſberries,	Blackberries,
Barberries,	Bilberries,
Cranberries,	Strawberries, &c.

With reſpect to the ſtones of Norway, they are a brown pebble, which eaſily decays; black, white, blue, grey and variegated marble; alabaſter, chalk-ſtone, cement-ſtone, ſand-ſtone, mill-ſtone, baking-ſtone, load-ſtone, ſlate, talc, amianthus, or aſbeſtos, ſwine-ſtone, or a kind of cryſtal, real cryſtals, granates, amethyſts, agate, various kinds of ſpars, thunder-ſtones, and eagle-ſtones. The eagle-ſtone is very ſingular, and ſeems to conſiſt of ſeveral ſhells or cruſts laid one over another; but that which diſtinguiſhes it from all others is its being hollow on the inſide, in which cavity there is another ſtone that is ſmaller: this, when it is ſhook, may be heard to rattle. It is of various colours, as white, grey, dun, or brown. Modern authors mention only three ſorts of this ſtone, the firſt of which is rough on the outſide, and is of different colours, but commonly of a black dun: this makes a very diſtinct noiſe when rattled. The ſecond is of an aſh colour, and contains a ſort of marl in the inſide, which is ſometimes white, yellow, red, or blue. The outſide is rough and ſandy, and ſeems to conſiſt of the particles of flint. A third is of ſeveral colours, but has the like contents as the former. The firſt kind is no bigger than a peach-ſtone, but the other two are often as large as a man's fiſt. Theſe ſort of ſtones are found in moſt parts of the country.

This kingdom is immenſely rich in metals and minerals. Iron is found in great plenty, and was the firſt metal ever worked in the country. Great quantities are annually exported, partly in bars, and partly in cannons, ſtoves, pots, kettles, &c. the national profits of which are very conſiderable. There is one ſpecies called moor-iron, found in large lumps in moraſſes, and of this many domeſtic tools and utenſils are made for home conſumption. The lead mines are deemed of little importance, but the copper mines are thought ineſtimable. Of the latter are four of a capital nature, viz.

1. That of Roaas, ſituated about an hundred miles from Drontheim.

2. The copper works at Lykken, about 20 miles from Drontheim. Theſe are very conſiderable, though inferior to the former.

3. The mine at Indſet, about 30 miles from Drontheim, where the copper is precipitated from its menſtruum by the means of iron.

4. The copper-works at Silboe, which is the leaſt conſiderable of the four.

In the dioceſe of Chriſtianſand gold hath been found, but not in any conſiderable quantities; and at Kongſberg a very valuable ſilver mine is now working on account of his Daniſh majeſty; the ore is admirable. Even large maſſes of pure ſilver have been found, among which one piece, weighing 560 lb. is ſtill preſerved in the Muſeum at Copenhagen. The value of the ſilver annually obtained from this mine is equivalent to the value of a ton and a half of gold; and the works employ, and give ſubſiſtance, to upwards of 5000 perſons. At Jarlſberg other ſilver mines are worked, but not to equal advantage, for this reaſon, that the ore is blended with lead and copper. At Kongſberg a vitriol-work is eſtabliſhed, and many parts of the kingdom yield ſulphur and allum; ſalt is likewiſe made here, and turns to very conſiderable advantage.

The quadrupeds of Norway are horſes, black cattle, ſheep, goats, hogs, dogs, cats, &c. The horſes are ſmall, but ſwift, hardy, and ſpirited; the black cattle are of a diminutive breed, but their fleſh is tender, delicate, and juicy; and the cows yield plenty of milk. The fleſh of the ſheep is delicious, and the fleeces profitable; the goats are very ſtrong, exceeding hairy, and their ſkins are much valued. Few hogs are reared here, but dogs are numerous of various kinds, and uncommonly ſerviceable; and the ſkins of cats, both wild and tame, bear a great price, being uſed for winter garments.

The wild animals of Norway are the

Elk	Lynx
Rein-deer	Glutton
Hare	Lerning
Rabbit	Ermine
Bear	Martin, and
Wolf	Beaver.

The elk is a tall, aſh-coloured animal, bearing ſome reſemblance both to the horſe and ſtag. It hath long legs, flat horns, and cloven hoofs. It is of a harmleſs diſpoſition, the fleſh taſtes like veniſon, and the hide is tanned into ſtrong leather.

The rein-deer has already been deſcribed in Lapland. The hares are ſmall, and change their colour with the ſeaſons, being brown in ſummer, and white in winter; but the rabbits reſemble thoſe which are common in England.

The bear is by ſome reckoned of the cat kind, but for what reaſon it is hard to ſay. While his hair is on he is a very ugly creature, but when he is ſtripped of his ſkin he much reſembles a man in the ſtructure of his thighs, legs, and feet. This reſemblance conſiſts chiefly in the length of the bear's thighs, in which he is quite different from other brutes; and he has five toes oppoſite to the heel. The bones on the wriſts are alſo like thoſe of a man; but the thumbs are not ſeparated from the reſt of the fingers as in a man; and are placed on the contrary ſides. Likewiſe the great toe on the foot is placed outwardly. In treading the bear does not touch the ground with his heel, for which reaſon it is covered with hair like the leg. Likewiſe the fingers of the fore paw are of a very bad conformation, which renders them quite improper for the uſes a man makes of his hand; for they are thick, and ſet cloſe to each other.

The wolves in Norway traverſe in troops the immenſe foreſts, thick woods, and lofty mountains, and make terrible devaſtations, devouring every creature they can conquer: they likewiſe aſſail the ſmall hamlets, break into the farmers yards, and do incredible miſchief.

Wolves and bears in Norway are afraid of the ſound of a horn, on which account ſhepherds, ſhepherdeſſes, farmers, travellers, &c. always take care to ſupply themſelves with thoſe ſonorous inſtruments, in order to drive away thoſe deſtroyers from their flocks and herds.

Various methods are taken, and ſnares laid, to deſtroy wolves: they are ſhot, poiſoned, blown up with trains of gunpowder, taken in pits dug in the ground, and covered over with boughs, ſhot with ſpring-guns, &c. When any perſon digs a pit in order to entrap wolves and bears, he is obliged by law to give intimation of it through the whole diſtrict, leſt any traveller, or other perſon, ſhould, by accident, paſs that way, and fall into it.

The lynx, called in Latin lupus cervarius, which in Engliſh is a wolf-hart, has been ſuppoſed to be of the ſhape of a wolf, and the colour of a hart. Others have thought that it was engendered between a wolf and a leopard, which is a great miſtake, for he is nothing like a wolf, and that in which he reſembles a leopard and a hart, is ſo common to many other animals, that it is very probable he has the name of lupus cervarius, becauſe he purſues the harts in the ſame manner as a wolf does a ſheep.

The muzzle of a lynx is not long and pointed like a wolf, but blunt and ſhort like a cat, and the length of his head is about ſeven inches, his neck four, and his body 24 inches, without including the tail, which is eight in length. His height, from the extremity of the fore feet to the top of the back is 20 inches, and from the bottom of his hind feet to the upper parts of his buttocks 23. He has five claws on the fore feet, and four on thoſe behind. Each toe is armed with long, crooked, ſharp claws, which are ſometimes concealed like thoſe of a cat.

The back is of a reddiſh colour ſpotted with black, and the belly and the inſide of the thighs are of a grey aſh-colour, ſpotted likewiſe with black, but in a different manner; for the ſpots on the belly are larger, not quite ſo black, and more diſtant from each other than thoſe on the back, legs, and paws, whoſe outſides are reddiſh. However, all the hair is of three different colours; for the root is of a greyiſh brown, the middle red, or of an aſh-colour, and the ends white. But this whiteneſs at the ends takes up ſo ſmall a part of the hair, that it is no hindrance from ſeeing the principal colour, which is that in the middle; and it only makes the ſurface of the body appear as if it was ſilvered over.

The glutton is not larger than a turnſpit dog, and is ſhaped very much like him. His luſtre is beautifully variegated, and has a moſt admirable luſtre like damaſk; being ſo fine and precious that he is ſhot with blunt arrows, that the ſkin may not be injured. This animal is ſo ravenous, and hath ſuch an inſatiable appetite, that he will devour a carcaſe which is nearly as big as himſelf. When he is ſo overgorged as to be quite uneaſy to himſelf, he ſearches out two trees that grow near together, and ſqueezes himſelf between them till he exonerates his ſtomach; and during this operation he is ſo ſick that his fierceneſs ſubſides, and he may be eaſily taken.

The lerning, or Norway mouſe, is in ſhape like a common mouſe, or rather like a dormouſe, only his tail is leſs; he is about five inches in length, and covered with thin hair of various colours. The extremity of the upper part of the head is blackiſh, the vertex yellowiſh, and from thence to the neck and ſhoulders black. The reſt of the body is reddiſh, intermixed with ſmall black ſpots of various figures, as far as the tail, which is ſhort, being ſcarce half an inch long; but it is hairy, ſlender, and of a yellowiſh black colour. However, the ſpots are not alike in all, with regard to their order, figure, and magnitude. The head is a little pointed, and the mouth is beſet with many ſtiff hairs like whiſkers; of which, twelve are longer and ſtiffer than the reſt. The mouth is ſmall, and the upper lip cloven like a ſquirrel's; beneath which, two large, ſharp, crooked teeth ſtand out, whoſe roots reach to the orbits of the eyes, and to the place

where the grinders are inſerted, Thoſe in the lower jaw are the ſame in number as in the upper, and diſpoſed in the ſame manner. The grinders on each ſide are three in number; of which, that before is broadeſt. The tongue, in proportion to the ſize of the mouth, is pretty large, and reaches to the extremity of the fore teeth. The eyes are little and black, and the ears blunt, inclining towards the back. The legs before are very ſhort, and the feet hairy, with five ſharp crooked claws, of which that in the middle is the longeſt. The fifth, which may be called the thumb, is like the ſpur of a cock, and ſeated ſomewhat higher near the leg. The hind legs are longer, but they are not unlike thoſe before.

It is ſomewhat ſtrange, that an animal with ſuch ſhort legs ſhould be ſo ſwift of foot as this is ſaid to be. The ſkin is very thin, except where it covers the lips, that the whiſkers may have a firmer hold. The bones are ſmall and brittle, for they may be broken with a very little force. Theſe creatures do a great deal of miſchief in paſtures and corn-fields, and when they die they infect the air in ſuch a manner that it cauſes dangerous diſeaſes. Some have affirmed, that they are generated by putrefaction, or drop out of the clouds; but this is an opinion too abſurd to need confutation.

The ermine, or hermelin, is a kind of weazel, and uſually reſides in the clifts of rocks, or among a heap of ſtones. It is all over white, except the end of the tail, which is black. It is greyiſh about the eyes, and there is a ſpot of the ſame colour in the middle of the head, as alſo between the ſhoulders, and on the tail. However, the colour varies according to the ſeaſon of the year, being white in winter and brown in ſummer. None are ignorant of the high eſteem in which the ſkin of this little animal is held throughout all Europe. It is the ſofteſt and the moſt beautiful of all furs, but then it loſes its beautiful whiteneſs by age, and turns a yellow or cream colour. It feeds upon rats, mice, moles, and ſuch like, but it is remarkable in thoſe kept in cages, that they will never touch any kind of fleſh until it be putrid.

The martin is of the ſize of a cat, but ſomewhat longer; for the length of the body, from the tip of noſe to the root of the tail, is about two feet, and that of the tail generally twelve inches; but the legs are ſhorter, as well as the claws, and the whole body is covered with fur of a browniſh fallow colour, except the throat, which is white. The ears are ſhort, broad, and roundiſh; the eyes ſhine in the night like thoſe of a cat, and the noſe is ſomewhat prominent; the upper jaw is blunt, the tongue long and ſmooth, and covered with ſharp papillæ, but they are ſoft, and the points are turned backwards. The teeth are very white, unequal and rough, and it has whiſkers like thoſe of a cat; the feet are divided into five toes, and are hairy all over; they are united half way by a membrane, and what is called the great toe is the ſhorteſt, and at a diſtance from the reſt. The tail is covered with long hair, which makes it ſeem thicker than it really is.

In ſome places the common martin delights to be among buildings, ſuch as caſtles, churches, barns, hay-lofts, ſtacks of wood, pigeon-houſes, and the like. He is a great enemy to domeſtic fowls and pigeons, and will kill a great number whenever he can come at them. He is alſo very fond of eggs, and will carry them from one place to another without breaking. The dung is ſaid to have a muſky ſmell, by which means their haunts may be found out. Martins ſleep in the day time, and go abroad in the night in queſt of their prey. They are hunted in ſome places by a ſort of dogs, that ſeem to be deſigned by nature for that purpoſe. Perhaps they may be the ſame as our fitchet dogs, ſo called from their hunting the pole-cat, or fitchet. Theſe animals are hunted for their furs, which are very valuable, and they are in ſeaſon in the beginning of the winter.

The fleſh of the martin is ſaid to be, by thoſe that have taſted it, good eating; but as for its being proper to ſtrengthen the ſtomach it may be very much doubted. In ſome places they make uſe of the dung as a perfume; and ſome pretend it is good to diſſolve the ſwelling of the glands. The gall, when mixed with fennel-water, is recommended to take out ſpots in the eyes.

Some authors diſtinguiſh martins into two kinds, namely, the domeſtic martin with a white throat, and the wood-martin, that is to be found in foreſts conſiſting of ſmall trees, in which they make their neſts, much in the ſame manner as ſquirrels. This may be known from the former, in having a yellow throat, and the fur on the reſt of the body more of a fallow colour. Some call it the golden martin, and its ſkin is much more valuable than that of the other.

With reſpect to the beaver, or caſtor, we ſhall particularly deſcribe it in America, where all that relates to it will come in with greater propriety.

Beſides the beforementioned animals, Norway is productive of foxes and ſquirrels. The ſkins of the foxes are greatly valued, their fur being either white, red, or black; but the latter is the moſt eſtimable. The Norway foxes have the common character for cunning which the foxes of other countries have; nor do the ſquirrels ſeem to be behind hand with them in point of ſagacity.

The reptiles and inſects of this country are,

Various land-ſnakes	Graſhoppers
Ditto water-ſnakes	Glow-worms
Lizards	Slow-worms
Toads	Cluſter-worms, and
Frogs	Snails
Spiders	Caterpillars
Butterflies	Gnats
Common flies	Wood-lice
Beetles	Fleas, &c.
Ants	

The weſt wind brings many inſects that greatly hurt vegetation; and the waters are productive of inſects that are exceedingly injurious to the fiſheries, by deſtroying the fiſh. The moſt particular of the latter is the little ſea-horſe, which exceeds nine inches in length; and, in the head, ſnout, and mane, is ſomewhat like a horſe. It is about the thickneſs of a man's thumb, and the body is full of clefts and furrows. The ſnout is a ſort of a tube, with a hole at the bottom, to which there is a cover that he can open and ſhut at pleaſure. The upper part of the body ſeems to have ſeven ſides; but below the vent it reſembles a figure conſiſting of four ſides. The eyes are ſmall and prominent, and between them are two high tubercles. The tail ends in a point, and is generally very much bent. Behind the eyes, where the gills are placed in other fiſh, there are two fins which look like ears, and above them are two holes, but there are no gills neither outwardly nor inwardly. The whole body ſeems to be compoſed of griſtly rings, on the intermediate membranes of which ſeveral ſmall prickles are placed. The colour is of a dark green, but towards the tail inclining to black. The belly is marked with ſpots of a whitiſh blue. It is taken in the Mediterranean, and alſo in the weſtern ocean.

Norway abounds in moſt of the fowls and birds common to European countries, ſuch as

Dunghill fowls	The Grawſe
Pigeons	Quail
Finches	Corncrake
Snipes	Thruſh
Nightingales	Ouzle
Eagles	Hawk
Ravens	Kite
Cormorants	Heron
Cuckows	Bats, &c.

The ſea-coaſts are overſpread with innumerable flights of Aquatic fowls, that build their neſts, and hatch their young among the cliffs, rocks, neighbouring iſlands, &c. and feed on fiſhes, inſects, and ſea-weeds. Among theſe are aſtoniſhing numbers of wild ducks, geeſe, and alks; the latter are peculiar to the country, build in the moſt inacceſſible rocks, fly in ſuch numbers as even to darken the air, and, with their wings, make a ſurprizing noiſe that ſomewhat reſembles the riſing of a tempeſt; many other birds build in the cliffs and mountains, though not in ſuch vaſt numbers; and the Norwegian peaſants, who reſide near the ſea coaſts, are employed, at a certain ſeaſon of the year, in climbing the rocks at the moſt imminent danger of their lives. But their ſkill and intrepidity, in general, ſurmount every obſtacle; and the birds they make prize of are, to them, very valuable, as the fleſh and eggs furniſh them with food, and the down and feathers ſell to great advantage. An ingenious writer, in ſpeaking of the Norwegian methods of bird-catching, ſays,

ſays; "In ſome of the Nordland diſtricts, the farmers train dogs to ſpring the ſhore, and ſtrand birds from their holes, which are almoſt inacceſſible. Theſe are auxiliaries to the bird-men or climbers, who either ſcramble up the face of perpendicular rocks, with the moſt aſtoniſhing courage and dexterity; or are lowered down by ropes, ſometimes above 100 fathoms, over projecting precipices. Some of the birds will allow themſelves to be ſeized in their neſts; others are taken in a net fixed to the end of a pole, which the bird-man applies to the mouths of the holes from whence they take their flight. In climbing up the rocks two bird-men tie themſelves together with a rope of a moderate length. The firſt being puſhed up by the other's pole to a proper ſtanding-place or projection, fixes himſelf to the rock, and the ſecond clambers up, aſſiſted by the rope which is tied round the waiſt of his fellow. In this manner they proceed alternately, till they arrive at the birding-places. But ſometimes, in ſpite of all their ſkill and precaution, one ſlips, and, dragging the other after him, both periſh. Some perſons alſo loſe their lives yearly in the other operation of deſcending from the ſummits; looſe fragments of the rock, being moved in the deſcent, ſometimes fall upon, and kill the bird-man; and ſometimes, the rope being cut by the ſharp-pointed ſtones, he is precipitated and daſhed to pieces among the rocks.

Two of the Norwegian birds are known by the names of the north-wind-fowl and ſouth-wind-fowl: the former is of a grey colour, ſmaller than a ſtarling, and makes a very uncommon noiſe previous to the blowing of the north wind; and the latter never appears in Norway but as a fore-runner of a ſouth wind; hence they both received their appellations.

The trier, or cock of the wood, is the principal of the game fowls, and the largeſt of all the eatable birds in the country; it reſembles a wild Turkey-cock in the bill and feet, has black or dark grey feathers, and red round the eyes.

The Norwegian eagle is of two ſpecies, the water and land eagle. The water eagle is the largeſt, and lives chiefly on the produce of the ſeas and rivers. The land eagle preys upon land animals, ſuch as ſheep, hares, lambs, kids, &c. Independent of which, he kills many birds, and hath ſometimes been known to deſtroy children.

About the latter end of autumn the Norway ſwallows try to conceal themſelves among the reeds and buſhes in freſh-water lakes, where they remain all the winter in a ſtate of inſenſibility, and revive again in the ſpring. The peaſants and fiſhermen frequently find whole flocks of them in this benumbed condition, coupled together, with their legs and bills entangled. If brought into a warm apartment, they feel the enlivening warmth, and, in about half an hour's time, begin to move; ſoon after they flutter, and even begin to fly about, but, within the ſpace of an hour, they drop down dead; which is owing to their being prematurely waked from their lethargy, or revivified before the natural time.

The Norwegian ſeas abound with fiſh, among which is a ſpecies of the ſhark called haae-moeren, which is ten fathoms in length, and whoſe liver is ſo fat as to yield three caſks of train oil.

The Helleflynder is a prodigious large kind of turbot, which, upon various occaſions, appears to have exhibited ſymptoms of revenge againſt mankind.

The whalebone, or blubber-whale, which we have already deſcribed in our account of Greenland, is likewiſe found in the Norwegian ſeas, as are great numbers of ſpermaceti whales. The ſpermaceti whale differs much from the former, having teeth, whereas the other hath none, nor is the head near ſo large, in proportion to the body, as that of the toothleſs whale.

In January, 1762, a ſpermaceti whale was brought into Greenland-Dock by a trading veſſel. Thoſe, who were concerned in taking it, give the following account of this fiſh, and the manner in which they killed it.

As they were going through the Hope, they ſaw ſomething floating at a diſtance, which appeared to them like the maſt of a ſhip; but, as they approached it, they diſcovered it to be a large fiſh, and, upon ſeeing it caſt up a great quantity of water, concluded it was a whale. They chaced him aſhore, below the Hope-Point, and went off to him in their boats. He ſeemed a motionleſs lump, his head and tail being concealed in the water. They firſt pierced the prominent parts; and, having dug a hole twelve inches deep, a great torrent of blood iſſued forth. Upon this they withdrew to a diſtance, and ſoon after the boat had paſſed him, (as the water was deep enough over his tail) he ſtruck the ground with ſuch violence, as to force up ſtones and mud to a great height in the air. They waited about three quarters of an hour, and then he expired with the moſt horrible groans. After this, they faſtened a cable to his body, and at laſt brought him to Greenland-Dock, where he was ſeen by ſeveral thouſands of people.

They took out of his head eight puncheons of ſpermaceti, which lay between the eyes and the ſpout-hole, in different cells of the brain. Its extreme length was 54 feet, and its breadth 14; the lower jaw was 10 feet, and the length of the penis eight: the tail meaſured 15 feet.

At Mr. Rackſtrow's exhibition-room, in Fleet-ſtreet, is the ſkeleton of a whale of this kind. Thoſe who ſhew this curioſity ſay, that it will contain 30 people in its head, and 50 in its cheſt; and that 12 hogſheads of ſpermaceti oil were taken out of its upper jaw, or rather that part of the head above it, which was entirely compoſed of fleſh and oil.

This whale was thrown aſhore on the Iſle of Thanet, Feb. 2, 1762, and meaſures, from the ſnout to the tail-fin, 72 feet. The upper jaw, which appears to be one ſolid bone, is 16 feet long, and ſix broad at the top, where it is wideſt, and from whence it grows narrower to the end of the ſnout, which terminates in a point. Along the middle of it runs a deep round groove, through which he ſucked up the water, which he afterwards diſcharged at the ſpout-hole. From the top of this jaw proceeds a large thick bone, which turns upwards almoſt perpendicularly to the height of about four feet, and forms, as it were, part of a kind of ſkull. The under jaw is not near ſo wide as the upper, herein being juſt the reverſe of the toothleſs whale. At the diſtance of about eight feet from the ſnout, it divides and becomes forked, in order to receive in the cavity a protuberance of the upper jaw, which ſeems exactly to fit it. This jaw had two rows of teeth. The upper jaw has no teeth; but, inſtead thereof, there is a groove or ſocket to receive thoſe of the lower: ſo that, when the mouth was ſhut, they muſt have reſembled ſo many pointed weapons in a ſheath. The ſockets of the eyes, which are of an oval form, and placed almoſt at the furtheſt part of the jaws, meaſure about eighteen inches over. Hence, what is told us by ſome writers, that the chryſtalline humour of the eye in this fiſh is not bigger than a pea, muſt appear to common reaſon as a fable; for we muſt not ſuppoſe, that nature is ſo unequal in her proportions. Beyond the ſockets of the eyes are the two fin bones, which are very thick, five feet long, and two feet three inches in the broadeſt part. There are eleven ribs on each ſide, the largeſt of which is 10 inches in circumference. The ribs form a cavity, eight feet wide, within the body of the fiſh, and in which were contained the heart, lungs, &c. The back-bone is at much the ſame diſtance from the floor, by which the ribs are ſupported. The back-bone, which is three feet 10 inches thick, (meaſured in the round part only; for the upper part of it is cloſely ſet, throughout the whole length of it, with ſpinal bones, like thoſe of a hog) and the tail fins, which extend about 15 feet, compoſe the reſt of this ſkeleton.

Though many parts of this ſkeleton ſeem much decayed, probably owing, in a great meaſure, to the injuries it muſt have unavoidably received in being removed from place to place, it is nevertheleſs highly worthy the attention of thoſe who delight in natural curioſities.—The particulars, as related above, were taken by the writer of this work, on the 23d of February, 1778.

Seals abound about the coaſt of Norway, they reſide in caverns and rocks in the ſea, but go on ſhore, twice a year, to bring forth their young. They are eaſily killed by the fiſhermen, who ſtrike them over the noſe with large ſticks; after which the fat is ſlead off with the ſkin. The latter being ſprinkled with ſalt, and rolled up ſingly, and the former depoſited in caſks for train oil.

The ſea ſcorpion is a fiſh about four feet long, with a head larger than the whole body, of a hideous aſpect,

wide mouth, enormous jaws, and ſmall ſcales, of a reddiſh colour. Its bite is poiſonous, and it is an exceeding voracious creature.

The ſea devil is about ſix feet in length, but the head makes full one half of the fiſh. The body ſuddenly tapers into a ſharp-pointed tail, the eyes are large, and the jaws wide and horrible, ſet with different rows of ſharp teeth, the tongue is likewiſe furniſhed with a kind of teeth, or ſharp protuberances, ſo that the bite is terrible; and all round the under jaw, which projects beyond the upper, there are hanging ſlips, or griſtly furs of about four inches in length. This fiſh is extremely voracious, deſtroying innumerable other fiſhes of various ſpecies and ſizes; and if he can ſeize upon a man that is bathing, he is ſure to kill and devour him.

Salmons ſwarm in theſe ſeas, are caught in great quantities, and highly eſteemed all over Europe.

The ſalmon is a very beautiful fiſh, and is every where in great eſteem; the body is longiſh, covered with ſmall thin ſcales, and the head is ſmall, with a ſharp ſnout, and the tail is forked. The colour on the back is blueiſh; on the other parts, white, generally intermixed with blackiſh or reddiſh ſpots, placed in a very agreeable manner. The female may be diſtinguiſhed from the male, by having a longer and more hooked ſnout, in having ſcales that are not quite ſo bright, and having its body ſpeckled over with dark brown ſpots. Likewiſe the belly is flatter, the fleſh is more dry, and not ſo red; nor yet is the taſte ſo agreeable.

The excreſcence which grows out of the lower jaw of the male, and is a bony griſtle like the beak of a hawk, is not a ſign of his being ſickly, as Walton and others have thought; but is a defence provided by nature againſt ſuch fiſh as would devour their ſpawn. It grows to the length of about two inches, and falls off when they return to the ſea. He is likewiſe more ſpotted in freſh water than in the ſea. The teeth are ſmall in proportion to its body; and the gills are four double, with a broad cover full of red ſpots, of the ſame colour as on the ſides; for towards the back, they are more duſky. The fleſh is not ſo red when boiled, as when it is raw or ſalted; and it is tender, flaky, and luſcious; for which reaſon it ſatisfies ſooner, and is harder of digeſtion, though generally preferred to that of other fiſh. About the time of ſpawning it grows more inſipid, and loſes a great deal of its lively colour. Some begin to be out of ſeaſon about the beginning of July, and others much later: which may be known by their falling away, their loſing their beautiful ſpots, and by their colour; inſomuch, that when they are quite out of ſeaſon, they look like fiſh of a different kind.

The ſalmon-fry, called in ſome parts a ſalmon-ſmelt, is by moſt thought to be the offſpring of a ſickly ſalmon, which has been forcibly detained from viſiting the ſalt water; but however that be, it is agreeable enough to the eye, though its taſte is very ordinary and inſipid. The ſalmon chuſes the rivers for its abode about ſix months in the year, entering the freſh water about February or March, in ſome places, where they continue to the autumnal ſeaſon, at which time they caſt their ſpawn, and ſoon after return to the ſea. In general, the ſalt water contributes moſt to their growth, and the freſh renders them fat.

When the time of ſpawning comes, the female makes a hole in a gravelly bottom, like a kind of neſt of her own dimenſions; which done, ſhe diſcharges her ſpawn and retires. Then the male, or milter, advances and covers the ſpawn with its belly, emitting, at the ſame time, a whitiſh fluid like milk. After this the female returns, and they both endeavour to cover their brood with gravel, in which they work with their noſes like hogs.

Then they return to the deep to recover their ſtrength, which they uſually do in about twenty days.

The ſalmon has different names, according to its different ages; being in the firſt year called ſmelts, in the ſecond ſprods, in the third morts, in the fourth forktails, in the fifth half-fiſh, and in the ſixth, at which time they are thought to have attained their proper growth, they are judged worthy of the name of ſalmons. And when they are largeſt they weigh near forty pounds.

The herring is from ſix inches to a foot in length. That which diſtinguiſhes this fiſh from all others is, a ſcaly line that runs along the belly from the head to the tail; the colour on the belly and ſides is of a ſhining ſilver; beſides, the ſcales are large, and come regularly off. It has no ſpots, and the belly is ſharp like a wedge, with red eyes. The tail is forked, and the ſwimming bladder is of a ſilver colour. The noſtrils of this fiſh are very apparent, and have two apertures, of which the foremoſt cannot be ſeen with the naked eye; it is a little nearer the ſnout than the eyes. The lateral bone, that covers and cloſes all the lower parts, is ſlightly dentated on the edges; there is a long ſpace, with teeth in the middle of the fore part of the palate; or rather two rows of ſmall teeth ſeated in a right line, according to the length of that part of the palate neareſt the end of the ſnout. The lower jaw is a little longer than the upper, and there are very ſmall teeth at its extremity; but thoſe at the extremity of the upper jaw are ſo ſlender they can hardly be ſeen. The tongue is ſharpiſh, free, and diſengaged below, of a blackiſh colour, and armed with ſmall teeth turned backwards. There is generally a red or violet ſpot at the extremity of the covers of the gills, the remaining parts of which are of a ſilver colour, and conſiſt, below, of three or four bony plates, and eight ſpines, a little crooked, joined together by a membrane. The ſcales are large in proportion to the body.

A herring dies immediately after it is taken out of the water, whence the proverb ariſes, "As dead as a herring;" the fleſh is every where in great eſteem, being fat, ſoft, and delicate, eſpecially if it be dreſt as ſoon as caught; for then it is incomparably better than on the next day. There are vaſt quantities of theſe fiſh taken, ſalted, ſmoak-dried, and conſumed all over Europe.

Herrings are diſtinguiſhed into ſix different ſorts; as the fat herring, which is the largeſt and thickeſt of all, and will keep longer than any. The meat herring, which is likewiſe large, but not ſo thick nor ſo fat as the former; the night herring, which is of a middling ſize; the pluck, which has received ſome damage from the nets; the ſhotten herring, which has loſt its roe; and the copſhen, which by ſome accident or other has loſt its head.

Theſe uſeful fiſhes annually viſit the weſtern coaſt of Norway, in ſuch amazing ſwarms as to exceed all belief. The innumerable ſhoals that emerge from their ſhelter under the ice, towards the north pole, divide themſelves into three bodies, about the latitude of Iceland. One of theſe directs its courſe weſtward, ſteering round the Hebrides, and coaſt of Scotland, towards Newfoundland. The ſecond ſteers towards the coaſt of Great Britain; and the third, coaſting about Norway, paſſes the Sound into the Baltic.

The herring and * cod are driven, in great ſhoals, upon the coaſt of Norway, by the great herring-whales; who, not daring to venture in among the rocks or between the iſlands, remain about ſix weeks, on the back of a great ſand-bank parallel to the ſhore, extending about 300 miles in length, in order, as is ſuppoſed, to watch the return of the ſhoals. But though the herring-whale is thus ſtopped in his purſuit, the ſharks, porpuſſes, and other ſmaller fiſhes of prey, can eaſily enter between the channels, and among the rocks near the ſhore, and theſe continue the purſuit in ſuch a manner, as to drive the cods and herrings into every little creek and inlet, and even to the very margin of the water; ſo that innumerable quantities may be eaſily taken. Several hundred ſhip-loads of pickled herrings are yearly exported from Bergen only, beſides the great quantity conſumed at home by the common people.

The largeſt, and the fatteſt herrings appear upon the coaſt from Chriſtmas to Candlemas, at which ſeaſon the country people aſſemble upon the ſhore in great numbers, with their boats, caſks, ſalt, fiſhing-tackle, &c. It is aſſerted that, in the compaſs of one mile, near 300 boats are daily employed, for a month together, in fiſhing. The nets are about 20 feet in length, and, in each, the fiſhermen will often catch near 5000 herrings. The fatteſt and beſt are pickled for exportation; but the worſt ſort are conſumed in the country. The cod, ling, kabelian and forſk, are caught in ſtrong nets of 400 fathoms in length, in 50 or 60 fathom water: then being

* The cod, and cod fiſhery, will both be particularly deſcribed under the article Newfoundland.

pickled with French or Spaniſh ſalt, or dried by various methods, they are, in general, exported to Bremen, Hamburgh, Amſterdam, &c. The Norwegian cod and herring fiſheries employ and maintain above 150,000 people.

Theſe ſeas produce a variety of ſhell-fiſh, ſuch as

Oyſters	Pearl-band, &c.
Muſcles	Cockles
Pearl muſcles	Lobſters
Crabs	Shrimps
Sea hedge-hogs	Scuttle-fiſh
Star-fiſh	Wilks
Sea-ſnails	Hermit-fiſh
Ink-fiſh	Sea-nettle, &c.

Of theſe the moſt particular are the pearl-muſcle, the right of which fiſhery appertains to the king of Denmark, and is carried on at his expence; the pearls which are taken annually, about Midſummer, become the property of the queen, as part of the regalia of Norway; and ſome of theſe are very little inferior to the Oriental pearls.

The ſtar-fiſh is commonly about nine inches in length, and ſometimes twelve, with a large, almoſt ſquare head, that is bony and rough. The body is roundiſh, and all the upper part is of an aſh colour, with a white belly. The ſcales are ſmall, and the lateral lines behind the fins approach each other and deſcend to the middle fin of the tail. The face is flat, looking upwards, whence this fiſh has its name; and the eyes are near each other, being protuberant and ſmall, with golden circles. The mouth is pretty large, and the chin beneath it is almoſt like that of a man. The jaws are armed with teeth, as well as the palate; and the lower lip is fringed with barbs. The whole face, and the covers of the gills, are very rough, with a ſort of warts or tubercles, ſome of which are prickly.

That extraordinary production of nature which is ranked among fiſhes, and called the ſea-nettle, is of two kinds, one of which comprehends thoſe that always remain fixed in one place, like ſea plants; and the other contains thoſe that change their place. With reſpect to the firſt, Reaumur deems them real animals, becauſe they have organized bodies, and give ſigns of feeling when they are touched; beſides which, they lay hold of fiſh and ſhell-fiſh, which they eat, and have alſo a progreſſive motion. Theſe nettles aſſume ſo many different ſhapes, that it is not poſſible to deſcribe them under any determinate figure; but, in general, their outward form approaches neareſt to a truncated cone, having its baſe fixed to ſome ſtone, to which it is found always adhering. Some are greeniſh, others whitiſh, and others again of a roſe-colour; likewiſe there are others of all the degrees of brown. In ſome of theſe nettles, theſe colours appear every where on the ſurface, and in others they are mixed with ſtreaks or ſpots. Sometimes again theſe ſpots are diſtributed regularly, and at other times irregularly, but always in a very agreeable manner.

The wandering ſea-nettles have nothing common with the preceding, except in the name, and they have different appellations in different places, as alſo according to their ſizes. Theſe may be more properly called ſea-jellies, according to Reaumur, which is very proper to the ſubſtance of which they are formed; for in reality their fleſh, if it may be ſo called, has always the colour and the conſiſtence of a jelly. When they are thrown upon the ſea coaſt, they appear to be quite motionleſs, which perhaps may be owing to the ſhocks they have received againſt ſtones or the ſand, which may be ſufficient to deprive them of life; for it is certain they are a ſort of animals.

If we may believe (ſays a late learned and ingenious writer) the teſtimony of many creditable Norwegians, the northern ocean produces ſome very extraordinary animals, the exiſtance of which has been doubted by mankind in general; namely, the merman, mermaid, great ſea-ſnake, and kraken or korven.

"The mermaid and merman (ſays this accurate gentleman) are ſea animals that bear ſome reſemblance to the human form. In the year 1719, one of the males of this ſpecies was found dead on a point of land in Norland. His colour was of a dark grey; the face reſembled that of a man, with a large mouth, and flat noſe; the arms were attached to the ſides by a thin membrane, and terminated in paws like thoſe of the ſea-calf. The body tapered into a fiſh's tail, like that of a porpuſs, and the length extended to three fathoms. The mermaid is formed in the ſame manner, bating the difference of ſex, which is diſtinguiſhed like that of the human race. Theſe creatures have been ſeen in many parts of the North Sea, and have appeared of various magnitudes, from two feet to three fathoms.

In the year 1723, three fiſhermen of Elſineur, in Denmark, being examined, upon oath, before the privy counſellor, Frederick Van Gram, declared, that in the month of July, in calm weather, between Hveen and Saedland, they approached, in their boat, ſomething that floated on the ſurface like a dead body; which lay, without motion, till they were within ſeven or eight fathoms of it; then it ſunk inſtantaneouſly, and roſe again nearly in the ſame place. There he ſtood, near a quarter of an hour, ſtaring at them; and was ſeen above the water, to his breaſt. They being terrified at the ſight of this monſter, began to row away; then he blew up his cheeks, uttered a kind of muttering roar; and dived under water. He appeared like an old man, with broad ſhoulders, and a ſmall head, covered with ſhort black curled hair; his eyes were hollow, his face was meagre and weather-beaten, and his ſkin was coarſe and hairy. One of theſe deponents further declared, that about 20 years before, he had ſeen a mermaid, with long hair, and large breaſts.

"The marmiele, or marmate, belongs to the ſame claſs, and is, perhaps, the young of this family; it is formed of different ſizes, and often caught on hooks, by the fiſhermen of Norway. Some are no bigger than infants half a year old; others are as large as children of three years.

"The ſea ſnake is ſaid to be peculiar to the Norwegian ſeas, where it has been ſeen by many hundred people, mariners, fiſhermen, and others. In the year 1746, Captain Lawrence de Tercy, of Bergen, ſhot at a ſea ſnake, which immediately diſappeared; and when the boat was rowed near the place, the water appeared tinged with blood. The head of this animal, which it held at leaſt two feet above the ſurface of the water, was of a greyiſh colour, and reſembled the head of a horſe, the mouth was very large, and black, the eyes were of the ſame colour, and a long white main hung down from its neck, and floated on the ſea. Beſides the head, they ſaw ſeven or eight coils of this ſnake, about the diſtance of a fathom one from another.

"In Egede's journal of the Greenland miſſion we find, that on the 6th of July, 1734, a large, and frightful ſea monſter raiſed itſelf ſo high out of the water, that its head reached above the main top-maſt of the ſhip, that it had a long ſharp ſnout, broad paws, and ſpouted water like a whale; that the body ſeemed to be covered with ſcales; the ſkin was uneven and wrinkled, and the lower part was formed like a ſnake. It plunged itſelf back in the water, and then raiſed its tail, above the ſurface, a whole ſhip's length from the head. Though the exact dimenſions of the ſea ſnake cannot be aſcertained, we may conclude, from the concurring teſtimony of thoſe who have ſeen it at ſea, that he is an hundred fathoms in length; and that his body is as large as a hogſhead. That his ſenſe of ſmelling is very acute, the fiſhermen conjecture from the circumſtance of his avoiding the ſcent of caſtor, a quantity of which they therefore provide themſelves with when they go out to fiſh in the ſummer; and when they meet the ſea ſnake, they throw a ſmall portion of it overboard.

"But the moſt ſurprizing creature in this ſea, and perhaps in the whole world, is the kraken or korven, an animal of the polypus kind, but ſeemingly a mile and a half in circumference. The Norwegian fiſhermen ſometimes, in a hot ſummer day, find no more than 20 or 30 fathoms water, where the depth uſed to be 80 or 100; and here they catch great plenty of cod and ling. They know the kraken is below them, and that they are fiſhing upon his back. When they perceive by their lines that the water grows more and more ſhallow, they judge he is riſing ſlowly to the ſurface, and row away with great expedition. At a proper diſtance they lie upon their oars, and, in a few minutes, part of him appears above the water like a number of ſmall iſlands and ſand-banks,

covered

covered with ſea-weeds, and abounding with a great variety of fiſh, that leap about, and roll off his ſides into the water. At length, a great number of pellucid antennæ riſe upon his back, as large and as high as the maſts of moderate veſſels; by means of theſe inſtruments or tentacula, he moves himſelf, and gathers in his food, which conſiſts of ſmall fiſhes; after he has remained a little time at the ſurface, he begins to ſink again gradually, and this motion produces a dangerous ſwell and whirlpool in the water. In all probability, the floating iſlands, which have been deſcribed by ſo many voyage writers, were no other than the back of this huge monſter."

In the holy ſcriptures the whalebone, or blubber whale, the ſpermaceti-whale, the great ſea-ſnake, and the kraken, ſeem to have been all deſcribed under the general name of leviathan; for that word is of univerſal acceptation, and implies not a particular fiſh only, but a huge ſea-monſter, or prodigious large fiſh. For want of knowing this, thoſe beautiful paſſages in the book of Job, where leviathan is deſcribed, have been frequently miſunderſtood. Thoſe parts (as finely paraphraſed by the celebrated Dr. Young) which apply to the whalebone, or blubber-whale, we have already given in our account of Greenland (ſee page 22 and 23, at the concluſion of ſect. iv, under the article Greenland, in vol. ii). The lines which ſuit the ſpermaceti-whale, as rendered by the ſame reverend gentleman, are theſe:

"At length, my huge leviathan ſhall riſe,
"Boaſt all his ſtrength, and ſpread his wond'rous ſize;
"Whoſe heart ſuſtains him to draw near?—behold
"Deſtruction yawns—His ſpacious jaws unfold,
"And marſhall'd, round the wide expanſe, diſcloſe
"Teeth edg'd with death, and crowding rows on rows.
"What hideous fangs, on either ſide, ariſe;
"And what a deep abyſs between them lies;
"Mete with thy lance, and with thy plummet ſound
"The one how long, the other how profound!"

Thoſe ſuitable to the great ſea-ſnake are as follow:

"When late awak'd, he rears him from the floods;
"And ſtretching forth his ſtature to the clouds;
"Writhes in the ſun aloft his ſcaly height,
"And ſtrikes the diſtant hills with tranſient light.
"Far round are fatal damps of terror ſpread;
"The mighty fear, nor bluſh to own their dread."

And theſe are applicable to the kraken, that aſtoniſhing animal, hitherto unconquered by the moſt ſubtle, and dreaded by the moſt courageous.

"His like, earth bears not on her ſpacious face;
"Alone, in nature, ſtands his dauntleſs race;
"For utter ignorance of fear renown'd,
"In wrath he rowls his baleful eyes around;
"Makes ev'ry ſwoln, diſdainful heart ſubſide,
"And holds dominion o'er the ſons of pride.

SECT. II.

Of the Inhabitants of NORWAY, *their Language, Religion, Laws, Government, &c.*

THE real Norwegians are deſcended from the ferocious Normanni, who harraſſed the greateſt part of the coaſts of Europe with piratical armaments, in the eighth, ninth, and tenth centuries. Many Daniſh, Engliſh, Dutch, Scotch, and German families have ſettled in this country, and now form a conſiderable part of the inhabitants.

Their language, in moſt places, is the ſame with that of Iceland, which proves them to be of the ſame original; but in the civilized parts of the country the language differs but little from that of Denmark.

The Chriſtian religion is ſaid to have been planted here about the middle of the tenth century, and the reformation was eſtabliſhed by the Danes; ſo that Lutheraniſm is the national religion. They have an archbiſhop at Drontheim, and a biſhop in each of the four following towns; namely, Bergen, Staffanger, Hammer, and Obſolo, otherwiſe called Chriſtianburgh.

Juſtice is adminiſtered here in ſeveral courts, from which appeals lie to the ſupreme court ſettled in the capital of the kingdom, where the viceroy reſides, who governs this ſtate with an abſolute power.

Norway is divided into four governments, or prefectorſhips; which are, thoſe of Aggerhus, Bergen, Drontheim, and Wardhus; beſides that of Babus, which is ſubject to Sweden; and the ſeveral iſlands depending on Norway: of all theſe we ſhall now give a diſtinct account.

I. The province of Aggerhus, in Latin Aggerhuſia Præfectura, is the ſouth-eaſt part of Norway, and is ſituated between the province of Bergen on the weſt, from which it is ſeparated by vaſt mountains; Dalcarlia and Bahus, which belong to Sweden, on the eaſt; the mouth of the Baltic, called the Categate, on the ſouth; and the province of Drontheim on the north. Its extent, from ſouth to north, is about 300 miles, and from eaſt to weſt, in the ſouth part, about 120; but it grows narrower northward, till it ends in a point. The land is mountainous and woody, but the vallies are tolerably fruitful, being watered by many lakes and rivulets, which paſs through the country, and fall into the Baltic. It is divided into ſix particular governments, viz. Agdeſinden, Hallingdal, Hammer, Hennemark, Rommerritkir, and Tallemark. There are here ſeveral ſea-ports, particularly Fleckeren, where the fiſhing-trade affords a pretty conſiderable income.

The moſt conſiderable cities and towns of this province are: Obſelo, Anſlo, or Chriſtiania, in Latin Anſloa, or Anſloga Civitas, or Chriſtiania; the chief city of this province is ſeated at the bottom of a narrow bay, and is 30 miles diſtant from the Baltic, and about 110 from Schagen-Cape in Jutland, to the north. It is the ſeat of the ſovereign court of juſtice, where ſentences are pronounced in the preſence of the governor of the province of Aggerhus, and of the viceroy. This city owes its foundation to king Harold, cotemporary with Sweno king of Denmark, ſurnamed Eſtritius, becauſe he was the ſon of Margaret, ſurnamed Eſtrita, daughter to Sweno II. and ſiſter to Canute the Great. Harold kept his court here in the middle of the eleventh century. When the Swedes were beſieging the fort of Aggerhus, in the year 1567, the Danes, in order to take from them all pretences for ſtaying in the country, burnt the city of Obſelo. A peace was concluded between them three years after, and Frederick II. of Denmark, under whoſe reign this town was burnt, dying in 1588, his ſucceſſor Chriſtian IV. rebuilt it in 1614, and called it Chriſtiania, by which name it has been generally known ever ſince. It is the ſee of a biſhop, under the archbiſhop of Drontheim. The cathedral is dedicated to St. Alward, and in it is ſhewn the ſword of Haquin, one of their antient kings, the hilt of which is of cryſtal, and is a great curioſity for art, as well as antiquity. This is a place of good trade for fir-timber, pitch, &c. Many mackrel are caught here, and much pearl; of which Henricus Arnoldi, a Dane, gives the following account: their ſhells are like thoſe of muſcles, but larger, and the fiſh like an oyſter, which produces a great cluſter of eggs, like thoſe of cray-fiſh, ſome white, and ſome black. Theſe eggs, when ripe, are caſt out, and grow like the ſhell, from whence they came: but ſometimes it happens, that one or two of thoſe eggs ſtick faſt to the ſide of the matrix, and are not voided with the reſt; which being fed by the fiſh, in time they grow into pearls of different ſizes, and imprint a mark, both in the fiſh and in the ſhell, of the ſame figure with themſelves. In this city the nuptial rites between king James VI. of Scotland, afterwards king of England, and Anne, the daughter of Frederick II. king of Denmark, were ſolemnized, on the 23d day of November, 1589, that prince having taken a voyage thither, upon the lady's being driven back by contrary winds, when ſhe firſt ſet out for Scotland.

Aggerhus, or Aggerhuſlot, in Latin Aggerhuſia, from which the whole province takes its name, lies on the bottom of the ſame bay, about 15 miles from Chriſtiania, to the ſouth-weſt. It has a ſtrong caſtle, memorable for the brave reſiſtance it made againſt the Swediſh army in the year 1567, which beſieged it hotly for 18 weeks together, but was at laſt beat off, and forced ſhamefully to retire.

Friderickſhall, or Friderickſtadt, in Latin Friderico-ſtadium, ſtands on the Categate, at the mouth of the river Glammen, which riſes in the mountains, in the province

vince of Drontheim, and having paſſed through Aggerhus, falls here into the ſea, and by the conveniency thereof affords this city a pretty good trade. It is about 50 miles diſtant from the town of Aggerhus towards the ſouth-eaſt, and is very well fortified, and of ſuch importance, that it is reckoned the key of this kingdom. Charles XII. king of Sweden, ſat down before it in the beginning of December 1718, and was killed there by a cannon ball, the 11th of the ſame month, as he was gone, about nine at night, to view the trenches.

Saltzberg is a ſmall town on the river Drammen, which falls into the bay of Chriſtiania, from which city it is about 15 miles diſtant to the north. It has a pretty conſiderable trade from the neighbouring copper and iron mines.

Tonſberg ſtands on the left ſhore of the bay of Chriſtiania, and is about 20 miles diſtant from the city of that name to the ſouth.

Skeen, or Scheen, a few miles from Tonſberg, ſtands on the Categate; both theſe towns are places of good trade, by means of the abovementioned mines. A ſilver one was diſcovered in the neighbourhood under the reign of Chriſtian IV. but it appears it is no rich one, ſince it is not worked at preſent.

Hammer, or Hammar, ſtands on the eaſtern bank of a long and narrow lake, formed by a river which, above 40 miles lower, falls into the Glammen. It is 100 miles diſtant from Chriſtiania to the north-eaſt, and was formerly a biſhop's ſee, which has been removed to Chriſtiania. It is divided into the Greater and Leſſer Hammer, which are parted by a ſmall canal, or arm of the lake.

Hollen, ſeated on the lake of Nordſee, 15 miles from Tonſberg to the north-weſt, is remarkable for its church, which is cut out of the rock called Vear, and has a burying-place on the top of it. It is very antient, and ſuppoſed, by Olaus Wormius, to be originally a temple of the heathens.

II. The province or government of Bergen, or Berghenhus, takes up the moſt ſoutherly, and alſo the moſt weſterly part of Norway, and is ſurrounded by the ſea on the ſouth, ſouth-weſt, weſt, and north. It has the government of Drontheim on the north-eaſt, and that of Aggerhus on the eaſt. Its extent, from cape Naze, in the ſouth, to lat. 62 deg. 30 min. where the government of Drontheim begins, is about 290 miles; but its greateſt breadth, from eaſt to weſt, is not above 90 miles, and in many places much leſs. It is divided into the governments of Bergen, properly ſo called, and Stavinger, which are again ſubdivided into leſſer diſtricts, or prefectures.

The chief towns here are Bergen, an antient and famous ſea-port, mentioned by Pomponius Mela, and Pliny; it ſtands on a crooked bay called Jelteſiord, into which one enters by a narrow ſtreight named Carmeſundt, which is bordered on each ſide with high rocks for ſeveral miles together. This town is 137 miles diſtant from Chriſtiania to the north-weſt. The bay here is ſo deep, that veſſels of above 400 tons can enter it, and come to load and unload before the merchants warehouſes. The inhabitants are partly natives of this country, and partly Germans and Danes, whom the conveniency of the town for trade has drawn thither, this being the principal mart and magazine for ſeveral merchandizes; divers ſorts of fine furs, vaſt quantities of hides, tallow, fir-timber, &c. being brought hither from the neighbouring provinces, and ſhipped off to foreign parts. The inhabitants drive alſo a conſiderable trade in ſtock-fiſh, which are taken on theſe coaſts, and in the lakes, in January, and dried in the open air. The privileges granted by the king of Denmark to ſtrangers make them flock to this town, and import thither thoſe neceſſaries of life which the country does not produce, as wheat, rye, biſcuits, beer, wine, brandy, &c. which they exchange for the merchandizes abovementioned. This is the ſee of a biſhop, ſuffragan to the archbiſhop of Drontheim. The churches here are pretty well built, as are alſo the edifices raiſed by the merchants of the Hans-Towns, and particularly their exchange. The common people's houſes were formerly of timber only, and covered with turf, ſo that the town was ſeveral times reduced to aſhes; but ſince the year 1702, when it was almoſt entirely burnt down, the houſes have been re-built with ſtone, ſo that it is now reckoned the largeſt, moſt beautiful, and moſt populous town in Norway, and is the capital of the whole kingdom. On the weſt-ſide of the town ſtands a royal citadel, in which the governor reſides, and which ſerves alſo to defend the harbour.

There is at Bergen a factory called the Cloyſter, in which a community of merchants live, who are ſtiled Monks, though they wear no particular habit, and have nothing in common with monks, except that they are not married.

Stavanger, or Staffanger, the chief town of the diſtrict of the ſame name, ſtands in the bay called Buckenfiord, which is very ſpacious, and full of ſmall iſlands, and is 80 miles diſtant from Bergen to the ſouth, and 100 from Chriſtiania to the weſt. The harbour is very large and ſafe, and it would have a greater trade than it has, were it not for the neighbourhood of Bergen. Though the town be but ſmall, it is the ſee of a biſhop, ſuffragan to the archbiſhop of Drontheim. It is the reſidence of the governor of this diſtrict, who is ſubject to the governor of Bergen. The town is defended by the ſtrong fortreſs of Doeſwyck, which ſtands to the ſeaward, about two miles from Stavanger. To the biſhoprick of Stavanger belongs Tyle-Marchia, whoſe name gave riſe to the opinion of Procopius and Ortelius, that Scandinavia was the ancient Thule. The diſtrict of Stavanger is the moſt temperate, the beſt peopled, and beſt cultivated, in all Norway; and yet it has no other town of any note but Stavanger.

III. Drontheim, Trontheim, Dronthem, or Dronthen, is the largeſt government of Norway. It lies along the coaſt of the North Sea, being about 500 miles in length, from ſouth to north. It has the North Sea on the weſt, the government of Wardhus on the north, that of Bergen on the ſouth, and on the eaſt it is ſeparated from Sweden by a long ridge of mountains. It extends from the 61ſt to the 69th deg. of lat. its greateſt breadth, from eaſt to weſt, is not above 120 miles, and in many places it is much leſs. The country is mountainous, woody, cold, and barren; ſo that, though it be large, the towns are not very conſiderable. It is divided into two parts, namely, the government of Drontheim, properly ſo called, where is the city of that name, and ſeven ſmall bailiwicks; and the ſub-government of Salten, which contains ſeven other ſmall diſtricts, or valleys, on the ſea-coaſt. This whole province was yielded to the Swedes in 1658, but the king of Denmark recovered it in 1660, by the treaty of Copenhagen. The valleys of Nomendall, Helligeland, or Halgoland, Froſten, Hinder, Hero, and ſome others, belonged formerly to this province, but were given up to the Swedes in 1645, by the treaty of Bromſbroe, together with the province of Jempland, or Jemterland. This whole country is very thinly peopled, and not cultivated but along the ſea-ſhore, till within 25 or 30 miles from it.

The moſt conſiderable towns here are Drontheim, or Nidroſia, formerly the capital of Norway; it is ſeated on the coaſt of the Northern Ocean, on a little gulph at the mouth of the river Nider, from whence it was antiently called Nidroſia. It is about 220 miles diſtant from Bergen to the north-eaſt. It has a harbour, pretty well frequented by ſmall veſſels, though very incommodious for large ones, the entrance being obſtructed by rocks. It was formerly the reſidence of the kings of Norway, but the town being only built with timber, was ſeveral times burnt down, and is very much decayed from its ancient ſplendor. It is without ditches or fortifications, being only encloſed by a ſingle wall. Its caſtle is not ſtrong, and ſuſtained but a few days ſiege when the town was taken by the Swedes in 1658. The Danes re-took it the ſame year, after a ſiege of ten weeks. It is the ſee of an archbiſhop, being the only one in Norway. The cathedral church, dedicated to St. Olaus, was formerly a very magnificent building, but now lies almoſt in ruins, having been deſtroyed by fire in the year 1522. This town has a pretty conſiderable trade, conſiſting in ſmall maſts, fir-deals, copper, iron, tar, goats ſkins, &c. for which they import ſpices, wine, brandy, vinegar, cheeſe, tobacco, coarſe cloths, &c. Here the governor has his ſeat, and reſides chiefly in the caſtle.

The other towns of this province, viz. Leerſtand, Stronden, Scoredale, Opdal, Ramſdael, and Solendael, are ſo ſmall and inconſiderable, as to merit no particular deſcription.

IV. The province of Wardhus is bounded on the north and weſt by the ocean, on the eaſt by Ruſſian Lapland, on the ſouth by Swediſh Lapland, and on the ſouth-weſt by the government of Drontheim. It is 310 miles in length, from eaſt to weſt, and 200 in breadth, from north to ſouth. It is divided into two parts, viz.

The weſtern, or maritime part, which is called Finland.

The eaſtern part, which is called Norwegian, or Daniſh Lapland.

The town of Wardhus, from whence this province hath its name, is the ſeat of a governor, but only conſiſts of a caſtle, and a ſtreet of cottages, inhabited chiefly by fiſhermen.

The province of Bahus, though yielded to the Swedes in 1658, is yet reckoned a part of Norway, being its moſt ſouthern province. It is 90 miles long, but not above 25 broad where wideſt, and only 10 in ſome places. It hath Weſt Gothland to the ſouth, Dalia on the eaſt, the government of Aggerhus on the north, and the Categate on the weſt. The principal places are

Bahus, a ſtrong caſtle, built on a ſmall iſland made by the river Nore-Elf, which there receives the Giotha-Elf, and both together are called Trolhetta. It is 116 miles diſtant from Chriſtiania; was built in 1309 by Haquin, the ſecond king of Norway, and ſtands on a ſteep rock near the banks of a river. The kings of Denmark had fortified it after the modern faſhion, but ſurrendered it to the Swedes in 1658, by the treaty of Roſchiled.

Maelſtrand, a ſtrong town built on a rock in a kind of peninſula, about 10 miles below Bahus. It is a place of great trade for fiſh, and hath a ſtrong caſtle to guard it.

SECT. III.

Of the Perſons, Cuſtoms, Manners, Revenue, &c. of the Norwegians.

WITH reſpect to the people of Norway, the men in general are tall, ſtout, robuſt, hardy, and well-made; hoſpitable, brave, and honeſt, but litigious. The women are finely ſhaped, comely, exceeding fair, and very obliging. The mountaineers are remarkably ſtrong, as the tone of their nerves acquires great firmneſs by hard living, much labour, continual exerciſe, and being expoſed from infancy to all the rigors of the cold ſeaſon. Thoſe who dwell in the maritime parts of the kingdom become excellent mariners, from the inceſſant practice of fiſhing and navigation; the peaſants are uſually their own handicraftmen, that is, they are in general able to make, for the uſe of themſelves and families,

Hats	Shoes
Woollen cloths	Iron-work
Linen cloths	Joinery-work
Stockings	Carpentry-work, &c.

They are likewiſe excellent tanners, expert ſhip and boat-builders, and ſome of them make tolerable violins, and other muſical inſtruments. Their general propenſity, however, is to carve in wood, which they do in a moſt ſurprizing manner, with only a common knife, which is likewiſe of their own making.

Their amuſements are, riding, wreſtling, ſwimming, ſkating, climbing, ſhooting, blowing a horn, playing on the violin, thrumming upon a kind of guitar, and making verſes. Indeed they are ſo fond of muſic, that they even play upon the violin at their funerals.

The Norwegians, upon various occaſions, have evinced their intrepidity; but while under the influence of rancour, their courage degenerates into brutality. They are always quarrelling with each other, and ſometimes their quarrels have been known to rage from generation to generation, and to be tranſmitted from poſterity to poſterity, with particular injunctions from the parents to their children to conſider it as a family quarrel, and on that account to carry it on with the greateſt implacability accordingly. The loweſt claſs of people have their punctilios of honour, and when they conceive themſelves affronted, ſend challenges to fight in ſingle combat; but theſe duels being generally founded in malice, are carried to the moſt ſavage extremes, and degenerate into abſolute butchery. For when a combat of this kind is to be fought, the combatants faſten themſelves together by hooks fixed to the extremities of their belts, and then fight furiouſly with their knives till one or both fall to the ground, either dead or mortally wounded. The common people, in many things, reſemble the three nations now ſubordinate to the crown of Great Britain; like the Scotch, they have aſpiring thoughts, which even difficulties cannot ſubdue; like the Iriſh, they idolize the ideas of independence, though they have loſt the ſubſtance; and, like the Welch, they plume themſelves upon their pedigrees, though their conquerors have taken care to tranſplant the principal families of the country into Denmark, in order to prevent factions, and annihilate the very idea of hoſtile aſſociations.

The principal people of Norway uſually live as luxuriouſly as the nature and commerce of the country will admit; but the peaſants, in general, are very frugal and temperate, except at the time of keeping any of their feſtivals.

The common bread is made of oatmeal, and formed into cakes like thoſe of Scotland. In times of dearth they dry the bark of the fir-tree, or elm-tree, and grind it into a kind of flour, which they mix with a ſmall portion of oatmeal, and thus compoſe a kind of apology for bread.

In the maritime parts it is common to knead the roes of cod with oatmeal or barley-meal, and boil the compoſition for a pudding; and the liquor, which ſerves as a kind of ſoup, is enriched with a ſalt mackarel, or pickled herring.

Beef, mutton, or goats fleſh, they pickle, ſmoke, or dry, for winter's ſtock; but in the ſummer uſually eat freſh fiſh, growſe, partridge, deer, hare, rein-deer, &c. Cheeſe they have all the year, and in common drink ſour whey; but at Chriſtmas, and other feſtivals, chriſtenings, weddings, &c. they provide good ſtore of ſtrong ale, and indeed theſe are the only times in which they ever run into any exceſſes, for their uſual temperance is ſuch, that they are in general very long-lived; a great number are to be found, who are hearty and well after being turned of an hundred years of age; and in the year 1733, four couples danced before his Daniſh majeſty at Frederickſhall, whoſe ages, when added together, exceeded 800 years.

"Some few by temp'rance taught, approaching ſlow
"To diſtant fate, by eaſy journies go;
"Gently they lay them down, as ev'ning ſheep,
"On their own woolly fleeces, ſoftly ſleep.
"So noiſeleſs wou'd I live, ſuch death to find,
"Like timely fruit not ſhaken by the wind,
"But ripely dropping on the ſapleſs bough,
"And dying, nothing to myſelf wou'd owe.
"Thus daily changing, with a duller taſte
"Of leſs'ning joys, I by degrees wou'd haſte,
"Still quitting ground by unperceiv'd decay,
"And ſteal myſelf from life, and melt away."

Some of the Norwegians, however, are ſubject to the gout, epilepſy, rheumatiſm, catarrhs, leproſy, ſcurvy, &c.

The peaſants of this country dreſs in a wide, looſe jacket, made of coarſe cloth, with waiſtcoat and breeches of the ſame. On their heads they wear a ſlouched hat, or a cap decorated with ribbons; their ſummer ſhoes are without ſoles, but in winter they uſe leather buſkins; and beſides theſe they have ſnow-ſhoes, and ſkates to travel in the winter. A corps of light troops, thus accoutered, are kept always in readineſs for winter expeditions, in caſe of emergencies, and theſe travel with more ſpeed than the ſwifteſt horſes.

The Norwegian peaſant never wears a neckcloth, or cloſes his waiſtcoat, but upon certain occaſions, chooſing always to have his neck and breaſt bare, and ſuffers the ſnow to beat into his boſom. Round his waiſt he wears a leathern belt, adorned with braſs plates, from which depends a braſs chain, that ſuſtains a knife, gimblet, &c.

The women dreſs in jackets laced cloſe about them; round their waiſts they wear girdles of leather, ornamented with ſilver, and about their necks ſilver chains, embelliſhed with gilt medals; their caps and handkerchiefs, and on certain occaſions their treſſes, are adorned with ſmall plates and ſpangles of ſilver, braſs and tin; large rings, buttons, and a variety of other trinkets.

The public edifices of Norway are built with ſtone;

the houſes of the principal people with ſtone or brick, but the common people, in general, reſide in wooden habitations.

The wooden houſes are made of fir and pine-trees laid upon each other, and joined with mortices at the corners. Few of the farm-houſes have either chimnies or windows, but a hole in the roof ſerves for both, as it lets out ſmoke and lets in light. In ſummer time this hole is left quite open, but in winter it is covered with the tranſparent membrane of ſome animal, which admits the light, and at the ſame time is ſo placed as not to impede the evaporation of the ſmoke. This membrane is occaſionally fixed or removed by the means of a long pole, which pole every ſtranger who enters the houſe is obliged to go and touch, agreeable to an ancient cuſtom. The roof is covered with the bark of birch trees, which is deemed incorruptible, and that is again coated with turf, from which every ſeaſon the graſs is cut. The ceiling on the inſide is about eight feet from the ground, and being arched like a cupola, the ſmoke rolls about within the circular part, till it finds a vent at the hole. Juſt beneath this aperture ſtands a table, ſurrounded with branches, and at the end a high ſeat for the maſter of the family, where, during meal-times, he ſits in great ſtate; and, indeed, upon all occaſions, aſſumes the appearance of much dignity, puts on many conſequential airs, and fancies himſelf a perſon of the utmoſt importance. It hath been the obſervation of many travellers, that the inhabitants of all conquered nations are much more proud than thoſe to whom they are held in ſubordination; and as they are uſually kept poor and illiterate, their vanity riſes in proportion to their ignorance, and frequently renders their behaviour intolerable.

Of all the cauſes which conſpire to blind
Man's erring judgment, and miſguide the mind;
What the weak head with ſtrongeſt byas rules,
Is pride, the never-failing vice of fools.
Whatever nature has in worth deny'd,
She gives in large recruits of needful pride:
For as in bodies, ſo in ſouls, we find,
What wants in blood and ſpirit's fill'd with wind:
Pride, where wit fails, ſteps in to our defence,
And fills up all the mighty void of ſenſe.

The ſtrength of Norway conſiſts in 30,000 land-forces, and 14,000 ſeamen, and the annual revenue amounts to 180,000l. ſterling, as the duty on the exports only produces 22,500l. yearly. The commodities exported are,

Copper unwrought	Cod
Ditto wrought	Ling
Iron	Salmon
Lead	Lobſters
Marble	Flounders
Millſtones	Down
Cow-hides	Feathers
Goat ſkins	Butter
Foxes ſkins	Tallow
Seal ſkins	Train Oil
Bear ſkins	Juniper and other berries
Beavers	Salt
Ermins	Glaſs
Martins	Tar
Maſts	Nuts
Deal boards	Allum
Timber	Vitriol
Herrings	Pot-aſhes, &c.

The commodities imported chiefly conſiſt of luxurious articles.

Every freeholder in Norway (ſays a learned writer) enjoys the right of primogeniture, and power of redemption; and it is very uſual to ſee a peaſant inhabiting the ſame houſe which had been poſſeſſed 400 years by his anceſtors. The odels-gads, or freehold, cannot be alienated by ſale, or otherwiſe, from the right heir, called odels-mand. If he is not able to redeem the eſtate, he declares his incapacity every tenth year at the ſeſſions; and if he or his heirs, to the third generation, ſhould acquire wealth enough for that purpoſe, the poſſeſſor, at the time, muſt give up the poſſeſſion.

The hiſtory of Norway is ſo blended with that of Denmark, that we ſhall give both together at the concluſion of the ſucceeding article.

CHAP. V.

DENMARK.

DENMARK, which was formerly called Dania, is a very ancient kingdom. It is compoſed of ſeveral parts, viz. Jutland, including the duchies of Sleſwic, which is the continental part; and the iſlands of the Baltic, which ſome deem the moſt conſiderable portion. The whole together, however, is known by the general appellation of Denmark.

Jutland, the continental part of Denmark, lies between the 54th and 59th deg. of north lat. and from the 8th to the 45th deg. of eaſt long. extending from north to ſouth near 240 miles; the breadth, in ſome parts, not being above 24 miles, and in others comprizing near 180 miles. The German Ocean waſhes it on the northern or weſtern parts; on the eaſt it is bounded by the Categate, and Middle Fort Sound, or Leſſer Belt; and on the ſouth it is divided from the duchies of Lunenburg, and Bremen, by the river Elbe.

SECT. I.

Natural Hiſtory of Denmark.

THE ſoil varies greatly on the Continent, and in the iſlands which form this kingdom. In the former there are good paſtures, but the latter are too ſandy to be fruitful. The mountains are barren, but moſt of the plains exhibit marks of fertility.

It hath been obſerved, as a great natural defect in Denmark, that the king has not in all his dominions one navigable river for veſſels of any conſiderable burthen: for the Eyder cannot be reckoned as ſuch; and the Elbe is rather to be eſteemed one of the confines and boundaries of his territories, than any-ways belonging to him. There are here ſome lakes which afford a good quantity of fiſh; and the foreſts are abundantly ſtocked with veniſon of all ſorts, as ſtags, elks, wild boars, hares; and wild fowl in great plenty.

The air, though very cold in Denmark, is not ſo ſharp as in ſome places of Germany, ſituated much more to the ſouth; which may be aſcribed to the ſea flowing about it; the vapours of which melt and diſſolve the nitrous particles, that are carried by the winds from the northern countries, before they arrive into this; by which means the ſharpneſs of the air is very much abated: the gentle breezes, blowing from the ſea, continue alſo to make the air cooler in ſummer. However, in Denmark there are but two ſeaſons of the year, winter and ſummer, theſe two other more agreeable ones, ſpring and autumn, not being commonly known; the

ſpring

ſpring never, and the autumn ſeldom; you immediately leap from extremity of heat to extremity of cold; and ſo on the contrary, when winter is over, from cold to heat. During the three months of June, July, and Auguſt, the heat is much more intenſe than in England, and very ſultry in the nights; but it is a gloomy heat, and people generally perceive ſome interpoſition of thick vapours between them and the ſun. In Copenhagen, during theſe three months, they are conſtantly troubled with the plague of flies, which they endeavour to deſtroy by a poiſonous water; upon the laying of which in their kitchens and chambers, whole buſhels of dead flies are ſometimes ſwept together in one room.

This country, in general, produces but little corn; and the vaſt number of barren mountains are great encumbrances and blemiſhes to the whole kingdom. The Eyder is the only ſtream worthy of the name of river, which can be ſaid properly to belong to Denmark. This riſes near Sedgebourg, runs by Rendſbourg, and diſembogues itſelf into the ſea, at Tonmingen, after having divided Sleſwic from Holſtein.

The very lateſt traveller, that we know of, who hath paid a viſit to this country, in ſpeaking of the climate, in a letter, dated Copenhagen, April 25, 1774, ſays, "The weather is ſtill very cold, we have had hail almoſt every day ſince my arrival. Indeed, I apprehend the year is more properly divided here into the ſummer and winter, than, as with us, into four ſeaſons; a ſhort ſummer ſucceeds to the long ſeries of cold and darkneſs, which environs them from October till April; and, during this period, they often experience very great heats for a few days, or ſometimes weeks. Certainly, man is much affected by phyſical cauſes; and one is not ſurprized to find the elegant arts chiefly confined to luxurious, and ſouthern climates, and faintly raiſing their heads amidſt theſe ſnowy, and inhoſpitable regions, where the inhabitants ſeem, in ſome degree, to partake of the aſperities of their ſoil; and where royal munificence, however unbounded, can only raiſe a few ſickly and ſtraggling plants."

To the above, we ſhall add the poetical deſcription of a winter in Denmark, written by the celebrated Mr. Phillips, while reſident in that country, and addreſſed, by him, to the earl of Dorſet.

From frozen climes, and endleſs tracks of ſnow,
From ſtreams that northern winds forbid to flow,
What preſent ſhall the Muſe to Dorſet bring;
Or how, ſo near the pole, attempt to ſing?
The hoary winter here conceals from ſight,
All pleaſing objects that to verſe invite.
The hills, and dales, and the delightful woods,
The flow'ry plains, and ſilver ſtreaming floods,
By ſnow diſguis'd, in bright confuſion lie;
And with one dazz'ling waſte fatigue the eye.
No gentle breathing breeze prepares the ſpring;
No birds within the deſart region ſing.
The ſhips, unmov'd, the boiſt'rous winds defy,
While rattling chariots o'er the ocean fly;
The vaſt leviathan wants room to play,
And ſpout his waters in the face of day;
The ſtarving wolves along the main ſea prowl,
And, to the moon, in icy valleys howl.
For many a ſhining league the level main
Here ſpreads itſelf into a glaſſy plain;
There ſolid billows, of enormous ſize,
Alps of green ice, in wild diſorder riſe.
And yet, but lately, have I ſeen, ev'n here,
The winter in a lovely dreſs appear;
Ere yet the clouds let fall the treaſur'd ſnow,
Or winds began thro' hazy ſkies to blow.
At ev'ning a keen eaſtern breeze aroſe,
And the deſcending rain unſully'd froze;
Soon as the ſilent ſhades of night withdrew,
The ruddy morn diſclos'd at once to view
The face of nature, in a rich diſguiſe,
And bright'ned ev'ry object to my eyes:
For ev'ry ſhrub, and ev'ry blade of graſs,
And ev'ry pointed thorn, ſeem'd wrought in glaſs;
In pearls, and rubies rich, the hawthorns ſhow,
While thro' the ice the crimſon berries glow;
The thick-ſprung reeds the wat'ry marſhes yield,
Seem poliſh'd lances in a hoſtile field;
The ſtag, in limpid currents, with ſurprize,
Sees chryſtal branches on his forehead riſe;
The ſpreading oak, the beech, and tow'ring pine,
Glaz'd over, in the freezing æther ſhine;
The frighted birds the rattling branches ſhun
That wave and glitter in the diſtant ſun;
When, if a ſudden guſt of wind ariſe,
The brittle foreſt into atoms flies;
The crackling wood beneath the tempeſt bends,
And, in a ſpangled ſhow'r, the proſpect ends;
Or, if a ſouthern gale the region warms,
And, by degrees, unbinds the wint'ry charms,
The traveller a miry country ſees;
And journeys ſad beneath the dropping trees;
Like ſome deluded peaſant, Merlin leads
Thro' fragrant bow'rs, and thro' delicious meads;
While here, enchanted gardens to him riſe,
And airy fabricks there attract his eyes;
His wand'ring feet the magic paths purſue,
And while he thinks the fair illuſion true,
The trackleſs ſcenes diſperſe in fluid air,
And woods, and wilds, and thorny ways appear;
A tedious road, the weary wretch returns,
And, as he goes, the tranſient viſion mourns.

SECT. II.

Of the Diviſions, Subdiviſions, Cities, and Towns of DENMARK.

BEFORE we enter upon a deſcription of the character of the Danes, it is neceſſary to deſcribe the diviſions, and ſubdiviſions of the country, with the principal cities, towns, &c. The grand diviſions of which are four in number, viz.

1. Jutland, properly ſo called, or North Jutland.
2. The duchy of Sleſwic, or South Jutland.
3. The duchy of Holſtein.
4. The Daniſh Iſlands.

Of JUTLAND, *properly ſo called, or* NORTH JUTLAND.

JUTLAND is bounded, on the ſouth, by the duchy of Sleſwic, on the north and weſt, by the German Ocean, and towards the eaſt, by the Baltic, the Categate, and the Leſſer Belt.

This country is divided into four dioceſes, viz.

Ripen, to the ſouth,
Arhuſen, to the eaſt,
Wiburg, to the weſt, and
Aalburg, to the north.

I. The dioceſe of Ripen is bounded, on the ſouth, by the duchy of Sleſwic, on the north, by the dioceſes of Arhuſen and Wiburg; and, eaſt and weſt, it extends from the Baltic to the German ocean. It contains 30 prefectorſhips, or bailiwicks, 282 pariſhes, 10 royal palaces, 100 noblemens' ſeats, and ſeven cities, which are as follow:

Ripen, or Rypen, in Latin Ripa, is ſeated on the river Nipſaw, which, before it comes to this city, divides itſelf into three branches, the largeſt of which runs on the north ſide of the town; the middle branch, which is the ſmalleſt, runs on the ſouth of it; the third, alſo, on the ſouth, but at ſome diſtance; they join again, a little lower, and fall into the German ocean, three miles below Ripen, making a commodious harbour. This city is 26 miles diſtant from Tunderen, towards the north, and 24 from Colding to the north-weſt. It is a place of conſiderable trade; the neighbouring paſtures and fields produce abundance of cattle and corn. Hither are drove almoſt all the black cattle from many parts of Jutland, which are here ſhipped off for foreign countries, eſpecially for Holland: their corn they export into the neighbouring countries, which have occaſion for it, all which afford them very great profit. But the city is often expoſed to imminent dangers from the tides flowing in with a prodigious violence from the ſea, ſo that the water ſometimes comes into the very church-yard of the cathedral, which ſtands on a hill; and even during the terrible inundation that afflicted Jutland in the year 1734, the water roſe an ell high in the very cathe-

dral.

dral. This town is ſtrong by nature only, without much aſſiſtance from art. Towards the weſt there is a caſtle, flanked with four bulwarks, after the old faſhion, built in the year 1150. The citizens houſes are pretty well built, and the inhabitants were formerly in better circumſtances than they are now; but they ſuffered very much during the wars with Sweden, the city being taken by the Swedes in 1645, but ſoon after recovered by the Danes. Before the reformation this was a biſhop's ſee, as it is now of a ſuperintendent or Lutheran biſhop. The cathedral is a noble pile, built with free-ſtone, as well as its ſteeple, which is ſquare, very high, and covered with lead. This church is adorned within with ſeveral marble columns, and with the tombs of ſome kings. There is another church dedicated to St. Catherine; here are alſo two public ſchools, for the education of youth in polite literature, and a college for divinity, in the court of the biſhop's palace, where there is alſo a public library. The city is governed by two burgomaſters, or conſuls, and by a ſenate, who formerly adminiſtered juſtice with ſo much ſeverity, that *the juſtice of* Ripen was become a proverbial ſaying, to expreſs a rigorous execution of the laws.

Colding, or Kolding, an old city mentioned by Ptolemy, ſtands on the banks of a little river called Coldinger Aa, which parts North Jutland from the duchy of Sleſwic, and falls into a little gulph, thence named the gulph of Colding. This city is about 11 miles diſtant from Haderleben to the north. It was burnt down during the civil wars in 1247. In 1268, king Eric VI. redeemed it out of the hands of Eric, duke of Sleſwic, and ſon to king Abel. He built a citadel there, to be a bulwark to Denmark, and fortified the town, eſpecially towards the ſouth. Chriſtian III. who liked the city very much, on account of its agreeable ſituation, and wholſome air, built the caſtle of Arnſburg, above the city, removed thither with his court, and died there January the 1ſt, 1559. The hoſpital was built by Frederick II. whoſe ſon endowed it conſiderably. In May 1644, the Danes gained a conſiderable victory over the Swedes near Colding. This town is but ſmall, ſince it does not contain above 100 or 120 houſes; but what makes it chiefly conſiderable is its bridge over the river Aa, which is called Boherrit, and gives name to the whole country about it. All the black cattle and horſes that come from Jutland, and go into Sleſwic, muſt paſs over this bridge, and pay each a crown for toll; whence ariſes a conſiderable part of the king of Denmark's revenue. Though this town lies commodious for trade on the Leſſer Belt, over-againſt Middlefort in Funen, yet they have hardly any trade but in cattle. They have good fiſh, and the river Aa produces excellent eels.

Frederick's Ode, in Latin Frederici Oda, ſtands on the banks of the Leſſer Belt, 10 miles from Colding to the north-eaſt, and about 27 from Ripen towards the eaſt. It was built by king Frederick III. of Denmark, and is well ſeated on a point of land, with an eaſy deſcent to the ſeaward: It has been well fortified, being a paſs over the Leſſer Belt, or Middlefort-Sound. The works are very high on the land ſide; and on the other ſide of the point there are eight baſtions: It has four gates, and before each a ravelin, but ruinous. Towards the ſea the fortifications are lower, and of a greater extent; where there are baſtions, platforms, and ſome batteries on the ſhore. Thoſe fortifications incloſe a great deal of ground, but the fifth part of it is not inhabited, for there are many corn-fields and orchards within the walls. This place was formerly a refuge for bankrupts and Jews; but king Frederick IV. has recalled thoſe privileges. Here are two churches, one Daniſh, and another German, but they have no ſteeples. In 1658, this town was taken by Charles Guſtavus's troops, commanded by Wrangel; the garriſon, conſiſting of 2000 men, were all killed or taken. This opened a way to the king of Sweden to undertake his expedition over the ice from this place to Funen; where the paſſage over the Belt is above three Engliſh miles.

Weille, or Weele, is ſix miles diſtant from Frederick's Ode to the north-weſt, and about 12 from Colding to the north. It ſtands on a little river, which falls into a great bay that communicates with the Leſſer Belt, and makes a good harbour. The city is neat, and well-built, but not large. About 22 miles to the north-weſt ſtands Warde, on a river that falls into the German Ocean, 10 miles below the town, which is conveniently ſituated for trade.

Ringcoping, or Ringkiobing, is 45 miles from Ripen, and 24 from Warde to the north. It lies on a bay of the German Ocean made by a neck of land 25 miles in length from north to ſouth, ſo that ſhips ride in the port ſafe from all winds.

Lenwick ſtands on the gulph of Limford (from whence it has its name) on the north-weſt borders of this dioceſe, 10 miles from the German Ocean to the eaſt, 56 from Ripen, and 18 from Ringcoping to the north.

Hoſtlebro, or Hodſelbrow, ſtands about 11 miles from Lemwick to the ſouth-eaſt, and 12 from Ringcoping to the north-eaſt. It is an inland town, but lies on a river which communicates with the German Ocean by a lake into which the river falls.

II. The dioceſe of Arhuſen is the eaſtern part of Jutland, having on the north the dioceſes of Wiburg and Aalburg; on the weſt and ſouth that of Ripen, and on the eaſt the Categate and Leſſer Belt. It extends about 60 miles along the coaſt of the Baltic, but is not much above 30 miles in breadth at the wideſt part. It contains 31 prefectorſhips, or bailiwicks, 304 pariſhes, five caſtles, or forts, and eight cities, or walled towns, viz.

Arhuſen, the capital of the dioceſe, ſtands at the mouth of the river Gude, which runs through it, and a little lower falls into the Categate. It is 86 miles to the northward of Sleſwic, and 42 north-eaſt of Ripen. The ſituation is pleaſant, being ſurrounded with foreſts full of game, paſtures that are exceeding rich for the country, and fields which produce a conſiderable quantity of grain. The town itſelf is neat and agreeable, well-furniſhed with proviſions, and domeſtic neceſſaries, from the neighbouring country; and with other commodities and luxuries from various countries, by the means of ſhipping. The harbour is tolerable, and the cathedral church erected after a curious ſtile of architecture, beautified and embelliſhed with various monuments of noblemen, prelates, &c. The biſhop's palace was once a magnificent ſtructure, but is now fallen to decay. This city was made an epiſcopal ſee in the year 1014, and is now the ſee of a ſuperintendant.

Scanderburg, ſix miles from Arhuſen to the ſouth-weſt, is a good fortreſs near the ſpring of the river Gude.

Horſens, 12 miles diſtant from Arhuſen to the ſouth-weſt, is a ſmall city or town ſituated on a little gulph, which ſerves it inſtead of a harbour, and falls into the Baltic.

Randers is a very antient city, ſituated on the river Gude, which, about 12 miles lower, falls into the Baltic, and thus affords this place a good conveniency for navigation. It is a place of great trade, and famous for the beſt ſalmon in Jutland. The neighbouring fields produce plenty of corn.

Ebelſtot is ſeated on the bottom of a bay of the Categate, about 18 miles from Arhuſen, towards the north-weſt.

Grinaa ſtands near the point or cape of a peninſula, which juts out into the Categate, and is ſeven miles diſtant from Ebelſtot to the north. It is defended by a caſtle.

Mariager ſtands on the ſouth-ſide of a large bay of the Categate, 16 miles diſtant from Arhuſen to the north.

Hobro, or Hebro, a ſmall town on the ſame bay, ſix miles above Mariager to the weſt.

III. The dioceſe of Wiburg has that of Aalburg on the north, from which it is partly ſeparated by the gulph of Limford; Arhuſen on the eaſt, and Ripen on the ſouth and weſt. It is not above 24 miles from ſouth to north, and 26 from eaſt to weſt, being almoſt of a round figure. Though it be an inland country, yet it wants not the conveniency of navigation; for here are large lakes, that branch out into ſeveral parts of this land, and from whence, by means of the Limford into which they run, and which communicates with the Baltic Sea, they receive veſſels of great burthen. Among theſe lakes there is one named Otheſunde, from the emperor Otho, ſurnamed the Great, who about the year 948, made an inroad this way, and penetrated even as far as this country; and, caſting his javelin into the water, gave it the name it ſtill retains. The beſt horſes in Denmark are bred in that part of the dioceſe named Salling. In this territory

are

are comprehended 16 prefectorſhips, or bailiwicks, 218 pariſhes, and three garriſons. The moſt conſiderable towns are

Wiburgh, which ſtands in the middle of North Jutland, of which it is the capital city.

It is a place of great reſort, being the ſeat of a high court of judicature, which receives the appeals from inferior courts, but none can be made from it, ſave to the king.

It has been the ſee of a biſhop for above 600 years; but the exact time cannot be fixed, for it is a matter ſtill diſputed, whether this or Aalburg be the moſt antient. The biſhop and chapter ſtill ſubſiſt, though they are now of the Augſburg confeſſion. It ſtands near a branch of the gulph of Limford, called Virkſund, and was antiently called Cimmerſburg, as being the chief city of the Cimbri; but whence it had its preſent name is not very certain. Yet by a reaſonable conjecture, a late author ſuppoſes it was called ſo from being the habitation of the pirates, who antiently were very powerful in thoſe parts, and were called Wigis, or Wickangels, in the old Daniſh tongue.

Scheve, or Schiffhnis, which ſtands on the ſame gulph, 12 miles from Wiburg to the north-weſt, has the reputation of breeding the beſt horſes in the north.

The peninſula of Saling is ſurrounded on all ſides by the ſame gulph, except towards the ſouth, and is the moſt noted place in Denmark for fine horſes, which are exported by foreigners.

Nybe, in Latin Nibe, on the ſame gulph, 18 miles from Wiburg to the north-eaſt, is alſo noted for a good breed of horſes.

IV. The dioceſe of Aalburg is the moſt northern part of Jutland, and ſurrounded by the ſea on all parts, except on the ſouth, where it is divided from Wiburg and Ripen by the gulph called Limford, which runs from the Baltic Sea, above 50 miles acroſs the country, and is ſhut own of the German Ocean by a narrow iſthmus, or neck of land, made by the ſand-hills on the weſt ſhore of Jutland, over-againſt a great ſhoal called Jutſche-Riff. This dioceſe is about 70 miles long, from the ſouth-weſt to the uttermoſt point of Schager-Riff, in the north-eaſt; but as it is of a triangular form, its breadth is not equal every where, it being but about 40 miles where broadeſt. The north part of this dioceſe, which is cut off by the gulph, (for the city of Aalburg lies on the ſouth-ſide of it) is called Wenſuſzel, and by Latin authors Vandalia, which makes ſome think that it was the ſeat of the Vandals. The inhabitants are the hardieſt of the king of Denmark's ſubjects. The country is fruitful, and pretty well enriched by trade. It is divided into 13 bailiwicks, which contain 177 pariſhes, 100 caſtles, and the following cities and towns.

Aalburg, ſo called from the great quantity of eels taken in the gulph of Limford, ſtands on the ſouth ſhore of it, about ſix miles from the Categate to the weſt. It is the ſee of a biſhop, founded about the year 1060; but the biſhops reſided antiently at Burglaw, whence the dioceſe was then called the dioceſe of Burglaw; but ſince the reformation, the Lutheran biſhops have had their palace of Aalburg.

Wenſuſzel, or Burglaw, ſtands on the river Ryaa, which 14 miles lower falls into the gulph of Limford, from which this city is as many miles diſtant to the north. It was formerly the ſee of a biſhop, which has been removed to Aalburg.

Schagen, Scagen, or Skau, as the inhabitants call it, is ſeated on the promontory, or cape, which it gives name to; and is the moſt northern land of Jutland, betwixt the Norwegian Sea and the Categate, or Schager-Rack.

This town is more frequented by merchants from all parts of Europe than any other town in Jutland, becauſe they touch here in their way to the Sound. Its trade would be far greater ſtill, were it not for the dangerous coaſt it lies on.

Nikioping is ſituated in the Iſle of Mors, made by the gulph of Limford, and is a conſiderable town.

Tyſted ſtands on the ſouth-weſt part of this dioceſe, near 30 miles from Aalburg to the weſt, in the middle of the iſthmus made by the German Ocean, and gulph of Limford, which is the moſt fruitful place of this diſtrict.

This town is noted for a kind of univerſity, which was firſt a free-ſchool only, founded by Chriſtian the Third.

Seeby is a ſmall ſeaport town on the eaſtern ſhore, 15 miles diſtant from Schagen, towards the ſouth-weſt.

The Duchy of SLESWIC, *or* SOUTH JUTLAND.

THIS duchy is an ancient dependance on the kingdom of Denmark, for in the year 1128, king Nicolas the Firſt gave it to his nephew Canute, the ſon of Eric. Denmark was afterwards deprived of it, but in the year 1459, Chriſtian the Firſt re-united it to that kingdom. It is about 86 miles in length, and 60 in breadth, being bounded by Jutland on the north, by the Baltic on the eaſt, by the duchy of Holſtein on the ſouth, and by the German Ocean on the weſt.

It is watered by ſeveral ſtreams, which render it exceeding fruitful in moſt parts, and in general abounds in meadows and paſtures. The eaſtern parts lie conſiderably higher than the weſtern, and in the latter there are large plains, which produce a great plenty of all ſorts of corn. The nobility here are rich, and the common people enjoy a great ſhare of independence. This duchy is divided into four circles, viz.

Gottorp	Flenſburg, and
Tonderon	Haderſleben.

The principal cities and towns of this duchy are,

Sleſwic, the capital of the whole duchy, is ſituated on a ſmall arm of the ſea, called the Sley, at the diſtance of about 38 miles from Gluckſtadt to the north-eaſt, and 28 from Lemden to the eaſt. Chriſtianity was eſtabliſhed here in the 9th century, and the great church was founded by Eric Barn, in conjunction with St. Anſchar, biſhop of Hamburgh; and in the year 930, king Harold Blatand erected an epiſcopal ſee here. Afterwards the Sclavonians invaded theſe parts in the year 1064, ruined the church, and reſtored the pagan ſuperſtitions; but ſoon after theſe foreigners were again expelled, chriſtianity was reſtored, and the cathedral rebuilt. In the next century it became a place of very great trade, and much frequented by merchants from Great Britain, France, Spain, Flanders, &c. The ſoil, eſpecially towards the ſouth and eaſt, is not very fruitful, but the town is ſufficiently ſupplied with all neceſſaries of life from the neighbouring country, and the Sley affords abundance of fiſh. They brew beer here, which is not very palatable; but they import ſome from abroad, as well as wine, which is pretty cheap. The buildings are very indifferent, though ſome of the moſt eminent citizens have fine houſes. The town has no fortifications, and is only ſurrounded by a wall, which parts it from the ſuburbs. The cathedral is the only church within the town. It is a large and beautiful pile, in which are to be ſeen the tombs of the antient dukes of Sleſwic, and of ſeveral biſhops. In the ſuburbs there is a church dedicated to St. Michael. Sleſwic was formerly the ſee of a Roman Catholic biſhop, and is now that of a Proteſtant ſuperintendant.

Within a few miles from Sleſwic, to the ſouth, are yet to be ſeen, in many places, the ruins of the famous wall and trench, which was built in antient times by the Daniſh kings againſt the incurſions of the Saxons. It is thought to have been begun by Gotherick, or Gothofred, king of Denmark, to keep out the armies of the emperor Charles the Great, about the year 808; and afterwards improved by queen Thyra, and other Daniſh monarchs, and made ſo ſtrong, as to be eſteemed impregnable by the counſellors of Henry, ſurnamed the Lion, duke of Saxony. This rampart was called Danewark, and, like Hadrian's wall, in England, is reported to have reached from ſea to ſea, quite acroſs this neck of land.

Gottorp was the antient ſeat and patrimony of the dukes of Holſtein, the chief branch of which family, after the royal one, took from thence the title or ſurname of Gottorp. It is about ſix miles diſtant from Sleſwic to the ſouth-weſt, and ſtands on the Sley, which almoſt ſurrounds it, and carries veſſels of ſmall burthen to and from the Baltick. This place is, at the ſame time, a fortreſs, and a noble palace, being reckoned one of the fineſt ſeats in all theſe northern parts. The caſtle ſtands to the weſt of the Sley, in the middle of a little lake, and is built in the form of an oblong ſquare, fortified

with four baſtions of earth: the bottom is paved with free-ſtone, the curtains are long, and the ſides ſtand north and ſouth. You approach the caſtle by a bridge, which joins it to the ſouth-ſhore. It is commanded by a mountain that ſtands north-eaſt of it, from whence the Danes annoyed the caſtle in the year 1675, when the duke was treacherouſly ſurpriſed by the king of Denmark at Rentſburg. The duke, before his death, had deſigned to rebuild the caſtle, but the front only is finiſhed; and, if the whole had been completed, it would have been one of the fineſt palaces in Europe. A rampart encompaſſes the firſt court, and the gate of the caſtle is of a fine blue ſtone, as hard as marble, with a lantern over it that has 27 lights. On the north ſide of the caſtle there is a bridge, of 200 paces, over the lake; and at the end of the bridge a walk, between rows of trees, that lead to the garden, which is adorned with many fine water-works and caſcades. On the left there is a baſon, or fiſh-pond, 200 paces ſquare, with rows of trees on all ſides, except to the north; there are, alſo, fine arbours on the ſides of the pond, and in the middle a Hercules, of a monſtrous ſize, repreſented with his club, going to kill the Lernæan hydra, out of every part of which the water plays. In every corner of the pond there are ſtatues which form caſcades. On the north there is a parterre, in the form of a creſcent, divided into ſeveral compartments, with niches round, containing the buſts of many kings, and modern princes. There are alſo the repreſentations of many fabulous animals, that throw water. At the end of the walk there is a ſmall room, in which is to be ſeen a globe, made by the famous Tycho Brahe, ſo contrived, that, by mechaniſm, it repreſents his ſyſtem of the world. There is another admirable globe of copper, 10 feet and an half in diameter, with a ſphere, wherein the ſun moves in the ecliptic, and all the heavenly bodies are carried round in exact order, by means of certain wheels, which are turned about by water conveyed from the adjacent mountain. Before this houſe there is a level ground 50 paces broad, and three times as long, divided into three parts: thoſe on the two ſides have fine parterres, and that in the middle has a great baſon in the centre, with water-works: the next terrace is higher, and the whole is incloſed with green pales, as high as each terrace, with buſts all round. From the higheſt terrace there is the fineſt proſpect perhaps in the world, viz. the caſtle in the front, in the middle of a lake, ſurrounded with a charming country, and a fine plain before it. On the left there is a great orangery, or greenhouſe, where they keep Indian trees, myrtles, pomegranates, and others, in boxes. The park is very noble, about four Engliſh miles in circumference, and full of fallow deer and ſtags. There is a toll-booth, or cuſtom-houſe, where toll is paid for great numbers of black cattle, that paſs from Jutland into Germany; this produces a conſiderable ſum to the king of Denmark, ſince in ſome years toll is paid for above 50,000 head of cattle.

Eckrenford ſtands on a little gulph of the Baltic, which makes a very commodious haven, and affords it a pretty conſiderable trade, it being one of the ſafeſt ports on that ſhore. It is about 22 miles diſtant from Gottorp to the eaſt, and ſix from Kiel towards the north. It is ſaid to have its name from the abundance of ſquirrels found in the neighbouring woods; though it is more probable it was called ſo from an old caſtle, out of the ruins of which it roſe.

Chriſtianpreis, the capital of a bailiwick of that name, which borders on the duchy of Holſtein, is ſituated on a gulph of the Baltic, at the entrance of the haven of Kiel, and is commanded by a caſtle that was built in 1637, by Chriſtian IV. king of Denmark. It is about five miles diſtant from Kiel to the north, and four from Eckrenford to the eaſt. It has about 500 houſes, and two gates, defended with ſtrong works. The Eyder ſerves for a ditch, and makes it inacceſſible; and where the river grows narrower, they have built a fine half moon in the water, with port-holes for 16 pieces of cannon.

Frederickſtadt was thus called from its founder, Frederick duke of Holſtein and Sleſwic, who built it in the year 1621, peopled it with Hollanders, and granted them great privileges. He endeavoured alſo to ſettle a ſilk-trade there, and for that purpoſe ſent a famous embaſſy to Muſcovy and Perſia, which gave occaſion to

Adam Olearius, ſecretary of it, to publiſh an account thereof, in an excellent book of travels. This town ſtands on the banks of the river Eyder, and is 24 miles diſtant from Sleſwic towards the weſt, and 42 from Gluckſtadt to the north. It is built after the Dutch way, and all ſorts of religions are tolerated there. The town is ſquare, and ſurrounded with a large canal, planted with rows of trees. It is divided into two parts by another canal, alſo with trees on the ſides. The Lutheran church is built with bricks, and very neat.

Tonderon is alſo ſituated on the river Eyder, 10 miles below Frederickſtadt, and about 14 miles from the German Ocean. It is not an antient town, but it has a pretty good trade, which increaſes daily, by means of its commodious harbour formed by the Eyder. It was formerly well fortified, but the fortifications were demoliſhed in 1714 by the Danes, who, after a long blockade, forced the town to ſurrender upon terms. This is the capital of the bailiwick of Eyderſtadt, and much frequented by the Dutch, who buy black cattle here.

Flenſburgh, the capital of a diſtrict known by the ſame name, as well as that of Angelen, or Engeland, the country of the Angles who invaded South-Britain, and beſtowed upon it the appellation of England. Its ſituation is eight miles to the northward of Sleſwic, on the gulph of Flens, formed by the Baltic; and the harbour is ſo very commodious, that ſhips of great burthen may come up, and lie loaded from the warehouſes.

Huſum, which is 10 miles from Tonderon, and ſituated on the gulph of Hover, was formerly flouriſhing and opulent, but is now greatly decayed; its ruin being deduced from three capital cauſes, viz. war, inundations, and conflagrations.

Lohm-Cloſter is an inconſiderable town, ſituated on the river Lohm-Beoke, about 10 miles from the German Ocean.

Haderſleben is a large ſea-port town, by the lake of Haderſleben, which runs into a narrow gulph that diſembogues itſelf into the Baltic. The inhabitants carry on a tolerable trade, by means of the fiſh that are caught in great plenty, both in the lake and gulph.

Timder, 12 miles to the weſtward of Haderſleben, is a remarkable neat town, ſituated in a fertile ſoil, on the ſouthern bank of the river Wydaw. Here is a ſmall but ſtrong fort, which the king keeps in excellent repair; the harbour, however, is at preſent choaked up, and the town hath ſcarce any trade.

Apenrade is ſituated at the bottom of a gulph of the Baltic, 25 miles north of Sleſwic. It is defended by a tolerable citadel, but has, nevertheleſs, been plundered frequently in war time.

Luxburg, or Gluckſburg, is four miles to the eaſtward of Flenſburg, near the ſame gulph, but on the oppoſite ſide. It is but a ſmall town, yet has a caſtle, and gives title to the dukes of Holſtein-Gluckſburg.

The Duchy of HOLSTEIN.

ALL former geographers have referred an account of this duchy to their deſcription of Germany, becauſe it was once a member of that empire; and this many ſeem to have been induced to, not from any apparent reaſon for ſo doing, but that others had done ſo before them, and they have therefore implicitly copied their method of dividing and disjoining contiguous countries. We ſhall, however, conſider Holſtein in this place, where alone it can be introduced with propriety, for theſe reaſons; becauſe it is on the north-eaſt ſide of the river Elbe, and is ſubject to the Daniſh monarch; and becauſe it is entirely incorporated with, and conſtitutes, the richeſt province of Denmark.

A very late traveller, whoſe information is accurate, and obſervations juſt; who had acceſs to the public records of the kingdom of Denmark, and received many curious particulars from the late unfortunate prime miniſter, count Struenſee, ſays of this duchy: "The great duchy of Holſtein, which is, at preſent, all united to the Daniſh dominions, is famous for its fine paſture, and for its producing excellent beef. Great quantities of horned cattle are brought up in Jutland, and other provinces of Denmark, and brought here to be fattened; and their beef, beſides what is uſed for the conſumption of Hamburgh and Lubeck, ſalted, dried, and exported,

Engraved for Middleton's Complete System of Geography

Ruſsian manner of punishing ROBBERS who infest the RIVER-WOLGA.

BRITISH
MUSEUM
1764

the former to Holland, and the latter to all parts of Lower Germany; and together with an excellent breed of horſes, of which great numbers are exported yearly, bring conſiderable ſums of money into the province, of the whole of which the court of Denmark has not hitherto found the means to drain them; ſo that this province may juſtly be ſaid to be the richeſt in the Daniſh dominions."

This duchy is bounded on the weſt by the German Ocean; on the eaſt by the Baltic; on the ſouth-eaſt by Mecklenburgh; on the ſouth-weſt by the river Elbe; and, on the ſouth, by the territory of Hamburgh, and by Lauenburg. It is 80 miles in length, 60 in breadth where broadeſt, and divided into four principal parts, or provinces, viz. Holſtein proper, Wagria, Stormar, and Ditmarſh.

This duchy is remarkably fertile, and contains many rich marſh, paſture, and meadow-lands. Through the marſh lands dykes have been cut, at an immenſe expence, not only to drain off the waters which naturally accumulate there, but to drain off ſuch as are occaſioned by the inundations both of the ſea and rivers, which are frequent; theſe, however, give ſuch a richneſs to the ſoil of the marſhes, that cattle are bred in great numbers, and fattened in them; and vaſt quantities of excellent butter and cheeſe are made of the milk. In ſome parts of them they ſow wheat, barley, peaſe, beans, rape-ſeed, &c. which thrive exceedingly. Sheep are bred in the more ſandy, heathy, and barren diſtricts; and woods and orchards abound in other parts. The beef, veal, mutton, lamb, and pork, are all fat and palateable; and the beſt ſea and river fiſh are caught in great plenty. The Holſtein horſes are exceedingly beautiful, and, on that account, highly prized both in Denmark and Germany. The principal people uſually farm out their cattle, to a kind of bailiff; who runs all hazards, receives all profits, and allows the proprietor ſo much per head for the whole; thus the gentry receive a certain income without having any trouble, and the bailiff is ſufficiently rewarded for his pains, as he uſually makes a fortune by the extra profits. The country is, in general, plain and level, and watered by the rivers Eyder, Stor, and Trave, with many rivulets, dykes, &c. An odd cuſtom prevails here, which is to drain the lakes and ponds, at certain times, and ſell the carp, lampreys, pike, perch, &c. which are found in them; and then, for ſome years after, to ſow them with oats, or uſe them for paſture; and after that, to lay them under water, and breed fiſh in them again. The houſes and churches are very neat, for the people here, with reſpect to nicety, reſemble the Hollanders. The duchy contains about 30 cities and towns, great and ſmall, and 600 pariſhes. The clergy are annually choſen, and removeable at pleaſure; the people are rigid Lutherans, ſo that they give but very little countenance to Calviniſts, and are ſtrongly prejudiced againſt the Roman catholics; with regard to their character, in other reſpects, they are, in general, well made, finely featured, fair, ſtrong, courageous, and ſo celebrated for their integrity, that the expreſſion Holſteinglaube, or honeſt Holſteiner, is proverbial throughout Germany, Denmark, &c. The principal cities, towns, &c. in Holſtein are as follow:

Lubeck, an imperial city, and chief of the Hans Towns, is ſituated at the conflux of ſeveral rivers, the largeſt of which is the Trave. 'Tis 12 miles from the Baltic, where it has a fine harbour, 25 miles north of Lauenburg, 40 north-eaſt of Hamburg, and 117 ſouth-weſt of Copenhagen. 'Tis a biſhoprick under the archbiſhop of Bremen, which was tranſlated hither from Oldenburg in 1163.

Lubeck is a government or republick within itſelf, with royal juriſdiction, viz. To make and execute its own laws, as well in civil, as in capital cauſes. From the conſiſtory, there lies an appeal to the ſenate of the city, which conſiſts of four burgomaſters, two ſyndicks, who are civilians and gentlemen, and 16 common-council men; each of whom has his particular province, and they are all for life; but the common-council is only formed of lawyers and merchants, with an excluſion of mechanicks. 'Tis obſerved by Martiniere, that a father and ſon, or two brothers, cannot be in the regency at the ſame time.

The name of this city is ſuppoſed to be derived from Lob-eck, the German word for a point of land; which agrees with its ſituation. 'Tis an antient place, which, the Poles ſay, was founded by one of their kings who conquered this part of the kingdom; but the Germans aſcribe its foundation to Godeſchalk, one of the kings of the Vandals, in 1040. It has ſuſtained wars, both defenſive and offenſive, for ſeveral years, not only againſt the dukes of Mecklenburg, but againſt the king of Sweden. 'Tis ſaid to have been a conſiderable city when taken in the year 1134, by Crito, a prince of Rugen, who deſtroyed it; but was rebuilt in the year 1140, by Adolph II. count of Holſtein, and then was firſt endowed with the immunities of the city. In 1158, it was again totally reduced to a heap of ruins by fire, and was afterwards reſtored by Henry the Lion, duke of Saxony, in whoſe time the collegiate church was founded. In 1164, the famous league of the Hans Towns was begun here; and their college is ſtill kept here, together with their records, and common ſtock raiſed by contributions, as will be obſerved in the article of the Hans Towns. In 1181, the emperor Frederick I. brought it under ſubjection to the empire; but Henry the Lion retook it; upon which it fell into the hands of Holſtein, and afterwards of Denmark. The city having ſuffered greatly by fire, particularly in 1276, it was rebuilt in the handſome manner we now ſee it, the ſenate having made an order, that none of the houſes ſhould for the future be built with timber, or covered with thatch. In 1350, it was almoſt depopulated by the plague, which Paulus Langius ſays carried off 90,000 of its inhabitants. At preſent it is a fine noble city, ſpacious and well fortified; two miles in length, and more than one broad, the ſtreets being ſtrait, uniform and wide; many of the ſtreets have rows of lime-trees on the ſides, and a canal in the middle. The churches are magnificent, and about 20 of them have high ſpires. The two chief ſtreets leading from the cathedral, and the Miller's Gate, to the royal, and caſtle gate, being in the higheſt part of the city, are interſected by others that deſcend gradually on each ſide to the Trave and Wagenitz rivers. The houſes are large and ſtately, being of brick covered with tiles, generally high, and adorned with ſculpture. The river Trave brings ſhips into the very heart of the city, which is near 10 miles from the ſea; the largeſt veſſels, however, unload at Travermund, a fort on the bay of Lubeck. The principal trade is to Riga, Revel, Narva, and Peterſburgh; and the magazines and warehouſes are likewiſe well ſtocked with the productions and commodities of England, France, Spain, Holland, the Eaſt and Weſt Indies, &c. The fortifications are ſtrong, well finiſhed, and kept in good repair; the baſtions are lofty and extenſive, the out-works numerous, and the haven defended by ſeveral forts and ramparts. The ſeveral market-places are large, and well ſupplied; and the public buildings ſtately, particularly the ſenate-houſe, arſenal, hoſpitals, &c. The collegiate church of St. Mary is a lofty noble pile, richly ornamented with ſculpture, images, pictures, &c. particularly a very curious piece called Death's Dance, which repreſents human beings in all ſtations of life, from an emperor to the meaneſt perſon; and from an old man to an infant, led round a circle by ſo many ſkeletons, ſhewing that death ſpares no age or condition.

Ah! what is life with ills incompaſs'd round?
Amidſt our hopes, fate ſtrikes the ſudden wound:
To day th' ſtateſman of new honour dreams,
To-morrow death deſtroys his airy ſchemes.
Is mouldy treaſure in thy cheſt confin'd?
Think all that treaſure thou muſt leave behind;
Thy heir with ſmiles ſhall view the blazon'd herſe,
And all thy hoards with laviſh hands diſperſe;
Should certain fate th' impending blow delay,
Thy mirth will ſicken, and thy bloom decay;
Then feeble age will all thy nerves diſarm,
No more thy blood its narrow channels warm.
Who then would wiſh to ſtretch this narrow ſpan,
To ſuffer life beyond the date of man?

This church is ſupported by beautiful tall pillars, made of a ſingle ſtone each, and has a very high ſpire covered with gilt lead. But the moſt ſingular circumſtance relative to this church is a remarkable inſcription in nine Latin diſtichs; on one of the pediments the lines importing,

porting, that "the emperor Charlemagne having taken "a ſtag alive in theſe parts, cauſed a collar of gold, with "a croſs on it, to be put about his neck, and the words "*Hoc Cæſar me donabat*, with the date of the year, and "then turned him looſe again into the foreſt; and Leon, "duke of Saxony, having caught the ſame ſtag 400 "years after, with the collar and croſs about his neck, "he took a fancy to build and endow this cathedral on "the ſame ſpot, and to grant the biſhops a croſs Or in a "field Gules for their arms; and as a monument of this, "the figure of a ſtag is placed on the top of the church." That the cathedral was built by Leon duke of Saxony, and that the figure of a ſtag is placed upon it, are undoubted facts; but with reſpect to the authenticity of the ſtory, or the degree of credit it merits, we leave every impartial reader to his own judgment; profeſſing, at the ſame time, that we place but little faith in ſuch amazing longevity of a ſtag, or in the probability of its being the ſame which Charlemagne turned looſe.

All parts of this city are ſerved with water by pipes from a reſervoir. The next ſtaple commodity to corn is beer, which is in high eſtimation, not only as a pleaſant liquor, but as a medicine, when externally applied to bruiſes, wounds, &c. Here are ſeveral hoſpitals which are well ſupported: there is one for antient people of both ſexes, which was once a caſtle, from whence the citizens drove out the Daniſh garriſon. St. Anne's is for orphans, and other children of poor burghers, who are here inſtructed in ſome handicraft, and there is an apartment for the confinement of libertines and madfolks. There are two other hoſpitals for the reception of poor travellers, where they are allowed three days refreſhment, and then ſent forward with a paſs; but ſuch as happen to be ſick, are provided with all neceſſaries till they recover or die. The richeſt foundation of this ſort is St. George's Cloyſter, which is chiefly for the maintenance of ſuch artificers as are grown old and paſt their labour; and there is alſo St. Gertrude's hoſpital, which is a peſt-houſe: there are, moreover, ſeveral alms-houſes endowed by the merchants for the maintenance of the widows of poor members, beſides ſeveral little ſtreets of houſes for the widows of other poor citizens.

Travemund, dependent on Lubeck, from whence it is but nine miles to the north-eaſt, and 32 weſt of Wiſmar, is a little town near the mouth of the river Trave. One of the counts of Holſtein ſold it in 1320, for 4000 marks to the Lubeckers, who fortified it with four good baſtions, erected a light-houſe to guide the ſhips at night, and commonly keep a garriſon here of three or 400 men, commanded by a burgher of Lubeck, who receives his orders from the burgomaſters, and admits no perſons into the place without a paſſport. It was ſeized by the czar in 1617, in order to ſecure tranſports for his troops, but he was perſuaded to quit it. There is a peninſula over againſt it, about a quarter of a league in circumference, which belongs to the duchy of Mecklenburg. The river Trave riſes out of a great lake, in the juriſdiction of Segeberg; and, after a ſerpentine courſe from north to ſouth, by Segeberg and Oldeſlo, turns ſhort to the eaſt, waters Lubeck city, of which this town is the port, and then falls here into the Baltic.

Oldeſlo, or Odelſo, on the river Trave, ſeven miles ſouth of Segeberg, 18 weſt of Lubeck, and 31 north-eaſt of Hamburg, is a little old town, which was formerly a very flouriſhing place, and the capital of this part; but ſuffered ſo much by the neighbouring princes, who contended for this province, and by a duke of Brunſwick, who deſtroyed its ſalt-works to favour thoſe at Lunenburg, that it is decayed.

Travendal, on the ſame river, within a mile of Segeberg, is only noted for ſeveral treaties betwixt the king of Denmark and the duke of Holſtein in 1700, for adjuſting the duke's rights.

Eutin, or Utin, about 16 miles from Lubeck, has given title of duke, and ſeat, to the younger ſon of the duke of Holſtein, ever ſince the year 1596.

Ploen is a town almoſt ſurrounded by lakes; it is the capital of what is deemed a principality of the ſame name. It hath a palace which ſtands high, and commands a beautiful proſpect, and is adorned with pleaſant gardens and a park. The neighbouring lakes, and the neighbouring woods, furniſh great quantities of fiſh and timber, upon the ſale of which the inhabitants principally ſubſiſt.

Oldenburgh, or Alterburg, was once a very conſiderable town, but is now fallen to decay. It is ſituated near the Baltic, 27 miles north of Lubeck, and gives name of a ſmall diſtrict. In ancient times the Sclavonian kings kept their court here.

Lemden is a market town on the confines of Sleſwic, not far from the Eyder. It is celebrated for its beer, which is ſent into many parts of the circumjacent country, and even tranſported abroad.

Meldorp, or Meldorf, is a large town ſtanding on a river or ſtream, called the Meele. It has ſome trade, and three market-places round its church, diſtinguiſhed by the names of the north, ſouth, and weſt markets. Here is likewiſe a public ſchool for the ſtudy of the claſſics and rhetoric.

Heyde is a large but poor town, 10 miles to the north of Meldrop.

Krempi is a ſmall open town, on a little river of the ſame name.

Gluckſtadt is ſituated on the north ſide of the Elbe, 26 miles ſouth-weſt of Hamburg. It is a neat well-built town, and ſo ſtrong as to be deemed impregnable. The Danes have 2000 men in garriſon here, and ſome men of war in the harbour, which is very ſafe and ſpacious. Here the Calviniſts have a church, the Roman Catholics a chapel, and the Jews a ſynagogue. The town was founded in 1620, when Chriſtian IV. king of Denmark, ordered it to be called *Gluckſtadt*, which implies *Fortunate-Town*. There being no ſprings about the town, the inhabitants uſe rain-water, or that of the river. Thoſe who are convicted of theft receive this ſentence; to draw, during life, the duſt-carts belonging to the town, to which they are chained like galley-ſlaves.

Bredenberg, or Breitenburg, is a village on the Stor, defended by a caſtle; it gives name to a lordſhip that hath long been the property of the antient and celebrated family of Ranzau.

Primeburg is a market town on the Pinace, 13 miles from Hamburg, and 14 from Gluckſtadt. It is only remarkable for giving name to a county which fell to the crown of Denmark, by the death of its laſt count Otho in 1640.

Altena, a large and populous village, is joined by a row of houſes on the Elbe to Hamburg, as London is to Southwark. It had its name from the king of Denmark, as it is ſaid, purely to banter the deputies of Hamburg. The latter remonſtrated to him againſt building this town too near to their city; and, having frequently ſaid thereupon, in their diſcourſe to the king, "Dat is al te na," which in the language of this country is, "it is too near;" the king, taking particular notice of the three laſt monoſyllables, ſaid to the deputies, he could not excuſe himſelf, if he did not go on with the building; but that, to oblige them, he would call it by the name they had given it. It was formerly a refuge not only for inſolvent debtors, but even malefactors, that came from Hamburg; becauſe, though the inhabitants, a few fiſhermen and ſailors, ſubject to the king of Denmark, depended intirely on the trade and buſineſs of that city; yet it was quite out of its juriſdiction. It is noted for a treaty in 1689, betwixt the late king of Denmark and the duke of Holſtein-Gottorp; but much more for its calamity in 1712, when count Steinboche the Swediſh general, having juſt defeated the king of Denmark and his army at Gadebuſch, came and burnt this town to the ground. The reaſons pretended by the Swedes were, that magazines of bread, beer, &c. were preparing here for the Muſcovites and Saxons; and that it was partly in reprizal for the burning of Staden, and other cruelties committed by the Danes and Muſcovites in the duchies of Bremen and Pomerania: but there was this difference as to Staden, that the Danes had beſieged it in form, and deſtroyed it by their bombs; whereas Steinboch was judged to have acted the part of an incendiary. As ſoon as he appeared before Altena, he ſent in a meſſage to adviſe the inhabitants to retire with what they could carry off, for that he was going to deſtroy their town. The magiſtrates came out in a body, and, falling at his feet, offered him 50,000 rixdollars to ſave the town; but Steinboch inſiſted on 200,000, which they were ready to comply with, and only deſired time to go to Hamburg for the money; but the general would admit of no delay: ſo that the poor inhabitants were obliged

to

to turn out; the mothers, with their infants at their breaſts; the ſons, with their aged and infirm parents on their backs; others groaning under loads of houſhold-ſtuff, and all lamenting their fate with the moſt lamentable cries. The Swedes ſtood at the barriers with flaming torches in their hands while they paſſed, and, before they were all gone out, entered the town, and ſet fire to all parts of it, which burnt 2000 houſes, with ſeveral fine magazines, and the Popiſh church; and ſome old men and women, beſides infants, periſhed in the flames; but they ſpared the Lutheran and Calviniſt churches, with about 80 houſes that lay neareſt to Hamburg. Never was a greater deſolation known in any town. But what completed the ruin of this place was, the raging of the plague at the ſame time in Holſtein; ſo that the Hamburghers were forced, for their own preſervation, to ſhut the gates againſt their diſtreſſed neighbours, many of whom periſhed with cold and want. The king of Denmark relieved them as far as the neceſſity of the times would permit, and cauſed them to be ſupplied with materials for re-building their town, which, by the help alſo of charities from the city of Hamburg, has ſince recovered its loſſes, and is a finer and more flouriſhing town than ever; the ſaid king having not only granted it many new privileges, but cauſed a harbour to be made there, and done every thing in his power to draw a trade to it; particularly, by the allowing a toleration here, which is denied at Hamburg, to all Chriſtian ſects, of whom there is ſaid to be a greater variety at Altena than in any city of Europe, except Amſterdam. The Calviniſts of Holland and France have handſome churches built all together on two ſides of the ſame court. The Papiſts, though tolerated, are not ſo publicly countenanced here as the Proteſtants.

Kiel is a town of great trade at the mouth of the river Swentin, on a bay of the Baltic, and the capital of all Holſtein; 17 miles eaſt of Renſburg, and 24 of Gottorp; 36 miles north-weſt of Lubeck, and 48 north of Hamburg. It ſtands between hills on an arm of the ſea, where it forms a lake. It has a good harbour, well frequented by ſhips from Germany, Sweden, &c. and is populous and wealthy. Both the town and harbour are defended by a caſtle on a neighbouring hill. On the right, or eaſt-ſide of this caſtle, the ſea waſhes its walls; and on the other ſide of the bay there is a delightful country, though woody. On the left there is a ſmall arm of the ſea, and another delicate country adjoining to it. There is a garden facing this caſtle, which is the only place whereby Kiel has communication with the main land; only to the left of the caſtle there is a row of houſes to a village called Brunſwick. This garden, which ſtands along the ſea-ſide, is above 200 paces broad, and conſiſts of a terrace walk level with the foundation of the caſtle, from whence there is a deſcent to parterres full of all ſorts of flowers, and adorned with a fountain and a wilderneſs; and this leads to other parterres, from whence there is a ſmall aſcent to another terrace. It ſuffered much during the war between Sweden and Denmark. An univerſity was eſtabliſhed here by the duke in 1665, which has had many learned profeſſors. It is divided into the new and old towns, of which the former is the largeſt and pleaſanteſt, the ſtreets being planted with rows of trees. The old town, which is a ſort of peninſula, is fortified by deep ditches; and there are fine walks of trees on the harbour. There is a palace facing the town on the north-ſide, but it is in very bad repair, and quite unfurniſhed. Here are ſeveral fair buildings, particularly a large church and an hoſpital, which before the reformation was a Franciſcan monaſtery.

The town has not ſo conſiderable a trade as it had in the time of duke Frederick, who ſent an embaſſy to Perſia in 1633, to ſettle a commerce with that country. But it is much enriched by its yearly fair, which is kept for three weeks after Twelfth-day, and frequented by multitudes of all ranks, eſpecially by the nobility and gentry of the duchies of Sleſwic and Holſtein, who meet every evening at a houſe where there is variety of gaming, and very often parties are made for ſupper, which is generally followed with a ball. Vaſt ſums of money are here negotiated, and payments made of ſums contracted before-hand, as punctually as by an Amſterdam banker upon the exchange; inſomuch that the man who does not preſerve his credit at this fair, is looked upon as a bankrupt, and ſubjected to puniſhment, beſides the ſcandal. During this fair Hamburg looks like a deſart, becauſe every body hurries hither to pay their rents, to renew their leaſes, or to let out money, &c. by which means the town, which at other times is but inconſiderable, is ſo full, that it is difficult to get lodgings.

The old town is ſeparated from the new one by a bridge, at the end whereof is a drawbridge, and a gate with a guard.

Renſburg is ſituated near 20 miles weſt of Kiel, and 32 ſouth-eaſt of Lunden, being near the borders of Sleſwic. It is ſmall but well built, and very ſtrong, having modern built fortifications, a capacious moraſs on one ſide, and a neat old caſtle, with a round tower, on the other. The town is ſurrounded by the river Eyder, which forms two ſmall lakes that abound with fiſh, and it is likewiſe divided into old and new town, by means of a bridge.

Wilſter is a ſmall town on a river of the ſame name, ſix miles from Gluckſtadt.

Itzehoe, a ſmall town on the river Stor, which is navigable from hence to the Elbe. The country from hence from Hamburg is remarkably pleaſant, and exceedingly fertile. The town is divided into old and new, the latter of which is extremely well built. Here is a Lutheran nunnery for ladies of quality, but they do not make vows, or lie under thoſe reſtrictions which are cuſtomary in Roman Catholic convents. It conſiſts of an abbeſs and 19 other ladies, and has the advowſon of ſeveral churches.

The inſular Parts of DENMARK, *or thoſe Iſlands which compoſe the moſt important Part of that Kingdom.*

IT is here neceſſary to deſcribe the iſlands which form the moſt conſequential parts of this monarchy, becauſe, collectively conſidered, they are the ſeat of regal and legiſlative government, contain the metropolis of the realm, the general archives of the nation, and are the ſources whence flow the chief political, civil, and eccleſiaſtical decrees, ſtatutes, &c. Add to theſe reaſons, they are ſo abſolutely blended with, and nearly contiguous to the other main parts of the nation, that it would be impoſſible to deſcribe Denmark as a kingdom, without taking them into particular conſideration. The other iſlands not ſo immediately connected with, though ſubject to or dependant on Denmark, we ſhall deſcribe in our account of the iſlands in thoſe ſeas, where they are reſpectively ſituated.

Before we enter into a deſcription of theſe members of the Daniſh monarchy, it is neceſſary to premiſe a few words concerning the Baltic. This ſea, or rather inland gulph, ſituated between Denmark, Sweden, Germany, and Ruſſia, receives into its boſom ſeveral other gulphs, particularly the gulphs of Finland, Bothnia, Livonia, and Dantzick. It is remarkable that this ſea, or gulph, neither ebbs or flows, and there is always a current from it, ſet through the ſound into the ocean. It is likewiſe generally frozen over three or four months in the winter.

ZEELAND, ZEALAND, *or* SEELAND.

ZEELAND is the moſt extenſive and fertile iſland of the Baltic, and the principal part of the kingdom of Denmark. It is bounded on the eaſt by the ſound which divides it from Schonen, and on the weſt by the Greater Belt, which ſeparates it from Funen. The iſlands of Moon, Falſter, and Laland, lie on the ſouth, and on the north are the Categate and Schager-rack. It is almoſt of a round form, being 70 miles in diameter, and about 200 in circumference. The land in general is low, and very fertile; its woods and foreſts, &c. abound with game. The coaſt is indented with many gulphs, bays, creeks, &c. which are of great commercial uſe, as they afford many ſecure harbours. The ſea vapors render the air thick, but not unwholeſome, as the people in general here live to a very old age, but they are dull, diſpirited, and inactive. Zeeland is divided into 26 bailiwicks, called herrits, and theſe contain 346 pariſhes, with ſeveral conſiderable cities, towns, &c. Of theſe the principal are,

Copenhagen, the capital of the whole kingdom. This city takes its name from the commodiouſneſs of its

port, for the word itſelf ſignifies *The Merchant's Port, or Haven.* It is ſituated on the eaſtern ſhore of Zeeland, upon a fine bay of the Baltic, near the ſtreight called the Sound, in 55 deg. 40 min. north lat. and 12 deg. 56 min. eaſt long. and is

Miles.			
90	S. E.	of	Aarhus.
118	N. E.	---	Sleſwic.
152	N. E.	---	Hamburg.
81	N. W.	---	Stralſund.
120	S.	---	Gottenburg.
290	S. W.	---	Stockholm.
634	S. W.	---	Peterſburgh.
340	N. E.	---	Amſterdam.
580	N. E.	---	Paris.
450	N. W.	---	Vienna.
560	N. E.	---	London.

This city was originally a mean little village of fiſhermens huts, which, by the aſſiſtance of the biſhops of Roſchild, gradually roſe to be a conſiderable town; and at length was declared a city, and made the royal ſeat of the Daniſh ſovereigns. The houſes were formerly of wood, but in the year 1728, almoſt the whole city was reduced to aſhes by fire, and ſince that time it hath been more ſumptuouſly, and ſecurely built, of free-ſtone. The then reigning king exhauſted immenſe treaſures to erect a ſuperb palace, and the town is embelliſhed with elegant houſes belonging to the nobility, many magnificent churches, and other elegant public edifices. An ingenious gentleman, however, who was very lately in this city, ſays, "ſo few perſons viſit this metropolis, or kingdom, from motives of curioſity, that they are quite ſurpriſed when I aſſure them I have no ſort of buſineſs here, and am only employed in the ſearch of knowledge. There is no face of induſtry or buſineſs here, and Copenhagen, though one of the fineſt ports in the world, can boaſt of little commerce. The public places are filled with officers, either in the land or ſea-ſervice, and they appear to conſtitute three-fourths of the audience, at the comedy and the opera. The number of forces are indeed much too large for this little kingdom: they can boaſt, it is true, a vaſt extent of dominion; but of what importance are the barren and almoſt uninhabited mountains of Norway and Lapland, ſtretching to the pole, or the plains of Iceland, where the inhabitants are yet, and will probably ever remain, in the moſt profound barbariſm? Their dominions in Holſtein are by far the moſt rich, and furniſh a large part of the royal revenue. There needs, indeed, no ſtronger proof of the poverty of the kingdom, than the ſcarcity of ſpecie. I have ſeen no gold, and hardly any ſilver; they pay every thing in paper; and if you loſe a ſingle dollar at the card-table, or the billiard-table, it is given in a bill." The excellency of the harbour is owing to the iſland of Amack, which breaks off the waves, and ſhelters it from the ſurge of the ſea. Here ſtand the arſenal, the exchange, the caſtle, and the mint, with about 500 houſes, known by the name of the New Town. The whole city of Copenhagen is about five miles in circumference: it lies very low; but there is a riſing ground within half a league of it, and two or three little hills that cover it on the weſt-ſide, from whence the city may be eaſily bombarded. It has a very regular citadel on the north and the north-weſt, built on the ſhore, with ſeveral fine baſtions and ravelins of earth, well ſtored with cannon, and palliſadoed. The other ſides are of more difficult acceſs, by reaſon of marſhes. There are ſeveral royal baſtions, with ravelins before the curtains, which reach from the citadel to the ſouth part, and continue beyond the arm of the ſea, which ſeparates Seeland from Amack. A circuit of fortifications, conſiſting of eight royal baſtions, and a ravelin, incloſes the new city, the port, and fleet, and faces the tolbooth, or cuſtom-houſe battery, which ſecures the entry into the haven. Theſe fortifications make the city of a round form. The houſes, which are not above 7000 in number, do not take up above half the ground incloſed. The entrance into the harbour is ſo narrow, that one ſhip only can paſs at a time, and this entrance is ſhut up every night with a ſtrong boom. The citadel on one ſide, and a good block-houſe well furniſhed with cannon on the other, command the mouth of it. Within this haven rides the royal navy, every ſhip having its place aſſigned to it. A wooden gallery ranges round the whole incloſure where the fleet lies, and is laid over the water in ſuch a manner that all ſhips may be viewed near at hand, as eaſily and commodiouſly as if they lay on dry land. This harbour is capacious enough to hold 500 ſail, where neither the wind nor the enemy can do them the leaſt miſchief. The road without is very good and ſafe, being fenced from the ſea with a large ſand-bank, on the points of which are always two buoys floating, to direct all ſhips that come in or go out. Here are no tides to fear, and there is always a ſufficient depth of water: ſometimes, indeed, according as the wind blows in or out of the Baltic, there lies a current, but it is neither frequent or dangerous.

As the iſle of Amack is contiguous to, forms part of, and is by the means of bridges joined with Copenhagen, or at leaſt with the old port of it, it ſeems neceſſary here to mention ſome particulars relative to this iſland.

The iſland of Amack then lies eaſt from the city, on the other ſide of the haven, and is called the Garden of Copenhagen. It is almoſt of an oval form, and was chiefly planted by Hollanders, ſent thither by Margaret ducheſs of Savoy, and governeſs of the Low Countries, at the deſire of Chriſtian II. who had married her niece, ſiſter to Charles V. emperor of Germany. He wiſhed that his queen might have pulſe, and other garden-ſtuff, planted there, which none knew ſo well how to cultivate as the Hollanders. Half the iſland was granted to them, and keeps to this day the name of Hollandeſby: they ſtill retain the Dutch faſhions, and ſupply Copenhagen with milk, butter, and cheeſe. The other half of the iſland is inhabited by Danes. Beſides the pulſe, and other fruit which this iſland produces, here is alſo plenty of wheat, barley, and oats, and abundance of hares. The inhabitants are induſtrious, and their houſes neat and cleanly.

There is a place here which approaches nearer to the nature of a circus than a ſquare; each ſide is formed of only one ſingle palace, and in the centre is an equeſtrian ſtatue in bronze of the late king Frederick the Fifth. This place has a good effect, and is much handſomer than the Place de Victoires at Paris. The celebrated count Moltcke, prime miniſter to the late Daniſh monarch, hath a fine collection of paintings in his palace; and M. Spengler, a Swiſs gentleman, well known in the literary world, is poſſeſſed of a very curious private Muſeum. But the greateſt curioſities, natural and artificial, both for variety and intrinſic value, are preſerved in the Royal Muſeum, in eight chambers erected over the king's library. The chambers, or apartments, are large and well furniſhed. One of theſe rooms is wholly taken up with medals, antique and modern, each ſort being kept by themſelves, and very judiciouſly arranged; and in a ſeparate caſe are contained the Paduans*, and other counterfeit medals, which in workmanſhip ſo nearly reſemble the true Grecian and Roman antiquities, that a good judge can ſcarce diſtinguiſh them from originals. The ſeries of the modern medals of European nations are abſolutely complete, and thoſe of each nation kept diſtinct.

Amongſt the natural curioſities preſerved in the chambers, one of the moſt remarkable is a petrified child. It was cut out of the mother's belly at Sens in Champagne, in the year 1582, after having lain there between 20 and 30 years; and that it is a human fœtus, and not artificial, is evident beyond all diſpute. Its head, ſhoulders and belly, are of a whitiſh colour, and very much reſemble alabaſter; the back and loins are ſomewhat brown and harder; but from the hips downwards it is of a red colour, and as hard as perfect ſtone can be, exactly reſembling the hard ſort of ſtones generated in the bladder. This fœtus, after it was taken from the mother, was firſt carried to Paris, where it was ſold to a jeweller of Venice, who happened to be there, for about 20l. ſterling; of whom it was afterwards purchaſed by Frederick

* A Paduan, amongſt medalliſts, is a modern medal ſtruck with all the marks and character of antiquity. The name is taken from a famous Italian painter, called the Paduan from Padua, the place of his birth, who ſucceeded ſo well in the cheat, that the beſt judges are at a loſs to diſtinguiſh his medals from thoſe which are really antique.

derick the Third, king of Denmark, for 60l. and added to this collection.

In one of the chambers are to be ſeen two elephants teeth, each weighing an hundred and fifty pounds, which were dug out of a ſtone quarry in Saxony.

In this fine collection there are ſeveral large pieces of ſilver ore, dug out of the mines of Norway in 1666, one of which weighs 560 pounds, and is valued at 5000 crowns. Another piece, ſomewhat leſs, is valued at more than 3000; both being ſo rich, that they are reckoned to contain at leaſt three parts ſilver. They are compoſed of a whitiſh ſtone, the cracks or cavities whereof ſeem to be filled with pure virgin ſilver, which in ſome places lies in broad flat plates, and in others like pieces of fine ſilver lace: but what is moſt admired in theſe pieces of ore are the threads or branches of ſilver, which ſhoot out an inch or two beyond the ſurface of the ſtone, appearing in the form of ſmall ſhrubs or buſhes; and ſeveral other rarifications of this kind are to be ſeen among the ſilver ores preſerved in this Muſeum.

Here are alſo ſeveral large pieces of amber, ſome weighing 40 or 50 ounces; which, upon opening the ditches about Copenhagen, when they fortified the city, were found ſticking to the ſides of old trees that were buried there, like the gum on the plum-trees in our gardens.

In the ſame chamber are a great many large branches of white and red coral, and one of black; likewiſe a pair of ſtag's horns growing out of a piece of wood in a ſurprizing manner.

Here is a human thigh bone three feet three inches long; and two very large ſcollop ſhells, holding about three gallons each, and weighing 224 pounds a-piece. Theſe were brought from the Eaſt-Indies; and, it is ſaid, the fiſh they belong to is of ſuch ſtrength, that if a man happens to get his arm or leg between the ſhells when they open, it claps them together ſo forcibly as to cut the limb clear off.

A piece of marble is preſerved in this collection, which the Lutherans reckon a very valuable curioſity, the natural veins of the ſtone running in ſuch a manner as to repreſent the exact figure of a crucifix. Some, indeed, have ſuſpected the repreſentation to have been by art; but, upon the niceſt examination, it appears to be entirely the work of nature.

Among the artificial curioſities, there is a ſkeleton made of ivory, two feet ſix inches high, in imitation of a human one; and it is ſo nicely formed and put togegether, that it may be eaſily taken for a natural one.

There are likewiſe two crucifixes of ivory, and the whole hiſtory of our Saviour's paſſion, beautifully expreſſed in a piece of carved work.

A ſmall man of war in ivory, with ſilver guns, is a curioſity much admired; as is alſo a watch made of ivory, with all its wheels and movements.

Beſides theſe there are many other curioſities in ivory, ebony, box, amber, and other materials, which are kept for the ſake of elegant workmanſhip. There is likewiſe a common cherry-ſtone, on the ſurface of which are engraved 220 heads, but their ſmallneſs makes them appear imperfect and confuſed.

In this royal repoſitory are ſix golden ſepulchral urns, which were found in the iſland of Funen in 1685, by a peaſant, as he was ploughing his land, and contained each of them ſome aſhes of a greyiſh colour. The largeſt of them weighs two ounces and a half, and the others two ounces and a dram. They are extremely thin, and each has three rings of gold about its neck, with ſeveral circles carved upon the outſide of the urn, having one common center. This diſcovery confirms the accounts given by various writers, that it was an antient cuſtom among the northern nations to burn their dead, and then bury their collected aſhes in golden urns.

There is another ſepulchral urn of cryſtal, of a conical figure, which has alſo a golden ring about it, and was found near Bergen in Norway.

There are likewiſe in this collection ſeveral veſſels of different ſizes, ſome of glaſs and others of earth, which are called lachrymal urns, or lachrymatories, being uſed by the antient Romans to catch the tears of weeping friends, which were afterwards mixed with the aſhes of the deceaſed.

We ſhall conclude our account of this celebrated Muſeum, with a deſcription of the Daniſh and Oldenburg horns, two curioſities which are greatly admired. The Daniſh horn is of pure gold, weighs an hundred and two ounces and a half, is two feet nine inches long, and holds about two quarts of wine meaſure. This horn was accidentally diſcovered, in the year 1639, by a country girl, in the dioceſe of Rypen in Jutland, and is undoubtedly a piece of great antiquity, by the figures carved on the outſides, which ſeem to be hieroglyphics, &c. It is likely that ſome of theſe figures were deſigned to repreſent their deities, and the horn was probably uſed in ſacrifices, as among the antient Aſſyrians and other nations, who, upon ſuch ſolemnities, made a great noiſe with horns and trumpets, and uſed them to drink out of at their ſolemn entertainments.

The Oldenburg horn is of pure ſilver gilt with gold, weighs about four pounds, and is curiouſly enamelled with green and purple colours. The Daniſh antiquaries tell many fabulous ſtories of this horn, which are not worth repeating; and as to what they ſay of its being given to Otho, earl of Oldenburg, in the year 982, it is plain it cannot be of that date, for the figures and characters on the outſide are modern; which, however, with the enamelling, and other ornaments, are of excellent workmanſhip, and make it a very fine and valuable curioſity.

An ingenious traveller, in ſpeaking of the palace of Roſenbourg, in this city, ſays: "It was conſtructed by our famous Inigo Jones, and ſtands in the middle of a large garden. It is ſmall, and at preſent very little uſed by the king, or royal family. There is an air of antiquity in all the apartments, tapeſtry, and furniture, which is not diſpleaſing, and impreſſes with reſpect. The grand ſala, or dining-room, in particular, is in this ſtile. The hangings, which are not ill executed, repreſent the various actions by ſea and land, which diverſified the antient laws between the Swedes and Danes, who ſeem always to have had the ſame rivalſhip and animoſity which the French and Engliſh are diſtinguiſhed for, and which, 'tis probable, they will ever, in ſome degree, retain. At one end of this grand apartment are three ſilver lions as large as life, who ſeem, by the ferocity and rudeneſs of their appearance, deſigned to characterize the age and nation in which they were caſt. It is a ſort of ſavage magnificence, which ſtrikes more effeminate and luxurious times with wonder, to introduce ſuch forms into a banqueting room of ſtate. Here are ſeveral cabinets full of curious rarities, which the various ſovereigns of Denmark have ſucceſſively collected and left to their poſterity. Many of them are intrinſically valuable, others only preſerved from ſome event or accident connected with them. Among the firſt is a ſaddle, on which Chriſtian IV. made a ſort of triumphal entry into Copenhagen. It is covered with pearls, diamonds, and other precious ſtones, and the ſpurs are of ſtones enriched with jewels. The coat worn by the king, and a light helmet, on the ſame occaſion, are likewiſe covered with pearls. They preſerve likewiſe, with great care, a handkerchief of this prince, dyed with his blood from a wound which he received by a ball, that deprived him of an eye. The man who accompanied us ſhewed me, with exultation in his countenance, a ſword of Charles XII. of Sweden. It is juſt ſuch a ſword as ſuch a monarch may be ſuppoſed to have uſed, and would well become the meaneſt ſoldier: it indeed evinces his ſtrength and vigorous frame of body, by its ſize and weight; the blade is at leaſt four feet long, and both the hilt and garde are entirely compoſed of braſs.

The gardens of this palace conſtitute one of the chief diverſions of the city, as they are always open, and on feſtivals or Sundays, are crouded with company. They are large, but not laid out with taſte, or adorned with any productions of art, one ſtatue only excepted of Hercules vanquiſhing the Næmean lion, which ſtands under a portico raiſed to defend it from the inclemencies of the weather: this is of Italian workmanſhip, and the artiſt has found means to diſplay great anatomical ſkill and beauty in the attitude and muſcles of the hero, who, by an extraordinary exertion of ſtrength, forces open, and breaks the jaw of his adverſary."

The other principal buildings of Copenhagen are the king's mews, or ſtables, the orphan-houſe, the opera-houſe, the military ſchool, the royal library, which contains

tains above 40,000 printed books and manuſcripts, in various languages, and the univerſity. With reſpect to the latter it muſt be obſerved that, prior to the reign of Chriſtian I. (who was one of the beſt kings that ever ruled the Danes, and indeed may be deemed the Alfred of Denmark) the Daniſh nobility and gentry, for want of proper ſeminaries of learning in their own country, were under the neceſſity of ſending their children to the French and German univerſities and colleges for education. To remedy this great inconvenience, Chriſtian applied, and obtained leave of the pope to eſtabliſh a public ſeminary of learning, in his own dominions, when the univerſity of Copenhagen was accordingly founded in the year 1475. But neither the ſucceſſors of this wiſe and patriotic monarch, nor even the clergy, have ſeconded his laudable endeavours with a proper degree of ſpirit; for a very intelligent gentleman, who recently viſited this city, ſays, "There are ſeveral hundreds of ſtudents in the univerſity of Copenhagen, who were entered upon eſtabliſhments which were made by former kings, when all the neceſſaries of life were very cheap, and when their young men could live decently upon what was allowed them; but now, as all theſe neceſſaries are become much dearer, and as few of thoſe ſtudents have any private fortune, many of them are in the greateſt miſery. I have met with ſeveral young men of lively parts, in the univerſity, and which might make a conſiderable figure in the world; but ſince the new titular nobility bear the ſway here, ignorance and impudence, as coming the neareſt to their own character, are rewarded; whilſt real merit, modeſty and decency are treated with the greateſt contempt; ſometime ſince, the king had a French comedy eſtabliſhed at Copenhagen, to the ſight of which every decent perſon was admitted gratis; but I was really aſtoniſhed to ſee three or four young men of genius refuſed admittance to this comedy, becauſe they were ſtudents in the univerſity, though they were very decently dreſſed, and even ſolicited to be admitted into the galleries; while thoſe places were filled with valet de chambres, and others of that claſs. No claſs of people are held in more contempt, in this country, than the ſtudents of the univerſity: what encouragement then have men of genius to ſtudy and cultivate the ſciences?"

Helſeneur, or Elſineur, is ſituated about 20 miles north of Copenhagen, on a neck or ſtreight of the ſea called the Sound, and ſurrounded by walls. The caſtle of Cronenburg, which defends Helſeneur, and the caſtle of Helſinburg, on the oppoſite ſhore, command the commerce of the Baltic; for, between theſe two forts, all veſſels that trade into that ſea muſt paſs, ſo that this ſtreight is the moſt frequented of any in Europe, that of Gibraltar excepted. The caſtle of Cronenburg was built by Frederick II. of free-ſtone brought from Gothland. Every ſhip that paſſes this ſtreight muſt ſtrike ſail at Cronenburg, and come to the town to compound for the cuſtom, under the penalty of forfeiting the veſſel and cargo. Helſeneur was ſurrounded with walls under the reign of Chriſtian IV. and peopled not only with Danes, but alſo with citizens from ſeveral nations. This city ſuffered very much when Charles Guſtavus, king of Sweden, beſieged Cronenburg in 1658. It was taken by him, but reſtored to the Danes by the treaty of Copenhagen in 1660. This was the native place of the celebrated John Iſaac Pontanus, though his parents were of Haerlem in Holland. He was doctor of phyſic, profeſſor in the univerſity of Hardewyck, and hiſtoriographer to the king of Denmark, and the province of Gelderland.

The caſtle of Cronenburg is four or 500 paces diſtant from Helſeneur, on the ſpot where ſtood formerly the fortreſs of Orekrange: It is built upon oaken piles, faſtened with hewn ſtones, and ſo ſolid, that it ſupports the fury of the tide, which ſometimes beats againſt it moſt violently, without damaging it in the leaſt. It makes a large ſquare court, and was adorned with fine ſtatues: the apartments alſo were very ſplendid. The pipes of the ciſtern which ſupplied the garriſon with water, and the locks of the doors, were all of fine ſilver, before it was plundered by the Swedes. It has four little towers at each corner, covered with copper; but this caſtle, with the chapel, ſteeple, and ornaments of it, are all going to decay. It has a ditch towards the ſea, ſurrounded with another ditch; and the land ſide is ſecured by five baſtions, and a half baſtion. They have five cannons upon them; but the baſtion that ſecures the paſſage of the Sound, has but two cannons, 36 pounders each; and 11 more of ſmaller ſize. The rampart is vaulted with free-ſtone. Frederick II. who built this caſtle, ſpent none but his own money in the building of it; and declared, that if he knew there was one ſingle ſtone in it that coſt his people a farthing, he would have it removed.

Subſequent to the late ſingular revolution in the kingdom of Denmark, the queen, Caroline Matilda, was confined in this caſtle. The apartments ſhe reſided in were thoſe uſually occupied by the colonel commandant, who, it ſeems, upon this melancholy occaſion, had humanity and politeneſs enough to reſign them to that unfortunate princeſs; for the royal apartments (as they are extremely cold) were not fit, at that inclement ſeaſon of the year, when ſhe was brought down here, to receive any perſon, it being January 17, 1772. There is a little hunting-ſeat, or palace, about a quarter of a mile from Helſeneur, to which the king reſorts, for a few hours, in ſummer. There is nothing worthy of obſervation in the ſtructure itſelf, but, from the roof, the proſpect is enchanting, as it commands the town of Helſeneur, the caſtle of Cronenburg, the Sound, and the coaſt of Sweden, for a conſiderable way.

Over-againſt Helſeneur lies the iſland of Huen, or Ween, remarkable only for the caſtle of Uraniburg, built by the famous Tycho Brahe. King Frederic II. had given him that iſland for his life, that he might build an obſervatory there, with other buildings proper for his purpoſe. The king gave him alſo a penſion of 2000 golden crowns, a conſiderable fief in Norway, and a prebend in the church of Roſchild. This iſland was perfectly well ſuited to Tycho Brahe's deſign; for it is properly a hill, which riſes in the middle of the ſea, the top of which is flat and ſmooth, and commands a proſpect all over the coaſt of Schonen, and the neighbouring country, affording thus a very extenſive horizon. Add to this, that the ſky is here generally clear, there ſeldom ariſing any fogs. Tycho Brahe laid towards the middle of the iſland the foundation of his caſtle, which he named Uraniburg, that is to ſay, the town of Heaven; and finiſhed it in four years time. The diſpoſition and conveniency of the apartments, together with the engines and inſtruments for obſervations it contained, made it be looked upon as a building that had not its equal in the world. In the neighbourhood of it were lodgings for workmen of all kinds, maintained at the expence of the maſter; a printing-houſe, a paper-mill, forges for making of inſtruments, laboratories for chymical experiments, &c. Four years after, he built, in the ſouth part of the iſland, another houſe, which he called Stelburg, that is, Starburg: there he kept ſeveral inſtruments, and lodged ſome ſtudents and ſervants, who applied themſelves to ſome particular ſtudy. But Uraniburg is now gone to decay. The iſland of Huen belongs now to the Swedes.

We may here add, that the chair in which Tycho Brahe uſed to ſit, to make his aſtronomical obſervations, is ſtill preſerved in the Royal Muſeum, and held, by the Danes, in the higheſt veneration. "Thus (ſays a judicious traveller in a letter to a friend) it ever happens! I need not remind you, that the aſtronomer himſelf was driven from his native country by faction and malevolence; or that he died at Prague, in the court, and under the protection of the emperor Rodolphus, who ſheltered this illuſtrious fugitive, and afforded him an aſylum. It reminds one of Dr. Johnſon's lines ſo often quoted on ſimilar occaſions.

"See nations ſlowly wiſe, and meanly juſt,
"To bury'd merit raiſe the tardy buſt."

Holbeck is 14 miles to the weſtward of Roſchild; it is a pretty conſiderable town, ſituated at the bottom of a narrow bay, which communicates with the bay of Iſefiord.

Callenburg, or Kallenburg, 52 miles to the weſtward of Copenhagen, ſtands at the bottom of a gulph which opens into the Great Belt, the gulph itſelf forming a ſafe and commodious harbour, from which circumſtance the town derives a tolerable ſhare of commerce.

Ringſtede is a place of great antiquity, ſituated about

about 30 miles to the ſouth-weſt of Copenhagen. It was formerly a burial-place for ſome of the Daniſh monarchs, but is, at preſent, but a very mean place, and without any trade.

Preſto, oppoſite to the Iſle of Moon, and ſituated on a bay of the Baltic, is a place of ſome trade.

Koge, 11 miles ſouth of Copenhagen, is a ſmall, populous, rich, commercial town, ſtanding on a bay in the Sound.

Warienburg, near Preſto, is a ſmall ſea-port town with ſome commerce.

Newſtad, ſituated oppoſite to Laland, on a little river that falls into the Baltic, is a poor mean town with little or no trade.

Skelſkor, a place as unimportant as the laſt, is ſituated on the coaſt of the Greater Belt.

Korſor, 56 miles ſouth-weſt of Copenhagen, is ſituated on a neck of land, and ſeparated from Funen by the Greater Belt. It is badly fortified, and has but little trade, though provided with a good baſon, in which ſhips may ride with ſafety.

Frederickſburg is a ſmall town 20 miles diſtant from Copenhagen, to the northweſt, and 18 from Helſeneur to the ſouth-weſt. It is conſiderable only by the ſtately caſtle and royal palace which ſtands near it. That caſtle was formerly but a ſmall ſeat belonging to a private gentleman. King Frederick II. being charmed with its ſituation, bought it of him, and began to enlarge it: His ſon, Chriſtian IV. finiſhed it. This is the Verſailles of Denmark. The houſe is built on piles in a lake. The body of the caſtle conſiſts of a very fair front, with two great wings. The chapel is well adorned, and covered with gilt copper: it has 12 ſilver ſtatues of the apoſtles, and all the locks, bolts, &c. were ſilver, till it was plundered by the Swedes. The hall is adorned with paintings, and has the pictures of ſeveral of the kings of Denmark, and of the royal family, as large as the life; and a frame of paintings, which repreſents the ſea and land battles of the kings of Denmark. It is hung with rich tapeſtry of mohair, repreſenting the actions and battles of Chriſtian IV. There is a gallery which leads from the caſtle to the hall of audience, adorned with pictures, moſt of which were bought in Italy. Here is a park, about nine miles long, of a proportionable breadth, and interſperſed with pools and fiſh-ponds, with a mixture of green plods, hillocks, and ſmall vallies. It was ſtocked with fallow deer from England. There is a pretty flower-garden behind the caſtle, in the very lake; in which, though it is exceeding deep, they have built a kind of terrace on piles, that coſt an hundred thouſand crowns.

Roſchild, or Roſkild, lies at the bottom of the bay of Iſefiord, and is 18 miles diſtant from Copenhagen to the weſt. It was formerly the capital of Denmark, when the kings reſided there; but ſince they have choſen Copenhagen for their reſidence, it has dwindled greatly in point of importance, and is much decayed with reſpect to wealth and commerce. But of 27 churches, which formerly embelliſhed this town, only two are now ſtanding. It continues, however, to be the burial place of the royal family. Among the monuments of the Daniſh ſovereigns, ſome of which are extremely magnificent, ſtands a beautiful marble pillar erected by queen Margaret as a ſupport to the whetſtone ſent her by Albert king of Sweden, to ſharpen her needles, in deriſion to her ſex. But it whetted her reſentment in ſuch a manner, that he ſuffered ſeverely for his ſarcaſm, for he was taken priſoner by the queen, detained ſeven years in cuſtody, and obliged to relinquiſh all his pretenſions to the crown of Sweden. Here is a convent of Lutheran nuns belonging to the beſt families; but they are not obliged to wear any particular habit, or to be reſtricted by the vows uſual in convents, but are permitted, if they think proper, to quit the convent and marry. In 1658 the famous treaty of peace was here concluded between Denmark and Sweden. The univerſity is in a declining condition, and indeed the whole town exhibits evident marks of poverty and decay.

Sora is ſituated on the banks of a lake, about the center of Zealand, was formerly the ſeat of a rich abbey, and has many pleaſant fields and foreſts near it. To this place the academy of Frederickſburg was removed, and the foundations of the univerſity were augmented by Chriſtian IV. Charles Guſtavus, king of Sweden, was educated here, and retained ſuch a veneration for the place, that, when he invaded Zealand, he would not ſuffer his ſoldiers to enter the town. But the revenues of this ſeminary have ſince been annexed to the crown of Denmark, and the whole is gone to decay. Abſolom, archbiſhop of Lunden, once founded here an eſtabliſhment for the maintenance of thoſe who ſhould write the hiſtory of Denmark; and to this foundation we owe the hiſtory written by the celebrated Saxo-grammaticus.

FUNEN.

THE iſland of Funen is the next member to that of Zealand, in the ſcale of importance, among the ſeveral parts which form the Daniſh kingdom. It is bounded by the Greater Belt on the eaſt, by the Leſſer Belt on the weſt, by the Baltic on the ſouth, and by a little channel which ſeparates it from the iſland of Samſae on the north. It is about 36 miles from eaſt to weſt, and 30 from north to ſouth. This iſland is fertile and agreeable, being finely diverſified with verdant hills, ſhady woods, pleaſant groves, fruitful fields, rich paſtures, &c. The ſoil is good, well cultivated, and affords a great deal of grain, not only for home conſumption, but exportation. Great quantities of black cattle, horſes, hogs, &c. are bred here. This iſland is an appendage to the eldeſt ſons of the kings of Denmark, and is deemed one of the richeſt governments belonging to that ſovereignty. It contains four garriſoned towns, and 264 villages, but the moſt conſiderable places, and the only ones indeed worthy of deſcription are

Odenſee	Woburg
Nyburg	Aſſens and
Schwenborg	Middlefar.

Odenſee, which is the capital of the iſland, ſtands about its center, and is a capacious, well-built, pleaſant town. Here the kings once reſided, and the aſſembly of the ſtates met before the crown became hereditary, and the ſovereign abſolute. In a church here, which is dedicated to St. Canute, the body of that prince was found near a century and a half ago. It was depoſited in a copper coffin, gilt, and adorned with precious ſtones. The moſt particular circumſtance relative to this town, at preſent, is, that the inhabitants brew the very beſt beer in the whole kingdom.

Nyburg lies on the narrower part of the Greater Belt, between Funen and Zealand. This place has ſome trade, the harbour is good, and the adjacent country is fertile. The damages done to the fortifications in the late wars with Sweden are not yet thoroughly repaired. Embarkations for the iſland of Zealand are made at this town.

Schwenborg is an agreeable town, with a commodious harbour, ſituated on the ſouth-eaſt part of the iſland. From hence Charles Guſtavus, in the year 1658, began his march, over the ice, to the iſlands of Langeland, Zealand, and Falſter.

Woburg, or Foburg, is a ſmall town, ſituate on a little gulph on the ſouthern coaſt of Funen, over-againſt the iſland of Arroe, and is about 10 miles diſtant from Schwenborg to the weſt.

Aſſens lies on the ſouth-weſt coaſt of this iſland, over-againſt Haderſleben, in the duchy of Sleſwic. It is about 11 miles diſtant from Odenſee to the ſouth. In the year 1535, the army of king Chriſtian III. commanded by John Rantzaw, routed that commanded by Chriſtopher earl of Oldenburg, and killed Guſtavus Troll, archbiſhop of Upſal. Rantzaw afterwards levelled this town with the ground.

Middlefar, on the weſtern ſhore of the iſland, lies on the Leſſer Belt, hence alſo called Middlefar-Sound. It is 17 miles diſtant from Aſſens to the north-weſt, and as many from Odenſee towards the ſouth-weſt. It is a ſmall, but neat town, in a country abounding with all the neceſſaries of life. It is the common paſſage from this iſland to Colding in Jutland, the Belt not being broader here than the Thames is at Graveſend. On the 13th of January, 1658, Charles Guſtavus, king of Sweden, led his army over the ice to this place, routed the Daniſh forces that oppoſed him, and made himſelf maſter of the whole iſland of Funen.

FALSTER.

THE iſland of Falſter lies to the north-eaſt of Laland, from which it is ſeparated by a narrow ſtreight: it has Zealand on the north, and the iſland of Moon on the north-eaſt. It is 20 miles in length, and eight in breadth. Its ſoil is very fruitful, and much corn is ſent from hence to Mecklenburg, and other ports of Germany. It is divided into two bailiwicks; namely, that of the ſouth, or Synder-Herrit; and that of the north, or Norre-Herrit. It has ſeveral towns; among which the chief are, 1. Nycoping, on the weſtern coaſt of the iſland, of which it is the capital. It is one of the moſt pleaſant and well built towns in the whole kingdom, and ſtiled by Dr. Heylin the Naples of Denmark. It has a ſtrong caſtle, and a well-frequented harbour. 2. Stubcoping, in Latin Stubcopia, ſeated on the north coaſt, is a place of ſome trade, being the uſual paſſage from Zealand into Germany.

ARROE.

THIS iſland is ſituated near the coaſt of Tunen, being eight miles in length, and two in breadth. It is extremely fruitful in corn, and abounds in aniſeed, with which the inhabitants give a flavour to their bread, and ſeaſon their meat. In this iſland are plenty of horſes and black cattle; and ſome woods, in which are abundance of hares. The whole iſland has but three pariſhes, the moſt conſiderable of it is Koping, or Kioping; the town belonging to it ſtands on the ſouthernmoſt part of the iſland, and bears the ſame name as the pariſh. It has ſome trade on account of its port, and is ſituated at the bottom of the bay.

LALAND.

THE iſland of Laland is ſituated to the eaſtward of Langeland, and to the ſouthward of Zealand, from which it is ſeparated by a narrow ſtreight called Groneſond. From its lowneſs, or flatneſs, it hath the appellation of Laland, or Lowland. It is near 40 miles in length, and about 20 in breadth, where wideſt. The ſoil is very fertile, ſo that Copenhagen is ſupplied from hence with great quantities of corn, beſides what the Dutch traders are furniſhed with for exportation. This iſland is divided into five diſtricts, or bailiwicks; is the ſeat of a governor, and has ſeveral ſmall iſlands ſubject to its juriſdiction: it contains various pleaſant little villages and hamlets, and a few ſeats belonging to the nobleſſe, excluſive of four conſiderable towns, viz.

Naſcow	Levenſcoping
Saxcoping	Nyſted.

Naſcow, or Naxkow, the capital, is 59 miles ſouth-weſt from Copenhagen, and has a commodious harbour for trade. The fiſhery is of ſome conſequence, and the circumjacent country is rich in meadow and paſture lands.

Saxcoping contains nothing worthy of particular notice.

Levenſcoping ſtands in the very ſame predicament, being

"A town without a ſingle thing
"That's worth a trav'ller's noticing."

Nyſted, or Newſtadt, on the ſouth of the iſland, was once famous for its noble monaſtery, which was founded in the year 1286, but is now gone to ruins.

MOON.

THE iſland of Moon lies to the ſouth-eaſt of Zealand, and to the north-eaſt of Falſter. It is about 20 miles long, eight broad, and full of high chalky hills. Here is ſome paſture grounds, but very little corn lands. It was formerly part of the Daniſh admiral's allowance, as being the fitteſt place for him to reſide in. There are in this iſland ſeveral villages, large pariſhes, and a conſiderable city, called Stege, or Stekoe, which lies on the north of the iſland, on a little rivulet, that a mile lower falls into the ſtreight, called Grone Sound. This city made a brave defence againſt the Lubeckers in the year 1510, and forced them to retreat; and the valour of the inhabitants of the whole iſland was ſignalized in 1659, when they defended themſelves better againſt the Swedes than the other larger iſlands had done.

LANGELAND.

LANGELAND, which is 22 miles long, and eight broad, is ſituated in the Greater Belt, to the ſouthward of Funen. It abounds with wheat, rye, and barley, of which the natives export great quantities. It is divided into 16 pariſhes; and Rutcoping, on its weſtern coaſt, is the moſt conſiderable town, being defended by the fort of Traneker, which is always furniſhed with a ſtrong garriſon.

FEMEREN.

FEMEREN lies near the coaſt of Holſtein, from whence it is ſeparated by a ſtreight, which is not above two miles broad, and is called Der Femmer Sundt, i. e. the ſtreight of Femeren. Though it is but a ſmall ſpot of ground, yet it has always been looked upon as one of the keys of Denmark, with regard to the empire. Therefore king Chriſtian IV. was more afraid of the Germans becoming maſters of this iſland, than of their overrunning Jutland, which made him fortify all the old caſtles, and put ſtrong garriſons into every place of importance here. This iſland is extremely fruitful in corn and paſtures, and yet it has but two pariſhes; namely, Borg and Peterſdorp. There is a fort at the place where people land from Holſtein; it is called Ferhſchans, that is, the Fort of the Paſſage.

BORNHOLM.

BORNHOLM, antiently Boringia, is ſaid to have been diſcovered by Thieloraus, the ſon of a prince of Jutland. It is the remoteſt, and moſt eaſterly of all the iſlands belonging to the king of Denmark, being about 75 miles diſtant from Zealand to the eaſt, and not above 15 from the neareſt coaſt of Schonen to the ſouth-eaſt. It is about 18 miles long from north-weſt to ſouth-eaſt, and about 10 in breadth from ſouth-weſt to north-eaſt. It is a place of great importance for its ſituation and fruitfulneſs, and belonged once to the archbiſhop of Lunden; but king Chriſtian II. took poſſeſſion of it in the year 1524, as being abſolutely neceſſary for the fleet he was preparing againſt Sweden: which uſurpation George Seſteberg, who was then archbiſhop, oppoſed with all his power, but in vain, for he was forced afterwards to fly into Germany, to avoid the effects of the king's diſpleaſure. The Swedes have frequently laid this iſland waſte; and in the war with Frederick II. they made themſelves maſters of it, and deſigned to keep it; but they were obliged to reſtore it by the treaty of Copenhagen, concluded May the 27th, 1660. The moſt conſiderable places are, 1. Sandwyck, on the northern coaſt. 2. Rattenby, or Rottum, on the ſouth-weſtern. 3. Nex, on the eaſtern. 4. And Sand-Hamer, to the north of Nex, on the ſame coaſt; beſides which there are here ſeveral villages.

* * * * * * * * * *

Many little iſlands ſurround the abovementioned more conſiderable ones, but they are either uninhabited, or of ſo little importance as not to be thought worthy of notice by travellers, or of mention by geographers. Some others are contiguous to, and belong to the other provinces of Denmark; the moſt conſiderable of which are Samſoe and Leſſaw, on the coaſt of Jutland.

Samſoe, or Samſoi, is in the Baltic, eight miles from the coaſt of Jutland. It is near nine miles in length, about three in breadth, fruitful, healthy, and pleaſant.

Leſſaw belongs to the dioceſe of Aaburg, oppoſite to which it lies at about the diſtance of 12 miles from the ſhore. It is ſurrounded by ſand-hills, but has two places where ſhips may ride ſafely at anchor on the north and eaſt ſides, and contains three ſmall villages.

Appertaining, and contiguous to the duchy of Sleſwic, are the following iſlands, viz.

Rom, which is in length ſeven, and in breadth four miles,

miles, contains ſeveral ſmall hamlets, and about 1500 inhabitants. Towards the eaſtern parts the paſturage for cattle is excellent, and on the weſtern ſide of the iſland are ſeveral harbours, in which ſmall veſſels may ride in ſafety.

Manoe was formerly a conſiderable iſland, but the greateſt part of it hath been ſwallowed up by the ſea.

The iſland of Sylt is ſituated to the northward of Fora, and is of a triangular form, the longeſt ſide being about 14 miles in length. It is ſandy, barren, and inhoſpitable; and the people, who are a hardy, clowniſh race, are annually engaged in the whale fiſheries, on the coaſts of Iceland, Greenland, and Spitzbergen. Earthen urns, containing human bones, aſhes, &c. have been found in the hills of this iſland, which farther evinces, that the antient inhabitants burned their dead.

Northſtrand lies oppoſite to the bailiwick and town of Huſum, and was, it is ſaid, ſeparated from the Continent by a violent ſtorm. When it became an iſland, it was about 12 miles long, and four broad, in ſome places, and in others leſs. Its ſoil is very fruitful, and produced abundance of corn before the inundations we ſhall mention hereunder; it had alſo very fat paſtures, where they fed exceeding good cattle; and they uſed to ſend daily to Huſum, and other places, a prodigious number of ſheep, fowls, ducks, and geeſe, and great quantities of butter. It contained 21 or 22 pariſhes, and about 8000 inhabitants. But it has ſuffered prodigiouſly, at ſeveral times, by fatal inundations. In the year 1300, the little city of Rungholt, with ſeveral churches and villages, were carried away by the waves, which drowned alſo a great number of people, and a large quantity of cattle. In 1532, on the 2d of November, there aroſe ſuch a violent ſtorm, that almoſt the whole iſland was overflowed, 1600, or, according to others, 1900 perſons, periſhed in the water. The next year another ſtorm damaged the dykes very much. From 1612 to 1618, there happened every year ſuch inundations, as occaſioned prodigious loſſes, and put the inhabitants to a very great expence; and particularly in 1615, when 300 perſons periſhed in the waves. They were afterwards free for ſome years, and had time to repair their banks and dykes; but all their care and precautions proved ineffectual againſt the ſtorm that happened October the 11th, 1634. At ten of the clock at night the whole iſland lay under water, above 6000 perſons were drowned, and, of all the inhabitants, there were hardly 1500 that ſaved their lives. The churches, which ſtood on riſing grounds, held out the ſtorm indeed, but fell down afterwards; and 28 windmills were carried away by the waves. The loſs of cattle, of all ſorts, was reckoned to amount to 50,000 heads; and the dykes were broke in 44 different places. The whole iſland continued thus overflowed, except a ſmall ſpot of ground which ſtood higher than the reſt. Since that time the inhabitants have laboured, with the aſſiſtance of ſome Dutchmen, to regain part of the land they have loſt.

Amron, or Amroen, is a ſmall iſland to the north-weſt of Northſtrand, from which it is about ſeven miles diſtant. It is in the form of a creſcent, and is only conſiderable for its oyſter fiſhery.

Fora, or Foehr, lies towards the north-eaſt of Amron, nearer the coaſt of Sleſwic, between Northſtrand and Sylt. It belongs to the prefectorſhip of Tunder, and is of an oval figure, about ſix miles in length, and four in breadth. It abounds in cattle and corn, and has about 4200 inhabitants, and ſeveral villages. The inhabitants ſtill preſerve the language, manners, and dreſs of the antient Friſons, though ſome of them ſpeak the dialect of Lower Saxony.

SECT. III.

Of the Civil, Eccleſiaſtical, and Political Hiſtory of Denmark; *or, an Account of the Language, Religion, Learning, Conſtitution, Government, and Laws of the* Danes.

THE Daniſh language, like the Norwegian, is a corruption of the Teutonic, or rather both the former are corrupted dialects of the latter; the pronunciation is, however, harſh, and the tone drawling and diſagreeable. Add to this, many Dutch, German, and French words have been introduced, and the better ſort of people plume themſelves in ſpeaking the latter language fluently.

The eſtabliſhed religion of Denmark is the Lutheran; and the kingdom is conſidered as divided into ſix dioceſes; viz. One in Zealand, one in Funen, and four in Jutland; but theſe are, in fact, no other than ſuperintendencies, for they are without cathedrals, eccleſiaſtical courts, or temporalities. The principal buſineſs of theſe biſhops, or rather ſuperintendants, is to inſpect the doctrines and morals of the inferior clergy. The ſuperintendants are not diſtinguiſhed from other miniſters by their habit: the clerical dreſs conſiſts of a black gown with ſhort ſleeves, a round cap with flat edges, and a large ruff about the neck. The revenue of the biſhop, or ſuperintendant of Copenhagen, which is the richeſt benefice in the whole kingdom, amounts to no more than 2000 rix-dollars, or about 510l. ſterling per annum. The clergy are wholly dependant on the government, and are obliged to act with the utmoſt ſubmiſſion and ſervility to the court. But to make amends for being obliged to be ſo obſequious to one claſs of people, they take care to ſhew their authority, and domineer over another claſs; for having acquired an abſolute influence over the minds of the common people, they exerciſe a kind of ſpiritual tyranny upon their conſciences. The clergy, in general, preach without notes, and ſome of them lead very exemplary lives. Their churches are kept neater, and are more embelliſhed with ornaments, than thoſe of England, but the decorations are uſually inelegant, and often abſurd. This incongruous taſte is very facetiouſly ridiculed by a late and very ingenious traveller, who, in a letter dated from Copenhagen, ſays; "I have been in all the churches here, whether German, French, or Daniſh; but it is not in the Lutheran places of devotion one muſt ſearch for the productions of art or elegance. Madonas and Magdalens are confined to Roman Catholic walls. There is one church here indeed, where they have placed ſix ſtatues of plaiſter before the high altar. As they have armed two of theſe with monſtrous gilt ſwords, as big as Charles the XIIth's, and a third is employed in blowing a trumpet, I muſt own I took them, at firſt ſight, for a kind of guard drawn up to defend the place; but on a nearer approach I found (probably for fear of ſuch a miſtake) that they had chriſtened them all, and placed their names ſeverally and reſpectively at their feet. To four of them they have applied the Jewiſh appellations of the angels which occur in ſcripture, Gabriel, Uriel, Raphael, and Michael; but unhappily when they had got ſo far, having yet two, namely, figures, and no more angelic titles, they ſeem to have been at a ſad loſs; under one of them they have put the word cherub, but left it undetermined who he might be; and to the other is affixed Jeremiell; who Jeremiell is I do not know. I ſhould have thought it to be the prophet Jeremiah, only a little altered in one ſyllable of its name; and to confirm this ſuſpicion, he holds a book in his hand; but then he has a pair of wings, which puzzle one confoundedly. I could not ſatisfy myſelf quite about this perſonage, and muſt leave it to Chriſtian the Fifth, who built the church, and put up the ſtatues, to anſwer for his own works, and unfold the enſignea."

The Danes have a great paſſion for ſonorous muſic; hence their organiſts entertain the congregation for a conſiderable time, both before and after ſervice. Thus it appears, that where the belle-letters find a difficulty in gaining ground, harmony will obtain an eaſy admittance; and a people without taſte, and who, in general, have but very crude notions of elegance, will ſtill admire muſic.

"Man may juſtly tuneful ſtrains admire,
"His ſoul is muſic, and his breaſt a lyre;
"A lyre, which while its various notes agree,
"Enjoys the ſweets of its own harmony.
"In us rough hatred with ſoft love is join'd,
"And ſprightly hope with grovling fear combin'd,
"To form the parts of our harmonious mind.
"What raviſhes the ſoul, what charms the ear,
"Is muſic, tho' a various dreſs it wear?
"Beauty is muſic too, tho' in diſguiſe,
"Too fine to touch the ear, it ſtrikes the eyes;
"And thro' 'em to the ſoul the ſilent ſtroke conveys.

'Tis

" 'Tis muſic, heav'nly ſuch, as in a ſphere
" We only can admire, but cannot hear;
" Nor is the power of numbers leſs below,
" By them all humours yield, all paſſions bow,
" And ſtubborn crowds are chang'd, yet know not how.
" Let other arts in ſenſeleſs matters reign,
" Mimic in braſs, or with mix'd juices ſtain;
" Muſic, the mighty artiſt, man can rule,
" As long as it has numbers, he a ſoul,
" And much as man can thoſe mean arts controul.

The ſtate of learning is at a very low ebb in Denmark; learning hath not yet triumphed over barbariſm; taſte, and polite literature are ſcarcely known; indeed this country hath produced ſome few perſons admirably eminent in the mathematical ſciences, and the art of medicine, ſuch as Tycho Brahe, Borrichius, Bartholines, &c. But the merit of theſe is to be conſidered as the effulgence of a comet, challenging the greater admiration, becauſe ſo ſeldom ſeen. The ſmall progreſs of the Danes in the ſciences, however, appears rather to reſult from a defective conſtitution, and an oppreſſive government, than from any want of natural abilities in the people; for a learned traveller, who very lately viſited this country, ſays, " The clergy and lawyers, as they are entirely dependant upon the court, and upon the great lords of the kingdom, are the moſt ſubſervient creatures I have ever ſeen. It is true, they fill their reſpective places in the ſcale of ſlavery, but they fill them as ſo many cyphers, or rather as ſo many machines that are moved at the will of others. I have met with ſeveral very ſenſible and learned men among the clergy and lawyers of this kingdom, which made me pity their ſituation; for, certainly, a man who knows his duty well, and is prevented from doing it, has a very diſagreeable taſk to go through; and when men have no will of their own, it is very difficult to define their characters."

The antient form of government in Denmark was the ſame which the Goths and Vandals eſtabliſhed in moſt, if not all parts of Europe whither they carried their conqueſts. Denmark therefore was, till lately, governed by a king, choſen by the people of all ſorts: even the boors had their voices; which king Waldemar III. who reigned in 1334, acknowledged in that memorable anſwer of his to the pope's nuncio, who pretended to a great power over him: " Our being we have from God; our kingdom from our ſubjects, our riches from our parents, and our religion from the church of Rome; and, if you grudge it us, we renounce it by theſe preſents." The eſtates of the realm, being convened, were to elect, for their prince, ſuch a perſon as to them appeared handſome, valiant, juſt, merciful, affable, a maintainer of the laws, a lover of the people, prudent, and adorned with all other virtues fit for government, and requiſite for the great truſt repoſed in him; yet with a due regard to the family of the preceding king. If, within that line, they found a perſon thus qualified, or eſteemed to be ſo, they thought it but a piece of juſt gratitude to prefer him before any other to this high dignity, and were pleaſed when they had reaſons to chuſe the eldeſt ſon of their former king rather than any of the younger, as well becauſe they had regard to priority of birth, when all other virtues were equal, as becauſe the greatneſs of his perſonal eſtate might put him above the reach of temptations to be covetous or diſhoneſt, and enable him, in ſome degree, to ſupport the dignity of his office. But if, after ſuch a choice, they found themſelves miſtaken, and that they had advanced a cruel, vicious, tyrannical, covetous, or waſteful perſon, they frequently depoſed him, oftentimes baniſhed, ſometimes deſtroyed him; and this either formally, by making him anſwer before the repreſentative body of the people; or if, by ill practices, ſuch as making of parties, levying of ſoldiers, contracting of alliances to ſupport himſelf in oppoſition to the people's rights, he was grown too powerful to be legally contended with, they diſpatched him, without any more ceremony, the beſt way they could, and elected preſently a better man in his ſtead; ſometimes the next-of-kin to him; ſometimes the valiant man that had expoſed himſelf ſo far as to undertake the execution, or the killing of the tyrant; at other times, a private perſon of good reputation, who poſſibly leaſt dreamt of ſuch an advancement.

Frequent meeting of the ſtates was a fundamental part of the conſtitution. In thoſe meetings all matters relating to good government were tranſacted, good laws were enacted, all affairs belonging to peace or war, alliances, diſpoſal of great offices, contracts of marriages for the royal family, &c. were debated. The impoſing of taxes, or demanding of benevolences, was purely accidental, no conſtant tribute being ever paid, nor any money levied on the people, unleſs either to maintain a neceſſary war, with the advice and conſent of the nation, or, by way of free-gift, to help to raiſe a daughter's portion; the king's revenue, at that time, conſiſting only in the rents of his lands and demeſnes, in his herds of cattle, foreſts, ſervices of tenants in manuring and cultivating his grounds, &c. Cuſtoms upon merchandize being an impoſition of late crept into this part of the world: ſo that he lived, like one of our modern noblemen, upon the revenues of his own eſtate, and eat not through the ſweat of his ſubjects brows.

His buſineſs was to ſee a due and impartial adminiſtration of juſtice executed according to the laws; nay, often to ſit and do it himſelf; to be watchful and vigilant for the welfare of his people; to command in perſon their armies in time of war; to encourage religion, arts, and learning: and it was his intereſt, as well as his duty, to keep fair with the nobility and gentry, and to be careful of the plenty and proſperity of his ſubjects.

This was the antient form of government in this kingdom; which continued, with little variation (excepting that the power of the nobles increaſed too much) till the year 1660, when, at one inſtant, the whole face of affairs was changed, the crown was made hereditary, and the king abſolute.

This ſingular revolution was thus brought about. After the peace with Sweden, the whole nation was in a moſt calamitous ſituation, for the treaſury was ſo much exhauſted, that when the army was to have been diſbanded there was no money to pay off the troops; hence the ſoldiery became inſolent and licentious. At the ſame time the nobles were proud and tyrannical; the clergy diſcontented, from their want of importance, and the diſreſpect with which they were treated; and the commonalty quite deſperate, on account of the heavy taxes with which they had been oppreſſed to carry on the war.

At this criſis the eſtates aſſembled to deliberate and redreſs the grievances of the nation, when it was propoſed by the commons that an equal and equitable tax ſhould be laid upon all perſons indiſcriminately, and without diſtinction, in an exact proportion to their reſpective circumſtances. The nobles, however, ſtrenuouſly pleaded their privileges, which, they aſſerted, were a full exemption from their payment of any taxes whatever; and the commons as ſtrenuouſly contended, that as the nobles engroſſed and enjoyed the greateſt part of the lands, wealth, honors, &c. in the kingdom, it was more particularly incumbent on them to bear their ſhare of the common burthen, and to contribute to the general defence.—The debates grew warm—the altercation became violent.—Each party conceived an implacable animoſity againſt the other, and the paſſions of all were equally overheated. In the height of this ferment, a nobleman called Otto Craeg ſtood up, and in a tranſport of rage told the commons, that they neither underſtood the privileges of the nobility, who were always exempted from ſuch impoſition, nor the condition of themſelves, who were no other than their ſlaves. Theſe degrading expreſſions irritating the commons beyond all degree of forbearance, Nanſon, their ſpeaker, ſtarted up, and, fired with indignation, ſwore that the nobility ſhould repent their having conſidered the commons as vaſſals, and terming them ſlaves. Immediately the commons, or clergy and burghers, broke up the aſſembly, and marched under the auſpices of their leaders to the brewer's-hall; and in a few hours reſolved to make the king a preſent of an abſolute power, and to render the crown hereditary in his family, ſo as that it might deſcend even to females, for want of male heirs; which reſolution they accordingly put in execution the next day: and though the nobility heſitated at firſt on the matter, yet they were alſo obliged to comply; and in three days time the alteration was completed: ſo that the kings have been ever ſince, and are at preſent, abſolute and arbitrary, not the leaſt ſhadow of liberty remaining to the ſubject. All meetings

of the eſtates in parliament are entirely aboliſhed; nay, the very name of eſtates and liberty is quite forgotten; as if there had never been any ſuch thing; the very firſt and principal article in the Daniſh law being, "That the king has the privilege reſerved to himſelf to explain the law; nay, to alter and change it as he ſhall think proper." It is eaſy for any conſidering perſon to gueſs the conſequences of this; which are, frequent and arbitrary taxes, and commonly very exceſſive ones, even in times of peace, little regard being had to the occaſions of them; ſo that the value of eſtates, in moſt parts of the kingdom, is fallen three-fourths. And it is worſe near the capital city, under the eye and hand of the government, than in remoter provinces; poverty in the gentry, which neceſſarily cauſes extremity of miſery in the peaſants; partiality in the diſtribution of juſtice, when favourites are concerned; with many other miſchiefs; being the conſtant effects of arbitrary rule, in this, and all other countries wherein it has prevailed.

Thus ſays a learned writer, "The people, with a raſh and deſperate hand, from motives of revenge, fomented by an artful miniſtry and ambitious clergy, reſigned their liberty and independence, and inveſted their ſovereign with a deſpotic power over their lives and fortunes.

From this time the kings of Denmark unite, in their perſons, all the rights of the ſovereign power; but not being able to exerciſe the whole themſelves, they are obliged to delegate ſome part of the executive power to their confidential ſubjects.

The ſupreme court of judicature, for Denmark and Norway, is holden in the royal palace at Copenhagen, the king being preſident. The tribunal of Holſtein is held at Gluakſtadt, and that for the duchy of Sleſwic, in the town of that name. The nod of the ſovereign is deciſive in the council, the members being obliged implicitly to obey his will, as they are removeable at his pleaſure.

Every man, if he chuſes it, may plead his own cauſe; and the proceedings are ſo ſummary, that a ſuit may be carried through all the courts, and finally decided in 13 months.

Subordinate to the ſupreme court of judicature, at which the king preſides, there are three other courts, viz.

The land-ſtag, or provincial court.
The Herredsfougds, or diſtrict court, and
The Byfoglids, or town court.

Appeals lie from each of theſe courts to the other, according to ſuperiority; and the final appeal to the ſupreme court; when an abſolute deciſion is given by the king as the ultimate legiſlator.

The judges are appointed by the king, but are removeable at pleaſure; they are puniſhable for miſdemeanors, that is, if the monarch thinks proper to deem their actions ſuch; and thus royally-condemned, are obliged to make reparation to the injured party. Their ſalaries are inconſiderable, paid from the king's treaſury, from fines, and from gratuities where ſentence is paſſed. In Copenhagen are likewiſe an exchequer court to try cauſes relative to the revenue; and a commercial, to decide all differences reſpecting trade. The admiralty court manages all marine diſputes, and the chancellory executes all manner of buſineſs reſpecting treaties, alliances, &c.

The police is very ſtrict in Denmark, hence high-way robberies, burglaries, coining, clipping, &c. are crimes ſcarcely ever heard of; and to ſpeak againſt the government is ſo ſtrongly prohibited, that none dare wag their tongues licentiouſly in political matters. Murder and manſlaughter are, however, common; and the puniſhment of the criminal is beheading, which is performed, with great dexterity, by the public executioner; who, though univerſally deſpiſed, is uſually rich, as he is not only well paid to deprive culprits of life, but is the general contractor to empty all the jakes, and remove from houſes, ſtables, ſtreets, &c. all kinds of filth, and, in particular, dead cats, dogs, &c. which no other Dane will touch upon any account whatever. In Copenhagen, there is a maſter of the police, who ſuperintends the council and civil affairs of the city; and ſuch diligence and circumſpection is uſed, that a perſon may walk through the whole city, at midnight, in perfect ſafety. To prevent fires, the chimney-ſweepers are bound to keep a regiſter of all the chimnies they ſweep, that in caſe of an accident; from a foul vent; the owner may be convicted, or puniſhed for his avarice or neglect.

The apothecaries of this kingdom are under excellent regulations; only two are allowed in Copenhagen, and one in all other towns of importance. They are licenſed by the college of phyſicians, and confirmed by the king; and are obliged to keep an exact regiſter of the drugs they ſell, by whom preſcribed, and to whom ſold.

The code of Daniſh laws is ſo perſpicuous and ſhort, that it is contained in only one quarto volume, which is written in the language of the country, and divided into ſix books, the contents of which are as follow:

Book 1. On the procedure of the courts of juſtice,
2. Eccleſiaſtical law,
3. Office and honorary law,
4. Maritime law,
5. Property law,
6. Criminal law.

Denmark is divided into ſeven capital governments, each being under the direction of a governor appointed by the king, who is called ſtifts-ampts-man; and this ſtifts-ampts-man, or governor, is uſually a court favourite.

Each of theſe ſeven capital governments is again ſubdivided into three ſmaller juriſdictions called ampts; and the governors of theſe ampts, are called amptſmen. But ſtifts-ampts-men, and ampts-men, are equally unanimous in obliging the court, and oppreſſing the poor people.

SECT. IV.

Of the Commerce, Revenue, Strength, Forces, naval Power, &c. of DENMARK.

THE dominions of the Daniſh ſovereign are extremely well ſituated for commerce; but his ſubjects are too much oppreſſed by exactions and duties, to render it very conſiderable. So that his kingdom, which might be eaſily rendered rich and flouriſhing, is, at preſent, one of the moſt indigent and diſtreſſed ſtates of Europe.

Where agriculture, and internal trade are cramped, foreign commerce can never flouriſh; and that this is ſeverely the caſe in Denmark, is evident from the moſt authentic and recent intelligence, which informs us: "That when a farmer, in Denmark or Holſtein, happens to be an induſtrious man, and is ſituated upon a poor farm which he is, by his great diligence and induſtry, endeavouring to cultivate and enrich, as ſoon as he has performed the laborious taſk, and expects to reap the profits of what he has ſown, his lord, under pretence of taking it into his own hand, removes him from that farm to another of his poor farms; and expects that he ſhould perform the ſame laborious taſk there, without any other emolument than what he ſhall think proper to give him." Hence many of the farmers, thus diſcouraged, ſcarce raiſe grain enough for their own conſumption, but ſuffer their lands to run to paſture, on which they breed cattle; but, at the ſame time, theſe paſtures will not bring cattle to perfection, as they are obliged to be ſent to Holſtein to fatten.

The commercial commodities of this country are chiefly

Fiſh	Planks
Timber	Skins
Tallow	Live Cattle
Pitch	Horſes, and, from ſome
Tar	Provinces, Grain.

The money of Denmark is reckoned in rix-dollars and ſtivers, the firſt being 4s. 6d. each; the latter rather more than an Engliſh penny.

In 1612 an Eaſt India Company was eſtabliſhed in Denmark, and a ſettlement made at Tranquebar, on the Coromandel coaſt; but this Eaſt India trade, though it benefits individuals, is detrimental to the nation in general; as the Danes pay in ſpecie for all their tea, porcelane, bale-goods, &c. not having natural productions, or manufactured goods proper for thoſe markets; and were it not for the ſmall quantities of thoſe goods which they ſend into Germany, Pruſſia, Courland, &c. and

the teas which their merchants ſmuggle upon the coaſts of Great Britain and Ireland, the whole country would ſoon be ruined by the company.

Chriſtian VI. indeed, did the utmoſt in his power to benefit his country. He aboliſhed the monoplies of wine, brandy, ſalt and tobacco. He terminated the diſputes which had long ſubſiſted, between the crown of Denmark and the city of Hamburgh; inſtituted a council of trade; invited artiſts, workmen and manufacturers from foreign countries to ſettle in Denmark; eſtabliſhed a bank; maintained a reſpectable fleet and army, &c. &c. And his ſon, Frederic the Vth, trod in his laudable footſteps; but in the preſent reign, their proſpects have been obſcured by oppreſſion, imprudence, faction, and party.

The revenues of Denmark ariſe from crown lands, taxes, and duties; and theſe are extremely heavy. The landholders pay dearly to the ſovereign for the privilege of holding their lands, for the implements and liberty of cultivating them, and for every neceſſary article of life. All perſons, not ſervants, (the clergy excepted) pay eight ſhillings annually, as a capitation tax for themſelves, the ſame for their wives, and the ſame for all their children who exceed twelve years of age. The clergy only are exempted in conſideration of the trouble they take in making out liſts every year of all taxable perſons within their reſpective pariſhes. Here is likewiſe a tax of four ſhillings upon every ſtable where horſes are kept. There are ſome few exemptions from the general mode of taxation; but the perſon ſo exempted pays a particular tax, levied in a peculiar manner.

With reſpect to domeſtics, thoſe who ſerve the nobility are thus taxed:

	s.	d.	
Stewards and houſekeepers	4	0	annually.
Footmen - -	2	0	
Maid ſervants - -	1	4	

Labourers pay yearly four ſhillings, and their wives two, if not hired ſervants. But one of the moſt conſiderable articles in the revenue of Denmark, is the money raiſed by a duty or toll, paid by all ſhips which paſs through the Sound into the Baltic. The Sound being a narrow ſtreight between Schonen and the Iſland of Zealand. On the Daniſh ſide ſtands the town of Helſineur or Elſineur, and the caſtle of Cronenberg; and on the Swediſh ſide, the town of Helſinburg. Between theſe paſs and repaſs all the ſhips and veſſels that trade to the Baltic. The Danes by the treaty of peace have expreſly retained their title to the ſound, and receive toll from all ſhips and veſſels that paſs, thoſe of Sweden excepted; yet they do not eſteem the ſecurity of that title ſo firm as they could wiſh, for as they are not the maſters of the land on both ſides, they may have the right, but not the power to aſſert it upon occaſion, and ſeem only to enjoy it during their good behaviour; as their ſtronger neighbours, the Swedes, are able to make uſe of the firſt opportunity or umbrage, to their prejudice; and this they could perhaps do with impunity.

The laws of nations always run a length,
Proportion'd to their wealth, their pow'rs, and ſtrength;
The rules of equity are ſet at nought,
If to back int'reſt, forces can be brought;
For whatſoever politicians ſay,
Their int'reſt points, and paſſions lead the way.

This toll being very conſiderable, and having occaſioned many diſputes, we thought it might not be amiſs to ſet down in this place an accurate account of the origin and nature of it. It was firſt laid by the conſent of the traders into the Baltic, who were willing to allow a ſmall matter for each ſhip that paſſed, towards maintaining of lights on certain places of that coaſt, for the better direction of ſailors in dark nights: hereupon this paſſage of the Sound became the moſt uſed; that other of the Great Belt being in a little time quite neglected, as well becauſe of the great conveniency of thoſe lights of the ſhipping that paſſed in and out of the eaſt ſea, as becauſe of an agreement made, that no ſhip ſhould paſs the other way, to the end that all might pay their ſhares; it being unreaſonable that ſuch ſhips ſhould have the advantage of thoſe lights in dark or ſtormy winter nights, who avoided paying towards the maintaining of thoſe fires, by paſſing another way in good weather. Beſides, if this manner of avoiding the payment had been allowed, the revenue would have been ſo inſignificant, conſidering the ſmall ſum which each ſhip was to pay, that the lights could not have been maintained by it; and the Danes were not willing to be at the charge, ſolely for the uſe and benefit of their own trading ſhips; becauſe they were maſters of ſo few, as made it not worth their while; the Lubeckers, Dantzickers, and merchants of other Hanſe-towns, being the greateſt traders at that time in the northern parts of Europe; by which they arrived to a great height of power and riches. But there being no fixed rule, or treaty, whereby to be governed with regard to the different bulk of the ſhips belonging to ſo many different nations, the Danes begun in proceſs of time to grow arbitrary, and exacted ſmaller or greater ſums, according to the ſtrength or weakneſs of thoſe they had to deal with, or according to their friendſhip or diſcontent with thoſe princes or ſtates to whom the ſeveral ſhips belonged: Therefore the emperor Charles V. to aſcertain this toll, concluded a treaty with the king of Denmark, which was ſigned at Spire on the Rhine, and was in behalf of his ſubjects of the Netherlands, who had a great traffic in the Baltic; and agreed, that as a toll-cuſtom in the Sound, every ſhip of 200 tons, and under, ſhould pay two roſe-nobles at its entrance into, or return from the Baltic; and every ſhip above 200 tons, three roſe-nobles. A roſe-noble is worth about eighteen ſhillings ſterling. This agreement remained in force till ſuch time as the United Provinces ſhook off the Spaniſh yoke; and then the Danes, taking advantage of thoſe wars, raiſed their toll to an extravagant height, the troubleſome time not affording the Dutch leiſure to mind the redreſſing of ſuch a miſchief.

The toll at preſent, however, is greatly reduced, and much more reaſonable; and if the principal maritime powers chuſe to diſpute the matter, they certainly would have no occaſion to pay it all: for the Danes have not a ſufficient naval ſtrength to oblige either the Engliſh, or Dutch, to pay this toll, or paſs through this paſſage, if they rather choſe to ſhoot either of the Belts. Beſides, the breadth of the Sound, in the narroweſt part, is four Engliſh miles over, and every-where of a ſufficient depth; ſo that the king of Denmark's caſtles could not command the channel, was he maſter of both ſides; much leſs now that he has but one. It is plain, therefore, that this pretended ſovereignty is very precarious, being partly founded on a breach of truſt, as well as on the careleſſneſs of ſome princes concerned in it, to the great injury of trade.

This toll affords the king yearly a conſiderable profit, though much leſs at preſent than it did formerly. About the year 1640, it produced 240000 rixdollers per annum; but ſince 1645, it has not yielded above 190000; ſome years not above 80000; in 1691, it did not extend to full 70000; and is now much leſs.

The moſt impolitic of all the Daniſh taxes, is that upon marriage, and more particularly, as the country greatly wants population. All people of rank, who have public employments, pay a ſum, equivalent to ten pounds ſterling, for the privilege of being married; people of rank, who have no public employment, pay at the rate of four pounds ſterling; clergymen, citizens, free farmers, and the ſtewards of the nobility, pay ſixteen ſhillings; mechanics eight ſhillings, and ſervants and labourers four ſhillings; ſeamen, ſoldiers, huſbandmen, who are vaſſals, are exempted from this tax; and with a very good reaſon, for they are totally unable to pay it, and indeed have ſcarce a ſufficiency to purchaſe the common neceſſaries of life.

There is another very heavy tax, or an exemption ſubſidy; which, though exorbitant and oppreſſive, is chearfully paid by all houſekeepers that can raiſe the money, becauſe by the payment they are exempted from having ſoldiers quartered on them. This tax is rated by the civil magiſtrates, according to the ſize, ſituation, rent, &c. of the houſe.

Beſides the taxes to government, two more are paid by all citizens and burghers, for the ſupport of their reſpective cities and towns: viz. a capitation tax, and a ground rent tax.

Independent of theſe, here is a heavy ſtamp-act, and taxes upon patents, commiſſions, a titulary tax paid by

the nominal nobility, &c. From theſe various taxes, duties, impoſts and emoluments, the whole revenue of Denmark, at preſent, amounts to the annual value of 1,200,000l; and this is the utmoſt that government can poſſibly draw from the people, without draining the kingdom of the little money that remains in circulation; for the Danes are, perhaps, the moſt heavily taxed, and the leaſt capable of paying ſuch oppreſſive ſubſidies of any people in Europe.

The ſtrength of Denmark conſiſts in its

Regular troops,
Militia, and
Navy.

The greateſt part of the regular troops are foreigners, and, more particularly, Germans. The cavalry and dragoons are well mounted, and conſiſt in 11 regiments; and each regiment in four ſquadrons, including the body guards. Theſe regiments are thus quartered:

Three	in	Zealand
One		Funen
Three		Jutland
Four		Holſtein.

The infantry is compoſed of 16 regiments, of which two do duty as the king's guards. When the regiments are complete, each conſiſts of two battalions, and each battalion contains ſix companies of 100 each.

The artillery conſiſts of three regiments, one of which is ſtationed in Denmark, another in Norway, and a third in Holſtein.

The body of engineers is divided into three parts, each of which comprizes 20 officers of various ranks. Since the late reduction of the Daniſh forces, their numbers are:

	men.
Cavalry and dragoons — —	10,000
Infantry and artillery — —	30,000
Total of regular troops belonging to Denmark. —	40,000

With reſpect to the militia, every perſon who cultivates or poſſeſſes 360 acres of land is obliged to find one man for the militia, and pay half the expence of a man towards a corps-de-reſerve to be embodied and called out only upon great emergencies.

The Daniſh fleet is compoſed of 30 ſhips of the line, and about 16 frigates; but theſe are uſually kept in ſuch very bad repair, that the Danes would find a difficulty, upon an emergency, in fitting out 20 ſhips capable of putting to ſea. To man this fleet there are two orders of ſeamen, viz. 30,000 who are conſtantly inrolled and retained, in times of peace, by a trifling annual ſtipend; and being exempted from the payment of certain taxes. And a ſecond claſs, compoſed of four diviſions, each diviſion having a chief, and 10 companies of 118 men each. Theſe are commanded by a captain, who has two ſubaltern officers under him; and in this claſs are a certain number of gunners, who have a kind of naval academy, and inſtruct the ſeamen. This ſecond claſs, or order, contains 4720 men, who are always ready for immediate ſervice, and conſtantly kept in full pay. They are occaſionally recruited from the enrolled ſeamen, and wear a blue uniform faced with different colours, according to their reſpective ſquadrons and diviſions.

The Daniſh men of war carry the ſame complement of men, in proportion to their guns, as the French ſhips of war do; but they are much inferior, in point of conſtruction, both to Engliſh and French ſhips of war; and, indeed, are far from being equal to the Swediſh ſhips.

A marine academy was inſtituted for the inſtruction of young cadets by Frederick IV. Appointments were made for 50 cadets to be trained up to a thorough knowledge of naval affairs, and perfectly taught navigation, gunnery, drawing, fencing, hiſtory, geography, geometry, ſeveral other branches of the mathematics, &c. In order to join practice to theory, they were annually to make a voyage in a frigate, and ſucceſſively to perform the ſervices of common ſeamen, pilots, and officers. This noble inſtitution, however, is now totally neglected, and the money appointed to ſupport it is ſunk into venal pockets; ſo that, except a few officers who have been bred in the Engliſh and French ſervices, the Danes would have a great difficulty, in caſe of a rupture with any naval power, to find proper perſons to command their ſhips of war.

Perhaps we cannot give a greater proof of the poverty of the Danes, and venality now practiſed in Denmark, than in the words of a very late traveller, and accurate obſerver of men and things; who, in ſpeaking of the affairs of this nation under the now reigning monarch, ſays, "Soon after the birth of the prince royal, when the king, by the advice of his council, reſolved to travel into England, France, and other parts of Europe, every means was uſed to raiſe money, in the ordinary way, to defray the expences of this journey, but without any effect; ſo that they were at length obliged to borrow a large ſum of money of the Baron de Schimmelman upon a mortgage of part of the revenues of Norway; and after the king's return, in the beginning of the year 1769, when a bill of exchange, for near 100,000l. ſterling, was drawn from France, upon the treaſury of Denmark, for the payment of the manufactured goods which the king was obliged to take of that polite people during the ſhort ſtay he made among them; as there was not money enough found in the treaſury for the payment of that ſum, they were obliged to have recourſe again to Schimmelman for the greateſt part of this money, upon the ſame mortgage; ſo that this artful and intriguing baron is now not only become maſter of the greateſt part of the revenues of Norway, particularly of the mines, but he has likewiſe got himſelf to be appointed treaſurer of Denmark. In the ſame year it was reſolved to eſtabliſh a ſtate lottery, at Altena, for the payment of this debt, which was to be guaranteed by the king; and as a lottery was a new thing in this country, and the propoſals fair, with at leaſt the appearance of juſtice, a great number of Danes, as well as many ſtrangers, ſubſcribed to it upon the public faith. But how great was their diſappointment and concern when they found that they had been made dupes, and that all the great prizes in this lottery fell into the hands of Moltke Schimmelman, ſome of the other miniſters and their friends: the national faith, as well as the national honeſty, were proſtituted to the avarice of thoſe people; to complain to the king would be to bring on ſudden deſtruction; and therefore to ſee their country plundered, their government diſcredited, and to mourn in ſilence, was all the conſolation that the honeſt Danes had on this occaſion.

SECT. V.

Of the Inhabitants of Denmark, *their Perſons, Habits, Characters, Cuſtoms, Manners, &c.*

THE king of Denmark is computed to have about 2,100,000 ſubjects in the various parts of his dominions.

The inhabitants of Denmark may be divided into five claſſes, viz.

1. The nobility who have privileged fiefs in the kingdom.
2. The titular nobility.
3. Clergy, lawyers, and ſtudents.
4. Merchants and citizens.
5. Seamen, farmers, and labourers.

With reſpect to the firſt claſs, there are very few families of the ancient Daniſh nobility now exiſting; ſo that moſt of the families, who are in poſſeſſion of the privileged fiefs, have been ennobled ſince the revolution in 1660, and moſt of them very lately. They value themſelves very much upon their titles and privileges, and are uncommonly fond of pageantry, pomp, and ſhew. They are proud of French fopperies, and imitate all the blemiſhes, but not the merits of that nation. The ladies in general, are finiſhed coquets, and ſeem to vie with the ſkillful females of London and Paris, in practiſing

The ſigh that heaves by ſtealth, the ſtarting tear,
The melting languiſh, the obliging fear;
Half-utter'd wiſhes, broken, kind replies,
And all the ſilent eloquence of eyes;

That

That teach the fair by various wiles to move
The ſoften'd ſoul, and bend the heart to love.
Proud of her charms, and conſcious of her face,
The haughty beauty calls forth every grace:
With fierce defiance throws the killing dart;
By force ſhe wins, by force ſhe keeps the heart:
The witty fair a nobler game purſues,
Aims at the head, but the rapt ſoul ſubdues.
The languid nymph enſlaves with ſofter art,
With ſweet neglect ſhe ſteals into the heart;
Slowly ſhe moves her ſwimming eyes around,
Conceals her ſhaft, but meditates the wound;
Her gentle languiſhments the gazers move,
Her voice is muſic, and her looks are love.

Many of the ſecond claſs, or titulary nobility, are foreigners, and in particular Germans, who generally come hither very poor, but by ſervilely attending the court, and falling into all the ſchemes of the favourite or miniſter, uſually acquire wealth.

Thoſe who compoſe the third claſs, as they are dependant on, are obliged to be ſubſervient to the court, and ſubmiſſive to the miniſter and favourites.

The people of the fourth claſs are conceited, and haughty, but at the ſame time ſervile and timid.

With reſpect to the fifth claſs, the ſeamen would be much more alert in their buſineſs, if they were better uſed; and act with greater ſpirit and courage, if they were not familiarized to fear, and trained from their births to the moſt abject ſlavery. The farmers are perfect vaſſals, and by not being permitted to have any will of their own, they become timid, careleſs, and indolent. If any of theſe happen to get a little money, they become perfect ſots, and uſually deſtroy themſelves by intoxication; taking no delight in any thing but out-drinking their neighbours, and in this they exactly reſemble the country ſquire deſcribed by Gay, who ſays,

Methinks I ſee him in his hall appear,
Where every table floats in clammy beer,
'Midſt mugs and glaſſes ſhatter'd o'er the floor
Dead drunk his ſervile crew ſupinely ſnore;
Triumphant, o'er the proſtrate brutes he ſtands;
The mighty bumper trembles in his hands:
Boldly he drinks, and like his glorious ſires,
In copious gulphs of potent ale expires.

Indeed, this vice of drinking to exceſs is almoſt general among the Danes; though many, ſorely againſt their wills, are obliged to keep ſober through poverty. The labouring people are ſome of the moſt oppreſſed and miſerable wretches in Europe, and may thank Providence for a kind of inſenſibility or ſtupidy, which prevents them from feeling all the horrors of that tyranny to which they are obliged to ſubmit.

A learned gentleman ſays, "theſe people ſeldom enter into quarrels with each other, although they are very fond of drinking, and of ſmoaking tobacco, which are of general uſe here, and which I believe contribute much to their health, to the little vivacity they poſſeſs in the midſt of ſuch a cold and wet atmoſphere."

The warlike genius for which the Danes were formerly celebrated, is now totally loſt, they are timid, ſuſpicious, deceitful, dull, and in general ſtupid. To be more minute in their characters an accurate writer ſays, "Their general character is a ſtrange compoſition of pride and meanneſs; inſolence and poverty. If any gentleman can find a purchaſer for his eſtate, the king by the Daniſh law, has a right to one third of the purchaſe money; but the lands are ſo burthened with impoſitions, that there would be no danger of alienation, even if this reſtriction was not in force. No perſon would offer money for an eſtate to be held upon ſuch terms; and ſome gentlemen have actually offered to make a ſurrender to the king, of large tracts of fertile land ſituated in the Iſland of Zealand. Conſcious that they enjoy their poſſeſſions, thus encumbered, at the nod of an arbitrary ſovereign, they are at little or no pains to improve their eſtates; and they look upon trade as beneath their dignity. They therefore rack their tenants with the utmoſt oppreſſion, in order to procure the immediate means of gratifying their vanity, gluttony, and extravagance. Thoſe courtiers, who derive money from their employments, inſtead of purchaſing land in Denmark, remit their caſh to the banks of Hamburgh and Amſterdam. The merchants and burghers tread in the footſteps of their ſuperiors; they ſpend all their gain in luxury and pleaſure, with an impatient avidity, as if they were afraid of incurring the ſuſpicion of affluence; and of being ſtripped by taxation. The peaſant, or boor, follows the ſame example; no ſooner has he earned a rix-dollar, than he makes haſte to expend it in brandy, leſt it ſhould fall into the hands of his oppreſſive landlord. This lower claſs of people are as abſolute ſlaves as the negroes in the Weſt Indies; and ſubſiſt upon much harder fare. The value of eſtates is not computed by the number of acres, but by the ſtock of boors; who, like the timber, are reckoned a parcel of the freehold."

The Danes, in perſon, are uſually tall, ſtrong, well-limbed, and tolerably featured; in general, they have red, yellow, and light hair. In the ſummer they dreſs in the French faſhion, and in winter wear warm furs, or woollen cloathing. They feed upon ſtock-fiſh, ſalt meat, and other courſe diet; and the only good piece of furniture in their houſes is the feather-bed.

The Danes equally feaſt and make merry at marriages and funerals. The nobility pique themſelves upon having ſumptuous burials and monuments for their dead. The principal diverſions of theſe people are, being drawn in ſledges upon the ice, during winter, and running at the gooſe on Shrove Tueſday. The king annually partakes of the paſtime of ſtag-hunting, during which diverſion he lays aſide the trappings of royalty, and mingles, as an equal, with his nobles and attendants; even the common people are indulged with very extraordinary freedoms at this time. When the hunting is over, about ſix in the evening the hunting aſſizes are held in the great court before the palace. There the ſtag, with great ceremony, is cut up by the huntſmen, who are cloathed in red, and have hunting-horns about their necks, while the hounds attend with the moſt clamorous impatience. Proclamation is made, that if any perſon has, that day, tranſgreſſed the laws of hunting, he ſhould be immediately accuſed. Some individual is always ſelected for this purpoſe, tried, and found guilty. Then he is led by two gentlemen, towards the ſtag, where he firſt kneels down between the horns; he is afterwards obliged to raiſe up his poſteriors, on which the king himſelf, with a large wand, inflicts a certain number of ſtripes, to the infinite diverſion of the queen, ladies, and other ſpectators; during which the hounds open, and the huntſmen blow their horns, as if in concert, to proclaim the king's juſtice. The criminal having undergone this ludicrous chaſtiſement, riſes up, and makes a profound obeiſance, and then the hounds are permitted to regale upon the ſtag they had run down.

Swan-hunting is another royal diverſion, which the court enjoys in a ſmall iſland near Copenhagen, where thoſe birds breed in great numbers. Before the young ones are ſufficiently fledged to take their flight, the king, queen, courtiers, &c. ſet out for this iſland in a number of pinnaces, incloſe the haunt of the ſwans, and, with fowling-pieces, deſtroy them by thouſands; the fleſh is never eaten, but the feathers and down belong to the king.

The people of Denmark are ſubject to apoplexies and epilepſies, which are owing to hard drinking, and low living. While the peaſants are employed without doors, at their labour, the women are occupied at home in ſpinning yarn for linen, which is here made to a great degree of fineneſs and goodneſs. The cities and towns afford but bad accommodations to ſtrangers, the taverns are poorly ſupplied; and a traveller, to be in any wiſe contented in this country, muſt carry with him a traveller's appetite and patience.

Some remarks of a very late writer on baron Holberg's ſentiments, reſpecting the Danes, are ſo curious, that they deſerve inſertion in this place. Baron Holberg, ſays, "the modern Danes are not thoſe imaginary and ferocious people their anceſtors were; who were aſhamed of dying in their beds, and who made their greateſt felicity conſiſt, in drinking hydromel out of the ſkulls of their enemies: nevertheleſs, the nation has not loſt all their ancient bravery and courage."

The obſervation on this paſſage is this. "It does not appear, that they (the Danes) have ever dared to enter the field, with equal numbers againſt the Swedes,

or

or Germans, for much more than two hundred years paſt."

Baron Holberg again ſays, "There are no people who are leſs quiet, leſs ſeditious, more compliable, and among whom there are leſs public robberies than there are in Denmark." To which, the ingenious writer above alluded to, replies, "This is very true, and clearly proves, that by continual ſcenes of oppreſſion and tyranny, they are entirely changed; and from a brave, enterpriſing, and warlike people, are become indolent, timid, and dull of apprehenſion; ſuffering themſelves to be kept in a low and dejected ſtate, loſing every ſpark of emulation, and of a laudable ambition; and catching at ſhadows, while they are loſing the ſubſtance."

"Strangers (ſays Baron Holberg) have a very imperfect idea of the abilities of the Daniſh nation, in the mechanic arts, as they would make a much greater progreſs, if they had leſs extravagance, and were not ſo idle; for, where the wife of a tradeſman goes to church in a coach, where a wedding conſumes all the bride's fortune, or a burial all the property of the family, it is difficult for the price of labour to be upon the ſame footing that it is in other countries. Then the unneceſſary expences, which the inhabitants of Copenhagen, and indeed of all the other great cities in this kingdom, put themſelves to, upon theſe and other occaſions of the like nature, render living in theſe towns extremely dear, though the prices of all the neceſſaries of life are very reaſonable. With theſe ſtrictures, the writer who makes the remarks on Baron Holberg's ſentiments coincides, and ſays, "Certainly there is no part of Europe where extravagancies of all kinds are carried to ſuch lengths, in proportion to the little they have to ſpend, as in this kingdom."

The titles and diſtinctions, of which the Danes are ſo fond, are partly annexed to military, civil, and eccleſiaſtical employments, and partly nominal. The various employments give a kind of dignity, during life, to thoſe who hold them; and the nature of the employ fixes the rank between thoſe who are in the ſame train, but it cannot decide the precedency between an officer, a magiſtrate, and an eccleſiaſtic; and therefore this is regulated by an ordinance for the etiquette or rank. With reſpect to the nominal ranks, nobility and title, the beſt information is thus given by a very intelligent gentleman: "As thoſe whoſe offices are named in the edict are ſuppoſed to be ſuperior to thoſe who have no employ, or whoſe employ is not claſſed in the ordinance, the deſire, and even the want of having a rank, is the reaſon why ſimple titles, which are not annexed to any employment or emolument, are ſo much the objects of ambition: it is common, in this country, to obtain the title of an employment, which the perſon never exerciſes, and from which he never receives any pecuniary benefit, but even pays a conſiderable ſum yearly for bearing the title. And very often thoſe who have a certain rank by their employments, after ſome time, obtain titles ſuperior to their reſpective functions. Theſe titles are likewiſe ſometimes imaginary; as thus, when a perſon has the title of counſellor of ſtate, of juſtice, or of finances, it is not to be concluded from thence, that he has neceſſarily any part of the government of the ſtate of juſtice, or of the public revenue, except the word *actual* is added to his character, otherwiſe it is only a nominal character which marks his rank. The king of Denmark has ſome hundred lords of the bedchamber, who pay about ten pounds ſterling yearly for wearing a golden key, which gives them a conſiderable rank; and yet there are not ten paid for their attendance at court. To the court belong two ancient orders of knighthood, viz. That of the elephant, and that of Daneburgh.

The badge of the former, which is the moſt honourable, is an elephant ſurmounted with a caſtle ſet with diamonds, and ſuſpended to a ſky-coloured ribbon, worn like the George in England. This order was inſtituted by Chriſtian I. at his ſon's wedding. It is conferred only on perſons of the higheſt quality; and the number of companions amount to 30 beſides the ſovereign. The order of Daneburgh, though leſs honourable, is much more ancient; ſo that the origin of it is loſt in fable: it is beſtowed, as an honorary reward, upon the nobleſſe of inferior rank, its inſignia being a white ribbon with red edges, worn over the left ſhoulder, from which depends a ſmall diamond croſs and an embroidered ſtar on the breaſt of the coat, ſurrounded with the motto *pietate & juſtitia*, or piety and juſtice.

Here is likewiſe a modern order of knighthood called the order of St. Matilda, and inſtituted in honour of the late unfortunate queen; but it is now but little regarded, and conſequently not aſpired to or ſought after.

SECT. VI.

Hiſtory of Denmark, Norway, *&c.*

THE ancient hiſtories of Denmark and Norway are, like all other ancient hiſtories, enveloped in fable, darkened by legendary tales, and obſcured by the ignorance or miſrepreſentations of old writers. All, therefore, that we can diſcover relative to the inhabitants of theſe kingdoms is, that they appear to have been colonies of the ancient Scythians who ſpread themſelves through all the northern and weſtern parts of Europe. The people of theſe countries were firſt known from their celebrated expedition into Italy, during the conſulate of Cæcilius Mettellius and Papirius Corbo. At this time the liberties of Rome were threatened by inteſtine diſſentions, till private feuds gave way to public conſternation, on the Romans being informed that 300,000 northern barbarians had made an irruption into the Roman territories. Theſe ravagers had deſigned to quit the inclement and unfertile regions, in which they were born, for a ſerener climate, and more fruitful country. They firſt conquered all the little nations in their own vicinity, then ſubdued the Gauls, and, at length, prepared to attack Italy itſelf.

Upon this emergency, the ſenate diſpatched Papirius Carbo to defend the paſſage of the Alps. This general, after entering into a negociation with theſe northern invaders, ſhamefully broke the truce, without any manner of provocation, and unexpectedly attacked them in the night; but was ſo warmly received, that he met with a repulſe. This affair was greatly prejudicial to the Romans, ſince it gave ſpirits to the Cimbri, as theſe northern people were called, and engaged many, who would otherwiſe have appeared as neutral, to join them.

The Cimbri now having entirely over-run Gaul, deſigned to paſs the Pyrenees and eſtabliſh themſelves in Spain; but being repulſed by the people of that country, they ſent an embaſſy to Rome to offer their military ſervices to the Romans, on a proviſo that they ſhould have a ſufficient territory aſſigned them to cultivate their ſubſiſtence. Theſe propoſals were rejected; which ſo greatly enraged the Cimbri, that they attacked the conſul Silanus, and cut his whole army to pieces. This misfortune was followed by ſeveral others; for the Germans, entering into an alliance with the Cimbri, the Romans were defeated in three other battles, in one of which the Roman general, Scaurus, was taken priſoner, and his two ſons, with above 80,000 Romans ſlain in the field of battle.

In this calamitous ſituation of affairs, the celebrated Marius was appointed to the command of the Roman army, when acting with more precaution than any of his predeceſſors, he at length defeated the enemy in one of the moſt bloody battles that ever was fought, and above 100,000 of the northern barbarians were ſlain. Similar ſucceſſes followed this, till the whole of theſe ferocious people were either deſtroyed, taken captives, or driven back into their own country.

Little more is mentioned of thoſe people for many years, when it is ſaid that a great perſon named Woden, or Oden, made himſelf ſovereign of all the northern nations; and his abilities being equal to his courage, he not only ſubdued all around him as a general, and ruled the people for them as a king, but formed a new religion for them as prieſt, and preſcribed a code of laws as a legiſlator. Hengiſt and Horſa, who firſt brought over the Saxons into England, derived their lineage from him; and moſt of the royal and noble families of the northern parts of Europe, to this very day, pretend to trace their deſcent from him. Yet hiſtorians do not pretend to aſcertain from whence this celebrated perſon came, or when he died, (unleſs a very ridiculous and fabulous account of his death can be credited); they, indeed, ſay, that he lived about 60 years before the birth of Chriſt, and that he was the firſt who ever bore the title of king of Denmark.

Woden's progeny reigned after him in the ſeveral northern nations, and at length revenged the misfortunes and miſcarriages of their anceſtors upon the Romans, by gradually weakening, and at length overturning the empire.

From Woden the firſt Daniſh king, to Regner, ſurnamed Logbrog, who began his reign, A. D. 750, the Daniſh chronicles mention 18 kings, but furniſh us with little more than their names, or at leaſt with only ſuch fables as are too ridiculous and abſurd for commemoration, or even recital, in this enlightened age.

The prodigious number of people who left this country in the fifth century to join the armies, which effected the conqueſt of the weſtern empire, greatly weakened the kingdom. It recovered about the eighth century, when we find the Danes riſe into importance as a maritime people, and harraſs the coaſts of Courland, Livonia, Pomerania, Ireland, Scotland, France, and England. They even attacked the emperor Charlemagne, burnt his palace at Aix-la-Chapelle, over-run Lower Saxony, Friezeland, Holland, and Flanders; conquered the greateſt part of the kingdom of France; obliged her kings to pay an immenſe tribute; ravaged Spain and Italy, and committed many other depredations. Alfred the Great, king of England, was the firſt monarch who gave them any conſiderable check, by building a fleet to oppoſe their naval expeditions, and attack them on that element, where they ſeemed to have ſuch a manifeſt ſuperiority.

At this time, ſays an able writer, "the greateſt part of the people were bred up to the ſea from their childhood, and had no ideas of the dangers to which they were expoſed upon this element. When a prince had attained the age of 18 or 20 years, he generally requeſted his father to have ſome ſhips equipped, by which he might attempt ſome glorious and uſeful exploit, with his followers. This the father regarded as a mark of his riſing courage, and of a great mind. A fleet was armed immediately, of which the admiral, and all his officers and men, made reciprocal promiſes never to return, except loaded with ſpoils and laurels. If they had received any injury from a neighbouring nation, that nation was choſen for the firſt victim. Thoſe whom they vanquiſhed were generally put to death; ſometimes, indeed, they contented themſelves with making ſlaves of them; and often, likewiſe, by a ſingular kind of generoſity, or rather by a deſire of ſignalizing themſelves, if they found themſelves ſuperior to the enemy which preſented itſelf againſt them, they ordered off a part of their fleet, that they might fight the enemy with equal force, deſpiſing the gaining an advantage with ſuperior numbers, and regarding it as an infamous practice to ſurprize an enemy in the night. Their veſſels were always well provided with arms, and their men were all taught to ſwim, ſo that as they generally fought near the ſhore, they were often in a ſituation of ſecuring themſelves, although their veſſels were deſtroyed. The manner in which their lands were divided in Denmark and in Norway, ſhews us that the chief end of their government was to have a great maritime force; every diviſion, whether it was greater or leſs, took its name from the number of veſſels that it could equip, and in ſome places their names are ſtill in uſe. In the beginning of their maritime expeditions their fleets were not very conſiderable; but when their princes had enriched themſelves by plundering their neighbours, they came to have two or 300 ſail of ſhips of war, and each ſhip to carry from 100 to 120 men. To a nation that is wholly addicted to plunder and rapine, civil laws, and a police, are of very little uſe. This was ſtrictly the caſe of Denmark, when their king, called Gorman, came to the throne in the year 840. The few uſeful regulations which had been left them by Woden and others, were now laid aſide, and the kingdom was divided among two or three princes, who governed with a very limited power; and that confuſion which we find in the hiſtory of Denmark to this time, was occaſioned by one hiſtorian writing the hiſtory of one prince, who reigned in this country; and another, the hiſtory of another prince, who reigned at the ſame time. But Gorman, by uniting to his crown all the provinces of Denmark, of which his anceſtors had been diſpoſſeſſed, and being forced by the emperor to receive the Chriſtian religion into his ſtates, gave this government again ſome form; and from hence we may date the origin of the civil government which exiſted in this ſtate for many years afterwards."

In the year 999, it is related that there was a general maſſacre of the Danes ſettled in England, which is ſtill commemorated annually at Hocktide: ſome are apt to doubt the truth of this fact; but however that be, certain it is that Swein and his ſon Canute, or Knute, made an entire conqueſt of this kingdom about the year 1014, though ſeveral battles were fought with the Saxon kings Ethelred and his ſon Edmund Ironſide, before the Danes could eſtabliſh themſelves here. Upon the death of Edmund Ironſide, anno 1017, all the great men acknowledged Canute their king, ſwore allegiance to him, and renounced the two ſons of Edmund, Edward and Edmund, who were baniſhed into Sweden, from whence they went into Hungary, where they reſided many years. King Canute, in the mean time, obliged the Engliſh to raiſe him 100,000l. every year, with which he paid his forces, and maintained his court; and in the year 1019, he conquered the kingdom of Norway. In the 15th year of his reign, anno 1031, he viſited Rome, where he gave great part of the ſpoils of the countries he had conquered to that ſee, and returning to England, died at Shaftſbury on the 12th of November, 1036, having divided his dominions between his three ſons; to Harold he gave England; to Swein, Norway; and to Canute, Denmark. Harold died anno 1040, leaving neither wife nor iſſue, and was ſucceeded by his brother Hardicanute, the third ſon of Canute, who died in the year 1042. This was the laſt king of the Daniſh race in England; for he was ſucceeded here by Edward, called the Confeſſor, ſon of king Ethelred.

Canute VI. ſubdued Vandalia, (the preſent Pomerania and Mecklenburg) and took upon him the ſtile of king of the Vandals, which country continued ſubject to the Danes 27 years. He made a conqueſt alſo of Livonia.

Waldemar II. extended his dominions in Germany, and lived in great reputation in the beginning of his reign; but count Swerin committing the care of his territories, as well as his wife, during his abſence in the Holy Land, to his majeſty's protection; he bebauched the count's wife in his abſence, of which her huſband being informed at his return, took the king priſoner by a ſtratagem, and having confined him three years, made him pay 45,000 marks to obtain his liberty.

While the king was priſoner, Pomerania, Mecklenburg, Lubeck and Dantzick revolted, the Teutonick knights took Livonia from him, and Adolph count Schawenburg ſubdued Holſtein and Stormaria.

On the death of Olaus, without iſſue, anno 1387, queen Margaret his mother was elected queen of Denmark and Norway, who having aſſociated her nephew Erick with her in the government, ſubdued the kingdom of Sweden; and it was enacted by the ſtates, that theſe three kingdoms ſhould be united for the future under one prince; and upon the death of queen Margaret, Erick became ſole ſovereign of the whole; but he was depoſed on pretence of mal-adminiſtration, and retiring into Pomerania, lived a private life there till he died.

Chriſtian, earl of Oldenburgh, was elected anno 1439, from whence the preſent royal family of Denmark is deſcended. He ſubdued the kingdom of Sweden, which had revolted, and the emperor Frederick gave him the country of Holſtein. This prince married his daughter Margaret to James III. king of Scotland, and gave him with her the iſlands of Orkney and Shetland, the laſt being a very valuable acquiſition, as it affords the beſt herrings in theſe ſeas. Here the Dutch begin that fiſhery every year at Midſummer, without aſking leave of the Britiſh court, though they paid 30,000l. annually for this privilege, in the reign of king Charles I. Chriſtian was ſucceeded by his ſon John, who divided the duchy of Holſtein with his brother Frederick.

In the reign of Chriſtian III. the Lutheran religion was eſtabliſhed in Denmark: he was ſucceeded by his ſon Frederick II. anno 1538. Chriſtian IV. his ſon, being engaged in a war with Sweden, in order to obtain peace, was compelled to yield up the province of Halland to the Swedes.

Frederick III. his ſon, was beſieged in his capital city of Copenhagen by Charles Guſtavus king of Sweden, who drew his artillery over the ice into the province of Zealand;

Zealand; and if the Dutch had not come to his aſſiſtance, would, probably, have made a conqueſt of that iſland: but though this prince was unfortunate in his wars with foreigners, he raiſed his prerogative to that height, that he perfectly ſubdued his ſubjects, and from a limited elective monarchy, made himſelf an abſolute prince, and eſtabliſhed the ſucceſſion of the crown in his family, in the year 1660, when the peaſants and lower claſs of people complained they were not able to diſcharge the debts the public had contracted during the war, and therefore entreated the nobility and gentry, that as the profits of the lands were theirs, they would condeſcend to bear part of the burthen, (the nobility and gentry, before this time, paying no taxes for their lands.) To which they anſwered the commons with great inſolence, told them that they were born in a ſtate of ſervitude, their ſlaves and vaſſals, and did not underſtand their duty. To which the commons made no reply, but retired from the aſſembly with the clergy, who adhered to them, and going immediately to court, acquainted his majeſty that they were come to a reſolution to make him an abſolute monarch, and his throne hereditary; and his majeſty being before apprized of the deſign, had introduced an army into the town, in order to compel the upper houſe to concur in this reſolution of the commons, if they refuſed their conſent. The lords being acquainted with the ſubſtance of the addreſs the commons had made to the throne, and ſenſible that they were in no condition to diſpute with the court and the commons, ſupported by the army, they offered to make the crown hereditary, and entreated the conſtitution, in other reſpects, might not be altered; but they were given to underſtand, that the king would be ſatisfied with nothing leſs than their unanimous concurrence with the reſolution taken by the clergy and commons, which they found themſelves obliged to ſubmit to, and took the oaths to his majeſty, acknowledging him the ſupreme and only legiſlator. Thus was the conſtitution changed from a republic with a nominal king at the head of it, into an abſolute hereditary monarchy; not one of the nobility daring to oppoſe it; only Gerdorf, a popular member, ſaid, he was confident his majeſty deſigned the happineſs of his people, and not to govern them according to Turkiſh politics, wiſhed his ſucceſſors might follow his example, and make uſe of this unlimited power only for the good of their ſubjects.

Chriſtian V. ſucceeded his father Frederick III. anno 1670, and being joint-ſovereign of Holſtein and Sleſwic with the duke of Holſtein, in order to exclude the duke from his ſhare in thoſe provinces, or at leaſt to oblige the duke to acknowledge his dependence on the crown of Denmark, treacherouſly invited the duke to an entertainment, and then made him priſoner, and ſent detachments of his army to take poſſeſſion of ſuch towns as belonged to the duke; with which the duke reproaching him, the king anſwered, he was always in the intereſt of Sweden, and never to be truſted; and unleſs he would renounce his right to certain places, he would take poſſeſſion of the whole country; and particularly demanded of him an order to the commander of Tonningen, the ſtrongeſt fortreſs belonging to the duke, to ſurrender it to his majeſty's troops; which the duke conſented to, apprehending the king would have taken his life if he had refuſed, and Tonningen was thereupon delivered up to the Danes. Several other articles he was obliged to ſign, that were very prejudicial to him; but the duke making his eſcape to Hamburgh, proteſted againſt the validity of all the acts he had been obliged to ſign. The king thereupon gave orders for the demoliſhing Tonningen, and ſequeſtered the duchy of Sleſwic, cauſing both magiſtrates and people to ſwear allegiance to him, declaring them abſolved from their allegiance to the duke. He alſo cauſed all the duke's revenues to be brought into his own treaſury, continued garriſons in his towns, and even in his palace of Gottorp. And not knowing how ſoon he might be obliged by the duke's allies, to deliver up what he had ſo unjuſtly ſeized, he exacted contributions from the poor ſubjects, to the value of many millions, to the ruin of as flouriſhing a province as any in Germany, whereby he filled his own treaſury, and diſabled the duke's ſubjects from giving him any aſſiſtance. The duke remained ſtill at Hamburgh, from whence he ſent his ſon to the German princes to implore their aſſiſtance. He applied alſo to the court of England, which was guarantee of the peace of the north, but to very little purpoſe, till the king of Sweden, Charles XI. undertook his cauſe in the year 1689, and was about to have tranſported an army into Germany, for the reſtoration of the duke. The German princes, and the Engliſh and Dutch, who were now entered into a confederacy againſt France, being apprehenſive that this might diſturb the peace of the empire, and divert the troops from the French war, held ſeveral conferences on this ſubject at Altena; and, at length, obliged the king of Denmark to reſtore the duke of Holſtein his dominions, after he had been in poſſeſſion of them 13 years, but took no care that the Dane ſhould make him any ſatisfaction for the devaſtation of his territories; one reaſon whereof might be, that the Dane promiſed to aſſiſt the confederates with a large body of troops in that war; and had it not been more upon account of their own intereſt, than any concern to ſee juſtice done the duke, he might have remained diſpoſſeſſed of his territories 13 years longer. From the concluſion of the differences between the king of Denmark and the duke of Holſtein at Altena, by the mediation of the confederates in 1689, to the year 1696, things remained in tolerable peace; but the late duke of Holſtein, Chriſtian Albert, dying about that time, and the king of Denmark having ſent a deputation to his ſon and ſucceſſor duke Frederick, to renew the union between them, and to let him have a ſight of the late duke's will, that he might ſee if there was any thing in it in favour of the eldeſt prince in relation to the ducal part of the duchy of Sleſwic; the duke refuſed both the one and the other; alledging, that the treaty of Altena, in 1689, had not been obſerved, or juſtice done to the ducal houſe, particularly in reſtoring the ſeigniory of Gottes-Gabre, in the iſland of Arœa.

The guarantees of the treaty of Altena, ſeeing both ſides inclined to a rupture, interpoſed their good offices, and engaged them to ſettle conferences for compoſing their differences, which were held at Penenburg: but the duke continuing to introduce Swediſh forces into Holſtein, and build and enlarge his fortifications during the time of the treaty, the king of Denmark marched an army into the country, and cauſed the new fortifications to be demoliſhed in the year 1697, which the duke, at that time, not finding himſelf in a condition to oppoſe, thought fit to acquieſce in, till the death of the then king, which happened the 4th of September, 1699, when he was ſucceeded by his ſon, Frederick IV. This the duke looked upon as a favourable opportunity to rebuild the fortifications which had been deſtroyed, eſpecially having married the king of Sweden's ſiſter, and aſſured of being ſupported by that crown: he began, therefore, to repair the fortifications of his demoliſhed forts, as he inſiſted he had a right to do by the treaty of Altena, and introduced into the country a conſiderable number of Swediſh troops to prevent their being demoliſhed again. The mediators and guarantees of the treaty of Altena employed their good offices to prevent a rupture, and propoſed that both the Swedes and the Danes ſhould withdraw their troops out of Holſtein, and that the fortifications ſhould not be proceeded in till the matter was ſettled by a treaty. But the Dane being determined on a war, both with Sweden and Holſtein, and having entered into a confederacy both with Ruſſia and Poland for that end, would not hearken to any pacific meaſures, but, on the contrary, ordered his general, the duke of Wirtemburg, to demoliſh Huſum, Frederickſtat, and other places belonging to the duke of Holſtein, which he ſoon after effected: and not content with raiſing ſuch new fortifications as had been erected, inveſted Tonningen, in which general Bannier commanded with a garriſon of 5000 men. Whereupon the princes guarantees gave the king of Denmark to underſtand, that ſince he had rejected all the friendly propoſals, they ſhould no longer ſee the treaty of Altena broken, or ſuffer the duke of Holſtein to be diſpoſſeſſed of his country again, under the pretence of oppoſing the building of forts which were already demoliſhed. The duke of Holſtein alſo publiſhed a manifeſto, ſhewing the right he had by the treaty of Altena, to build fortifications in his dominions, and the injuſtice of the Daniſh invaſion. And not only the German princes, but the Dutch joined their forces with

with the Swedes in order to bring the Dane to reaſon; and marching towards Tonningen, the Daniſh general thought fit to raiſe the ſiege, without coming to a battle. The Engliſh and Dutch alſo ſent each of them a ſquadron into the Baltick, and joined the Swediſh fleet, compelling the Danes to retire into the harbour of Copenhagen. In the mean time, the young king of Sweden landed with 15,000 horſe and foot upon the iſland of Zealand, about three miles to the ſouthward of Elſineur; and was preparing to inveſt Copenhagen, when the Dane finding himſelf overpowered, was glad to accept of ſuch terms as the princes, guarantees, who, at this time held their conferences at Travendale, were pleaſed to preſcribe.

By this treaty, which was concluded the 18th of Auguſt, 1700, it was agreed, that the houſe of Holſtein ſhould continue independent ſovereigns in Holſtein and Sleſwic; and that the crown of Denmark ſhould pay the duke of Holſtein 260,000 crowns for the damages they had done him. A miſunderſtanding, however, happened between the two courts the year following; one part of the chapter of Lubeck chuſing the brother of the duke of Holſtein coadjutor and ſucceſſor to their biſhop, and the other chuſing the king of Denmark's ſon; and the biſhop dying, Anno 1705, the king of Denmark determined to make good his ſon's election to that biſhoprick by force, and took ſeveral places belonging to Lubeck; but the court of Great Britain interpoſing, the duke of Holſtein's brother was afterwards confirmed in the poſſeſſion of the biſhoprick of Lubeck, in conſideration of a ſubſidy granted by Great Britain to Denmark, for a body of Daniſh troops that were to join the allies againſt France, which they could not have had, if the war had been revived at that time in the north: one article in this treaty being, that the duke of Holſtein ſhould permit that body of Danes to paſs through his territories, and join the confederates. The duke of Holſtein having been killed at the battle of Liſſau in Poland, Anno 1702, and ſucceeded by his ſon Charles Frederick (the late duke) then an infant of two years old, the duke of Holſtein Eutin, brother to the late duke of Holſtein Gottorp, and afterwards biſhop of Lubeck, was conſtituted regent of Holſtein, during his nephew's minority.

Charles XII. being defeated by the Ruſſians at Pultoway, Anno 1709, Frederick king of Denmark immediately joined his former allies, the czar and Auguſtus king of Poland, and recalled the Daniſh troops which were in the emperor's ſervice in Hungary, and quartered them in Holſtein: he tranſported 10,000 men from Norway to Denmark, levied new troops at Hamburgh, and fitted out a ſtrong ſquadron of men of war; and having aſſembled an army of 18,000 or 20,000 men, proclaimed a faſt to implore a bleſſing upon his deſigns; or rather, ſay the Swedes, to beg of God to proſper his breach of faith, and the unjuſt invaſion of a prince's dominions, who had given him no offence, and with whom he was then engaged in a ſolemn league of friendſhip, which he had no other reaſon to break, than becauſe he, the king of Sweden, was not in a condition to help himſelf, or defend his ſubjects. However, the king of Denmark, on the 28th of November, 1709, publiſhed a manifeſto, to juſtify his intended enterprize, ſetting forth, that the ambitious deſigns of the king of Sweden had, for ſeveral years paſt, occaſioned great devaſtations in the kingdoms of the north; and that he had received repeated inſtances of the animoſity that prince entertained againſt him and his ſubjects, as well by the oppoſition made to his intereſt by the Swediſh miniſters in foreign courts, as by ſeveral expreſſions in his own letters, and, therefore, thought himſelf obliged to prevent the impending danger, and not imprudently wait till the deſigns of the Swedes were ripe for execution. He complained alſo of the dedication of a book, wherein the king of Sweden is ſtiled emperor of Scandinavia, of which Denmark and Norway are parts, and of the Swedes granting paſſes to foreign veſſels which paſs the Sound, whereby the revenue of Denmark was impaired. For theſe reaſons he declared war againſt all the territories of Sweden, except thoſe in Germany; and embarking 6000 horſe and dragoons, and 12,000 foot, he made a deſcent upon Schonen, landing at Helſingburgh the 12th of November, 1709; but it being winter time he only took up his quarters in the country towns at firſt, and invited the people of Sweden to join him, waiting for a proper ſeaſon to enter upon action, which gave the Swedes time to put themſelves in a poſture to defend their country. About the middle of January, by the favour of a hard froſt, the Danes advanced towards Chriſtianſtat, where a battalion of Saxons being in garriſon, laid down their arms, and went over to the Danes, whereby that town fell into their hands. They afterwards made themſelves maſters of Carelſhaven, in the province of Bleking, and threatened Carelſcroon, where the Swediſh fleet and magazines were laid up. At the ſame time a ſtrong detachment extended themſelves towards Holland on the weſtern ſide of Schonen, and their forces receiving frequent ſupplies, their army was conſiderably increaſed, and became very formidable; but the Swediſh general, count Steinbock, having aſſembled 18,000 or 20,000 men, and marching towards Helſinburg, as if he intended to cut off the communication of the Danes with that place, they immediately abandoned all their conqueſts, quitting Carelſhaven and Chriſtianſtat, and retreated to Helſinburg, near which place the armies came to an engagement, and the Danes were entirely defeated; a day or two after they quitted Helſinburg, tranſporting the remainder of their troops to Denmark in the night, which, after their ill ſucceſs, did not amount to above 6000 or 7000 men. And thus ingloriouſly ended the king of Denmark's expedition againſt Schonen, which, ſay the Swedes, was a juſt puniſhment for his perfidious breach of treaties. The Danes having been diſappointed in their enterprize upon Schonen, the next year joined king Auguſtus and the Czar's troops, and fell upon the Swediſh Pomerania, deſtroying the whole country in a moſt barbarous manner, and the Swediſh forces not being ſtrong enough to oppoſe theſe united powers, retired into Stralſund, the Iſle of Rugen, and other places of ſecurity. The king of Denmark, while the Moſcovites and the Saxons blocked up Stralſund, paſſed the Elbe, and entered the duchy of Bremen, where the Swediſh general not having a ſufficient body of troops to oppoſe him, the Dane took the town of Staden, and made himſelf maſter of the whole country. In their return the Danes inſulted the city of Hamburgh, threatening them with a bombardment, to avoid which the burghers were compelled to raiſe them 230,000 rix-dollars. Count Steinbock, the Swediſh general, found means afterwards, on the 22d of December, 1712, to engage the Danes ſingly, when they were ſeparated from their allies near Wiſmar; and having given them a great defeat, purſued them into Holſtein, ſeized the magazines the Danes had laid up there, and put the Daniſh Holſtein under contribution; from hence he marched to Pinenburgh, near Hamburgh, where he determined to burn the Daniſh city of Altena, not ſo much by way of retaliation, or revenge for the many Swediſh cities deſtroyed by the Danes, and their allies the Moſcovites and Saxons, as he declared in a memorial publiſhed on this occaſion, as to deter them from committing the like barbarities for the future.

The Danes, Saxons, and Moſcovites, being now joined, to the number of 50,000 men, and marching towards count Steinbock, whoſe army did not conſiſt of above 14 or 15,000, he found himſelf under a neceſſity of retiring into the ducal Holſtein, whither the allies followed him, and preſſing him with all imaginable eagerneſs, he threw himſelf into Tonningen, and by that means avoided them for that time, which the Dane afterwards made a pretence for ſeizing the duke of Holſtein's dominions, alledging, that the governor of Tonningen admitted general Steinbock into the place by the direction of his maſter the duke of Holſtein, (who was not at that time above 12 years of age) this occurrence happening in February 1712-13; but however that be, the confederates blocked up the city of Tonningen till May following, and the Swedes not being in a condition to ſend general Steinbock any reinforcements or ſupplies, he was obliged to ſurrender himſelf, and his little army, conſiſting of 9000 men, priſoners of war, on condition of keeping their cloaths and baggage, and being exchanged or ranſomed the firſt opportunity; and thus, for a little time, the war ſeemed to be at an end in Germany: but the Moſcovite the next year inveſting Stetin, the king of Pruſſia ſo managed the matter, that by the agreement of the czar and the Swediſh governor, the town was ſequeſtered

into the hands of his Pruſſian majeſty, and agreed to be garriſoned by an equal number of Pruſſians and Holſteiners, but was to be reſtored to the king of Sweden at the end of the war. In the latter end of November, 1714, the king of Sweden returning out of Turkey, arrived at the city of Stralſund, and found a league was formed againſt him, to which the kings of Denmark, Pruſſia, and Poland, and the king of Great-Britain, as elector of Hanover, were parties, the avowed deſign whereof was, to preſerve the peace of Germany, which was propoſed to be done by ſecuring the ſequeſtration of Stetin to the king of Pruſſia, and the poſſeſſion of Bremen and Ferden, and whatever elſe the Dane had ſeized of the dominions of Sweden in Germany, to the Dane, and thoſe to whom he ſhould, or had aſſigned his intereſt in thoſe conqueſts. This the king of Sweden thought highly unreaſonable, viz. that he ſhould not be permitted to recover thoſe territories again, which had been ſurprized in his abſence. The kings of Pruſſia and England inſiſted, that the reſtoring the king of Sweden theſe territories, would embroil the north of Germany in a war, and joined in a confederacy againſt the diſtreſſed king of Sweden, who had, before the Moſcovite, the king of Poland and the king of Denmark to contend with; and the king of Pruſſia, on the 28th of April, 1715, proclaimed war againſt Sweden, diſarmed the regiment of Holſtein, which was in Stetin, entering upon that city as a conqueſt from Sweden, and holding it no longer in ſequeſtration: and the Danes and Pruſſians ſoon after aſſembled their forces to the number of 60,000 men, and appeared before Stralſund, under the walls of which city the king of Sweden found himſelf obliged to retire, his army not conſiſting of more than a fourth part of the enemy's number. In the month of July a treaty was ſet on foot between the king of Denmark and the court of Hanover, by which the king of Denmark ſtipulated to convey and deliver up Bremen and Ferden, which he had taken from the king of Sweden, to the elector of Hanover, in conſideration of the elector's entering into the war againſt Sweden, and advancing a ſum of money to his Daniſh majeſty. The confederates before Stralſund being joined by 24,000 Ruſſians, and a body of Saxons, carried on the ſiege of that town with great vigour; but finding the place continually received freſh ſupplies and reinforcements from the iſland of Rugen, which lies over-againſt it, they landed a great body of troops on the iſland, and after a ſharp diſpute, in which the king of Sweden was in perſon, made themſelves maſters of it, on the 17th of November. Still the king of Sweden determined to defend the town to the laſt extremity; and it was a terrible winter's ſiege, the centinels being frequently frozen to death at their poſts; and the attacks were deſperate, in one of which the confederates loſt near 1000 men; however, they prevailed by their numbers at length, and the king of Sweden finding the town not tenable, retired in a light frigate, and arrived ſafely in Sweden, giving the governor orders to capitulate, which he did the latter end of December, upon very honourable terms; and both the town and the iſland of Rugen were put into the poſſeſſion of the king of Denmark, and all the inhabitants of the Swediſh Pomerania were obliged to take an oath of allegiance to him, except thoſe of the city and diſtrict of Stetin, the iſlands of Uſedom and Wollin, and the lands between the Oder and the river Pene, which were left in the hands of his Pruſſian majeſty. The city of Wiſmar, in the duchy of Mecklenburgh, the only town which the Swedes had left in Germany, was inveſted by the Danes, Pruſſians, Hanoverians, and Moſcovites, the next ſpring, and obliged to ſurrender, after which the king of Denmark was left in poſſeſſion of it; and thus ended the war in Germany. The Danes and Moſcovites then made mighty preparations for invading the king of Sweden's dominions in Schonen. The czar of Moſcovy went in perſon to Copenhagen to that purpoſe, whither his generals led an army of 30,000 horſe and foot. The Danes alſo aſſembled between 20 and 30,000 of their troops for this expedition, and had prepared 700 or 800 veſſels to tranſport them. But great part of the Daniſh fleet being employed in Norway during the ſummer, to oppoſe an enterprize of the Swedes on that ſide, all theſe preparations came to nothing. The czar of Moſcovy upbraided the king of Denmark, that his fleet was not ready in time, and the Dane pretended to be very angry with the Ruſſian monarch, that he would not make the deſcent in the latter end of the year, which the czar obſerved was impracticable, there being no forage to be found, and the king of Sweden being ready to receive them at the head of 40,000 veteran troops; and upon this the Danes and Moſcovites, who had been ſo long in a confederacy againſt Sweden, began to look very cool upon one another. The Dane drew up his forces under the cannon of Copenhagen, as if he had ſome jealouſy of his old ally, and the czar ſoon after returned with his troops to Germany; and it ſeems not only the Dane, but other German princes began to be apprehenſive, that if this enterprize had ſucceeded, the czar would have made himſelf maſter of Sweden, and have been a very formidable neighbour to many of them, which the Dane did not ſufficiently conſider when the ſcheme was firſt laid for the deſcent of Schonen; but being now pretty well convinced of his error, he choſe rather to ſit down with the vaſt expence he had been at in order to the invaſion of Sweden, and let the affair entirely drop, than contribute any further to the aggrandizing the Ruſſian emperor, who was become too powerful already. The Dane being now left almoſt alone to defend himſelf againſt the Swede, was threatened in his turn with an invaſion of Zealand by his Swediſh majeſty, which had certainly been put in execution, if it had not been that king George was under ſome apprehenſions, that thoſe preparations of the Swedes were intended againſt his Britiſh dominions, or rather for the recovery of Bremen and Ferden, and thereupon ſent a ſquadron of men of war to the aſſiſtance of his Daniſh majeſty, which put an end to the king of Sweden's intended enterprize againſt Zealand. The following year, 1718, the Swedes marched two armies into Norway; one to the northward, as high as Dronthein; and the other led by the king in perſon towards Chriſtiana, laying the whole country under contribution, there being no army in Norway ſtrong enough to oppoſe them; but the king of Sweden, laying ſiege to Frederickſhal, was unfortunately ſhot in the trenches, and the Danes and Hanoverians thereby delivered from their fears: for had the Swedes made themſelves maſters of Frederickſhal, as it was computed they might have done in a fortnight more, all Norway had been irrecoverably loſt, and the Daniſh dominions reduced to a very narrow compaſs.

By the death of the king of Sweden the war between Denmark and that crown was in a manner brought to a concluſion, though the peace was not formally ſigned till the year 1720, when the Swedes being invaded and diſtreſſed by the Ruſſians, were obliged to accept of ſuch conditions as the mediators and guarantees of it, the the kings of Great-Britain and France, were pleaſed to preſcribe. By the fifth article of this treaty the king of Denmark obliged himſelf not to aſſiſt the Czariſh majeſty againſt Sweden, or permit the Ruſſian men of war to enter his ports. And by the ſixth article, the Swedes obliged themſelves not to oppoſe ſuch meaſures as ſhould be taken by the ſaid mediators in behalf of the king of Denmark, in relation to the dominions of the duke of Holſtein. By the ſeventh article the king of Denmark promiſes to deliver up to Sweden the city of Stralſund, and part of Pomerania, as far as the river Pene; to evacuate the fortreſs of Marſtrand, the iſle of Rugen, and all other iſlands taken by the Danes in the late war; as alſo the town of Wiſmar in Mecklenburg: in conſideration whereof the Swedes, by the ninth article, renounce the privilege of paſſing the Sound, without paying toll, and agreed to pay the ſame tolls as the Engliſh and Dutch. And by the 10th article the crown of Sweden engages to pay to the king of Denmark 600,000 crowns before the aboveſaid places be delivered to the Swedes. And by a ſeparate article it was agreed, that Wiſmar, the fortifications whereof were demoliſhed, ſhould never be fortified again. As to Bremen and Ferden, theſe provinces had been confirmed to king George by another treaty.

By the aboveſaid treaty his Daniſh majeſty obtained the guarantee of the French king, for the poſſeſſion of the duchy of Sleſwic; and the king of Great-Britain renewed his guarantee of that duchy, which he had given by a former treaty. The king of Denmark now reigning in peace, applied himſelf to promoting the trade of his kingdom, but had the misfor-

tune to ſee his capital city of Copenhagen almoſt deſtroyed by a fire, which happened in the year 1728. His firſt queen was the princeſs Louiſa, daughter of Guſtavus Adolphus, duke of Mecklenburg, by whom he had iſſue prince Chriſtian, born December 10, 1699, and Charlotte Amelia, born October 6, 1706, and ſome other children, who died in their infancy. His ſecond wife, the daughter of count Raventlau, his chancellor, he married within four days after the deceaſe of his firſt queen, and died the 13th of October, 1730, in the 61ſt year of his age.

Chriſtian VI. his ſon, born in December, 1699, married Sophia Magdalena of Brandenburg-Culembach, by whom he had iſſue his late majeſty, Frederick V. born March 31, 1723, and the princeſs Louiſa, born October 19, 1726, and married, October 1, 1749, to the duke of Sax Hilburghauſen. He began his reign with ſome popular acts, particularly in aboliſhing the monopolies for the ſole vending of wine, brandy, ſalt and tobacco, which were very grievous to the ſubject. In the year 1732, he acceded to the treaty between the courts of Vienna and Peterſburg, whereby he obtained their guarantee for his own dominions, and guarantied the dominions of thoſe powers, and the pragmatick ſanction; and by a ſeparate article in this treaty, king Chriſtian agreed to pay the duke of Holſtein 1,000,000 of rix-dollars, on his renouncing his right to the duchy of Sleſwic; and in purſuance of this treaty, Anno 1734, he ſent 6000 men to the aſſiſtance of the emperor againſt the French; and in 1736, he relinquiſhed his pretenſions to the city of Hamburgh, on their paying him 500,000 marks of ſilver.

About the ſame time he erected a council of trade to examine all propoſals that ſhould be made for the advantage of it, and invited foreigners ſkilled in manufactures, to reſort to Denmark, and eſtabliſhed them there, prohibiting the importation of foreign manufactures; he erected a bank alſo, in imitation of England and Holland, and concluded treaties of ſubſidy with foreign powers, particularly with England, which country was at the charge of raiſing, cloathing, and paying 6000 of his troops; and yet when their ſervice was wanted, withdrew thoſe troops, and would take no part in the enſuing wars between the powers of Europe. Thus theſe northern princes have diſcovered the art of obtaining ſubſidies from foreigners for maintaining their armies, while they ſtand neuter themſelves, or perhaps employ their troops againſt the very nations from which they received their ſubſidies. The Danes, as well as the Swedes, at this time, receive ſubſidies from France, though they have received ſo much Engliſh money, and this nation hath ſo often been at the expence of ſending fleets into the Baltick for their protection; for which a late Britiſh writer applauds their wiſdom; but ſurely the wiſdom of that nation, which hath ſo often been bubbled by thoſe princes, who deſert their ſervice, when they are moſt wanted, can never be applauded.

The Danes, about the year 1739, ſeizing on the lordſhip of Steinhurſt, which his Britiſh majeſty apprehended himſelf entitled to, as duke of Lawenburg, a ſkirmiſh happened between the troops of Hanover, and thoſe of Denmark, wherein ſeveral were killed on both ſides. The Hanoverians recovered the territory in diſpute; however, as the Danes ſeemed determined not to relinquiſh their claim, a treaty was ſet on foot between thoſe powers, and Britain was thereby obliged to pay a ſubſidy to the Danes for 6000 men (which never did them any ſervice) for permitting the Hanoverians to enjoy Steinhurſt.

The Danes alſo had a quarrel with the Dutch for fiſhing upon the coaſt of Iceland; their guard-ſhips ſeized on ſome of the Dutch fiſhing-veſſels, and carried them to Copenhagen; but the Hollanders threatening to make repriſals, thoſe veſſels were releaſed; however, the writer abovementioned aſſures us, that the Danes carried their point in this diſpute alſo; but we preſume the Dutch will ſtill take the liberty of fiſhing at Iceland, as they do on the Britiſh coaſts.

Chriſtian having reigned 16 years, with great reputation, was ſucceeded by his ſon Frederick V. on the 26th July, 1746. This prince trod in his father's footſteps, encouraged the manufactures, extended the commerce, and improved the trade of his country. He was firſt married to the princeſs Louiſa, daughter to his Britannic majeſty, but upon the death of his queen, who was the mother of his preſent Daniſh majeſty, he again married a daughter of the duke of Brunſwic Wolfenbuttel, and died in 1766, being ſucceeded by his ſon.

Chriſtian VII. the preſent king of Denmark and Norway, L. L. D. and F. R. S. was born in 1749; married in 1766 to the princeſs Caroline Matilda; and has iſſue Frederick, prince royal of Denmark, born January 28, 1768; and Louiſa Auguſta, princeſs royal, born July 7, 1771. The reign of this young monarch opened auſpiciouſly; but was afterwards darkened by a fatal event, which occaſioned much aſtoniſhment to all Europe, and of which we ſhall give the following account in the words of an intelligent gentleman who made the moſt minute enquiries concerning it, of the moſt cool and diſpaſſionate Danes, and wrote this narrative in the metropolis of Denmark. "I have," ſays this gentleman, "made it my endeavour, ſince my arrival here, to gain the moſt authentic, and unprejudiced intelligence reſpecting the late celebrated, and unhappy favourite count Struenſee, and the late extraordinary revolution which expelled a queen from her throne and kingdom, and brought the miniſters to the ſcaffold. Struenſee had not any noble blood in his veins, or, conſequently, any hereditary and preſcriptive title to the immediate guidance of affairs of ſtate. Fortune, and a train of peculiar circumſtances coinciding with his own talents and addreſs, ſeem to have drawn him from his native mediocrity of condition, and placed him in an elevated rank. He originally practiſed phyſic at Altena, on the Elbe, and afterwards attended the preſent king of Denmark, on his travels into England, in quality of phyſician. On his return he advanced, by rapid ſtrides, in the royal favour; and ſeems to have eminently poſſeſſed the powers of pleaſing, ſince he became equally the favourite of both king and queen. He was inveſted with the order of St. Matilda, inſtituted in honour of her majeſty, created a count, and poſſeſſed unlimited miniſterial power; his conduct, in this ſudden and uncommon eminence, marks a bold and daring mind, perhaps I might add, an expanded and patriotic heart. Unawed by the precarious tenure of courtly greatneſs, and more peculiarly of his own, he began a general reform. The ſtate felt him through all her members; the finances, chancery, army, navy, nobles, peaſants, all were ſenſible of his influence. He not only dictated, but penned his replies to every important queſtion or diſpatch; and a petition, or a ſcheme of public import and utility, rarely waited two hours for an anſwer. At preſent, I am told, you may be two months without receiving any.

The civil judicature of this capital was then veſted in 30 magiſtrates. Struenſee ſent a meſſage to this tribunal, demanding to know the annual ſalary or penſion annexed to each member; rather alarmed at this enquiry, they ſent an anſwer, in which they diminiſhed their emoluments near two thirds, and eſtimated them at 1500, inſtead of 4000 rix-dollars. The count then informed them, that his majeſty had no farther occaſion for their ſervices; but, in his royal munificence and liberality, was graciouſly pleaſed to continue to them the third part of their avowed incomes as a proof of his ſatisfaction with their conduct. He, at the ſame time, conſtituted another court compoſed only of ſix perſons of integrity, to whom the ſame power was delegated. He proceeded to purge the chancery and other bodies of the law. Then entering on the military department, he, at one ſtroke, broke all the horſe-guards, and afterwards the regiment of Norwegian foot-guards, the fineſt corps in the ſervice, and who were not diſbanded without a ſhort, but very dangerous ſedition. Still proceeding in this ſalutary, but moſt critical and perilous atchievement, he ultimately began to attempt a diminution of the nobles, and to ſet the farmers and peaſants at perfect liberty; no wonder that he fell a victim to ſuch meaſures; and that all parties joined in his deſtruction. Theſe were his real crimes, and not that he was too acceptable to the queen, which only formed a pretext. It was the miniſter, and not the man, who had become obnoxious. I do not pretend, in the latter capacity, either to excuſe, or condemn him; but, as a politician, I rank him with the Clarendons and Mores, whom tyranny, or public buſineſs, and want of virtue, have brought, in almoſt every age,

age, to an untimely and ignominious exit, but to whoſe memory impartial poſterity have done ample juſtice. Yet I muſt avow, that though I cannot think Struenſee made a bad uſe, yet he certainly made a violent and imprudent one of his extenſive power. He ſeems, if one may judge by his actions, to have been intoxicated with royal favour, and ſuch accumulated honours, and not to have adverted ſufficiently to the examples which hiſtory furniſhes of Wolſeys in former days, and of Choiſeuls in modern times, who moſt ſtrikingly evince the ſlippery foundation of political grandeur. When he was even preſſed, only a ſhort time before his ſeizure, to withdraw from court and paſs the Belts, with the moſt ample ſecurity for his annual remitment of forty, fifty, or even an hundred thouſand dollars, an unhappy faſcination detained him, in defiance of every warning, and reſerved him for the priſon and the block. The queen-dowager, and prince Frederic, were only the feeble inſtruments to produce this cataſtrophe, as being, by their rank, immediately about the perſon of the ſovereign, though common report has talked loudly of the former's intrigue, and attributed it to her imaginary abilities. The only mark of capacity, or addreſs, they exhibited, was in preſerving a ſecreſy which deluded Struenſee, and the queen Matilda, till the time of their being arreſted. I have been aſſured, that on the laſt levee-day preceding this event, the count was habited with uncommon magnificence, and never received greater homage, or court ſervility, from the crowd, than when on the verge of ruin. On the night fixed for his ſeizure, there was a bal parè in the palace. The queen, after dancing as uſual one country dance with the king, gave her hand to Struenſee during the reſt of the evening. She retired about two in the morning, and was followed by him and count Brandt. The moment was now come; the queen-dowager, and her ſon prince Frederic, haſtened to the king's private chamber, where he was already in bed. They kneeled down beſide him, and implored him, with tears and expoſtulations, to ſave himſelf and Denmark from impending deſtruction, by arreſting thoſe whom they called the authors of it. It is ſaid the king was not eaſily induced to ſign the order, but did it with reluctance and heſitation. At length their entreaties prevailed, and he affixed his ſign manual to the paper. Colonel Koller Banner inſtantly repaired to Struenſee's apartment, which, as well as Brandt's, was in the palace: they were both ſeized at nearly the ſame inſtant, and as all defence was vain, hurried away immediately to the citadel. When count Struenſee ſtepped out of the coach, he ſaid, with a ſmile, to the commandant, "I believe you are not a little ſurprized at ſeeing me brought here as a priſoner." "No, and pleaſe your excellence, replied the old officer bluntly, I am not at all ſurprized, but, on the contrary, have long expected you." It was five o'clock in the morning when count Rantzaw came to the door of her majeſty's anti-chamber, and knocked for admittance. One of the women about the queen's perſon was ordered to wake her, and give her information that ſhe was arreſted: they then put her into one of the king's coaches, drove her down to Elſineur, and ſhut her up in the caſtle of Cronenburg.—Mean while they dreaded an inſurrection in Copenhagen; every military precaution was taken to prevent it; the moſt infamous and ſilly reports were circulated among the populace, to render the ſtate priſoners odious: that they had put poiſon into the king's coffee to deſtroy him; that they intended to declare him incapable of governing; to ſend the dowager-queen Juliana out of the kingdom, as well as her ſon prince Frederic; and to proclaim Matilda regent. To confirm theſe extraordinary and contradictory reports, the king himſelf, and his brother, appeared in a ſtate coach, and paraded through the ſtreets of the city, to ſhew himſelf unhurt, and as if eſcaped from the moſt horrid conſpiracy. During theſe tranſactions, Struenſee and Brandt were detained in the moſt rigorous impriſonment. They loaded the former with very heavy chains about his arms and legs, and he was at the ſame time fixed to the wall by an iron bar. I have ſeen the room, and can aſſure you it is not above 10 or 12 feet ſquare, with a little bed in it, and a miſerable iron ſtove; yet here, in this abode of miſery, did he, though chained, compleat, with a pencil, give an account of his life and conduct as miniſter, which is penned, as I have been aſſured, with uncommon genius.

"A tribunal was appointed for the trial of the queen, and two counts, and a council aſſigned for each, to preſerve an appearance of juſtice and equity."

The reſult of this was, they were ſentenced to loſe their heads, and the queen to baniſhment. The two counts were executed, April 28, 1772; and their ſkulls and bones are yet expoſed on wheels, about a mile and a half out of the metropolis. Hence the precarioufneſs of favouritiſm may be ſeen; and that thoſe who riſe rapidly, generally fall with equivalent velocity.

"He that in court ſecure will keep himſelf
"Muſt not be great, for then he's envy'd at;
"The ſhrub is ſafe, when as the cedar ſhakes;
"For where the king doth love above compare,
"Of others they as much more envy'd are."

SHAKESPEARE.

Yet with what avidity are fleeting riches, imaginary pomp, temporal titles, and precarious power, ſought after, while ſolid happineſs is neglected. How univerſal is the wiſh to acquire wealth, dominion, and worldly honours; and yet when the diſappointments naturally attendant on theſe objects attend the purſuit, mankind blame not themſelves, but lay the fault on fate, when their own wiſhes alone are erroneous.

"But why, alas! do mortal men in vain,
"Of fortune, fate, or Providence complain;
"God gives us what he knows our wants require,
"And better things than thoſe which we deſire.
"Some pray for riches, riches they obtain,
"But watch'd by robbers, for their wealth are ſlain.
"Some pray from priſon to be freed, and come,
"When guilty of their vows, to fall at home;
"Murder'd by thoſe they truſted with their life,
"A favor'd ſervant, or a boſom wife.
"Such dear-bought bleſſings happen ev'ry day,
"Becauſe we know not for what things to pray.
"Like drunken ſots about the ſtreets we roam,
"Well knows the ſot he has a certain home;
"Yet knows not how to find th' uncertain place,
"But blunders on, and ſtaggers ev'ry pace.
"Thus all ſeek happineſs, but few can find,
"For far the greater part of men are blind."

CHAP.

CHAP. VI.

SWEDEN.

SWEDEN extends from 55 deg. 20 min. to 69 deg. 30 min. north lat. and from 12 to 32 deg. east long. It is bounded on the south by the Baltic, the Sound, and the Categate; on the west by the ſtupendous Norwegian mountains; on the north by Lapland; and on the eaſt by Ruſſia. It is near 800 miles in length, and 500 in breadth; but when proper abatements are made for vaſt lakes, inland ſeas or gulphs, ſterile mountains, extenſive rocky tracks, barren heaths, moraſſes, &c. &c. the inhabited, or cultivated parts, are very ſmall, in proportion to the whole dominion.

SECT. I.

Natural Hiſtory of Sweden.

THE climate of Sweden is formed of extremes, for the winter is intenſely cold, and the ſummer exceſſive hot. The ſun, at the higheſt, is above the horizon of Stockholm 18 hours and an half, and for ſome weeks makes a continual day. In winter the days are proportionably ſhorter, the ſun being up five hours and an half; which defect is ſo well ſupplied as to lights by the moon, the whiteneſs of the ſnow, and the clearneſs of the ſky, that travelling by night is as uſual as by day; and journies are begun in the evening, as frequently as in the morning. The want of the ſun's heat is repaired by ſtoves within doors, and warm furs abroad; inſtead of which, the meaner people uſe ſheep-ſkins, and other ſuch defences, and are generally better provided with cloathing, befitting their condition, and the climate they live in, than the common people in moſt other parts of Europe: though where any neglect or failure happens, it uſually proves fatal, and occaſions the loſs of noſes, or other members, and ſometimes of life, unleſs the uſual remedy to expel the froſt, when it has ſeized any part, be carefully applied, which is, to remain in the cold, and rub the part affected with ſnow, till the blood returns to it again.

The ſeaſons of the year, though regular in themſelves, do not altogether anſwer thoſe of other climates, as a French ambaſſador obſerved, who, in raillery, ſaid, there were in Sweden only nine months winter, and all the reſt was ſummer: for as winter commonly begins very ſoon, ſo ſummer immediately ſucceeds it, and leaves little or no ſpace to be called ſpring. The productions, therefore, of the earth ought to be, as they really are, more ſpeedy in their growth than in more ſouthern countries; the reaſon of which ſeems to be, that the oil and ſulphur in the earth (as appears by the trees and minerals it produces), being bound up all the winter, are then on a ſudden actuated by the heat of the ſun, which almoſt continually ſhines, and thereby makes amends for its ſhort ſtay, and brings to maturity the fruits proper to the climate. In the ſummer ſeaſon the fields are clothed with a variety of flowers, and the whole country overſpread with ſtrawberries, raſberries, currants, &c. which grow upon every rock. In their gardens melons are brought to good perfection in dry years, but apricots, peaches, and other wall-fruits, are almoſt as ſcarce as oranges. They have cherries of ſeveral ſorts, and ſome tolerably good, which cannot be ſaid of their apples, pears, and plums, for theſe are neither common, nor well-taſted: but all kinds of roots are in plenty, and contribute much to the nouriſhment of the poor people.

Their woods and vaſt foreſts overſpread much of the country, and are, for the moſt part, of pines, fir, beech, birch, alder, juniper, and ſome oak; eſpecially in the province of Bleking in South Gothland; the trees, growing, in moſt places, ſo cloſe together, and lying to rot, where they fall, that the woods are ſcarce paſſable. Theſe afford a plentiful and cheap firing; and, being generally very ſtrait and tall, are eaſily convertible into timber fit for all uſes. So that the Dutch export, from hence, boards, and maſts for their ſhipping, which prove as good as thoſe of Norway. In the parts near the mines the woods are much deſtroyed; but that want is ſo well ſupplied from diſtant places, by the conveniency of rivers and winter-carriages, that they have charcoal above ſix times as cheap as in England; though it is deemed not half ſo good.

The principal lakes in Sweden are, the

Vetter,
Wemer, and
Maeler.

The firſt is in Oſtrogothia, or Eaſt Gothland; and is remarkable for its foretelling of ſtorms, by a continual thundering noiſe, the day before, in that quarter from whence they ariſe; as alſo for the ſudden breaking of the ice upon it, which ſometimes ſurpriſes travellers, and in half an hour it becomes navigable. It is extremely deep, in ſome places above 300 fathom, though no part of the Baltic ſea exceeds 50. It ſupplies the river Motala, which runs through Norkoping, where it has a fall of above 30 feet, and, ſome winters, is ſo choaked up with ice, that, for many hours, no water paſſes.

The ſecond is in Weſtrogothia, or Weſt Gothland, from which iſſues the river Elve, that, falling down a rock, near 60 feet, paſſes by Gottenburgh.

The third empties itſelf at Stockholm, and furniſhes one ſide of the town with freſh water, as the ſea does the other with ſalt. Theſe, and abundance of other lakes, whereof many, like ponds, have no vent, are well ſtored with variety of fiſh; as ſalmon, pike, perch, tench, trout, eels, and many other ſorts, unknown elſewhere; of which the moſt plentiful is the ſtreamling, a fiſh leſs than a pilchard, taken in great quantities, ſalted in barrels, and diſtributed all over the country.

The gulph of Finland, which ſeparates Sweden from that province, abounds with ſeals, of which a conſiderable quantity of train-oil is made and exported; and in the lakes of Finland are vaſt quantities of pike, which they ſalt, dry, and ſell at very cheap rates. Theſe lakes are of great uſe for the conveniency of carriage in ſummer by boats, and in winter by ſledges; and among them, and on the ſea-coaſt, are almoſt innumerable little iſlands, ſome of which are inhabited, ſome uninhabited, but covered with wood, and others are merely barren rocks.

With reſpect to the rivers, they will be mentioned when we come to enumerate the ſeveral provinces and diſtricts of this kingdom.

Concerning the ſoil of Sweden, an ingenious traveller, who but very recently viſited this country, ſays, "I think it may be very juſtly aſſerted, that not one twentieth part of this country is in a ſtate to be cultivated. I have travelled near 700 Engliſh miles in this kingdom, and, except in the province of Scania, and in ſome parts of Finland, I did not ſee 20 acres of good land lying together. The ſoil, in thoſe places where it is capable of being

being cultivated, is tolerably fruitful, though ſeldom more than eight inches deep. It is eaſily ploughed, and is generally beſt where there is leaſt of it, that is, in the little ſpaces between the rocks; and frequently the barren land, enriched with the aſhes of trees, which are burnt upon the ſpot, for making of charcoal produces a plentiful crop; but the danger of deſtroying too much of the woods, which are ſo neceſſary for their iron-works, has occaſioned ſeveral laws to be publiſhed to limit that cuſtom. It is true, that if agriculture had been properly encouraged, and the farmers permitted to make the moſt of their farms, they might have grain ſufficient for their own conſumption; but as things are managed at preſent, they cannot ſubſiſt without great importation of all ſorts of grain, from Livonia, Courland, Pomerania, and other parts of Germany adjacent to the Baltic Sea; and, notwithſtanding theſe ſupplies, the poorer ſort of people, in ſome of the interior provinces, when the harveſt is bad, are obliged to grind the bark of birch-trees to mix with their grain to make bread, which they bake in thin cakes only twice a year, and hang them up in a dry part of their houſes for uſe."

To corroborate this gentleman's teſtimony concerning the ſoil of Sweden, we ſhall ſelect, and blend together, the opinion of various other travellers, which evidently ſeem to confirm his ſentiments.

The ſoil, in places capable of cultivating, is tolerably fruitful, though ſeldom above half a foot deep; and frequently the barren land, being enriched by the aſhes of trees burnt on the places where they grow, and the ſeed raked among the aſhes, produces a plentiful crop, without further cultivation. This practice is ſo antient, that their writers derive the name of Sweden from a word in their language that expreſſes it; but the danger of deſtroying the woods has, of late, occaſioned ſome laws to limit that cuſtom. If the inhabitants were induſtrious above what neceſſity forces them to, they might, at leaſt, have corn ſufficient of their own; but, as things are managed, they have not, nor can they ſubſiſt, without great importations of all ſorts of grain; and, notwithſtanding theſe ſupplies, the poorer ſort, in many places remote from traffic, are obliged to grind the bark of birch-trees to mix with their corn, and make bread, of which they have not always plenty.

The cattle, as in other northern countries, are generally of a very ſmall ſize; neither can the breed be bettered by bringing in larger from abroad, which ſoon degenerate, becauſe in ſummer the graſs is much leſs nouriſhing than in the places from whence they came, and in winter they are uſually half ſtarved for want of fodder of all kinds, which often falls ſo very ſhort that they are forced to unthatch their houſes, to keep a part of their cattle alive. Their ſheep bear a very coarſe wool, only fit to make cloathing for the peaſants. Their horſes, eſpecially thoſe of Finland, are hardy, vigorous, ſtrong, ſure-footed, and nimble trotters, which is of great uſe to the people, becauſe of the length of their winter, and the fitneſs of theſe horſes for ſledges, which are their only carriages in that ſeaſon: in war their horſes are not only able to reſiſt, but even to break a body of the beſt German cavalry.

Here we cannot forbear to mention a curious circumſtance, communicated to us by an ingenious Swediſh gentleman now in England, and who hath been employed, at various times, both by the Swediſh and Britiſh governments, in ſeveral important improvements in the uſeful arts. This circumſtance is, that the farmers in ſome parts of Sweden, when the winters are uncommonly ſevere, and the cattle almoſt ſtarved, in order to nouriſh them, and cauſe the fodder to hold out during the ſeaſon, make *hay-tea*; that is, they boil about a handful of hay in three gallons of water, and the drink thus made is ſo extremely nutritive, that it nouriſhes the cattle aſtoniſhingly, repleniſhes the udders of the cows with a prodigious quantity of milk, and makes one truſs of fodder go as far as ten would otherwiſe do.—We cannot think but if this was tried in England, upon ſimilar occaſions, it would prove a beneficial experiment.

Sweden produces elks, bears, wolves, deers, hares, foxes, wild cats, ſquirrels, &c. and theſe are hunted either for their fleſh, ſkins, or furs; the Swediſh huntſmen uſing guns, and being in general excellent markſmen.

Moſt of the above animals have no material difference from thoſe already deſcribed in ſome of the preceding northern countries.

The ſquirrel is ſomewhat thicker than a weaſel, but not quite ſo long; he is of a reddiſh colour on the upper part of the head and back, but on the belly is white. The tail is long and buſhy, which being turned over his back, is ſufficient to ſhade it; whence the Latin name ſciurus, which ſignifies a ſhade.

He ſits upon his backſide when he feeds, laying hold of the proviſion with his fore feet, and putting it to his mouth. He lives upon nuts and acorns of all kinds, but is moſt fond of hazel nuts, which he gathers in the proper ſeaſon, and hoards up againſt winter. Squirrels are generally to be met with upon trees, where they build their neſts, and bring up their young. They can leap very readily from bough to bough, and ſometimes from tree to tree, at which time they uſe their tails inſtead of wings, for it is of great help in keeping them from ſinking.

Various kinds of poultry are reared in Sweden. Of game there is plenty, both of land and water-fowl, particularly partridges, and a bird called a yerper, which reſembles the partridge.

The orra is a fowl of the ſize of a hen, and the keder is very near as big as a turkey. In winter the Swediſh ſportſmen amuſe themſelves in killing blackbirds, thruſhes, and ſydenſwans; the latter being beautiful birds, ſumptuouſly arrayed in gorgeous plumes, which are finely tipped with ſcarlet: they are about the ſize of fieldfares, and their fleſh is of a moſt exquiſite flavour. Pigeons are ſcarce, on account of the great number of voracious birds which deſtroy them.

As Sweden abounds with birds of prey, it is here neceſſary to deſcribe ſome of thoſe which are the moſt remarkable. Of theſe the firſt is the eagle: this bird is of a large ſize, remarkable ſtrong, and can never be tamed like the hawk in order to purſue game, and it is much more majeſtic in appearance than the vulture.

The eagle principally inhabits inacceſſible mountains, and rooſts on the loftieſt trees, being fond of ſuch places as are leaſt frequented by mankind. However, as birds as well as other animals are found in greater plenty round the habitations of men, the eagle is ſometimes induced to frequent thoſe places for the readieſt getting at its prey. They live much on fiſh, crabs, tortoiſes, wild-ducks, poultry, pigeons, and the like. They have been known not to ſpare even their own ſpecies, when preſſed with hunger; they attack not only lambs and young goats, but ſometimes deer, ſheep, and even horned cattle. They build their neſts on the moſt inacceſſible parts of rocks, and the higheſt trees, ſome of which have been found near ſix feet in diameter. They are uſually lined with the hair of foxes, wool, or the fur of hares and rabbits to keep the eggs warm, of which the female generally lays two, or ſometimes three at a time, and hatches them in thirty days, during which time the male ſupplies her with food. As ſoon as the young ones are produced, the old become remarkably miſchievous, and deſtroy lambs and poultry for ſeveral miles round them. They often bring hares and partridges alive to their young, to regale them with the reliſh of warm blood. The country folks ſometimes avail themſelves of theſe proviſions, by taking it from the eagles in the abſence of the old ones, and carrying it home for their own uſe.

The vulture differs from the eagle in not having its beak turned immediately crooked from the root, it continuing ſtrait to the length of two inches: it is much more lazy than the eagle, and fond of carrion, which the eagle will not touch. However, they prey upon live birds, hares, kids, fawns, &c. if they can get them; and if not, eat any filth that comes in their way.

The hawk has wings ſo long as to reach to the end of the tail, which reſembles that of a ſparrow-hawk; the beak is partly blue and partly yellow; the feet are of a pale green; the toes are ſlender, the talons large, ſharp, and darkiſh; the breaſt, belly, and thighs white, ſtreaked with black; the neck, back, wings, and head are brown, and the latter is flattiſh at the top; the tail is of a light brown, with black lines running acroſs it; and the legs and feet are of a yellow colour. Some years ago a hawk was killed in Finland, which had a plate of gold

on one leg, and a plate of ſilver on the other. On the former was this French inſcription:

"In ſuis au Roi."

which, in Engliſh, implies,

I belong to the king.

And, on the latter, were theſe words in the ſame language:

"Le Duc de Chevreuſe me gardé.

which may be thus tranſlated:

"The duke of Chevreuſe keeps me."

The kite is diſtinguiſhable from all other rapacious birds by having a forked tail. It is uſually about 28 inches long, from the head to the tip of the tail, when the neck is ſtraight; but, when the wings are extended, it meaſures, from extremity to extremity, 64 inches, or better. The head is of an aſh colour, the neck red, the back brown, and the wings are diverſified with red, black, and white. The beak is black, the tongue thick, the legs and feet yellow, and the talons of a ſable hue. It has always been famous for its rapacity, and is often mentioned by the antients.

"Thus the ſpreading kite
"That ſmells the ſlaughter'd victim from on high,
"Flies at a diſtance, if the prieſts are nigh,
"And ſails around, and keeps it in her eye."

OVID.

The adjacent ſeas of Sweden, and the lakes and rivers within the country, abound with a great variety of fiſh, particularly

Salmon	Trout
Perch	Tench
Pike	Eels
Streamling	Seals, &c.

The pikes are ſo abundant, that vaſt quantities are ſalted and dried for ſale; and great numbers of ſtreamlings, which is a delicious fiſh, ſmaller than a pilchar or pilchard, are pickled and barrelled, both for home conſumption and exportation. And the train oil, extracted from the ſeals, is a valuable article of traffic.

The wealth of Sweden conſiſts chiefly in the numerous and excellent mines with which the country abounds. The principal of theſe is the great ſilver mine, into which workmen are let down in baſkets to the firſt floor, which is 105 fathom under ground: the roof there is as high as a church, ſupported by vaſt arches of oak; thence the deſcent is by ladders, or baſkets, to the loweſt mine, above 40 fathom. They have no records ſo antient as the firſt diſcovery either of this, or the great copper mine, which muſt needs have been the work of many ages. The ore ſeldom yields above four per cent. and requires great pains to refine it: they are alſo at the charge of a water-mill to drain the mines, and have the benefit of another to draw up the ore. This mine formerly produced between 20,000 and 30,000 of fine ſilver crowns, annually; and the king had an exemption in his favour, of being allowed to purchaſe whatever quantity he thought proper of it; and to pay one fourth leſs than the intrinſic value. The very lateſt traveller that we know, who hath viſited Sweden, informs us, that this mine is, at preſent, much diminiſhed in value by having been ſo greatly exhauſted. However, it may not be improper, in this place, to deſcribe the metal called ſilver, and the nature of the various ores from which it is produced.

Silver is a noble and perfect metal, of a white ſhining colour, ſonorous and ductile, but not ſo perfect as gold. It is ſometimes found in ſmall maſſes of many different ſhapes, but moſt commonly like filaments and ſcales in ſeveral ſorts of ſtones and earths, and in many ſorts of land.

The Vitrean ſilver ore is of an irregular and uncertain form, is very weighty, and may be eaſily flatted with a hammer; for it is not much harder than lead, and is much of the ſame colour; for which reaſon it is often miſtaken for lead. It melts preſently, and ſoon grows red-hot. It conſiſts of ſulphur, and pure ſilver, and above three quarters of it is ſilver. The horny ſilver ore is half tranſparent, and is of a deeper yellow or brown colour, according as it conſiſts of larger or ſmaller lumps. It looks like roſin, and is of an irregular ſhape. When carefully examined, it appears to conſiſt of very thin plates; it is not very weighty or hard, for it may be eaſily ground; and when brought ſuddenly to the fire, it crackles, burſts, and exhales a ſulphurous ſmell, and ſometimes burns lightly. This hard ſort contains two thirds of ſilver. The red ſilver ore is ſometimes of a lighter, and ſometimes of a deeper ſcarlet colour; the firſt caſe is tranſparent, like a garnet, and has been miſtaken for tranſparent cinnabar; and, in the ſecond caſe, it is of a deeper dye. It is heavier than the former horny ore, but burſts when brought near a candle or a mild fire, and the remaining part melts before it grows red-hot; then it emits a diſagreeable ſmell of arſenick, together with a thick ſmoke. It contains the ſame quantity of ſilver as the horny ore juſt mentioned.

The white ſilver ore is of a light grey colour, of an irregular figure, pretty weighty, and very brittle. It has not only copper in it, but ſometimes more of it than of ſilver; for it differs from the white copper ore in nothing but in the quantity of ſilver it contains. Theſe are the principal ſilver ores hitherto known, though many others are looked upon, by ſome, as ſuch, becauſe they contain a conſiderable quantity of ſilver; but then there is always more of other metals along with them, and therefore they cannot properly be called ſilver ores.

Silver may be eaſily extracted from lead, by melting it in channels, made with aſhes in the furnace, and then blowing up the fire with bellows, till it turns into glaſs, ſinks into the channels, and leaves the pure ſilver behind.

Silver is harder than gold, but not ſo ductile, and is lighter than gold or lead, the weight, with regard to gold, being little leſs than five to nine. It will not ruſt, but will grow black by ſulphurous vapours, and will diſſolve in aqua fortis, but not in aqua regia. When it is mixed with common ſalt, and melted, it turns into a half tranſparent maſs like horn, which is hard to be brought back to ſilver again, becauſe it is volatile, and, in a violent fire, will all fly away. When ſilver is diſſolved in aqua fortis it may be cryſtalized; and the cryſtals are very corroſive, and of an exceeding bitter taſte; when applied to the ſkin, they leave an impreſſion like that of a burning coal, and make an eſcar of a black colour. The ſolution of ſilver will turn any thing black, and therefore, when properly diluted, is often uſed to colour the hair. Theſe cryſtals will melt in a very moderate heat before they grow red, and form a blackiſh maſs; it is then proper for the uſe of ſurgeons, and is called the ſilver cauſtic.

The great copper mine is about 80 fathom deep, of great extent, but ſubject to damages by the falling-in of the roof; yet that is ſometimes recompenſed by the abundance of ore which the ruined pillars yield, though moſt commonly the loſs is very great. The occaſion of theſe falls is aſcribed to the throwing the earth and ſtones, brought out of the mine, upon the ground over it; by which the pillars become overcharged, and give way: and the reaſon of this is ſaid to be, that the profit ariſing, to thoſe who are concerned, is ſo little, that they are not able to work it off as they ought, and to remove the rubbiſh to a greater diſtance: and unleſs the king abates a conſiderable part of the profit ariſing to the crown from this mine, it is believed it will, in a few years, be at a ſtand, eſpecially if the deſigns of making copper, which are on foot elſewhere, do take any tolerable effect. The copper yearly made out of this mine amounts to the value of about 200,000l. of which the king has a fourth part, not by way of pre-emption, but in kind; beſides which, he has, upon the remainder, a cuſtom, of 25 per Cent. when it is exported unwrought. Many years ago, a gentleman of Italy came into Sweden, with propoſals to make copper a ſhorter and cheaper way than had till then been practiſed, ſo as to make that in five days, which before required three weeks, and with one

fifth part of the charcoal, and with fewer hands. The bargain was made, and his reward to be 100,000 crowns. The firſt eſſay he made ſucceeded to admiration; but when he came to work in earneſt, and had got his new-ovens built to his mind, the miners, as he complained, picked out the very worſt ore, and were otherwiſe ſo envious and untractable, that he failed of ſucceſs, and loſt his reward: nor was it without difficulty that he obtained leave to buy ore, and practiſe his invention at his own charge.

Concerning this mine, the abovementioned modern traveller tells us, "that in the laſt century it ſupplied the greateſt part of Europe with copper, but at preſent it is worked ſo very deep, that it is become extremely expenſive; and though the ore is uncommonly rich, the produce is conſiderably diminiſhed."

With reſpect to copper itſelf, it is a hard ignoble metal, ſofter than iron, and when poliſhed is of a ſhining reddiſh colour. It will melt in the fire, and is ſo ductile that it may be beaten into exceeding thin leaves. It is more frequently found in its metallic form than iron, in various ſhapes; but its ore never diſtinguiſhes itſelf by any certain figure, for it is almoſt always irregular. But the fineſt colours of any kind, except the red and tranſparent, moſt commonly betray the preſence of copper; for this reaſon there is hardly any copper ore that is not mixed with iron in a larger quantity than the ores of other metals commonly are. However, there is not ſo much in ſome as in others, and thoſe that contain the leaſt iron are naturally more eaſily melted than the reſt. The vitrious copper ore is of a darkiſh violet ſky colour, like that of a piece of ſteel that has touched a red hot iron. It is very heavy, and of a moderate hardneſs; but it is commonly variegated here and there with ſpots and grey veins. One hundred weight of this contains from 50 to 80 pounds of copper. The azure copper ore is of a moſt beautiful blue colour, and is not ſoft, but very heavy, and when broken ſhines like blue glaſs. This is moſt free from iron, arſenic, and ſulphur, and a great quantity of excellent copper may be extracted out of it with very great eaſe. The green copper ore is like green cryſtals, and ſometimes very prettily ſtreaked; but in other things it has the properties of the former. The light duſky blue concretes, as well as the green, called by ſome copper okers, yield a great deal of very good copper when they are pure, which may be known from their colour and weight; but thoſe that are more light are mixed with unmetallic earth, and thoſe that are yellow contain iron oker, on which account they are the more difficult to be met with, and yield leſs copper of an inferior ſort.

Iron mines and forges are in great numbers, eſpecially towards the mountainous parts, where they have the conveniency of water-falls to turn their mills. From theſe, beſides ſupplying the country, there is yearly exported iron, to the value of near 300,000l. but of late years the number of theſe forges has been ſo much increaſed, that each endeavouring to underſell others, the price has been much lowered. And ſince the prohibition of foreign manufactures, in exchange of which iron was plentifully taken off, it is grown ſo cheap, that it is found neceſſary to leſſen the number of forges. Neither has that contrivance had the effect intended; but, on the contrary, many more are like to fall of themſelves, becauſe they cannot work but with loſs; in which caſe many thouſands of poor people, whoſe livelihood depend upon theſe forges and mines, will be reduced to a ſtarving condition.

Iron is an ignoble metal, remarkable for its hardneſs, and is of a whitiſh livid colour when poliſhed, but before that it is blackiſh. When it is cleanſed it is called ſteel. The ore of common iron is of no certain form, but is moſt commonly of a ruſty colour. There is alſo an ore which is very heavy, and of a red blueiſh colour when broken. It is very rich in the beſt kind of iron, and uſually yields at the firſt melting, from 60 to 80 pounds out of an hundred weight. There is alſo a ſingular kind of iron ore, of a pale yellowiſh colour, though ſometimes grey, and ſometimes of a kind of ſemi-tranſparent white. It will yield, when melted, about 30 pounds of iron out of an hundred weight.

When iron is melted it is formed into large maſſes, which are long and thick, and commonly called pigs. Theſe are melted over again, and ſtirred with an iron rod, in order to render them malleable. While they are yet red hot, they are placed under hammers, and by that means the heterogeneous particles are forced away by the repeated ſtrokes. One ſort of iron differs greatly from another; but that which is tougheſt is beſt; and that which is moſt brittle is worſt of all. However, all ſorts of iron are of the ſame nature, and they are only more or leſs tough in proportion to the earthly, vitriolic, and ſulphurous particles mixed therewith. Iron being often melted and cleanſed is turned into ſteel; though in ſome little labour is required for that purpoſe, and in others a great deal. When iron is very good, they melt it in a furnace, and throw in gradually a mixture of equal parts of an alkalious ſalt, and filings of lead, with the raſpings of oxes horns; then they ſtir the melted metal, and at length place it on the anvil, where they beat it into rods.

Mr. Wraxall, a very late traveller, gives ſo intereſting a deſcription of his deſcent into the mines of Danmora, that we are perſuaded a tranſcript of the paſſage cannot be unpleaſing to our readers.

"We lay (ſays he) at a pretty village called Oſtarby, and went about three miles the next morning to ſee the mines of Danmora. They are celebrated for producing the fineſt iron ore in Europe, the iron of which is exported into every country, and conſtitutes one of the moſt important ſources of the national wealth and royal revenue. The ore is not dug as in the mines of tin or coal, which we have in England, but is torn up by powder. This operation is performed every day at noon, and is one of the moſt tremendous and awful it is poſſible to conceive. We arrived at the mouth of the great mine (which is near half an Engliſh mile in circumference) in time to be preſent at it. Soon after twelve the firſt exploſion began: I cannot compare it to any thing ſo aptly as ſubterraneous thunder, or rather vollies of artillery diſcharged under ground. The ſtones are thrown up by the violence of the powder to a vaſt height above the ſurface of the earth, and the concuſſion is ſo great as to ſhake the ſurrounding earth, or rock, on every ſide. I felt a pleaſure, corrected with terror, as I hung over this vaſt and giddy hollow, to the bottom of which the eye in vain attempts to penetrate. As ſoon as the exploſions were finiſhed, I determined, however, to deſcend into the mine. There is no way to do this but in a large deep bucket, capable of containing three perſons, and faſtened by chains to a rope. The inſpector, at whoſe houſe I had ſlept the preceding night, took no little pains to diſſuade me from the reſolution, and aſſured me not only that the rope, or chains, ſometimes broke, but that the ſnow and ice which lodged on the ſides of the mines frequently tumbled in, and deſtroyed the workmen; nor could he warrant my abſolute ſecurity from one or both of theſe accidents. Finding, however, that I was deaf to all his remonſtrances, he provided me a clean bucket, and put two men into it to accompany me. I wrapped myſelf therefore in my great coat, and ſtepped into the bucket. The two men followed, and we were let down. I am not aſhamed to own, that when I found myſelf thus ſuſpended between heaven and earth by a rope, and looked down into the deep and dark abyſs below me, to which I could ſee no termination, I ſhuddered with apprehenſion, and half repented my curioſity. This was, however, only a momentary ſenſation, and before I had deſcended an hundred feet, I looked round on the ſcene with very tolerable compoſure. I was near nine minutes before I reached the bottom, it being 80 fathoms, or 480 feet. The view of the mine when I ſet my foot to the earth, was awful and ſublime in the higheſt degree. Whether terror or pleaſure formed the predominant feeling as I looked at it, is hard to ſay. The light of the day was very faintly admitted into theſe ſubterraneous caverns. In many places it was abſolutely loſt, and flambeaux ſupplied its place. I ſaw beams of wood acroſs ſome parts, from one ſide of the rock to the other, where the miners ſat employed for boring holes for the admiſſion of powder, with as much unconcern as I could have felt in any ordinary employment, though the leaſt dizzineſs, or even a failure in preſerving their equilibrium, muſt have made them loſe their ſeat, and daſh them to pieces againſt the rugged ſurface of the rock beneath. The fragments torn up by the exploſion, pre-

vious

vious to my deſcent, lay in vaſt heaps on all ſides, and the whole ſcene was calculated to inſpire a gloomy admiration in the beholder. A confinement for life, in theſe horrible iron dungeons, muſt ſurely, of all puniſhments which human ſubtlety has deviſed, be one of the moſt terrible. I remained three quarters of an hour in theſe gloomy and frightful caverns, and traverſed every part of them which was acceſſible, conducted by my guides. The weather above was very warm, but here the ice covered the whole ſurface of the ground, and I found myſelf ſurrounded with the colds of the moſt rigorous winter, amid darkneſs and caves of iron. In one of theſe, which run a conſiderable way under the rock, were eight wretches warming themſelves round a charcoal fire, and eating the little ſcanty ſubſiſtance produced from their miſerable occupation. They roſe with ſurprize at ſeeing ſo unexpected a gueſt among them, and I was not a little pleaſed to dry my feet, which were wet with treading on the melted ice, at their fire. There are no leſs than 1300 of theſe men conſtantly employed in the mines, and their pay is only a common dollar, or three-pence Engliſh, a day. They were firſt opened about 1580, under the reign of John the Third, but have been conſtantly worked only ſince the time of Chriſtina. After having gratified my curioſity with a full view of theſe ſubterranean apartments, I made the ſignal for being drawn up, and can moſt ſeriouſly aſſure you I felt ſo little terror while re-aſcending, compared with that of being let down, that I am convinced, in five or ſix times more I ſhould have been perfectly indifferent to it, and could have ſolved a problem in mathematics, or compoſed a ſonnet to my miſtreſs, in the bucket, without any degree of fright or apprehenſion. So ſtrong is the effect of cuſtom on the human mind, and ſo contemptible does danger or horror become, when familiarized by continual repetition!"

The ſame writer, in ſpeaking of the manner in which the peaſants manufacture the iron, ſays, "I have viſited ſix or ſeven forges on my journey, each of which conſtantly employs from four to fourteen hundred workmen, only in iron. Wherever there is a country ſeat, you may be certain to ſee one of theſe fabrics; and no Cyclops were ever more dextrous in working their materials. I have ſeen them ſtand cloſe to, and hammer, in their coarſe frocks of linen, a bar of ore, the heat and refulgence of which were almoſt inſupportable to me at 10 feet diſtance, and with the ſparks of which they are covered from head to foot. I had the pleaſure of viewing the whole proceſs uſed to reduce the ore into iron, and muſt own it is very curious. They firſt roaſt it in the open air for a conſiderable time, after which it is thrown into a furnace, and when reduced to fuſion is poured into a mould of ſand about three yards in length. Theſe pigs, as they are then denominated, are next put into a forge heated to a prodigious degree; they break off a large piece with prickers when red hot, and this is beat to a leſſer ſize with hammers. It is put again into the fire, and from thence entirely finiſhed by being laid under an immenſe engine reſembling a hammer, which is turned by water, and flattens the rude piece into a bar. Nothing can exceed the dexterity of the men who conduct this concluding part of the operation, as the eye is their ſole guide, and it requires an exquiſite nicety and preciſion.—It is certainly a moſt happy circumſtance that Sweden abounds with theſe employments for her peaſants, as from the ungrateful ſoil and inclement latitude, they muſt otherwiſe periſh by miſery and famine."

SECT. II.

Geographical Deſcription of Sweden.

SWEDEN has always been geographically conſidered as divided into ſeven provinces, viz. Sweden Proper, Gothland, Livonia, Ingria, Finland, Swediſh Lapland, and the Swediſh iſlands in the Baltic; but it is to be obſerved, that two of theſe provinces, viz. Livonia and Ingria, at preſent appertain to Ruſſia, having been conquered by Peter the Great, and afterwards ceded to the Ruſſians by poſterior treaties.

The five provinces which ſtill remain in the poſſeſſion of the Swedes are thus divided;

Sweden Proper contains	Uplandia, Sudermania, Weſtmania, Nericia, Geſtricia, Helſingia, Delecarlia, Medolpadia, Angermania, Iniptia, Weſt Bothnia.
Gothland, or Gothia, contains	East Gothland, Weſt Gothland, South Gothland.
Finland contains	Finland Proper, Nylandia, Carelia, Kenholm, Savolaxia, Tavaſtia, Cajunia.
Swediſh Lapland contains	Augermanice Lapmark, Uma Lapmark, Pitha Lapmark, Lula Lapmark, Torno Lapmark, Kima Lapmark.
The Swediſh iſlands are	Gothland, Ocland, Oeſel, Dago, Aland, Hagland, Rugen.

To theſe we may add, that Livonia contains Eſtonia and Letten, and that Ingria contains Ingri Proper, Ingermania, and Soluſka.

SWEDEN PROPER.

SWEDEN, properly ſo called, is bounded on the north by Lapland, on the ſouth by Gothland, on the eaſt by the gulph of Bothnia, and the mountains part it on the weſt from Norway; extending 710 miles from ſouth to north, and about 225 from eaſt to weſt, though in many places it is much narrower. The country is fruitful, though mountainous in ſome parts; abounds with rich mines of copper, and affords conveniency of water and fuel for working them. It is divided, as we have already obſerved, into eleven parts; which are,

Upland, ſurrounded on the north-eaſt and eaſt by the Baltic Sea; on the ſouth it has part of the ſame ſea, and part of Sudermania, from which it is ſeparated by the lake of Maeler; on the weſt it is bounded by Weſtmania, and on the eaſt by Geſtricia, from which the river Dala parts it. It extends about 75 miles from north to ſouth, and about 65 from eaſt to weſt. Here are many mines of iron and lead, and ſome of ſilver. The country is very fruitful, and produces, amongſt other things, excellent wheat. The moſt conſiderable cities and towns here are as follow:

Stockholm, the capital of the whole kingdom, and the reſidence of the king, had its name from its ſituation, and the great quantity of timber uſed in building it; Stock ſignifying timber, and Holm an iſland. It ſtands 280 miles north-eaſt from Copenhagen, 224 from Gottenburg, 342 from Wyburg, 387 weſt from Peterſburg, 465 from Warſaw, 660 north from Vienna, 840 from Paris, and 790 north-eaſt from London. It is built upon piles in ſeveral little iſlands which lie near one another. It takes up at preſent ſix of thoſe iſlands, together with the ſouthern and northern ſuburbs; the one in the peninſula of Toren, and the other in Athundria. It is commonly divided into four parts, which are South-Malm and North-Malm, the two ſuburbs, between which the city ſtands in an iſland; the fourth part is called Garceland. The iſle, within which the greateſt part of Stockholm is incloſed, is ſurrounded by two arms

of

of a river, which run with great force out of the lake Maeler: Over each of theſe arms there is a wooden bridge. There are ſome other iſlands ſeparated from the city but by ſmall canals. From the city there is a proſpect, on one ſide over the lake, and on the other over the ſea, which here forms a gulph, that running between ſeveral rocks, ſeems as if it were another lake. The water is ſo little brackiſh before Stockholm, that it might be drank; which is owing to the great quantity of freſh water that runs into the ſea from the lake.

About 300 years ago this place was only a bare iſland, with two or three cottages for fiſhers; but upon the building of a caſtle there, to ſtop the inroads of the Ruſſians, and the tranſlation of the court thither, it grew, by degrees, to ſurpaſs the other more antient cities, and is now ſuppoſed to be as populous as Briſtol. The caſtle, which is covered with copper, is a place of no ſtrength or beauty, but of great uſe; for it is a ſpacious building where the court lodges, and which alſo furniſhes room for moſt of the great officers, the national court of juſtice, the colleges of war, chancery, treaſury, reduction, liquidation, commerce, execution: here is alſo an armoury, chapel, library, the public records, &c. It lodges very few of the inferior officers and ſervants of the court; they, together with the foot-guards, being quartered upon the burghers, at their landlord's charge for lodging, fire, and candle.

In this city are nine large churches, built with bricks, and covered with copper; and three or four wooden chapels.

The palace of the nobility, which is the place of their aſſembly at the convention of the ſtates, and the depoſitory of their privileges, titles, and ſuch other records as concern their body, is a very ſtately pile, and one of the fineſt in the kingdom: it is but one large pavilion, adorned on the outſide with marble figures and columns, and within with pictures and ſculptures; eſpecially in two large halls, where the nobility meet. Next to this palace, is that of the lord high chancellor; and a little farther are two other palaces belonging to noblemen. Theſe four palaces ſtand on the banks of the lake, are built after the ſame manner of architecture, and are all covered with copper. The bank, built at the city's charge, is alſo a noble edifice, and, together with ſeveral magnificent houſes of the nobility, all covered with copper, afford a handſome proſpect.

Moſt of the burghers houſes are built with brick, except in the ſuburbs, where they are of timber, and thereby ſubject to the danger of fire, which commonly, when it gets a-head, deſtroys all before it in the quarter where it happens. To repair which misfortune, they ſometimes ſend the dimenſions of the houſe they intend to build, into Finland; where the walls, and ſeveral ſeparations, are built of pieces of timber laid one upon another, and joined at the corners; and afterwards marked, taken down, and ſent by water to Stockholm, there to be ſet up and finiſhed; and, when they are kept in good repair, they will laſt 30 or 40 years; and are warmer, cleanlier, and more healthful than thoſe of either brick or ſtone. To prevent the danger of fire, the city is divided into 12 wards; and in each of theſe there is a maſter, and four aſſiſtants; who, upon notice of any fire, are immediately to repair to it; as alſo all porters and labourers, who muſt range themſelves under the maſter of their reſpective ward. There is, beſides, a fire-watch by night, who walk about only for that purpoſe; and in each church ſteeple a watch is kept, who tolls a bell upon the firſt appearance of fire.

The government of this city is in the hands of the great ſtadtholder, who is alſo a privy-counſellor. He ſits once a week in the town-houſe, and preſides in the college of execution, aſſiſted by an under-ſtadtholder, and a bailiff of the caſtle. Next to him are the four burgomaſters; one for juſtice, another for trade, the third for the polity of the city, and the fourth has the inſpection over all publick and private buildings, and determines ſuch caſes as ariſe on that account: with them the counſellors of the city always ſit, and give their votes, the majority of which concludes. Their number is uncertain, but uſually about 20, moſtly merchants and ſhop-keepers, or ſuch as ſerved the king in ſome inferior employments. Beſides their ſalary, they have an immunity from ſuch impoſitions as are laid on the inhabitants to ſupport the government of the city; which pays all its officers and ſervants, maintains a guard of 300 men, and defrays the charge of all public buildings and repairs. To ſupport this expence, beſides a duty belonging to the city of goods imported and exported (which is about four per cent. of the cuſtoms paid to the king, and amounts to about 5000 pounds per ann.) the magiſtrates impoſe a yearly tax on the burghers; in which they are aſſiſted by a common-council of 48 (which chuſes its own members) and meet every ſpring, to proportion the payments for the enſuing year. On the traders they uſually impoſe 40, 50, or 60 pounds ſterling; and upon others, of a meaner condition, as ſhoemakers, taylors, &c. five or ſix pounds; and on no houſekeeper leſs than 15 ſhillings; beſides quartering the guards, inferior officers and ſervants of the court, with other leſſer charges; which all together would be thought a great burden, even in richer countries: neither is it otherwiſe eſteemed by the inhabitants of this city, who can ſcarce be kept in heart by the privileges they enjoy, as well in cuſtoms, as in the trade of the place; which muſt needs paſs through their hands: for the natives of other parts of the kingdom, as all foreigners are obliged to deal only with the burghers; except thoſe of the gentry, who make iron; they having the privilege to ſell it immediately to ſtrangers.

This city is, in a manner, the ſtaple of Sweden; to which moſt of the goods of their own growth, as iron, copper, wire, pitch, tar, maſts, deals, &c. are brought to be exported. The greateſt part of the commodities imported from abroad come to this port, where there is a haven capable to receive 1000 ſail of ſhips, and a bridge or key near an Engliſh mile long, to which the greateſt veſſels may lie with their broadſides. The only inconveniency is, that it is 10 miles from the ſea, the river very crooked, and no tides. It opens into the Baltic, but is of dangerous acceſs, by reaſon of the rocks; within, it is one of the moſt commodious harbours in Europe; for the ſhips of the largeſt ſize lie cloſe to the key, where they are ſo ſecure from the wind, that they need neither anchors or cables to hold them. Its entrance is defended by two forts.

Upſal ſtands on the banks of the river Sal, or Sala, which falls into the lake of Ekolen, and is 42 miles diſtant from Stockholm towards the north-weſt. It is a very antient city, formerly the capital of the North, and the ſeat of the king. It is divided into two parts by the river, which is here pretty large, and ſo hard frozen up in February, that a fair is yearly kept there upon the ice in that month. The town is large, but without any conſiderable fortifications. Here is to be ſeen the fineſt church in the whole kingdom; namely, the cathedral. It is all covered with copper, and adorned with ſeveral tombs, eſpecially thoſe of many kings. In the chapel, behind the altar, ſtands the monument of king Guſtavus in marble, between the ſtatues of his two wives, who lie alſo buried here. In another chapel is the tomb of king John's wife, who was mother to Sigiſmund III. king of Poland: it is of white marble. Above the city, on a ſteep hill, there is a beautiful caſtle, which is fortified. It is very large, built after the Italian manner, and has a noble proſpect over the city, which it commands; and over the whole country.

Upſal was, at firſt, a biſhop's ſee, and was created into an archbiſhoprick by pope Alexander III. at the requeſt of king Charles, ſucceſſor to St. Erick. Stephen, who died in the year 1158, was the firſt archbiſhop of this ſee; and John Magnus, who, at the reformation, refuſed to admit the Lutheran confeſſion, and removed to Rome, was the 26th. Since his time there have been only proteſtant archbiſhops, who do not live with the ſame pomp and magnificence as the Roman catholic prelates uſed to do; for the latter never appeared in public without a retinue of four or 500 people on horſeback.

The univerſity of Upſal conſiſts of a chancellor, who is always a great miniſter of ſtate; a vice-chancellor, always the archbiſhop; a rector, choſen out of the profeſſors, of whom there are about 20 that have each 120l. a year ſalary. The ordinary number of ſtudents is about ſeven or 800, 50 of which are maintained by the king, and ſome few others were formerly by perſons of quality: the reſt, that cannot ſubſiſt of themſelves, ſpend the vacation in gathering the charities of the dioceſe they be-

long to, which is commonly given them in corn, butter, dried fiſh or fleſh, &c. upon which they ſubſiſt at the univerſity the reſt of the year. They do not live collegiately, but in private houſes, wear no gowns, nor obſerve any other diſcipline than what their own neceſſity or diſpoſition leads them to.

Engkoping is a place of conſiderable trade, on the lake Maeler, about 25 miles from Stockholm to the weſtward, and 24 from Upſal to the ſouth.

The next ſubdiviſion of Sweden Proper is Sudermania, which is ſeparated from Upland on the north by the lake Maeler; bounded on the ſouth by Eaſt Gothland; on the weſt by Nericia; and by the Baltic on the eaſt. It is a populous country, extending 60 miles in length, and 45 in breadth; fruitful in corn, wines, and timber, of which laſt many ſhips are built in this province. It is divided into Sudermania Proper, and the iſland of Foren, formed by lake Maeler and Rekarne.

Nicoping, the capital of this province, ſtands on the ſhore of the Baltic, 48 miles to the ſouthward of Stockholm. It is a place of ſome trade, with a commodious harbour, and a caſtle, in which the dukes of Sudermania uſed to reſide.

Strengthniſs is a ſmall town on the ſouth-ſide of the lake Maeler, the ſee of a biſhop ſuffragan to the metropolitan of Upſal. Some gothic inſcriptions in the Runic characters evince the antiquity of the place. Charles IX. lies buried in the cathedral, which is an ancient gothic edifice; oppoſite to the town an annual fair is held upon the ice.

Troſa, or Treſen, is ſituated on the Baltic, about 40 miles from Stockholm, and has a very good harbour.

Telga, which is 20 miles diſtant from Stockholm towards the ſouth-weſt, and Toriſilia, which is 18 miles to the weſt of Strengthniſs, contain nothing now worthy of obſervation, though Telga was formerly a place of ſome conſequence, and is thus mentioned by Monſieur Huet, the celebrated biſhop of Arranches, in his poetical account of a journey to Stockholm.

"Once fam'd, by ſubterranean fires
"Now waſted, Telga next aſpires.
"Each ſtable here rein-deer contains,
"The denizens of northern plains;
"Two curling horns their lofty brow
"Defend, like ſtags their bodies ſhew;
"O'er ice and ſnow, the lake and mead,
"They whirl the ſledge with Eurus ſpeed."

The province of Weſtmania, or Weſtmanland, is a very barren country, ſtretching about 90 miles in length, from ſouth-eaſt to north-weſt, and about threeſcore miles in breadth, from ſouth to north. It had formerly ſome conſiderable ſilver mines, but now they are exhauſted.

Aroſon is the capital of Weſtmania; it is ſituated on the ſide of the lake Maeler, between Koping and Engkoping, about 35 miles from Stockholm. It is a biſhop's ſee, and well defended by a ſtrong caſtle. The hereditary convention was ſettled here in the year 1544, by which the ſucceſſion to the crown of Sweden was ſettled in the family of Guſtavus Vaſa.

Arbogen, on the little river Arbou, which falls into the lake Maeler, is ſituated about 60 miles to the weſtward of Stockholm.

Koping is a ſmall town between Aroſon and Arbogen, and in its neighbourhood are ſome tolerable mines of iron and copper.

Nora is another ſmall town at the diſtance of 28 miles to the weſtward of Arbogen.

Lindeſzas is an inconſiderable place built near a rivulet, which diſembogues itſelf in the lake Maeler, and ſituated to the eaſtward of the Lindenberg mines.

The province or diſtrict of Nericia is bounded on the north by Weſtmania; on the eaſt by Sudermania; on the ſouth by Eaſt Gothland; on the weſt by part of Weſt Gothland, and the northern extremity of the lake Vatter, or Veter. It contains ſeveral lakes and rivers, of which the river Troſa ſeparates the country into two parts, from weſt to eaſt. Silver mines were formerly worked in this province, but at preſent it produces only iron, ſulphur, and allum. The chief places here are

Arebro, Aſkerſund; and
Hillſmerberg, Glanſhammer.

But none of theſe are any ways remarkable, or deſerve a particular deſcription.

The province or diſtrict of Geſtricia is ſituated between Delecarlia, or Dalekarlia, the Bothnian Gulph, and the rivers Tynea and Dala. It contains three towns, viz. Gevalia, Borna, and Coperberget; the two latter are quite inconſiderable, but the former being at the mouth of the river Haſunda, which forms a gulph that ſerves as a good harbour, the place drives on a conſiderable trade.

The province of Helſingia is very extenſive, being bounded on the north by Jemptia and Medolpadia; on the weſt and ſouth-weſt by Delecarlia; on the ſouth by Geſtricia; and on the eaſt by the Bothnian Gulph. The country is mountainous and woody, and the inhabitants employ themſelves principally in fiſhing and hunting.

Hudwickſwald is the capital of this province, and is ſituated near the Bothnian Gulph: it carries on a conſiderable traffic in roſin, pitch, corn, timber, and hides.

Soderhamn has a good haven, formed by the mouth of the river Luiſpa.

The other towns, viz. Hien, Swegh, Korbole, Luſdal, and Alta, are of very little importance, and contain nothing worthy of obſervation.

The province of Delecarlia, or Dalekarlia, is bounded on the weſt and north by the mountains of Norway; on the eaſt by Helſingia and Geſtricia; and on the weſt by Weſtermania and Weſtmaland. It is 165 miles in length, and 100 in breadth: its ſubdiviſion is into what are called Three Vallies; yet though it is ſo extenſive, it contains only a few very inconſiderable villages. The mountains abound with iron and copper, and ſome of the mines are incredibly deep. It hath been an obſervation often made, that the greateſt number of the revolutions of Sweden have begun or originated in this province, on which account the inhabitants have been characterized as more courageous, bold, and ferocious than any of the Swedes, as well as poſſeſſed of a more liberal ſpirit of independency. The principal villages are

Idra, ſituated on the river Elſinain, one of the ſources of the Dala, which runs into the Silian lake.

Lima, 36 miles more to the ſouthward; and

Hedernora, about 40 miles from Upſal, and ſituated on the river Dala, near the confines of Weſtermania.

The province of Medolpadia hath the Bothnian Gulph on the eaſt, Angermania on the north, Jempterland on the north-weſt, and Helſingia on the ſouth-weſt. It is woody, mountainous, and is watered by three rivers, the moſt northern of which is called Indal, and runs through the whole province lengthways. The moſt meridional one is named Niſarund. The third, which runs betwixt theſe two, is the ſmalleſt. Beſides theſe, there is a rivulet called Stamming-Back, which waters the ſouthern borders of this province. The ſea-coaſt here is about 40 miles long, and full of rocks, to the ſouth of Sundſwald, the capital of this province, at the mouth of the middle river, with a pretty good harbour. Other places of ſome note are, Haſio, a ſea-port town at the mouth of the river Indal, over-againſt which lies the iſland of Alvon. Nirunda, alſo a ſea-port town on the Niſarund. Trop and Tuna ſtand higher up on the ſame river. Tors, Indal, and Carlobec, on the river Indal. Anas, Sion, and Guarp, lie on the ſame coaſt.

Angermania, or Angermanland, is bounded on the north by Weſt Bothnia and Lapland; on the eaſt by the gulph of Bothnia; on the ſouth by Medolpadia; and on the weſt by Jempterland. It is above 90 miles in length, and near as many in breadth. The river Angerman-Flodt runs through it; but it is a mountainous country, full of rocks and foreſts, ſo that there are very few villages, and but one town of ſome note, which is Hernoſand, on the Bothnic Gulph, where it has a pretty good harbour, which affords it ſome trade. It lies about 70 miles from Hudwickſwald to the north. Natra, in the ſame province, ſtands on a bay of the ſame gulph, 45 miles diſtant from Hernoſand to the north.

Iniptia, Jemptia, or Jempterland, has Lapland on the north; Angermania on the eaſt; Medolpadia, Helſingia, and Dalecarlia on the ſouth; and the high mountains of Norway on the weſt. It is watered by two pretty conſiderable rivers, namely, the Indeal, which forms in the middle of this province a large lake, and runs into Medolpadia and the Hamerdal, which runs from north-weſt

to ſouth-eaſt, and enters into Angermania. Here are no cities, but only a few villages and hamlets; the moſt conſiderable of which are Reſſund, a fortreſs 66 miles diſtant from Hernoſand towards the weſt. Lidh, or Lida, reckoned the chief place of the province, ſtands about 20 miles north of Reſſund.

Weſt Bothnia, thus called to diſtinguiſh it from Cajunia, which lies on the other ſide of the gulph, and is ſometimes called Eaſt Bothnia, lies along the northern part of the gulph, thence called the Bothnic Gulph, which bounds it on the eaſt; it has Angermania on the ſouth, and is ſurrounded by Swediſh Lapland on the weſt and north. That part of this province which lies along the coaſt, is pretty well peopled, and has many villages, but few towns of any note. The country is well watered by ſeveral rivers which ariſe from the lakes in Lapland. The chief of theſe rivers going from ſouth to north are, Uma, Skellefta, Pitha, Lula, Rana, Torno, and Rimi; the laſt of which, together with the gulph, divide Weſt from Eaſt Bothnia. The chief towns here are, Uma on the gulph, at the mouth of the river of that name, about 96 miles from Hernoſand to the north-eaſt. Pitha, at the mouth of the river of that name, about 80 miles north from Uma. Lula, alſo at the mouth of a river of that name, 18 miles from Pitha to the north. Torno, at the mouth of the river thus called, 54 miles diſtant from Lula to the north-eaſt, ſtands at the bottom of the Gulph of Bothnia, near the borders of Lapland. It has a good harbour, and is a place of ſome trade.

GOTHLAND.

THE ſecond grand diviſion of Sweden, called Gothland, comprizes

Eaſt-Gothland,
Weſt-Gothland, and
South-Gothland.

Of theſe in their order.

I. Eaſt Gothland includes the country properly ſo called, Smaland, and the iſland of Ocland.

Eaſt Gothland Proper is bounded on the north by Sudermania; on the eaſt by the Baltic; on the weſt by the lake Vetter, or Veter; and on the ſouth by Smaland. It is a fertile, open, flat country, producing corn, cattle, fowl, veniſon, fiſh, &c.

The chief town is called Norkoping, which term implies the Northern Market. It ſtands about 75 miles to the ſouthward of Stockholm, on the bank of a ſtream which runs from the lake Vetter to the gulph of Brawiken. The town is populous, large, and hath conſiderable commerce. The biſhop of Avranches, in mentioning it, ſays;

"At Norkoping, where copper-plates
"Are forg'd, the ſteeds our driver baits;
"Large coins are here impreſs'd, and threads
"Form'd of vaſt length from copper ſhreds;
"To diſtant lands theſe precious wares,
"In loaded ſhips the merchant bears."

This place is likewiſe celebrated for a ſalmon fiſhery, which affords a maintenance to many people.

Sudercoping, a town of ſome trade; it ſtands on a branch of the ſea, about 16 miles from the Baltic; is unfortified, but has been remarkable for ſome curious cryſtal ſtones which have been found in the neighbourhood.

Ten miles to the eaſtward of Sudercoping ſtands Stegeburg; it is a ſmall town, but has a tolerable harbour, and ſome commerce.

Waſtena, or Vadſtan, ſituated on the eaſtern bank of the lake Vetter, at 25 miles diſtance from Norcoping, is only remarkable for the ruins of an ancient royal palace.

The biſhop of Avranches, whom we have already quoted, in ſpeaking of Eaſt Gothland in general terms, ſays;

"Now wild Eaſt Gothland's bounds we gain,
"Where beaſts-ſkins cloath each livid ſwain;
"Froſt-bit their faces, coarſe their fare,
"Caps of warm frieze the women wear;
"Well jolted with the rugged way,
"Each night in cottages we lay,
"Which upright trunks of trees compoſe,
"Graſs on the turfy covering grows;
"Where ſheep as on a level mead,
"Undaunted, unmoleſted, feed.
"The roof has peep-holes—So 'tis ſaid,
"Thy temple, Terminus, is made."

Smaland is ſituated between Eaſt Gothland, the Baltic, Bleking, and Halland. It is 170 miles in length, and about 75 in breadth: it abounds in wood, cattle, copper, lead, iron, &c.

Calmar, the capital of this diſtrict, is a very conſiderable city. It is ſituated 160 miles to the ſouthward of Stockholm, and built upon a ſtreight of the Baltic, called Calmer Sund, which is ſituated oppoſite to the iſle of Ocland. It is divided into the Old and New Town. Old Calmar is famous by a deed executed there in the year 1393, by which the three northern crowns of Sweden, Norway, and Denmark, were ſettled on the head of queen Margaret. This is called in hiſtory the union of Calmar. Eric, Margaret's ſucceſſor, founded 13 prebends here, and gave a decree, by which he put the church of Calmar among the collegiate ones. After the diviſion of the crowns, which the fatal union of Calmar had united, this city became a frontier town, with regard to the Danes, who were in poſſeſſion of Schonen. It was often taken, retaken, and plundered; and, to complete its ruin, it was burnt down to the ground in the year 1547; nothing eſcaped the fire but the church, and about threeſcore houſes. Soon after this misfortune the new city was built at a muſquet-ſhot's diſtance from the old town, in a little iſland called Owarnholm. This new city is large, the ſtreets are broad and ſtrait, and the houſes well built; but the town is not populous. The new fortifications conſiſt only of thick walls built with large pebble ſtones taken out of the ſea, and a few ramparts built only with ſand, and therefore ſupported by another wall, which the ſea ſurrounds almoſt on all ſides, except the gate. The ſituation of this city renders it very ſtrong, all the avenues to it being full of marſhes, or cut off by water from the ſea, which abounds here with rocks, between which there are, as it were, ſo many abyſſes, that it is impoſſible to approach the place either in boats, on horſeback, or on foot. On the ſea-ſide there is a long mole built with ſtone, along which boats and ſhips ride ſecure. This mole is defended by a fortreſs called Grimſkar, built at about 50 paces from it, on a rock ſurrounded by the ſea, and where a garriſon is conſtantly kept. Behind the Old Town ſtands the caſtle, which is of very difficult acceſs, having on one ſide the ſea, which is full of rocks; and on the other good ramparts, large baſtions, and ditches full of water. This city is at preſent the reſidence of a ſuperintendant for the government of the clergy, who is honoured with a place in the public conſiſtory of the kingdom. This is a town of good trade, and the paſſage from Sweden into Germany.

Wexio, a biſhop's ſee, where ſome of the firſt planters of Chriſtianity lie buried, ſtands on the banks of the lake Salen, and is 45 miles diſtant from Calmar towards the north-weſt.

Weſterwick, a ſea-port town of good trade on the Baltic, is about 70 miles diſtant from Calmar to the north.

Ekeſio is 45 miles from Calmar to the weſt, and 18 from the lake Vetter to the eaſt.

Jonkioping is ſituated on a bank of the lake Vetter, about 60 miles north-weſt of Calmar. It is without walls or ditches, but defended by a citadel which is ſurrounded by ramparts. It is rather a briſk place, as the lake on which it ſtands affords it ſome trade. The ingenious Mr. Wraxall, a very late traveller into the northern parts of Europe, hath given us ſo intereſting and curious an account of his journey from Helſinborg (the firſt town belonging to the Swediſh dominions on the ſide of Denmark) to this place, that we think it incumbent on us to tranſcribe the moſt material paſſages of his letter, dated from Jonkioping, May 18, 1774, and addreſſed to a friend. In which he ſays,

"I croſſed the celebrated paſſage of the Sound, though it blew very freſh. We were over in little more than half an hour. At Helſinborg, where I entered the Swediſh dominions, I had the pleaſure of viewing the beautiful

tiful landſcape reverſed, which I had ſeen the preceding evening from the iſland of Zealand. Which of the two is actually the moſt charming I leave connoiſſeurs to determine. I drove 20 miles in the afternoon, and was then obliged, by the approach of night, and the want of horſes, to ſtop at a miſerable little inn, or rather cabin, where I could procure nothing beſides milk; I lay down five hours in my cloaths, and then got into the carriage at three o'clock in the morning. Had I underſtood properly the manner of travelling in this country, which is to ſend a peaſant forward from every poſt-houſe, to procure horſes in readineſs, I ſhould have doubtleſs made a conſiderable progreſs on my way; but as I neglected this neceſſary ſtep, I was obliged to wait at every ſtage an hour or two, while the horſes were brought from the neighbouring villages.

"I was forced to ſpend this night in a more deſolate and dirty hovel than the firſt, where I wrapped myſelf in my great coat, and ſlept upon a table. In the morning, when I continued my journey, the whole aſpect of nature was changed. The ſnow lay upon the ground two feet deep, and the winter ſeemed to have renewed its empire over theſe inhoſpitable plains, from whence the ſmiling month of May cannot baniſh him. In the hope of reaching Jonkioping at night, I ſet out, however, in defiance of the inclemency of the weather, which, from having been very warm, was become in a few hours as cold and piercing as our Decembers. The drivers ſeemed totally unaffected by this ſudden alteration, which did not produce any in their dreſs or cloathing; and the peaſants, both men and women, were all barefooted as before. The ſnow, however, conſpiring with the want of horſes, prevented me from reaching Jonkioping, and I ſtaid all night at a houſe, which for horror of ſituation I never remember paralleled. It is quite detached from any village or hamlet, and the ſpot on which it ſtands is a bare rock, deſtitute of any covering or earth, and ſurrounded on every ſide by the deepeſt woods it is poſſible to conceive, and in which I had not ſeen one human creature for two leagues before my arrival. Yet, in this ſituation, fatigue made me ſleep very ſound, and my ſervant by me, till three in the morning, when, with the return of day, I entered my carriage, and left this moſt melancholy and wretched habitation. Had I been in Spain or Portugal I own my fears would have kept me awake, and I ſhould have recollected every diſmal recital of murders and aſſaſſinations, which nurſes or novels had informed me of; but here thoſe accidents rarely or never happen, and one may travel in perfect ſafety.

"I got to Jonkioping the next morning about ten o'clock, and gladly enjoyed a few hours of relaxation after ſo many unpleaſing occurrences. It is difficult to give a picture of the country through which I paſſed from Helſinborg, the colours of which you will not imagine are heightened by fancy or invention. The firſt 20 miles exhibited ſome few marks of cultivation and agriculture; and though there was not one collection of huts or houſes, which could be denominated a village, yet ſcattered cottages, and a little ploughed land, amidſt an immenſe waſte, informed the paſſenger that it was not totally unoccupied or unpeopled. But as I advanced farther into the province of Scamia, and afterwards into that of Smaland, even there faint traces of human reſidence vaniſhed. Groves of fir or aſpin covered the country; and in the courſe of 60 miles, I can ſafely aſſure you, I ſaw not 100 people, and not 10 hamlets: villages there are not any. I have drove from one ſtage to another, of 12 or 14 Engliſh miles, without meeting or ſeeing a ſingle perſon, though I caſt my eyes impatiently round on every ſide, in hopes to diſcern the countenance of man.

"In many places the firs on either ſide the road formed avenues as noble as thoſe which are often planted at the entrance to palaces, or noblemens ſeats; and through the whole was ſpread a kind of rude and gloomy magnificence, which, ſuperadded to their ſilence and lonelineſs, very ſtrongly affected the mind. Even the birds ſeem to have abandoned theſe dreary foreſts, and I heard or ſaw none, except woodpeckers, and now and then a cuckoo. I enquired if they did not afford refuge to wolves or bears, as theſe animals are commonly found in thoſe countries and places which want population; but the peaſants aſſured me, the former were only in ſmall numbers, and rarely ſeen: and as to bears, there are not any.

"The peaſants are civil and humble, to obſequiouſneſs, grateful for the third part of a halfpenny, and infinitely leſs uncivilized and barbarous than one would be tempted to ſuppoſe from the appearance of every thing around them. Had I not taken the precaution to carry wine and proviſions with me, I muſt have been almoſt ſtarved in my journey through theſe miſerable provinces, where the peaſants are ſtrangers to every kind of aliment, except bread, and ſalt pork or fiſh. It is, indeed, a queſtion whether the former of theſe deſerves the name of bread, as it is a compound of rye and oats; among which they mingle, in times of dearth and famine, a kind of flour made of the internal bark of trees raſped: it is of a colour approaching to black, and of a taſte which you muſt be as hungry as I was to reliſh.

"My ſervant, who is a German, and has wandered over half Europe in various ſervices, was quite tired with four days of ſuch miſerable accommodation, and exclaimed in a rapture, at the ſight of this place, that it was *le paradis terreſtre*. It is, indeed, of itſelf, a very neat country town, and moſt delightfully ſituated on the lake Vetter. I am juſt returned from looking down from the top of the church on it, and the ſurrounding meadows, which are all cultivated, and, after the deſerts I have paſſed, are peculiarly grateful to the eye. The lake itſelf, which is near 100 Engliſh miles in length, extends, far beyond the view, to the north, and rather reſembles the ſea, than a piece of inland water."

The iſle of Orland will naturally be deſcribed in thoſe iſlands which are contiguous to, and form a part of the kingdom of Sweden.

II. Weſt-Gothland is a large province, having Smaland on the ſouth-eaſt, Halland on the ſouth-weſt, the river Gothelba on the north-weſt, by which it is parted from the government of Bahus, and the province of Dalia; on the north it has the lake Wenner, and part of Vermeland; and on the eaſt it has part of Nericia, and the lake Vetter, which divides it from Eaſt-Gothland Proper. It is watered by a great many lakes and rivers, and abounds with excellent paſtures, where great quantities of cattle are bred, and the country is made wealthy by the ſale of them.

Here are the following conſiderable towns:

Gottenburg, or Gothburg, which ſtands on the Schager-Rack, or Categate, on the ſouthern branch of the river Gothelba, which there falls into the ſea, and forms the harbour of this city. It is 170 miles diſtant from Calmar towards the weſt, and 225 from Stockholm to the ſouth-weſt. It is not an antient town, being built in the year 1607, under the reign of king Charles IX. His ſucceſſors have granted it great privileges, by which it is become a conſiderable mart-town. The Dutch drive a large trade here. In the war of 1644, the Danes exerted their utmoſt efforts to ruin this city, but to no purpoſe; and it has been ſo well fortified ſince, that it is now one of the ſtrongeſt maritime towns in the kingdom.

"Of late years (ſays a learned writer) the Swedes have eſtabliſhed an Eaſt India company at Gottenburg, whence they ſend ſome ſhips annually to China, and to the coaſts of Coromandel and Malabar. They have no kind of merchandize to ſend from Sweden to India, except ſome iron and copper, and thoſe articles they cannot find a market for in any conſiderable quantity; ſo that the greateſt part of their cargo muſt be paid for in ſpecie; how far this part of trade is beneficial for Sweden, where there is ſo little ſpecie, and where the merchants are obliged to procure ſilver at a conſiderable premium, is an affair that I ſhall now enquire into. Undoubtedly, if the cargoes of the Eaſt India ſhips, which are landed in Sweden, were for the conſumption of that kingdom, this branch of commerce would ſoon bring the inhabitants to deſtruction. But I find, by the cuſtom-houſe books of Gottenburgh, that they export Eaſt India goods to the amount of 250,000 l. ſterling yearly; which are ſmuggled into Scotland and Ireland, and entered regularly into ſeveral ports of the Baltic, to Hamburg and to Bremen, which is rather more than the prime coſt and freight of all the goods they bring from India, and, conſequently, Sweden has her own conſumption free of all charges; and as long as the merchants of this kingdom

can

can find a market for the ſurplus of their Eaſt India goods, this trade cannot be detrimental to them, but the contrary. The uniting the Iſle of Man to the crown of Great Britain, where the merchants of Gottenburg, as well as thoſe of Copenhagen, had conſiderable magazines of Eaſt India goods, was a terrible loſs to the Swediſh and Daniſh companies."

Skara, Skaren, or Skar, a biſhop's ſee, about 12 miles diſtant from the lake Wenner to the ſouth, and 84 from Gottenburg to the north-weſt, was the ſeat of the antient kings of Sweden, and had a palace, one of the ſtatelieſt not only in the north, but in all Europe, as may ſtill be judged by its ſituation, walls, and ſtructure. It is now a defenceleſs town, though formerly the metropolis of Weſt-Gothland. Near the lake Wenner, and the antient palace we have been mentioning, ſtands the mountain called Kindakulle, which is very high, and produces all kinds of herbs and plants, except vines. Every thing grows there naturally; and this mountain, which may be reckoned one of the moſt fruitful in the north, is alſo one of the moſt delightful, by the ſweet warbling of an infinite number of birds that meet here.

Linkoping or Lidkoping, which implies the mart of Lida, ſtands on the lake Wenner, at the mouth of the river Lida, which there falls into the lake. It is 15 miles diſtant from Skara. Concerning this place the biſhop of Avranche ſays:

" Wide branching pines, as on we paſt,
" A welcome ſhade around us caſt;
" The night o'ertook us at a town
" Nam'd Linkoping, to fame well known,
" Where firſt their breath the Magni drew,
" Johannes and Olaus too."

The magni above alluded to were the two celebrated brothers, viz. Johannes Magnus, archbiſhop of Upſal, the author of the Swediſh hiſtory; and Olaus his brother, who ſucceeded him in the archbiſhopric, and wrote a treatiſe on the manners, cuſtoms, and wars of the northern nations.

Falcoping, 20 miles north from Skara, ſtands on the ſouth bank of a little lake, which empties itſelf into the river Lida.

Marieſtadt ſtands on the eaſtern bank of the lake Wenner, 30 miles diſtant from Lidkoping to the north-eaſt. This town had its name from Mary Anne, conſort to king Charles IX. who built it. Theſe three laſt cities are not, at preſent, very conſiderable.

Vermeland, or Wermeland, has Dalecarlia on the north, Weſtermania and Nericia on the eaſt, the lake Wenner on the ſouth, and Norway, with part of Dalia, on the weſt. Its greateſt extent, from eaſt to weſt, is about 97 miles; and from north to ſouth, about 144. It has a great many lakes and marſhes, is but indifferently cultivated, and thinly peopled. Here are ſome mines of iron, and one of copper.

The chief towns are,

Carloſtad, or Carlſtad, which ſtands on the northern bank of the lake Wenner, 120 miles weſt from Stockholm. It was built by Charles IX. king of Sweden, in the place of the antient city of Tingwalla.

Philipſtad, about 25 miles from Carloſtad, to the north-eaſt, is a place of difficult acceſs, being ſeated amongſt brooks and marſhes.

Ruſcoy is about the ſame diſtance from Philipſtad, to the ſouth.

Dalia, which the Swedes ſpell Daal, one of the ſmalleſt provinces in the kingdom, has the lake Wenner on the eaſt, Weſt-Gothland Proper on the ſouth-eaſt, the government of Bahus, and part of Aggerhus, on the weſt and north-weſt, and Vermeland on the north-eaſt. Its extent, from north to ſouth, is about 84 miles; and from eaſt to weſt, not above 24. It is full of mountains, lakes, and rivers, which fall into the lake Wenner, and has pretty good paſtures for cattle, which are of a larger ſize than ordinary; but otherwiſe the country is barren.

The moſt noted places are,

Daleburg, which is the chief place in this province, and ſtands on the weſtern bank of the lake Wenner, 60 miles from Gottenburg, towards the north-eaſt.

Tweta, on the ſame lake, 30 miles more to the north.

III. South-Gothland has Eaſt and Weſt-Gothland on the north, and is ſurrounded every-where elſe by the ſea. It is divided into three provinces; namely, Halland, Schonen, and Bleking.

Halland has the ſea of Denmark, or Categate, on the ſouth-weſt; Schonen, on the ſouth; and part of Eaſt-Gothland, and Weſt-Gothland, on the north-eaſt and north. Its extent, along the ſea-coaſt, is about 75 miles; but its greateſt breadth is not above 22 miles. This is a pleaſant and fruitful country, which belonged formerly to Denmark, but was, in 1645, engaged to the Swedes, as a ſecurity for a free paſſage of the Sound; and was afterwards yielded to them for ever by the treaty of Roſchild.

The chief towns here are,

Halmſtad, the capital of this province, which ſtands on the Categate, 140 miles from Calmar, to the weſt; and 46 from Gottenburg, to the ſouth. It has a good harbour, and is a place of trade. It was fortified by Chriſtian IV. king of Denmark, but yielded to Sweden by the treaty of Bromſbro in 1645.

Laholm, a ſmall town on the Categate, at the mouth of the river Laga, 18 miles diſtant from Halmſtad, to the ſouth-eaſt. It has a citadel, and a good harbour.

Falkenberg, on the ſame ſea, at the mouth of a large river of the ſame name, is 18 miles diſtant from Halmſtad, to the north-weſt. It is a ſea-port, defended by a caſtle.

Warberg, a ſmall town with a ſtrong caſtle, and a large harbour, is 27 miles diſtant from Halmſtad, towards the north; and 20 from Gottenburg, to the ſouth.

Schonen is a peninſula, ſeparated from Zealand by the Sound, which waſhes its coaſt on the weſt: it is bounded, on the north, partly by Halland, and partly by Smaland; on the eaſt it has part of Bleking, and the Baltic ſea, which waters it alſo on the ſouth. It is about 80 miles from north to ſouth, and about 60 from eaſt to weſt. As it is the moſt ſouthern, it is alſo the moſt fruitful province; abounding with corn, cattle, fowl, and all conveniencies of life. It has alſo mines of ſilver, lead, and iron. This province belonged formerly to the Danes, but was yielded to the Swedes in 1660. The Danes ſeized again the greateſt part of it in 1676, and 1677, but were obliged to reſtore it to the Swedes by the treaty concluded at Fontainebleau in France, September 16, 1679. This province is ſubject to the theatre of war, whenever any breaks out between Sweden and Denmark, becauſe of the neighbourhood of theſe two kingdoms.

Notwithſtanding the fruitfulneſs of this province, the biſhop of Avranches ſpeaks of it in the following words:

" Spite of the wind's tempeſtuous roar,
" We croſs'd the Sound to Schonen's ſhore;
" Our hoſt there cook'd a ſtrange repaſt,
" Delicious to a Gothland taſte;
" He kindly urg'd us firſt to eat,
" Sprinkled with ſaffron, ſalted meat;
" Then on the board at once appear
" Raw mutton-ſteaks, dry'd currants, beer,
" Sweet-ſcented herbs, rice pounded, wine,
" Cloves, and quick pepper, ſifted fine.
" The table laſt, full many a pound
" Of ginger, butter, ſugar, crown'd;
" With muſtard, honey, fennel, oil,
" And coriander——All the toil
" And ſkill of Hecaté could ne'er,
" In Stygian ſhades, ſuch cates prepare;
" Nor worſe the drugs, if fame be true,
" Which unrelenting ſtep-dames brew.
" Each diſh untouch'd, we haſte away,
" Reſolv'd to travel night and day.
" Thro' fir-tree foreſts, large and brown,
" We paſs, to Gothlanders well known;
" Our thirſt with proffer'd mead we ſlak'd,
" They then brought biſcuits, which, well bak'd,
" With ſalt and cinnamon, they prepare,
" And harden, in the ſmoke and air;
" Your knife can no impreſſion make,
" Then, in its ſtead, a hammer take."

Lunden, the capital of this province, is but a few miles diſtant from the ſea-ſhore, and ſtands over-againſt

Copenhagen, from which it is about 24 miles diſtant to the eaſt; 120 from Gottenburg, to the ſouth; and about 273 from Stockholm, to the ſouth-weſt. It was formerly the ſee of an archbiſhop; but in 1658, when the Swedes took the city, that dignity was removed to Copenhagen; and it is now only an epiſcopal ſee. It was adorned with an univerſity erected by Charles IX. in 1668, and which has produced eminent men; and, particularly, the celebrated Samuel Puffendorf: but this univerſity has been ſuppreſſed, as we have obſerved above. This was formerly a very conſiderable city, in which were 22 churches, whereof the cathedral of St. Laurence is a magnificent ſtructure, having a very high ſpire, which is a landmark for ſailors; and a clock, of the moſt ingenious contrivance, ſaid to be the work of Caſpar Bartholinus. It not only ſhews the hour, day, month, and year, together with all the feſtivals; but the movements are ſo artificially contrived, that, at the hour, two horſemen come forth, and encounter each other, giving ſo many blows as the hammer is to ſtrike upon the bell: then a door opens, diſcovering the Virgin Mary ſitting on a throne, with Chriſt in her arms, and the wiſe men paying their homage to him, while two trumpeters ſound a note of triumph. In the neighbourhood of this city, we obſerve the hill on which the kings of Sweden were formerly elected.

Malmoe is a populous though ſmall town, ſituated on the Sound, and enjoying a conſiderable ſhare of commerce.

Landſkroon is likewiſe ſituated upon the Sound. It has a good harbour, much commerce, is ſtrong, and well fortified.

Elſinburg, which is alſo ſituated on the Sound, is a place of conſiderable trade; but the fortifications are, at preſent, gone to ruin.

The province or diſtrict of Bleking is ſituated between Smaland, Schonen, and the Baltic, and ſtretches above 80 miles in length, from eaſt to weſt; and is about 50, from north to ſouth, at the broadeſt part. The coaſts are rocky, and the interior parts mountainous, woody, and barren. The principal towns are theſe:

Chriſtianſtadt is eight miles from the ſea, and ſituated in the midſt of moraſſes. It has been ſeveral times taken and retaken in the courſe of the wars with Denmark.

Chriſtianople was once the capital of this province, and had formerly a good harbour, which Charles XI. took a great deal of pains to ruin and render uſeleſs.

Ahuys is ſituated on the Baltic, at the mouth of the river Hellean, having a ſafe, capacious, and much frequented harbour.

Carlſcroon is ſituated on a ſmall iſland, which it entirely covers, and joined to the continent by a long bridge. It is near 46 miles to the eaſt of Ahuys, has an excellent harbour, and is well fortified. Between this place and Ahuys is another ſmall ſea-port called Carſholm.

FINLAND.

FINLAND, the next grand diviſion of Sweden, is about 386 miles in length, from north to ſouth; and 215 from eaſt to weſt: it is bounded by the Bothnian gulph, part of Ruſſia, and part of Lapland. It abounds in grain, cattle, fiſh, &c. of which exports are made to other parts of the kingdom; it likewiſe furniſhes other provinces with butter, cheeſe, &c. The inhabitants, in general, are Lutherans, and they ſpeak a very peculiar dialect, ſo as to be ſcarcely intelligible to the Swedes of other provinces.

The Finlanders had kings of their own till about the middle of the 13th century, when they were ſubdued by Eric IX. king of Sweden; however, part of the province of Savolacia, all that of Kenholm, a portion of Carlia, and the fortreſs of Nyſlot, were, by the treaty of Abo, in 1743, ceded for ever to Ruſſia.

Finland is divided into ſeven provinces, viz.

Finland Proper	Savolaxia
Nylandia	Tavaſtia
Carelia	Cajunia.
Kenholm	

Abo, the capital of the whole duchy in general, and of Finland Proper in particular, is ſituated on the Bothnic gulph, at the mouth of the river Aurojoki, oppoſite to the iſle of Aland. Here is an univerſity, which was founded and endowed by the celebrated queen Chriſtina, and the town is the ſee of a biſhop.

In ſpeaking of this town a very late traveller, in a letter to a friend, ſays, "There is not any thing in Abo which has entertained me in the ſurvey, or can amuſe you by the deſcription. It is a wretched capital of a barbarous province. The houſes are almoſt all of wood, and the archiepiſcopal palace is compoſed of no better materials, except that it is painted red. I enquired if there was not any thing in the univerſity to merit attention; but they aſſured me it would be regarded as a piece of ridicule to viſit it on ſuch an errand, there being nothing within its walls except a very ſmall library, and a few philoſophical inſtruments." The town, however, derives ſome trade from its harbour, in the neighbourhood of which is a rock ſurrounded by the water. It is ſingular, that when any ſhip paſſes this rock, the needle no longer points towards the north; from whence a vulgar conjecture hath ariſen, viz. that the rock contains a loadſtone mine. The other towns of Finland Proper are exceedingly inconſiderable, their names being Biorno, Hangant, Biorneburg and Nyſtadt.

The province of Nylandia hath South-Finland Proper on the weſt, Tavaſtia on the north, the river Kimen on the eaſt, the gulph of Finland on the ſouth, and contains the following towns:

Helſingfors, the capital of this province, is a ſmall town ſituated on a gulph of the ſame name, at the mouth of the river Winda, which falls here into the gulph of Finland. It lies over-againſt the city of Revel, and is about 90 miles diſtant from Abo towards the eaſt. It has a pretty good harbour, and an immenſe fortreſs, lately built, which is garriſoned by about 8000 men.

Burgo, a ſmall and not very populous, but antient town on the coaſt of the Finnic gulph, on the eaſtern bank of a little river, lies over-againſt the iſle of Paling, and is 21 miles diſtant from Helſingfors, to the north-eaſt. It has alſo a ſmall harbour.

Raſeburg, a little town, the capital of an earldom of the ſame name, ſtands on the gulph of Finland, 38 miles from Helſingfors to the weſt, and 48 from Abo to the ſouth-eaſt.

Ekenes, that is to ſay, the peninſula of oaks, ſtands on the ſame gulph, about ſix miles from Raſeburg to the ſouth-weſt. There are before this town a great many rocks and ſhelves, which render it of a dangerous acceſs.

The province of Carelia is very fruitful, and extends, from eaſt to weſt, about 150 miles. The principal towns are the following:

Wyburg, which is ſituated at the bottom of the gulph of Finland, is a biſhop's ſee, has conſiderable trade, is well fortified, commanded by a caſtle, and greatly benefitted by having a good harbour.

Mala ſtands on a ſmall bay, which communicates to the lake Ladoga. Wekelao is a very ſmall poor place; and Wilmanſtraid belongs to the Ruſſians.

The province of Kenholm is extenſive, but unfertile, as it contains many large lakes and barren mountains. It is bounded on the north by part of Lapland, on the eaſt by part of Ruſſia, and the Onega lake, on the weſt by Savolaxia, and on the ſouth, by the lake Ladoga. It contains but two places of any note, viz.

Kenholm, from which the province has its name, is a ſmall city, ſituated among marſhes, on the weſtern bank of the Ladoga lake, 60 miles from Wyburg to the north-eaſt. It is defended by a very ſtrong citadel, and was formerly, with the whole province, ſubject to the Ruſſians, till about the beginning of the laſt century, when the czar promiſed Charles IX. king of Sweden, to ſurrender the town and province to him, if he would aſſiſt him againſt the Poles, by whom he was then cloſely beſet; but, being freed from the danger, he refuſed to perform his promiſe; which made the Swedes invade his dominions, and oblige him to yield up by treaty, in the year 1616, not only this town and country, but alſo the moſt conſiderable places in Ingria. But, in the late wars, the Ruſſians have taken all again, as has been already obſerved.

Lexa,

Lexa, in the north part of this province, ſtands on the banks of a lake, 120 miles diſtant from Kenholm to the north.

Savolaxia, an inland province, has Cajunia on the north, the province of Kenholm on the eaſt, Carelia on the ſouth, and Tavaſtia on the weſt. It is a barren and deſert country, covered with foreſts, and abounding with lakes, which afford its few inhabitants plenty of fiſh. It is divided into the greater and leſſer Savolaxia; the former, which lies towards the ſouth, contains five diſtricts. The eaſtern part of this province was yielded to the Ruſſians by the late treaty of Abo. The moſt conſiderable towns here are as follow:

Koſkimpe, or Koſnipe, the chief town of this province, ſtands on a lake, about 75 miles from Wyburg to the north.

Nyſlot, a ſtrong fort, is alſo ſeated on a lake, 50 miles from Koſkimpe, to the eaſt. It was built in the year 1475, by Eric Axelſon governor of Abo.

Runal is named by Luytz as one of the chief towns of this province; but, by the maps, Saminge, which ſtands on the banks of the ſame lake, a few miles diſtant from Nyſlot to the ſouth, as Runal does about 30 more to the weſt, ſeems rather to deſerve that character.

Tavaſtia, or Tavaſtland, has Cajunia on the north, and partly on the weſt, where it is alſo bounded by Finland properly ſo called. It has Nyland on the ſouth, and Savolaxia on the caſt. It is a marſhy country, and is divided, according to d'Audiffred, into four territories, called Sermaki by the inhabitants; namely, the diſtricts of Hattula, Hauho, Offre-Haredt, and Nedra-Haredt. Here are reckoned eight lakes, the moſt conſiderable of which is the Peinde. This country is not much cultivated or populous: there are, however, iron mines, which afford a pretty conſiderable profit. The moſt noted places are:

Tavaſtus, the capital of the province, which borrows its name from it, otherwiſe called Croneburg, in latin. Tavaſtia, or Croneburgum, is ſeated in the ſouthern part of the province, on a ſmall river, which, a little lower, falls into the lake Wana, about 100 miles from Abo to the north-eaſt, and 126 from Wyburg to the north-weſt. It is ſtrong by its ſituation in a marſhy ground, which renders it of very difficult acceſs.

Martin Zeiller aſſerts, that Birger Jarl, a Swediſh general, fortified this city in 1250, in order to keep the inhabitants in awe, whom he had obliged to embrace the chriſtian religion.

Sermaki, the moſt northern town of this province, near the borders of Cajunia, is 165 miles diſtant from Tavaſtus to the north.

Hattula is 48 miles from Sarmaki to the ſouth:

Mahatan is 15 miles from Hattula towards the ſouth-eaſt:

Rautalanby, on a branch of the lake Peinde, is 12 miles from Hattula to the ſouth:

Jemſe, on the weſtern bank of the lake Peinde, is 36 miles from Rautalanby to the ſouth-weſt:

Siſme, on the eaſtern bank of the ſame lake, 40 miles from Jemſe to the ſouth-eaſt; and

Padasjoki, over-againſt Siſme, on the ſame lake, is 40 miles from Tavaſtus to the north-eaſt.

The Peinde, or Pe Jende lake, is about 80 miles long from north to ſouth, and communicates with ſeveral other lakes, particularly with that called Rotzlain, by means of which its waters run into the river Kymen, and ſo into the gulph of Finland.

Cajunia, called by ſome Eaſt Bothnia, lies along the Bothnic gulph, which bounds it on the weſt; it has that part of Lapland called Kimi-Lapmark on the north; part of Muſcovite Lapland and Tavaſtia on the eaſt; and Finland Proper on the ſouth. It abounds with rivers, which empty themſelves into the gulph of Bothnia; and has ſeveral lakes, amongſt which there is a pretty large one called Ula-Treſk, which receives the waters of ſeveral other lakes, and runs into the ſea by means of the river Ula. This lake is about 45 miles in length, and 24 in breadth. In the midſt of it ſtands a little iſland, called Ula, about 15 miles long, and nine miles broad. The northern and eaſtern parts of this province are covered with mountains, but the reſt of the country is fruitful. The chief towns here are as follow:

Cajaneburg, the chief place of this province, from which it borrows its name, is ſituated on the north-eaſt ſide of the lake Ula-Treſk, about 207 miles from Tavaſtia towards the north, 96 from the coaſt of the Bothnic gulph to the eaſt, and about 30 from the neareſt borders of Lapland towards the ſouth-weſt. It is defended by a good citadel.

Ula, a little town at the mouth of the river to which it gives its name, ſtands on the Bothnic gulph, 88 miles from Cajaneburg to the weſt.

Ulaburg, a fortified town, lies in a little iſland over-againſt the mouth of the river Ula.

Carelby, or Old Carelby, and New or Ny Carelby, are on the coaſt of the Bothnic gulph, the former about 70, and the latter 84 miles from Ula to the ſouth. Between theſe two towns ſtands

Jacobſtadt, ſix miles from Old Carelby to the ſouth, and eight from Ny Carelby to the north.

Lochto is a ſmall town on the ſame coaſt, eight miles from Old Carelby to the north, near the mouth of the river Lochtoa, which ſprings from a ridge of mountains, that divide Cajunia from Tavaſtia, and being ſwelled by the waters of a lake called Leſtjerwi, runs to the north-weſt, and falls into the Bothnic gulph, between Lochto and the rock called Kala. The coaſt from Carelby to this place is full of rocks.

Waſa, or, as the inhabitants of this country call it, Muſtaſar, is alſo a ſea-port town on the ſame gulph, 60 miles from Old Carelby to the ſouth. It is the native place of the famous Guſtavus Vaſa, who reigned in Sweden with ſo much glory.

Chriſtianſtadt ſtands alſo on the gulph of Bothnia, and is 15 miles diſtant from Waſa towards the ſouth, and 50 from Biorneburg to the north.

SWEDISH LAPLAND.

AS we have already given an ample deſcription of Lapland in general, and a circumſtantial account of the inhabitants of that country, it only remains to deſcribe the diſtricts which appertain to the Swediſh crown, and which, on that account, go under the denomination of Swediſh Lapland.

This country then is divided into ſix provinces, viz.

1. Augermanice-Lapmark
2. Uma-Lapmark
3. Pitha-Lapmark
4. Lula-Lapmark
5. Torno-Lapmark
6. Kima-Lapmark.

The firſt of theſe provinces is the moſt ſouthern, and contains only one town of any conſequence, which is called Aoſalko, and ſituated about 300 miles diſtant from Stockholm.

The ſecond province, which adjoins to the former, contains two little villages, viz. Loiſby and Semisjorfie.

The third province, which is ſituated between the Norwegian mountains, contains four unimportant villages, viz.

Sitonia, Locktari,
Arieplogs, Arivitzerfs.

The fourth province, which adjoins to the latter, contains three little villages, viz. Jackmoth, Torpajour, and Sirkeflucht.

The fifth province, which is the moſt northern of Swediſh Lapland, is well watered by many rivers, has ſeveral lakes, and contains four towns, viz.

Tingavara, Ronnala,
Sandewara, Titiſara.

The ſixth province, which is contiguous to Ruſſian and Daniſh Lapland, is likewiſe well watered; it contains the great lake Enure, and ſix towns, viz.

Somby, Kimibi,
Kalajerſui, Solden-Kyle,
Kitijerfuilye, Kimi.

Of the inſular Parts of SWEDEN, *or thoſe Iſlands which form a Part of that Kingdom.*

THOSE iſlands which form a conſiderable part of the kingdom of Sweden are,

Gothland

Gothland, Dago,
Ocland, Hagland,
Oeſel, Aland, and Rugen.

GOTHLAND.

GOTHLAND, or Gothia Inſula, is ſituated in the Baltic Sea, over-againſt the coaſt of Eaſt-Gothland in Sweden, from which it is about 52 miles diſtant to the eaſt. It lies between 57 and 58 deg. of north lat. and between 18 deg. 30 min. and 20 deg. of long. eaſt of London. Its greateſt length, from the ſouth-weſt to the north-eaſt, is about 56 miles; but its breadth is not above 18 miles, from eaſt to weſt. Olaus Magnus ſays, it was called Gothland, that is to ſay, Good Land, becauſe it is fruitful, abounding with all neceſſaries of life, and ſo well provided with the bleſſings of nature, that it may be reckoned amongſt the beſt iſlands in the north. It is, ſays he, in another place, a good land, in ſeveral reſpects; the inhabitants are a good ſort of people; there are good harbours all round the coaſt; the ſoil is good; it abounds in paſtures, cattle, wild-fowl, fiſh, good water, woods, and beautiful marble. This iſland belonged formerly to the Pruſſian knights, who quitted it to the Danes in 1408, for 9000 crowns. The Swedes got it in 1645, but it was retaken by the Danes in 1677, and reſtored to the Swedes by the treaty of Fontainebleau in 1679. There is here but one conſiderable city, which is

Wiſby, or Wiſburg, the chief place of this iſland, on the weſtern coaſt of it. It is built on the declivity of a rock near the ſea-ſhore, is ſurrounded with a ſtrong wall, and defended by a pretty ſtrong caſtle, erected near the harbour, where the governor of the iſland uſually reſides. Olearius relates, that the ruins of 14 churches, and of ſeveral houſes, gates, and walls, of free-ſtone and marble, which he ſaw there in 1635, made him judge that this was formerly a conſiderable city: but it is now very much decayed. It began to be important towards the end of the 8th century; ſince which time it became ſo populous, that it contained 10,000 inhabitants, moſt of them merchants, without reckoning the Danes, Swedes, Vandals, Saxons, Muſcovites, Jews, Greeks, Pruſſians, Polanders, and Livonians, who traded there. Theſe foreigners were ſo numerous, that they could make head againſt the inhabitants; and in the year 1288, there aroſe a quarrel amongſt them, and a battle was fought, in which a great many men were killed on both ſides. However, the inhabitants gained the victory, and Magnus, king of Sweden, reconciled them with the foreigners.

The inhabitants of Wiſby are ſaid to be the firſt who made hydrographical tables, and ſea charts: they alſo pretend to the glory of being the firſt that made laws for regulating trade and navigation. But Monſieur La Martiniere obſerves, that they have rather admitted, than invented them. He ſays, that, being grown rich by navigation, they introduced among themſelves the famous laws of Oleron, an iſland of France, in order to decide by them the diſputes that might ariſe amongſt merchants. They tranſlated thoſe laws into their own language, and made ſome additions to them; by which means, they were not only looked upon as the authors of them, but acquired alſo the reputation of being the moſt famous traders in Europe. In 1597, the Hans-Towns ſent deputies to Lubeck, in order to draw up laws concerning navigation, which laws are ſtill obſerved throughout the whole Baltic; but they are, properly ſpeaking, the very laws of Wiſby, with ſome additions and improvements: and what ſhews, that theſe laws are more modern than thoſe of Oleron, is, that thoſe of Lubeck are fuller than thoſe of Wiſby, as the latter are more complete than thoſe of Oleron.

OCLAND.

OCLAND, a narrow ſlip of land over-againſt the continent of South-Gothland, from which it is ſeparated by a ſtreight, which is not above nine or ten miles broad, and is called Calmarſundt, or the Streight of Calmar. This iſland, whoſe name ſignifies the Land of Hay, is about 70 miles long, from ſouth to north; but its greateſt breadth is not above 12 miles. The ſoil affords good paſture, and many herds of oxen, horſes, and fallow-deer, feed upon it.

The weſtern coaſt is not very populous, containing only two villages, named Alebeck and Smedeby, with the city of Borkholm, the capital of this iſland. It lies under 56 deg. 57 min. north latitude, and 18 degrees 10 min. of longitude, eaſt of London. It is about 15 miles diſtant from Colmar towards the north-eaſt, and is defended by a caſtle. The eaſtern coaſt, on the contrary, is very well peopled, and contains, going from north to ſouth, the towns of Boda, Koningſgard, Hogaby, Kilda, Stapeling, Genſtala, Remaſten, Mokleby, Stenaſa, with the villages of Hulderſtad and Ottenby. There are many forts and caſtles to defend this iſland, that have been often attacked. In 1530 it was taken by the Danes, ſoon after which the Swedes recovered it; but, being loſt again, Guſtavus Adolphus finally retook it in 1613, ſince which time it has been conſtantly poſſeſſed by the crown of Sweden.

OESEL.

OESEL is about 40 miles in length, but the breadth varies in different parts. It is oppoſite to the coaſt of Livonia; and has no town of conſideration but Arenſberg, which is ſituated on the ſouthern coaſt of the iſland, and defended by a caſtle. On the northern coaſt there is a fortreſs called Someburg, the whole being now in poſſeſſion of the Ruſſians, who, ſome years ſince, took it from the Swedes.

DAGO.

DAGO is ſituated to the northward of Oeſel, from which it is ſeparated by the narrow ſtreight of Honſwick; it is of a triangular form, the ſides being from 20 to 25 miles in length. On the weſtern cape there is a high tower, which was built by the ſenate of Revel as a light-houſe and landmark. The northern and north-eaſt parts are mountainous, and between here and the continent of Eſtonia are ſome ſand-banks, ſmall iſlands, rocks, &c.

HAGLAND.

HAGLAND, in the gulph of Finland, is about nine miles in length. The whole is but a cluſter of rocks interſperſed or covered with fir-trees, brambles, &c. and haunted by a few hares that grow white in the winter.

ALAND.

ALAND is ſituated in the Baltic, between 40 and 50 miles from the ſouth-weſt part of Finland; the circumference is near 180 miles, and the inhabitants near 6000 in number. Theſe live in ſmall hamlets, as there is no regular town in the iſland; for indeed the peaſants have always remonſtrated againſt the founding any which the Swediſh government have been deſirous of effecting. The unhappy king Eric XIV. was confined in a caſtle in this iſland which goes under the name of Caſtleholm. It was lately viſited by an ingenious Engliſh gentleman, who mentions the following curious particulars concerning it: "I arrived (ſays he) in half an hour, at the caſtle, and alighted under the walls. It ſtands in a beautiful ſituation, on the banks of a river, and commands an extenſive view on every ſide. It was not till after a quarter of an hour's ſearch that the peaſant who drove the carriage, and who had known the caſtle 40 years, could diſcover the paſſage which led to the chamber where the king had been impriſoned; and it was with ſtill greater difficulty I could enter it when found. I crawled upon my hands and knees under an arch, the ſtones of which, having fallen down in a courſe of years, had almoſt filled up the way; and after paſſing this narrow entrance, I had two ladders to mount, which did not appear capable of bearing too much preſſure. I followed, however, where my guide led the way, and entered the apartment through a trap-door. I muſt own, that I was ſtruck with compaſſion and horror to think that a ſovereign had been the tenant of ſuch a dungeon, which is too miſerable for the worſt malefactor. It is compoſed of ſtone, and vaulted over head. I meaſured it by my paces; it was about 23 feet long, and 12 broad. The light is admitted by a narrow window

through a wall five feet in thickneſs. In one corner is a little fire place, and in the other a cupboard hollowed in the wall; the flooring is of brick; and as the peaſant pretended to ſhew me, is worn away in thoſe places where the king was uſed to walk."

This iſland abounds in cattle, and ſome wild beaſts, and is plentifully ſupplied with fiſh. It is ſurrounded by many ſand-banks, rocks, and ſmall iſlands; ſome of the latter being inhabited, and others uninhabited. Of theſe little iſlands the moſt remarkable are Ekero, (which is ſix miles long, and ſeparated from Aland only by a river of three miles over) Flys, Landſweden, Rodan, Nyan, Lappo, &c.

RUGEN.

RUGEN, which is ſituated in the Baltic oppoſite to Stralſund, is 23 miles in length, and 15 in breadth, with the title of a principality. It abounds with corn and cattle, contains a town called Bergen, is ſtrong by nature, and well fortified by art.

The ſame ingenious gentleman, whom we have before quoted, in ſpeaking of his departure from Finland, and concerning the adjacent iſlands, ſays, "It was my intention to have gone on to Finland by the poſt route, through ſeveral ſmall iſlands or rocks, from one to another, of which there are conſtantly boats provided to convey travellers. Juſt as I was on the point of carrying this deſign into execution, four or five of the country people came and propoſed to convey me from thence ſtrait to Abo. I did not heſitate long, but complied with the offer, and left Aland about midnight on Saturday. I ſlept as I had done the preceding night, in my carriage, and at ſeven in the morning found myſelf in a narrow paſſage, ſurrounded by high rocks, and the people employed in rowing. I made no queſtion but we were already in the river of Abo; but was not a little chagrined to find, on enquiry, that the wind had fallen away, that we were hardly 30 miles from the place we had quitted, and that I muſt not flatter myſelf with landing in Finland that day: they added, that the whole way was through ſuch channels as I was then in; that ſeveral iſlands by which I ſailed were inhabited, and that, if I pleaſed, they would land me on one of them, where I might procure ſome refreſhment. To this I gladly conſented, and about nine o'clock I went on ſhore, on one called Lappo. I walked to a little hamlet at a mile diſtance from the ſhore: the poor peaſants very chearfully brought me ſome cream, and aſſiſted in boiling my coffee. Nothing could exceed their poverty; a little black bread, fiſh, pork, and a ſort of mixture they called beer, conſtituted all their ſuſtenance. After having made a very comfortable breakfaſt on this unknown and ſequeſtered iſland, I returned again to the boat. During the whole day we purſued our voyage through a labyrinth of ſmall rocks and iſles; many of them covered with firs and aſpins; ſome few green and beautiful, but far the greater number barren and rugged. I could have fancied myſelf among the Cyclades, ſo famous in ancient ſtory; but here were no temples ſacred to Apollo or to Juno, nor had genius and poetry conſpired to render every cliff and promontory immortal. Many of the proſpects were, however, wonderfully pictureſque and romantic, and I frequently ſtopped the boatman for a minute, to gaze upon the extraordinary ſcenes around me. Sometimes we went through channels of only 20 or 30 feet in breadth. Sometimes the water opened into a conſiderable expanſe, and often there appeared to be no avenue on any ſide. I was aſtoniſhed how they ſo exactly knew their track in this intricate and perplexing maze, through which nothing beſides long experience could have conducted them."

SECT. III.

Of the Inhabitants of Sweden; *their Manners, Cuſtoms, Language, Religion,* &c.

THE Swedes are in general a very ſtrong and robuſt people, and the climate affording a healthy and dry air, they have excellent conſtitutions. The women are well-ſhaped, and much fairer than the men: they are proportionably robuſt, and the lower ſort are ſo inured to hardſhips, that they diſcharge the moſt laborious offices.

Though the Swedes are naturally ſtrong and hardy, yet they are very inactive, and their mental faculties are exceeding imperfect: they are in general very dull of apprehenſion, and even the better ſort have narrow capacities. They are little troubled with the ſpirit of inquiry, and ſeldom amuſe themſelves in the regions of ſpeculative philoſophy. However, it muſt be obſerved to their credit, that by induſtry, experience, and travelling, ſome of them arrive at ſuch a mature and ſolid judgment as to make a conſiderable figure in life, and to merit the title of great and able men. The nation has produced many excellent ſtateſmen, and ſome learned men; among the latter of whom ſtand the celebrated Puffendorf, hiſtorian, civilian, and philoſopher; and of our time the famous botaniſt Linnæus, one of the beſt naturaliſts now living.

The inhabitants of Sweden may be properly divided into the four following claſſes:

1. The nobility and gentry.
2. The clergy.
3. The citizens and merchants.
4. The ſoldiers, ſeamen, and peaſants.

The nobility and gentry chiefly apply themſelves to a military life: they are naturally courageous and hoſpitable, fond of glory, and ſcrupulouſly obſervant of the functions of honour; but at the ſame time it muſt be obſerved that they are proud, oſtentatious, jealous, and vindictive. Thoſe who are employed in the adminiſtration of civil affairs, though they are indeed laborious and indefatigable in their buſineſs; ſeldom raiſe their ſpeculations above what the neceſſity of their employments require; their abilities proceeding not ſo much from ſtudy, as experience in the track of buſineſs. They preſerve a graceful deportment, and make the beſt appearance they poſſibly can, in order to gain the reſpect of thoſe beneath them. They never deſcend to any employments in the church, the practice of law or phyſic, or the exerciſe of any trade; nor will they ever accept the command of a merchant's ſhip, though, to gain experience in maritime affairs, they will ſubmit to the loweſt offices in foreign countries.

A late celebrated writer, in ſpeaking of the young nobility of Sweden, ſays, "They go very much into the French military ſervice, both by ſea and land, and through a principle of policy in that nation they receive rank before all others; becauſe, by the laws of Sweden, when they return into their own country they receive the ſame rank in their own military ſervice that they held abroad, whereby they are not only advanced much faſter than they could poſſibly be had they not been abroad, but they become firm friends to the French intereſt when any particular relative to it comes to be debated before the diet."

The clergy of Sweden, who are very numerous, are proportionably illiterate with the other orders of people. Even thoſe who have ſome abilities are ſo indolent, that they will not be at the trouble of digeſting their own thoughts, but ſupply their negligence by tranſcribing the works of others. Having no adverſaries to oppoſe, they are little acquainted with diſputes about religion. They affect great gravity, are eſteemed hoſpitable, and preſerve a diſtinguiſhed authority over the lower order of people.

The citizens and merchants plod on in a beaten track, without ingenuity to diſcover, or ſpirit to purſue, new branches of commerce, notwithſtanding all the care and encouragement beſtowed by the legiſlature. They have ſuch ſmall capitals that they cannot carry on their buſineſs without credit from abroad; and from their poverty it is probably owing, that they make uſe of every opportunity that offers, whereby they can over-reach or defraud thoſe with whom they deal.

The common ſoldiers endure cold, hunger, long marches, and hard labour, to admiration; but they learn their duty very ſlowly, and are ſerviceable more by their obedience to command, and ſtanding their ground, than by any great forwardneſs to attack the enemy, or activity in executing their orders.

The ſeamen are very bold and active, and well inſtructed in their buſineſs: they have juſt ſentiments of

morality and honeſty, and pay ſuch attention to religious duties, that the captains of merchant ſhips have always prayers twice a day, whether their ſhips are in harbour or at ſea.

The peaſants, when ſober, are very obſequious and reſpectful; but when intoxicated with ſtrong liquors, they are furious and ungovernable. They live in great poverty, and rudely practiſe ſeveral mechanical arts, which neceſſity teaches them to exerciſe, ſuch as making their own ſhoes, cloaths, tools, and inſtruments of huſbandry. They are very obliging, courteous, and remarkably hoſpitable to ſtrangers.

A celebrated Engliſh traveller, who lately made a tour through Sweden, in ſpeaking of the inhabitants and their cuſtoms, ſays thus: "Through the whole country are lakes, and pieces of inland water, on the banks of which their palaces and villas are uſually built. My late tour has been entirely from one to another of theſe houſes, and nothing can exceed the generous hoſpitality I have found every where. It would even be reſented if a ſtranger viſited a forge, without paying his compliments to the owner, who expects that mark of his attention and reſpect. This cuſtom plainly ſhews how few perſons travel in theſe parts of Europe: if they were numerous it would, in all probability, be quickly laid aſide, or at leaſt reſtrained within narrower limits."

"I cannot," ſays the ſame traveller, "ſay as much in praiſe of the Swediſh refinement of elegance, as of their benevolence and civility. The richer ſort have a profuſion of diſhes at their entertainments, but no taſte in the arrangement or diſpoſition of them. The table groans beneath a number of covers, which are all brought in at once, and then left to cool during a ceremonious meal of at leaſt two hours. But the prologue to this play is even worſe. Before they ſit down to dinner the company take bread and butter, which they waſh down with a glaſs of brandy; and this horrid faſhion prevails not only among perſons of condition, but extends even to the ladies as well as the men."

We have before obſerved, that the nobility and gentry of Sweden are chiefly engaged in military employments: it is therefore little to be wondered at that they ſhould be fond of martial entertainments, which are here frequently appointed by the king for their amuſement, his majeſty himſelf generally attending in perſon. Of one of theſe entertainments we have the following particular account given by the above gentleman, in a letter to his friend in England, dated 21ſt June, 1774.

"You will ſee by the place from whence I date, that I have now reached the eaſtern ſide of the gulph of Bothnia. A ſpectacle of a ſingular kind detained me, however, at Stockholm, a day longer than I had intended. The ſcene lay in a large park, about an Engliſh mile without the gates of the city, where the camp has been pitched ſome weeks, and which is finely adapted for a martial entertainment, from the nature of the ground, which is irregular and full of declivities: the riſing parts of it are covered with ſmall woods of fir, and it is divided by a branch of the Meler Lake, over which is a floating bridge. The king of Sweden commanded about two regiments, moſtly infantry; his youngeſt brother, prince Frederick, had under him near 1000 troops, horſe and foot. They were entirely ignorant of each others motions, his majeſty only endeavouring to ſurround the inferior army, and the prince exerting his endeavours to effect a ſecure retreat. The queen-dowager, with her daughter the princeſs of Sweden, were preſent in a little open chaiſe, which permitted them to follow the ſoldiers over the field, and be preſent every where. The king, dreſſed in his uniform, was mounted on a cream-coloured horſe, and appeared as much animated and intereſted in this aſſay of arms, as he could have been on a day of action. It was about five in the evening. I cannot pretend to purſue the two generals through the different manœuvres of their conduct, which paſſed in too rapid a ſucceſſion, and were of too intricate and uncertain a nature to admit of a minute deſcription. The reſult, however, was favourable to the king; his brother having neglected to ſeize on a poſt which might have commanded a retreat in caſe of emergency, found his error too late; and when he would have availed himſelf of this paſſage, diſcovered that his rival's troops were already in poſſeſſion of it, having croſſed the river in boats for that purpoſe. After having in vain endeavoured to force them from this poſt, he formed his infantry into a hollow ſquare, and maintained a briſk fire on all ſides for a conſiderable time; but finding himſelf environed by a much ſuperior body of forces, and no poſſibility of eſcaping, he delivered up his ſword to the king, and his ſoldiers remained priſoners of war. His cavalry had, however, ſeized on a ſmall but moſt advantageous ſpot, and, unterrified by the fate of their companions, refuſed to ſurrender, and demanded permiſſion to march off the ground with all military honours. Their fate was not yet decided when I quitted the place at eleven o'clock at night. It was a very elegant and gallant diverſion, finely deſigned to cultivate and practiſe the operations of a campaign, and keep alive the knowledge of war even amidſt the moſt profound peace."

Though the Swedes are a very poor people, and the laws of their country prohibit their wearing rich apparel, yet the better ſort greatly indulge themſelves in dreſs, and imitate as much as poſſible the faſhions and manners of the French; but the commonalty here, as in Denmark, wear cloaths made of coarſe ſtuff, lined with ſheep ſkin, to ſecure them from the inclemency of the weather.

With reſpect to the marriages of the Swedes, they are generally governed by the will of the parents, and founded ſo much upon intereſt, that the inclination of the parties is little regarded, nor the nation much troubled with the extravagancies of lovers. Stealing of matches is hardly heard of in an age, nor can the church give licenſe to marry, without publication of the banns.

Perſons of quality, of both ſexes, commonly remain unmarried till thirty, or above, becauſe their fortunes on both ſides being in their parents hands while they live, they are not in a condition to maintain a family, till the death of relations, or advancement to office, furniſh them with the means of ſubſiſting.

The women in general are more diſtinguiſhed for their chaſtity before marriage, than for their fidelity after: they are very fruitful, and ſeldom fail of a numerous iſſue. They are no where made greater drudges than here, the meaner ſort being, beſides the ordinary offices of their ſex, put to plough and threſh, to row in boats, and bear burdens at the building of houſes, and on other occaſions.

Domeſtic quarrels happen ſeldom, and more rarely become public, the huſbands being apt to keep the authority in their own hands, as the wives by nature, cuſtom, and neceſſity, are inclined to be obedient. Divorces, and other ſeparations between men and wives, ſcarce ever happen but among the inferior ſort, when the innocent party is allowed to marry again. Couſin-germans may not marry without the king's diſpenſation, which is more frequently granted than refuſed.

In wedding entertainments the Swedes have ever affected pomp and ſuperfluity, beyond the proportion of their abilities; for by the exceſs of one day, oftentimes many of them involve themſelves in ſuch inconveniences that they cannot remove for ſeveral years. The ſame is obſervable in their funeral ſolemnities, which are uſually accompanied with great jollity and feaſting; and, to gain time to make their preparations, they commonly tranſport their dead to vaults within, or adjoining to their churches, where they remain unburied ſome months, and ſometimes ſeveral years. But of late theſe, and other unneceſſary expences, have been much laid aſide, as well in conformity to the frugality of the court, as in compliance with the general impoveriſhed circumſtances of the people.

The Swediſh language is formed of the antient Gothic or Teutonic, and bears a near affinity with that of Denmark. This language is a dialect of the Mæſo-Gothic, ſpoken antiently by the inhabitants of Mæſian Tartary, from whence the northern parts of Europe are ſuppoſed to have been peopled. The only ſpecimen of the language then ſpoken by the Scythian Goths, in Mæſia, is preſerved in a book at Upſal, being a tranſlation of the four goſpels, by Ulphilas biſhop of the Goths, ſeated upon the Palus Mæotis. The pureſt dialect of this antient tongue is now found among the Dalekarlians, or

Highlanders

Highlanders of Sweden, and in the iſland of Iceland; in which places it appears to have a ſurprizing conformity with the Engliſh, both in language and pronunciation.

The religion of the Swedes is that of Luther, which was eſtabliſhed here ſoon after it began to prevail in the proteſtant parts of Germany. Guſtavus Vaſa, the founder of the preſent royal family in Sweden, was the prince who firſt introduced the tenets of Luther. He aſcended the throne in the year 1523, and not only rendered the regal dignity hereditary in his own family, but eſtabliſhed the reformed religion in Sweden, where it has ever ſince continued to flouriſh with ſurprizing uniformity. This is partly owing to the rigorous execution of the laws, which prohibit all ſects, and puniſh all diſſenters: partly to the nature and diſpoſition of the people, who are dull, ignorant, and entirely reſigned to the ſpiritual direction of their clergy, without any deſire to enquire or diſpute about controverted points of faith and doctrine; and laſtly, to the care, aſſiduity, and regular lives of the clergy, by which they acquire a ſurprizing influence over the minds of their audience. An attempt was once made to re-eſtabliſh the Roman catholic religion in Sweden, and the peace of the country was not a little diſturbed: but the ſcheme proved abortive; and now the government is ſo much upon its guard againſt any future effort of the like kind, that no popiſh prieſt can enter the kingdom, without running the riſque of caſtration.

The Swediſh church is governed by one archbiſhop and 13 ſuffragans, who confine themſelves entirely to the occupations of their own function: they are, indeed, preſent at the aſſembly of the ſtates; but are never called to council, nor do they ever intermeddle in the adminiſtration of ſtate affairs. Their revenues are very moderate, that of the metropolitan not exceeding 400l. ſterling; and thoſe of the biſhops are proportionably ſmaller. Under theſe are ſeven or eight ſuperintendants, veſted with the power, though not the name of biſhops; and over each 10 churches, a provoſt or rural dean preſides, to ſuperintend the conduct of the inferior clergy; the number of whom, including chaplains and curates, may amount to 4000, the churches in Finland and Sweden being little leſs than half that number.

The metropolitan ſee of Sweden is Upſal: the inferior dioceſes are thoſe of Linkoping, Skara, Strengnas, Weſteros, Wegſio, Abo, Lund, Borgo, Gottenburg, Calmar, Carliſtad, Hernoſand, and Wiſby. In the election of the archbiſhop, all the conſiſtories or chapters of the kingdom give their votes; but the ſuffragans are choſen in the following manner: three perſons are preſented by the chapter to the king, who confers the dioceſe on one of them, with the advice of the ſenate. Simple benefices are beſtowed in Sweden, as in England, by right of preſentation; which is ſometimes veſted in the crown, and ſometimes in the nobility.

The inferior clergy are generally of the lower claſs of people, ſons of peaſants or poor citizens; ſo that they live the more contented with their ſmall income, which ariſes from certain inconſiderable dues, glebe-lands, and one third of the tythes: the other two-thirds are veſted in the crown, to be employed in pious and charitable uſes. But notwithſtanding their poverty, the Swediſh prieſts are extremely hoſpitable, and their houſes are always open for the refreſhment of ſtrangers and travellers.

The Swediſh churches are, in general, handſome and ſpacious buildings, and are well ornamented with gilding, painting and ſculpture. They are kept neat and clean, in good repair, and furniſhed with rich altar-cloths and veſtments.

The church is governed according to a body of eccleſiaſtical laws and canons, reviſed by a committee choſen from the different ſtates that compoſe the diet, and approved by the king. By theſe canons it is, among other things, ordained:

1. That if any Swediſh ſubject changes his religion, he ſhall be baniſhed the kingdom, and loſe all right of inheritance for himſelf and his deſcendants.

2. That if any perſon continues excommunicated above a year, he ſhall be impriſoned a month, during which he ſhall be fed with bread and water only, and then baniſhed.

3. If any perſon ſhall introduce into Sweden teachers of another religion, he ſhall be fined and baniſhed.

4. Foreign miniſters ſhall enjoy the free exerciſe of their religion only for themſelves and families.

5. Strangers ſhall not be allowed to exerciſe a different religion publicly; and their children ſhall be baptized by Lutheran miniſters, and educated in their communion, otherwiſe they ſhall not enjoy the privileges of Swediſh ſubjects.

By theſe laws the laity are obliged to pay a ſtrict attendance to the duties of religion; and, indeed, the civil magiſtrate is impowered to puniſh, with impriſonment, all thoſe who abſent themſelves from divine ſervice without a proper excuſe. But the clergy are not entruſted with the execution of their own laws; nor can they tranſact matters of any importance without the concurrence of the civil power. Many cauſes, formerly cognizable in the eccleſiaſtical courts, are now tried in ſecular tribunals. The clergy are not even permitted to pronounce the ſentence of excommunication without the king's permiſſion, becauſe, in that caſe, it would be conſidered that the ſtate had been deprived of a ſubject.

Learning, whatever the modern Swedes pretend, can boaſt no great antiquity in this country, the inſtitution of an univerſity at Upſal being not above four centuries ago; and there are few monuments extant of a more antient date, but only funeral inſcriptions rudely cut upon rocks, and unhewn ſtones, which are found in many places: but as they have no date, ſo they expreſs no more than the names of perſons, of whom no other memory remains: what makes them the more remarkable is, that they are written in the antient Gothick language, and in the Runick character. The moſt curious piece of learning amongſt them is a tranſlation of the evangeliſts into the Gothick tongue, done above 1300 years ago, by Upſala, a biſhop of the Goths in Thracia, of which they have the ſole antient manuſcript copy that is known to be in the world. Since the reformation, Guſtavus Adolphus was the firſt patron learning had in this country, by whom the univerſities, which had been much impaired, were endowed with tolerable ſalaries for profeſſors in moſt ſciences. Theſe his daughter, queen Chriſtina, ſomewhat augmented; and by the fame of her own learning, and the favourable reception ſhe gave to ſcholars, drew ſeveral learned men from abroad, that have left good proofs of their abilities, and raiſed an emulation in the natives, whoſe beſt performances are in the hiſtory, antiquity, and the antient laws of their own country.

SECT. IV.

The commercial, political, civil, and military Account of Sweden, *&c. &c.*

SWEDEN is admirably ſituated for commerce, both foreign and internal; its excellent harbours, in the ocean and Baltic, being finely adapted to the firſt purpoſe; and its various navigable lakes and rivers well calculated for the latter. But the beſt uſe is not made of theſe advantages, which is chiefly owing to the want of population; for according to an accurate calculation, which was laid before the diet, in the year 1770, it was found, that they contained no more than 2,350,000 inhabitants. As Sweden was once much more populous, this great decreaſe of inhabitants is ſuppoſed to be owing to a dearth, which happened towards the end of the laſt century: a great plague and dreadful ſweating-ſickneſs, which towards the concluſion of the laſt, and beginning of the preſent century, carried off a prodigious number of perſons, to the deſtructive wars in which this kingdom has been ſo particularly engaged, &c. &c.

Another oppreſſive circumſtance is, that the nobility alone, of this kingdom, amount to 10,900 perſons, who live upon the induſtry of the reſt. From an accurate liſt, made by authority, we find, that Sweden contains

Principal manufacturers - - -	410
Labouring manufacturers, at Stockholm, and their families included,	5,200
Ditto in other parts of the kingdom -	7,100
Total, in the manufacturing branch,	12,710

Yet

Yet the trading companies are 7387, in number, of which 1520 are eſtabliſhed at Stockholm. Some few, however, work at various callings, under the immediate protection of the nobility.

A late and intelligent traveller obſerves, "That the different branches of trade, as well as every other thing relating to merchandize, are monopolized in this kingdom, and only a fixed number of every ſort of artiſans and tradeſmen allowed in every town. So that when a young man has ſerved his apprenticeſhip to any particular branch of buſineſs, he cannot exerciſe it till he has likewiſe ſerved a certain number of years as a journeyman, and then not till there be a vacancy by the death of one of the maſters." Again, the ſame gentleman ſays, "The ſtagnation of inland commerce, in this kingdom, prevents the inhabitants of the different provinces, from bartering the ſuperfluities of their reſpective products, the one with the other; and though the produce of agriculture is the firſt, and great object of commerce, no encouragement is here given to carry on any trade with the produce of the earth, which is alſo one of the great reaſons why agriculture hath been ſo little improved in this kingdom: there are very extenſive tracks of land in the moſt fertile provinces, which ſtill remain uncultivated and full of woods. Indeed there has been very little progreſs made in the cultivation of this kingdom, for 200 years paſt, although, at preſent, the inhabitants do not grow a ſufficient quantity of grain for their own conſumption; neither does their paſture produce a ſufficient quantity of proviſions for their uſe. Great quantities of all kinds of grain are imported yearly into Sweden from Ruſſia, Courland, and Pomerania; and all kinds of proviſions, ſuch as butter, cheeſe, ſalt meat of different kinds, beer, rice, &c. from England and Ireland, though ſome of her provinces are very fertile, and abound in paſture."

Moſt of the exports of Sweden (the iron in particular) are in the hands of foreigners, which greatly injures the commercial intereſts of the country; the exports are

Iron	Copper
Wood	Braſs-wire
Tar	Pitch
Pipe-ſtaves	Herrings
Dried-cod	Train-oil.

The imports conſiſt of

Grain	Manufacturing materials
Various kinds of Proviſions	Sugar
Coffee	Hemp.
Flax, &c.	

But the ballance is againſt this country; ſo that, ſays the above-cited author, "Sweden would ſoon be exhauſted of all the little wealth ſhe has, if ſhe was not ſupported by the money which is ſpent by foreigners in her different provinces, and what ſhe receives from other courts in ſubſidies."

Hence it appears to be the falſe policy of the Swediſh government to diſcourage agriculture, to encourage manufactures, ſupport the arbitrary power of the nobility, and oppreſs the commonalty. Thus many of thoſe who are fond of naval or military employments are driven into the ſervice of other ſtates, and the poor driven into other countries for protection, ſhelter and ſuccour.

It is ſingular, that about one half of the bar iron which is made in this country, is exported either to Great Britain or Ireland; and when the ſeaſon happens to be unfavourable, or accidents attend the miners or forges, the merchants are ſo poor that they are obliged to draw upon the Britiſh merchants for the price of the exports before they are able to ſhip them off. Yet, notwithſtanding theſe indulgencies, and that the balance of trade is greatly in their favour, the Swediſh government gives the greateſt diſcouragement to the Britiſh trade, which is ſo capital a ſource of their wealth; and encourages, as much as poſſible, the French trade, which drains them annually of a great deal of their ſpecie.

Goods here of moſt kinds cannot be made ſo cheap by an hundred per cent. as they are ſmuggled from the more ſouthern parts of Europe. The government indeed is not only totally ſupine with reſpect to ſmuggling, but moſt of the principal people prefer ſmuggled goods to any manufactured in their own country. To theſe impediments to the encreaſe of trade and commerce we may add, with an accurate judge of theſe matters, "That the regulation of the exchange alone, as it is conducted in this country, would be ſufficient to ruin the beſt eſtabliſhed commerce."

The trade to Portugal and Spain, for ſalt, fruits, and wines, is not againſt the Swedes, as they barter for thoſe commodities their iron, fiſh, and copper. But the trade to France is the moſt deſtructive, as it takes off but few of their commodities except iron and a little braſs wire, yet runs away with a great deal of their ſpecie, and returns them hardly any thing but luxuries.

The eſtabliſhed revenues of Sweden ariſe from

1. A capitation tax.
2. Crown lands.
3. Exciſes.
4. Cuſtoms.
5. Certain tithes.
6. Silver mines.
7. Copper mines.
8. Law proceedings.

And a few leſs conſiderable particulars.

Theſe taxes amount annually to 10,104,406 dollars, ſilver mint, which in the year 1769, according to the then value of dollars, in pounds ſterling was equal to 594,180l. But we hear that the Swediſh government hath lately taken infinite pains to augment the annual revenue, aboliſh paper currency, &c.

A third part of the revenues are appropriated to the uſe of the royal family, and the reſt to ſupport the civil and military eſtabliſhments. It is to be obſerved, that the crown of Sweden has, for above 100 years paſt, received a ſubſidy from France, for which the former hath uſually ſacrificed its dearer intereſts to the latter; and for the ſake of retaining this paltry annual preſent, in the late war with the king of Pruſſia, Sweden was forced to contract a debt of 3,500,000l. which has ſince been conſiderably augmented to ſuch a degree, that it will always be a dreadful national weight.

The Swediſh forces conſiſt chiefly of an eſtabliſhed national militia, the regulations of which were either formed or improved by Charles the Eleventh, and there continued to be the baſis of the preſent eſtabliſhment. The nobility and gentry were obliged to furniſh the cavalry; and a nobleman, after having furniſhed a man, could not put either him or his horſe to any other employment. The infantry are raiſed from among the farmers, and the king's commiſſion diſtributes them through the various provinces, in proportion to the number of farms, each of which, to the value of above 60l. per annum, not being occupied by the officers, or appropriated to their peculiar ſervices, are charged with one foot ſoldier, who receives from the farmer lodging, diet, cloaths, and a trifling annual allowance of money; or otherwiſe a wooden houſe is built for him at the farmer's charge, who muſt alſo furniſh him with as much hay as will keep a cow in winter, and paſturage in ſummer, and plough and ſow for him ſuch a parcel of ground as will afford him bread. Thoſe that are married (as many of them are) generally accept this latter condition; the unmarried ſoldiers uſually abide with the farmer, but are not obliged to do him any ſervice without wages. When they have once taken the peaſants money, and are liſted into the king's ſervice, they can never quit it as long as they are able to ſerve; and, if they deſert, they are puniſhed with death. The firſt inſtitution of this method was very burdenſome to the peaſants, who were at great charge to hire their men, who coſt them 10, and ſometimes 20l. a-piece; and the ſame they muſt do, whenever their ſoldier dies. This, in peaceable times, is not ſo chargeable as in times of war, when men are unwilling to ſerve, and recruits more frequently wanted.

As all the common ſoldiers are thus provided for at the country's charge, ſo all officers, both of horſe and foot, are maintained by the king, who has appropriated for that purpoſe ſome of the lands re-united, or formerly belonging to the crown: ſo that every officer has a convenient houſe, and a competent portion of land to live upon, ſituated in that part of the country where the regiment

giment he belongs to is quartered; as alſo the rent of as many other farms as make up his pay; which, though it be ſomewhat leſs than formerly, yet being punctually paid, either in money, corn, or other commodities, they find it more profitable than when they were to ſolicit for it at the treaſury. A colonel of foot has of theſe lands the yearly rent of about 300l. and the reſt proportionably, which amounts to about 2500l. a year for all the officers, both upper and under, of one foot regiment; and there being in Sweden, Finland, and Livonia, 28 regiments of foot under this eſtabliſhment, the maintenance of all the officers belonging to them coſts the king about 70,000l. a year: what charge the cloathing of the common ſoldiers once in two or three years, their arms, and ſuch other neceſſaries, may amount to, cannot ſo eaſily be computed. The officers of horſe are provided for after the ſame manner, with ſuch large allowance as is requiſite. There are 15 regiments of horſe thus eſtabliſhed, and the maintenance of their officers is computed to be about 80,000l. a year: all which ariſes from the rents of crown lands, as do alſo the wages of civil officers in the country, who have farms annexed to their employments, in the ſame manner as the militia.

The laws the king made for maintaining this conſtitution, are very exact and particular; and provide, with great caution, that neither the peaſants ſhall be oppreſſed, nor the lands or houſes ruined: to which end all ſuch lands are yearly viſited, and the poſſeſſor compelled to make ſuch repairs as are found needful: and as every officer, upon his firſt coming to ſuch an eſtate, ſubſcribes an inventory of it, ſo upon advancement he cannot take poſſeſſion of another charge, till he has put that eſtate into as good a condition as he found it; and, in caſe of his death, his heir cannot inherit till that is done.

In times of peace all treſpaſſes and crimes committed by the ſoldiers fall ordinarily under the cognizance of a civil magiſtrate, who has the ſame authority over them as over the reſt of the king's ſubjects, except when they are encamped, or in garriſon, or any ways under flying colours: in all which caſes, as alſo in matters that relate ſolely to their profeſſion, their officers have juriſdiction over them, without whoſe leave a private ſoldier is not permitted to lodge out of his quarters, nor be abſent a day from the pariſh he belongs to. The inferior officers cannot be abſent from their charge but by their colonel's permiſſion; nor captains, and thoſe above them, without the king's leave. Above the ordinary eſtabliſhment the king annexed to each regiment 20 ſupernumerary farms, to anſwer any extraordinary accident of fire, &c. and to furniſh a ſubſiſtence for ſuch officers as are paſt ſervice: and for common ſoldiers, whom age and wounds have rendered unfit for war, there is one general hoſpital, which has a good revenue; and beſides that, every officer who is advanced, pays to it a ſum of money proportionable to the degree he is raiſed to: a colonel pays 100 crowns, and others in proportion.

The whole of land-forces uſually conſiſts of about 40,000 men, but the preſent king of Sweden, we are informed, is doing his utmoſt endeavours to augment them. With reſpect to the naval forces of Sweden, an ingenious late traveller ſays, "The naval forces of Sweden, which heretofore made a good figure againſt their enemies, are now in a very poor and debilitated ſtate. When I was at Carlſcroon, in the year 1770, the place where their fleet is ſtationed, and where are the dock-yards, ſtore-houſes, and all the materials they have for the uſe of their marine, I was amazed to ſee the maritime force of this ſtate in ſuch a ſituation. About 20 old ſhips of the line, the one half of which was rotten, and unfit for ſea, and 10 or 11 frigates and ſloops of war, almoſt in the ſame ſituation, compoſed their whole navy. Their ſtore-houſes were almoſt empty, and all the officers and men of their dock-yards complaining of being greatly in arrears with reſpect to their pay. It is true they ſtill keep up the form of a marine eſtabliſhment, the officers of which are ſupported much in the ſame manner as the affairs of the militia are, and the men are raiſed among the farmers to recruit the body of ſeamen." To which the ſame gentleman adds, "The port of Carlſcroon is defended by ſeveral batteries of cannon, and is ſuppoſed, in this country, to be a place of great ſtrength, but four Engliſh 70 or 80 gun ſhips would ſoon ſilence all theſe batteries if they were to be attacked by them, and then the place could not reſiſt."

The ſeamen of Sweden, as well as thoſe of Denmark, are of two claſſes, viz. One order, which is always actually ready either to man the fleet, or work in the dock-yards; and another order, which is but nominally ready, as the individuals are only regiſtered, and muſt appear, upon occaſion, as recruits.

With reſpect to the laws of Sweden there are five great officers of the crown, who preſide each in a tribunal compoſed of ſome ſenators; and when any of their places become vacant, the king gives it generally to the moſt antient ſenator of the tribunal where the vacancy happens, though he may beſtow it in whoſe favour he pleaſes. Theſe officers are, 1. The drotſer, or chief juſtice; he is the firſt officer in the nation, and was formerly a kind of viceroy; he has the honour of putting the crown on the king's head at the coronation; he preſides in the ſupreme court of juſtice, to which there is an appeal from all other courts. 2. The conſtable; he preſides in the council of war; has the inſpection of the diſcipline, and all that relates to war; and enjoys many great and honourable privileges. 3. The admiral; his power is alſo very great; he has the command of the fleet, and appoints all the officers who ſerve by ſea, and gives them their commiſſions: juſtice, in all that relates to the admiralty, is adminiſtered in his name. He has alſo many other privileges. 4. The chancellor; he is the chief of the police, rectifies abuſes, and gives the neceſſary orders for the good of the public. He is the keeper of the ſeals of the crown, diſpatches all ſtate affairs, and lays the king's orders and demands before the ſtates general. 5. The lord high treaſurer; he has the adminiſtration of the treaſury, and of all the king's revenue; audits the accounts of all the ſeveral receivers; ſigns all the orders for payments; manages the public funds, and pays all the officers of the kingdom: he alſo preſides in the chamber of accompts, where the impoſts on the people are aſſeſſed, and where all officers belonging to the exchequer do reſort.

The revenues of the king of Sweden were antiently ſo ſmall, that they could hardly maintain him; they aroſe only from ſome duties on merchandizes imported or exported, either by ſea or land. It was conſiderably increaſed by the diſcovery of the mines, but chiefly by the introduction of the reformation; for Guſtavus I. having propoſed to the nobility to ſhare with him the church lands, which made up above one-third of the kingdom, ſeized the greateſt part of them; and united alſo with the crown the right of forfeitures, which belonged to the biſhop almoſt throughout all Sweden; and the reſumption of lands granted away from the crown by preceding kings, to the nobility and gentry, have raiſed the king's revenues to a very high degree. This was done by king Charles XI. in the year 1680, and though it was much oppoſed by the aſſembly of the ſtates, eſpecially by the nobility; yet the lower order conſenting, the nobility were forced to comply. Beſides theſe branches, the king has a third part of all fines, when they do not exceed 40 marks of ſilver; and, when they do, he takes it all: he has alſo all forfeitures upon the account of high treaſon; and the eſtates of ſtrangers, if their heirs do not appear within a year after their death.

The laws of Sweden were antiently as various as the provinces were numerous, each of which had ſtatutes and cuſtoms peculiar to itſelf, enacted as occaſion required, by the laghman, or governor of the province, who was choſen by the people, and inveſted with great authority, eſpecially when the kingdom was elective, his ſuffrage concluding the province he governed. This variety was neceſſarily attended with great confuſion, for remedy whereof, near 200 years ago, a body of laws was compiled for the direction of the whole kingdom: yet this collection is but an imperfect piece, and the laws ſo few, and conceived in ſuch general terms, that in moſt caſes they need the aſſiſtance of the civil law; and after all, the final determination depends much upon the inclination of the bench, which in a poor country, where ſalaries are ſmall, is often filled with ſuch men as are of weak parts, and ſubject to corruption upon very ſlight temptations. The effects of this would be more

viſible, if each ſuperior court did not keep a check upon the lower, and the king's court of reverſion over-awe them all, to which all civil cauſes, amounting to the ſum of 70l. are appealable; and very few end before they have been brought thither. In this ſupreme court the king frequently ſits in perſon, and determines cauſes himſelf. Here the preſident of the chancery, and two or three privy-counſellors, alſo ſit; as does the chancellor of the court (an officer next in degree to a privy-counſellor) who is preſident of the under-reviſion, where he and two ſecretaries prepare the buſineſs, in a proper manner, to be brought before the king.

The courts of juſtice, inferior to this, are of three degrees: of the loweſt degree, or firſt inſtance, there is one in each corporation (beſides Stockholm, where there are three) as alſo in each diſtrict or territory, whereof every province contains ſeveral, ſome above twenty: in the former, namely in cities, an alderman or counſellor preſides, and has ſome of his brethren for aſſiſtants: in the latter the governor of the territory preſides, with a ſtanding jury under him; his court is ambulatory, and uſually kept near or upon the place, where the fact or treſpaſs was committed. In theſe courts examinations are taken, and matters not exceeding forty ſhillings are determined: the reſt are tranſmitted to the next ſuperior court, of which, in every corporation, there is one, where the burgomaſter is preſident, and the aldermen aſſiſtants: and ſo in every province there is one or more of theſe courts, the preſident whereof retains the name of Laghman, without any other authority than that of a judge. From theſe all cauſes of blood muſt be tranſmitted to the reſpective national courts, where they are determined without farther appeal; and thither alſo all civil actions, not exceeding 20l. may be appealed. Of theſe national courts there are three: one for the kingdom of Sweden, held at Stockholm; another for the kingdom of Gothia, or Gothland, kept at Jonkioping; and a third for the dukedom of Finland, at Abo. In each of theſe a privy-counſellor is preſident, and above half the aſſeſſors muſt be gentlemen.

All theſe courts ſit continually, or at moſt have but ſhort vacations; and, not being peſtered with too much formality, give cauſes a ſpeedy diſpatch, unleſs they be retarded by ſome underhand engagements.

Actions relating to the ſea are triable in the ordinary courts, according to their ſea-laws, founded upon thoſe antient ones of Wiſby in the iſle of Gothland, which have formerly been as famous in the Baltic ſea, as the laws of Rhodes and Oleron in other places. The court of admiralty has not any peculiar juriſdiction in the adminiſtration of theſe laws, but only in ſuch matters as directly concern the king's fleet, and in ſome places that belong immediately to the admiralty.

For cauſes eccleſiaſtical, there is a conſiſtory in each dioceſe, of which the reſpective biſhop is preſident, where cauſes of baſtardy, contracts of marriage, and other matters of that nature are tried, and church cenſures of penance, divorce, &c. inflicted. Theſe courts have no power to adminiſter an oath, nor to inflict any corporal puniſhment. From them there lies an appeal to the reſpective national courts, and, in ſome caſes, to the king, as in all other matters.

For matters relating to the mines, beſides inferior courts and officers ſettled in the reſpective parts of the country, a general court, called the college of the mines, ſits at Stockholm, of which moſt commonly the preſident of the treaſury is the chief, with a vice-preſident, and other aſſeſſors. The laws in this reſpect are more exact and particular, than in other matters; and for the moſt part juſtice is very carefully adminiſtered.

The power of executing all judicial ſentences is lodged in the governors of the provinces, the ſtadtholders of Stockholm, and other places; and from them derived to inferior officers, who are accountable to the national courts, whither they may be ſummoned, and puniſhed, upon plain proof of default: but the proof being difficult, and miniſters of juſtice apt to favour each other, they take great liberty to delay execution, or to arbitrate and put their own ſenſe upon ſentences; ſo that this part of juſtice is adminiſtered the worſt of all others, and has an influence not only at home, but leſſens the credit of the Swediſh ſubjects abroad; againſt whom juſtice cannot be obtained without great difficulty.

The ordinary charges of law-ſuits are no where more moderate than in Sweden, the greateſt burden ariſing from a late conſtitution, that all declarations, acts, and ſentences, muſt be written upon ſealed paper of different prices, from two-pence to ſeven ſhillings a ſheet, according to the quality of the cauſe; the benefit of which accrues to the king, and is computed to bring about three thouſand pounds a year. Other charges are very few, every man being permitted, and in criminal actions compelled, to plead his own cauſe. Accordingly, the practice of the law is below a gentleman, and rather the refuge than the choice of meaner perſons, who are very few in number, and for the moſt part very poor.

The cuſtom of a jury of 12 men is ſo antient in Sweden, that their writers pretend it had its original among them, and was thence derived to other nations: but at preſent it is diſuſed every where, except only in the lower courts in the country; and there the jurymen are for life, and have ſalaries. They have this peculiar to themſelves, that among them there muſt be an unanimous conſent to determine a cauſe, which in their other courts is done by a majority of voices.

Titles to eſtates are rendered more ſecure, and leſs ſubject to conteſts, by the regiſters that are kept of all ſales and alienations, as well as of other engagements of them; the purchaſer running the hazard of having an after-bargain take place of his, if he omits the recording his tranſaction in the proper court.

In criminal matters, where the fact is not very evident, or where the judges are very favourable, the defendant is admitted to purge himſelf by oath; to which are alſo added the oaths of ſix or 12 other men, who are all vouchers of his innocence. Treaſon, murder, double adultery, burning of houſes, witchcraft, and the like heinous crimes, are puniſhed with death; which is executed by hanging of men, and beheading of women; to which burning alive or dead, quartering, and hanging in chains, is ſometimes added, according to the nature of the crime. Criminals of the gentry and nobility are uſually ſhot to death. The puniſhment of ſtealing is ſince ſeveral years, inſtead of death, changed into a kind of perpetual ſlavery; the guilty party being condemned to work all his life for the king, in making fortifications or other drudgery; and has always an iron collar about his neck, with a bow coming over his head, to which is a bell faſtened, that rings as he goes along.

Duels between gentlemen, if the one party be killed, are puniſhed with the ſurvivor's death, and a note of infamy upon the memory of both. If neither be killed, they are both condemned to a priſon, with bread and water, for two years: to which is added a fine of a thouſand crowns: or one year's impriſonment and two thouſand crowns. Reparation of honour, in caſe of affront, is referred to the reſpective national court, where recantation, and public begging of pardon, is uſually inflicted.

Eſtates, as well acquired as inherited, deſcend to the children in equal portions; of which a ſon has two, and a daughter one; nor is it in the power of the parents to alter this proportion, without the intervention of a judicial ſentence, in caſe of their childrens diſobedience; only they may bequeath a tenth of their acquired poſſeſſions to ſuch child or other as they will favour. Where an eſtate deſcends incumbered with debts, the heir uſually takes two or three months time, as the law allows, to ſearch into the condition of the deceaſed's eſtate; and then either accepts the inheritance, or leaves it to the law, which, in that caſe, adminiſters.

Before we conclude this ſection it may not be amiſs to mention, that the payments in this country are uſually made in copper, that being the principal, but, at the ſame time, a very inconvenient medium of trade, as ſome of the copper coins are as large as a tile, and when a perſon receives a ſum of this money, it muſt be carried home in a cart, wheelbarrow, or ſack. But here are ſome gold ducats value 9s. 3d. each, eight-mark pieces of ſilver valued at 5s. 2d. and four-mark pieces of ſilver of half the value of the latter. A dollar ſilver-mint, as it is termed, is worth about an Engliſh ſhilling; and three dollars copper-mint make one dollar ſilver-mint.

Here are three orders of knighthood, viz. The order of the polar-ſtar, the order of vaſa, and the order of the ſword, the latter having been created ſo late as the year 1772.

SECT. V.

History of Sweden.

THE ancient history of Sweden, like that of most other countries, is involved in fables, and enveloped in obscurity. The Swedish historians pretend that their country was peopled soon after the flood, but the reasons they give for such a supposition are so absurd, that they are unworthy of mention, and do not merit confutation. Puffendorf, perhaps the best of the Swedish historians, does not pretend that any thing can be relied on till about 60 years before Christ, when he relates that their hero Woden subdued the Russians, Saxons, and Danes; but we are greatly in doubt whether there were any such nations in being at that time, at least any that were known by those names; nor does he furnish us with any material event until the year 829, when Ansgarius, bishop of Bremen, was sent by the emperor Lewis the Pious, to convert the Swedish idolaters, and make Christians of them; and it was not till the reign of Stenchild, about the year 900, that the great idol at Upsal was demolished, and the worship of that image prohibited, upon pain of death; which so enraged his heathenish subjects, that they assassinated him; however, his brother and successor, Olaus, sent to the king of England, for more Christian priests, and was, by those priests, persuaded to pay the Pope an annual sum to maintain a war against the Saracens, which afterwards obtained the name of Romescot. The following history contains hardly any thing but their civil wars, or the wars the several kingdoms of Sweden, Denmark and Norway, were engaged in against each other; sometimes they were all subject to one monarch, and at others to more, until Margaret, queen of Denmark and Norway, reduced Sweden also under her power, and reigned sole monarch of Scandinavia, in the year 1396; but Sweden was delivered from the Danish yoke by Gustavus Ericson, about the year 1520.

Gustavus was descended from the antient kings of Sweden, but reduced at this time so low, as to be obliged to work in the copper mines of Dalicarlia for his subsistence, and to conceal himself from the tyrannical prince, who then possessed the throne of Denmark; and representing the miserable estate of their country to the miners, and the neighbouring peasants, he prevailed on them to join with him in an attempt to shake off the Danish yoke; to which end having assembled a numerous body of these brave rustics, he boldly issued out of those subterraneous territories, and surprising the several posts the Danes possessed, drove them entirely out of the kingdom; for which service the Swedes elected him their king. And as the bishops and popish clergy had appeared his greatest enemies, he introduced the Lutheran doctrines, and seized the revenues of the church, most of which he appropriated to the service of the state, and was enabled thereby to ease the people of their taxes, which rendered him exceeding popular. He was crowned at Upsal in the year 1528, but his reign was frequently disturbed by conspiracies and insurrections, incited by the clergy; and when these were pacified, the Danes invaded the kingdom, endeavouring to recover the dominion of Sweden; but Gustavus proved successful, both against foreign and domestic enemies, and marrying the princess Katherine, daughter of Magnus, duke of Sax Lawenburg, his eldest son by this marriage, Erick Augustus, was declared his successor, and the crown made hereditary by the states, anno 1544; and at the same time the Catholic religion was abolished, and the Lutheran religion established, for the maintaining whereof future sovereigns were always sworn. After this Gustavus reigned in peace, except that the Russians made an incursion into Finland, and were repulsed. Though the king and states had settled the succession upon Erick, his eldest son, he gave some part of his territories, as an appendage to his younger sons John, Magnus and Charles, for the maintenance of their several families, and died in the year 1559, when his eldest son was preparing to embark for England, in order to court queen Elizabeth; but having some apprehension that the government would be disturbed in his absence by his ambitious brothers, he did not think fit to undertake the voyage at that time. He made another attempt afterwards to pay his court to the queen of England; but the wind being contrary, he was driven back again to the coast of Sweden, which he looked upon as ominous, and never made a third attempt to visit her majesty. In the mean time the Livonians being divided about the choice of a sovereign, one party called in the Poles, another chose to submit to the Russians, and a third adhered to the Swedes; and these rivals at length seized each of them a part of the country, Revel and its district being possessed by the Swedes. Erick still proposing a great deal of happiness in the married state, courted Mary queen of Scots, also a princess of the house of Lorrain, and the princess Catherine of the house of Hesse, but did not succeed in any; and his brother John marrying the lady Catherine, a Polish princess, the king appears to have been so much incensed at the repulses he had met with himself, or at the success of his brother, that he thought it a sufficient reason to declare war against him, and laying siege to his castle of Abo, made him prisoner, and caused him to be condemned to death, though he changed his sentence into perpetual imprisonment. The Poles thereupon entered into an alliance with the Danes and Lubeckers, in behalf of prince John, and his own subjects were so disgusted with the king's conduct, that they appeared ripe for an insurrection. Erick, however, defended himself against all his enemies, but abandoning himself to his pleasures, and leaving the kingdom to be governed by a favourite, who massacred the family of the Stures, that were of the royal blood, under pretence they were in a conspiracy against the crown, the people broke out into a rebellion, and he was compelled to release his brother John out of prison to appease them; however, insisting afterwards that his brothers should deliver up the countries their father had settled upon them, the people took up arms again in behalf of those princes, made Erick a prisoner, and he died in prison, supposed to have been poisoned. This was the end of that mad son of Gustavus Erickson, who delivered Sweden from the tyranny of the Danes. He was succeeded by his brother John, who endeavouring to restore the Roman Catholic religion, met with great opposition; but dying in the year 1592, he was succeeded by his son Sigismund, then upon the throne of Poland; but the states insisting on the restoration of the Protestant religion before he was crowned, he affirmed that the kingdom was hereditary, and that none had a right to put terms or conditions upon him, and commanded that one church in every town should be reserved for the use of the Roman Catholics: he declared also, that he would be crowned by the pope's nuncio, who attended him from Poland.

The states thereupon raised forces, and being joined by prince Charles, the king's uncle, compelled him to submit to the terms they proposed, and he was thereupon crowned by the Protestant bishop of Strengness. Determining, however, to break through the engagements he had entered into for the establishment of the Protestant religion, he sent for forces out of Poland, and when he found the Swedes were not to be frightened by his threats of introducing foreign troops, he returned to Poland, and the states thereupon declared his uncle, prince Charles, regent of Sweden, and a war commenced between Charles and Sigismund, in which several battles were fought. The states at length excluded Sigismund and his posterity from the crown of Sweden, and advanced his uncle Charles to that throne, settling the succession in his family, anno 1604.

Charles, soon after his accession, embarked a body of troops, and making a descent in Livonia, engaged the Poles, in which war he proved unsuccessful; and while he was at war with the Poles, the Danes invaded his territories in Sweden, and greatly distressed him, as the Russians did on the side of Livonia; when prince Gustavus his son, then but 17 years of age, (afterwards the celebrated king Gustavus Adolphus) defeated the Danes, and gave a surprising turn to the Swedish affairs; and his father king Charles dying the next year (1611) was succeeded by his son Gustavus Adolphus, then 18 years of age; when by the consent of the states, he took upon him the administration of the government, though his father had appointed queen Christina his mother to be regent, till he came of age. This prince finding the

kingdom

kingdom engaged in an unfortunate war with the Danes and Ruſſians, purchaſed a peace of the Danes, at the price of 1,000,000 crowns, anno 1613, and carried on the war againſt the Ruſſians, over whom he was victorious in ſeveral battles, and at the peace that enſued, they yielded up Kenholm and Ingermania to the Swedes: and the truce which had been made with Poland being expired, he invaded their dominions in Livonia, and took the important town of Riga, and made himſelf maſter of that whole province: he afterwards invaded Pruſſia, took Elbing, Marienburg, and ſeveral other towns, which were confirmed to Sweden by a treaty concluded not long after. The Poles, in this war, were aſſiſted by the Germans, which probably induced Guſtavus to carry the war into Germany, as well as the invitation the Proteſtants gave him to come over to their aſſiſtance; and in the year 1630, he embarked his army, with which he invaded Pomerania; and advancing to the capital city of Stetin, the duke of Pomerania admitted his troops into that city, and entered into an alliance with him, as did alſo the archbiſhop of Bremen, the duke of Lunenburg, the landgrave of Heſſe, and moſt of the Proteſtant princes of Germany, in hopes of his protection againſt their Catholic perſecutors. The French alſo entered into an alliance with the Swedes againſt the Germans, and agreed to pay them a ſubſidy of 400,000 crowns per annum.

In the year 1631 the Swedes made themſelves maſters of ſeveral other towns in Germany; and the great city of Magdeburg declared for them, which being beſieged by Tilly, the Auſtrian general, Guſtavus advanced towards it in order to attempt the relief of the place, expecting to be joined by the elector of Saxony; but that cautious prince not thinking fit to declare himſelf againſt the Auſtrians yet, the opportunity was loſt; Magdeburg was taken by ſtorm, where the imperial general maſſacred 40,000 of the inhabitants, and burnt the town down to the ground; nothing was left ſtanding but the cathedral church. The ſame year Charles I. king of Great Britain, ſent 6000 men under the command of the marquis of Hamilton, to the aſſiſtance of the German proteſtants; but landing in Pomerania, a kind of peſtilence carried off the greateſt part of them.

Tilly, after his taking of Magdeburg, marched into the electorate of Saxony, and made himſelf maſter of the city of Leipſick; whereupon the elector entreated king Guſtavus to come to his aſſiſtance, which he, at length, complied with, though he ſeemed to reſent the elector's not joining him during the ſiege of Magdeburg. Their forces were no ſooner joined, than the king gave battle to the Auſtrians, killed about 8000 of them, and took 5000 priſoners, with upwards of 100 colours and ſtandards. The king afterwards marched into Franconia, where he took ſeveral ſtrong towns; from thence he advanced to the palatinate, where he defeated a body of Spaniards that were come thither to the aſſiſtance of the imperialiſts; and the towns of Openheim, Landau, Spire, and Germerſheim ſubmitted to him. The Saxon troops, in the mean time, made themſelves maſters of Prague, and other places in Bohemia; but pretending that king Guſtavus had an eye upon the imperial throne, they refuſed to advance into Auſtria: at the ſame time, the Auſtrians were entirely diſpoſſeſſed of all the towns near the ſhores of the Baltic ſea.

In the beginning of the year 1632, the king obtained another victory over the Spaniards in the palatinate, after which he marched into Swabia, in ſearch of count Tilly, who fled before him, leaving him almoſt entire maſter of that country. Tilly, at length, entrenched himſelf on the river Lech, where, being attacked by the Swedes, that general was mortally wounded by a cannon-ball, of which wound he died ſome few days after. The king then laid the duchy of Bavaria under contributions, and coming before Munich, that capital was ſurrendered to him. In the mean time, the imperialiſts having driven the Saxons out of Bohemia, and entered Saxony, the elector entreated the king to come to his aſſiſtance; he left Bavaria, therefore, and joined the Saxons; ſoon after which, a general battle was fought in the plains of Lutzen near Leipſick; and the Swedes made themſelves maſters of the cannon of the imperialiſts; but their horſe being ſtopped by a ſmall river, Guſtavus, to encourage his men to attempt the paſſing it, advancing at the head of the cavalry, was ſoon after found dead on the other ſide of the river, having been ſhot through the back, which was generally thought to have been done by ſome pretended friend: but notwithſtanding the loſs of their great leader, the Swediſh generals behaved ſo well, that they obtained a complete victory; and the war continued many years afterwards, in which the Swedes were generally victorious, notwithſtanding the Saxons and ſome other German princes changed ſides, and adhered to the Auſtrians: but the aſſiſtance the Swedes received from the French, was more than an equivalent for the deſertion of the German princes. Guſtavus Adolphus left only one daughter, namely, the princeſs Chriſtina, who was proclaimed queen of Sweden on the death of her father, being then but ſix years of age; whereupon the diet of Sweden determined, that the regency ſhould be committed to the great officers, who behaved with that conduct and fidelity, that the kingdom appeared in a flouriſhing condition during her minority, notwithſtanding they were engaged in a war with ſuch potent enemies; and, at length, concluded a peace upon honourable terms, anno 1648, uſually called, "The treaty of Weſtphalia." By which treaty, the duchies of Bremen and Ferden, the beſt part of Pomerania, the iſle of Rugen, the city of Wiſmar, and the duchy of Deuxponts in the palatinate, were allotted to Sweden, and 5,000,000 of crowns were given them towards the expences they had been at in theſe wars. Queen Chriſtina, one of the greateſt geniuſſes of the age, and one of the moſt learned of her ſex, courted by all the princes of Europe, and in the higheſt reputation for her equitable adminiſtration, having reigned till the year 1654, reſigned the crown in favour of her nephew Charles Guſtavus, reſerving only a penſion for the ſupport of her dignity. After which ſhe profeſſed herſelf a Roman Catholick, and retired to a convent in Rome, where ſhe acquired no leſs eſteem by her works of piety and charity, than ſhe had done before by her excellent conduct in the government of her kingdom; none of the princes of Europe, or men of figure, who viſited that city, neglecting to attend this incomparable queen, daughter of the greateſt monarch that ever reigned in the north.

The war ſtill continuing between Sweden and Poland, Charles Guſtavus (Charles X.) marched in perſon into Poland, and was ſo ſucceſsful, that he obliged John Caſimir, their king, to quit the kingdom, and take refuge in Sileſia; and the Poles took an oath of allegiance to Charles; but he marching into Sileſia, the Poles revolted and obtained ſome advantages over the Swediſh forces: the elector of Brandenburg joining Charles about this time, they obtained a compleat victory over the Poles near Warſaw, and were in a fair way of making an entire conqueſt of that kingdom, when the Danes declared war againſt him, and he was obliged to march that way with the greateſt part of his army; and the Baltic Sea being frozen over at that time, he marched over the ice into Holſtein, and cauſed his artillery to be drawn after him in the ſame way: a thing that never was attempted before by any of the northern princes. The Danes were ſo amazed at this march, that they immediately deſired to treat, and were content to yield up to the Swedes the provinces of Schonen, Halland, and Bleking, with the iſland of Bornholm. This was called the peace of Roſchild, at which place plenipotentiaries met, anno 1658, and the Danes have ever ſince been expelled from the continent of Sweden. But I ſhould have remembered, that the Danes having giving king Charles ſome reaſon to ſuſpect that they did not intend to perform thoſe articles, he invaded the iſland of Zealand, and laid ſiege to the capital city of Copenhagen; but the Dutch coming to the aſſiſtance of the Danes, obtained a victory over the Swediſh fleet, and compelled Charles to raiſe the ſiege. The imperialiſts, Brandenburghers, and Poles, alſo entered into a confederacy againſt Sweden, and obtained a victory over the Swedes at Nyburg; and while king Charles was levying another army to oppoſe them, he was taken ill of a fever and died, on the 23d of February, 1660, leaving only one ſon, named Charles, then about five years of age. During the minority of Charles XI. the adminiſtration of the government was committed to his mother, the queen-dowager, and five great officers of the crown, who finding it neceſſary to be at peace with their neighbours,

neighbours, concluded a treaty in May 1660, with the Poles at the abbey of Oliva, near Dantzick, whereby the Poles relinquiſhed their claim to Livonia, and left the Swedes in the entire poſſeſſion of that province; and in the ſame month they concluded a peace with Denmark on the ſame conditions they had agreed on at Roſchild, only the Swedes ceded to the Danes the iſland of Bornholm, and the city and territory of Drontheim in Norway.

The Swedes afterwards entered into a treaty with England and Holland againſt France, called the Triple Alliance; but on the commencement of the war, anno 1674, they entered into an alliance with France, and invaded Brandenburg; but their forces were defeated by that elector, who made himſelf maſter of moſt of their territories in Pomerania, while the duke of Zell reduced Bremen and Ferden, and the Danes recovered ſeveral towns in Schonen: the Danes being afterwards defeated in ſeveral battles, were compelled to make a ſeparate peace with Sweden at St. Germains, which was ſucceeded by the treaty of Nimeguen, anno 1678, whereby all the territories the Swedes had loſt in this war were reſtored them; and king Charles married the princeſs Ulrica Eleonora, ſiſter to the king of Denmark. The young king had been declared major in the year 1672; and the ſtates ſoon after made him as abſolute as any prince in Europe, declaring, that the king received his crown from God, and was accountable to none but God for his actions, reſigning their ſhare in the government entirely into his hands; and he ſoon made uſe of the powers they had inveſted him with, to reſume all the grants his predeceſſors had made of the crown lands, and erected a court to enquire into ſuch miſdemeanors as had been committed by the great lords, or any other of his wealthy ſubjects, and repleniſhed his treaſury by the fines and forfeitures they were condemned in, whereby many of the ſenators and great officers, civil and military, were reduced to great diſtreſs. He alſo lowered the coin, and obliged the creditors of the government to be content with half the money that was due to them, by ſetting a double value upon every piece, paying only the value of half a crown where a crown was due. He ſeems to have made peace with all his neighbours, in order to make war upon the liberties and properties of his ſubjects. The laſt conſiderable tranſaction he was concerned in, was his mediation between the confederates and France, and he had the honour of ſeeing a treaty of peace nearly concluded between thoſe powers before his death, which happened in the month of April 1697, leaving one ſon, named Charles, born the 17th of June 1682, and two daughters, viz. 1. Hedwick Sophia, born anno 1681, and afterwards married to the duke of Holſtein; and 2. Ulrica Eleonora, born 1688, and married to Frederick, hereditary prince of Heſſe, (afterwards elected king of Sweden) who died without iſſue, anno 1691.

Charles XII. being but 16 years of age at the death of his father, his grandmother, the queen-dowager, was appointed regent by the late king, till his ſon ſhould be compleatly 18; but he was, however, declared major by the ſenate, in November 1697, though he was not then 16, and the ſame year ſaw the peace of Ryſwick concluded under his mediation.

The king of Denmark encroaching on the territories of the duke of Holſtein, who had married Charles's eldeſt ſiſter, the princeſs Hedwick Sophia, Charles interpoſed in the duke's behalf, and a treaty was entered upon to adjuſt this affair, which laſted near two years; but the Dane not being diſpoſed to do the duke juſtice, and knowing that the Swedes were too powerful for him, if he ſhould enter into a war ſingly, he ſecretly confederated with Auguſtus king of Poland, and the czar of Moſcovy, and ventured to invade Holſtein again, while the king of Poland invaded Livonia on the ſouth, as the czar did on the weſt. The maritime powers obſerving this flame kindling in the north, and concluding they muſt expect no aſſiſtance from any of theſe princes, in caſe of a rupture with France, which was expected every day, they ſent a fleet into the Baltic to propoſe pacific meaſures to his Daniſh majeſty, which that prince refuſing to liſten to, the confederate fleet blocked up Copenhagen by ſea, while Charles tranſported his army into the iſland of Zealand, and laid ſiege to Copenhagen by land, and compelled the Danes to conclude a peace with him at Travendal, in the month of Auguſt 1700.

During the ſiege of Copenhagen, Peter, czar of Moſcovy, invaded the province of Ingria, and in October following laid ſiege to Narva; of which king Charles receiving advice, embarked his army as ſoon as he had concluded the peace with Denmark, and landing at Pernau in Livonia with 18,000 men, he marched with all his horſe and 4000 foot to Revel, leaving the reſt of his army to follow him with the artillery and baggage: but before they joined him he fell upon the advanced poſts of the Ruſſians, and drove them before him into the Ruſſian camp: their generals imagining the whole Swediſh army had been with him, drew up their men in order of battle, and defended themſelves for ſome time: but the king entering the Ruſſian entrenchments in that part of the camp where he expected to have met the czar, they all fled before they knew what forces the king had with him. And, indeed, the czar was not in the camp, but gone to aſſemble another army, in order to ſurround the Swedes, not doubting but he ſhould have made them all priſoners. But, ſurely, ſuch a panic never poſſeſſed an army; ſome thouſands of the Ruſſians loſt their lives, without attempting to defend themſelves, and 30,000 of them, with the generals at their head, came and implored the king's mercy, laying down their arms at his feet, the Swedes not loſing above 1500 men in all the engagement. It is ſaid, indeed, that the Ruſſian army amounted to 100,000 men, and there is no doubt but they vaſtly out-numbered the Swedes: but ſuch relations are uſually much magnified; few people confine themſelves to ſtrict truth, in relating the events of war.

In the mean time the king of Poland, who lay before Riga, raiſed the ſiege, when he underſtood Charles was marching that way, leaving his army encamped on the ſouth ſhore of the river Dwina, to defend the frontiers of Poland againſt the Swedes. This army being commanded by the duke of Courland, a moſt accompliſhed general, king Charles met with much greater oppoſition than he had done at Narva, though the enemies forces were not more numerous than his own. The Saxon troops fought very bravely, and contended long for victory; but king Charles proved victorious, and marched into Courland, of which the duke was ſovereign, where he laid that province under contributions. From thence he marched into Lithuania, where leaving a part of his forces to aſſiſt prince Saphiea againſt prince Oginſki, (theſe great men having drawn the whole province into a kind of civil war) he marched with the reſt to the capital city of Warſaw, which opened her gates to him, king Auguſtus and his friends being fled towards Cracow. Here he declared to the cardinal primate, who came to attend him, that he would never give peace to Poland till they had elected another king, and began his march towards Cracow; which Auguſtus being acquainted with, aſſembled his Saxon forces, and the Poles in his intereſt, determined to give the Swedes battle; and the two armies met in the plains of Cliſſaw, almoſt in the midway between Warſaw and Cracow, on the 19th of July 1702. The king of Poland's army conſiſted of 24,000 men, Poles and Saxons; and that of the Swedes are ſaid not to have been more than 12,000. The young duke of Holſtein, who commanded the Swediſh horſe, a prince of great merit, who had married the eldeſt ſiſter of Charles, was killed on the firſt diſcharge of the Saxon artillery, by a cannon ball. The king being told he was dead, ſhed ſome tears, and then covering his face a little time, ſpurred his horſe, and charged the enemy at the head of his guards. The king of Poland on the other hand, thrice led on his troops to the charge, and fought like a prince, whoſe crown was at ſtake; but was at length forced to ſubmit to the ſuperior fortune of Charles, who gained a compleat victory, made himſelf maſter of the Saxon camp, colours, artillery, baggage, and military cheſt, and without reſting purſued Auguſtus as he fled towards Cracow, where not thinking himſelf ſecure, he left that city before king Charles arrived there: the citizens ſhutting their gates againſt the conqueror, he forced his way into the town, and took the caſtle by ſtorm, obliging the townſmen to pay him large contributions; but had his ſoldiers under ſuch exact diſcipline, that not one of the inhabitants were plundered.

Charles ſoon after left Cracow, and purſued Auguſtus very cloſely; but had not advanced far from the city, before his horſe threw him and broke his thigh; whereupon he was carried back to Cracow, and confined to his bed ſix weeks, the party of Auguſtus giving out that he was dead; and a diet being aſſembled at Lublin, moſt of the grandees of Poland came in and took the oaths of allegiance to king Auguſtus. In this oath they declared, that they never had, nor ever would attempt any thing againſt this prince; and the primate coming in among the reſt, Auguſtus excuſed his taking the firſt part of the oath, at which the cardinal bluſhed, but took the latter part of it; and not only this prelate, but a great many more who took the oath entire, had given ſufficient reaſon to ſuſpect their fidelity. The reſult of the diet was, that they would maintain an army of 50,000 men in defence of Auguſtus, and allow Charles but ſix weeks time to conſider whether he intended peace or war; but that prince having received a reinforcement of 6000 horſe, and 8000 foot, from Sweden, he overturned all their ſchemes, fell upon a body of Saxons commanded by general Stenau, who were encamped on the oppoſite ſide of the river Bug, ſwimming his horſe over that river, which ſo terrified the Saxons, that moſt of them run away without waiting to be charged. The city of Thorn ſtill holding out againſt the Swedes, the king laid ſiege to it, and as he wore a plain dreſs, was never ſingled out by the enemies gunners; but general Lieven, in a laced coat, walking with him, the king perceived the ſhot fly very thick, and directed the general to walk behind him, which the general refuſing becauſe the king would then be moſt expoſed to the ſhot, his majeſty took the general by the arm, and compelled him to walk behind him, which he had no ſooner done, but a cannon ball, which came in flank, ſtruck the general dead. This very much confirmed the king in the notion he entertained of predeſtination; for his majeſty would have been in the very place where the general ſtood, if he had not removed him in that inſtant, with a deſign to preſerve him, though this remove happened to prove fatal to the general.

Rovel, the governor of Thorn, made a brave defence againſt the victorious Swedes for a month, but was then obliged to ſurrender at diſcretion. The king was ſo well pleaſed with the conduct and courage the governor had ſhewn in defence of this town, that he gave him his own ſword, when he was brought priſoner before him, and preſented him with a ſum of money. He never failed to reward valour, even in his enemies.

The king next marched to Elbing, which city not opening their gates to him ſo ſoon as he expected, he obliged them to raiſe him 260,000 crowns; and thus he made the conquered towns contribute ſo largely to the charges of the war, that his own kingdom was very little burthened with taxes; whereas other generals frequently beggar their own country while they enlarge their conqueſts.

In the mean time the cardinal primate, who had a little before renewed his oaths of allegiance to king Auguſtus, aſſembled the ſtates of the kingdom at Warſaw, the 14th of February 1704, and declared that this ſame Auguſtus, elector of Saxony, had rendered himſelf incapable of wearing the crown of Poland; and the ſtates immediately declared that the throne was vacant, at leaſt ſuch of them as were aſſembled on this occaſion; for Auguſtus had ſtill many friends that refuſed to appear there.

Before the aſſembly at Warſaw ſeparated, they received a letter from the king of Sweden, deſiring they would make choice of prince James Sobieſki for their king, who was the ſon of John Sobieſki, their late king, who relieved Vienna. This prince was then at Breſlau in Sileſia, and received the compliments of ſome of the Poles on this occaſion; but as he was one day hunting within a little way of that city with his brother prince Conſtantine, they were both ſurprized by 30 Saxon troopers, that king Auguſtus had ſent to lie in ambuſcade, and carried off to Leipſick in Saxony. About the ſame time, Renchild the Swediſh general, was very near ſurprizing king Auguſtus, whom he hunted from place to place, as he would have done a wild beaſt; but the king had the good fortune to eſcape him, and retired into Saxony. Charles hereupon offered the crown of Poland to prince Alexander, the third ſon of John Sobieſki; but he refuſed it, looking upon that crown to be his eldeſt brother's right. Charles was then adviſed by count Piper, his prime miniſter, by Staniſlaus, and all the Poles of his party, to accept the crown of Poland himſelf; but his Swediſh majeſty had ſo little ambition, that he would not comply with the importunity of his friends, though the kingdom was at that time entirely in his power. The ſelf-denial of theſe two princes in refuſing the crown at that time, became the general ſubject of converſation, and the admiration of the ſovereigns then reigning; notwithſtanding which, the great actions of Charles have ſince been aſcribed by his enemies to his inſatiable ambition, or, which is worſe, to his revenge; though it does not appear clearly that either of them had any ſhare in the enterprizes he undertook.

His firſt actions can be aſcribed to nothing but pure ſelf-defence againſt four powerful monarchs, who confederated to deprive him of his dominions in his minority, and to ſecure himſelf againſt the future attacks of his neighbours, which could never be effected but by depriving them of the power of hurting him. And he might have this further motive in endeavouring to depoſe Auguſtus and the czar, namely, the delivering their ſubjects from their tyranny. If Auguſtus was not an uſurper, he was certainly an unjuſt poſſeſſor, by breaking through the Poliſh conſtitution, and introducing foreign forces into that kingdom, and was violently ſuſpected of deſigning to render that elective crown hereditary in his family. And as to the czar, though he endeavoured to introduce arts and ſciences into Ruſſia, he was nevertheleſs a tyrant; he deſtroyed ſeveral hundred thouſand of his own ſubjects in laying the foundation of Peterſburg; and though he reformed his ſubjects in ſome inſtances, he gave his people a very bad example in others; being a moſt debauched prince himſelf, and endeavouring to make others ſo: he would hardly admit an ambaſſador to an audience, till he had made him drunk. When Auguſtus and the czar met in Livonia, to contrive the ruin of Charles, it is ſaid, that after they had diſpatched their buſineſs, they were drunk for a week or ten days ſucceſſively, and both theſe monarchs allowed themſelves ſuch liberties in venereal encounters as can never be defended in a Chriſtian country, and to which their deaths have been aſcribed by ſome. On the contrary, this great monarch, king Charles, at the age of 18, obtained an entire victory over his appetites and paſſions, before he took the field againſt his enemies. He abandoned wine, women, and every thing almoſt the world calls pleaſure, and endured all manner of hardſhips upon the moſt laudable motives imaginable, namely, in defence of his ſubjects, and to ſecure them againſt the inſults of their enemies, and to reſcue other nations from the tyranny of their oppreſſors; and Staniſlaus, the perſon he finally recommended to the choice of the Poles, ſeems to have been a prince of great virtue and merit, which were the principal motives Charles had to advance him to that throne. He is ſaid alſo to have been a prince of great courage, abſtemious, like himſelf, extremely temperate, hoſpitable, and generous to his vaſſals and domeſtics; inſomuch that he was almoſt adored, and every way the propereſt perſon to ſucceed to that throne. He was elected by the diet at Warſaw, on the 12th of July 1704, in the abſence of the cardinal primate, who ſtill pretended to be neuter, whereupon Staniſlaus was crowned by the biſhop of Poſna, and the primate, as well as the reſt of the great officers, were obliged to come in and take the oaths of allegiance to him.

This was no ſooner effected than the king of Sweden marched into the ſouth of Poland, and took the town of Leopold, the capital of that part of the kingdom, where Auguſtus had lodged moſt of his treaſures; and here Charles met with no leſs than 400 cheſts repleniſhed with gold and ſilver.

Staniſlaus remaining at Warſaw, while Charles was engaged in this fortunate expedition, with a garriſon of 6000 Polanders and 1500 Swedes, received advice that Auguſtus was marching towards that city, at the head of 20,000 men, and being ſenſible that he could not defend himſelf in Warſaw, which was in a manner an open town, he ſent away his family into his own palatinate of Poſnania. The cardinal primate fled into Pruſſia, and moſt of them that were of the party of Staniſlaus abandoned

doned the place. The new king fled from his capital within ſix weeks after he had been proclaimed, and joined Charles near Leopold; only the biſhop of Poſnania, who crowned him, was left behind, being fallen ſick, and not able to travel; and as to the Swediſh garriſon, they retired into the caſtle; ſoon after which Auguſtus entered the city as a conqueror, and not only demanded a contribution from all the inhabitants in general, but ſuffered his ſoldiers to plunder the primate's palace, and the houſes of all the great men who adhered to Staniſlaus: the biſhop of Poſnania, after ſeeing his palace plundered, was carried away into Saxony, where he died, and the Swedes in the caſtle were obliged to ſurrender themſelves priſoners of war, which Charles was no ſooner acquainted with, than he prepared to engage the Saxons, who fled before him, and at length overtaking general Schulemburg, who commanded the greateſt body of Saxon troops, it was with difficulty that general made his eſcape from him into Sileſia, loſing the greateſt part of his army in the retreat; however, it was allowed that Schulemburg ſhewed a great deal of ſkill in retiring before the victorious Swede, and preſerving a part of his army. Auguſtus having now no forces capable of making head againſt Charles, abandoned Poland a ſecond time, and ſhut himſelf up in Dreſden, the capital of his German dominions, which gave an opportunity to Staniſlaus to reſort to Warſaw again, where he was ſolemnly crowned on the 4th of October 1705, by the archbiſhop of Leopold, aſſiſted by ſeveral other prelates, the cardinal primate dying at Dantzick about this time, having wrote a letter firſt to king Auguſtus, to beg his pardon for his treacherous conduct towards that prince.

In the mean time the czar having ſent a great reinforcement of troops into Poland, to the aſſiſtance of his friend and ally king Auguſtus, and Schulemburg the Saxon general having raiſed another army in Saxony, with which he joined the Ruſſians, a battle was fought at Frauenſted on the 12th of February 1706, wherein the Saxons and Ruſſians were again defeated by the Swedes; the Ruſſians threw down their arms and begged for mercy, but the Swediſh general Renchild ordered them all to be put to death in cold blood to revenge the barbarities the czar had committed in Livonia; for the czar, taking advantage of the king of Sweden's abſence from that province, had reduced moſt part of it, taken the chief towns, maſſacred great numbers of the inhabitants, and ſent the reſt in chains to the remoteſt part of his dominions.

The king of Sweden having driven both the Ruſſians and Saxons out of Poland, bent his march towards the river Oder, in order to enter Saxony, which induced the diet of the empire to declare him their enemy, in caſe he paſſed the Oder; the king, however, continued his march, and entering the frontiers of Saxony, the inhabitants immediately fled from their houſes till his Swediſh majeſty publiſhed a proclamation to inform them, that all who returned to their houſes, and paid the contributions he required, ſhould be treated as his ſubjects, but to the reſt he ſhould give no quarter; and the people thereupon returned to their houſes. The army being encamped at Alranſted near Leipſick, Charles ſummoned the ſtates of Saxony to meet him there, and bring with them an account of the revenues of the electorate, which having peruſed, he impoſed on them a tax or contribution of 625,000 rix-dollars (crowns) a month, beſides which he obliged them to ſupply every one of his ſoldiers with two pounds of meat, two pounds of bread, two pots of beer, and four-pence a day, with forage for their horſes; he then ordered every houſe, in which any of his ſoldiers were quartered, to ſend him certificates of the ſoldiers behaviour every month, without which the ſoldier was not to receive his pay. He aſſigned inſpectors alſo to viſit every houſe, and enquire if his ſoldiers had committed any irregularities, and puniſh them as they deſerved; and under ſuch exact diſcipline were his ſoldiers, that when a town was taken by ſtorm, the ſoldiers durſt not ſeize upon the plunder without leave: and ſo well ſatisfied were the people with their ſecurity, while the Swediſh forces remained in Saxony, that the great annual fairs were held at Leipſick as uſual, without interruption.

King Auguſtus ſending to the conqueror to beg a peace on his own terms, he immediately ſent him the following articles.

1. That Auguſtus ſhould for ever renounce the crown of Poland, and acknowledge Staniſlaus lawful king, and promiſe never to remount the throne, even after the death of Staniſlaus.

2. That he renounce all other alliances, eſpecially that of Ruſſia.

3. That he releaſe the princes Sobieſki, and all his other priſoners.

4. That he deliver up all deſerters, particularly John Patkul; and that all who have deſerted his ſervice, and been entertained in the Swediſh ſervice, ſhall not be liable to any proſecution.

During this treaty Menzikof, general of the Ruſſians, entered Poland at the head of 30,000 men, and joined Auguſtus, who had ſtill a body of 6000 Saxons with him; they attacked the Swediſh general Maderfield, who commanded 10,000 men near Caliſh, and obtained a compleat victory, for which Auguſtus ſung Te Deum at Warſaw; but in the midſt of theſe rejoicings Auguſtus received advice that his plenipotentiaries in Saxony had agreed to the terms abovementioned, which he found himſelf obliged to ratify, or ſee his German dominions ruined, as well as Poland: Auguſtus had ſeveral conferences afterwards with Charles, and endeavoured to procure better terms; but Charles was ſo incenſed at the defeat of his forces under Maderfield, that he made them ſtill worſe. He obliged Auguſtus to ſend Staniſlaus the following letter, viz.

"SIR and BROTHER,

"AS I ought to regard the directions of the king of Sweden, I cannot avoid congratulating your majeſty upon your acceſſion to the crown, though, perhaps, the advantageous treaty the king of Sweden has lately concluded for your majeſty, might have excuſed me from this correſpondence; however, I congratulate your majeſty, beſeeching God that your ſubjects may be more faithful to you, than they have been to me.

Leipſick, April 8, 1707. AUGUSTUS, king."

Auguſtus was alſo obliged to order his Saxon ſubjects not to addreſs him as a king for the future, and cauſed his title to be left out of the public prayers.

The delivering up Patkul went more againſt Auguſtus than any other article, as he had been one of his generals, and was at this time ambaſſador from his ally the czar; when he ordered his guards, therefore, to deliver him to the Swedes, he had ſent private orders a little before to the governor of Koniſting caſtle in Saxony, where he was confined, to let him eſcape; but the governor, who was a mercenary creature, inſiſting that Patkul ſhould pay dear for the favour, while they were debating about the price of his liberty, the guards came to the caſtle and demanded the priſoner, who was thereupon taken and delivered to four Swediſh officers, who carried him to the king of Sweden's quarters at Alranſtad, where he remained three months in chains, till he was tried by a council of war, and condemned to be broke alive upon the wheel, the uſual puniſhment of traitors in Sweden; for Patkul was a native of Livonia, and conſequently a ſubject of Sweden, and was one of the five deputies ſent with a memorial to Charles XI. king of Sweden, to repreſent to that prince the hardſhips the Livonians lay under, that their liberties were invaded, and to deſire a redreſs; which was ſo reſented by the then adminiſtration, that Patkul was condemned to have his right hand cut off, and afterwards be beheaded, and his eſtate confiſcated; to avoid which ſentence he fled into Ruſſia, where he was advanced to the higheſt employments by the czar, and employed as ambaſſador and plenipotentiary at the laſt treaty between the czar and Auguſtus: but Charles XII. was moſt incenſed againſt him, for being the principal occaſion of the invaſion of Livonia by the Poles and Ruſſians. It was Patkul who repreſented to Auguſtus, that Livonia would be an eaſy conqueſt, the people being in deſpair, and ready to ſhake off the Swediſh yoke, and their king a child, unable to defend the country; to whom Auguſtus liſtened with attention, and immediately prepared for the invaſion of Livonia, entering at the ſame time into a treaty with the czar, wherein

wherein it was agreed, that the czar ſhould invade the north of Livonia, while Auguſtus inveſted Riga in the ſouth; and Patkul was at the ſame time ordered to penetrate into that province, and endeavour to bring over the nobility of Livonia to the intereſt of the Poles, which he attempted without ſucceſs; the Livonians continuing faithful to their king to the laſt, which ſufficiently demonſtrates that they were not hardly uſed by the Swedes, as Patkul repreſented; and at the ſame time ſhews the heinouſneſs of his crime, in ſpiriting up thoſe princes againſt his native country, and endeavouring to excite a rebellion againſt his ſovereign. It cannot therefore deſerve cenſure, that king Charles XII. did not ſpare him, when he was condemned as a traitor for ſuch atrocious crimes committed, and perſiſted in for many years. It was ſaid, indeed, that he ought to have been ſpared by the law of nations, as he was ambaſſador from the czar; but it is agreed even at this day, that a man cannot diveſt himſelf of that allegiance he owes his ſovereign, by accepting any employment from a foreign prince; and that if he endeavours the deſtruction of his native country, he will be liable to ſuffer by the laws of his country, eſpecially an incendiary, who was the principal occaſion of all thoſe calamities the northern nations underwent for 20 years and upwards. — The ſentence awarded againſt him was accordingly executed with the greateſt rigour.

While the king of Sweden remained in Saxony, he was attended by ambaſſadors and miniſters from all the powers in Europe; and the allies were terribly afraid he would join the French againſt the confederates. The duke of Marlborough therefore was ſent by the Britiſh court to ſound his intentions, by offering him the mediation between the allies and France; but when he found he had only a deſign to mortify the emperor for ſome affronts he had received; and that his preſent view was the conqueſt of Ruſſia, and the depoſing of the czar; the duke returned very well ſatisfied that the allies would meet with no interruption from the Swedes, in carrying on the war againſt France.

Count Zobor, lord chamberlain to the emperor, having ſpoken very diſreſpectfully to the king of Sweden, the king demanded that he ſhould be delivered up to be puniſhed as he deſerved, which the imperial court found themſelves under a neceſſity of complying with; but the king having kept that miniſter with him a little while, ſent him back to Vienna unhurt. His next demand was, that the houſe of Auſtria ſhould grant their proteſtant ſubjects in Sileſia the liberties and privileges they were entitled to by the treaty of Weſtphalia; and the Lutherans had thereupon upwards of 100 churches reſigned to them, which the Roman Catholicks had taken from them, and were allowed to profeſs their religion publicly; (but the king was no ſooner incapable of affording the Sileſians his protection, than the Auſtrians revived the perſecution of the proteſtants again.) And now Charles having obtained for the proteſtants the reſtoration of their rights, he began his march towards Poland, and as he paſſed by Dreſden made Auguſtus a ſhort viſit, attended only by two or three gentlemen of his court, and having breakfaſted with that prince, and viewed the fortifications of the city, returned to his army, who were in great pain for him, when they knew he had put himſelf into the power of his mortal enemy, and were overjoyed when they ſaw him return in ſafety.

The king marched out of Saxony into Poland in September, 1707, at the head of 43,000 men, and he had another army of 20,000 men in Poland, commanded by count Leuenhaup. The czar was then with his army in Lithuania, but retired to the confines of Ruſſia as Charles advanced; the grand ſeignior about this time ſent king Charles a ſolemn embaſſy, and preſented him with 100 Swediſh ſoldiers the Tartars had taken. He deſired the alliance of the Swedes and Poles, that they might make a diverſion in his favour whenever he ſhould be engaged in war with the emperors of Germany or Ruſſia: the king of Sweden found Poland ſo deſtroyed by the Ruſſians, that he was forced to remain there a year before he could furniſh himſelf with ſupplies to enter upon his grand deſign of invading Ruſſia, and then he followed the czar towards the Ukrain, who had aſſembled moſt of his forces on that ſide to reduce the Coſſacks, commanded by their general Mazeppa, who had promiſed the king of Sweden to join him whenever he ſhould march that way: Charles apprehending the Coſſacks might be ſuppreſſed by the Ruſſians before he arrived, marched with great expedition towards Kiof on the Boriſthenes, leaving general Leuenhaup to follow him with a body of 16,000 men, and convoy a train of artillery and ſeveral thouſand waggons laden with ammunition and proviſions; but Leuenhaup being ſurrounded in his march by a numerous army of Ruſſians, commanded by the czar in perſon, after he had defended himſelf three days, was at laſt compelled to retire, having loſt the greateſt part of his army, and all his artillery, ammunition and proviſions, and with great difficulty joined the king with the remainder of his troops, which did not amount to more than 4000 or 5000. Mazeppa alſo having been defeated by the czar's forces, joined the king with very few troops; and now all communication being cut off between Poland and Ruſſia, Charles could receive neither recruits nor proviſions, and great part of his army periſhed by hard marches, and the rigour of the ſeaſon. In the winter of 1709, it is ſaid, he loſt 2000 men in one day, and in April following his army did not amount to 18,000 men, beſides Coſſacks or Tartars of the Ukrain. In this condition, about the latter end of May, he laid ſiege to Pultowa, which lies in the latitude of 50, about 40 miles eaſt of the Boriſthenes, in which the czar had a great magazine, by the taking whereof Charles hoped to furniſh himſelf with proviſions, and open a way to Moſcow; but here it was the czar ſurrounded him with a numerous army, and obtained that deciſive victory, which obliged him to take refuge in Turkey.

The king arriving at Bender, a Turkiſh province of Beſſarabia, was entertained as a ſovereign prince by the Baſſa of the province. He had before written a letter to the grand ſeignior from Oczakow, deſiring his protection, and that he would enter into an alliance with him againſt Ruſſia, which was dated July 13, 1709. To this he did not receive an anſwer till ſix months afterwards, and then no poſitive anſwer, in relation to the Porte's breaking with Ruſſia; however, a guard was ordered to attend him wherever he thought fit, and a ſupply of 500 dollars a day ordered him, as long as he remained in Turkey, which was but a ſcanty allowance, conſidering he had 1500 people to maintain out of it; ſo many having made their eſcape from the Ruſſians after the battle of Pultowa, and joined him at Bender.

It was near two years before the Porte could be perſuaded to enter into a war againſt the Ruſſians, in which they met with great ſucceſs; for the czar entering into Moldavia before he had erected magazines for the ſervice of his army, one half of them periſhed by famine, and the hardſhips they underwent, and the reſt being ſurrounded by the Turks, on the banks of the river Pruth, the czar was compelled to beg a peace, and reſtore Aſoph, and all the places he was poſſeſſed of on the Black ſea, and exclude himſelf from the navigation of it, before he could obtain leave to retire, and might have been made priſoner with his whole army, if the vizir, who commanded the Turks, had not choſe to accept the terms offered by the Ruſſians, rather than venture a battle with ſuch a body of deſperate men, whoſe military ſkill much exceeded that of the Turks.

The peace being concluded between the Porte and Ruſſia, the king of Sweden was deſired to leave the Turkiſh dominions, which that prince refuſing to do, the Turks attacked him in his quarters, in order to force him out of their territories, and he defended himſelf with the few people he had about him, till he was made priſoner, and carried away to a village near Adrianople, where the grand ſeignior let him know that he expected he ſhould quit his dominions again; but if he choſe to reſide where he was, he would allow him and his people a ſubſiſtence during their ſtay; and the king having remained here about another year, was conducted to the frontiers, from whence he rode through Hungary and Germany, incognito, attended only by one gentleman, and arrived at Stralſund in Pomerania, the only town almoſt that held out for him in Germany; and here he was ſoon after beſieged by the Danes and Pruſſians; he defended the town four months, and then finding it no longer tenable, ſailed over to Sweden, and notwithſtanding his misfortunes was received by his ſubjects with as much joy as if he had returned a conqueror.

This

This prince has been ſeverely cenſured for remaining ſo long in Turkey, and obſtinately expoſing himſelf and his faithful followers to ſuch imminent dangers, without any proſpect of ſucceſs.

But as to the firſt two years of his reſidence there, it is evident he made uſe of that time, in order to induce the Turks to join his forces, and aſſiſt him in the invaſion of Ruſſia; and when the Porte had made peace with the czar, he did not care to appear in Sweden in that forlorn condition he was reduced to, when he had a little before been able to awe moſt of the powers of Europe, and might, if he had been as ambitious as his enemies repreſented him, have erected an empire equal to that of Alexander's. Fallen from this height of power, he choſe rather to die by the hands of the Turks, than return, ſtripped of all his conqueſts, to Sweden. He could have no hopes, indeed, of ſubduing the numerous forces that attacked him at Bender with the few people that were with him; but death was what he ſought rather than an inglorious life, and to die fighting, the height of his ambition, when he could be ſerviceabe to the world no longer.

All the world admires his bravery and conduct in the beginning of his reign, when, young as he was, he defended himſelf againſt four powerful princes, and carried the war home to their own doors. Nor can he be condemned for continuing the war till he had diſabled them from playing the ſame game again, and delivered their ſubjects from the tyranny and oppreſſion they groaned under; thus far he will ever be applauded, eſpecially when it is evident he had no intention to enlarge his own dominions, or aſcend the throne of any depoſed prince, and actually refuſed it, when he was offered the throne of Poland, and that kingdom was then in his power. His view ſeems to have been to reform mankind, as well as to deliver them from their oppreſſors; his temperance and abſtemiouſneſs are beyond example in a conqueror. He would have taught the world the true road to happineſs, if ſucceſs had attended his endeavours: that a young hero at 18 years of age, in a country where intemperance reigned to a greater degree than in any other, ſhould refuſe to taſte wine, and devote himſelf to ſuffer hardſhips for the ſervice of mankind, and demonſtrate to the world, that every virtue which religion recommends, was feaſible, even when our paſſions and appetites are ſtrongeſt, and when it is in our power to indulge them, was ſuch an heroic attempt as muſt render him adored almoſt in every age to which his hiſtory ſhall come down.

At his return to Sweden, when he found all his foreign dominions torn from him, he was not dejected even then, though another power, the elector of Hanover, was added to the other four princes, who had divided his territories among them; and he would probably have made the Dane pay dear for his perfidy, if a Britiſh fleet had not ſkreened him from the reſentment of the Swede. He hoped to have made himſelf ſome amends for Bremen and Ferden, which the Dane had wreſted from him during his abſence in Turkey, by the invaſion of Norway; but to the great joy of his adverſaries, who ſtill dreaded his power (though they had reduced him exceeding low) he was killed before Frederickſhal, a Daniſh city on the frontiers of Norway, on the 11th day of December, in the 36th year of his age. The principal officers of the army immediately reſorted to their general, the prince of Heſſe's quarters, and aſſured him they would aſſiſt in advancing the princeſs Eleonora, his conſort, to the throne, though ſhe was the youngeſt ſiſter of the late king; and this princeſs was ſo much in favour with the people of Stockholm, that ſhe was prayed for as queen in the churches of that city the Sunday following. But the ſtates, when they met at Stockholm, on the 20th of January, ſtiled her only princeſs royal, and inſiſted ſhe ſhould acknowledge ſhe held the crown of them, before they would conſent to her aſcending the throne. With this, and many more articles, ſhe complied, knowing ſhe had no other right to the throne, but the election of the people, the duke of Holſtein being the ſon of her elder ſiſter. The war ſtill continued with Ruſſia, and the czar would probably have made a conqueſt of that country, if the Swedes had not prevailed on the Engliſh to ſend a fleet into the Baltic, for their defence; for though the late king Charles was ſuſpected of countenancing the pretender, in order to procure ſatisfaction for Bremen and Ferden, which the Hanoverians had poſſeſſed themſelves of; the Engliſh were ſatisfied queen Eleonora had no ſuch view, and ſent a fleet into the Baltic, therefore, to protect Sweden againſt the Ruſſians. What the Engliſh received for this important ſervice does not appear; but it was conjectured, that the confirmation of the provinces of Bremen and Ferden to Hanover, was the price paid for that armament. However, the Britiſh fleet could not prevent the Ruſſian galleys from plundering the coaſts of Sweden, which lie on the Bothnic gulph, and deſtroying ſeveral of their copper and iron-works; this gulph not being deep enough for large ſhips to enter: but the alliance between Great Britain and Sweden prevented the Ruſſians making any farther conqueſts in that kingdom: and by the treaty of peace between Sweden and Denmark, his Daniſh majeſty promiſed not to aſſiſt the Ruſſians in that war: for both theſe kingdoms began now to be apprehenſive of the growing power of the czar, and perceived that it was their mutual intereſt not to contribute to render him ſtill greater. The Danes alſo agreed to reſtore to Sweden all their territories they had poſſeſſed themſelves of in the late war (except Bremen and Ferden) in conſideration of a ſum of money; but the ſhips of Sweden were, by this treaty, obliged to pay toll to the Danes on paſſing the Sound, as well as the ſhips of other nations.

By a treaty of peace concluded with Ruſſia, at Newſtadt, anno 1721, the Swedes ceded to Ruſſia the provinces of Livonia, Ingria, part of Carelia, and the diſtricts of Wiburg and Kenholm in Finland, as alſo the iſlands of Dago, Oſel, and all the iſlands in the gulph of Finland.

In the year 1728, an ambaſſador arrived in Sweden from Turkey, to ſettle an account of the money that had been advanced to the late king Charles, which being honourably diſcharged, the Porte and Sweden entered into an alliance, which gave great umbrage to the courts of Peterſburg and Vienna; and, probably, encouraged the Swedes to revive the war with Ruſſia afterwards, to recover the fine provinces they had yielded to Ruſſia by the laſt peace.

In the mean time, major Malcolm Sinclair, who had, upon pretence of ſettling accounts between Sweden and the Porte, made ſeveral journies to Conſtantinople, being ſuſpected of concluding a treaty to the diſadvantage of the two empires of Germany and Ruſſia, was, in the month of June, 1739, aſſaſſinated by a Ruſſian officer near Naumburg in Sileſia, and his papers taken and carried off; and though the courts of Vienna and Peterſburg took a great deal of pains to juſtify themſelves, and wipe off the imputation of their authorizing, or at leaſt countenancing that murder, and the Swedes ſeemed ſatisfied with the apologies they made; yet it is evident they did not forget it, by their inſerting this fact as one reaſon of their renewing the war againſt Ruſſia, in their declaration of war againſt that empire, anno 1741. But before the commencement of this war, it may be proper to take notice, that Frederick king of Sweden ſucceeded his father in the landgravate of Heſſe, Anno 1730; and about the ſame time, the Swedes projected the erecting an Eaſt India company; and the Dutch apprehending that this might be as prejudicial to them as the Oſtend company had been, complained of the attempt to the court of Sweden; they were anſwered, that foreign commerce was open to all nations, and the Swedes had as good a right to this traffick as the Dutch, or any other nation; and the Swedes actually ſent ſeveral ſhips to China and India, though we cannot learn they have yet one ſettlement in India; nor indeed, is it neceſſary they ſhould; for other European nations, without having any ſettlement in China, or other parts of India, carry on a trade thither to great advantage.

In the treaty the Swedes made with Poland, the principal articles were, That her Swediſh majeſty ſhould, during the life of Auguſtus, acknowledge him for king of Poland; and after his death, the perſon that ſhould be lawfully elected; and that Staniſlaus, who was to retain the name of king, ſhould not bear the arms or title of Poland. Auguſtus, on his ſide, engaged, that there ſhould be a general amneſty to the adherents of Staniſlaus; that all of them ſhould be reſtored to their honours and eſtates; and that he would uſe his endeavours to eſtabliſh peace in the north.

By the laſt treaty with Pruſſia, the Swedes, who, in conſideration thereof, were to receive a ſum of money, quitted all claim to the dutchy of Stetin. The greateſt difficulty was to ſettle matters with the czar; but, at length, this was done in Auguſt 1721, on the following terms: Ingermania, Livonia, part of Carelia, the iſlands of Oeſel, Dagoe, and Maens, together with the territory of Wiburg in Finland, were ceded to the czar. The reſt of this laſt province was reſtored, and the czar engaged to pay the court of Sweden 2,000,000 of crowns. The Swedes were, however, to have the liberty of buying corn annually, without paying any duty, to the amount of 50,000 rubles, in the markets of Riga, Revel, and Wiburg; and the inhabitants of the ceded provinces were to enjoy their antient privileges, and be allowed the free exerciſe of their religion.

In the year 1720, Frederick, hereditary prince of Heſſe-Caſſel, huſband to the queen, who ſince her acceſſion had been generaliſſimo of Sweden, was, with the conſent of that princeſs, and the ſenate, raiſed to the throne. The principal difficulty in this was, that he had been educated in the reformed religion; whereas Lutheraniſm was the eſtabliſhed religion of the kingdom; but upon the queen's declaring that he would embrace the latter, he was on the 14th of May crowned.

In order, however, to ſet bounds to the prerogative, which had in the two late reigns been extended to abſolute power, a capitulation was drawn up by a committee appointed for that purpoſe, and ſigned by him before his coronation. The articles of it were: that the new king ſhould profeſs publicly the Lutheran religion: that he ſhould employ none but ſuch as were of the ſame religion: that the exerciſe of any other ſhould be prohibited, except in the houſes of foreign miniſters: that the king ſhould conduct himſelf according to the form of government eſtabliſhed after the death of the late king: that affairs of importance ſhould not be tranſacted in the privy-council, but in the ſenate, and in the reſpective colleges: that the ſtates ſhould always be at liberty to demand the aſſembling a diet: that all civil officers, and all military ones, from a colonel upwards, ſhould be at the diſpoſal of the ſenate: that no perſon ſhould be deprived of his poſt without a formal trial: that the king ſhould not intermeddle in what concerns the privileges of the four colleges, but leave every thing of that kind to be adjuſted amongſt themſelves: that the power of levying taxes, and diſpoſing of the public money, ſhould be in the ſenate, and the reſpective colleges: that no foreigners ſhould be in the ſervice of Sweden: that no more officers than are abſolutely neceſſary, ſhould be employed in his majeſty's German provinces: that the king ſhould not make over his German dominions during his life; nor, if he had any children, bequeath them to any one of the Heſſe family: that the ſupreme authority ſhould at all times, in the king's abſence, be in the ſenate: that the king ſhould not uſe any influence, to have the ſucceſſion fixed by the ſtates, who are always to have the liberty of electing their monarch, in any perſon during his life, except it be in his own male iſſue, by the preſent queen: that the value of gold and ſilver coins ſhould be the ſame as at the acceſſion of Charles XI: that the right of patronage to univerſities ſhould remain as at preſent: that the king ſhould not revoke penſions, or appropriate to himſelf any thing given to pious or charitable uſes; and that if any perſon ſhould dare to adviſe any thing contrary to this capitulation, his majeſty ſhould cauſe him to be proceeded againſt as for high treaſon: that no prince ſhould be, for the time to come, declared major, or take the government into his own hands, before he ſhould be twenty-one years of age: that the ſtates ſhould not be bound by any laws which ſhould be made without their conſent: that the ſovereign may make peace with the advice of the ſenate only; but that war ſhould not be declared without the conſent of the ſtates: that ſenators, to be approved, however, by the prince on the throne, ſhould be nominated by the college of nobles: that the king ſhould in all things conduct himſelf according to the advice of the ſenate: that every cauſe, wherein the life or honour of any gentleman is concerned, ſhould be tried in the royal court, called Hoffraten, and in no other: that the preſidents of the four colleges, as alſo the governor of Stockholm for the time being, ſhould be ſenators: that all officers in both ſea and land ſervice, ſhould take an oath of fidelity to the ſovereign, the kingdom, and the ſtates; that no colonel ſhould, on pain of death, march a ſingle ſoldier from the place he is quartered in, without orders from the king given in the ſenate: that once in three years a diet ſhould be held, and oftener if the public good requires it: that the nobility of Sweden ſhould have the liberty of electing their own marſhal: that the nobility in the German and other provinces, ſubject to Sweden, as ſoon as the war is ended, ſhould be reinſtated in their antient privileges: and, laſtly, that the enjoyment of its full rights and privileges ſhould be reſtored to every town.

The queen of Sweden dying without iſſue, anno 1741, the diet of Sweden took into their conſideration the nominating a ſucceſſor to his late majeſty, for which honour there appeared four candidates, viz. 1. The young duke of Holſtein-Gottorp, ſupported by many of the nobility, and by a ſtrong party amongſt the burgeſſes, as well as by the whole order of peaſants: the ſecond was prince Frederick of Heſſe-Caſſel, nephew to the king, for whom all the clergy declared: the third was the prince of Denmark, who had a very conſiderable party: and, the fourth, the duke of Deuxponts, who is alſo of the royal family of Sweden, and had but a ſmall party. After very warm debates, the duke of Holſtein was declared ſucceſſor, in the month of October 1742, by a majority of two votes only; and deputies were named, to offer him, on certain conditions, the reverſion of the crown, in hopes he might induce the czarina to reſtore the grand dutchy of Finland. But before they arrived at Peterſburg, he had embraced the Greek religion, with a view to the ſucceſſion of Ruſſia, to which alſo he had a claim of hereditary right. This ſcheme having failed of producing its deſired effect, was followed by conſequences that were equally unavoidable and unexpected: for the peaſants that had expreſſed ſuch unanimous affection for the houſe of Holſtein, began with the ſame zeal and unanimity to eſpouſe the intereſt of the prince of Denmark, to whom the clergy were attached; they likewiſe inſiſted on the calling to a ſevere account, the generals that had commanded the forces in the two laſt campaigns; and thoſe very perſons that had ſhewn the greateſt warmth in promoting the war with Ruſſia, were equally warm in demanding the puniſhment of all ſuch as were the managers of that war, to whom they imputed its want of ſucceſs. Yet in the midſt of theſe domeſtic diſputes, a peace appeared as precarious as ever; and the diet ſeemed equally unable to bear the thoughts of loſing Finland entirely, or falling upon any expedient for recovering it, except receiving it as an equivalent from the hands of the czarina; his Britannic majeſty having offered his mediation, the conferences were continued at Abo. Theſe, at laſt, ended in a treaty, by which Ruſſia conſented to reſtore all that had been taken in this war from Sweden, except a ſmall diſtrict in Finland, and to renew the peace between the two nations, in caſe the ſtates of Sweden ſhould elect prince Adolphus Frederick, adminiſtrator of Holſtein, and biſhop of Lubeck, ſucceſſor to the crown; and in this caſe, the young duke of Holſtein, whom they had already elected, and who was now become hereditary prince of Ruſſia, offered to make a ſolemn reſignation of all his claim and right to the Swediſh diadem.

When this treaty came to be conſidered in the diet of Stockholm, there aroſe very high debates, but at laſt the conſideration of thoſe immediate advantages, which were to ariſe from the election of the biſhop of Lubeck, and the proſpect of continual diſputes, in caſe they elected any other ſucceſſor, brought over all the orders of the ſtates to this propoſition, and duke Adolphus was accordingly choſen hereditary prince and ſucceſſor of Sweden, on the 23d of June, 1743. But while the diet was thus providing for their preſent peace and future ſafety, the Dalicarlians took up arms and marched directly to the city of Stockholm, under pretence of ſupporting the intereſt of the prince of Denmark, in which they perſiſted, notwithſtanding the king took all poſſible methods to reduce them by fair means to their duty. At laſt the malecontents attempted to overturn all, to which the king and the ſtates of Sweden had conſented. This obliged his majeſty, much againſt his will, to employ force even in his capital city, where after a ſharp engage-

ment, in which one of the ſenators, at the head of the king's troops, was mortally wounded, the rebels were totally defeated, obliged to lay down their arms, and ſubmit to the king's mercy, which was extended to them in the moſt ample degree. But this extraordinary inſtance of royal clemency did not ſoften the reſentment of the peaſants againſt two unfortunate noblemen, viz. count Lewenhaup and baron Buddenbrook, who, to ſatisfy them, had been condemned for want of ſucceſs in the two laſt campaigns, and whoſe execution was demanded with ſuch heat, that the king could not refuſe it. Lieutenant-general baron Buddenbrook ſuffered firſt on the 16th of July in the ſame year; but field marſhal Lewenhaup made his eſcape, yet was ſoon after retaken; and notwithſtanding the nobility and clergy were inclined to ſpare his life, the peaſants remained ſtill inflexible, and to ſatisfy them, he was, according to his ſentence, beheaded. The king retired to his country palace till theſe melancholy ſcenes were over, and the peaſants, gratified in their revenge, conſented to the election, which being ſignified to duke Adolphus, he went ſoon after to Stockholm, where he was received with univerſal acclamations. The late king of Denmark had many motives to diſlike this ſudden and extraordinary elevation of the houſe of Holſtein, and who beſides was not a little mortified on the ſcore of his ſon's being ſet aſide to make way for the biſhop of Lubeck, began to make ſuch vaſt military preparations as ſeemed to beſpeak a deſign of invading Sweden, and which for ſome months, not only amuſed the north, but all Europe; yet the czarina found means to lay this ſtorm, by declaring roundly to the courts of Stockholm and Copenhagen, that ſhe would maintain the election ſhe had promoted with the whole force of her empire. To eſtabliſh the peace of the kingdom more effectually, it was thought highly requiſite that the new prince ſucceſſor ſhould marry, and accordingly he eſpouſed the princeſs Louiſa Ulrica, ſiſter to the king of Pruſſia, by whom he has already three ſons. He ſucceeded to the crown of Sweden on the death of the late king Frederick, anno 1751.

Adolphus ſoon found that his new dignity was to him a crown of thorns; for through a variety of intereſts he perceived that the French had a vaſt influence over the ſenators, who were little better than penſioners to them. The intrigues of the ſenators forced Adolphus to take part in the late war againſt Pruſſia, but as that war was diſagreeable not only to the people, but alſo to the king of Sweden, the nation never made ſo mean an appearance; and upon Ruſſia's making a peace with Pruſſia, the Swedes likewiſe conciliated matters as well as they could. After a reign of tumult, commotion, and trouble, this monarch died of chagrin, in the year 1771, and was ſucceeded by his ſon Guſtavus of Holſtein-Gottorp, the preſent reigning monarch, who was born in 1746, and married to the princeſs-royal of Denmark in 1766. In the commencement of the reign of Guſtavus a very remarkable revolution happened in Sweden, of which a learned and ingenious late traveller gives the following elegant account, in a letter to a friend, dated Stockholm, 3d June, 1774.

"Adolphus, the late ſovereign, was a weak man, and under him the democratical authority attained its utmoſt heighth. The royal revenue was very inadequate to his dignity, and his weight in the ſcale of government inconſiderable and deſpiſed.

"In this ſituation Guſtavus the Third ſucceeded to the crown. He poſſeſſed the ſame advantage over his two immediate predeceſſors, which his preſent majeſty, George the Third of England, did over his, on his acceſſion; that is, he was born in the country over which he reigned, and ſpoke the language perfectly. The Swedes, who ſince the year 1720, had ſeen only foreigners on the throne, were charmed to have, once more, a king from among themſelves; and I have been ſhewn ſince my arrival here, ſeveral ſilver medals ſtruck to commemorate this happy æra; on the reverſe of which is this inſcription, *Fadern's land et*, It is my native land.

"If one may credit the accounts given of the late procedures of government while veſted in the ſenate, it was high time to redreſs the injuries they did the ſtate, which ſuffered greater evils from the irreſolutions, the delays, the diviſions of a large aſſembly, than it can even undergo from an abſolute monarch. Time had matured theſe ſeeds of diſſatisfaction, and a young prince, beloved by his ſubjects, was ready to take advantage of them.

"On the 19th of Auguſt 1772, this extraordinary event was produced, which again reſtored to the crown thoſe prerogatives ſhe had loſt for more than half a century. The king's ſecrecy, addreſs, and diſſimulation, in ſo dangerous and critical a juncture, far ſurpaſſed what might have been expected from his age. It is ſaid only five perſons in the kingdom were entruſted with the deſign, which was carried into execution with as much vigor as it had been planned with ſagacity and judgment. The ſoldiery and the people were ſucceſſively gained by the eloquence with which the young king addreſſed them, who plainly evinced the vaſt importance of this quality, in popular commotions and public affairs. Very few perſons were impriſoned, and that only for a ſhort time; nor have any of them experienced, in the ſmalleſt degree, any diminution of the royal favour, on account of their oppoſition. The ſenate took a new oath of allegiance to the prince, and tranquillity was reſtored throughout the kingdom."

Hence we may perceive the great force of elocution, and the power which an orator has over the human mind.

"Whene'er he ſpeaks, heav'n, how the liſt'ning throng
"Dwell on the melting muſic of his tongue;
"His arguments are th' emblems of his mien,
"Mild, but not faint; and forcing, tho' ſerene:
"And when the pow'r of eloquence he'd try,
"Here light'nings ſtrike you, there ſoft breezes ſigh."

CHAP.

CHAP. VII.

The EMPIRE of GREAT RUSSIA.

WE enter now upon the deſcription of an empire, which is deemed the moſt extenſive in the univerſe, and which is larger than all the other dominions in Europe taken collectively. The boundaries are at a prodigious diſtance from each other, viz.

Northern boundary,	-	Frozen Ocean.
Eaſtern ditto,	- -	Chineſe Empire.
Southern ditto,	- -	Indoſtan, Perſia, Caſpian and Black Seas, Turkey, Part of Poland.
Weſtern ditto,	- -	Sweden.

It lies between the 47th and 72d deg. of north lat. and between the 23d and 65th deg. of eaſt long. At leaſt thoſe are the limits at preſent known to geographers, the abſolute extent of ſome parts being unknown, and conſequently the real boundaries not yet aſcertained.

The eaſtern parts are but little frequented, and conſequently but little known, on account of the depredations and incurſions of the moſt ſavage tribes of the Tartars; and the northern parts have been leſs viſited, by reaſon that the greateſt part of the year they are almoſt inacceſſible from the extremity of the cold.

This country received the name of Muſcovy from the river Moſco, which gave name likewiſe to the city of Moſcow, once the metropolis of the whole empire. It hath likewiſe been called White Ruſſia, on account of the ſnow with which it is covered the greateſt part of the year; but at preſent it is uſually diſtinguiſhed by the name of *Great Ruſſia*.

This extenſive empire is divided into ſix grand diviſions, viz.

Livonia and Ingria.
Muſcovy Proper, or Weſtern Ruſſia.
Eaſtern Muſcovy, or Ruſſia.
Muſcovite Tartary.
Ruſſian Lapland, and Nova Zembla.
The countries diſmembered from Poland.

Theſe grand diviſions are ſubdivided into a great number of provinces, which include ſeveral kingdoms, duchies, &c. which have been ſubdued at different periods, and annexed to the imperial crown of Ruſſia.

SECT. I.

The Natural Hiſtory of Ruſſia.

THE greateſt part of this vaſt empire is flat and level; towards the north indeed it is very rough, and contains many mountains, particularly thoſe called Zimnopoias, or the Girdle of the Earth, which are ſuppoſed to be the *Montes Riphæi*, or Hyperborean mountains of the antients. Many large tracks are totally barren, and incapable of receiving any kind of culture.

It may naturally be imagined, that the climate muſt vary prodigiouſly in the different parts of a country of ſuch amazing extent; a country, which ſtretches from the middle of the temperate, almoſt to the extremity of the frigid zone. In the ſouthern parts the longeſt day is not above 15 hours and a half, but in the northern parts it is upwards of two months, that is, the ſun is there more than two months above the horizon without ſetting. The principal, and moſt important parts of the empire, however, are exceedingly cold. The ground in ſome places is covered near three quarters of a year with ſnow and ice, and by the ſeverity of the weather many perſons annually periſh, or are maimed. This weather ſets in about the latter end of Auguſt, and continues to the month of May, in which interval moſt of the rivers, lakes, &c. are frozen to a great depth. A very learned and ingenious clergyman, who reſided a conſiderable time at St. Peterſburg, ſays, in a letter to a reverend prelate, "It is almoſt difficult for an inhabitant of our temperate climate to have any idea of a cold ſo great; it may perhaps help to give ſome notion of it to tell, that when a perſon walks out in that ſevere weather, the cold makes the eyes water, and that water freezing hangs in little iſicles on the eye-laſhes. As the common peaſants uſually wear their beards, you may ſee them hanging at the chin like a ſolid lump of ice; yet by the way, the advantage of the beard, even in that ſtate, to protect the glands of the throat, is worth obſervation; and the ſoldiers who do not wear their beards, are obliged to tie a handkerchief under their chins to ſupply their place. From this account it may be eaſily imagined, that the parts of the face which are expoſed are very liable to be frozen; and it may ſeem ſtrange, what is a certain fact, that the party himſelf does not know when the freezing begins, but is commonly told of it firſt by ſomebody who meets him, and calls out to him to rub his face with ſnow, the uſual way to thaw it. It is alſo remarkable that the part which has once been frozen, is ever after moſt liable to be frozen again.

"In ſome ſevere winters I have ſeen ſparrows, though a hardy bird, quite numbed by the intenſe cold, and unable to fly; and I have heard that the drivers, who ſit on their loaded carriages, have ſometimes been found frozen to death in that poſture; the ſeaſons, however, are ſeldom ſo ſevere, and that ſeverity laſts but a few days; though it is not unfrequent in the courſe of a winter, that ſome poor wretches getting drunk with ſpirituous liquors, fall down by the road ſide, and periſh by the cold before any one finds them."

Again, the ſame ingenious gentleman ſays, "When the thermometer has ſtood at 25 deg. below 0, boiling water thrown up into the air by an engine, ſo as to ſpread, falls down perfectly dry, formed into ice. I have made an experiment nearly like this, by throwing the water out of a window two pair of ſtairs high. A pint bottle of common water I have found frozen into a ſolid piece of ice in an hour and a quarter: during the operation I have obſerved the ſpicula flying towards the exterior part of the water full an inch, or an inch and a half long, where they form the chryſtallization: the great length of theſe ſpiculas is remarkable, and ſeems to be cauſed by the intenſeneſs of the cold. A bottle of ſtrong ale has been frozen in an hour and a half, but in this ſubſtance there is always about a tea-cup full in the middle unfrozen, which is as ſtrong and inflammable as brandy or ſpirits of wine. I never ſaw good brandy or rum freeze to ſolid ice, though I have ſeen ice very thin in both, when put in a ſmall flat phial: the phials I made uſe of for the experiment were the common bottles, in which there had been lavender water. It may not be foreign to theſe inſtances to mention an experiment made by

by prince Orloff, maſter of the ordnance to her imperial majeſty, which I had from him, though I was not a witneſs of it myſelf. He filled a bomb-ſhell with water, and then ſtopped the hole vere cloſely with a plug; and as ſoon as the congelation began, the contents of the ſhell ſwelling, iſſued out by the ſide of the plug like a ſmall jet d'eau, or fountain. He then made a ſcrew to faſten up the hole of the bomb-ſhell after it was filled with water, and in 20 minutes the froſt burſt the ſhell with ſome degree of violence, ſo that ſome of the pieces flew to the diſtance of four or five yards."

Though the cold is thus intenſe for ſo great a part of the year, the ſmall ſummer is very hot; and, indeed, about ſix weeks of it is uſually intolerable.

The principal rivers are the

Volga, Wolga, or Rha.
Don, or Tanais.
Dwina, formed by the conflux of the Succhana and the Juga.
Occa.
Kama.
Oby.
Jeneſaida.

The Volga is not only the moſt conſiderable Ruſſian river, but is the largeſt in Europe, as it traverſes the far greater part of Ruſſia; and, after a long winding courſe of upwards of two thouſand Engliſh miles, falls into the Caſpian Sea. It hath its ſpring-head at the lake of Uronow, at a ſmall diſtance from the city of Rzeva Ulodimerſki, near the frontiers of Lithuania, about 56 deg. 15 min. of north lat. and begins to be navigable, and to carry veſſels of conſiderable burden about ſix miles below its ſpring. In its courſe, which is moſtly from eaſt to weſt, it receives near 40 rivers, ſome of them very large, waters the walls of near double that number of towns, fertilizes all the lands on each ſide, ſupplies them with prodigious quantities of fiſh, particularly ſturgeon, ſalmon, pikes, &c. of a large ſize and exquiſite taſte. There grow likewiſe along its banks the fineſt truffles, and a kind of large aſparagus, of a ſpontaneous growth, and a delicious taſte and flavour; and we are told, that the only oaks that Moſcovy produces, are to be found along its banks. The misfortune is, that a great track of that fruitful land along this noble river, is ſo expoſed to the incurſions of the Cuban Tartars, that it lies altogether uncultivated, and almoſt unpeopled. To remedy this the late czar Peter I. cauſed an intrenchment to be made from that river a little on this ſide the city of Zaritza, quite to the river Don, near the city of Twia; by which means he hath ſecured all that part of the country which lies within the trench; but the reſt reaching above 80 leagues in length and breadth, is ſtill expoſed to thoſe free-booters, and lies neglected. The Volga, towards the latter end of its courſe, takes a winding towards the ſouth, and falls into the Caſpian Sea, about 36 miles below Aſtracan, in lat. 45, 40, long. 50, 30, eaſt.

"Thus in meanders to the diſtant main,
"The liquid ſerpent draws his ſilver train."

The Don, or Tanais, is the next conſiderable river in this country, and divides it in its moſt eaſtern parts from Aſia. It hath its ſpring in the province of Rezan, on the north-eaſt of the lake Jwanow-Oſero; and, in its courſe towards the eaſt, comes ſo near the Volga abovementioned, that the late czar had undertaken to have cut a communication between them by means of a canal. But this deſign, grand and uſeful as it would have proved, he was forced to ſet aſide; the Nagayan Tartars, who at that time were poſſeſſed of the kingdom of Aſtracan, having, with an army, driven the workmen from it. From thence the Don turning its courſe towards the ſouth-weſt, and having received ſeveral rivers, tranſverſes a great number of cities, and forms many beautiful iſlands, eſpecially below Tſchercaſke, which is itſelf built upon one of them: it diſembogues itſelf into the Palus Mæotis at the famed fortreſs of Aſſof, or Azoph. The whole length of its courſe is very conſiderable, on account of its great windings and turnings, though in a direct line, it is no more than four hundred Engliſh miles.

The Dwina, or Dowina, hath no ſpring-head of its own, but is formed from thoſe called Succhana, and Juga, or Jugh: its name ſignifies double, as it is compoſed of thoſe two rivers, and its courſe bends northwards, in which it receives the Vitſogda, and ſeveral other rivers; and, having paſſed through Archangel, empties itſelf at two mouths, parted by a ſmall iſland, into the White Sea.

The Occa hath its ſpring in a large plain in Ucrania, and runs its courſe towards the north, croſſes the fens of Vorochel, and after having received a great number of other rivers, falls into the Volga, in the lower principality of the Novogorod. On each ſide of the ſprings of the Occa, and at a ſmall diſtance from it, ariſe thoſe of the Sem, on the weſt, which falling into the Deſna, are carried with it into the Boryſthenes; which laſt hurries them into the Black Sea; and, on the ſouth, that of Sneſna, which, after a ſhort courſe, falls into the Don.

The Kama is another large river, which ſprings from the fens that lie on the ſouth of the foreſt of Zirania, in the country of the Xeremiſſes, thence winding northwards along the ſide of that foreſt, and watering the city of Kaigorod, it winds again ſouth-eaſtwards and weſtwards, and falls at laſt into the Volga, in the kingdom of Caſan. It is wide and rapid, and of a blackiſh hue, but very ſweet to the taſte.

The Oby, or Vmar, ſprings out of the lake Kithai, or Kariſan, in the kingdom of Altin, in Great Tartary, and thence paſſes into the Moſcovite Tartary, forming ſeveral lakes and iſlands in its courſe; and, receiving many other rivers, empties itſelf at laſt into the northern ſea at Samoiedia, ſouth of Nova Zembla. Among the ſeveral rivers which it takes in its way, ſuch as Salim, Ket, Vaga, Trafagam, &c. is that of Irtis, which is wide and rapid, and greatly increaſes the ſtream and force of it; and, at their confluence, is the city of Sammarock, built juſt upon the point of the two ſtreams. As it winds farther northwards towards the 66th deg. of lat. it extends its waves ſo wide as to form a very large gulph with a number of iſlands, five of which are of a conſiderable bigneſs. This gulph grows afterwards narrower and narrower, as it draws nearer to the ſea, or rather the ſtreights of Naſſau, which divide this part of the continent from Nova Zembla.

The Jeneſaida, or Jeniſcia, is a no leſs conſiderable river: it hath its riſe likewiſe in Great Tartary, and falls into the ſame northern ocean, about 100 leagues eaſt of the mouth of the Oby, and ſo properly belongs to Moſcovy in Aſia.

It would be endleſs to mention the lakes of this vaſt empire, they are ſo numerous, and ſo little worthy of notice, except two of them, viz. the lake Ladoga, and the lake Onega.

The lake of Ladoga is reckoned one of the largeſt in Europe. It is formed by four rivers, which continually pour their ſtreams, and thoſe of other ſmaller lakes, into it: the two principal ones are the Voxen, or Corela the Fair, which flows from the lake of Onega; and the Volchova, which flows thither from the ſouth. To prevent its overflow from ſo many ſtreams, it hath a channel by which it diſcharges itſelf into the gulph of Finland, and thence into the Baltic. It is computed to be above 40 leagues long, and about 35 in breadth, where wideſt. It extends itſelf in length from 60 to 61 deg. 50 min. of lat. and hath the province of Carelia on the north, and thoſe of Ingria and Novogorod on the ſouth. The late czar Peter I. not finding the ſouth part of it ſo navigable as he wiſhed, cauſed a canal to be dug, by which he hath opened a communication with Peterſburg, which canal reaches to the river Volchova; by which means one may now ſail even from thence quite to Aſtracan, by the help of that and ſome other rivers which fall into the Volga. As for the lake, it breeds prodigious quantities, and variety of good fiſh; ſuch as ſalmon, ſturgeon, and a peculiar kind called Ladog, of the bigneſs of a herring, but of a finer taſte; from which the lake is ſuppoſed to have had its name.

That of Onega is the next in ſize, and lies about 50 miles eaſtward of it. It extends itſelf in length, from north to ſouth, from 60 deg. 30 min. to 63 deg. of north lat. and is about 40 leagues in length, and 18 in

breadth, having the country of Carelia on the north, the lake of Ladoga on the weſt, the province of Vologda on the ſouth, and the Cargapol, and territory of Onega, on the eaſt. It receives the rivers of Povenza, near the city of that name, on the north; that of Zelmoſa, on the eaſt; thoſe of Vitegra, and Suſta, on the ſouth; thoſe of Saala, Pudoa, Nikiſſima, Andama, and ſome others of leſs note, on the weſt; and laſtly, the Suir, which carries the waters out of this lake into that of Ladoga. On the ſouth of that of Onega is that called the White Lake, about 20 leagues from it, which diſcharges itſelf into it by the river Coeſchea, and is about half the ſize of it. Along the coaſts of Onega are ſeveral conſiderable cities, ſituate moſtly upon, or near, the mouths of thoſe rivers that fall upon it from all the four ſides, for the convenience of commerce. This lake gives name likewiſe to a conſiderable river, and to a territory through which it runs, till it empties itſelf into the White Sea.

With reſpect to the ſoil of Ruſſia, it is rather more various than the climate. The ſouthern Provinces produce

Wheat,	Oats,
Barley,	Peas,
Rye,	Herbs,

with various kinds of fruit; and all theſe with a vegetation ſo uncommonly expeditious, that corn is commonly reaped in two months after it begins to appear above the ſurface of the ground. This is attributed to the ſnow, which not only enriches and mellows the land, but cheriſhes and ſhelters the product of it, and makes it take deeper root.

" ——When high Jove his ſharp artill'ry forms,
" And opes his cloudy magazine of ſtorms;
" In winter's bleak uncomfortable reign,
" A ſnowy inundation hides the plain;
" He ſtills the winds, and bids the ſkies to ſleep,
" Then pours the ſilent tempeſt thick and deep;
" And, firſt, the mountain tops are cover'd o'er,
" Then the green fields, and then the ſandy ſhore,
" Bent with the weight the nodding woods are ſeen,
" And one bright waſte hides all the works of men;
" The circling ſeas alone abſorbing all,
" Drink the diſſolving fleeces as they fall."

The ſowing time, in many parts, muſt follow the harveſt immediately; becauſe the ſummer not laſting above three months, there can be no ſowing after the froſt is begun. But in more moderate climes they will not ſow till April or May, and then their reaping time comes in Auguſt, and ſometimes in July. As for manure, they have no need of any, the ſnow ſupplying that in every reſpect. Beſides grain and fruit of various ſorts, the country produces plenty of rhubarb, flax, hemp, good paſture for cattle, honey, wax, &c.

The aſtoniſhing quantity of muſhrooms produced ſpontaneouſly in Ruſſia are a great bleſſing and relief to the poor, while at the ſame time they are deemed delicacies at the tables of the rich and luxurious. It has been known, that above a thouſand waggon loads of muſhrooms have been annually ſold at Moſcow.

Agriculture was but little underſtood in this country till the time of Peter the Great, who brought his ſubjects in ſome meaſure better acquainted with it. The principal articles in a Ruſſian farm are wax and honey, which ſometimes produce to the peaſant a competency; as he ſells the wax and ſome of the honey, and makes a domeſtic drink of the reſt. This drink is a kind of metheglin extremely ſtrong, and very palatable. The Ruſſian method of forming bee-hives is as follows: the peaſant cuts down a tree, ſaws the trunk into many parts, hollows the pieces, then ſtops up the extremities, and bores ſmall holes into the body for the admittance of the bees; then the bee-hive is made, and the honey ſecured from all the attacks of the bear, who is exceedingly fond of it, and tries a variety of experiments and ſtratagems, to make himſelf maſter of the ſweet treaſure.

The rye here ſerves not only for bread, but a ſtrong ſpirituous liquor is extracted from it, which the Ruſſians prefer to brandy.

The wild beaſts in this country are much the ſame as thoſe already deſcribed in Lapland, Norway, Sweden, &c. ſuch as

Rein-deer,	Bears,
Foxes,	Ermins,
Martins,	Sables,
Hares,	Squirrels.

In the ſouthern provinces are bred

Black cattle,	Goats,
Camels,	Sheep, &c.
Small horſes,	

The whole empire abounds with poultry, wild-fowl, game, birds of prey, &c.

The different parts of this vaſt country are plentifully ſupplied with various kinds of fiſh, by means of the

Northern Ocean,	White Sea,
Baltic,	Black Sea,
Gulph of Finland,	Caſpian Sea,

and innumerable lakes, rivers, rivulets, &c. Theſe produce immenſe quantities of ſalmon, trout, pike, ſturgeon, and belugo, which latter is a large fiſh, of whoſe roe the beſt caviare is made.

The ſummer's heat hatches innumerable inſects in the ſand, moraſſes, foreſts, &c. and they are indeed very troubleſome throughout the whole empire. Some are like thoſe before deſcribed in the northern countries of Europe which we have already conſidered; and others are ſo imperfect as not to have received a name, or at leaſt to have been aſſigned to any particular ſpecies, for in the ſummer months we may ſay with Ovid:

" The fat manure with heav'nly fire is warm'd,
" And cruſted creatures as in wombs are form'd;
" There when they turn the glebe the peaſants find,
" Some rude and yet unfiniſh'd in their kind;
" Short of their limbs, a lame imperfect birth,
" One half alive, and one of lifeleſs earth."

Ruſſia abounds with very rich mines of ſilver, iron, and lead; the two former metals have been already deſcribed; but the latter not having been particularized, we ſhall here mention it.

Lead is of the leaſt value of all metals, it being heavy, livid, and fouls the hand with a blackiſh colour; it yields little or no ſound, and melts quickly in the fire before it turns red. Pure lead is ſeldom found in the mines, but is extracted from ores of different kinds; for it is ſometimes black, blue, yellow, or of an aſh colour. It is full of ſhining minute particles, and ſometimes again it is like a ſtone of a leaden ſhining colour, conſiſting of ſquares like dice, that lie in a white or reddiſh ſtone. The ore of lead almoſt always contains a ſmall quantity of ſilver.

When flints, and the like are mixed with an aſh or black colour, or are only marked here and there with veins and ſpots of the ſame, it is a ſign that they contain either iron or lead. The green lead ore is very rare; but when it is found, it is variegated with a yellowiſh green colour and ſemi-tranſparent. It is likewiſe heavy but not hard, and one hundred weight of it yields from ſeventy to eighty pounds of lead. There is alſo white and aſh-coloured lead ore, but it is as uncommon as this.

SECT. II.

The Geographical Deſcription of Great Ruſſia.

THE firſt grand diviſion of this great empire contains Livonia and Ingria.

LIVONIA.

LIVONIA, or Leiſland, is bounded on the north by the gulph of Finland; on the ſouth by the duchy of Courland and Lithuania; on the weſt by the gulph of Riga; and on the eaſt by Ingria and part of Ruſſia.

This province is admirably ſituated for commerce, having the ſea on the north and weſt, the great lake Pepus on the eaſt, and the river Dwina on the ſouth.

Three

Three other internal lakes, and many ſmall rivers, likewiſe greatly contribute to the advantage of this province, by facilitating the inland navigation. Livonia, from north to ſouth, is 150 miles in length; and from eaſt to weſt, where broadeſt, about 110 miles.

This province, though extremely marſhy in ſome places, is in general very beautiful, plentifully producing honey, corn, cattle, paſture grounds, &c.

The Livonians, about the twelfth century, were involved in Pagan ſuperſtitions, and with reſpect to their manners were ferocious and ſavage to a great degree. They were brought to embrace chriſtianity by their neighbours the Germans, who, however, made uſe of fire and ſword to convince their new converts.

Livonia was held as a fief of the empire, by Albert the canon of Bremen, who built Riga; and Albert afterwards obtained leave to coin money, and to inſtitute a new order of knighthood to be called *Sword Bearers*. And theſe knights ſhed oceans of blood in attempting to make converts among their neighbours.

In the year 1234, theſe knights were united to the Pruſſian, or knights of the Teutonic order; when in conjunction, they maintained very long and bloody wars againſt the Poles, Ruſſians, and many other of their neighbours. In the 16th century, Albert, of Bradenburgh, became a Lutheran, which occaſioned a ſeparation between the Livonian order and that of Pruſſia. About 1535, the principal part of the Livonians declared for proteſtantiſm, notwithſtanding the menaces and intrigues of the emperor Charles the Fifth.

This fine country hath alternately been ravaged by the Germans, Ruſſians, Poles, and Swedes. In 1660, by the treaty of Oliva, it was entirely ceded to the Swedes, who kept poſſeſſion of it till the beginning of the preſent century, when during the wars of Charles XII. the Ruſſians ſubdued the whole duchy of Livonia, as well as Ingria, and they were afterwards confirmed to Ruſſia by the treaty of Nyſtadt.

The native peaſants of Livonia are of ſtrong conſtitutions, fit to undergo hardſhips, but even at this time retain a great part of their ſavageneſs and ferocity; they call themſelves Lutherans, but are ſo extremely ignorant of religion in general, that they ſcarce know an article of that which they pretend to profeſs. As ſome of their ceremonies, ſuperſtitions and peculiarities are remarkable, we ſhall here relate them; and firſt with reſpect to their marriage ceremonies.

When a country fellow marries a laſs out of another village, he goes on horſeback to fetch her, ſets her behind him, and makes her embrace him with the right hand. He hath in his hand a ſtick cleft at the top, where he puts a piece of braſs money, which he gives to him who opens the wicket through which he is to paſs. Before him rides a man that plays upon the bagpipe, as alſo two of his friends, who, having naked ſwords in their hands, give two ſtrokes therewith acroſs the door of the houſe where the marriage is to be conſummated, and then they thruſt the point of one of the ſwords into a beam over the bridegroom's head, which is done to prevent charms, which, they ſay, are ordinary in that country. It is to the ſame end that the bride ſcatters little pieces of cloth or red ſerge by the way, eſpecially where croſs-ways meet, near croſſes, and upon the graves of little children dead without baptiſm, whom they bury in the high-ways. She hath a veil over her face while ſhe is at the table, which is not long; for, as ſoon almoſt as the gueſts are ſet down, the married couple riſe and retire. About two hours after they get up, and are brought to ſit down at the table. Having drank and danced till ſuch time as they are able to ſtand no longer, they lay down on the floor, and ſleep all together like ſo many ſwine.

They believe there is another life after this; but their imaginations of it are very extravagant. A Livonian woman, being preſent at her huſband's burial, puts a needle and thread into the grave, giving this reaſon for it, that her huſband being to meet in the other world, with perſons of good rank, ſhe was aſhamed he ſhould be ſeen with his cloaths rent. Nay, they ſo little mind what is to happen in the next world, that in the oath they take to decide any difference at law, inſtead of intereſting the ſalvation of their ſouls therein, they are obliged to conſider their preſent and temporal advantages.

They have ſuch an inclination to ſorcery, and think it ſo neceſſary for the preſervation of their cattle, that fathers and mothers teach it their children, ſo that there is ſcarce any peaſant but is a ſorcerer. They all obſerve certain ſuperſtitious ceremonies, by which they think to elude the effects of it, upon which account it is, that they never kill any beaſt, but they caſt ſomewhat of it away; nor never make a brewing but they ſpill ſome part of it, that the ſorcery may fall upon that. They have alſo a cuſtom of re-baptizing their children, if, during the firſt ſix weeks after their birth they chance to be ſick or troubled with fits, when they think the cauſe to ariſe from the name given them at their baptiſm not being proper for them; wherefore they give them another; but as this is not only a ſin, but a crime, which the magiſtrate ſeverely puniſhes, they uſe their utmoſt endeavours to conceal the practice of it.

As they are ſtubborn in their ſuperſtitions, ſo are they no leſs in the exact obſervation of their cuſtoms; to which purpoſe we have a very pleaſant ſtory concerning an old country fellow. Being condemned, for faults enormous enough, to lie along upon the ground to receive his puniſhment, and Madam de la Barre pitying his almoſt decrepid age, having ſo far interceded for him, as that his corporal puniſhment ſhould be changed into a pecuniary mulct of about fifteen or ſixteen-pence, he thanked her for her kindneſs, and ſaid, that for his part, being an old man, he would not introduce any novelty, nor ſuffer the cuſtoms of the country to be altered, but was ready to receive the chaſtiſement which his predeceſſors had not thought much to undergo, put off his cloaths, laid himſelf upon the ground, and received the blows according to his condemnation.

This is accounted no puniſhment, but an ordinary chaſtiſement in Livonia. For the people, being of an incorrigible nature, muſt be treated with that ſeverity which would elſewhere be inſupportable. They are not permitted to make any purchaſe, and to prevent their ſo doing, they have only ſo much ground to manage, as will afford them a ſubſiſtance. Yet will they venture to cut down wood in ſome places of the foreſts, and having ordered the ground, ſow wheat in it, which they hide in pits under ground to be ſecretly ſold. When they are taken in this, or any other fault, they make them ſtrip themſelves naked down to the hips, and to lie down upon the ground, or are tied to a poſt, while one of their comrades beats them with a ſwitch, or holly wand, till the blood comes of all ſides; eſpecially when the maſter ſays, Selcke nack maha pexema, Beat him till the ſkin falls from the fleſh.

Nor are they ſuffered to have any money; for as ſoon as it is known they have any, the gentlemen and their officers, who are paid by the peaſantry, take it from them; which cruelty of the maſters puts theſe poor people many times into deſpair, of which there happened a ſad example. A peaſant preſſed by his officer for what he neither had, nor ought to pay, and being deprived of the means whereby he ſhould maintain his family, ſtrangled his wife and children. The officer coming the next day to the houſe, thinking to receive the money, ſtruck his head againſt the man's feet that was hanging, and ſo perceived the miſerable execution of which he was the cauſe.

Livonia is divided into two parts, viz. Eſtonia and Letten.

I. ESTONIA.

Eſtonia, the moſt northern part of the province, is bounded on the ſouth by Letten; on the eaſt by Ruſſia; on the weſt by the gulph of Riga; and on the north by the gulph of Finland. The chief cities and towns are,

Revel, the capital of Eſtonia. This city is ſituated in part on a plain, and in part on the declivity of a mountain, at the top of which there is a ſtrong caſtle. It is 125 miles from Stockholm, and ſtands on the gulph of Finland. Waldemar, the ſecond king of Denmark, founded Revel, but ſold it, together with Narva and Weſemberg, to the grand maſter of the Teutonic order. Revel was one of the places originally admitted into the confederacy of the Hans-Towns, and was a conſiderable commercial place till 1550, when the Ruſſians removed the commerce of Revel to Narva, after having ſubdued the latter. But in 1711, when the Ruſſians

conquered

conquered the former, they again turned its trade into the old channel, and ſince that period the place hath, in ſome degree, encreaſed in opulence and importance. The citizens ſtill preſerve the privileges originally granted by their former patrons the grand maſters, the kings of Sweden, &c. and enjoy their own forms of government, though a Ruſſian garriſon ſecures the place. The market-place, however, is guarded by a band of their own. The civic government is democratic, conſiſting of elective magiſtrates, counſellors, &c. who are obliged occaſionally to conſult their conſtituents; and the religion is Proteſtaniſm, according to the confeſſion of Augſburgh. The Daniſh peaſants, who formerly ſettled here, are ſtill diſtinguiſhable from the original inhabitants by their habits, cuſtoms, manners, &c. During the laſt ſiege of Revel, 50,000 of the inhabitants died of the plague, which was probably owing to the want of room, proper proviſions, &c. as many of the country people had taken ſhelter in the city.

Narva is ſituated on the river Nerva, which divides Livonia from Ingria. It was originally built by Waldemar II. king of Denmark, taken by John Baſilowitz, czar of Moſcovy or Ruſſia, retaken by the Swedes, and finally reduced by Peter the Great, in the year 1700. Previous to its reduction, when the Ruſſians laid ſiege to it with an army of 80,000 men, under the command of the duke of Cray, Charles XII. king of Sweden, advanced to its relief, at the head of only 8000 men; attacked the Ruſſians in their lines, gave them a total overthrow, ſlew 20,000 men on the ſpot, took the general, moſt of the officers, and a great number of private men priſoners, with 190 pieces of cannon and mortars, 171 colours and ſtandards, the whole baggage of the army, &c. &c. A late Engliſh traveller, in ſpeaking of this victory, ſays, "That afterwards Peter moſt ſeverely revenged the diſhonour of his arms, on that unfortunate day when he afterwards took Narva, and tranſported the wretched inhabitants into the moſt remote parts of his dominions, (Aſtrachan). They yet ſhew the baſtion where he gave the aſſault, and it is ſaid that on his entering the place, and finding the Swediſh commandant in his robe de chambre, unapprehenſive of ſuch an event, he ſtruck him ſeveral times, reproaching him for his remiſſneſs to his ſovereign's intereſt, and for having been found in a dreſs ſo unworthy of a ſoldier."

This gentleman gives us the following curious account of the Livonian dreſs: "I had the pleaſure (ſays he) to dine in company with four ladies yeſterday, who were habited in the Livonian dreſs. Nothing could more aptly realize that barbarous ſplendor which has been ſo frequently depictured, but is now ſo rarely to be ſeen, in any parts of Europe. It was expenſive, and might have been worn by perſons of the firſt eminence, without degradation of their rank. Their heads were covered with a complete bonnet of pearls, which were not worth leſs than 2000 rubles, (450l. ſterling, a ruble being 4s. 6d.); and round their necks were ſeveral ſtrings of the ſame; a part of their necks was left expoſed, but the lower part was concealed by a veſt of red ſilk, which ſat cloſe to the breaſt, and was bordered with a gold lace of a vaſt breadth, which deſcended to the feet. Their arms had no other covering than the ſleeves of their ſhifts; and when they walked out they threw over their heads and ſhoulders a piece of ſilk, reſembling a Highland plaid, which was a ſort of a ſubſtitute for our capuchin."

Juſt oppoſite to Narva, on the other ſide of the river, upon a rock which it almoſt ſurrounds, is the fortreſs of Iwanogorod.

At the foot of the above rock there is a little town called Ruſſian Narva, and which only Ruſſians inhabit. Among other ridiculous ſuperſtitions the people have a cuſtom of obſerving the eve of Whit-Sunday as a feſtival, ſacred to the memory of the dead. On this occaſion the women aſſemble in the church-yard, ſpread clean napkins on the graves and tomb-ſtones, and cover them with painted eggs, fiſh dreſſed various ways, cakes, cuſtards, &c. The prieſt then prays over, and perfumes theſe with frankincenſe; the clerk follows, and gathers up the offerings for the uſe of the church; and the women, during the whole ceremony, make the moſt diſmal lamentations.

The river Nerva, which flows from the lake Peibus, and empties itſelf into the gulph of Finland, is exceedingly rapid; and near two miles from the city there is an impetuous cataract, which ruſhes violently down a precipice with the moſt tremendous noiſe, and daſhes ſo furiouſly againſt the rocks, that a miſt or vapour continually aſcends from its foam, which, when the morning ſun obliquely ſhines upon it, produces a beautiful rainbow.

"The intercepted beams mix'd with the ſhade
"Of temper'd æther, and refracted light,
"Paints the fair rainbow charming to the ſight."

Nieſlat or Newfort, is a ſtrong fortreſs on the banks of the Nerva, near where it iſſues out of the lake Peibus.

Weiſenburg, on the river Weiſs, about 20 miles weſt of Nerva, is another ſtrong fortification.

Thirty miles ſouth of Weiſenburg is Weſſeſtein, another ſtrong fortreſs, ſituated in the midſt of a moraſs.

Tolſburg, a ſmall ſea-port town, on the gulph of Finland, at the mouth of the river Semſteback, is about 90 miles diſtant from Nerva, to the eaſt.

Badis, or Padis, a fort ſeated on the river Aſſa, about 20 miles from Revel, to the weſt.

Hapſal, or Hapſel, is ſituated on a ſmall gulph of the Baltic, to which it gives its name, over-againſt the iſle of Dagho, about 30 miles from Revel, to the ſouth-eaſt. It was formerly the ſee of a biſhop, and ſubject to the Danes; but in 1572 it was taken by the Ruſſians. The Swedes ſeized it in 1581, and it became again ſubject to the Ruſſians in the beginning of this century.

Lehal ſtands alſo on the Baltic, or rather on the gulph of Riga, 60 miles from Hapſal, to the ſouth-eaſt. It is a place of ſtrength, and has a caſtle of good force.

Parnaw, or Pernaw, ſtands on the gulph of Riga, at the mouth of the river Parnaw, 65 miles from Revel, to the ſouth. It is a ſmall city, but a place of good trade, a great quantity of corn, eſpecially, being ſhipped hence for the Netherlands. It is divided into the old and new city, and was formerly one of the Hans-Towns. It is pretty well fortified, but owes its ſtrength chiefly to its caſtle; though it is built only of timber, as well as all the houſes and churches. The Polanders made this the capital of one of their palatinates, when it was under their juriſdiction. It became ſubject to the Swedes in 1617, after it had been taken and retaken many times in the laſt century; and in 1710 it ſurrendered to the Ruſſians. There is an univerſity removed thither from Derpt, in the year 1685, but it is not much frequented. The river Pernaw, on which this town is ſituated, has its ſpring in a large foreſt near the little river Beca, and the caſtle of Weſſeſtein receives, in its courſe, the rivers Fela and Pernkeia, and falls into the gulph of Riga at Pernaw.

Derpt, or, as the inhabitants call it, Derpat, and the Muſcovites Junogorod, is a large and antient city on the river Eimbeck, between the lakes Peibus and Wortzi, which have a communication together by that river. It is 60 miles diſtant from Narva to the ſouth, and 75 from Parnaw to the eaſt. It was formerly the ſea of a biſhop, and was adorned with an univerſity in 1632, by king Guſtavus Adolphus, on account of its being a pleaſant healthy place, abounding with proviſions, and all neceſſaries. But the univerſity has been ſince removed to Parnaw, as we have already obſerved. The buildings at Derpt are of ſtone and brick, but the town is not ſo populous as it was formerly. It has a ſtrong caſtle for its defence, ſeated on a hill; but it has, however, been ſubject to many maſters. The Teutonick knights took it from the Ruſſians in 1280, the Poles ſeized it in 1582, afterwards the Swedes drove them out; but in 1603 they regained and kept it till 1625, when the Swedes took it again; and, finally, in 1704, it ſurrendered to the Ruſſians, who have kept it ever ſince.

Felin, a town with a caſtle, ſtands on a ſmall river, which runs from the lake Wortzy to Pernaw, 70 miles from that city to the eaſt, and as many from Derpt to the weſt.

Ringen is a fort 35 miles diſtant from Felin, to the ſouth.

Farneſt, another fort, formerly very ſtrong, but ſo demoliſhed when the Poles took it, that though the Swedes ſpent much in repairing it, when in their poſ-

ſeſſion,

ſeſſion, they could not reſtore it to its former ſtrength: nor have the Ruſſians, who have it now, much improved it.

II. LETTEN.

THE diſtrict of Letten is bounded on the eaſt by Ruſſia, on the weſt by the Baltic, on the ſouth, and ſouth-weſt, by the river Dwina; and on the north by Eſtonia. The principal cities and towns are as follow:

Riga is the capital, not only of Letten, but of all Livonia. Yet a very late and accurate traveller, in ſpeaking of it, ſays, "My ſtay in this city has been rather regulated by caprice, than ſtrictly proportioned to the number of objects it preſents, either to elegant amuſement or inſtruction. It would be hard to have found a ſpot more deſtitute of any natural beauties and advantages, to induce an adventurer to fix in, than is that where Riga ſtands. Deep barren ſands inveſt it round on every ſide, and a traveller who regulated his ideas of the province by that part of it he ſaw here, would accuſe thoſe authors of groſs impoſition who have called Livonia the granary of the north. It was commerce which evidently gave birth to the place; and the genius of which ſtill protects and enriches it. The river Dwina is an inexhauſtible ſource of plenty, and amply makes amends for every other deficiency. It runs a vaſt length into the interior parts of Poland, and conveys down all the articles of trade exported from hence. Timber is one of the chief, and I am aſſured, that many of the largeſt trees do not arrive, in Riga, within two years, being cut near Bender, on the banks of the Nieſter, from whence they are drawn over the ſnows, in winter, to the Dwina, and brought down the enſuing ſeaſon.

This city is ſituated in a large plain on the weſtern bank of the river Dwina, ſix miles above the mouth of it, which makes a commodious harbour from the gulph of the Baltic, called, from thence, the gulph of Riga, though by ſome the gulph of Livonia. The city is 120 miles diſtant from Revel to the ſouth, and 165 from Narva to the ſouth-weſt. It was founded about the latter end of the twelfth century, and, in 1215, was made a metropolitan ſee by pope Innocent III. It was for ſome time the ſeat of the grand maſter of the Teutonic order, and afterwards entered into the Anſeatic league; and was for ſeveral years a free town under the protection of the emperors of Germany. In the 16th century the reformation was introduced into this city, and made, in a ſhort time, ſo great a progreſs, that all the citizens embraced the Lutheran religion, and drove away the clergy, whoſe eſtates they ſeized. The Teutonic knights here, moſt of whom had alſo declared for the reformation, after the example of thoſe of Pruſſia, ſided with the burghers, who revolted againſt their archbiſhop; and even many of the clergy did alſo profeſs Lutheraniſm. After ſome years war, a treaty was made in 1547, by which it was agreed, that the Lutheran religion alone ſhould be profeſſed at Riga; and that the citizens ſhould take an oath of allegiance to the archbiſhop, and to the grand maſter of the order. Some time after, the conqueſts which the Ruſſians and Swedes made, obliged the knights, the clergy, and the citizens, to beg the aſſiſtance of Sigiſmund king of Poland, and even to ſubmit to him in 1561. That prince granted the free exerciſe of the Lutheran religion to all the inhabitants in the whole country: and all the clergy having renounced popery, the archbiſhoprick of Riga became ſuppreſſed in 1566, and all the church-lands were ſecularized, and made hereditary. Stephen Battori, whom the Poles had elected king, after the abdication of Henry duke of Anjou, who ſucceeded to the crown of France, repaired to Riga in 1587, and being reſolved to reſtore the Roman Catholic religion, he put the Jeſuits in poſſeſſion of St. James's church, and gave them a college. Afterwards, he ſent a governor thither to command in the whole province. Charles IX. king of Sweden, beſieged Riga unſucceſsfully in 1605, and again in 1609; but his ſon and ſucceſſor, Guſtavus Adolphus, was more fortunate, and took it in 1620. He gave the Jeſuits, and all the Roman catholics, leave to retire with all their effects. In 1656, whilſt this prince was making war in Poland, the czar of Muſcovy entered Livonia, and attacked Riga; but after a ſiege of ſeven months he was obliged to retire. The Ruſſians attempted this city again in the beginning of this century, with no better ſucceſs; but at laſt, the 13th of July, 1710, they took it, having thrown 8000 bombs into it, which reduced it almoſt to a heap of rubbiſh. The plague, which afflicted it afterwards, carried off above 6000 inhabitants. A great many families had left the city before it ſurrendered.

The trade which this city carries on with England, Holland, and the towns of the Baltic, renders it extremely populous, and very conſiderable. There are in the town almoſt as many ſhops as houſes. Proviſions are here very plentiful, and cheap. There arrive at Riga yearly above 1000 veſſels laden with corn, hemp, flax, pitch, tar, planks, furs and ſkins of all ſorts, Ruſſian leather, aſhes to make ſoap and glaſs, &c. All theſe merchandizes are tranſported by ſea to England, France, Germany, Holland, and other countries; and exchanged for the commodities of the more ſouthern climates. They reckon that above 1000 merchantmen arrive every year in the port of Riga. This city, though large, is well fortified; having ſtrong walls, bulwarks, and a very large trench on the land ſide, and a ſtrong caſtle on the river, where the governer-general of Livonia reſides: there is alſo a fort oppoſite the town, on the other ſide of the river; it is called fort Kobber, or Kobruns. The harbour is ſecurely guarded by the Dunamond fort, or, as it is called, the Dunamunder-Schans, ſeated about ſix miles below the city, near the mouth of the river Dwina, as its name declares; and is a fortreſs of great importance, commanding the paſſage to Riga, ſo that, without leave from the governor, no ſhip can ſail thither.

Concerning the inhabitants of Riga, the celebrated Dr. Cook, who was many years a phyſician to the empreſs of Ruſſia, gives us the following particulars: "The inhabitants of Riga are a frank kind of people, and very polite to ſtrangers; they live by their trade, and have by their policy kept up hitherto a ſhare of liberty. Their city is governed by four magiſtrates, and they have alſo a great number of counſellors and a ſyndic. Their magiſtrates have a ſalary annexed to their office, and they are not permitted to trade during their magiſtracy, which, though elective, may continue as long as they live, provided they pleaſe their council. They have great power in the city, but if any think they have not got juſtice, they appeal to St. Peterſburg, and frequently get the magiſtrates ſentence reverſed. The women are very pretty, rather inclinable to be fat, but fine agreeable features; the unmarried women are kept in very good order, but it is ſaid, that after marriage they do not pay a great regard to chaſtity, againſt which they offend not by ſtealth but pretty openly. The ladies of quality are very vain, but at the ſame time polite to thoſe who pay them great reſpect. Merchants wives, and other idle women, are to be ſeen at the doors of their houſes almoſt through the whole day, for no other reaſon than to ſee the gentlemen paſs by, and receive their compliments. To ſuch a length is this fooliſh cuſtom come, that the men ſcarcely can be covered one moment, and therefore walk with their hats under their arms, like ſo many petit maitres."

The bridge over the Dwina is one of the moſt ſurprizing in Europe, being 900 paces in length. It conſiſts of tranſverſe beams of timber joined together, and riſes or falls with the tide. It is always taken to pieces, and put up before the froſt ſets in, which happens in November, and again put up as ſoon as the ice is gone. The inhabitants of the city of Riga itſelf are about 8000 in number, and the ſuburbs contain about as many more. Three miles below the town, on the ſouthern ſide, is the place where Charles XII. routed the Saxons, as he had firſt done the Ruſſians before Narva: a high bank of ſand is now collected, and poſſeſſes the ground where the action happened, under which are ſtill frequently found ſkulls and human bones.

Kokenhauſen, or Kokenhuys, ſtood on the river Dwina, 90 miles above Riga to the eaſt. It was ſtrong by its ſituation on a hill, rather than by its fortifications, but was defended by a good citadel. It was formerly the reſidence of the archbiſhop of Riga. The Ruſſians blew it up in 1701, after they had unſucceſsfully beſieged Riga.

Nienhaus, or Nyenhauſen, on the borders of Muſ-

covy, near the river Peides, is 40 miles diſtant from Derpt to the ſouth, and 180 from Riga to the eaſt.

Marienburg, 25 miles from Nienhaus to the ſouth-weſt.

Warbeck ſtands at the mouth of the river Embeck, near the lake Peipus. Theſe three laſt are all forts of good ſtrength.

Sewold, or Segenwold, 45 miles from Riga towards the eaſt, ſtands on the ſouth bank of the river Treiden; and over-againſt it, on the other ſide of the river, lies Treiden, from which it has its name.

Wolmer ſtands on the north bank of the ſame river, 80 miles from Riga to the north-eaſt.

We come now to the ſecond grand diviſion of Ruſſia, namely,

INGRIA.

Ingria, or Ingermanland, to the northward of Livonia, is bounded on the ſouth by the river Luga; on the north by the Finland gulph, lake Ladoga, and the river Nieva; on the weſt by lake Peibus and the river Nerva; and on the eaſt by an imaginary lake, ſuppoſed to be drawn between the town of Lubo to the river Lugo. It is 130 miles long, 70 broad, and abounds in cattle. In the winter here are a great number of elks, which in the ſummer ſwim in the river Nieva, and make excurſions into Carelia. The czar, Peter the Great, being deſirous of opening a communication between Archangel and the Baltic, by means of the gulph of Finland, in order to improve the commerce of his dominions, determined to make himſelf maſter of Ingria, which he accordingly did in the beginning of this century. Then to make it an European maritime power, he determined on one of the moſt ſtupendous undertakings that ever was entered upon by human reſolution, viz. building the city of Peterſburg, which he deſigned to make not only the capital of Ingria, but of the whole Ruſſian empire, the center of trade, and the principal ſeat of the imperial reſidence. It is ſituated between Ingria and Finland, in a fenny iſland, ſurrounded by the river Nieva, in 60 deg. north lat. and 31 deg. 34 min. eaſt long. being diſtant from

	Miles.

A late traveller, who calls this city a creation of the preſent century, ſays further of it, "I am ſtruck with a pleaſing aſtoniſhment while I wander among havens, ſtreets, and public buildings, which have riſen as by enchantment within the memory of men ſtill alive, and have converted the marſhy iſlands of the Nieva, into one of the moſt magnificent cities on the earth. The imagination, aided by ſo many viſible objects, riſes to the wondrous founder, and beholds in idea the titulery genius of Peter, yet hovering over the child of his own production, and viewing, with a parent's fondneſs, its riſing palaces and temples. The names on which ancient ſtory dwells with ſo much fondneſs, ſinks on a compariſon with this immortal man; and the fabulous legiſlators of Greece and Egypt never preſumed to attempt the mighty transformation which the czar completed. The followers of Cadmus, of Theſeus, and of Romulus, were animated with the ſame ardor as their leader; but the Muſcovites, (Ruſſians) wrapt in the moſt profound barbariſm, ſecluded by their illiberal prejudices from an intercourſe with European nations, and equally the ſlaves of ſuperſtition and long preſcription, were forcibly torn from this night of ignorance, and compelled to accept of knowledge, of refinement, and of civilization."

The iſland on which this fine city has been ſo wonderfully raiſed, was nothing but a heap of mud in the ſhort ſummer of theſe climates, and a frozen pool in winter, not to be approached by land but by paſſing over wild foreſts and deep moraſſes, and had been till then the habitation of bears and wolves, till it was, in 1703, inhabited by above 300,000 Ruſſian, Tartar, Coſſack, &c. peaſants, whom the czar called together from all corners of his vaſt empire, ſome near 1200 miles; and theſe made a beginning of this work. He was obliged to break through foreſts, open ways, dry up moors, and raiſe banks, before he could lay the foundation. The whole was a force upon nature. At firſt the workmen had neither ſufficient proviſions, or even pick-axes, ſpades, wheelbarrows, planks, &c. or huts to ſhelter in; and yet the work went on ſo expeditiouſly, that in five months the fortreſs was raiſed, though earth thereabouts was ſo ſcarce, that the greateſt part of the labourers carried it in the ſkirts of their cloaths, or in bags made of old rags and mats, barrows being then unknown to them. It is computed full 100,000 periſhed at the place; for the country had been made deſolate by war, and ſupplies by Ladoga lake were often retarded by contrary winds. The czar himſelf drew the whole chief plan. While the fortreſs was going on, the city began gradually to be built. He obliged many nobility, merchants and tradeſmen, to go and live there, and trade in ſuch commodities as they were ordered. Proviſions being ſcarce, and conveniencies wanting, the place at firſt was not at all agreeable to perſons of diſtinction, who had in Moſcow large buildings, and ſeats in the country with fiſh-ponds, gardens, &c. &c. However, he little regarded the complaints of thoſe who only conſidered their own eaſe. The Boyars (nobility) brought great retinues with them, and merchants and ſhopkeepers ſoon found their account in ſettling here. Many Swedes, Finlanders, Livonians, from towns nearly depopulated by the wars, continued here. Artificers, mechanics, ſeamen, were invited hither, to encourage ſhipping; who, having worked out the time agreed on for the czar, were hired by the Boyars; and ſome built for themſelves, and ſettled, each man being allowed to pitch on the ſpot he liked. In one year 30,000 houſes were erected, and, in two or three more, double the number, which doubtleſs are very much increaſed ſince. Some indeed, but chiefly in the ſlabodas, or ſuburbs, are mean, and may be taken to pieces in two or three hours, and ſet up elſewhere. To build this town, that of Nienſchans (a ſtrong fort on the Nieva, not far from Noteburg) was demoliſhed for the materials, and the inhabitants removed hither. As he intended to remove the trade of Archangel to Peterſburg, in 1713 he made 1000 families come from Moſcow, and offered great advantages to all foreigners that ſhould there ſettle; and ordered that all goods uſually ſent to Archangel, to be ſold, &c. to ſtrangers, ſhould be ſent hither, the duties to be in every reſpect the ſame. But the commerce, &c. were not entirely removed till ſome years after. In 1714 it was ordered, that all future houſes ſhould be built of brick, and tiled. The citadel is a long and irregular hexagonal, with ſix baſtions parallel to each other, except the two middlemoſt, one of which, oppoſite to Carelia, has two orillons (blinds); that over-againſt the river none; each of the four others one. They were all at firſt but earth and turf; but in 1710, the czar reſolved to have them all lined with ſtrong walls. Thoſe on Carelia ſide were finiſhed in his lifetime, and the work has been carried on and compleated by his ſucceſſors. The wall is 30 feet high to the parapet, and the faces are all lined with large iron and braſs guns. On the flanks, which are pretty ſhort, are two rows of Cazamattes, one above the other, arched over, and covered with beams and turf, bomb-proof. The curtain on the right of this catadel's gates has one of the fineſt royal diſpenſaries in Europe, both for the great quantity of drugs and medicines, and the large number of beautiful porcelain veſſels from China and Japan, therein. This citadel has two gates, one adorned with ſtatues, particularly of St. Peter with his two emblematic keys, and on its inſide the black eagle of Ruſſia, with the globe and the ſceptre in its two talons; and below the figure of the Ruſſian St. Nicolas. Before that gate is a ravelin, from whence is a bridge, with two drawbridges over an arm of the river. In this place galleys and ſmall veſſels are ſheltered from bad weather.

As Peter the Great deſigned to introduce, as much as poſſible, politeneſs and refinement amongſt his ſubjects, he cauſed aſſemblies to be opened at Peterſburg in the year 1719, under the following regulations printed in the Ruſſian tongue.

"Aſſembly, or aſſembleé, is a French term, which cannot be rendered in Ruſſian in one word. It ſignifies a number of perſons meeting together, either for diverſion or

or to talk about their own affairs. Friends may ſee each other on that occaſion, to confer together on buſineſs, or other ſubjects, to enquire after domeſtic or foreign news, or to paſs their time. They were to be regulated as follows:

"I. The perſon at whoſe houſe the aſſembly is to be in the evening, is to hang out a bill or other ſign, to give notice to all perſons of either ſex.

"II. The aſſembly ſhall not begin ſooner than four or five in the afternoon, nor continue later than ten at night.

"III. The maſter of the houſe is not obliged to go and meet his gueſts, to conduct them out, or to entertain them; but though himſelf is exempt from waiting on them, he ought to find chairs, candles, drink, and all the neceſſaries aſked for; as alſo to provide for all ſorts of gaming, and what belongs thereto.

"IV. No certain hour is fixed for any body's coming or going; it is ſufficient if one makes his appearance in the aſſembly.

"V. It is leſt to every one's liberty to ſit, walk, or play, juſt as he likes; nor ſhall any body hinder him, or take exception at what he does, on pain of emptying the Great Eagle (a bowl filled with wine and brandy): as for the reſt, it is enough to ſalute at coming and going.

"VI. Perſons of rank, as for inſtance, noblemen and ſuperior officers, likewiſe merchants of note and head-maſters (by which are chiefly underſtood ſhip-builders) perſons employed in the chancery, and their wives and children, ſhall have liberty of frequenting the aſſemblies.

"VII. A particular place ſhall be aſſigned to the footmen (thoſe of the houſe excepted) that there may be ſufficient room in the apartments deſigned for the aſſembly."

In theſe aſſemblies there is dancing in one room; in another playing at cards, draughts, or cheſs; in which laſt game the meaneſt Ruſſians excel; in a third room there is commonly company ſmoking, and diſcourſing together; and in the fourth, are ladies and gentlemen, diverting themſelves with queſtions and commands, croſs-purpoſes, and ſuch like little plays, that promote good humour and laughter. Although none of the company are obliged to drink more wine or brandy than what they aſk for, except on the tranſgreſſing the eſtabliſhed rules or laws of the aſſembly, which happens very often; yet there are many Ruſſians who lay hold of that opportunity of making much of themſelves at other mens coſt, and look upon aſſemblies as one of the moſt laudable of the late czar's innovations. It falls to the turn of every great man of the court to keep an aſſembly once in a winter at leaſt; and if the czar pitches upon a particular perſon for it, notice is given by him to the maſter of the police.

The academy eſtabliſhed by Peter the Great, has a multiplicity of profeſſors in moſt ſciences, and the belles lettres who have liberal ſalaries. The building is a ſuperb pile, containing two ſtories, with a beautiful cupola in the middle, and an obſervatory. Here is a good library, and all manner of natural and artificial curioſities. "In one of the galleries (ſays Dr. Cook) in a caſe, is the ſkin of a Frenchman tanned and ſtuffed. This has been the talleſt man I ever ſaw. In another caſe is his ſkeleton, and a pair of breeches made of his wife's ſkin, alſo dreſſed; the leather was like buff. On the bottom or pavement ſtands the ſkin of an Engliſh cheſnut horſe, ſtuffed, ſaddled, and bridled, and beſide it the ſkeleton. Peter the Great uſed to ride this horſe. Here I ſaw the head of the unfortunate Miſs Hamilton, a Swediſh lady, who loſt it for having murdered her child unlawfully begotten, and this is the only murder of that kind I ever heard of in Ruſſia. This lady was maid of honour to the empreſs Catherine. It is ſaid Peter went and ſaw her executed; he wept much, but could not prevail upon himſelf to pardon her, for fear, as it is ſaid, that God would charge him with the innocent blood ſhe had ſhed. He cauſed her head to be capped and injected. The forehead is almoſt compleat. The face is the beautifulleſt my eyes ever beheld. The *dura mater* and brain are all preſerved in their natural ſituation. This is kept in ſpirits in a large cryſtal veſſel."

Beſides the above here are depoſited great quantities of earths, foſſils, ſtones, ores, natural metals, minerals, ſhells, moſſes, corals, &c. In one room is a figure of Peter the Great in wax-work, as large as the life; he ſits in an elbow chair croſs-legged, dreſſed in a blue ſuit of cloaths, white ſtockings, and has a hanger by his ſide. He has ſhort black hair, his head covered, and is ſurrounded by mathematical, philoſophical, and mechanical inſtruments. The plan of this academy was drawn up by Peter the Great himſelf, and is as follows:

"I. The academy is to be compoſed of twelve members, beſides one ſecretary, one library-keeper, four interpreters, and twelve pupils.

"II. The ſciences to be taught in this academy are divided into three claſſes; in the firſt the ſtudents will be inſtructed in all the parts of mathematics; in the ſecond they ſhall ſtudy phyſic; and, in the third, all ſorts of polite learning.

"III. Every one is to dive into thoſe ſciences, and to improve that in particular, which he has made his particular ſtudy. All the members are to examine the diſcoveries that ſhall be propoſed to them, either by order of the emperor, or by any other man of learning; and they are to declare ſincerely, whether they are new, uſeful, and really ſuch for what they are given out. They are to make extracts from the books that are printed in Ruſſia and abroad, which they ſhall think proper for the improvement of ſciences and literature, which they are to put into the hands of the ſecretary, with their remarks upon every ſubject.

"IV. And to the end that every one may reap the benefit of other mens learning and remarks, all the members are to meet once a week in private, and three times a year in public.

"V. Whereas by this foundation the emperor has not only in view to favour the academy of ſciences, but alſo to make it uſeful to the whole nation; his majeſty's pleaſure is, that each member of this academy ſhall write a ſyſtem of the ſcience he profeſſes, and have a public lecture once a day; they may alſo have private lectures, and make their advantage that way.

"VI. To fill up the places that will become vacant, every member is to have under his direction a pupil who is already advanced in learning, and who ſhall have a penſion allowed him for his maintenance; and if he makes conſiderable progreſs in the ſcience he has applied himſelf to, he is to ſucceed his tutor.

"VII. In return of ſuch a favour, the pupils ſhall be obliged to teach the beginners the firſt elements, and to inſtruct them ſo far that they may, in time, be capable of improving themſelves by the lectures of the members of the academy.

"VIII. That body ſhall be immediately under the emperor, who has taken it under his protection; and all thoſe that are of that body ſhall not be liable to appeal (without the preſident's conſent) before any other court of juſtice but their own.

"IX. The library, the chamber of engines, the cabinet of anatomy, and that of medals, ſhall be for their uſe; and the money requiſite for making experiments, either in public or in private, will be furniſhed them.

"X. Each member ſhall have a year's ſalary beforehand, to be paid out of the fund of the academy: they ſhall have free lodgings, and ſufficient fuel; and thoſe that come from abroad ſhall have their travelling charges defrayed.

"XI. They ſhall not be impowered to make any laws but with the conſent of the whole academy."

There was at Peterſburg a fine globe, made after a deſign of Tycho Brahe: it was ſo large that twelve perſons might ſit conveniently round a table within-ſide of it, to make celeſtial obſervations by turning it round. The late czar had ſeen this curioſity at Gottorp, and was ſo wonderfully pleaſed with it, that he begged it of the king of Denmark, who was then maſter of that city. The czar put himſelf to a great expence in bringing it to Peterſburg, whole foreſts being cut through to make way for it. But a gentleman who lately viſited Peterſburg, in ſpeaking of this ſays, "The celebrated globe of Tycho Brahe, which Peter I. procured from Frederic of Denmark, exiſts no more; it was conſumed by fire in the year 1747. I ſaw the new one lately conſtructed on the model of the other, but ſomewhat inferior in ſize. The exact dimenſions of the firſt I do not know. The preſent globe is 11 feet in diameter from pole to pole, and on the inſide is a table with ſeats round it, which can admit 12 perſons."

There

There is another academy for the improvement of arts, furniſhed with ſeveral Greek and Roman models, &c. But this is ſtill in its infancy, and Ruſſia hath as yet produced no great genius in this way to give it an eclat.

The admiralty is a noble ſquare building, on the ſouth ſide of the river, oppoſite to the academy. It is fortified, hath three entrances by means of draw-bridges, and contains a great variety of offices, magazines, &c. Many large men of war, ſloops, &c. are built here. On the top of a tower belonging to the admiralty is a high ſpire covered with copper, double gilt, and a ſhip on the ſummit made of the ſame metal, and alſo double gilt.

Eaſtward from the admiralty is the caſtle, a royal foundery, in which are caſt ſome of the beſt cannon, mortars, bombs, &c. in the univerſe. It is a noble building, with the figure of a burning bomb, double gilt, on the ſummit.

The late czar eſtabliſhed alſo, at Peterſburg, an academy of the marine, to which he obliged every conſiderable family in Ruſſia to ſend one or more of their ſons or kinſmen, above 10, and under 18 years of age, where they were inſtructed in navigation: here alſo they learnt the languages, and were taught to ride and fence, and other exerciſes proper for gentlemen, and kept under a very ſtrict diſcipline.

At the weſt end of Peterſburg is a wharf for building ſmall veſſels, and machines called camels, which are uſed to carry great ſhips over the bar for Cronſtadt.

On the weſt end of the weſtermoſt iſland belonging to St. Peterſburg, there is an excellent well-fortified haven, where between 200 and 300 Ruſſian galleys ride with great ſecurity. On the weſt end of the ſame iſland is the cuſtom-houſe, and a fine exchange (though only a wooden fabrick) well frequented by merchants. It is an extenſive and uniform building, with convenient warehouſes for the preſervation of goods. Not far from the caſtle is a noble ſquare magazine, built of brick, for preſerving merchandize. It has only one gate, which is very large, and is guarded conſtantly by 100 ſoldiers.

The grand market-place is on the ſouthermoſt part of the city, with many warehouſes, to depoſit all kinds of commodities, domeſtic and foreign, for ſale. It is a large ſquare, with four entries, and a range of ſhops on each ſide, both within and without, with covered galleries to ſecure thoſe who frequent it from the rain. "A ſtranger need not, as in other places (ſays a learned traveller) hunt through this for what he wants to buy. A pleaſant walk in theſe galleries will give him an opportunity of ſeeing many of the beſt people in Peterſburg, and all ſorts of commodities in the world.

Woollen and linen manufactures were ſet up here, of which the latter is brought to great perfection, as we may obſerve by the linen of late imported from thence. Here is particularly a workhouſe, where an old Dutch woman has 80 wanton nymphs under her care, who are taught, with a whip, how to handle the ſpinning-wheel; and ſeveral regulations are made for improving the plantations of hemp and flax. Paper-mills, and powder-mills, have alſo been erected, with laboratories for gunnery and fire-works; and other places for preparing ſalt-petre and brimſtone. Rope-yards, like thoſe in England and Holland, for the making of cables and tackling for the navy, are alſo ſet up here. The great forge at Peterſburgh furniſhes anchors, and ſupplies all iron-work for building ſhips and houſes: and they burn bricks, and uſe them in their buildings, inſtead of wood. A printing-houſe is eſtabliſhed, and news-papers are now as regularly printed as in other countries of Europe; ſeveral uſeful books have been tranſlated out of the High-Dutch, and printed, the government encouraging their ſubjects to enquire into the ſtate of the world abroad, inſtead of keeping them in ignorance, according to their antient maxims. As to their ſilk and woollen manufactures, they have not been able hitherto to bring them to any degree of perfection.

An ingenious gentleman, in mentioning Peterſburgh, ſays, "This city is, as yet, only an immenſe outline, which will require future empreſſes, and almoſt future ages, to complete. It ſtands, at preſent, on a prodigious extent of ground, but as the houſes, on many parts, are not contiguous, and great ſpaces are left unbuilt, it is hard to aſcertain its real ſize and magnitude; devotion has not been wanting to add to her magnificence, and to erect places of worſhip in almoſt every part. Curioſity and novelty have carried me to all of them. The external architecture differs very little in any; the Greeks ſeem as fond of domes as the Mahometans are of minarets in their churches. They uſually encircle one large, with four ſmaller cupolas, and cover them with copper gilt, which has a fine effect to the eye when the ſun ſhines upon it. The ornaments within are coſtly and barbarous, a Mexican temple can ſcarce be more ſo. In the church of the citadel repoſe the bodies of Peter I. and the ſucceſſive ſovereigns, ſince his death, who are ranged in coppers, ſide by ſide, but have not any of them marble monuments erected to their memories.

In Peterſburgh are a great number of palaces and fine buildings, the moſt remarkable of which are, a ſmall houſe, which is the moſt ancient, and reſpected, as being erected by Peter the Great. It is built of wood, and conſiſts only of a little kitchen and a ſmall bed-chamber, not bigger than a common bedſtead, and an anti-chamber for buſineſs. A covered gallery goes round it, where that great man uſed to walk when it rained. At the end of this miniature palace, the firſt boat ever built at Peterſburgh is placed. Houſe, gallery, boat, &c. are all, at preſent, ſhaded with a cover of timber, in order to preſerve them from the injuries of the weather. This little palace ſtands near the citadel, on the north ſide of the river Nieva; and on the ſouth ſide of the ſame river there is another wooden palace, called the ſummer palace, which was likewiſe founded by Peter the Great. This is large, contains many elegant rooms, rich apartments, &c. and has, appertaining to it, ſpacious gardens, pavilions, pleaſure-houſes, ſhell-works, water-works, fine ſtatutes, a private playhouſe, and a fine lake well ſtored with fiſh. Before this palace there is a ſmall ſhip mounting ſix cannon, which was ſaid to have been built by a Ruſſian peaſant, and preſented to Peter I.

The winter palace, about half a mile further down on the ſouth-ſide of the Nieva, is a ſuperb ſquare ſtone building, the inſide excelling the outſide, though in point of external appearance it is deemed one of the moſt magnificent in Europe. The furniture is made of the nobleſt materials, and moſt excellent workmanſhip. The royal family, with the proper retinue, attendants, &c. are all lodged here; as do 500 of the military, who regularly mount guard, and are diurnally changed.

Upon a canal, at ſome little diſtance from the Nieva, there is another elegant wooden palace, built upon piles, and two others leſs remarkable.

At a little diſtance from town there is a noble ſeminary for the education of females only, founded by the late empreſs Elizabeth. The building is capacious and grand; children of diſtinction are kept ſeparate from thoſe of an inferior rank, and the whole contains between 700 and 800 young ladies.

The buildings on the great quay, or rather ample parade, which runs above a mile in length by the water ſide, are admirable; and over the narroweſt part of the wa[illegible] is a bridge of pontoons. From this excellent river canals are cut to all parts of the city; the whole city is laid out with great regularity; there is not any thing that looks old, though many things appear imperfect and unfiniſhed. The buildings which are finiſhed are handſome, and formed on a larger ſcale than is uſually ſeen in other places. A gentleman, who was lately at Peterſburgh, ſays, "The ſtreets are moſtly paved, but they have a cuſtom here of laying, in many places, a flooring of timber on the ground. This, I am told, was yet more common formerly in Moſcow, where, in the frequent fires they uſed to have, the ſtreet itſelf caught the flames, and the conflagration became terrible. The public buildings of different kinds, are ſo prodigiouſly numerous in this city, that I am inclined to believe they conſtitute a fifth or ſixth part of the whole capital. Some of them are ſtone, but the larger part are only brick or wood plaiſtered." Again he ſays, "Near the Nieva is a ſmall palace, built by the preſent empreſs, and called, why I know not, *The Hermitage*. It no more reſembles our idea of a hermitage than it does a temple; but when her majeſty reſides in this part of the building ſhe is in retreat, and there is no drawing-room or court. I was admitted a few days ago to ſee theſe apartments, which are very elegant, and furniſhed with great taſte.

BRITISH MUSEUM
1 JY 84

There are two galleries of paintings which have been lately purchaſed, at an immenſe expence, in Italy. The crown, which I ſaw in the palace itſelf, is perhaps the richeſt in Europe. It is ſhaped like a bonnet, and totally covered with diamonds. In the ſceptre is the celebrated one purchaſed by prince Orloff for 500,000 rubles (112,500l.) and preſented by him to his ſovereign miſtreſs only a few years ſince. It far exceeds Pit's diamond in ſize, and is not inferior in water. Lapidaries declare it the moſt beautiful and rare ever brought from Golconda. One of the nobleſt monuments of the gratitude and veneration univerſally paid to Peter I. is that which her preſent majeſty has ordered to be erected. It is an equeſtrian ſtatue, and has been ſome years under the hands of Monſieur Falconet. In this production he has united the greateſt ſimplicity with the trueſt ſublimity of conception. No other ſtatue, whether ancient or modern, gave him the deſign, which is ſingular in its kind, and admirably adapted to expreſs the character of the man and of the people over whom he reigned. Inſtead of a pedeſtal adorned with inſcriptions, or ſurrounded by ſlaves, he appears mounted on a rock or ſtone of a prodigious ſize; up the aſcent of which the horſe labours, and appears to have nearly reached its ſummit. This attitude has given him room to exert great anatomical beauty and ſkill in the muſcles of the horſe's hind thighs and hams, on which the whole of his body is neceſſarily ſuſtained. The czar's figure is full of fire and ſpirit, he ſits on a bear-ſkin, and is clad in a ſimple habit, not characteriſtic of any particular country, but ſuch as may be worn without violation of propriety by an inhabitant of any country.

The Ruſſians, in winter, contrive to make the warmth of their houſes ſuitable to the ſeverity of the climate. They give a proper degree of heat to the different rooms by means of an oven conſtructed with ſeveral flues, and their ovens conſume a ſmaller quantity of wood than might at firſt be imagined. A ſingle faggot only, and that but a little one, is put in, and ſuffered to burn till the black thick ſmoke is evaporated. The chimney is then ſhut, by which the heat is retained, and the place kept warm for the ſpace of 24 hours; and this fire ſerves not only to warm the rooms, but to dreſs the food. The windows, in the houſes of the poorer ſort of people, are very ſmall, that as little cold as poſſible may be admitted; but in the houſes of ſuperior perſons, they are large, and, in order to guard againſt the inclemencies of the weather, they have double glaſs frames, and are caulked up in the winter. All ranks of people are very expert and nice in regulating the proper heat in their houſes by means of a thermometer, when, by opening and ſhutting the flues, they encreaſe or diminiſh the heat to a great degree of critical exactneſs.

Beſides French, German, and Ruſſian players, who perform before the court in their reſpective languages, there is a ſet of Italian ſingers. No perſon pays either to go to the play or concert, none being allowed to enter except ſuch as have tickets by authority. Some few years ſince, an Engliſh company of comedians went over to St. Peterſburgh, where they met with great countenance and encouragement. The playhouſe doors are guarded; and if any one ſhould get in without a proper right, they would be ſeverely puniſhed.

About 20 miles weſt from Peterſburgh is the beautiful palace of Peterſhoff, ſituated on an eminence, in a large garden, commanding a fine view, and ſurrounded by many out-houſes, offices, &c. for ſervants and attendants. It faces the ſouth, and, in the front, there is a beautiful canal of clear tranſparent water, from which three *jet d'eaus* are ſupplied, and conſtantly play. When the empreſs is here, the guards are encamped in a part of the garden, where their tents make a very agreeable appearance. In ſpeaking of one of theſe *jet d'eaus*, doctor Cook ſays, "Out of the water, much to my agreeable ſurprize, aroſe a dog and three ducks made of copper or iron, and, in appearance, all alive. The ducks flutter through the water quacking; the dog follows after them barking. There is, in a ſubterraneous place, a charming chime of chryſtal bells, which play by water. The grotto, which is covered before by a caſcade, has two entries, one on each ſide. The entries are guarded by ſtatues, which, when you are in, prevent any from getting out till the keeper, by turning a handle, puts a ſtop to them. Theſe ſtatues evacuate ſo much water, by vomiting and ſhooting out of ſtone piſtols and guns, that the keeper ſaid it would overwhelm any man. Beſides the curioſities before mentioned, there is a beautiful gallery full of the fineſt China in the world; at one end of which is a ſmall, but commodious room, with a bed in it, whither the empreſs ſometimes retires to repoſe herſelf.

The apartments here are all ſplendid and nobly furniſhed, and among the paintings there are five matchleſs portraits of the ſovereigns of Ruſſia, viz. 1. Peter the Great. 2. The Livonian villager, whoſe virtues raiſed her from a cottage to an imperial diadem, and to ſhare the bed of Peter the Great. 3. The empreſs Ann, 4. The empreſs Elizabeth, and 5. The preſent reigning ſovereign.

Before we conclude our account of this city, it is neceſſary to take notice of a dreadful inundation and hurricane which lately happened there, and has done incredible damage. We ſhall give the whole in the words of a gentleman who was preſent, and who, in a letter to his friend, dated Sept. 24, 1777, ſays,

"I told you, in my laſt, how diſagreeably I was ſituated, and how happy I ſhould be to be once more in London. I little thought then of an addition to my uneaſineſs, by the great national calamity that has happened. I preſume you have had accounts of it before now. I was very near ſuffering with others: I climbed acroſs the ridges of houſes, and with great difficulty deſcended; walked more than a quarter of a mile, and ſwam occaſionally. Indeed I thought I ſhould never have got to the water's ſurface, the wind was ſo dreadfully high. I have been ill ever ſince; indeed am now much indiſpoſed and confuſed. Three perſons attempting to follow me on the houſes were either killed in falling or drowned.

"Almoſt all the houſes in the little iſlands in the mouth of the Nieva, are demoliſhed, and a conſiderable number of the inhabitants loſt.

"The fortifications of this place have ſuſtained great damage. The rapidity of the river was beyond all conception: it carried every thing before it, making a moſt dreadful havock, and roaring with a noiſe not eaſily to be deſcribed.

"I ſaw a poor man, with his wife and two daughters, getting out at a window, when a guſt of wind blew down the houſe, and all were killed except the man, who ſurvived three days.

"A poor young lady, in fixing a rope to deſcend by, was killed by the falling of the roof of another houſe, and two other perſons in the ſaid houſe loſt their lives.

"You may form ſome idea of the dreadful inundation which has viſited us, when I tell you that the great bridge of Pontons is totally borne away, and paper-mills, elaboratories, manufactories, &c. demoliſhed.

"I was much ſhocked to ſee the dead body of one of the handſomeſt of women floating on the waters: the wind and ſtream conveyed her to a wreck on which myſelf and ſome others ſtood, and we were diſpoſed to flatter ourſelves ſhe might have ſymptoms of life, but a confuſion in her head ſoon baniſhed every ſentiment of that kind."

We are likewiſe informed of a prodigious number of cattle and poultry being deſtroyed, as well as of horſes drowned in ſtables. A tribe of itinerant Tartars too, we find, were drowned in their temporary huts in the country. In ſhort, both the city and neighbouring flat country exhibited a moſt horrible aſpect.

The river Nieva, at Peterſburgh, is about half a mile broad, and ſo deep and rapid, that no ſtone bridge can poſſibly be built over it: hence it was, that a bridge of boats was neceſſarily thrown acroſs it; but theſe being now deſtroyed, the inhabitants, at the hazard of their lives, muſt be obliged to paſs each other in ſingle boats, as was with great danger practiſed before Peter the Great would conſent to the formation of the grand bridge of Pontons.

The ducheſs of Kingſton has been a great ſufferer by the violent hurricane at Peterſburgh; her yacht not only loſt its rudder, but all her maſts and ſails; the organ, which coſt her grace 1500 l. is entirely broke to-pieces, and the elegant coach, which lay in the hold, totally deſtroyed. In ſhort, the yacht and furniture are

ſo much damaged, that the loſs is computed at upwards of 3000l.

To the above we ſhall add the account of this calamitous affair, given in the London Gazette, October 18, 1777.

The narrative which is dated Peterſburgh 1777, is as follows.

"On Sunday laſt an inundation happened here, more extenſive and deſtructive than has ever been remembered in theſe parts. A violent hurricane of wind at weſt-ſouth-weſt, which began about two o'clock in the morning, raiſed the waters, in the ſhort time of four hours, to the height of fourteen feet above the ordinary level of the Nieva, by which the whole town, and a great extent of the flat country in the neighbourhood, was rapidly overflowed. The water remained about half an hour at its extreme height, and the wind getting a little to the northward between ſix and ſeven o'clock, it returned in a very ſhort time to its uſual bounds. It is impoſſible to eſtimate, with any degree of exactneſs, the loſs which the ſtate and individuals have ſuffered. The number of perſons drowned muſt amount to ſeveral hundreds. In the beſt parts of the town many houſes were unroofed, and the loſs of liquors and other proviſions in the cellars and lower apartments is very great. In the ſhops (which are all in the ſame quarter of the town) goods were deſtroyed to a very conſiderable amount. In the gardens of the ſummer-palace great numbers of the fineſt trees are broken or torn up by the roots. The lower ſkirts of the town, where the houſes are moſtly of wood, and inhabited by the poorer ſort of people, preſented a ſcene of deſolation which can be more eaſily imagined than deſcribed. Many perſons were drowned in their beds, and others, who ſought for ſafety from the waters on the roofs of their houſes, were carried from thence by the violence of the wind; and thoſe who eſcaped with life were left deſtitute of habitations and effects. Great damage is done at the quay of the Exchange, and to the lower magazines and warehouſes. Numbers of barks, laden with iron, hemp, grain, wood, &c. to a very great amount, were ſtaved, ſunk, or driven in pieces in the ſtreets or fields. Several large veſſels, lying between this place and Cronſtadt, were driven aſhore into woods and gardens. Many of the country houſes in the neighbourhood are deſtroyed. The village of Catherinenhoff, and ſome others on the ſame coaſt, were entirely ſwept away, with all the cattle; and many lives were loſt there, as well as on the ſide of the Galley Haven, where the ground is very low. The great bridge of boats over the Nieva was carried away, and moſt of the bridges in the town, except thoſe on the new Stone Quay (no part of which has ſuffered any material damage) were torn up. We have the ſatisfaction, however, to hear, that little or no damage has been done to the works or ſhipping at Cronſtadt.

"According to accurate obſervations it appears, that the waters roſe a foot and a half higher than in the great inundation which happened here in the year 1752. The plays at the Court Theatre are ſtopped for ſome time on account of this public calamity. Arrangements are taking to give all poſſible relief to the poor ſufferers.

"To the above melancholy account, it gives us ſome ſatisfaction to add, that the empreſs, with a degree of humanity that will ever do honour to her character, ordered the royal coffers to be opened to thoſe who have ſuffered moſt materially by the tempeſt, and that advice was received from St. Peterſburgh, that four of the ſhips which were ſuppoſed to have been loſt in the hurricane, returned to that port, but in a very ſhattered condition, and likewiſe that none of the Engliſh merchant ſhips had ſuffered."

After Peter the Great had laid the foundation of his new city of Peterſburgh, and made ſome progreſs in the buildings, he thought it neceſſary to have a convenient harbour in which the ſhipping might ride ſecure, and pitched upon the iſland of Retriſari at the mouth of the gulph of Finland. There he built a new town called Cronſtadt, and ſecured it with a caſtle called Cronſlot, ſituated on a ſand bank near the ſide of Ingria; ſo that between the caſtle and the town, the ſhipping ride in a ſafe, deep, and commodious harbour. The caſtle is built in the form of a round tower, and three tier of galleries well furniſhed with cannon ſurround it. In caſes of emergency, the piers of the harbour may be mounted with a conſiderable train of artillery, and two ſmall batteries at preſent are ſituated on the oppoſite iſland.

Between Cronſtadt and Peterſburgh are many elegant houſes, and on an iſland formed by the river Nieva, near the weſtern banks of the lake Ladoga, is the ſtrong fortreſs and ſeaport of Noteburg or Oreſco. It was taken from the Swedes by Peter the Great in the year 1702. With reſpect to the other towns, Nieuſcham is demoliſhed, Iwanogorod is a ſtrong caſtle oppoſite to Narva, from which, at the diſtance of 45 miles, is the fortreſs of Caporia, ſituated on the banks of a ſmall river. Fifteen miles to the north-eaſt of Iwanogorod is Jama, another fortreſs, built on a river of the ſame name.

The ſecond grand Diviſion of the RUSSIAN *Empire, containing* MUSCOVY PROPER, *or* WESTERN RUSSIA.

MUSCOVY Proper, or Weſtern Ruſſia, contains twenty-two provinces, viz.

1 Pleſkow or Pſkow,	12 Mordoa,
2 Great Novogorod Veleki,	13 Niſi-Novogorod,
3 Twere,	14 Volodimer,
4 Rzeva or Reſchaw,	15 Suſdal,
5 Biela or Bielſki,	16 Moſcow,
6 Smolenſko,	17 Roſtow,
7 Severia,	18 Yeroſlawla,
8 Czernichow,	19 Bilejeſora or Relozero,
9 Vorotin,	20 Vologda,
10 Rezan,	21 Cargapol,
11 Bielgorod,	22 Dwina.

I. PLESKOW.

THE lordſhip of Pleſkow, or Pſkow, is ſituate between the duchy of Novogorod on the eaſt, Ingria and Eſtonia on the north, Livonia on the weſt, and the palatinate of Polockz on the ſouth. It was formerly a republic, after which it had the title of duchy. It was at length ſubdued by Iwan Baſilowitz, anno 1509. It hath a lake of its name, which lies on the confines of Ingria and Livonia, and empties itſelf into the larger one of Peopus, or Crud-kow. It lies under the 56, 57, and 58 deg. of latitude, and 28 and 32 of eaſt longitude.

The chief towns are, Pleſkow, Abdova, Petzur, Oſtrova, Fieburgh, Voronecks, and Poſtarzova.

Pleſkow, the capital, is ſeated on the mouth of the river Muldow, on the right hand of the lake of its name. It is divided into four wards or quarters, each of which is encompaſſed with its own walls, and the whole is defended by a ſtout caſtle built on a high rock. It is a Ruſſian archiepiſcopal ſee, and a conſiderable populous city.

Other cities of this territory are inconſiderable, and not worth notice, except for their ſtrength and fortifications, which gave the late czar no ſmall trouble to reduce; and are ſtill carefully kept up, for the defence of this advanced frontier. But that of Pleſkow is looked upon as the ſtrongeſt in all the north.

II. GREAT NOVOGOROD VELEKI, *or, the Duchy of* NOVOGOROD.

THIS duchy is ſituate on the eaſt of Pleſkow, laſt mentioned, with Ingria, and the lake of Ladoga, on the north; on the eaſt the duchy of Belozera and Twere; and the province of Rzeva on the ſouth. It is divided into five principal diſtricts, viz. Ob Oneſkaia Petina or diſtrict on this ſide the Onega; Graſina Pagoſt or Graſinean tribe; Vichny Volock and Zauzolſi Volock, or the republics of Vichni and Zauzolſki; and Beſvolki Petina, or the dry or barren quarter. It hath four lakes, called the Ilmen, Voldai, Lutiniſch, and Miſtim, and ſixteen rivers, the moſt conſiderable of which are, the Wolohowa, Vitegra, Bagda-konſa, Nieſca, Miſtaſua, Palamil, Vidoca, Phchega, and Loega. The principal cities and towns are, the Great Novogorod or Novogorod Veliki, Staraia or Old Ruſſa, Nova or New Ruſſa, Parcoff, Vitzgora al. Vitegra, Ochloma, Tiffina, Ladoga, al. Ladiſkia, Soltza, Gorodna, Poliſſa, Crocka, Quelcor, Niewbochi, and S. Nicolas.

It is called Novogorod Veliki, or Superior, to diſtinguiſh

guiſh it from the Inferior, or Niſi Novogorod. Its extent from eaſt to weſt, on the ſouthern part, is computed to be near 250 miles, but grows more and more narrow towards the north. The chief produce is corn, flax, hemp, wax, honey, and leather; in all which it drove a conſiderable traffic, when it was governed by its own princes, though, even then, it was very often obſtructed by its wars; but ſince it is become under ſubjection, it is much decayed from its flouriſhed condition. In the middle of the ſouthern part is the lake Ilmen, out of which flows the river Wolohawa beforementioned, which paſſes through part of this province into the lake of Ladoga.

The city of Novogorod Veliki, capital of this province, called by the French Neugard, and by the Dutch New Garten, ſtands on the Wolohowa, and is a large and conſiderable place, very populous, and well fortified. But it is plain from the remains of ſome old walls, towers, ſteeples, &c. that it was formerly a great deal more ſpacious: and indeed, when one beholds the great number of thoſe towers and ſteeples which it hath ſtill ſtanding, one is apt to expect to find ſomething grand in the place, whereas it is indeed but ill built, the walls being made of timber and mud, as well as the greateſt part of the houſes. This change is owing to the ſeveral diſaſters that it ſuffered from the Polanders, Ruſſians, and other nations; for it was once in ſuch a flouriſhing condition, that it was a common ſaying, who can hurt God or Novogorod? But ſince it fell into the hands of the Ruſſians, its great trade and ſplendor have ſenſibly decayed. It is however an archbiſhopric of the Ruſſian rite. The cathedral, called Santa Sophia, is large and beautiful, though in the antique ſtyle.

On the other ſide of the river is the caſtle, which is joined to the city, by a large bridge, famed for the many thouſands of clergy, citizens, and others, whom the tyrant of Novogorod, duke Iwan Baſilowick, cauſed to be thrown from it into the river, anno 1569. The caſtle is the reſidence of the Vaivode, and near unto it is the archiepiſcopal palace, and a monaſtery dedicated to the miraculous St. Antony of Padua. There is another monaſtery here, called Perunki Monaſtir, ſaid to have been built on the ruins of an antient temple, dedicated to Perun, or the god of fire, formerly worſhipped here, under the figure of a deity, holding a thunderbolt in its hand.

Here are beſides about 100 churches, moſt of whoſe ſpires and towers are covered with copper gilt, eſpecially the cathedral; and about ſeventy monaſteries. It ſtands in 58 deg. 20 min. of latitude, and 34 deg. of eaſt longitude, about 150 miles north-eaſtward from Pleſkow, 106 almoſt ſouth from Peterſburgh, and 210 north-weſt from Moſcow.

Staria or Stara Ruſſa, or Old Ruſſa, is ſituated on the oppoſite ſhore of the lake Ilmen, whoſe outlet is the river Lovat, from the water of which the inhabitants make a conſiderable quantity of ſalt for exportation.

New Ruſſa is ſituated on the ſame river, about 10 miles from the old, but does not contain any thing worthy of obſervation.

Ladoga is ſituated on the banks of the river Velcova, which diſembogues itſelf into the lake of Ladoga.

Mologa is ſituated at the confluence of the rivers Viſſa and Wolga.

The town of St. Nicholas is a large populous place, ſituated near the Wolga, and celebrated for a ſtately and ſpacious monaſtery, dedicated to the ſaint from whom the town itſelf derives its name.

III. *The Duchy of* TWERE.

THIS territory is ſmall and compact, but populous and fertile, and takes its name from its capital, and that from the river Twerza. It is bounded on the north and weſt by the Great Novogorod, on the eaſt by the duchy of Roſtow, and on the ſouth by that of Moſcow, and the province of Rzeva. Its chief city is Twere, the capital, ſituate on the confluence of the rivers Twerza and Wolga; which laſt is by this time become ſo wide, that they are obliged to croſs it in ferry-boats. It ſtands pleaſantly on the ſide of a riſing hill, on the banks of the Twerza, from which it hath its name; and is a large, rich, and populous city, having no leſs than ſixty churches, and an epiſcopal ſee; and is the ſtation of a mint. It ſtands about 60 leagues eaſt-ſouth-eaſt of Pleſkow, and 25 north-weſt of Moſcow. Latitude 56. 15. and longitude 37. 20. eaſt.

A little below it on the ſame river ſtands the large town of Terſack, Torſak, or Tarſock, about 20 miles north from Twere. The other towns have nothing worth notice.

IV. *The Duchy of* RZEVA *or* RESCHAW.

THIS province is bounded on the north by that of Twere laſt deſcribed, and by that of Moſcow; on the ſouth, by the principality of Biela, and the palatinate of Vitepſk; on the weſt, by the lordſhip of Pleſkow; and on the eaſt, by part of the territory of Moſcow. The towns are,

Rzeva the deſert, ſo called becauſe ruined and abandoned, was the capital, and ſtood on the weſtern ſide of the province, on the ſouth-weſt of Velikie-Louki; but hath yielded its dignity to

Rzeva Volodemerſki, which is pleaſantly ſituated on the Wolga, on the eaſtern ſide of this province, near the ſmall lake Wolga, which is one of the head ſprings of that river. It is ſaid to have been built by prince Volodimer, who made very conſiderable conqueſts in this and the neighbouring provinces. It is but indifferently built, but well peopled, and drives ſome ſort of trade in hemp, fiſh, &c.

Toropecky is a ſmall neat town, pleaſantly ſituated on a little river that falls into the Dwina. The other towns are,

Viliki-Loaki,	Borgocow,
Boroveo,	Zari;
Lubiekze,	Dudure.

But none of theſe contain any thing meriting a deſcription or worthy of notice.

V. *The Principality of* BIELA.

BIELA or Bielſki, is ſituated to the ſouthward and weſtward of Ryeva, to the eaſtward of Lithuania and the palatinate of Wetepetz, and to the northward of Smolenſko.

It was formerly governed by its own princes, and the capital Biela, ſituated on the river Oſca, which diſcharges itſelf into the Dwina, was a conſiderable town till ſubdued and ruined by the czar Baſilowitz.

VI. *The Province of* SMOLENSKO.

THIS province extends about 200 miles from eaſt to weſt, and is uſually ſtiled the great duchy or palatinate of Smolenſko. It has the principality of Biela on the north, the duchy of Severia on the ſouth, Moſcow on the eaſt, and Lithuania on the weſt. It has been alternately ſubdued by the Poles and Ruſſians, and at length was finally ceded to the latter, by treaty, towards the concluſion of the laſt century. It is watered by the Niepe or Boriſthenes; the land is in general ſterile, but the ſkins of the wild beaſts, with which it abounds, yield the inhabitants ſome profit.

Smolenſko, the capital of the province, is agreeably ſituated on the banks of the Nieper, near the confines of Lithuania. It is large, populous, and well fortified, and contains 8000 houſes tolerably well built. It is 210 miles from Moſcow, has a citadel and garriſon to defend it, was once a metropolitan, and is now a biſhop's ſee. The ſurrounding woods are ſaid to produce the beſt firs in the Ruſſian dominions.

Dragobuſa is ſituated on the ſame river, about 15 miles from Smolenſko, but contains nothing remarkable.

VII. *The Duchy of* SEVERIA.

THIS duchy is ſituated to the weſtward of Little Ruſſia, to the eaſtward of Cozernikow, to the northward of Bielgorod, and to the ſouthward of Smolenſko.

It had formerly princes of its own till the country was ſubdued by the czar Baſilowitz. It afterwards fell into the hands of Sigiſmund III. king of Poland, who incor-

porated

porated it with his dominions; but it was at length finally ceded to Ruſſia as a member of the ancient palatinate of Smolenſko.

This province being watered by the rivers Ubic, Doniza, and Nevin, is fertile and populous, yet woody. In the ſouthern part there is one vaſt extenſive foreſt, which is computed to be 100 miles ſquare.—Here

Horrid with fern and intricate with thorn,
Few paths of human feet, or tracks of beaſts are worn.

Nogogrodeck, the chief town, ſtands on the river Doniza, and is tolerably fortified in the Ruſſian ſtile.

Branſki is a well-fortified town, about 60 miles from Nogogrodeck. And Demetriowick is a town of ſmall importance, nearly at the ſame diſtance from Branſki. The other towns or villages of this province are of ſo little conſequence as not to deſerve mentioning.

VIII. *The Duchy of* Czernichow.

THIS duchy is bounded on the weſt and ſouth by the river Nieper, and the palatinate of Kiow; and on the north and eaſt by Servia and part of Lithuania. The river Doniza waters it; but the land is exceeding ſterile. The principal town called Czernichow is ſmall, thinly peopled, and inconſiderable; and the other places are ſo trifling and paltry as not to deſerve mention.

IX. *The Principality of* Vorotin.

THIS principality is bounded northward by the river Ugra, and part of the duchy of Rezan or Rhezan; on the ſouth, by Leſſer Tartary, or the land of the Coſſacks; on the eaſt by another part of the ſaid duchy of Rezan, and weſt by the duchy of Severia.

The continual excurſions of the Coſſacks have almoſt deſolated that portion of this province which is ſituated near Leſſer Tartary; but the other parts are populous and fertile, being watered by the river Occa.

On the banks of the Occa ſtands Vorotin the capital of the province. It is only a ſmall town, but well ſecured by a caſtle and other fortifications. On the ſame river ſtands Cromare, Starol, and Bolgoff.

X. *The Duchy of* Rezan *or* Rhezan, *or as it is now called, the Province of* Veronis.

THIS province includes a very large track of land, ſituated between the Don and the Occa, and extending near 300 miles in length. It is watered by the Don or Tanais, and the Occa; hath the duchy of Moſcow to the north, Smolenſko to the weſt, Niſi-Novogorod to the eaſt, and Little Ruſſia to the ſouth. The Ruſſians deem the ſoil of this province the moſt fertile in the univerſe; and affirm, that the corn grows ſo thick and ſtrong that a horſe cannot make his way through it. This muſt be owing to the great quantity of ſalts with which the ſnow impregnates and enriches the ground by lying ſo many months upon it. The people here are courageous, warlike, civil, and polite, and ſo very numerous, that they are able to ſend 15000 foot, and 4000 horſe to the wars.

This country was formerly governed by its own dukes, who were eſteemed very powerful princes; but it hath long ſince been ſubdued by the czar, and become ſubject to Ruſſia, ſince which time it hath decayed much of its antient ſplendor and traffic. It continues, however, ſtill fertile in corn, millet, and other grain, and abounds with all kind of game, as the rivers do with fiſh; particularly the great river Don, which hath its ſpring in this province, and runs almoſt acroſs it, and, after a long ſerpentine courſe, diſcharges itſelf into the Palus Mæotis at Aſoph.

Moſt of the towns were formerly conſiderable, rich, and well-peopled; but being miſerably plundered and abuſed by the Crim-Tartars in the year 1568, they have not ſince been able to recover themſelves; particularly

Rezan, or Rhezan, the antient capital of this province, which was formerly a fair, large, and populous city, and advantageouſly ſituated on the Occa. It is chiefly famed for the noble reſiſtance which it made againſt the Tartars in the year 1570, by which the whole empire was preſerved from their fury, though the city itſelf, and almoſt the whole duchy, were deſtroyed by them. Since that time, the fertility of that ground, which reaches from this city and the river Occa, quite to the intrenchments which were afterwards made on the confines of Tartary, to prevent the incurſions of thoſe free-booters, induced the Moſcovites to gather up all the diſperſed inhabitants of this once-flouriſhing place, and to cauſe the materials of the ruined city to be conveyed about eight leagues off, and to build the new town with them called Pereſta Rezanſki, becauſe many of the inhabitants of Pereſta went likewiſe and ſettled there. All that the antient Rezan now retains of its former grandeur, is the archiepiſcopal ſee, and its being ſtill the reſidence of that metropolitan.

Voronetz, commonly called Veronis, is the moſt conſiderable place in this duchy, on account of the great ſhips of war built there by the direction and inſpection of the late czar Peter the Great; it being ſituated on a ſmall river of its own name, which falls into the Don, or Tanais, a little below it, and is deep enough to carry them into the great river, and thence down to the Black Sea, to which that prince opened himſelf a free paſſage by the taking of Aſoph.

The town is on a hill, and ſurrounded with a wooden wall almoſt rotten. It is divided into three parts; one of which, called Jakatoff, is the common reſidence of the Ruſſian merchants: it hath large and extenſive rope-walks, and a ſpacious ſubterranean magazine of powder without the walls. On the declivity of the hill, and along the water-ſide, are ſeveral ſpacious houſes, ſome of them 400 paces long, which belong ſome to the Ruſſian admirals, vice-admirals, and perſons of rank. Moſt of them ſtand facing the citadel, and behind them are ſtreets for thoſe that are employed in ſhip-building. The city ſtands on the weſt-ſide of the Veronis, and the citadel on the other; and a large bridge is built over it for communication.

The citadel is a large ſquare building, flanked with a tower on each corner; hath large apartments in it, and makes a great figure without. It is ſurrounded with ſtrong palliſadoes, and a wet foſſe, and is defended by a ſtrong garriſon. This is the chief magazine on this part of Ruſſia, in which there are about 150 cannon, moſtly unmounted for ſpeedy carriage, conveniences for ſhip-building, and apartments three ſtories high for all manner of naval ſtores; and the town is computed to have about 10,000 ſouls in it. Here are ſome handſome churches after the Ruſſian taſte; and at a ſmall diſtance from the town one ſees a high mountain almoſt mouldered away, and full of cracks, on which are ſome antient monuments. It ſtands in about 55 deg. 40 min. of lat. and 40 deg. 25 min. of eaſt long. and about 25 leagues almoſt ſouth of Moſcow.

Taverhoff was built by Peter the Great, on the ſouth banks of the river Veronis, and two-thirds of the town are waſhed by that river and the Don. The place is very unhealthy, on account of the circumjacent low flat grounds being covered either with wood or water. This town is regularly built with ſtreets, interſecting each other at right angles; but the houſes are of wood, as is a palace which ſtands at the weſt end of the town. The citadel is made of earthen ramparts, palliſadoed with baſtions at the corners, mounted with cannons. Taverhoff itſelf is inhabited principally by ſailors and fiſhermen; and what is very ſingular, 3000 ſoldiers, who are the garriſon, and appointed to defend the place, do not reſide in the town, but dwell all together in a neighbouring village.

The other towns in this duchy worth mentioning, are Donkarod, a large place about 14 leagues ſouth from Rezan, ſituate near the ſpring-head of the Don, or Tanais, and Toul, or Tula, on the weſtern confines, near the borders of Vorotin, which is defended by a ſtout caſtle built by the czar Baſilowitz ſoon after he took it.

XI. *The Province of* Bielgorod.

THE province of Bielgorod, or Belgord, which was antiently called Organia, is ſituated to the ſouthward of Rezan, and is bounded on the north by the Nogay Tartars and Don Coſſacks; on the eaſt by the river Don; and on the weſt by the Ukraine, and palatinate of Kiow.

As it lies in a temperate climate, and is watered by ſeveral ſtreams, it is naturally fertile, but being expoſed to the continual attacks, and inroads of the Don Coſſacks, it is neither populous nor well cultivated. In fact, the country originally belonged to thoſe people, and the inhabitants ſtill retain the Tartarian cuſtoms and manners; being themſelves more inclinable to live by free-booting than by the cultivation of the earth, and to make wild excurſions about the country, than to reſide ſocially in cities and towns. Indeed it hath a conſiderable number of ſmall towns, moſt of them poor, and half ruined; but no cities, except that of Bielgorod, from which it has its name, and which is itſelf hardly remarkable upon any other account. The Don Coſſacks country on the ſouth-eaſt, called alſo Rodoni Donſki, and the Nogay Coſſacks country on the ſouth-weſt, are either very boggy or woody, and have few towns in their territory; which, with the palatinate of Bielgorod, was formerly part of Tartary, but hath been gradually conquered from it by the Ruſſians.

XII. *The Province of* MORDOA, *or* MORDVA, *and Diſtrict of* CZERMISSE.

WE have now gone through the weſtern provinces of Ruſſia, from the lakes Ladoga and Onega, to the ſouthernmoſt part of it, called Little Tartary; and muſt face about towards the north, where, in our courſe, we meet the province which is called Mordva, and whoſe inhabitants are called Morduates, or Mordva Tartars. It is ſurrounded on the ſouth by the Leſſer Tartary and Rezan, on the weſt by the duchies of Moſcow, Volodimer, and Niſi-Novogorod, or Leſſer Novogorod; on the north by the river Volga; and on the eaſt, by the ſouthern Czeremiſſe. The inhabitants of this province are ſaid to be the moſt civilized of all the Tartarian people, and have ſome towns; the chief of which are Adema, about 40 leagues eaſt from Volodimer, and 20 from Niſi-Novogrodeck; and Moruma, ſeated on the river Occa; but neither of them worth deſcribing. The people here are heathens, and worſhip one God and a devil, the former out of love, the latter out of fear; but have neither temples, altars, or prieſts. Their country is ſmall, and full of foreſts, and is by M. de L'Iſle placed between the rivers Occa, Sura, and Mokſcha-Reka.

The diſtrict or province of Czeremiſſe, or Scheremiſſe, which lies on the eaſt ſide of the former, is a vaſt track of land, extending from 54 to 61 deg. of latitude; and is divided by the river Volga into two parts; the ſouthern diſtrict, which adjoins to Mordva, has the name of Nagorno, which implies mountainous; the ſouthern is known by the name of Logowai or Low Land. The inhabitants, who are deemed the moſt ſavage of all the Tartars, breed vaſt herds of cattle. They are without towns, faithleſs in their dealings, ſuperſtitious in their notions, and cruel in their diſpoſitions. Some are called Mahometans; but the greater part, eſpecially towards Cazan, know nothing either of Chriſt or Mahomet, baptiſm or circumciſion. Their way of naming their children is, by chooſing a day ſix months after birth, and giving the name of the firſt perſon they meet. They have no notion of a future life; but believe that God bleſſes, and the devil puniſhes, according to deſert, in this life. They go to a place called Nemda, 40 leagues from Cazan, full of marſhes, to pay their devotions to the godhead; and believe if they go empty-handed, the devil will puniſh them with a lingering and incurable diſeaſe. They worſhip ſun, moon, ſtars, and animals; but to God they ſacrifice a horſe, ox, or ram, roaſted and baſted with liquor made of honey. Their language is peculiar, underſtood by neither Muſcovite nor Tartar. A man is allowed three or four wives. The women wear only a coarſe linen gown, which covers their whole body; and the head-tire of the married ones riſes over their heads like a horn growing out of their ſkulls, at the top of which hangs a little bell by a ſilk ſtring of ſeveral colours. The men have much the ſame garb about their bodies, with drawers under. The married ſhave their heads, and the unmarried let their hair grow to a conſiderable length. They are ſubject to the czar, and obliged to aſſiſt him in war; but are free from all tribute ſave voluntary preſents.

XIII. *The Duchy of* NISI-NOVOGOROD.

THIS duchy is ſituated to the weſt of Cazan, and to the eaſt of Moſcow. It is watered by the Volga and Occa, abounds with foreſts, but is nevertheleſs pleaſant, populous, and fertile.

The capital Niſi-Novogorod, is ſituated on a rock at the confluence of the Volga and Occa, ſurrounded by a ſtone wall, and defended by a ſtrong citadel. Near the river ſide, and before the ſtately gate of the city called Iwanoffki, there is a ſpacious market-place. A noble ſtreet, interſected by others, runs through the whole town; the cathedral, which is built after the model of Santa Sophia at Conſtantinople, is a ſtately edifice; it has five cupolas beautifully varniſhed with green, and adorned at the top with elegant croſſes. The ſuperb archiepiſcopal palace is near the cathedral, but contains a church within its own walls. The governor's palace, and the chancery, are noble fabricks, and the houſes in general are well built of timber. The city itſelf is ſmall, but the ſuburbs are large, and the whole has a good trade and is well furniſhed with proviſions. The luxuries, as well as the neceſſaries of life, are remarkably cheap, but the inhabitants in general, women as well as men, are abominable drunkards.

Baſiligorod, ſituated at the foot of a riſing ground near the Volga, is a large village conſiſting of wooden houſes. It was originally founded by the czar Baſilius as a check upon the Tartars, but as the Ruſſian frontiers at preſent extend much farther, the fortifications have been ſuffered to go to decay. The other towns of this province are, Slaboda, Balagna, and Paſtoff, but they are neither important or remarkable.

XIV. *The Province of* VOLODIMER.

THIS province is bounded by that of Niſi-Novogorod on the eaſt, by the duchy of Moſcow on the ſouth; by thoſe of Roſtow and Suſdal on the weſt, and by the river Volga on the north. It contains ſome fens and foreſts, but in many parts is fertile, and well watered by the rivers Occa, Cleſma, and Volga.

Volodimer, the capital, ſtands abaut 75 miles from Moſcow to the north-eaſt; it is ſituated on a fine hill, which is beautifully diverſified with plantations. Hence a moſt noble appearance is exhibited to the diſtant eye. It was built by prince Volodimer in the commencement of the tenth century, and here he and his ſucceſſors reſided till the court was removed to Moſcow, ſince which period its ſplendor hath gradually decayed. The other towns are, Gorachowitz; Ileſs, ſituated on the river Cleſma; and Baluchna, which ſtands on the banks of the Volga.

XV. *The Duchy of* SUSDAL.

THIS duchy has Volodimer on the ſouth and eaſt, Roſtow on the weſt, and the river Volga on the north. It is very narrow, but extends in length near 120 miles, and is watered by ſeveral rivers, which render the low lands exceedingly fertile. It however contains many foreſts, which are well ſtored with fallow deer and other game, and with wild beaſts, whoſe furs bear a good price. This duchy was beſtowed, by the czar Jeroſlaws, on his ſon Andrew, who became a branch of the dukes of Suiſki, from whom Baſilowitz Suiſki was deſcended, who was choſen czar after the defeat of the ſham Demetrius. John Baſilowitz ſubdued this country anno 1565, and incorporated it with his own eſtates. Its chief towns are,

Suſdal, the capital, Caſtro-Moigorod, Louch, and Yourieff.

Suſdal is ſituated on the river Cleſma, near the ſouthern part of the duchy. It is an archiepiſcopal ſee, and was formerly the metropolis of Ruſſia, but is gone to decay ſince the ſeat was removed from it. It is built moſtly of wood, after the Ruſſian manner, and retains but little of its priſtine grandeur. It is, however, famed for a ſtately monaſtery of nuns, and for ſome other antient buildings.

XVI. *The Duchy of* Moscow.

THE province of Moſcow, or Muſcovy, properly ſo called, in order to diſtinguiſh it from the great empire of which it is the principal province, bears alſo the name of duchy, becauſe, for a long time, the princes of it took only upon themſelves the title of dukes. It hath its name from its capital, Moſcow, or Moſcova; and this from the river of that name, on which it is ſituated. This province is bounded on the north by the duchies of Twere, Roſtow, Suſdal, and Volodimer; on the ſouth by that of Rezan, from which it is parted by the river Occa; on the eaſt by the little principality of Cachine and the ſame river Occa, which parts it from Niſi-Novogorod; and on the weſt by the duchies of Rzeva, Biela, and Smolenſko.

Its extent, from eaſt to weſt, is computed to be about 68 leagues, or a little above 200 miles: and its breadth, from north to ſouth, about 33 leagues, or 100 miles. The chief rivers that run through it are, the Moſcow, Occa, and Cleſma, all which fall into the Volga; and on the weſtern ſide of this province is a large foreſt, out of which flows that famed one called the Boryſthenes, which, croſſing the duchy of Smolenſko, makes its courſe to Ucrania, Lithuania, and Poland. The ſoil, however, is nothing near ſo fertile as in ſome of the other provinces; but the air, though ſharp, is here very healthy; which, with the advantage of its ſituation amidſt ſome of the beſt provinces of the empire, induced the monarchs to make it their chief reſidence, and the metropolis of it.

The chief cities and towns are,

Moſcow, the capital, Treytza, Columna, Colomenſko, Moſaiſk, Wieſma, Golutwina-Slaboda, and Dmitroff.

Moſcow, once the metropolis of, and the greateſt city in the whole Ruſſian empire, is ſeated in a fine ſpacious plain, on the river of its name, over which it hath a ſtately bridge of twelve arches, of a prodigious height and breadth, becauſe that river often overflows. It was built by prince Gafiſchin, from the deſign of a Poliſh monk. The town ſtands in a gravelly ſoil, and wholeſome air, and almoſt in the centre of the beſt provinces of Moſcovy. It was founded in the year 1334, and we are told very ſtrange things concerning its largeneſs, populouſneſs, and number of houſes, which, it ſeems, once amounted to above 80,000; though, if we may gueſs at theſe by what they are now, the far greater part of them might be more properly called low wooden huts than houſes: on which account this city has been always liable to ſuch violent conflagrations as ſeldom failed of conſuming near two parts in three of it. It was taken, and almoſt burnt down by the Tartars, anno 1572, and by the Poles, anno 1611, when 41,000 houſes were deſtroyed, beſides the vaſt number of men and women that periſhed, either in the flames, or by the ſword. Notwithſtanding which loſs, we find in 1662, when my lord Carliſle was ambaſſador there from our king Charles II. it was ſo well recovered as to be 12 miles in compaſs, full of houſes and inhabitants; inſomuch that the number of the former is, by the loweſt calculations, ſaid to have amounted to 40,000; and by the Ruſſians affirmed to have been above double that number.

Moſcow is of a circular form, and conſiſts of four diſtinct parts, or quarters, all ſurrounded with a diſtinct wall, viz. 1. Cataigorod. 2. Czargorod. 3. Skorodom. 4. Strelitze-Slaboda, ſo called becauſe it was formerly the quarter of the Strelitze's, or czar's guards. The Cataigorod, or middle city, is ſurrounded with a brick wall; and on this ſtands the caſtle, which is two miles in circuit, and fortified with three ſtout walls, ſtately towers, and a foſſe: and in the caſtle are, 1. Two palaces of the czars, one of timber, the other of ſtone, and built after the Italian manner. 2. The patriarchal palace, a large antient building. 3. The exchequer, chancery, and other offices. 4. The grand magazine. 5. Two handſome monaſteries. 6. Five large churches, among which is that noble one of St. Michael, in which are the tombs of the grand dukes, or czars. There are ſeveral other ſtately buildings in this great caſtle, at whoſe gate ſtands that ſtately antient fabric, called the church of Jeruſalem; and fronting the caſtle is the great market and large bell. This quarter is waſhed on the ſouth-weſt by the river Moſcow, and on the north by the Negliga, which falls into the former on the back of the caſtle. It is called Cataigorod, not on account of its being ſituated in the middle of the city, as Olearius fancies, but from Catai, the antient and Ruſſian name of China, becauſe the chief merchandizes ſold in it come from that country: ſo that the name implies the ſame as the Chineſe city.

The Czargorod, or ducal city, encompaſſes the Cataigorod, and is itſelf ſurrounded with a white ſtone wall, called Biela Stena; whence it is alſo called Biela Gorod, or White City. It contains, among other buildings, the great arſenal, and is watered by the Negliga, which runs through it, and thence flows into the ditch that ſurrounds the middle city.

The quarter called Skorodom, or Scoradum, ſtands on the north-weſt ſide of the Czargorod, and is chiefly inhabited by timber-mongers and carpenters, who ſell houſes ready made. Theſe houſes are moveable, and ſold very cheap, and in great numbers: and, indeed, conſidering the frequent fires that happen in this city, owing moſtly either to drunkenneſs, a reigning vice here, or to the neglect of putting out the candles, which they light to ſome favourite ſaint, in their houſes and chambers, they have need of ſuch a large market to repair to on thoſe occaſions. It is called ſcorodum, which, in the Ruſſian language, ſignifies done in haſte, alluding to the mud wall that ſurrounds it. And it well deſerves that name, if what they tell us be true, that it was finiſhed in four days, on a report of the Tartars approaching, though it was 15 or 16 miles in compaſs, and the earth is every where ſupported by planks and beams of fir.

The Strelitze-Slaboda, formerly the quarter of the ſoldiers, or guards, ſtands on the eaſt and ſouth-eaſt ſide of the Cataigorod and the caſtle; and is itſelf ſurrounded and fortified with wooden ramparts, and divided from the reſt by the river Moſcow; for which reaſon it is ſtiled a ſlaboda, or ſuburb.

The houſes being of ſo mean an appearance without, as they, for the greateſt part are, except thoſe of the noblemen, gentlemen, and rich merchants, the furniture of the inſide cannot be expected but to be of a piece; ſo that, excepting the lives and merchandize that may be loſt in ſuch frequent conflagrations, the damage is generally looked upon as ſo inconſiderable, that they never attempt to extinguiſh the fire, but by pulling down ſuch a great number of them as will prevent its ſpreading farther.

But the merchants, who have much to loſe, take care to depoſit their choiceſt wares in vaults of ſtones, which are proof againſt ſuch diſaſters. And there are reckoned in this whole city about 3000 ſuch houſes of ſtone, or brick, in all; which, if they ſtood cloſe to one another, would make a noble ſhew; but they ſtand at ſuch vaſt diſtances from each other, and are intermingled with ſuch long rows of theſe wooden huts, that they are almoſt loſt, eſpecially as they do not ſtand in the ſtreets, but on the backſide of them, for the conveniency of large courts and gardens, which moſt of them have, ſpacious, and in ample order, and ſurrounded with high and ſtrong walls, to keep off thieves and fire. The ſtreets are not paved with ſtones, but boarded with thick fir planks; and one may gueſs at their beauty, by what we have ſaid of the houſes.

Churches and chapels, including thoſe that belong to monaſteries, are here in ſuch plenty, that they are computed to amount to above 1500; and ſome of them are very large and ſtately; that, particularly, which is in the kremelin, or palace in the caſtle, is a vaſt, antient building: on the right ſide of the altar is the czar's throne, and on the left that of the patriarch; and in the body of the church hangs a chandelier of immenſe weight and value. The very jewels, and other coſtly ornaments, that enrich a picture of the Virgin Mary here, are valued at half a ton weight of gold, beſides a vaſt number of chalices, pixes, patins, ſtatues, and other church utenſils of gold and ſilver, finely wrought, and enriched with precious ſtones; a vaſt number of other prieſtly veſtments of great value, and an immenſe quantity of donatives and preſents offered to the relics of three eminent Ruſſian ſaints, which are here interred. So that

the treaſure of this church is deemed equal to that of any church in Europe.

Concerning the celebrated great bell of Moſcow, the learned Dr. Cook ſays, "I went to ſee the great bell which was then in a large pit. A fire had about two months before this, burnt down about two thirds of this great city, and the belfry being all of timber, ſhared the ſame fate; the bell fell into the bottom of the pit, and had a piece broken out of its edge large enough to permit any man to go into it. Its weight is 443,772 pound, and its height about 21 feet four inches and a half.—I then went to the top of a very high tower called Ivan Velike, or the Great John. From this tower I had a compleat view of the whole city, which indeed made a very grand appearance. The weather being very cold, the Ruſſians heat their ſtoves before day-light, and make uſe of fire at no time of the day except to get dinner ready, ſo that the view is never but at thoſe times obſtructed by the ſmoke. Upon the top of this tower there are three balls, I think the leaſt of which is larger than the largeſt in London. Under the tower is the antient imperial palace, a large Gothic ſtone building. All theſe which I have mentioned, and all the imperial antient archieves and different courts of juſtice, are in that part of the city called the Crimline, which is ſurrounded by a high brick wall, ſaid to be about 2090 paces in circumference."

The ſuperb church of Saboor is 90 feet in length, hath a ſtately dome, ſupported by four large pillars, and is, though in the ancient ſtyle, quite magnificent within and without. That of St. Michael is the repoſitory of the dead czars, and of all the royal family of the male ſex. The bodies of the princeſſes of the blood are interred in the ſtately abbey of the nuns called Tzudoff Monaſtir, in the ſame caſtle, and near the church abovementioned. The tombs of the princes who never reigned are in a ſeparate chapel. But nothing is more magnificent than the palls with which their coffins are covered; not conſtantly, indeed, but only on holidays: thoſe of the czars, eſpecially, are of the fineſt velvet, and have either a maſſy or embroidered golden crucifix upon them, of curious workmanſhip, and enriched with vaſt variety of coſtly ornaments, eſpecially inſcriptions, which are moſtly done with pearls and other precious ſtones.

Monaſteries of men and women are here in great plenty and variety, likewiſe, both in the city and caſtle, and in the ſuburbs and avenues of the town. As a minute detail of each would be unneceſſary, we ſhall only ſay in general, that they are, next to the palaces and noblemens houſes, ſome of the beſt edifices in the city; the pious founders of them having ſpared no coſt to adorn them with curious architecture, paintings, gardens, and every thing that is convenient and beautiful. The only one we ſhall mention here, is called Dewitze Monaſtir, about a mile out of the city; and is that in which the ambitious princeſs Sophia, who had hatched ſo many plots againſt her brother the czar Peter I. was at length confined, and ended her days. It is ſituated on a ſpacious plain, and hath 300 nuns belonging to it, who lead a very regular life, and never ſtir out of their limits, as ſome other ſorts are permitted to do: theſe are only allowed, on holidays, to walk on the terraces round their gardens, which are raiſed to a convenient height for them to enjoy the proſpect of the adjacent plain.

The late czar Peter I. founded here three colleges, which he took care to fill up with men well verſed in arts and ſciences, and all kind of literature, for the poliſhing of the next generation. The firſt is for humanity, rhetoric, and philoſophy; the ſecond for mathematics; and the third for navigation, aſtronomy, and other ſciences ſubſervient to them. In all theſe youth are kept under ſtrict diſcipline, and have, at the ſame time, all due encouragement to excel in their reſpective ſtudies. To theſe the ſame prince added a diſpenſatory, which is not only one of the fineſt ſtructures in Moſcow, but, by report, one of the beſt furniſhed with all ſorts of medicines, drugs, &c. in Europe. It is put under the care of ſome Germans, who are allowed the beſt maſters in that art, though the moſt ſlovenly in their compoſitions, they never ſtudying to pleaſe the eye or taſte in their preſcriptions, as we do in England, but nauſeate their patients by the inelegance of their drugs, which could not poſſibly be taken by the people of any other country. This diſpenſatory hath a yearly revenue of 20,000 rubles, to renew their Materia Medica; and furniſhes not only all the army, but likewiſe all the principal cities in the empire with medicines.

The courts of judicature, cuſtom-houſe, and other offices, are generally large, and built of ſtone, and reſemble gaols, and indeed are ſuch in ſome ſenſe; they having apartments for debtors, as well as criminals, who are kept there chained up. Juſtice is, in general, adminiſtered with ſome ſtrictneſs and ſeverity; yet the Ruſſians being naturally lazy, and given to drinking, the whole city ſwarms with beggars and vagabonds, and moſtly of ſuch a ſturdy breed, that it is dangerous to deny them alms. This makes it very hazardous to walk the ſtreets in the night; for they generally lurk in corners, with a ſhort truncheon, or bludgeon, in their hands, which they throw at the heads of paſſengers with ſuch dexterity, that they ſeldom fail of knocking them down, after which they rob and murder them, and go off. Theſe diſaſters happen more frequently on holidays, and eſpecially during the carnival; and when a perſon is found murdered, they carry the body to a certain place, where it lies expoſed a day or two; and, if it is not owned, it is flung into a deep large pit, made to ſerve on all ſuch occaſions; and on the Whitſuntide holidays ſome prieſts come thither to ſay maſs for their ſouls.

The city of Moſcow is much decayed from its ancient grandeur and opulence, ſince the building of that of Peterſburgh. However, it is very full of inhabitants, and all kinds of proviſions are brought to it in great plenty, and ſold very cheap; (fiſh is the only dear food, occaſioned both by the number of inhabitants, and the four lents, and other faſts, that are obſerved by the Ruſſians:) and this great cheapneſs hath ſo far lowered the price of land all about the country, that the nobility and gentry are great ſufferers by it, their eſtates being reduced to little more than one-third of what they formerly brought in, when the city was in its flouriſhing ſtate. The canal, made by the order and direction of the late Peter the Great, to open a communication between this metropolis and his new-built and favourite city of Peterſburgh, and by that means, to the Baltic and German Ocean, is a great and noble work, which hath been ſome time finiſhed, at an immenſe charge and labour, running between two cities, which, in a direct line, ſtand near 90 leagues aſunder: it begins at Peterſburgh, on the river Niewa, or Nieva, which empties itſelf into the gulph of Finland, and, going up that river quite to the lake of Ladoga, croſſes it at the ſouth-end, enters into the Woltoff, another river, which flows thither from the province of Novogorod. From the capital of that province begins what is properly the artificial canal, which paſſing through the territories of Brognitz, Chreſtitz, Chilolova, Witſchna-Voloſcha, Torſchock, the province of Twere, and the diſtrict of Kiln, reaches, at length, the city of Moſcow, and enriches it by the vaſt quantities of merchandizes that are brought to and from that capital.

Of the monaſtery, and church of Jeruſalem, &c. a late traveller gives the following account: "The church, biſhop's, and prieſts houſes, &c. are all incloſed with high brick walls; the wall, forming one ſide of the biſhops palace, all built on a beautiful detached hill, having on the eaſt, north, and weſt, the fineſt lawns in the world, through which glides a noble river. In the plain, upon the banks of the river, ſtands the builder's romantic houſe, all built of ſtone. It is quite alone, three ſtories in height, in every one of which are four rooms, except the ground ſtory, where are his kitchen, ſtore-room, and a room, I imagine, for his attendants. The area of each of theſe rooms is but about eight, or at moſt but nine feet ſquare. In every one is a ſmall ſtove; his bedſtead is of ſtone, as are his bed and pillow. His chairs are of the ſame materials: every ſtory of his houſe is vaulted, and it is flat on the roof, for the conveniency of taking a view of the country. It has but one entry, and every room receives light from one window of the leaſt ſize. The builder was a hermit, and a profeſſed religious.—The hoſpital is not large, but well enough provided with every neceſſary but medicine, prayers being (in their opinion) ſufficient to cure all diſeaſes which appear in this holy place. At the weſt-end of

the church is one of the moſt capacious cupolas I have ever ſeen, only the middle of the arch had fallen down ſome years ago. The dome is very magnificent and high, with a gallery which ſurrounds it near the top; the windows are capacious, it is well lighted, the walls are all hung round with various pictures of the ſaints, very richly adorned with ſilver, gold, pearls, and precious ſtones; and the altar is very grand, and adorned with various pieces of curious workmanſhip. I cannot ſay whether this dome is as large as that of St. Paul's, in London, or not, but it is a noble ſtructure.

Moſcow ſtands about 650 miles from Caffa in Crim-Tartary, 950 miles north-eaſt from Conſtantinople, 720 eaſt from Cracow, 660 eaſt from Stockholm, and 1320 from London; lat. 55. 42. lon. 38. 45 E.

Treytza is a ſmall, but handſome town, famed for the ſtately monaſtery of that name, or convent of the Trinity, a ſpacious building, with three large gates, and a noble church, ſtanding in the middle of the ſquare. The abbot here is ſo rich, that he has 60,000 peaſants dependent on him, beſides other revenues. The czars have ſome apartments for themſelves, and a noble palace, ſtrongly fortified. In this monaſtery it was that the late czar Peter I. in his younger days, was forced to retire, to ſecure himſelf from the fury of the Boyard Couvanſki and his Strelitzes, who plundered and murdered all opponents in his metropolis; and from the plots and conſpiracies of his ambitious ſiſter. It ſtands about 40 miles north of Moſcow.

Columna is ſituated near the confines of the duchy of Rezan on the weſtern ſhore of the river Occa, which divides it from a ſlabode, or ſuburb, on the oppoſite ſide. It is almoſt of a round figure, half a mile in compaſs, well fortified with a ſtone wall, ſix fathoms high, and two thick, and flanked with ſtout and high towers, at the diſtance of 200 paces from each other; but it is now gone to decay, and is almoſt ruined on one ſide. The ſuburb, which is called Colutwina Slaboda, is the place where the merchandizes are expoſed to ſale. As for the city, it hath nothing conſiderable in it except the fine ſtately church of the Virgin Mary, and the archiepiſcopal palace; the city being dignified with the title of an archbiſhoprick.

Colomenſko is a ſmall city in the neighbourhood of Moſcow, ſituate on an eminence, from which it yields a beautiful proſpect. Here is a handſome church, with two high towers, and a ſtately monaſtery. It hath two avenues to it over the Moſca, which muſt be croſſed over a float of timber faſtened together, ſo as to be looſened and divided, to give paſſage to the veſſels that go up and down.

Moſaiſch is another town ſituated on the ſame river, about nine leagues ſouth-weſt of the city of Moſcow, but not ſo conſiderable at preſent as it was formerly.

XVII. *The Duchy of* Rostow.

THE duchy of Roſtow, Roſthow, or Roſtoff, is bounded on the ſouth by that of Moſcow, on the north by that of Yeroſlawla, on the eaſt by that of Suſdal, and on the weſt by that of Twere. It is a rich and plentiful country, and was formerly the firſt duchy in all Ruſſia, next to that of Novogorod; and was governed by its own dukes till the czar Iwan Baſilowitz put the laſt of them to death, and ſeized on this territory, anno 1564. It was afterwards aſſigned for the maintenance of the Czarowitz or heir apparent. Roſtow abounds with corn, fruits, herbs, game, &c. The capital, called Roſtow, is a large town and metropolitan ſee ſituated on the lake Roſtow, from whence iſſues the ſmall river Cobris or Kolſpar, which runs into the Volga. This city ſtands about 120 miles to the north of Moſcow, and contains ſome elegant ſtone churches.

Uglitz, ſituated on the Volga, about 80 miles to the weſtward of Roſtow, is celebrated for the excellency of the bread made in it. It was here that the young prince Demetrius, ſon of the czar Iwan Baſilowitz, was murdered by order of his brother-in-law Trederowitz Gadenaw, during a tumult which was occaſioned by a conflagration made on purpoſe, and the murderer uſurped the throne.

Chlopigorod was formerly a place of conſiderable trade, but is now gone to decay.

Periſlaw is a large populous town ſtanding at an equal diſtance from Moſcow and Roſtow. The other towns and villages are known by the names of Mologa, Semebratoff, Guo, Imbilowa-nova, and Baſma-nova, but none of them contain any thing remarkable.

XVIII. *The Duchy of* Yeroslawla.

THIS duchy, which lies between Monow and Valogda, is exceeding fertile, abounds with corn, cattle, and honey, and is watered by the Volga, which runs through the heart of it.

The capital, Yeroſlowla, is a ſtrong, well fortified, large populous city, containing 40,000 inhabitants. It is about 36 miles to the northward of Roſtow, and has a conſiderable trade in corn, cattle, leather, honey, &c. The other towns of this diſtrict are Roma-Nova and Darnelofke, but neither of them contain any thing worthy of obſervation.

XIX. *The Duchy of* Bilejesora.

THIS is a very ſmall province, nearly circular, and derives its name from a lake called Biele-Ozoro, or the White Lake, which is 40 miles long and 20 broad, and on the banks of which ſtands the capital of the ſame name. This duchy is bounded, on the ſouth, by that of Twere, on the weſt by Great Novogorod, on the north by Vologda, and on the eaſt by Yeroſlawla. The whole is ſo much encumbered with lakes, fens, bogs, woods, &c. that the roads, in general, are uſeleſs, except in the winter, when the froſt renders them paſſable. There is plenty of fiſh all over the province, and ſome parts afford corn and paſture.

The capital Biele-Ozoro, or Belozero, is ſtrongly fortified, hath an important caſtle, and is ſurrounded by the waters of the beforementioned lake. Upon the whole, it is a large, populous, briſk place.

XX. *The Duchy of* Vologda.

THIS duchy is bounded on the weſt by Bilejeſora, on the eaſt by the river Dwina, on the north by Cargapol and Ouſtriang, and on the ſouth by Yeroſlawla. It is large, woody, mountainous, full of lakes, fens, &c. Abounds with fiſh and game, but is deſtitute of moſt other kinds of proviſions.

Vologda, the capital of this province, ſituated on both ſides of the river of the ſame name, is a capacious, populous, and commercial place, as beſides natives, many Engliſh, Dutch, and other merchants reſide in it. This city is one of the moſt antient Ruſſian archiepiſcopal ſees; is near 230 miles to the northward of Moſcow, ſurrounded by a ſtone wall, and defended by a ſtrong fortreſs. The ſtreets are open and regular, the houſes handſome, and the markets well furniſhed, every commodity being ſold in a peculiar quarter. The river is broad and navigable, and the cathedral magnificent; beſides which here are 20 ſtone, and 43 wooden churches, three nunneries, with an elegant chapel appertaining to each, &c.

Dwinitza, ſituated on a river of the ſame name, which falls into the Vologda, is a ſmall but well-peopled town. On the river Vologda are likewiſe two other inconſiderable towns named Sooſka, and Strelitz.

XXI. *The Province of* Cargapol.

THIS province is ſituated to the north of Vologda, from whence it ſtretches almoſt to the White Sea. It is woody and fenny, contains many lakes and rivers, but has no town except Cargapol, which is ſituated on the weſtern banks of the river Onega. The people are exceedingly rude and barbarous. The diſtrict of Wiga, which lies to the north-weſt of Cargapol, is wild and deſolate, and contains only two ſmall towns called Waga and Wied; and the diſtrict of Onega, which lies to the weſtward of that of Waga, is equally barren and wild, very thinly inhabited, and hath only one town named Korelſkoi, which is ſituated near the mouth of the river Onega on the ſouthern coaſt of the White Sea.

XXII. *The Province of* DWINA.

THIS province is of conſiderable importance and great extent, being near 300 miles in length, and in form of a rhombus. It is bounded on the north by the White Sea and part of Ingria; on the weſt by Waga and Onega, from which it is ſeparated by the river Dwina; on the ſouth by Ouſtriang; and on the eaſt by Zirania. It is woody, mountainous, and barren, though watered by ſeveral rivers beſides the Dwina. The ground produces no corn, and but very little paſture; ſo that few cattle are bred in the province, and conſequently meat is ſcarce; ſo that the inhabitants ſubſiſt principally on fiſh, either freſh or dried, but the ſtaple commodity is ſalt, and indeed this was their only article of trade, previous to the commercial intercourſe eſtabliſhed by the Engliſh at Archangel, ſince which period this province hath gradually grown rich and important.

The city of Archangel, or St. Michael the archangel, is advantageouſly ſituated on the eaſt ſide of the Dwina, which falls into the White Sea 18 miles below it. Conſidering the excellency of its ſituation, and the greatneſs of its commerce, it is not ſo large as might be naturally ſuppoſed, not exceeding two miles in length; it is, however, rich and populous, and the houſes are of modern architecture, the builders ſeeming to have had in view thoſe excellent maxims of deſign, which our inimitable poet Pope hath thus elegantly verſified;

To build, to plant, whatever you intend,
To rear the column, or the arch to bend,
To ſwell the terras, or to ſink the grot,
In all, let Nature never be forgot.
But treat the goddeſs like a modeſt fair,
Nor over-dreſs, nor leave her wholly bare;
Let not each beauty ev'ry where be ſpy'd,
Where half the ſkill is decently to hide.
He gains all points, who pleaſingly confounds,
Surprizes, varies, and conceals the bounds.

It chiefly became conſiderable and opulent by means of the great trade carried on there by the Engliſh, which, in proceſs of time, induced the merchants of many other nations to reſort thither; ſuch as the traders from other parts of the Ruſſian empire; the merchants from Holland, Sweden, Denmark, Norway, &c. inſomuch that in thoſe months in which the river is not frozen, three or 400, and ſometimes more ſhips, are ſeen in the harbour. The Engliſh were the firſt diſcoverers of it, anno 1553, when Sir Hugh Willoughby having received a commiſſion to go to find out the north-eaſt paſſage to China, Richard Chancellor, maſter of one of the ſhips, ſeparating from the fleet, accidentally fell into the bay of St. Nicholas, on the White Sea; from whence he was ſent for, and kindly received by the then czar Iwan Baſilowitz, who ſoon after granted the Engliſh free liberty to trade in his dominions. A company of merchants was accordingly incorporated in London, anno 1555, and had great privileges granted to them by that monarch; upon which encouragement a large traffic was ſet on foot, to the profit of both nations, which ours enjoyed ſolely for ſome time. Till then the Ruſſian commodities uſed to be conveyed to Narva, a ſea-port on the gulph of Finland; but this latter hath yielded ſince to Archangel, which is now, in a manner, the only port of conſideration in Ruſſia. The Dutch, however, and after them other nations, ſoon ſtruck in for a ſhare of this traffic, though not with the ſame advantage as ours, by reaſon of the peculiar privileges granted to our company. But theſe were unhappily loſt, the czar being ſo exaſperated againſt the Engliſh nation, on his hearing of the death of king Charles I. that he wholly deprived them of their trade, ſince which all our efforts to regain it have been vain. The moſt conſiderable edifice here is the palace, or hall, built of large ſquare ſtones, after the Italian manner, and divided into three parts; in one of which the merchants, both Ruſſian and ſtrangers, have large and convenient apartments, for themſelves and their wares; but after the ſhips are ſailed away, which they commonly do in October, they are obliged to remove to other lodgings. This palace is a large ſtately building, with a ſpacious court before it, which reaches quite to the river. The courts of juſtice, both civil and criminal, are held in it in their proper apartments. The citadel, where the governor reſides, is built after the Ruſſian manner, and ſurrounded with wooden fences, which reach alſo quite to the river. In it are a vaſt number and variety of ſhops, where the Ruſſians ſtore up their merchandizes againſt the fair: theſe, as well as the houſes of the town, are all of wood, but ſtout and large, and well furniſhed within, eſpecially thoſe of foreign merchants. They have all of them a ſtove within ſide every chamber, as a defence againſt the extreme cold. The ſtreets are paved with broken ſtumps, pieces of timber, and other rubbiſh, ſo roughly laid, that one is in continual danger of falling; only in winter the ſnow, which lies pretty thick and hard upon them, makes them ſmooth and eaſy. Here is plenty of proviſions, as fleſh, fowl of all ſorts, eſpecially wild, and fiſh in great variety. Theſe are ſold extraordinary cheap, particularly partridges, which commonly ſell at about 3d. or 4d. per brace, and of which here are two kinds; one like the common ſort; and the other, which turn white in the winter, and reſume their natural colour in ſummer. The government was wholly lodged in the governor till 1700, when the czar created four burgomaſters to take care of the civil and mercantile affairs; ſo the governor's power is confined to the militia only. The court ſends hither yearly a commiſſioner to receive cuſtoms on all merchandizes, which has been computed between 150,000 and 200,000 rubles per annum; and the number of ſhips which come hither from foreign nations is commonly between three and 400. The chief commodities brought into port are, gold and ſilver ſtuffs, ſilks, gold and ſilver lace, other ſorts of lace, gold wire, cochineal, indico, and other drugs for dying; wines, brandies, and other diſtilled liquors. However, the trade is vaſtly decreaſed ſince the czars, by the conqueſt of Livonia, have made the ports of Peterſburgh and Riga the rivals of this, and cauſed the flow of trade to paſs, in a great meaſure, from it to them. Archangel is the ſee and reſidence of a Ruſſian archbiſhop. Our geographers, more exactly than others, give its lat. 64 deg. 36 min. long. 40 deg. 5 min. eaſt.

St. Nicholas is a ſea-port town upon the White Sea, about 20 miles weſt of Archangel, from which the bay of St. Nicholas receives its name. The town itſelf, at preſent, is inconſiderable, and the trade trifling.

Colmogorod is ſituated on the weſtern banks of the Dwina, near the place where the Pinega falls into that river, and about 30 miles from Archangel. It is a conſiderable town, and the ſee of a Ruſſian archbiſhop.

Nova Dwinſka is a ſtrong fortreſs, built lately to defend the mouth of the new canal, or moſt northern mouth of the Dwina, on the White Sea. It hath a large wooden bridge over that river, with a drawbridge in the middle, wide enough for two veſſels to paſs a-breaſt.

Sottotitza is a very conſiderable and populous city, and inhabited by many wealthy merchants and curious mechanics; it ſtands upon the ſouth limits of this province, in lat. 63. 00. Near this place is a territory of 70 German miles extent, named Wolloſtuſgy, inhabited by men of a different language, and ſuppoſed to have come from Livonia. They are civilized, and chriſtians of the Greek church.

Near this part of the Ruſſian ſhore are a few iſlands of very little importance or conſideration, viz. Martinowitz, which is about 130 miles long, and upwards of 50 broad. It extends near two degrees to the northward of the arctic circle, is full of woods, and watered by ſeveral rivers. In many maps this iſland is called Caudenora or Kandenoſs; farther north there is another called Kolgow, from the extreme ſeverity of the climate; theſe are but thinly inhabited, of trifling conſideration, and but little known; beſides theſe, the White Sea contains a few other ſcattered iſlands, which in general are barren and uninhabited.

The third grand Diviſion of the RUSSIAN *Empire, included under the Name of* EASTERN MOSCOVY *or* RUSSIA.

THE provinces which conſtitute this grand diviſion of the Ruſſian empire, called Eaſtern Moſcovy, are ten in number.

1 Mezzen,
2 Jugora,
3 Condora,
4 Teeſca,
5 Petzora,
6 Vogulizi,
7 Permia,
8 Ouſtioug,
9 Zirania,
10 Vaitka or Viatka.

I. *The Territory of* MEZZEN.

THE territory of Mezzen is ſituated to the northward of Dwina and the river Prega, and extends northward to Jugora and the ſtreights of Kandenoſs. It is a long track of land, narrow, barren, woody, fenny, mountainous, and cold. The chief town called Mezzen, and the few villages which this province contains, are wretched places, and indeed the whole region is gloomy and uncomfortable.

The frozen earth lies buried here below
A hilly heap, ſeven cubits deep in ſnow.
The ſun from far peeps with a ſickly face,
Too weak, the clouds and mighty fogs to chace;
When up the ſkies he ſhoots his roſy head,
Or in the ruddy ocean ſeeks his bed;
Swift rivers are with ſudden ice conſtrain'd,
And ſtudded wheels are on their rocks ſuſtain'd.
The brazen cauldrons with the froſt are flaw'd,
The garments ſtiff with ice at hearths are thaw'd;
From locks uncomb'd, and from the frozen beard,
Long icicles depend, and crackling ſounds are heard.

II. *The Province of* JUGORA.

THE province of Jugora or Jugorſki, is bounded on the ſouth-weſt by Mezzen, on the north by the northern ocean, on the eaſt by the province of Petzora, and on the ſouth by thoſe of Ouſtioug and Permia. It is a very large territory, divided by the Polar circle into two parts, the far greater of which lies on this ſide; however, its ſituation is cold enough to make the land barren and uncultivated, ſo that the country is moſtly over-run with foreſts, and covered with lakes and bogs: it hath alſo abundance of rivers. The principal are, the Fitza, Goloebintza, Goloebeica, Otma, Oymitza, Peitza, Peizitza, Voloinga, and Indega; all which flow northwards into the gulph of Teeſca, called by the Ruſſians Teeſkaia Gouba. There are ſeveral others on the ſouth end of the province, which take different courſes from theſe, and empty themſelves ſome into the Dwina, and others into lakes. In the middle of this province is the territory of Vaconitza Voloſt, which hath a few towns or great villages; and on the ſouth parts are the Jugorian mountains, always covered with ice and ſnow, which divide that part from the province of Zirania.

Jugora, or Juhora, ſtands on a ſmall bay of that name, on the northern coaſt, in the latitude of 68 deg. between the iſland of Candenois on the weſt, and the gulph of Petzerſkaia on the north-eaſt; and over-againſt it, about 20 leagues from the land, lies the iſland of Colgoya.

III. *The Province of* CONDORA.

CONDORA, or Condieſki, lies between the Dwina on the weſt, Jugora on the north, Petzora on the eaſt, and Permia on the ſouth. It is a large province, with the title of duchy, but ſo boggy, woody, and mountainous, that it deſerves no farther deſcription, any more than Wereatoura, the capital, ſeated on the northern part, in the latitude of 66 deg. Antient maps place this province between the White Sea and Siberia, which is however the very land of the Samoiedes, incloſed within the river Oby or Umar.

IV. *The Territory of* TEESCA.

TEESCA is a ſmall territory, north of this and Juhorſki, on the northern ſea; having the ſtreights of Candenois, and its iſland, on the weſt, and Samoieda on the eaſt. It hath but one town worth naming, viz. Gorodiſche, which ſtands on a ſmall river, that falls about 10 leagues below it into the gulph of Teeſca; lat. 67. 00. long. 50. 20. eaſt.

V. *The Province of* PETZORA.

THIS is a vaſt territory, extending itſelf from the lake Petzerſkie, on the ſouthernmoſt part of it, quite to the northern or Frozen ocean; that is, from the 63d to almoſt the 70th degree of north latitude. It is bounded on the weſt by Jugora, on the eaſt by the Riphæan, or Obian mountains; on the ſouth by the province of Vogulizi, and by the Northern Sea on the north. The river Petzora, which riſes out of that lake, runs quite through it, in a direct courſe, from ſouth to north, and diſembogues itſelf in the abovementioned ſea by ſix different mouths, near the ſtreight of Weigatz, a little above the city of Petzora, which is ſituate upon the ſame river, about 30 leagues from the ſea. It is but a ſmall place, and is ſuppoſed to have been formerly called Puſte Oſoro, from ſome golden mines, or ſands, that fell from thoſe Obian mountains into that river. The cold is ſo exceſſive here, that the rivers are frozen about eight months in the year. They begin to thaw in the month of May, and to freeze again in Auguſt.

Other towns, beſides the capital, in this province, are, Weliki Poyaſſa, near the ſpring-head of the abovenamed river; Papynowgorod, about 34 leagues below it; Botwanſkaia, on the gulph of its name, near the mouth of the Petzora; Puteſerſkoy, on the eaſt coaſt of the ſame, &c.

VI. *The Territory of* VOGULIZI.

SOUTH of the province laſt named, and north of that of Permia, are ſeated the Vogulizi, called alſo Vogulitzi, Vogolſkoi, and Volgolitzes. Their country is divided by the ſame ridge of mountains we have already mentioned in the laſt article, from the country of Siberia on the eaſt, and extends itſelf weſtward to the river Irtis. Theſe people differ ſo much from all their neighbours round about, that they have been ſuppoſed to be of Tartaric extraction, but without any probability; ſince all the Tartars, either of Siberia, Cazan, or Aſtracan, are all Mahometans; whereas theſe Vogulizi are heathens, and reſemble moſt, in their religion and cuſtoms, the Siberian Pagans, only they are more civilized.

They acknowledge a Supreme Being, the creator and preſerver of all things; and ſacrifice to him once a year, at the end of ſummer, in one of the neareſt foreſts, ſome of the beſt cattle they are maſters of, one of each ſort; but can give no reaſon for their ſo doing, but that their fathers did ſo before them. They believe a future life of rewards and puniſhments, but will not bear being told, that there are any devils, or malevolent ſpirits, alledging, that they have no inſtances amongſt them of any ſuch. They go dreſſed much like the Ruſſian peaſants, and bury the dead in their beſt cloaths, together with ſome money. As there is little corn comes to perfection in their country, they live chiefly upon the milk of their cattle, and ſuch game as they kill. They marry as many wives as they can maintain, which they buy of their parents, but they are very ſcrupulous of marrying within the forbidden degrees of conſanguinity.

They have neither cities or towns, but villages made up of huts, of a conic figure, with a hearth in the middle, and a hole at the top, to let the ſmoak out; which hole, however, they cover with a thin tranſparent piece of ice, to let ſome light into their huts, as ſoon as their fewel is burnt to a coal. When a woman is near the end of her pregnancy, ſhe is obliged to go into a private hut reared on purpoſe for her, and to live in it ſeparate from her huſband, and all matrimonial intercourſe. The men go a ſhooting of elks, fallow deer, and other game: they live quiet under the Ruſſian government, and pay their tribute in ſkins and furs, which are ſent into the public repoſitory at Siberia. This country reaches from 62 deg. 30 min. to almoſt 63 deg. of north latitude.

VII. *The Province of* PERMIA, *or* PERMESKY.

THIS is one of the largeſt provinces of the Ruſſian empire, and is bounded on the north by the country of the Vogulizi; on the eaſt by Siberia; on the ſouth by the province of Vaitka; and on the weſt by that of Ouſtioug, or Uſtiug, and reaches almoſt from 52 to 61 deg.

of

of north lat. and in breadth above 60 leagues, where broadeſt, though much narrower in the ſouthern part towards Cazan, or Caſan. Notwithſtanding which vaſt extent, it is far from being conſiderable in proportion upon any account, if we except its rivers, ſome of which are very large, and run a vaſt length: the moſt remarkable one is the Kama, which receives ſeveral others, and ſprings from that long chain of mountains which part it from Siberia, and which extend themſelves from the kingdom of Cazan quite to the Frozen Sea, that is from 55 to almoſt 70 deg. of lat. Beſides this ridge, the country abounds with many more, as well as lakes, ſo that its ſoil is ſo far from fertile, that the inhabitants are obliged to eat peaſe, beans, and other pulſe, inſtead of bread. They differ likewiſe much from the nations round in other reſpects, as in their cuſtoms, religion, &c. and have a language peculiar to themſelves. They are ſubject to the Ruſſians, and pay their tribute in horſes, and ſeveral kinds of furs. The chief town is

Perma Velikaia, or the Great City, which ſeems to intimate ſomething of large and conſiderable; but this country is ſo little viſited by travellers, that we can get no certain intelligence about it; moſt authors that have ſpoken of it, mentioning it as a place of little note.

VIII. *The Country of* OUSTIOUG, *or* USTIUG.

THIS province hath its name from its capital, and is bounded on the eaſt by Permia, and by the foreſts of Zirania; on the north by the rivers Waga and Dwina; on the weſt by the province of Cargapol; and on the ſouth by that of Vologda. It is not only ſmall but barren, a great part being covered with vaſt and impenetrable woods. Theſe harbour ſuch a prodigious number of black foxes, that their furs are one of the chief commodities of this country. It is in this province likewiſe that the two rivers, Jugh and Suchana, riſe; the former on the eaſt ſide, and the Suchana on the weſt; and both ſtreams, meeting near the middle, form the Great Dwina, or, as its name imports, the double river. Other rivers which fall into the Suchana on the eaſt ſide, are the Peetzenga Recca, which divides Ouſtioug from Vologda, the Bronſnaia, and Striliuſka. On the weſt ſide fall into it thoſe of Pelſma, Ouſtioug, Souzenga, Verchna, Jorga, and a ſmaller one, at the mouth of which ſtands the monaſtery of Teelego. The Waga, which likewiſe falls into the Dwina, runs through ſome of the frontiers of this province; that of Ouſtioug, which hath its ſpring-head alſo in this province, and runs its courſe about four or five leagues from that of the Waga, and falls into the Suchana. This province abounds with the fineſt black foxes, whoſe ſkins bear a great value. The chief town is

Ouſtioug, Uſtiug, or Uſt Jugh: it is ſituated on the weſtern ſhore of the Suchana, which receives the Jugh a little below it. It is an archiepiſcopal ſee of the Ruſſian church, and hath 10 or 12 neat churches built of white ſtone, the cupolas and ſpheres of which are covered over with tin. The other churches, as well as the houſes, are built of wood. The archiepiſcopal palace, which is a large building, and the beſt edifices of this city, are on the weſt ſide of the river. The other part of it, over the water, is leſs conſiderable, but extends itſelf along the ſide of it, in form of a creſcent, a league in length, and a quarter in breadth. It is chiefly noted for a yearly fair for the ſale of fox-ſkins, and other furs. In Olearius's time it was, it ſeems, the only city in all Moſcovy that was ſurrounded with ſtone walls. The reaſon of which was, that the czars uſed to ſend part of their moſt valuable treaſure thither in time of war. It ſtands in lat. 61 deg. 35 min. long. 45. deg. 55 min. eaſt; 220 miles ſouth-eaſt from Archangel.

IX. *The Province of* ZIRANIA.

OR country of the Zarani, is a long, deſert, woody track of land, running from ſouth to north, from the 60th to the 65th deg. of north latitude; but much narrower from eaſt to weſt. It deſerves rather the name of a foreſt than of a province, and ſo indeed it is called by ſeveral authors, there being but few ſpots inhabited, in compariſon of the vaſt and impenetrable woods that ſpread themſelves over it, and breed innumerable quantities of wild beaſts. The people who are here ſcattered in villages, or groups of ſorry huts, are fierce, brutiſh, and untractable; they live upon the game they kill, pay their tribute to the czar in furs, and with it they make cloathing for themſelves, and covering for their houſes, and the reſt they ſell and exchange with whom they can.

X. *The Province of* VAITKA, *or* VIATKA.

VIATKA has the title of a duchy, and is the laſt province in that which we call Eaſtern Moſcovy. It is bounded on the north by Permia, Zirania, and Ouſtioug; on the weſt by Vologda and Peroſlaw; on the ſouth by the kingdom of Cazan; and on the eaſt by that part of Siberia called the territory of Stoutka. It is moſtly woody, marſhy, and barren; yet yields great quantity of honey, wax, and furs. It was conquered from the Tartars by the czar Iwan Baſilowitz; but was at that time ſo ſubject to the incurſions of the Scheremiſſe Tartars, that he found it almoſt deſert, and half abandoned; but it hath fared much better ſince both nations have been ſubdued by the Ruſſians.

It is watered by the river of its name, which ſprings a little above the town of Sextanoff, or Seſtakoff, and running through that, and ſeveral other towns, falls into the Kama; this laſt runs through another part of the country, and falls into the Volga a little above Cazan.

The chief towns in this duchy are, Viatka the capital, Coteliniz, Orlowa or Orlooff, Glinow, Oveſtoi, Catharina, Verſchoſenſkoi, Koigorod, Koigorodoc, Sloboda, Seſtanox or Sextakoff, and Urſum.

Viatka is ſituated on the river of its name, or, according to Olearius, on a ſmall river that falls into it, a little below that city. It hath little or nothing worth notice, except its biſhop's ſee, and a good ſtout caſtle built by the czar abovementioned, to ſuppreſs the incurſions of the Scheremiſſe Tartars. There are two high roads that lead from hence to Moſcow; the one through Caſtroma and Galicz; the other through Uſtiug: the former is much the ſhorter, but the moſt troubleſome and dangerous, on account of the vaſt marſhes that muſt be croſſed, and of the Scheremiſſe free-booters that infeſt thoſe parts.

Colcinitz is rather a conſiderable town, ſituated near the confines of the kingdom of Cazan, or Caſan; and Sladboda, another town, ſtands more to the north-weſt, on the borders of the Schiremiſſe Tartars. Beſides the above, this province includes Clinow, Ortow, and Kaigorod, all fortified after the Ruſſian manner.

The fourth grand Diviſion of the RUSSIAN *Empire, denominated* MOSCOVITE TARTARY.

This grand diviſion contains

- The Crim - - -
- Leſgee - - -
- Baſkeer - - -
- Kalmuck - - -
- Uſbeck - - -
- And ſome leſs conſiderable tribes of - - } Tartars.
- Part of Circaſſia,
- Siberia,
- Kamſchatka,
- Samoieda,

And the kingdoms of Aſtrachan, Cazan, and Bulgaria.

But as the principal part of theſe are ſituated in Aſia, the reader is furniſhed with an ample account of them all, except Cazan and Bulgaria; and by referring to vol. I. of this work, he will find

- Siberia, — deſcribed in page 42
- Kamtſchatka, — 43
- Samoieda, — 47
- Aſtrachan, — 50
- Circaſſia, — 52

And

And the

Kalmuck	Tartars, described in page	51
Uſbeck		53
Baſkeer		53
Crim		54
Leſgees		54

With the deſcription of ſeveral other inferior tribes of Tartars, interſperſed with theſe more intereſting particulars. It therefore only remains to deſcribe the kingdoms of Cazan and Bulgaria.

The Kingdom of CAZAN.

THE kingdom of Cazan, or Caſan, was formerly governed by its own monarchs, who were formidable and opulent, till the czar Baſilowitz ſubdued the greateſt part of it, and his ſon Iwan Baſilowitz completed the conqueſt of the whole in the year 1554. Cazan has been always conſidered as a valuable acquiſition to Ruſſia, on account of its amazing fertility. This country is bounded on the north by the provinces of Vaitka and Permia; on the eaſt by Tumæan Tartary; on the ſouth by Baſkeer Tartary, Bulgaria, and Aſtrachan; and on the weſt by Novogorod. It is watered by the great rivers Volga and Kama, which encreaſe the natural fertility of the ground, and enrich the whole country by commercial means.

Cazan, or Cazanum, the capital, is ſituated in 56 deg. 54 min. north lat. on the river Canſanka, and in the midſt of a fruitful and ſpacious plain. It is a capacious and populous city, the ſeat of a Ruſſian metropolitan, and contains many churches and monaſteries. But the houſes, and even the ramparts and towers, are all built with wood. The caſtle, however, is of ſtone; and the river, by ſurrounding it, forms an excellent foſſe; the whole being amply furniſhed with artillery, ammunition, &c. and well ſecured by a Ruſſian garriſon. At a little diſtance from the city, a large commodious dock, for ſhip-building, is ſituated at the confluence of the Volga and Caſanka. Cazan is well ſupplied, both by land and water, with all kinds of proviſions. Wine and fruits are brought hither from Turkey, European commodities, and ſome kinds of groceries from Moſcow, teas from China, and iron and furs from Siberia and Tartary. The ſituation is admirable for commerce, which is carried on not only with the abovementioned places, but with Perſia and other parts of the eaſt. Large quantities of Ruſſia leather, bark for tanning, timber for ſhip-building, &c. are annually ſent from hence to Peterſburg, and other parts of Ruſſia. A great number of Tartars inhabit the neighbourhood of Cazan. They are neat and cleanly in their perſons, and ſupply the markets with cattle, horſes, ſheep, &c.

Kockſcaga, about 70 miles from Cazan, on the banks of the Volga, is a very ſmall city.

Malmiſhas is an inconſiderable town on the ſide of the river Caſanka, near the frontiers of Bulgaria, ſurrounded by a wooden wall, and thinly peopled with very poor inhabitants.

About three miles from the Volga are the ruins of Scrulierſki, which was an opulent city, between Cazan and Aſtrachan, till deſtroyed by Tamerlane the Great.

The other towns are

Sabackzar	Laiſoff
Pagautzina	Swatſk
Kolcis	Tetul
Karakul	Sunder
Batula	Bur

and Uza; but none of them contain any thing worthy of a particular deſcription.

The Kingdom of BULGARIA.

THIS kingdom, which was formerly called Horda, or the region of Zavolani, was anciently inhabited by the Bulgaras, who made an irruption into thoſe parts from Aſia, and conferred their name on this country.

Bulgaria is divided into Little and Great. Little Bulgaria is ſituated on the ſouthern coaſts of the Danube; belongs to the Turks, having been conquered by Amurath II. and forms part of Turky in Europe. Great Bulgaria was ſubdued by the Moſcovite czars, and now is an appendage of the Ruſſian empire. It is bounded on the north by the kingdom of Cazan, on the eaſt by Baſkeria, on the ſouth by the river Sumara, and on the weſt by the Volga.

This kingdom is watered by ſeveral rivers; near its center are the deſarts of Ufa; on the eaſtern confines, the mountains of Caf, which yield great quantities of iron, as well as ſome excellent chryſtals; and, towards the ſouthern ſide, the great lake Kerghewl. The ſoil is tolerably fertile, and many parts of the country populous.

Bulgar, or Bulgara, the capital, is ſituated on the Volga, and deemed a conſiderable city.

Samara, on the banks of a river of the ſame name, which diſembogues itſelf into the Volga, is built on the declivity of a mountain, and the ſuburbs ſtretch along the river. The place is large, but poor and mean; the houſes, walls, fortifications, &c. being all built of timber. This city was erected, in one month, by 30,000 men ſent thither, for that purpoſe, by Peter the Great. The work was directed by prince Galitzin, and the place is an excellent check upon the Tartars, Coſſacks, &c. Near this city are the ruins of Sunbeſka, which was deſtroyed by Tamerlane the Great; and we are informed by John Struits, in his voyages, that going aſhore, at no great diſtance from hence, he aſcended a mountain where formerly ſtood the city of Abuchim, and there diſcovered a ſtone with an inſcription, which a Ruſſian interpreted for him, and which was to this effect: "Whoſoever thou art, if thou haſt ſtrength "enough to turn me, thou wilt make thy fortune." From this intimation, he and his company expecting to find ſome hidden treaſure, immediately moved it from its place, and, on the other ſide, found another inſcription importing: "This is not the firſt time thou haſt taken "great pains to little purpoſe."

The fifth grand Diviſion of the RUSSIAN *Empire, comprehending* RUSSIAN LAPLAND, *and* NOVA ZEMBLA.

RUSSIAN LAPLAND.

WE have had occaſion, in former articles, to obſerve, that Lapland, or Laponia, is divided into three parts, according to the princes each of them is ſubject to; Daniſh, Swediſh, and Ruſſian. The other two have been deſcribed under their proper heads; and the third is that we are now upon. It is bounded on the north by the northern ocean, on the eaſt and ſouth by the White Sea, which forms there a ſpacious gulph, and by the river Zoloticza, which diſcharges itſelf into it on the eaſt ſide of Kierni; and on the weſt it hath the Daniſh Lapland. It is further divided into three parts, according to their ſituation; whereof one is called Leporia Mouremanſkoi, or Maritime Leporia; Terrſkoi, or Inland Leporia; and Bellamoureſkoi Leporia. The firſt is ſituated on the north and eaſt ſide, having the Norwegian, or Daniſh Lapland, on the north-weſt; the Swediſh on the weſt, Bellamoureſkoi on the ſouth-eaſt, and Terrſkoi on the ſouth and ſouth-weſt.

The whole territory is barren, woody, and mountainous; the air extremely cold; the inhabitants as rude and ignorant; and, in general, the country is much like the Swediſh and Daniſh Lapland formerly ſpoken of. Moſt of the iſlands, cities, and towns, ſtand on the ſea-coaſts; and are as follow:

Kierni, ſituated near the mouth of the river Zoloticza.

Zolosſki, a town and iſland, in which is a monaſtery of the ſame name.

Kerrelli, or Kierlit, on the mouth of the freſh-water river.

Kemeloe, a town and iſland, with ſome ſmall ones about it.

Kovoda, ſituated on the mouth of a river which flows from the lake Pajerfwi into the gulph Ombai, on the mouth of a river of the ſame name, which empties itſelf into the Gouba, or Salt River.

Wolna Oſtrof, or Iſland of Deer, with a town of the ſame name.

Cape Touria, Soutkete, Caſcavaron, Warſiga, Polengi, and Pelitza; which are but ſmall towns.

Souſnowitz, or Iſland of the Croſs; three others on the mouth of the river Ponoi; cape Orlogone, with a bay and haven, at the entrance into the White ſea; the iſles of Lombacho; the cape and iſles of Swetenoes, in a bay; at the further end of which is the town of Jockna, ſituated on a river of the ſame name, which affords plenty of fiſh. Nook Oſtrof, called, by the Dutch, Nagel Eyland, or Nail Iſland; the Mariners Bay; ſeven iſlands more on the mouth of a nameleſs river, well-ſtored with ſalmon; as are, indeed, moſt rivers on this coaſt: the Golden Bay; Daelna Olignia, or Farther Olignia, to diſtinguiſh it from another of the ſame name, and nearer the coaſt; viz. Daelna Silenſi, or Farther Silenſi, ſo named, on the ſame account; port Gabriel; port of Waronia; Blieſna, or Nearer Olignia; Blieſna, or Nearer Silenſi; the iſland and town of Kildwin; the town, iſland, and lake of Kola; the Fiſhermens iſland; Petzinſka river; with a monaſtery of the ſame name.

In the inland are, the lake of Polina, or Polina Ozero; with a town of the ſame name.

The territory of Mouremanſkoi Leporia is mountainous and woody, and hath few towns of note except Kola, a ſmall port, ſituated on the mouth of a river of the ſame name, which falls into the ocean. It is the chief place in the whole country, and ſtands between the town of Wardways and the White Sea; lat. 68 deg. 55 min. long. 34 deg. 25 min. eaſt.

Terrſkoi Leporia, or inland part of the Ruſſian Lapland, is almoſt ſurrounded with the ſea, and is the land that makes the gulph of the White Sea. It is no leſs woody and barren than the reſt; and the chief town in it is Warſiga, ſituated on the ſouth coaſt, over-againſt Archangel; lat. 64 deg. 25 min. long. 40 deg. 0 min. eaſt. Lockena is another ſmall ſea-port, at the mouth of a river of its name, which falls into the Northern Ocean; lat. 68 deg. 0 min.

Bellamoureſkoi Leporia lies at the bottom of the abovementioned gulph, called the White Sea, and, like the reſt, is cold, barren, and thinly inhabited. The chief town is Soma, ſituated on the frontiers of the province of Moſcovitiſh Carelia, and at the very entrance into the Ruſſian Lapland, on the White Sea; lat. 64 deg. 20 min. As to what farther relates to the country, and its inhabitants, we ſhall refer our readers to what we have formerly ſaid of the Daniſh and Swediſh Lapland; they being ſo alike in every thing, that it would be but a needleſs repetition to ſay any more about them here.

NOVA ZEMBLA.

NOVA ZEMBLA was a name given to this new-diſcovered track, which, in the Ruſſian language, ſignifies New Land: it is ſeparated from the northern part of Ruſſia, by the ſtreight called Veigatz, or Wygatz, which lies in north lat. 70 deg. The land that forms this ſtreight is a promontory, advancing ſouthward from the main country, which is ſuppoſed to extend itſelf much farther north. It was long doubted whether this country joined to the continent of Greenland on the weſt, or of Tartary on the eaſt, but it is now known to be an extenſive iſland.

This country was at firſt diſcovered by the Engliſh, anno 1553, when captain Hugh Willoughby ſailed thither with three veſſels, and advanced from the north cape of Finmark as far north as the 72d deg. of lat. where he thought he had deſcried this land; but being obliged, through ſtreſs of weather, to put into a port of Lapland, he there periſhed with cold, with all his company. After him captain Burroughs ſailed in ſearch of it three years after, and having doubled the abovementioned cape, diſcovered the ſtreight of Weygatz, between the ſouth part of Nova Zembla, and the north coaſt of Samoieda. Since that time it hath been often viſited, both by Dutch and Engliſh, in hopes of finding out the north-eaſt paſſage; but the coldneſs of the climate, and the mountains of ſnow which covered that whole country, prevented their making any great diſcoveries. Some Dutchmen wintered there, anno 1596, but found the cold ſo exceſſive, that they, with great difficulty, kept themſelves alive till the next ſummer. They ſaw no ſun from January 4 to June 24, during which long and dark interval they had no light, but what the moon gave them from the firſt to the laſt quarter, in which ſhe ſhone by day as well as night.

The account they gave of it is, that ſome parts of that country is inhabited by a people of low ſtature, who are idolaters, and barbarous. The attempts made afterwards by captain Barentz, a Hollander, by Hudſon, Wood, and Flaws, proved likewiſe of little or no conſequence to the public, and of a bad one to them, except that Wood made ſome remarks, which gave him reaſon to think there was a paſſage between this country and that of Greenland. As for Nova Zembla, he repreſents it as the moſt forlorn ſpot in all the world, the greateſt part of which is laid under ſnow and ice; and, where there are neither of theſe, one meets with nothing but diſmal quagmires covered with moſs, and ſome blue and yellow flowers. Upon digging two or three feet into the earth, they found the ice as hard as marble, which ſhews how vain it would be to attempt to winter there in caves dug under ground. In other northern countries the ice and ſnow is obſerved to melt much ſooner on the ſea-coaſts than in the inland; but here it proves the reverſe; and the ſea, which beats againſt mountains of it of a prodigious height, hath undermined it ſo, that it ſeems to hang in the air, and diſcovers ſuch monſtrous chaſms, as cannot be beheld without dread.

The country, ſo far as our author had opportunity to view it, breeds ſome ſorts of wild creatures; ſuch as large white bears, foxes, ſome little creatures like rabbits, but not bigger than rats, larks, penguins, &c. With reſpect to the penguin, it is of the ſize of a gooſe, and the feathers are ſomewhat like hairs, and are of an aſh-colour. The wings are very ſhort in proportion to the body, and the bill is black, but the legs are of a bright green. They keep in the water all the day, where they feed upon fiſh. As they cannot fly, they cannot ſhun their enemies, except by leaping along, which they do pretty well by the help of their ſhort wings. However, this bird is active upon the water, and ſeems to be very ſkilful in catching its food. When the ſun begins to ſet, they retire to the rocks near the ſea, where they continue till morning, at which time they are eaſily taken. They build their neſts upon the rocks, on the craggy points, to which theſe birds can get up very eaſily. Their eggs are very good; but the fleſh has a fiſhy taſte, and is never eaten but in caſes of great neceſſity.

We cannot conclude this article, without making a remark upon the bird penguin abovementioned, which is not only common in theſe northern parts, but likewiſe in ſeveral countries of North America, and is every where known by the ſame name, with little or no variation, which in the old Celtic, and in our preſent Welch, ſignifies a white head, as that bird actually hath. This, together with ſome great affinity which is found in many of the radical words, and proper names, uſed by thoſe diſtant regions, confirms a curious conjecture we have borrowed from the authors of the Univerſal Hiſtory, and have already mentioned, on ſeveral occaſions, in this work, viz. that the deſcendants of Gomer, the eldeſt ſon of Japhet, were not only the firſt peoplers of Europe, even in its remoteſt parts, but have preſerved their antient language more than any other nation we know of, except the Chineſe. The ſouthern part hath been ſince found to be inhabited by a ſquat, ſwarthy ſort of people, who cloath themſelves with ſeal-ſkins, or with the ſkins of a large bird, which they call penguin, with the feathers outward. They live upon what game or fiſh they catch. They worſhip the ſun and moon, and have ſome little wooden idols, in human ſhape, but monſtrouſly carved, or rather notched.

The various romantic tales, and manifeſt abſurdities, advanced by many of the Dutch voyagers; the ridiculous relations of Ferdinand, Mendez, Pinto, and the improbable ſtories of Sir John Mandeville, gave riſe to a *witty and ingenious ſatire*, written by the celebrated Sir Richard Steele, and publiſhed in the Tatler, as if from a manuſcript of Sir John Mandeville's. The ſcene being founded in Nova Zembla, the humour being admirable, and the ſatire pointed againſt all voyagers and

travellers who attempt to impoſe upon the public, we ſhall make an extract from it without farther apology. The relation being in the firſt perſon, as if Sir John Mandeville was the narrator; the words are, "We were ſeparated by a ſtorm, in the latitude of 73, inſomuch that only the ſhip which I was in, with a Dutch and French veſſel, got ſafe into a creek of Nova Zembla. We landed in order to refit our veſſels, and ſtore ourſelves with proviſions. The crew of each veſſel made themſelves a cabin of turf and wood, at ſome diſtance from each other, to fence themſelves againſt the inclemencies of the weather, which was ſevere beyond imagination. We ſoon obſerved, that in talking to one another we loſt ſeveral of our words, and could not hear one another at above two yards diſtance, and that too when we ſat very near the fire. After much perplexity, I found that our words froze in the air, before they could reach the ears of the perſon to whom they were ſpoken. I was ſoon confirmed in the conjecture, when, upon the encreaſe of the cold, the whole company grew dumb, or rather deaf, for every man was ſenſible, as we afterwards found, that he ſpoke as well as ever, but the ſounds no ſooner took air, than they were condenſed and loſt. It was now a miſerable ſpectacle, to ſee us nodding and gaping at one another; every man talking, and no man heard. One might obſerve a ſeaman that could hail a ſhip at a league's diſtance, beckoning with his hand, ſtraining with his lungs, and tearing his throat, but all in vain.

"We continued here three weeks in this diſmal plight; at length, upon a turn of wind, the air about us began to thaw. Our cabbin was immediately filled with a dry clattering ſound, which I afterwards found to be the crackling of conſonants that broke above our heads, and were often mixed with a gentle hiſſing, which I imputed to the letter *S* that occurs ſo frequently in the Engliſh tongue. I ſoon after felt a breeze of whiſpers ruſhing by my ear, for thoſe being of a ſoft and gentle ſubſtance, immediately liquified in the warm wind that blew acroſs our cabbin. Theſe were ſoon followed by ſyllables and ſhort words, and at length by entire ſentences, that melted ſooner or later as they were more or leſs congealed, ſo that we now heard every thing that had been ſpoken during the whole three weeks that we had been ſilent, if I may uſe that expreſſion. It was now very early in the morning, and yet to my ſurprize I heard ſomebody ſay, *Sir John, it is midnight, and time for the ſhip's crew to go to bed.* This I knew to be the pilot's voice, and upon recollecting myſelf, I concluded that he had ſpoken theſe words to me ſome days before, though I could not hear them till the preſent thaw. My reader will eaſily imagine how the whole crew was amazed, to hear every man talking, and ſee no man open his mouth. In the midſt of this great ſurprize we were all in, we heard a volley of oaths and curſes, laſting for a long while, and uttered in a very hoarſe voice, which I knew belonged to the boatſwain, who was a very choleric fellow, and had taken his opportunity of curſing and ſwearing at me, when he thought I could not hear him, for I had ſeveral times given him the ſtrappado on that account, as I did not fail to repeat for theſe his pious ſoliloquies when I got him on ſhipboard.

"I muſt not omit the names of ſeveral beauties in Wapping, which were heard every now and then in the midſt of a long ſigh that accompanied them, as dear Kate! pretty Mrs. Peggy! when ſhall I ſee my Sue again? This betrayed ſeveral amours which had been concealed till that time, and furniſhed us with a great deal of mirth in our return to England.

"When this confuſion of voices was pretty well over, though I was afraid to offer at ſpeaking as fearing I ſhould not be heard, I propoſed a viſit to the Dutch cabbin, which lay about a mile farther up in the country. My crew were extremely rejoiced to find they had again recovered their hearing, though every man uttered his voice with the ſame apprehenſions that I had done.

"And try'd his tongue, his ſilence ſoftly broke."

"At about half a mile's diſtance from our cabbin, we heard the groanings of a bear, which at firſt ſtartled us, but upon enquiry we were informed by ſome of our company that he was dead, and now lay in ſalt, having been killed upon that very ſpot, about a fortnight before, in the time of the froſt. Not far from the ſame place we were likewiſe entertained with ſome poſthumous ſparls and barkings of a fox."

The ſixth grand diviſion of the Ruſſian empire, or a deſcription of the countries diſmembered from Poland, will be introduced in our account of that kingdom, as it cannot come with ſo much propriety in any other place, and will there be accompanied by a relation of the late troubles and revolutions in Poland, and of the diſmemberment of that unhappy country, in which the provinces ſeized by the empreſs of Ruſſia will be deſcribed, and the political part ſhe took in thoſe tranſactions delineated.

SECT. III.

Of the Inhabitants of Ruſſia, *their Cuſtoms, Manners,* &c.

THE Ruſſians in general are but of a middling or rather a ſhort ſtature, but the ſeverity of the climate, which produces a dry and ſharp air, diſpoſes the inhabitants in general to a ſtrong and hardy conſtitution, and enables them to undergo great hardſhips. They are ignorant, brutal, and have but very imperfect notions of the ſocial virtues, but in ſufferings they are patient, bold in dangers, and reſolute in war. A late intelligent traveller ſays, "The common people in Ruſſia have no kind of learning or education among them, and although they are called Chriſtians, have no idea of the true principles of the chriſtian religion, paying a proper reſpect to their ſaints and to the images of arch-ſaints, keeping their faſt days with ſome ſolemnity, and repeating a certain number of prayers by rote, of the true uſe and meaning of which they have no idea, is the whole of the religion of at leaſt ten millions of people in this empire. The general character of the Ruſſian nation is, to content themſelves with a ſuperficial knowledge of things, rather than to proſecute their ſtudies to any conſiderable degree. This diſpoſition qualifies them more for a life of labour and fatigue than for that of art or curioſity; and the effects of it are viſible in all orders of men in this ſtate."

The people of Ruſſia are divided into four different claſſes, viz.

Nobility and gentry,
Clergymen and lawyers,
Merchants and citizens,
Farmers, labourers, ſoldiers, and ſeamen.

The firſt claſs, or the nobility and gentry of Ruſſia, is ſubdivided into many leſſer claſſes, viz.

The firſt ſub-diviſion is compoſed of the moſt ancient families of the empire, and thoſe who were enobled by the great duke Woldimer the firſt.

The ſecond ſub-diviſion includes the families of foreign nobility, who have at different times eſtabliſhed them in Ruſſia.

The third ſub-diviſion contains thoſe who were created nobles during or ſince the reign of the czar Alexis.

The fourth ſub-diviſion is formed by what are called the common nobility and common gentry, or thoſe who have had any famous generals or ſenators for their anceſtors, or in whoſe families the czars have choſen their wives, or who are proprietors of conſiderable fiefs, or who were raiſed by their merit during the reign of Peter the Great.

It is to be obſerved, however, that of late years the military rank ſuperſedes every thing, and is at preſent the ſtandard which regulates every degree of precedency, whatever may happen to be the rank or claſs of perſons.

But nothwithſtanding the great ſtrides made towards civilization, thoſe of the Ruſſian nobility who are not immediately about the court, or have not travelled, ſtill remain brutal and tyrannical, to which the arbitrary power they are permitted to have over their ſlaves not a little contributes, for they regard themſelves as ſo many petty ſovereigns in their ſeveral fiefs, and the riches of a nobleman in Ruſſia is conſidered not from the annual revenue of his eſtate, but from the number of ſlaves (peaſants) upon it; ſo that when an eſtate is ſold, a great number of people are transferred with it; or when the

ſovereign chooſes to reward any favourite, ſhe makes him a preſent of ſo much land and ſo many families, conſidering the poor people as ſo many herds of cattle or flocks of ſheep. What renders this ſtate of vaſſalage ſtill more dreadful is, that neither the peaſant, or any part of his family, dare remove from the portion of land aſſigned them, but are cruelly fixed upon that dreadful ſpot for life where they muſt continually toil, their lord taking the chief profit, and themſelves only being permitted to enjoy a very ſcanty pittance.

"The Ruſſian nobility (ſays a gentleman who reſided a conſiderable time at St. Peterſburgh) ſeem to be much better calculated for a military life, where bravery and much action are neceſſary, than for civil affairs; for thoſe who are employed in the latter, though they are laborious in their buſineſs, ſeldom elevate their ſpeculations above what the neceſſity of their reſpective employments require. This claſs of men are very proud and haughty, and too apt to value themſelves upon the little knowledge they have of things, though in general it is extremely ſuperficial."

The court nobility, however, from the great connections they have had of late years with the moſt civilized European ſtates, ſeem totally to have emerged from their barbariſm into the height of elegance and politeneſs, and the young Ruſſian nobility at preſent, are much improved by ſtudies of taſte and a propenſity to travel.

The celebrated M. L'Abbe Chappe D'Ateroche, of the Royal Academy of Sciences at Paris, who made a journey through Ruſſia and into Siberia by order of the late French king, ſays, "The nobility dare not come near the throne without fear and trembling. They are baniſhed into Siberia for the ſlighteſt political intrigue, and their poſſeſſions being confiſcated, one whole family thus falls a victim to the artful inſinuations of the courtier. The mutual diſtruſt in which people live in Ruſſia, and the total ſilence of the nation upon every thing which may have the leaſt relation either to the government or the ſovereign, ariſes chiefly from the privilege every Ruſſian has without diſtinction of crying out in public *ſlowo dielo*, that is to ſay, I declare you guilty of high treaſon both in words and actions. All the byeſtanders are then obliged to aſſiſt in taking up the perſon accuſed, a father arreſts his ſon, the ſon his father, and nature ſuffers in ſilence. The accuſed and accuſer are both conveyed immediately to priſon, and afterwards to St. Peterſburgh, where they are tried by the ſecret court of chancery."

The learning of the clergy ſeldom riſes above mediocrity, they affect great gravity, and are exceeding ſuperſtitious. All the archbiſhops and biſhops are choſen from among the monks, but no ſoldiers, farmers, or any perſons employed by government, are ever permitted to become monks. The lawyers are very ignorant, and what is worſe, uncommonly diſhoneſt, venal and corrupt. The laws of Ruſſia are in themſelves very imperfect, but the manner in which they are adminiſtered renders them execrable.

"For modes of government let fools conteſt,
"Whate'er is beſt adminiſter'd is beſt."

The merchants and citizens are but little intelligent in affairs of trade and commerce, nor would they be able to carry on foreign commerce without the aſſiſtance of ſtrangers; their commerce at Archangel and the Baltic being managed by Engliſh, Dutch, French, and German merchants, and that of the Caſpian Sea by Armenians and Perſians. The Ruſſian traders are diſhoneſt in their dealings, deeming fraud, addreſs, and diſengenuity a deep knowledge of trade, though at the ſame time their knowledge is as confined as their diſhoneſty is extenſive. Theſe people, however, are much better calculated for drudgery than ſpeculation, and are equally deficient in arts, manufactures, &c.

The farmers and labourers, who compoſe the bulk of the nation, and from whom the army and navy are recruited, are in a moſt deplorable ſituation, being in a manner denied the common rights of mankind, and in many places they are ſo ſtupidly ignorant, that their form excepted, it would be difficult to diſcover they were of the human ſpecies. From the ſeverity of the climate, they are naturally robuſt and ſtrong; by ſtrict diſcipline they become tolerable ſoldiers, and from the rigour of their ſituation they habituate themſelves to deſpiſe life, and ſuffer all kinds of puniſhment and ſeverities with a kind of apathy or rather inſenſibility.

The Ruſſians are naturally very lazy and indolent, and much addicted to drinking ſtrong liquors to exceſs. "The common people (ſays M. L'Abbe Chappe D'Ateroche, whom we have already quoted) are bigotted even to fanaticiſm in favour of the Greek religion. This extravagance encreaſes the farther we get from the capital, but theſe very people are ſo little acquainted with the religion, that they are perſuaded they fulfil all its duties by complying with ſome external ceremonies, and eſpecially by keeping the Lent faſts with the greateſt ſtrictneſs. In other reſpects, they give themſelves up to debauchery and to every kind of vice. Morality is leſs to be met with among the Ruſſians than among the Pagans their neighbours. The opinions of the Ruſſians with regard to chriſtianity are ſo extraordinary, that it ſhould ſeem as if that religion, ſo well adapted in itſelf for the happineſs and good order of ſociety, had only ſerved to make this people more wicked. A murderer being taken and condemned, and being aſked in the courſe of his trial, whether he had kept the Lent faſts, appeared as much ſurprized as the moſt upright man would have been, if his honeſty had been called in queſtion. He immediately anſwered with warmth, that he was incapable of neglecting the duties of his religion. Yet this very man was at the head of a ſet of ruffians, and whenever they ſeized upon any travellers, he readily gave up all the booty to his companions, if they did but deliver him theſe unhappy victims alive. He firſt undreſſed them, and tied them naked to a tree without any regard to their ſex; he then opened their breaſt near the heart, and drank their blood, and declared that he took great pleaſure in ſeeing the dreadful contorſions and convulſions of theſe wretched people."

The Ruſſians are bred up with ſuch high notions of their ſovereigns, and of a blind implicit obedience they owe to them, as the only perſons who have ſenſe enough to diſtinguiſh between right and wrong, that they never diſpute their will in any thing, except where they attempt, as the late Peter did, an innovation, either in their religion, or cuſtoms; which they cannot but look upon as an impeachment of the wiſdom of their anceſtors who had eſtabliſhed them. In all other caſes they are ſo prepoſſeſſed with the notion of their unerring wiſdom and knowledge, as well as of their own ignorance and imperfection, that it is a common ſaying with them, in all dubious caſes, "God and the czar alone know."

They are extremely fond of hot baths and ſweating-houſes, in which they conſtantly go once or twice a week, and oftener, if they can afford it, and with ſo little regard to decency, that women and men make no ſcruple to go into them promiſcuouſly, and to appear naked there to each other. Upon their coming out of them, they will leap, naked, and reeking-hot, into a river, if any be near; or pour two or three pails of cold water upon their bodies, to cloſe the pores, and render them healthy and hardy; for they do it even in the heart of the winter.

The ingenious Mr. Wraxall, in his travels, ſays, in a letter dated from St. Peterſburgh, July 23, 1774, "I am juſt returned from being a ſpectator of one of their cuſtoms, at which I could not help being a little ſurprized. It was a promiſcuous bathing, of not leſs than 200 perſons of both ſexes. There are ſeveral of theſe public bagnios in St. Peterſburgh, and every one pays a few copiques (value a halfpenny Engliſh each) for admittance. There are indeed ſeparate places for the men and women, but they ſeem quite regardleſs of this diſtinction, and ſit or bathe in a ſtate of abſolute nudity among each other. What is equally extraordinary, they go firſt into a room heated to ſo intenſe a degree, that it is ſcarce poſſible to breathe in it; and, after having remained there till their bodies are in the moſt violent perſpiration, they inſtantly either plunge into the cold water of the Nieva, or elſe throw a quantity of it over them from little buckets with which they are all provided for that purpoſe. This may harden a Ruſſian conſtitution, but I believe would be found to have very different effects upon an Engliſh one."

The ſeamen here are very ignorant of navigation, and

and aukward in the conduct of a ſhip; and the poor, who are paſt their labour, are in a ſtate of miſery ſcarce deſcribable, as there are but few charitable foundations in the whole empire.

Both men and women accuſtom themſelves to ſleep conſtantly after dinner; they are both of a robuſt and healthy conſtitution, and fit to endure any fatigue. They will live or travel many days upon the ſtrength of a little oatmeal mingled with water, or upon ſome raw roots; but that which they generally chuſe, in their marches, is rye-bread cut into ſmall ſquare pieces, and dried again in the oven. It being light of carriage, they every now and then put a bit of it in their mouths, which moiſtens it, and gives them freſh ſpirits; and when they come to any water, they complete their repaſt.

The women are generally fair, comely, and well-ſhaped; very dutiful to their lordly huſbands, and very patient under their correction and diſcipline: they are even repreſented as fond of it, and uneaſy, and even outrageous, under the want of it; as implying a want of love or regard in their ſpouſes: and this makes the churliſh ones to uſe it with ſo little diſcretion, that they ſometimes die under it, there being no puniſhment for it: though if a woman happens to kill her huſband, which is often the caſe, when they are too ſeverely uſed by them, the law condemns them to be buried alive. A very dreadful puniſhment this; becauſe they are put into the earth in a ſtanding poſture, and covered with it only up to their necks: ſo that ſome of them live ſix or eight days in hunger and miſery, it being forbid, under pain of death, to afford them any kind of ſuſtenance all that time. They are, moreover, looſe in their behaviour, and far from ſhy of their favours; and will even bear their huſbands company in their drunken debauches; which may, in ſome meaſure, juſtify theſe for the brutiſh jealouſy they are commonly addicted to: and ſo little gallantry, or even decency, is uſed towards the fair ſex in this whole country, that no reſpect is paid to them, though they are even of quality. The only chance they have in wedlock is, from the kindneſs of their parents, who, by the contracts of marriage, take care to bind the huſband under ſome ſort of penalty, to uſe them well and kindly, to feed them with wholſome food, and to forbear all unreaſonable correction and ill treatment. But all theſe precautions often prove ineffectual, ſo that it is not without reaſon that they crown the bride, on her wedding day, with a garland of wormwood, to put her in mind of the bitterneſs that attends the marriage-ſtate; and the bridegroom with one of hops, to intimate to him the fruitfulneſs of it; which is there taken ſo much hold of, that he may divorce her, and ſhut her up, for the very fault of her not bearing him any children.

Whether the cuſtom of the bride's preſenting her ſpouſe with a whip, on her wedding-day, in token of ſubmiſſion, be ſtill in vogue in the more remote parts, ſince they have been poliſhed in theſe latter reigns, we will not affirm; but there is authority ſufficient to believe it to have been an antient one: and our Engliſh reader will not, perhaps, be diſpleaſed to be told whence it had its riſe. Ruſſia is now part of the antient Sarmatian Scythia, whoſe inhabitants, having formed a deſign to ſeek ſome new and better habitations, left their wives and country, under the care of their ſlaves, went and conquered a great part of Greece, and held it a conſiderable time; during which, their wives hearing no tidings of them, and unwilling to loſe their teeming-time, took the ſlaves to their beds. The maſters returning from Greece, the ſlaves deſigned to oppoſe them. Both ſides being drawn up in order of battle, one of the Sarmatians addreſſing himſelf to his fellows, obſerved, that they ſhould debaſe themſelves by uſing the ſword and the ſpear againſt ſlaves whom they had formerly overawed with the ſound of a whip. He therefore propoſed, that every man ſhould arm himſelf with this weapon only; the advice was immediately purſued, and they attacked the enemy with ſcourges. The ſlaves had been ſo accuſtomed to dread this inſtrument, that they were inſtantly ſeized with a panic, and fled with the utmoſt precipitation. The priſoners were purſued with vigour, and a great part of the women made away with themſelves; the reſt ſubmitted to flagellation, which was ſeverely exerciſed. In memory of this event, and as a warning to Ruſſian wives, the whip, or ſcourge, is one of the firſt wedding preſents, and hung up in the moſt conſpicuous part of the houſe; that by preſenting itſelf continually to the good woman's eyes, it may never ſlip from her remembrance.

The baptiſmal, matrimonial, and funeral ceremonies of the Ruſſians, are thus judiciouſly deſcribed by a lady, who very recently reſided ſome years in Ruſſia.

"The Ruſſian religion conſiſts of outward form and much ſuperſtition. I have ſeen a chriſtening and a wedding: at the former, the child was dipped three times in a tub of water, while the goſſips had each a wax candle in her hand. After the child had been dipped, the prieſt (who by the way was very drunk) put on the ſhirt, and then exorciſed it, and at the end of every ſentence, he and the goſſips ſpit, to ſhew they triumphed over the devil. The wedding was one of my ſervants; the match was propoſed to the girl's parents, and they approving of it, came in for to aſk my conſent; when that was obtained, the man ſent her a preſent, conſiſting of a comb, ſome paint, and patches; then he was admitted to her for the firſt time: they gave each other a ring, and a promiſe of marriage, and the wedding was appointed for that day ſe'nnight. From that time to the day of the wedding, the girls of her acquaintance took turns to be with her night and day, continually ſinging ſongs to bemoan her loſs out of their ſociety; when the day came, they took a formal leave of her with many tears; and the man's relations came to fetch her, and her fortune, which was a bed and bedding, a table, and a picture of her patron ſaint.

"A Tartar prince and his family, who came to ſeek protection, were converted to chriſtianity, and were publicly chriſtened at court. As I have told you the ceremony of a Ruſs chriſtening, you may think it odd it ſhould be done in public, but zeal and ſuperſtition carry people great lengths; and I could not perceive that either the converts (among whom were two women) or the ſpectators, were out of countenance; and they ſeemed to think I had great prudery, and ſmall devotion, becauſe I withdrew during the ceremony; but I could not bring myſelf to think, but that, before ſo numerous an aſſembly, the ladies at leaſt ſhould have had ſome other robe beſides that of righteouſneſs. I am now going to give the hiſtory of a Ruſs burial, as I have already done of a chriſtening and a wedding. The only one I have ſeen was of the youngeſt daughter of prince Menzikoff, who was recalled from baniſhment, with her brother, by the preſent empreſs, and by her married to count Guſtavus Biron, youngeſt brother to the duke of Courland. She died in childbed, and was buried with great pomp. After the company had ſat ſome time, they all went into the room to the corpſe. The coffin was open: ſhe was dreſſed in an undreſs, as ſhe died in that condition, (otherwiſe, as they told me, ſhe would have been full dreſſed) in a night gown of ſilver tiſſue, tied with pink ribbons; on her head a fine laced mob, and a coronet, as princeſs of the Roman empire; round her forehead was tied a ribbon, embroidered with her name and age; in her left arm lay the child, who died a few minutes after its birth, dreſſed in ſilver tiſſue; in her right hand was a roll of paper, which was a certificate from her confeſſor to St. Peter. When all the company were ranged in the room, her ſervants came to take their leave of her, the inferior firſt; they all kiſſed her hand, and the child, aſked her pardon for any crime they had committed, and made the moſt terrible noiſe imaginable, rather howling than crying. After that her acquaintance took their leave, with this difference, that they kiſſed her face, and made a hideous noiſe, though not ſo bad as the others. Then came her relations, the moſt diſtant ones firſt; when her brother came, I really thought he would have pulled her out of the coffin. But the moſt moving ſcene was the huſband, who had begged to be excuſed this diſmal ceremony, but his brother thought he ought to comply with the Ruſs cuſtom, leſt, as he was a foreigner, it ſhould be deemed a ſlight. He was brought from his own apartment by two gentlemen as ſupporters, and they were really, in this caſe, more for uſe than ſhew. He had true but ſilent ſorrow painted in his face. When he came to the door of the room where the corpſe lay, he ſtopped and aſked for ſome hartſhorn; which when he had drank, and ſeemed to have armed himſelf,

he advanced to the coffin, and there fainted; when he was taken out of the room and recovered, the corpſe was carried down and placed in an open chariot; a great train of coaches followed, and, as a general officer's wife, a party of guards. She was carried to St. Alexander's monaſtery to be buried, and though the coffin-lid was put on as the corpſe paſſed the ſtreets, it was taken off again when it came into the chapel, and the ſame ceremony of leave was taken over again, except by the huſband, who was carried home in a ſecond fainting fit, the moment the coffin was uncovered. The reſt of the ceremony was much like the Roman Catholics. When the corpſe was buried, all the company returned to the houſe, to a grand dinner, which had more an air of rejoicing than mourning, as every body ſeemed to have forgot their ſorrow; but the huſband was affected with too much real ſorrow to attend."

A long beard was ſome time ſince looked upon as a mark of great dignity in Ruſſia, and the longer it was the more the perſon wearing it was venerated; but at preſent none but the lower ſort of the people, and ſome of the inferior clergy, wear beards. All the nobility, and the politer citizens, follow the cuſtoms of the poliſhed ſtates of Europe, and the court is perhaps as brilliant as any in Europe.

The education of the czarowitz, or prince royal, is intruſted to the care of a few perſons, by whom he is ſtrictly kept from the eyes of the vulgar, until he hath attained the fifteenth year of his age: then he is publicly expoſed in the market-place, that the people, by viewing him attentively, may remember his perſon, in order to aſcertain his identity; for they have, more than once, been deceived by impoſtors.

Such is the ſlavery in which the Muſcovites of both ſexes are kept by their parents, their patrons, and the emperor, that they are not allowed to diſpute any match that may be provided for them by theſe directors, howſoever diſagreeable or odious it may be. Officers of the greateſt rank in the army, both natives and foreigners, have been ſaddled with wives by the ſovereign in this arbitrary manner. A great general, lately deceaſed, who was a native of Britain, having been preſſed by the late czarina to wed one of her ladies, ſaved himſelf from a very diſagreeable marriage, by pretending his conſtitution was ſo unſound, that the lady would be irreparably injured by his compliance.

The Ruſſians are fond of muſic, particularly of the bagpipe, and have a kind of violin, with a large belly like that of a lute; their muſic, however, is barbarous and defective. Public ſchools are eſtabliſhed, in which the children are regularly taught to ſing. The very beggars aſk alms in a whining cadence, and ridiculous ſort of recitative; and it is recorded, that a Ruſſian ambaſſador at the Hague, having been regaled with the beſt concert of vocal and inſtrumental muſic that could be procured, was aſked how he liked the entertainment, and replied, "Perfectly well, the beggars in my country ſing juſt in the ſame manner." The Ruſſians think it beneath them to dance, but have Poliſh or Tartarean ſlaves to entertain them with that diverſion.

The women are commonly well made, excluſive of their legs, which, as well as their feet, are always large. Nature, in this reſpect, ſeems to have had in view the bulk they uſually acquire, which ſeems to want very firm ſupporters. The countenances of many of the Ruſſian women are agreeable, and their eyes, in general, are black and languiſhing, and always downcaſt, for they never dare to look a man full in the face. They wear no caps, but uſe coloured handkerchiefs, which they interweave ſo curiouſly among their hair, generally black and unpowdered, that this kind of head-dreſs generally renders the looks captivating. They uſe paint, young girls as well as married women; and this cuſtom prevails even among the ſervant maids, and the very loweſt of the people.

The dreſs of the generality of the Ruſſians is at preſent much like the habits worn in England. A few merchants, noblemen's, and gentlemen's ſervants, and ſome of the common people, at a diſtance from the capital, indeed, retain the old dreſs, as well as the cuſtom of wearing a long beard. The women generally wear a looſe gown like a domino, and both ſexes love to appear fine, and conſequently dreſs as rich as the very extent of their circumſtances will admit. But they univerſally want cleanlineſs and neatneſs; the women change their linen but ſeldom, and are unacquainted with that variety of undreſs to which other Europeans are accuſtomed, and which is often more bewitching than the richeſt ornaments.

In the houſes there are generally one bed for the huſband and wife, and one for the children, but all other perſons lie promiſcuouſly upon benches, or mats, which they ſpread on the ground. Nay, we are told by a celebrated hiſtorian and philoſopher, that "In 1663, the people of quality uſed to lie upon boards, or benches, on which a ſkin, or other covering, was ſpread. There was ſcarce any furniture in the houſes, and very few tables were covered with a cloth at meals." The beds have no curtains, and inſtead of a bolſter, the huſband and wife have each of them ſeven or eight pillows, one leſs than the other, raiſed up in the form of two pyramids: the requiſite benches, a large ſtove, and a few wooden chairs, make up the reſt of the furniture.

At a Ruſſian feaſt all the diſhes are ſerved up at once. The ſoup is made by meat cut into ſmall pieces; they have ſome ragouts, which none but a Ruſſian can touch; ſeveral pyramids of game, and butcher's meat roaſted; Chineſe ſweetmeats, and Ruſſian fruits. A profound ſilence is obſerved at dinner, which is interrupted only at times by the healths which are drank. As ſoon as they ſit down to table, each man pours into his glaſs ſome Ruſſian made wine, and then all riſe to drink to each other. Every gueſt is drank to reſpectively by his chriſtian and ſurname, and a drop of wine is ſwallowed to each perſon's health. "I have, (ſays an accurate traveller) been at ſome of theſe dinners, when there were more than 60 people, all drinking to each other at the ſame time. Their attitudes, and the confuſion of different ſounds, had a very ſingular effect. Peter not being able to make James hear him, was ſtretching himſelf over the table, and bawling as loud as he could; at the ſame inſtant he was interrupted by Francis, who was bowing to him; or by a knock of the head from Philip, who was turning about from right to left, without perceiving the poſture Peter was in. Philip's turn came next; as he was lifting his glaſs to his mouth, his neighbour gave him a jog of the elbow, and ſpilling part of his wine, interrupted him at his moſt intereſting moment. Such ſcenes as theſe, varied in different ways, were repeated at almoſt every part of the table, and the pleaſure of them was enhanced, by obſerving the impatience of ſome of the people. As to myſelf, I could never find an opportunity of drinking any one's health, but kept my head in conſtant motion to the right and left, and forwards. It is reckoned a qualification to catch the opportunity ſo ſeaſonably, as to drink to every perſon's health, without deſcending from one's dignity, or meeting with any accident.

"The firſt health being over, every body ſits down, and is at liberty to eat for a few minutes; glaſs tumblers, of a cylindrical form, ſix inches high, and four wide, are placed on different parts of the table. Every gueſt, within reach of one of theſe tumblers, takes it up, and drinks out of it: it would be thought very impolitic, if he was to take a glaſs in order to avoid drinking out of the ſame tumbler as his neighbour.

"When the company has eat for a few minutes, the empreſs's health goes round. This toaſt is given in a different manner; a large glaſs bottle, to which there is alſo a glaſs top, is placed on the table before the perſon of the higheſt rank. This perſon riſes from his ſeat, as well as his right hand neighbour, to whom he gives the head of the bottle, and pouring ſome wine into the cup, gives out the empreſs's health, bowing to the whole company. As ſoon as he hath drank, he gives the bottle to his neighbour, who paſſes the top to the perſon ſitting next to him. All the company drink the ſovereign's health in the ſame manner, while a band of muſicians is employed in ſinging ſongs adapted to the ceremony.

"The healths of the princes and princeſſes of the royal family are then drank in the ſame order, and eating goes on for a little time longer. The healths of all the gueſts are then carried round, with another glaſs bottle, which is not ſo beautiful as the firſt, and is covered with a cruſt of bread.

"This toaſt goes round nearly in the ſame way as the

former, except that when the lid of the bottle is given to one's neighbour, it is uſual, at the ſame time, to tell him the chriſtian and ſurname of the perſon whoſe health is going round; and this muſt be repeated, making a bow to him. This cuſtom is very troubleſome to ſtrangers, as the Ruſſians have generally three or four chriſtian names. This ceremony is carried on with the utmoſt gravity, and one muſt be very exact in the whole detail which extends all round the table."

The ſame accurate traveller, in another place, ſays; "The ſpirit of invention is as uncommon among the Ruſſians as genius; but they have a peculiar turn for imitation. In Ruſſia locksmiths, maſons, carpenters, &c. are formed as a ſoldier is in other countries. Each regiment has, in its own corps, all the neceſſary artiſts, and is not obliged to have recourſe to manufactures, as is the cuſtom every where elſe. They determine, by the ſtature, what employment a man is moſt fit for. They give a ſoldier a lock for a pattern, with orders to make others like it, and he does it with the greateſt dexterity; but the original muſt be perfect, otherwiſe he would copy it with all its defects, however eaſy it might be to correct them. The ſame may be obſerved with regard to artiſts and workmen of all kinds."

If the Ruſſians excell in any thing, it is in making all kinds of artificial fireworks. The ingenious Mr. Wraxhall, in his travels, gives the following animated account of a grand illumination and maſquerade which he ſaw at the palace of Peterhoff. "I went down, ſays he, to Peterhoff yeſterday again, when there was a maſquerade and illuminations in the gardens. The former of theſe is rather a *bal paré an domino*, as there are very few or no fancy dreſſes, nor is any character ſupported. Every perſon, without diſtinction, is admitted upon this occaſion, and there were not leſs than four or five thouſand perſons preſent. Her majeſty was dreſſed in a blue domino, and played at cards moſt of the night. The illuminations in the gardens far ſurpaſſed any I ever ſaw in my life. In theſe, as alſo in fireworks of every kind, I am aſſured that the Ruſſians excel any nation of Europe. Two prodigious arcades of fire extended in the front of the palace. The canal, which reaches to the Gulph of Finland, was illuminated on both ſides, and the view terminated by a rock, lighted in the inſide, and which had a beautiful effect. From either ſide of the canal went off long arched walks illuminated, and beyond theſe, in the woods, were hung feſtoons of lamps differently coloured. All the jet d'eaus played artificial caſcades, where the water tumbled from one declivity to another, and under each of which lights were very artificially diſpoſed, amuſed and ſurprized the ſpectators at the ſame time. Beſides, there were ſummer-houſes, pyramids, and temples of flame; and beyond all appeared the imperial yatchs on the water in the ſame brilliant and dazzling ornaments. Nothing could be better calculated to produce that giddy and tumultuous feeling of mingled wonder and delight, which though it ariſes neither from the underſtanding or the heart, has yet a moſt powerful influence over both."

Travelling is here performed with great expedition and the utmoſt facility, by the means of ſledges which render travelling as eaſy in the midſt of winter as in ſummer. Theſe ſledges are made with a frame at the bottom which is ſhod with iron like ſkates. The friction not being very conſiderable, and the reſiſtance but trifling on the ice, frozen ground and congealed ſnow, a ſledge with a great weight on it, may be drawn with great velocity by a ſmall force. Thus a ſingle horſe being able to draw a conſiderable weight on one of theſe ſledges, the communication from place to place is eaſy, expeditious, and cheap. Some of the fixed great roads are marked out by rows of trees regularly planted, white poſts placed at equal diſtances, &c. but in other parts, the traveller in his ſledge paſſes over rivers and lakes covered with ice, frozen bogs, &c. and ſteers his way by means of a pocket compaſs. There is uſually a bed or matraſs in the ſledge, ſo that the traveller may either ſit upright, or repoſe at his length, which adds to the agreeableneſs of the journey. The worſt is, the accommodations on the road are but very indifferent, ſo that people uſually take with them in the ſledge, whatever they imagine they ſhall have occaſion for in the journey.

The ſledges uſed for journies are uſually cloſe ſledges, but there are open ſledges for amuſement, and ſome of theſe are ſo diminutive as not to exceed in bigneſs a butcher's tray. In theſe little ſledges they ſlide down declivities with amazing velocity, and are mighty fond of this diverſion. As Peterſburg is without natural hills, the people raiſe artificial mounts to enjoy this amuſement. In mentioning this ſubject, a learned traveller ſays, "The late empreſs, Elizabeth, was ſo fond of this diverſion, that at her palace of Zarſko Sello, ſhe had artificial mounts of a very ſingular conſtruction made for this purpoſe. Theſe have been called by ſome Engliſhmen who viſited that country, the *Flying Mountains*, and I do not know a phraſe which approaches nearer to the Ruſſian name. There are five mounts of unequal heights, the firſt and higheſt is full 30 feet perpendicular altitude. The momentum with which they deſcend carries them over the ſecond, which is about five or ſix feet lower, juſt ſufficient to allow for the friction and reſiſtance, and ſo on to the laſt, from which they are conveyed by a gentle deſcent with nearly the ſame velocity over a piece of water into a little iſland. Theſe ſlides, which are about a furlong and a half in length, are made of wood, that they may be uſed in ſummer as well as winter. The proceſs is, two or four perſons ſit in a little carriage, and one ſtands behind, for the more there are in it, the greater the ſwiftneſs with which it goes. It runs on caſtors, and in grooves to keep it in its right direction, and it deſcends with a wonderful rapidity. Under the hill is a machine worked by horſes for drawing the carriages back again with the company in them.—At the ſame place there is another artificial mount which goes in a ſpiral line, and in my opinion (for I have tried it alſo) is very diſagreeable, as it ſeems always leaning on one ſide, and the perſon feels in danger of falling out of his ſeat."

The palace of Zarſko-Sello itſelf is erected in a barbarous taſte; without a proſpect in a low ſituation, with a long extended front, and only one ſtory above the ground floor. The capitals of the pillars, ſtatutes, and many other external parts, are gilded, and within the whole is loaded with Gothic ornaments. One apartment however is in a ſingular ſtile of magnificence, the ſides being all compoſed of amber, with feſtoons and ornaments of the ſame.

The Ruſſians have a very peculiar and ſingular method of fiſhing when the rivers are frozen over, which the learned gentlemen juſt quoted thus deſcribes. "There is a hole about four feet by two cut in the ice to let down a common drag net; oppoſite to this, at the diſtance they mean to pull up the net, is another hole about four feet ſquare. They then cut a number of ſmall round holes at about four yards diſtance from each other, in a circular form from the hole where the net is let down, to that where it is taken up. At the ends of the two ſtrings, that is, the upper and lower ſtrings which drag the net, long poles are tied; theſe poles will reach from one round hole to another, where they are directed and puſhed under the ice, as they ſwim at the top of the water, till they come to the biggeſt ſquare hole, and which they draw them out, and by this means the net, incloſing the fiſh it has ſurrounded, for the upper part of the net is floated at the top of the water under the ice, and the lower part of it ſunk by leads in the ſame manner as when the river is open. The ingenuity of the operation conſiſts in the contrivance of dragging under the ice."

Proviſions are as well preſerved in Ruſſia by the froſt as with us by the means of ſalt, and certainly while it laſts (that is, during the winter months) the former is a better preſervative than the latter, for this reaſon, that it never alters the taſte or quality of whatever it preſerves, as ſalt always does. The froſt only for a time fixes the parts and only juices, but does not change the flavour. Veal and other kinds of meat frozen at Archangel are eſteemed the beſt of eating at Peterſburg, nor are they diſtinguiſhable from what is freſh killed. Hence the capital, in the winter, is plentifully ſupplied with all kinds of freſh proviſions, and the markets are filled with piles of carcaſſes, conſiſting of frozen hogs, ſheep, fiſh, poultry, vegetables, &c. But it is to be obſerved, that when any of theſe are to be dreſſed, they muſt be thawed by immerſion in cold water, and not by the means of fire or warm water, as theſe would ſpoil them immediately.

SECT. IV.

Language, Arms, Eccleſiaſtical, Political, and Civil Hiſtory of Ruſſia, *&c.*

THE language of Ruſſia is moſtly the old Sclavonic, or rather a dialect of it, as that was of the old Scythian; but it is ſo corrupt, and intermingled with other languages, that it is hard for a perſon who hath been uſed only to the pure Sclavonian to underſtand it; and yet that is ſtill retained in their divine ſervice, in their bibles and homilies; and ſuch as affect any degree of learning or politeneſs, affect to ſpeak and write in it. Their character is a corrupt ſort of Greek, ill-ſhaped, whoſe letters they have increaſed to the number of 38; but ignorance, till of late, had ſo thoroughly covered this whole country, that even the clergy and nobility, as well as the common people, neither could write, or ſcarcely read. A greater encouragement was given to it, and to arts and ſciences, by their late monarchs who, by beſtowing favours, and places of honour and profit, on thoſe who were moſt learned, foreigners as well as ſubjects; and by ſetting up ſchools and academies, exciting and careſſing ſuch as were moſt famed for all ſorts of learning, ſending young noblemen and gentlemen into foreign countries for education, &c. have gone a great way towards tranſplanting the muſes into a climate till then unknown to them. It is therefore abſurd to expect to find any univerſities in ſuch a country as this, or any ſeminaries of learning, except two or three academies for arts and ſciences ſet up in the capital, and alſo a few colleges or ſchools, in ſome other principal cities, for the inſtruction of youth, which yet, it is to be feared, have not met with proper encouragement.

The arms of the ſovereigns of Ruſſia are, a Field Or, with a diſplayed Eagle Sable, bearing a Shield Gules on her breaſt, charged with a Cavalier Argent, fighting with a Dragon Sinople; on and between the heads of the eagles are the three crowns of Moſcow, Cazan, and Aſtrachan. According to others, they were Sable, a Portal open, with two leaves, and as many Steps, Or. The former was taken by John Baſilowitz, anno 1540, on pretence that the Ruſſian princes Rurio, Sinans, and Truvor, were deſcended from the emperor Auguſtus. The eagle however ſpreads not its wings like the imperial, but hangs them down; and the knight fighting with the dragon was added, in memory of the total defeat which the czar Demetrius gave to the Tartars in the Rulicoceian field. The antient great ſeal of Muſcovy, after its embracing chriſtianity, had ſomething ſtill more remarkable; it conſiſted of three circles, or rings, in a triangle: on the uppermoſt was the title of the godhead, in theſe words in Greek characters: "Our God, the Trinity, who was before all time; not three Gods, but one God." The ſecond ring had the titles of the prince to whom the ſealed inſtrument was directed; and the third thoſe of the czar. But it was in time exchanged for that mentioned above.

It is obſerved, that in the Sclavonic language, the Bohemians are called Chechy, the Poles Lechy, and the Ruſſians Ruſſy. The language of theſe three countries is the ſame, and only differ in dialect, as the High Dutch from the Low Dutch. The Bohemians and Poles about the year 80, embraced the Chriſtian religion at the perſuaſion of ſome Romiſh prieſts, and conſequently the rites and ceremonies of that church, which they obſerve to this day; and alſo make uſe of Latin characters in writings. But the Ruſſians, who embraced the Chriſtian religion much about this time, were inſtructed by Greek monks from Conſtantinople, and adhered ſtrictly to the doctrines of the Greek church, and in printing and writing they make uſe of Greek characters. They never acknowledged the pope of Rome as head of the church, but the patriarch of Conſtantinople, till the time Conſtantinople was taken by the Turks; and the Ruſs clergy elected a patriarch, who had his reſidence at Moſcow, and he had a ſovereign's power in all eccleſiaſtical matters, which Peter the Great thinking too great, depoſed him, and declared himſelf head of the church. The clergy conſiſts at preſent in ſecular and monaſtic prieſts; the ſecular prieſts are archbiſhops, and biſhops; the monaſtic are monks. The ſecular order of prieſts may marry; but if their wives die they cannot officiate in their office, but muſt retire to a monaſtery, for which reaſon prieſts in Ruſſia are ſo kind to their wives. The monaſtic order is that of St. Baſil, of which there are many monaſteries in Ruſſia; each monaſtery has a prior, who is ſtiled Archmandit. The monks are not admitted to marry. There are two or three nunneries in the country, which are not very regular, for the nuns wander abroad and receive company.

Their religion is entirely outward ſhow, and conſiſts of keeping ſtrict faſt during Lent, Advent, &c. croſſing themſelves with the repetition of "God be merciful to me." This, with a few of St. Baſil's homilies, is all the church ſervice; no ſermons are preached extempore there. As to the point of doctrine, they differ little from Roman Catholics; they pray to and adore the ſaints; the picture of St. Nicholas is in every houſe; they believe in the holy ſacrament, and that they really receive the body and blood of Jeſus Chriſt; but as the Roman Catholics give to the communicants the bread and wine apart, they mix the bread and wine with a little water and give to the communicants.

Beſides the numerous fixed faſts, the Ruſſians at particular times, reject as impure, horſe-fleſh, elk, veal, hare, rabbit, aſſes milk, mare's milk, venice treacle, and all compoſitions which contain any thing of muſk, caſtor, civet, &c.

The government of Ruſſia is abſolute deſpotiſm. The ſovereigns, if males, were called czars; if females, czarinas, but at preſent the imperial title is aſſumed. The people are not leſs ſlaves than formerly, but much of the power of the nobility is ſwallowed up in the great importance and authority of the crown. The ſovereign appoints wawodes or governors of provinces, and beſtows all offices of conſequence, whether eccleſiaſtical, civil, or military. The czar Peter introduced the titles of count and prince of the empire, and inſtituted an order of knighthood in honour of St. Andrew, diſtinguiſhed by a blue ribbon and a ſtar.

State priſoners here are, in general, privately ſeized, partially adjudged, and ſecretly diſpatched, or ſent into baniſhment to Siberia, of which the following is a ſingular incident, as related by Dr. Cook, who reſided many years in Ruſſia. "I was not long in Riga (ſays that gentleman) when I received the following piece of hiſtory from good authority. One Dr. Fonderholſt, a German, was, a few years before my arrival, phyſician to the army. He was ſaid to have been a man of learning, but of no great foreſight. He happened to receive an affront from one of the great lords of the court, and who was in great favour with the empreſs, which he, the doctor, would not put up with, but lampooned him ſeverely, and rendered him very ridiculous. The lord had the addreſs to get the doctor ſent to Siberia in the following manner: one day as the doctor was attending the field marſhal, who was ſick, a captain of the guards arrived with expreſſes from St. Peterſburgh, and demanded immediate audience. He was introduced, and whiſpered ſomewhat in the field-marſhal's ear, who deſired the doctor to amuſe himſelf in the great hall till he had ended ſome buſineſs with the captain. When that was done the doctor was again called upon, and when he had given the field marſhal his advice about ſome ailment which he at that time laboured under, was going to retire, the count deſired him to come to dinner becauſe he might need his farther aſſiſtance, and, at the ſame time adviſed the captain of the guards to dine, telling him he was not able to ſit at the table himſelf, but the vice-governor, prince Dolgoruke, who was preſent, would bear him company; this was agreed to. At dinner the captain told the vice-governor, that a relation of his, in his way to the army, was ſuddenly taken ill of ſome diſeaſe, and was obliged to remain in a houſe only diſtant three or four verſts from the city; therefore deſired him to appoint ſome ſufficient phyſician to viſit him, for which he would be handſomely conſidered. The vice, or deputy governor, pointed to Dr. Fonderholſt, ſaying, this gentleman is phyſician to the army, and one of the ableſt phyſicians in Riga; therefore he could not be better ſerved, and, at the ſame time, politely deſired the doctor to viſit the ſuppoſed gentleman. Dr. Fonderholſt agreed, and was giving directions to his ſervants to get his coach ready, when the prince told him that that was needleſs,

as

as his coach was large enough to carry them all to ſuch an inconſiderable diſtance. After dinner, when they had arrived at the houſe where they pretended the ſick gentleman was ſuppoſed to be, and had taken a few glaſſes of wine, the doctor deſired to ſee him, but was anſwered, that he was a ſtate priſoner by order of the cabinet; and therefore they adviſed him to make no reſiſtance, but go into a travelling-waggon ready at the door; telling him, at the ſame time, that if he offered the leaſt reſiſtance, he would be bound faſt with ropes, and might be very cruelly treated, on the way, by the ſerjeants and ſoldiers who were appointed to convey him to his place of deſtination. Thus this man was conveyed to Siberia, and there, in ſome pitiful town, was long immured, or kept in a hole in the wall, with only a ſmall ſlit through which he received his proviſions. It ſeems he had ſome money about him when he was arreſted, but the captain took nothing from him except his ſword. The ſoldiers, on the way, robbed him of his watch, but he concealed what little money he had from them. He was at no loſs to ſee that his money could not maintain him long; and likewiſe that he, who had been accuſtomed to live in luxury, could not long ſupport himſelf with ſuch poor proviſions as are allowed to ſuch priſoners. Therefore he affected to be a fortune-teller, and gave inſtructions to the ſoldiers who kept guard upon him, frankly giving them the half of what he got by his art. The ſoldiers were acquainted with many of the ſuperſtitious inhabitants, and told the doctor every thing concerning them before they came to him, which he repeated to them; whereby his fame, as a wiſe man, ſpread far: and he got ſomething to ſupport himſelf. Having no books, nor any company who could in the leaſt help him, to paſs his time in this miſerable ſituation he got a few hens, and diverted himſelf with feeding them. He gave their eggs a black colour, and wrote upon them with a pin *Den ungelucklick doctor Fonderholſt*. Ungelucklick ſignifies unfortunate; theſe eggs he ſold to the inhabitants as charms. They knew not the meaning of the writing, but thought it made the eggs more valuable. After the doctor had been many months thus confined, one day the governor's lady ſet up in this village, in her way from Ruſſia to Siberia, and wanted eggs, among other things, for dinner. The hoſteſs told her that there was, in this place, a priſoner, a very wiſe man, who ſold extraordinary eggs. She deſired to ſee them, and as ſhe underſtood the German language, ſhe was ſurprized to ſee wrote upon them the name of the phyſician who, a few years before that, had recovered her from a very dangerous fever. She went to the hole and ſpoke to the doctor; then ſhe applied to her huſband and got his ſituation made much eaſier; and as ſhe was a great favourite with the empreſs, ſhe wrote to her majeſty, and repreſented his undeſerved misfortune ſo pathetically, that the governor received orders to liberate him, and ſend him, at her expence, to Moſcow."

The adminiſtration of this empire is managed by the ſovereign council or chancery, which is chiefly compoſed of the third claſs of the nobility, and is divided into ſix departments, in which are ſeparately conſidered

1. Foreign affairs,
2. War,
3. Finances,
4. Public accounts,
5. Civil proceſſes brought by appeal,
6. Criminal cauſes brought by appeal.

The determination of the two laſt mentioned formerly depended upon the equity of the judge; but we are told, that, anno 1647, a code, or body of laws, was ordered to be compiled by the wiſeſt men in the empire, which was accordingly done, in one volume in folio, intitled, Sabrona Uloſienia, that is to ſay, Univerſal and general Right; and by this the judges were to regulate their ſentences. And there is this great and ſingular advantage in the courts of judicature of this country, that they are neither expenſive, nor long winded; and that a law-ſuit is begun and determined in the ſpace of ſix or ſeven weeks; nevertheleſs, they are extremely venal.

All the peaſants and huſbandmen are ſlaves, either directly to the ſovereign, to the Boyars or lords, to monaſteries, or to ſome of the gentry; and the greater number of them any hath, the richer he is eſteemed. Theſe are employed by them in whatever work or buſineſs they think fit; and this is one reaſon why they affect to appear more dull and untractable than they, perhaps, naturally are; becauſe, if any of them betrays a greater vivacity or dexterity than the reſt, he is ſure to have more buſineſs and trouble upon his hands, without any anſwerable reward or encouragement. It is uſual for the ſovereigns to reward ſome of the ſervices done to them by any of his nobles or officers, with a number of thoſe villages; and as there is an account of their number in all provinces, in 40 days two or three hundred thouſand of them may be raiſed by ſummoning each maſter to furniſh ſuch a quota.

Their coin, till the reign of the late Peter I. conſiſted chiefly in copecks, or ſilver pence, except that which was brought thither from foreign parts; for merchants were obliged to pay the government in rixdollars: but after the loſs of the battle of Narva, that monarch was ſo ſtreightened for want of money, that an expedient was tried, of recalling all the copecks, and coining new ones of the ſame weight and value, though alloyed with two fifths of a baſer metal. This induced the people to hoard up their old money, inſtead of bringing it to the mint; upon which another expedient was thought of, and a new order iſſued, whereby 10 per cent. was given, in new money, to every one that ſhould bring the old: and larger pieces were ordered to be coined, ſuch as rubles, half and quarter rubles, and pieces of ten, five, and three copecks value; on which account, a rixdollar, which, during the currency of the old coin, was valued at but 55 copecks, being now re-coined, and mixed with ſome alloy, made a ruble, or 100 copecks. This greatly diſtreſſed commerce in general, made the exchange to fall between 30 and 40 per cent. and was attended with other great inconveniencies to the ſubjects. But the czar, who was a prodigious gainer by it, and did not want his coin to go out of his dominions, but to make the foreign ones flow into them, was deaf to every thing that was ſaid againſt it.

At preſent the Ruſſians have

Gold ducats	Copecks of ſilver
Rubles	Five copecks
Half rubles	Two copecks
Quarter rubles	Half and quarter ditto.
Griveners or 10 copecks	

The ducat is worth two rubles, and the ruble is, in value, about 4s. 6d. ſterling. The half and quarter rubles are expreſſive of their own value.

A grivener is the tenth part of a ruble, and a copeck is an hundredth part of the ſame.

The Ruſſian pound is exactly the ſame as our pound, apothecaries weight.

40 Pounds make a pood,
40 Poods —— a berkwitz,
63 Poods —— a ton.

With reſpect to the liquid meaſures,

8 Cruſkas make 1 vedro,
1 Half vedro — 1 ſtackan,
2 Stakans — 1 anchor,
6 Anchors — 1 hog, which is exactly the ſame as an Engliſh hogſhead.

The principal meaſure of extenſion is the verſt, which is 3500 feet Engliſh, and 104 verſts make a degree; and the Ruſſians reckon diſtances by verſts, as the Engliſh do by miles.

Murder may be compromiſed in Ruſſia by means of money, and no perſon can be convicted of a capital crime but by his own confeſſion; however, to extort that confeſſion, the moſt inhuman tortures are uſed, as the priſoner is obliged to undergo the ſcourge, the ſtrappado, and the knout. The laſt mentioned puniſhment is dreadful indeed. It is inflicted with a thong of a buffalo's hide, managed in ſuch a manner that the executioner can either cut the ſcarfskin only, or this and the fleſh together, or ſkin and muſcles to the bone, juſt as he is ordered. The moſt ſevere infliction of this puniſhment is called the pine. The patient is ſuſpended by his two arms, pulled up behind until the ſhoulder joints are

are diſlocated, and in this ſituation of excruciating miſery is ſlead with the knout, from the neck to the loins. If theſe tortures do not produce a confeſſion, the parts are ſeared with red hot irons, the bones are ſcorched, the muſcles broiled over a ſlow fire, &c. And ſhould the perſon thus tormented ſtill perſiſt in denying the charge, melted lead is poured upon the crown of his head till he expires.

A gentleman, who reſided ſome years in Ruſſia, gives the following account of the whimſical manner in which libellers are puniſhed in Ruſſia: "While I reſided at Moſcow, there was a gentleman who thought fit to publiſh a quarto volume in vindication of the liberties of the ſubject, groſsly reflecting upon the unlimited power of the czar Peter, and expoſing the iniquity of the whole legiſlature (if it may be ſo called) of that empire. The offender was immediately ſeized by virtue of a warrant ſigned by one of the principal officers of the ſtate; he was tried in a ſummary way; his book determined to be a falſe libel, and the author condemned to eat his own words. This ſentence was literally carried into execution on the following day. A ſcaffold was erected in the moſt populous part of the town; the imperial provoſt was the executioner, and all the magiſtrates attended at the ceremony. This book was ſevered from the binding, the margins cut off, and every leaf rolled up, as near as I can recollect, in the form of a lottery ticket when it is taken out of the wheel at Guildhall, by the bluecoat boy. The author of the libel was then ſerved with them ſeparately by the provoſt, who put them into his mouth, to the no ſmall diverſion of the ſpectators. The gentleman had received a complete mouthful before he began to chew; but he was obliged, upon pain of the ſevereſt baſtinado, to ſwallow as many of the leaves as the czar's ſerjeant ſurgeon and phyſician thought poſſible for him to do without immediate hazard of his life. As ſoon as they were pleaſed to determine that it would be dangerous to proceed, the remainder of the ſentence was ſuſpended for that time, and reſumed again the next day at the ſame place and hour, and ſtrictly conformable to the ſame ceremony. I remember it was three days before this execution was over; but I attended it conſtantly, and was convinced that he had actually ſwallowed every leaf of the book. Thus I think he may be very juſtly ſaid to have eat his own words."

Traitors, after having undergone a variety of tortures, are baniſhed to Siberia, but not ſometimes till they have been deprived of their eyes, or ears. Coiners are obliged to ſwallow the melted metal of the coin which they counterfeited. Thoſe who are hanged are obliged to put the nooſe about their own necks, and to fling themſelves off the ladder, when commanded by the executioner. The puniſhment for robbery is ſcourging; and every lord, or maſter, has a right to inflict the batags on his ſervant: this puniſhment conſiſts in ſtretching the offender naked on the ground, and cauſing him to be beaten with ſticks by two of his fellow-ſervants, or ſlaves.

SECT. V.

Of the Commerce, Revenue, Military Forces, Navy, &c. of Ruſſia.

THE Ruſſian empire is extremely well ſituated for commerce, and her exports are

Iron,	Flax,
Hemp,	Furs,
Wood,	Linſeed,
Hides,	Fiſh,
Grain,	Leather,
Pot-aſh,	Tallow,
Wax,	Materials for ſhip-
Cordage,	building, &c.
Copper,	

The imports are

Sugar,	Braſs wire,
Beaver-ſkins,	Spirituous liquors,
Tin,	Silk,
Dye-woods,	Spices,
Shalloons,	Indigo,
Norwich ſtuffs,	Engliſh beer,
Lead,	Wines,
Cloths,	Fruits,
Flannels,	China,
Mancheſter velvets,	Paper, &c.

The commerce is with Great Britain, Ireland, Holland, France, Germany, Poland, Turkey, Perſia, China, &c.

If we conſider Ruſſia with reſpect to its amazing extent, it is but very poorly peopled, the inhabitants amounting to 18,000,000, of which ſeven parts out of ten are in abſolute abject ſlavery.

The revenue of Ruſſia hath been gradually improving ever ſince the reign of Peter the Great; but as part is paid in money, and part in commodities, it is almoſt impoſſible to aſcertain the real amount. However, the reſources are large, and the revenue very conſiderable.

The regular troops of Ruſſia, excluſive of the Coſſacks and Tartars, are 350,000 men: "But ſuch (ſays a modern traveller) is the great extent of their territories, and the number of fortreſſes which they have to ſupport, from Peterſburg to the borders of China, that it is with difficulty they can bring half that number into the field, to act offenſively againſt an enemy. The common Ruſſian ſoldiers, from a principle of ſuperſtition, are taught to deſpiſe life, and by this means are brought to ſtand their ground, and keep their ranks, perhaps, equal to any troops in the world."

On the commencement of the late Ruſſian war, the Ruſſian marine was upon a moſt deſpicable footing; and it was diſcovered, that all the uſeful regulations which Peter the Great had eſtabliſhed, were laid aſide, or forgotten; but ſome experienced Engliſh ſea-officers being immediately employed, with great addreſs and diſpatch, again rendered it reſpectable. The Ruſſians have now about 60 ſhips of the line, and near 40 frigates; and, excluſive of theſe, about 150 row-gallies, containing two pieces of cannon, and between 50 and 100 men each, in the Baltic; and ſmall fleets of frigates, ſloops and row-gallies, in the Black and Caſpian Seas.

A late traveller tells us, that "The Ruſſian empire is, at this time, in a ſituation to defend itſelf againſt all the powers of the north; and as the government has *now* a powerful army, which is tolerably well diſciplined, at command, and a very conſiderable revenue, without any debts but what were made during the ſhort war which they have had lately againſt the Turks, together with great reſources for raiſing both men and money, upon any ſudden occaſion. This empire is alſo in a ſituation to act offenſively both by ſea and land, eſpecially if a bold and enterprizing prince comes to the throne, who has capacity and judgment to direct his military forces in a proper manner. But after all, conſidering the preſent ſituation of Ruſſia, her growing commerce, her arts and manufactures, ſtill in their infancy; her want of inhabitants, in proportion to the extent of her territories; ſuch a prince would not act as a patriot, and as the father of his people, who would engage his ſubjects at preſent in an offenſive war."

Beſides the already mentioned military and naval forces, the Ruſſians have a very large train of artillery, which is diſtributed in different parts of the empire, to be ready on any occaſion, when perhaps it would be difficult to tranſport military ſtores.

SECT. VI.

Hiſtory of Ruſſia.

THE Ruſſians, if we trace them to their original, are as antient a people as any upon the face of the earth: for their anceſtors were thoſe Scythians who poſſeſſed mount Caucaſus, or the Dagiſtan mountains, which lie between the Euxine and the Caſpian Seas, immediately after the flood; even before their brethren deſcended from the mountains of Armenia or Arrarat, into the plains of Meſopotamia, between the Tigris and Euphrates, as will be ſhewn in the hiſtory of Germany. The term Ruſſe ſignifies a wanderer, as all the Scythians or northern nations were, till very lately. If we only regard the time when the Ruſſians, and other tribes of Scythians, or Tartars, came to fix their habitations, and live in towns, we need not aſcend far into antiquity:

for Kioff, or Kiow, upon the borders of Poland, is held to be the firſt town the Ruſſians built, and Woldemir their firſt prince, who reigned about the year of our Lord 1000. But it is not to be underſtood that the Scythians lived without any government till then; for government was certainly coeval with the world; but till then, the patriarchal form generally prevailed in Scythia, as it does in ſome parts of it (now called Tartary) to this day: and, indeed, in many other parts of the world, both in the eaſtern and weſtern continent, we find the patriarchal government ſtill prevail; and theſe, like other ſtates, will probably be united in time by force or compact, and grow up into kingdoms and empires. This country of Ruſſia, after the patriarchal form was aboliſhed, was governed by a multitude of petty ſovereigns, which are uſually ſtiled dukes, till Woldemir united ſeveral of theſe dukedoms into one, about the year 1000, and obtained the name of the Great Duke, and ſometimes was called Czar, or Cæſar; forming one potent ſtate, which the ſovereigns of Cazan and Aſtrachan becoming jealous of, made war upon the Ruſſians, and compelled them to become tributary to thoſe princes.

John Baſilowitz, or Vaſiliwitz Grotzden, united many more of theſe duchies under his government, and expelled the Tartars, who were then in poſſeſſion of the caſtle of Moſcow, anno 1450, and ſubdued the provinces of Novogorod and Twere. His ſon added thoſe of Pleſkow and Smolensko, and John Baſilowitz his grandſon, anno 1540, conquered the kingdoms of Cazan and Aſtrachan, and added Siberia to the Ruſſian dominions: and in his reign it was, that the Engliſh, commanded by Captain Cancellor, arrived at Archangel, and began to trade with Ruſſia, which till then had never been viſited by the ſhips of any nation. The Coſſacks and Circaſſians, ſituate near the mouths of the Volga, Don, and Nieper, ſubmitted to czar Alexis Michaelowitz; and many of the Calmucks alſo acknowledged themſelves ſubjects of Ruſſia.

Michael, deſcended from the czar John Baſilowitz, aſcended the throne of Ruſſia, by the unanimous conſent of the ſtates, anno 1613. He was ſucceeded by his ſon Alexis Michaelowitz, anno 1645, after whoſe death, his ſon Theodore Alexowitz ſucceeded to the throne, who dying without iſſue, anno 1682, appointed John his brother by the ſame mother, and Peter his half-brother, to reign jointly, as they did, until the year 1696, when czar John died, leaving three daughters by his conſort Proſcovia Federowna Solticow, viz. the princeſs Anne, married to Frederick William, duke of Courland, the 13th of November, 1710; the princeſs Katherine, married to Charles Leopold, duke of Mecklenberg Schwerin, the 19th of April, 1716, and the princeſs Proſcovia, who died unmarried.

Czar Peter was the ſon of the czar Alexis Michaelowitz, by his ſecond wife Natolia Kerihowna Nariſkin: he married the princeſs Ottokeſa Federowna, a ſubject of Ruſſia, by whom he had iſſue the Czarowitz Alexis, born anno 1690; but was divorced from his mother, anno 1692. The Czarowitz married the princeſs Charlotta Chriſtina Sophia, daughter of Lewis Adolphus, duke of Brunſwick-Wolfenbuttle, and ſiſter of the empreſs, conſort of Charles VI. anno 1711, and died in priſon, anno 1721, being then under ſentence of death for a conſpiracy againſt his father, Peter the Great, leaving iſſue a ſon named Peter Alexowitz, born in 1715, and afterwards emperor. Peter the Great, married to his ſecond wife, the lady Katherina Alexowna, anno 1711, (with whom he had cohabited ſome years before); he had iſſue by her the princeſs Anne, married to Frederick duke of Holſtein, and the princeſs Elizabeth, (the preſent empreſs of Ruſſia) who is yet unmarried.

Peter the Great entered into a war with the Turks, anno 1695, and the year following took Aſoph, ſituated near the Palus Mœotis, which opened him a way into the Euxine Sea; and having determined to build a fleet, and ſhare the navigation of that ſea with the Turks, and traffic with the nations bordering upon it, though he had not, at that time, a ſingle ſhip of war, or a ſhip-carpenter in his dominions, he reſolved to travel into the maritime countries of Europe, where he might meet with artiſts that could inſtruct him in ſhip-building, and procure carpenters to return home with him, and aſſiſt in raiſing a royal navy. Nor did he propoſe only to qualify himſelf and his people for the ſea-ſervice, but to encourage all other arts and ſciences; and invite learned men and mechanics to return with him to Ruſſia, by offering them great rewards.

He firſt viſited Holland, incognito, and arriving at Amſterdam, took a houſe near the principal dock-yards, where he lived with ſome of his noblemen, and worked part of the day with the axe among the ſhip-builders, as he obliged the noblemen who attended him to do, dreſſed in the habit of Dutch ſkippers. Another part of the day was taken up with rowing and ſailing upon the water; and ſometimes he made viſits to the Dutch burghers, with whom he would be very merry, having learned Dutch of the factors of that nation before he ſet out from Moſcow: but having ſeen ſome Engliſh ſhips while he was in Holland, he was much better pleaſed with their beauty and proportion, than with thoſe of the Dutch; whereupon he determined to viſit England, and having communicated that deſign to king William, who was then in Holland, a convoy was provided to attend him thither; but ſtill chooſing to remain incognito, a houſe was taken for him, when he arrived at London, in York Buildings, near the Thames, where he reſided but a little while; for the conſtruction of ſhips being his chief buſineſs, he removed to Mr. Evelin's houſe at Deptford, which opened into the king's yard, being attended by the marquis of Carmarthen, ſon to the duke of Leeds, then one of the Engliſh admirals. Here the builders communicated to the czar their drafts, and the method of laying down, by proportion, any ſhip or veſſel, of any bulk whatever, with the rules for, and building a ſhip according to it, which he ſaw practiſed, with much pleaſure, both in the king's and merchants yards, which made him repent his having ſpent ſo much time in Holland, where their method is leſs artificial, obſerving, that he ſhould have been a bungling ſhip-builder, if he had not viſited England, and declaring he would have all his ſhips built after the Engliſh model: he took ſeveral builders home with him, to whom he offered conſiderable ſalaries. The chief of theſe builders was a ſon of Sir Anthony Dyer's, who was ſent to France by the court of England, in the reign of Charles II. to inſtruct the French in ſhip-building, who choſe alſo to follow our models, and, it is ſaid, has improved upon us of late.

The czar appeared extremely pleaſed with the marquis of Carmarthen, who worked with him in the king's yards, and ſailed with him on the Thames, ſhewing him how near the wind a veſſel might ſail, and what way ſhe would make when the wind was contrary, as well as when it was fair; and, as an acknowledgment for the ſervices the marquis had done him, he made him a grant of the ſole importation of tobacco in his dominions.

The czar was never idle when he was in London; he attended the founderies for great guns and mortars, and enquired into almoſt every mechanic art: and having reſided here between three and four months, king William made him a preſent, on his return, of the fineſt yacht in England, called the Royal Tranſport, built like a frigate, and carrying 24 guns, which had been contrived by the marquis of Carmarthen, to carry the king over to Holland, during the war with France.

The czar arriving at Vienna, in his way from England towards Ruſſia, in the year 1698, received advice of a conſpiracy in his dominions to depoſe him, and declare his throne vacant, ſince he had remained ſo long abſent from his dominions: but arriving at Moſcow, he found that general Gordon, a native of Scotland, had defeated the diſaffected, and all was quiet there. The next year was taken up in improving his revenues, and diſciplining his army; but, above all, in increaſing his navy, which in three years time conſiſted of 40 men of war, 10 frigates, bomb-veſſels, &c. 20 whole gallies, and 30 half gallies.

In the year 1700, the czar entered into a confederacy with the Poles, Danes, and Brandenburghers, againſt the young king of Sweden, under pretence that the Swedes had poſſeſſed themſelves of ſome places in Ingria that belonged to the Ruſſians; and the reſt of the confederates made much the ſame pretenſions; for which ſome of them paid very dear in the enſuing war, and particularly the czar, who having beſieged Narva with 100,000 men, his army was defeated by 18,000 Swedes, commanded by Charles XII. in perſon, and the ſiege raiſed.

raiſed. Voltaire relates, that there were but 8000 men in the Swediſh army, and that it was one of the moſt terrible defeats that ever was known, the Swedes killing 18,000 Ruſſians, and taking as many priſoners, among whom were moſt of their general officers. But a more particular account of this battle has been already given in the hiſtory of Sweden.

At the time of this battle, the czar was marching at the head of 40,000 men towards Narva, in order to ſurround the Swedes on every ſide; but receiving advice of the defeat of his army before that town, he thought fit to retire; ſaying, "He knew the Swedes would be victorious for ſome time; but, they would, in the end, teach the Ruſſians to beat the Swedes." The citizens of Moſcow were in ſuch a conſternation, when they underſtood the ill-ſituation of their affairs, that they imputed their misfortunes to the force of magic: nothing but a ſupernatural power, they imagined, could have defeated ſo fine an army as lay before Narva: ſo much were they perſuaded of this, that prayers were ordered to be put up to St. Nicholas, the patron of their nation, to protect them from theſe deviliſh Swedes; the form of one of them being of the following tenour, viz.

"O thou, who art our perpetual comforter in all our adverſities, great St. Nicholas, infinitely powerful; by what ſin have we offended thee, in our ſacrifices, bowings, and thankſgivings, that thou haſt forſaken us? We have implored thy aſſiſtance againſt theſe terrible, inſolent, enraged, dreadful, inſuperable deſtroyers; when, like lions and bears, who have loſt their young, they have fallen upon us, terrified, wounded, and ſlain by thouſands, us who are thy people. As it is impoſſible this ſhould have happened without diabolical influence and inchantment, we beſeech thee, O great St. Nicholas, to be our champion and ſtandard-bearer, to deliver us from this troop of ſorcerers, and drive them far from our coaſts, with the recompence that is due unto them."

The king of Sweden, after his victory at Narva, marched the whole length of Livonia, and having obliged the Saxons to raiſe the ſiege of Riga, gained another victory over them upon the banks of the Dwina. He then purſued the Saxons into Poland, and obtained a third victory near Cracow: but having left no more than 8000 men in Livonia, the Ruſſians, who had introduced near 100,000 men into that province, ſurrounded the Swediſh general Slippenback, and deſtroyed all his infantry, though that general broke through with his horſe, and retreated to Pernau, a port-town on the Livonian Sea; and there remaining now no force to defend the open country, the Ruſſians plundered Livonia from one end to the other, making a multitude of priſoners, and driving them in chains as far as Aſtracan, where moſt of them periſhed. The Ruſſians afterwards ſurprized Dorpt, and took Narva by ſtorm, putting to death all they found in arms, and giving the plunder of the town to the ſoldiers. Thus did this hero, the king of Sweden, abandon his faithful Livonian ſubjects, in order to depoſe Auguſtus king of Poland. Riga was afterwards ſurrendered to the czar, being in a manner depopulated by the plague; the whole province being ſoon after reduced by the czar's forces, and Marienburg among the reſt, where a young virgin, or as ſome relate, a wife, was taken priſoner, anno 1702, whom czar Peter advanced to the imperial throne, in his life-time, and appointed his ſucceſſor after his deceaſe. She was called by the name of Catherine, the daughter of a poor woman, who lived in a neighbouring village, as Voltaire relates: ſhe never knew her father; but was baptized by the name of Martha, and regiſtered among the baſtard children. The vicar of the pariſh took her, and charitably provided for her until ſhe was fourteen years of age; and then ſhe was retained in the ſervice of a Lutheran miniſter, whoſe name was Gluck, in the city of Marienburg: being about 18 years old, ſhe married a Swediſh dragoon, anno 1702, who, going out the ſame day, or the next, with a party that was defeated by the Ruſſians, he was never heard of more; and ſome few days after, ſhe herſelf was made priſoner by the Ruſſian general Czeremetoff, who made a preſent of her to prince Menzikoff, who finding her genius, as well as beauty, exceeding any thing he had ever met with in the ſex, could not forbear boaſting of the preſent which had been made him before the czar, and had repreſented her in ſo amiable a light to that prince, that he immediately commanded her to be ſent for; at which, it is ſaid, the general trembled, when too late he ſaw his error; being deeply ſmitten with her charms himſelf, as the czar alſo was, as ſoon as ſhe appeared: and, from that hour, he entertained her in his palace, obſerving in her an aſtoniſhing capacity; and after a thorough experience of the greatneſs of her ſoul, he proceeded to marry her in the year 1707. During his reign, ſhe acted the part both of a miniſter and a general; her advice was regarded more than that of any of his council, and ſhe attended him both in his land and naval expeditions, extricating him out of the greateſt difficulties, particularly at the battle he fought with the Turks on the banks of the river Pruth, and in the ſea-fight with the Swedes in the gulph of Finland: ſhe renounced the Lutheran religion, in which ſhe had been educated, on her marriage with the czar, and profeſſed herſelf of the Greek communion, being re-baptized according to the rites of the Ruſſian church.

But to return to the part the Ruſſians had in this war: while the king of Sweden was employed in depoſing king Auguſtus, and advancing Staniſlaus to the throne of Poland, the czar marched into Lithuania at the head of 50,000 men, and made himſelf maſter of that whole province, and of the duchy of Courland; king Charles being at that time purſuing Auguſtus into his German dominions: the Ruſſians and Saxons alſo having united their forces in Great Poland, defeated an army of 8000 Swedes and 14,000 Poles, of the party of king Staniſlaus, commanded by the Swediſh general Mardefield, which would have given Auguſtus an opportunity of remounting his throne, if his plenipotentiaries, appointed to treat with thoſe of Sweden, had not at that inſtant concluded a treaty, whereby king Auguſtus was obliged to relinquiſh the crown of Poland, and acknowledge Staniſlaus the lawful king; which he thought fit to ſubmit to, rather than provoke king Charles to deſtroy Saxony, of which he was then poſſeſſed.

The czar, however, having no regard to the treaty Auguſtus had concluded with the Swedes, introduced ſtill more forces into Poland, with which he plundered the eſtates of all ſuch as appeared to be in the intereſt of Staniſlaus, ſending all the furniture, pictures, libraries, ſtatues and curioſities, he found in the palaces or noblemens houſes, to Moſcovy, and rendering the country a perfect deſert. The czar afterwards taking up his quarters at Grodno, and cantoning the greateſt part of his army in the province of Lithuania, the king of Sweden advanced towards him in the month of January, and having paſſed the river Niemen, within two leagues of Grodno, before the czar knew any thing of his march; the czar left the town by the north gate, when Charles entered by the ſouth. The king had with him but 600 of his guards, the reſt not being able to follow him, and the czar fled with above 2000 men, upon ſuppoſition that the whole army was entering into Grodno; but having learnt that very day from a Poliſh deſerter, that he had quitted the place to no more than 600 men, and that the body of the enemy's army was ſtill above five leagues diſtant, he loſt no time, but ſent a detachment of 1500 horſe in the evening to ſurprize the king of Sweden in the town. The 1500 Moſcovites, aſſiſted by the darkneſs of the night, advanced as far as the firſt Swediſh guard without being known; this guard conſiſted of 30 men, and they alone ſuſtained the effort of 1500 for half a quarter of an hour. The king, who lay at the other end of the town, came up preſently with his 600 guards, and the Moſcovites fled with precipitation: his army was not long without joining him, nor he without purſuing the enemy. All the Moſcovite troops, diſperſed in Lithuania, retired in haſte eaſtward into the palatinate of Minſky, near the frontiers of Moſcovy, where the rendezvous was appointed. The Swedes, whom the king alſo divided into ſeveral bodies, did not ceaſe to purſue them for above thirty leagues of their way: thoſe who fled, and thoſe who purſued, made exceſſive hard marches almoſt every day, though in the midſt of winter. All ſeaſons had been long equal to the ſoldiers of Charles and of the czar; the ſole terror which the name of Charles carried with it, then made the difference between the Moſcovites and the Swedes.

From Grodno to the Boriſthenes eaſtward, lie nothing but moraſſes, deſerts, mountains, and immenſe forefts: in

in ſuch places as are cultivated, there was no proviſion to be found; the country people buried all their grain under-ground, and whatever elſe could be preſerved there. In order to diſcover theſe ſubterraneous magazines, they were obliged to ſound the earth with long poles pointed with iron. The Moſcovites and Swedes ſerved themſelves with theſe proviſions by turns; but they were not always found, nor did they prove ſufficient when they were.

The king of Sweden, who had foreſeen theſe difficulties, had provided biſcuit for the ſubſiſtence of his army, ſo that nothing ſtopped him in his march. After he had croſſed the foreſt of Minſkey, where his men were obliged to cut down trees to make way for his artillery and baggage, he found himſelf, on the 25th of June, 1708, before the river Berezine, over-againſt Boriſlow. The czar had got together the beſt part of his troops in that place, and intrenched himſelf to advantage; his deſign was to hinder the Swedes from paſſing the river. Charles poſted ſome of his regiments on the banks of the Berezine, directly againſt Boriſlow, as though he meant to attempt the paſſage in ſight of the enemy. At the ſame time he led his army about three leagues up the river, and having thrown a bridge over it, made his way through a body of 3000 men, who defended that poſt, and marched to the enemy without ſtopping. The Moſcovites did not wait, however, for his coming up, but immediately decamped, and retreated towards the Boriſthenes, ſpoiling all the roads, and ſpreading deſtruction wherever they paſſed, that by this means they might retard the progreſs of the Swedes.

Charles ſurmounted all difficulties; advancing ſtill towards the Boriſthenes, he met with 20,000 Moſcovites in his way, intrenched in a place named Holloſin, behind a moraſs, which could not be come at without paſſing a river. Charles did not wait for the aſſault till the reſt of his infantry came up, but threw himſelf into the water at the head of his foot-guards, and croſſed the river, with the water ſometimes above his ſhoulders. While he thus marched againſt the enemy, he ordered his horſe to paſs round the moraſs, and fall upon them in flank. The Moſcovites in amaze, that no barrier could defend them, were routed.

The horſe having made their way through the enemy, joined the king in the midſt of the battle. He then mounted on horſeback, but ſome time after finding a young Swediſh gentleman, named Gullenſtiern, whom he very much eſteemed, wounded in the field, and unable to march, he obliged him to take his horſe, and continued to command on foot at the head of his infantry. Of all the battles he had ever fought, this, in all probability, was the moſt glorious; for here he was expoſed to the moſt dangers, and ſhewed the greateſt abilities: the memory of it is preſerved by a medal, with this inſcription on one ſide, *Sylvæ, Paludes, Aggeres, Hoſtes victi*; and on the other, *Victrices Copias alium laturus in Orbem.*

The Moſcovites, thus obliged to fly, repaſſed the Boriſthenes, which ſeparates the dominions of Poland from their own country. Charles loſt no time in the purſuit, he croſſed that great river after them at Mohilou, the laſt town in Poland, which ſometimes belongs to the czar, and ſometimes to the Poles, according to the common fate of frontier places.

The czar thus ſeeing his empire, in which he was giving birth to arts and trade, become a prey to a war, which in a little time might ruin all his projects, and perhaps take from him his throne, was inclined to a peace, and even ventured to ſend ſome propoſals, by a Poliſh gentleman, to the Swediſh army. Charles XII. who had not been uſed to grant peace to his enemies, anſwered, "I will treat with the czar at Moſcow." When this haughty anſwer was reported to the czar, "My brother Charles (ſays he) ſtill affects to act the Alexander; but I flatter myſelf he will not find a Darius in me." About 30 leagues northward from Mohilou, the place where the king paſſed the Boriſthenes, along the river, and ſtill upon the frontiers of Poland and Moſcovy, is ſituated the country of Smolenſko, in which lies the great road from Poland to Moſcow. This way the czar retreated, and the Swedes followed by long marches, and ſo cloſe, that part of the rear-guard of the Moſcovites was frequently engaged with the dragoons of the Swediſh vanguard. The latter had generally the advantage; but they weakened themſelves, even by conquering in theſe ſmall ſkirmiſhes, which were never deciſive, and in which they always loſt abundance of men.

On the 22d of September, in the year 1708, the king attacked a body of 10,000 horſe, and 6000 Calmucks near Smolenſko. He fell upon this army with only ſix regiments of horſe, and 4000 foot, broke their ranks upon the firſt onſet, at the head of his Oſtrogothick regiment, and forced the enemy to retreat. He advanced upon them through rough and hollow ways, where the Calmucks lay hid; they then appeared again, and threw themſelves between the regiment where the king was fighting, and the reſt of the Swediſh army. The Moſcovites and Calmucks, in an inſtant, ſurrounded this regiment, and made their way quite up to his majeſty. They killed two aids de camp who fought near his perſon; the king's horſe was ſlain under him, and as one of his equerries was preſenting him with another, both the equerry and horſe were ſtruck dead upon the ſpot. Charles fought on foot, encircled by ſome of his officers, who immediately flew to relieve him by ſurrounding him.

Several of them were taken, wounded or ſlain, or carried off to a diſtance from the king by the multitude that fell upon them, ſo that only five men were left about him. He was quite ſpent with fatigue, having killed above a dozen of the enemy with his own hand, without receiving ſo much as one wound, by that inexpreſſible good fortune, which, till then, had ever attended him, and upon which he ſtill relied. At laſt colonel Dardoff forced his way through the Calmucks, with a ſingle company of his regiment, and came time enough to diſengage the king. The reſt of the Swedes put the Tartars to the ſword, the army recovered its ranks, Charles mounted his horſe, and, fatigued as he was, purſued the Muſcovites two leagues.

The conqueror was ſtill in the great road from Smolenſko (near which this battle was fought) to Moſcow, which are about 300 miles diſtant, and the roads in themſelves not worſe than thoſe, through which the Swedes had already paſſed; but they had information, that the czar had not only made all theſe roads impaſſable, either by laying ſuch parts of them under water as lay near the marſhes, or by digging very deep ditches at certain diſtances, or by covering the way with the wood of whole foreſts, which his ſoldiers had cut down; but alſo they learnt that he had ſet fire to all the villages, both on the right and left of the road. The winter was coming on, and there was little appearance of making any ſpeedy advances into the country, and none of ſubſiſting there; and the whole body of Moſcovite forces might unexpectedly fall upon the king of Sweden through by-ways, which he was not acquainted with.

Charles having made a review of his whole army, and taken an account of their proviſions, found that he had not enough to ſubſiſt them above 15 days. General Lewenheup, who was appointed to bring him a ſupply, with a reinforcement of 15000 men, was not yet come up; he therefore reſolved to quit the road to Moſcow, and turn to the ſouth towards Ukrania, into the country of the Coſaques.

The Swediſh army, therefore, was ordered to march towards that ſide of the country, to the great aſtoniſhment of all the officers. Charles ſent orders to Lewenheup to bring his troops and proviſions, with all ſpeed, into Ukrania, where he deſigned to paſs the winter; that having ſecured that country to himſelf, he might conquer Moſcovy the next ſpring, and in the mean time he advanced towards the river Deſna, which falls into the Boriſthenes at Kiof. The obſtacles they had hitherto encountered in their march were trifles to thoſe they met with in this new road. They were obliged to croſs a foreſt full 50 leagues broad, which abounded in marſhes. General Lagercorn, who marched before with 5000 men and pioneers, led the army 30 leagues eaſtward out of the right way, and they had marched four days before the king diſcovered the miſtake; with difficulty they did get into the right road again, but left almoſt all their artillery and waggons behind, which were either ſtuck faſt, or quite ſunk in the mud.

They marched for twelve days in this painful and laborious manner, till they had ate up the little biſcuit that

that was left, and then they arrived, quite ſpent with hunger and wearineſs, upon the banks of the Deſna, in the place where Mazeppa, general of the Coſacks, had appointed to meet them; but inſtead of that prince they found a body of Moſcovites advancing towards them on the other ſide of the river.

The king was very much aſtoniſhed, but reſolved immediately to paſs the Deſna and attack the enemy. The banks of the river were ſo ſteep, that they were obliged to let the ſoldiers down with cords, and they croſſed it in the uſual manner, ſome by ſwimming, and others on floats haſtily made. The body of Moſcovites, which arrived at the ſame time, were not above 8000 men, ſo that they made but ſmall reſiſtance, and this obſtacle was alſo ſurmounted. Charles advanced farther into this wretched country, uncertain of his road and Mazeppa's fidelity. Mazeppa appeared at laſt, but rather as a fugitive than a powerful ally. The Moſcovites had diſcovered and prevented his deſign of joining the Swedes; they had fallen upon the Coſacks, and cut off many of them; his principal friends were taken, and thirty of them had been broke upon the wheel. His towns were laid in aſhes, his treaſures plundered, the proviſions he was preparing for the king of Sweden ſeized, and he was ſcarce able to eſcape himſelf with 6000 men, and ſome few horſes loaded with gold and ſilver. However, he gave the king hopes of ſupporting him by his intelligences in this unknown country, and the Coſacks, enraged againſt the Moſcovites, came in troops to the camp, and brought them proviſions. Charles hoped alſo that general Lewenheup would have come and repaired this ill fortune. He was to bring with him about 15,000 Swedes (more valuable than 100,000 Coſacks) with proviſions and ammunition; and he arrived at laſt, but almoſt in the ſame condition as Mazeppa.

Lewenheup had paſſed the Boriſthenes above Mohilow, and advanced about twenty leagues farther on the road to Ucrania, with 8000 waggons, and the money he had raiſed in Lithuania; but as he was upon his march near the place where the rivers Pronia and Soſſa join, and fall into the Boriſthenes, the czar appeared at the head of 50,000 men. The Swediſh general, who had not quite 16,000 men, reſolved not to intrench. Their many victories had inſpired the Swedes with ſo much confidence, that they never enquired after the number of the enemy, but only where they lay. Lewenheup therefore marched againſt them without heſitation on the 7th of October 1708, in the afternoon. Upon the firſt onſet they killed 1500 Moſcovites. The czar's army fell into confuſion, and fled on all ſides, and the emperor of Ruſſia was upon the point of ſeeing himſelf entirely defeated. He perceived that the ſafety of his dominions depended upon the action of that day, and that he was utterly undone, if Lewenheup joined the king of Sweden with a victorious army. As ſoon as he ſaw his troops begin to fall back, he ran to the rear-guard, where the Coſacks and Calmucks were poſted: "I charge you, ſays he, to fire upon every man that runs away, and even to kill me, if I ſhould be ſo cowardly as to turn my back." From thence he returned to the van-guard, rallied his troops in perſon, aſſiſted by prince Menzikof, and prince Gallicſin. Lewenheup, who had preſſing orders to join his maſter, choſe rather to continue his march than renew the fight, thinking he had done enough to diſcourage the enemy from purſuing him.

At eleven the next morning, the czar attacked him at the entrance of a moraſs, and drew out his army at length, that he might ſurround him. The Swedes faced about, and the fight laſted two hours with equal reſolution. The Moſcovites loſt three times as many men as the Swedes; but ſtill kept their ground. At four in the afternoon, general Baver brought the czar a ſupply of troops: the battle was then renewed for the third time, with more fury than ever, and laſted till night came on: at laſt, numbers carried it. The Swedes were broke, routed, and driven as far as to their baggage: Lewenheup rallied his troops behind his waggons, and though the Swedes were conquered they did not fly; they were about 9000, and not a ſingle man of them ran away; and the general drew them up as eaſily in order, as though they had never been beaten.

The czar, on the other ſide, paſſed the night under arms, and commanded his officers, under pain of being caſhiered, and his ſoldiers under pain of death, not to ſtir for plunder. The next morning at day-break, he ordered a freſh aſſault; Lewenheup having retired to an advantageous ground at ſome miles diſtance, after having nailed down part of his cannon, and ſet fire to his waggons.

The Moſcovites came time enough to hinder the whole convoy from being conſumed in the flames; they ſeized upon 6000 waggons, which they ſaved. The czar, who was deſirous of compleating the defeat of the Swedes, ſent general Flug to fall upon them again, the fifth time; and the general offered them an honourable capitulation. Lewenheup refuſed it, and the fifth battle was as bloody as any of the former: of the 9000 ſoldiers he had left, he loſt near half, and the other remained unbroken. At laſt, night coming on, Lewenheup, after having ſuſtained five battles againſt 50,000 men, ſwam over the Soſſa, followed by the 5000 men he had left alive, and the wounded were carried over on floats. The czar loſt about 20,000 Moſcovites in the five engagements, in which he had the glory of conquering the Swedes, and Lewenheup the reputation of diſputing the victory for three days, and of retreating without being broken at laſt. He then came to his maſter's camp with the honour of having made ſo good a defence, but brought with him neither ammunition nor army. King Staniſlaus would have been glad to have joined Charles at the ſame time; but the Muſcovites, who had defeated Lewenheup, lay in his way. The king of Sweden thus found himſelf without proviſions or communication with Poland, ſurrounded with enemies in the midſt of a country, where he had ſcarce any refuge but his courage.

In this extremity, the memorable winter of 1708, which was ſtill more terrible in thoſe frontiers of Europe, than it was in France, carried off part of his army. Charles reſolved to brave the ſeaſons as he had done his enemies, and ventured to make long marches with his troops, during the exceſſive ſeverity of the weather. It was in one of thoſe marches, that 2000 of his men were ſtarved to death almoſt before his eyes: the horſemen had no boots, and the foot had no ſhoes, and almoſt without cloaths: they were forced to make ſtockings of the ſkins of beaſts in the beſt manner they could; they often wanted bread: they were obliged to throw the beſt part of their cannon into quagmires and rivers for want of horſes to draw them; ſo that this once flouriſhing army was reduced to 24,000 men, ready to periſh with hunger; they neither received news from Sweden, nor were they able to ſend thither. In this condition, one ſingle officer complained: How, ſays the king, are you uneaſy, that you are ſo far from your wife? If you are a ſoldier, indeed, I will carry you to that diſtance, that you ſhall ſcarce hear from Sweden once in three years. A ſoldier grumbling, ventured to preſent him, in the preſence of the whole army, with a piece of bread that was black and mouldy, made of barley and oats, the only food they then had; nor had enough of this. The king received the piece of bread without the leaſt emotion, eat it entirely up, and then ſaid cooly to the ſoldier, "It is not good, but it may be eaten." This little turn, if any thing may be called little, that ſerves to encreaſe reſpect and confidence, contributed more than all the reſt to ſupport the Swediſh army under extremities, which would have been intolerable under any other general.

The czar, who was as active as the king of Sweden, after having ſent freſh forces into Poland to the aſſiſtance of the confederates united under general Smianſki againſt Staniſlaus, advanced very ſoon into Ucrania, in the midſt of this ſevere winter, to oppoſe the king of Sweden. He continued there with a view of weakening the enemy by ſmall engagements; for by this means, he thought the Swediſh army muſt be ruined entirely at laſt, as it could not be recruited, whilſt he was able to draw freſh forces every moment out of his own dominions. The cold there muſt have been exceſſive indeed, ſince it obliged the two enemies to agree upon a ſuſpenſion of arms. But upon the firſt of February, they began to engage again in the midſt of ice and ſnows: after ſeveral ſmall ſkirmiſhes, and ſome diſadvantages, the king's army was reduced in April to 18,000 Swedes. Mazeppa alone, the prince of the Coſacks, ſupplied them with the neceſſaries of life: without his aſſiſtance, the army

muſt have periſhed by hunger and hardſhips. The czar in this conjuncture, offered conditions to Mazeppa, to draw him again into his ſervice. But the Coſack continued faithful to his new ally, either through fear of the terrible puniſhment of the wheel, by which he had loſt his friends, or through a deſire of revenge. Charles, with his 18,000 Swedes and as many Coſacks, had not laid aſide the deſign or hopes of penetrating as far as Moſcow. Towards the end of May he went to lay ſiege to Pultowa, upon the river Vorkſlat, on the borders of Ucrania, about thirteen long leagues eaſt of the Boriſthenes, where the czar had a magazine. If the king took it, it would open him the road to Moſcow. And in the abundance he ſhould then poſſeſs, he could at leaſt wait for the coming up of the ſuccours he ſtill expected from Sweden, Livonia, Pomerania, and Poland. His ſole refuge being then in the conqueſt of Pultowa, he carried on the ſiege with vigour. Mazeppa, who had a correſpondence in the town, aſſured him he would ſoon be maſter of it; and hope began to revive in his army. His ſoldiers looked upon the taking of Pultowa, as the end of all their miſeries. The king perceived from the beginning of the ſiege, that he had taught his enemies the art of war. Prince Menzikof, notwithſtanding all his precautions, threw freſh troops into the town; and the garriſon, by this means, amounted to almoſt 10,000 men. The king continued the ſiege with ſtill more warmth; he carried the advanced works, gave two aſſaults to the body of the place, and took the courtine. The ſiege was in this condition, when the king, having rode into the river to take a nearer view of ſome works, received a ſhot from a carbine, which pierced through his boot, and ſhattered a bone of his heel. There was not the leaſt alteration obſerved in his countenance, by which it could be ſuſpected that he was wounded; he continued calmly to give orders, and remained near ſix hours on horſeback afterwards. One of his domeſtics, at laſt, perceiving that the ſole of his boot was bloody, made haſte to call the ſurgeons; and his pain then began to be ſo ſharp, that they were forced to take him off his horſe, and carry him into his tent. The ſurgeons looking upon the wound, obſerved, that it already began to mortify, and were of opinion that the leg muſt be cut off. The army was in the utmoſt conſternation; but one of the ſurgeons, named Newman, who was better ſkilled, and more courageous than the reſt, was poſitive, that by making deep inciſions he could ſave the king's leg. "Fall to work then preſently, ſaid the king, cut boldly, fear nothing." He held the leg himſelf with both his hands, looking upon the inciſions that were made, as though the operation had been performed upon another perſon. As they were laying on the dreſſing, he gave orders for an aſſault the next morning; but the orders were ſcarce given, before word was brought him, that the czar appeared with an army of above 70,000 men; he was therefore obliged to take another reſolution. Charles, wounded and incapable of acting, ſaw himſelf incloſed between the Boriſthenes, and the river which runs to Pultowa, in a deſart country, without any places of ſecurity, or ammunition, and expoſed to an army, which had prevented him either from retreating, or being ſupplied with proviſions. In this extremity he aſſembled no council of war as might have been expected; but, on the 7th of July, at night, he ſent for mareſchal Renchild into his tent, and ordered him without deliberation, and without uneaſineſs, to prepare to attack the czar the next morning. Renchild did not diſpute his maſter's will, but went out with a reſolution to obey him. At the door of the king's tent, he met count Piper, with whom he had long been at variance, as it often happens between the miniſter and the general. Piper aſked him if any thing new had happened? No, ſays the general, coldly, and paſſed on to give his orders. As ſoon as Piper was entered into the tent, "Has Renchild ſaid any thing to you?" ſays the king to him. "Nothing," anſwered Piper. "Well then, replies the king, I tell you, that to-morrow we ſhall give battle." Count Piper was aſtoniſhed at ſo deſperate a reſolution; but knew well, that his maſter could not be prevailed on to change his opinion; he only expreſſed his aſtoniſhment by his ſilence, and left the king to ſleep till break of day.

It was on the 8th of July 1709, that the deciſive battle of Pultowa was fought between the two moſt celebrated monarchs then in the world; Charles XII. illuſtrious by a courſe of nine years victories, and Peter Alexiowitz, by nine years of fatigue, ſpent in training up his troops to an equality with the Swedes; the one glorious for having given away others dominions, the other for having civilized his own; Charles in love with danger, and fighting only for glory; Alexiowitz not flying from danger, and making war only for intereſt: the Swediſh monarch, liberal through a greatneſs of ſoul, and the Moſcovite never generous but for ſome private end: the one ſober and continent beyond example, naturally brave, and never cruel but once; the other, having not yet worn off the roughneſs of his education, or the brutality of his country, as terrible to his ſubjects, as wonderful to ſtrangers, and much addicted to exceſs of pleaſures as ſhortened his days. Charles had the title of invincible, which one unhappy moment robbed him of; but the nations around had already given Peter Alexiowitz the name of Great, not for his victories, but for having poliſhed a ſavage nation.

To have a clear idea of this battle, and the place where it was fought, we muſt imagine Pultowa lying on the north, the camp of the king of Sweden on the ſouth, drawing a little towards the eaſt; his baggage about a mile behind him, and the river of Pultowa on the north of the town, running from eaſt to weſt.

The czar had paſſed the river about a league from Pultowa towards the weſt, and was beginning to form his camp. At day-break, the Swedes appeared out of their trenches with four cannon, being their whole artillery; the reſt were left in the camp with about 3000 men; and 4000 remained with the baggage. So that the Swediſh army, which marched againſt the enemy, conſiſted of about 25,000 men, whereof there were not above 12,000 regular troops.

The generals Renchild, Field, Lewenheup, Slippenback, Hoorn, Sparre, Hamilton, the prince of Wirtemberg, who was related to the king, and ſome others, had been eye-witneſſes of the battle of Narva; theſe put the ſubaltern officers in mind of that day, when 8000 Swedes had deſtroyed an army of 100,000 Ruſſians in their intrenchments: the officers ſaid the ſame thing to the ſoldiers, and all encouraged one another as they marched. The king conducted the march, carried in a litter, at the head of his foot. A party of horſe advanced by his order to attack that of the enemy: the battle began with this engagement at half an hour after four in the morning. The enemies horſe lay weſtward on the right of the Ruſſian camp; prince Menzikof and count Galowin had placed them at diſtances between redoubts fortified with cannon. General Slippenback, at the head of the Swedes, fell upon them: all who have ſerved in the Swediſh troops know that it was almoſt impoſſible to reſiſt the fury of their firſt ſhock: the Moſcovite ſquadrons were broken and routed; the czar himſelf ran to rally them, and his hat was ſhot through with a muſket ball; Menzikof had three horſes killed under him, and the Swedes cried out victory. Charles did not doubt but the battle was gained; he had diſpatched general Cruets about midnight with 5000 horſe or dragoons, who were to take the enemy in flank, whilſt he attacked them in front; but his misfortune was, that Cruets loſt his way, and did not appear. The czar, who began to deſpair, by this accident had time to rally his horſe, and fell upon the king's cavalry in his turn, which not being ſupported by Cruets's detachment, was broken, and Slippenback taken priſoner in the engagement. At the ſame time 72 cannons from the camp played upon the Swediſh horſe, and the Ruſſian foot advanced to attack the Swediſh infantry.

The czar, by a preſence of mind, and a penetration, which, in ſuch moments, belongs only to men that are truly great, immediately detached prince Menzikof to poſt himſelf between Pultowa and the Swedes: prince Menzikof executed his maſter's orders with dexterity and readineſs, and not only cut off the communication between the Swediſh army and the troops remaining in the camp before Pultowa, but meeting with a corps de reſerve of 3000, he ſurrounded them, and cut them to pieces.

In the mean time, the Moſcovite foot came out of their lines, and advanced in order into the plain. On the other ſide, the Swediſh horſe rallied within a quarter

of a league from the enemies army; and the king, aſſiſted by general Renchild, made a diſpoſition for a general engagement.

He ranged what troops were left him in two lines; his foot were poſted in the center, and his horſe made up the two wings. The czar diſpoſed his army in the ſame manner; he had the advantage of numbers, and of 72 cannon, whilſt the Swedes had no more than four, and began to want powder. The emperor of Ruſſia was in the center of his army, having then the title only of major-general, and ſeemed to ſerve under general Czeremetoff: but he went as emperor from rank to rank, mounted on a Turkiſh horſe, which was a preſent from the grand ſeignior, exhorting the officers and ſoldiers, and promiſing every one of them rewards. Charles did all he could to ſit his horſe, at the head of his troops; but finding the poſture too painful, he returned to his litter, holding his ſword in one hand, and a piſtol in the other. At nine in the morning the battle was renewed; one of the firſt diſcharges of the Moſcovite cannon carried off the two horſes of the king's litter; he cauſed two others to be put to it, and a ſecond volley broke the litter in pieces, and overturned the king. The troops which fought near him believed him killed. The Swedes, in a conſternation, loſt ground, and their powder failing, and the enemy's cannon continuing to play upon them, the firſt line fell back upon the ſecond, and the ſecond fled. In this laſt action, the Swediſh army was routed by a ſingle line of 10,000 men of the Moſcovite foot; ſo much were matters changed. The king, carried upon pikes by four grenadiers, covered with blood, and all over bruiſed by his fall, and ſcarce able to ſpeak, cried out, Swedes, Swedes! Anger and grief renewing his ſtrength, he tried to rally ſome of his regiment; but the Moſcovites cloſely purſued them with their ſwords, bayonets, and pikes. The prince of Wirtemberg, general Renchild, Hamilton and Stakelberg, were already taken priſoners, the camp before Pultowa forced, and all in confuſion, which did not admit of any remedy. Count Piper, with all the officers of the chancery, had quitted the camp, and neither knew what to do, or what was become of the king. They ran from one ſide of the plain to the other; major Bere offered to lead them to the baggage; but the clouds of duſt and ſmoak, which covered the field, and their own confuſion, carried them ſtrait to the counterſcarp of the town, where they were all taken priſoners by the garriſon. The king would not fly, and could not defend himſelf; general Poniatoſky chanced to be by him that inſtant; he was a colonel of the Swediſh guards of king Staniſlaus, and a perſon of uncommon merit, whom his attachment to the perſon of Charles had engaged to follow him into Ucrania, without any poſt in the army. He was one, who in all the occurrences of his life, and in dangers, where others at moſt would have only behaved with courage, ſhewed a command of underſtanding, which was ever attended with ſucceſs. He made a ſign to a young Swede, named Frederick, the king's firſt valet de chambre, and as intrepid as his maſter; they took the king under their arms, and, aſſiſted by a drabant who came up to them, mounted him on a horſe, notwithſtanding the exceſſive pains of his wound: Frederick got up behind his maſter, and ſupported him from time to time. Poniatoſky, though he had no command in the army, being made a general on this occaſion by neceſſity, drew up 500 horſe near the king's perſon, ſome of them drabans, others officers, and others private troopers. This body, reanimated by the misfortune of their prince, made their way through more than ten regiments of Moſcovites, and conducted Charles through the midſt of the enemy, the ſpace of a league, to the baggage of the Swediſh army. This ſurpriſing retreat was of great conſequence in ſuch diſtreſs; but the king was under a neceſſity of flying ſtill farther. They found amongſt the baggage count Piper's coach, for the king never had one ſince he left Stockholm. They put him into it, and made towards the Boriſthenes with all poſſible ſpeed. The king, who, from the time he was ſet on horſeback, till he came to the baggage, had never ſpoke one ſingle word, then aſked what was become of count Piper? They told him he was taken with all the officers of chancery: and general Renchild, and the prince of Wirtemberg? added the king. They are priſoners too, ſays Poniatoſky. Priſoners to Moſcovites! replies Charles, ſhrugging up his ſhoulders: come on then, let us rather go to the Turks? They did not obſerve, however, the leaſt alteration in his countenance, and whoever had then ſeen him, and not known his condition, would have never ſuſpected him to have been either conquered or wounded.

Whilſt he was getting off, the Moſcovites ſeized upon his artillery in the camp before Pultowa, his baggage, and the money he had raiſed for carrying on the war, where they found 6,000,000 of ſpecie, the ſpoils of Poland and Saxony. Near 9000 Swedes were killed in the battle, about 6000 were taken, 3000 or 4000 ran away, and were never heard of after. There ſtill remained near 18,000 men, comprehending the Coſacks, with the Swedes and Poles, who fled towards the Boriſthenes under the direction of general Lewenheup; he marched on one ſide with theſe fugitive troops, while the king took another road with ſome of his horſe. The coach, in which he rode, broke down in his march, and they ſet him again on horſeback; and to finiſh his misfortune, he rambled all night in a wood: there his courage not being able to ſupply any longer his exhauſted ſpirits, and the pains of his wound becoming more inſupportable by fatigue, and his horſe falling under him through exceſſive wearineſs, he reſted himſelf ſome hours at the foot of a tree, in danger of being ſurprized every moment by the conquerors, who ſought for him on all ſides. At laſt, on the 9th of July at night, he found himſelf upon the banks of the Boriſthenes, and Lewenheup juſt arrived with the remains of his army. The Swedes ſaw their king again, whom they judged to have been dead, with a joy mixed with ſorrow. The enemy drew nigh, and they had no bridge to paſs the river, nor time to make one, nor powder to defend themſelves againſt the enemy, who came upon them, nor proviſions to hinder the army from periſhing with hunger, who had eat nothing for a whole day; but what gave the Swedes the greateſt uneaſineſs was, the danger of their king. By good fortune there was ſtill left a ſorry calaſh, which by chance they had brought along with them; this they embarked in a little boat, and the king and general Mazeppa in another. The latter had ſaved ſeveral cheſts of money, but the current being very rapid, and a violent wind beginning to blow, the Coſack threw more than three parts of his treaſures into the river to lighten his boat.

Mullern, the king's chancellor, and count Poniatoſky, who was now more than ever neceſſary to the king, for his remarkable preſence of mind under difficulties, croſſed over in other barks with ſome of the officers; 300 troopers of the king's guard, and a very great number of Poles and Coſacks, relying upon the goodneſs of their horſes, ventured to paſs the river by ſwimming; their troops keeping cloſe together, reſiſted the current, and broke the waves; but all who attempted to croſs ſeparately a little below, were carried away by the ſtream, and ſunk into the river. Of all the foot who tried to paſs over, there was not one that got to the other ſide.

Whilſt the routed part of the army were in this extremity, prince Menzikof came up with 10,000 horſe, having each a foot-ſoldier behind him. The carcaſes of the Swedes that lay dead in the way, of their wounds, fatigue and hunger, ſufficiently pointed out to the prince the road which the body of the army had taken. The prince ſent a trumpet to the Swediſh general to offer him a capitulation; four general officers were preſently ſent by Lewenheup to receive the law of the conqueror. Before that day 16,000 ſoldiers of king Charles's would have attacked all the forces of the Ruſſian empire, and have periſhed to the laſt man rather than have ſurrendered; but after a battle loſt, and a flight of two days, not having their eyes any longer upon their prince, who was conſtrained to fly himſelf, the ſtrength of every ſoldier being ſpent, and their courage no longer ſupported by any hope, the love of life took place of intrepidity. They found themſelves obliged to ſubmit to the conquerors; but ſome of the ſoldiers, rather than fall into the hands of the Moſcovites, threw themſelves into the Boriſthenes, and the reſt were made priſoners. They all filed off in preſence of prince Menzicof, laying their arms at his feet, as 30,000 Moſcovites had done nine years before at the king

of

of Sweden's at Narva: but whereas the king then ſent back almoſt all the Moſcovite priſoners but the general officers, the czar retained all the Swedes that were taken at Pultowa, and ſent them into Siberia.

As to the king of Sweden's eſcape to Bender, in the territories of Turkey, and his conduct there and afterwards, theſe have been related in the hiſtory of Sweden.

The czar had no ſooner obtained the victory of Pultowa, than Auguſtus reaſcended the throne of Poland, his rival Staniſlaus and the Swediſh forces retiring into the territories of Sweden. The czar at the ſame time reſtored the duke of Courland, whom he married to his niece, the princeſs Anne, daughter of the late czar John, his elder brother, and compleated the conqueſt of Livonia; he alſo made himſelf maſter of Wiburg, and the territory of Kenholm in Finland. The czar, however, ſtill quartered great part of his army in Poland, though the Diet inſiſted on his withdrawing them, complaining that their country had been ravaged and plundered 12 years by foreign troops already, and deſired they might enjoy ſome reſt after ſo many calamities: that the Swedes were now reduced ſo low, that the Poles wanted no foreign aſſiſtance, and they could not underſtand what the czar intended by quartering his troops ſtill in Poland, unleſs he had a deſign upon their liberties: but they were, for a time, relieved from the outrages committed by the Ruſſian forces, by a rupture between the Ruſſians and the Turks; the king of Sweden having prevailed on the grand ſeignior to declare war againſt Ruſſia, the pretence for which was, that the Ruſſians had purſued the Swedes into the Turkiſh territories, and made priſoners of many of them there. The czar did not wait to be invaded by the Turks, but marched into Moldavia, being aſſured by a Tartarian prince, that the Moldavians and Tartars would join his army with a large body of troops on his appearance among them. He marched into Moldavia, therefore, before he had provided ſufficient magazines for the ſubſiſtence of his troops, relying on the Moldavians to furniſh him with proviſions; but whether the treaty between the czar and the Moldavians had been diſcovered by the Porte, or by what other accident it happened, the Moldavians did not join him as he expected. The Ruſſian army was deſtitute of proviſions, and being ſurrounded by the numerous forces of the Turks, were attacked three days ſucceſſively on the banks of the river Pruth, viz. on the 11th, 12th, and 13th days of July. The Ruſſians, though they defended themſelves very well, yet being deſtitute of all proviſions and neceſſaries, it was thought proper to hang out a white flag, and demand a treaty, which the vizir, who commanded the Turks, was not averſe to, if he could procure advantageous terms; and having ſufficiently tried the reſolution of the Ruſſians, whom he looked upon as deſperate men, he conſented to parly with them. The miniſters on both ſides, therefore, being met, the Turks inſiſted that the czar ſhould deliver up Aſoph, and all his forts on the Black Sea, and renounce all pretence to the navigation of it, which the czar conſented to; and thereby his favourite project of building a fleet of men of war at Woronets, to ſail on that ſea, and trade with the countries on the coaſt of the Euxine Sea, and perhaps diſpute the dominion of it with the grand ſeignior, proved abortive. But even upon theſe hard terms, it is preſumed, the vizir, who knew the Ruſſian army to be in a ſtarving condition, would not have ſuffered them to retire to their own country, if the czarina Katherine had not borrowed of the officers all the money they could raiſe, and made a preſent of it to the covetous vizir; whereupon the Ruſſians were permitted to march off unmoleſted, and were ſupplied with proviſions even by the Turks themſelves; but their numbers were ſo diminiſhed by ſickneſs or the ſword, that of 70,000 men, which entered Moldavia, ſcarce 40,000 remained alive. The king of Sweden arriving juſt as the Ruſſians were marching off, reproached the vizir with betraying his maſter, and offered with 20,000 men to attack the Ruſſians, and carry the czar priſoner to the grand ſeignior; but the vizir refuſed to violate the treaty he had made, and the czar returned to his dominions, quartering a body of his forces in Poland again, which the Poles proteſted againſt, deſiring he would withdraw them; but either under pretence of money due to him for his protection againſt the Swedes, or ſome other demands he had on the republick, the Ruſſians continued in Poland ſeveral years, where they raiſed what contributions they ſaw fit; and the war ſtill continuing between the Swedes and Ruſſians, the czar, with his ally the Dane, ſubdued the Swediſh Pomerania, anno 1713, and the year following defeated the Swediſh fleet in the gulph of Finland, and afterwards made himſelf maſter of almoſt the whole province of Finland, and proceeded to invade the provinces of Sweden on the weſt ſide of the Bothnick gulph, where he demoliſhed ſome of their iron and copper works, in which the gallies he had built were of great ſervice to him; this being a ſhallow ſea, in which he met with little oppoſition, as large ſhips of war could not enter it; but the king of Sweden returning from Turkey, put a ſtop to his incurſions on that ſide; and as he had now no other enemy, he applied himſelf again to the poliſhing of his ſubjects, and promoting arts and ſciences; but more particularly navigation and traffic.

In the year 1717, he made another journey to Holland, not incognito, as before, but as a ſovereign prince, and was received with all the honours due to his rank. From thence he viſited France, and made himſelf acquainted with every thing he thought worthy his attention: but his principal view being to improve his own people, he engaged the artiſts in all profeſſions in his ſervice, and by the ſalaries and rewards he offered them, prevailed with many of them to return with him to Ruſſia. Nor did he only introduce arts and ſciences among his people, but imitated the politeſt nations in their diverſions at his return. Before he arrived at Peterſburg, he received advice, that a conſpiracy had been formed to depoſe him, and ſet his only ſon the czarowitz upon the throne; to which, that prince, it is ſaid, was privy.

A great many of the conſpirators were put to death on the czar's return, and the czarowitz fled to the court of Vienna to avoid his father's reſentment: and, as his conſort was ſiſter to the then empreſs of Germany, it was given out that the court of Vienna had obtained his pardon; but however that might be, when the czarowitz returned to Ruſſia, he was apprehended and impriſoned; and being tried by a court of officers of his father's appointing, condemned to die: however, the ſentence was not executed, the prince dying a natural death in priſon. The king of Sweden being now returned to his dominions, and invading the Daniſh territories, the czar, to make a diverſion in favour of his old ally the Dane, was preparing to invade Sweden again, when he heard that king Charles was killed in the trenches before Frederickſhall in Norway, and that his youngeſt ſiſter the princeſs Ulrica Eleanora had ſucceeded him in that throne; who deſiring to live at peace with the czar, a treaty was ſet on foot in the iſland of Aland, anno 1718, between the two nations, which being abruptly broke off, the czar invaded Sweden again the year following, and deſtroyed ſome of their moſt conſiderable copper and iron works, which obliged the Swedes to ſubmit to the terms he offered them, anno 1721; namely, that the Swedes ſhould confirm to him the provinces of Livonia, Ingria, and Carelia, and the eaſtern provinces of Finland: and this year it was that the czar aſſumed the title of emperor of all the Ruſſias.

The Perſians being at this time engaged in a civil war, having lately depoſed ſultan Hoſſein, their ſovereign; the czar aſſembled an army of 30,000 men at Aſtracan, and invaded the provinces on the weſt of the Caſpian Sea; having publiſhed a manifeſto, declaring, that it was not with any ambitious views of enlarging his dominions, that brought him to the frontiers of Perſia, but to reſcue their king out of the hands of his rebellious ſubjects; and being arrived with his army near Derbent, a difficult paſs on the coaſt of the Caſpian Sea, and eſteemed the gate of Perſia from Ruſſia, the governor and inhabitants agreed to ſurrender that city to the czar upon the firſt ſummons; whereupon, the czar having confirmed the governor in that office, and left a garriſon of 2000 men in the citadel, returned to Aſtracan.

The following year, 1723, the Ruſſians aſſembled an army near Derbent, and the whole province of Ghilan ſubmitted to them as ſoon as they took the field; and ſoon after the Ruſſian troops marched into the province of Shirvan, and took the port-town of Baku: prince Thomas, ſon of the late ſultan Hoſſein, having made his eſcape

eſcape from the uſurpers at Iſpahan, and aſſembled ſome forces in the north of Perſia, ſent a miniſter to Peterſburg to deſire the czar's protection, and a treaty was concluded on the 23d of September, 1723, wherein the czar promiſed his aſſiſtance to prince Thomas againſt the rebels; and the prince, on the other hand, ceded the provinces of Ghilan, Shirvan, Mazenderan, and Aſtrabad, to Ruſſia. There was ſoon after a treaty concluded between the Turks and Ruſſians, guaranteeing to each other the ſeveral provinces they had poſſeſſed themſelves of on the frontiers of Perſia: in which they declare, that if prince Thomas ſhould refuſe his conſent to this treaty, they would keep them by force, but yield up the reſt of the kingdom to prince Thomas, or any other prince, who ſhould be deemed heir to the throne of Perſia, and afford their aſſiſtance againſt the uſurpers.

In the mean time, the czar cauſed the czarina to be proclaimed his ſucceſſor, and crowned; and the nobility and officers of ſtate took the oaths of allegiance to her: ſoon after which he fell ſick, and died on the 8th of February, 1724-5, in the 53d year of his age. Whereupon the ſenate proclaimed the czarina Katherine, empreſs of all the Ruſſia's, and renewed their oaths of allegiance to her, who was about 35 years of age at her acceſſion.

The czarina applied herſelf immediately to perfect what the late czar had begun; encouraging all arts and ſciences, and inviting learned foreigners and artificers, by offering them large revenues, to ſettle in the Ruſſian dominions; and obliging her ſubjects to ſend their ſons and dependants abroad, to qualify themſelves in every ſcience. We had, and have ſtill, ſeveral of them in England: but wherever they travel, the court of Ruſſia takes an account of them; they are all regiſtered, and never remove from one kingdom to another for improvement, without the leave of the Ruſſian miniſter, (who reſides in the kingdom to which they are deſtined,) and return home whenever they are commanded.

The czarina Katherine applying herſelf to the encreaſing and diſciplining her forces both by ſea and land, at the beginning of her reign, gave the king of Denmark ſome apprehenſions, that theſe preparations were intended againſt his kingdom, as he had lately ſeized upon the territories of the duke of Holſtein, her ſon-in-law, which lie in Sleſwick; whereupon that prince applied himſelf to the Britiſh court, to ſend a ſquadron of men of war to his aſſiſtance; and a fleet was accordingly ſent into the Baltic, under the command of Sir Charles Wager, and a letter ſent to the czarina at the ſame time, to juſtify this meaſure, wherein his then majeſty obſerves, that the warlike preparations ſhe was making both by ſea and land, had alarmed him and his allies, and that he had ſent his fleet into the Baltic, to obviate the dangers which might ariſe from ſuch an extraordinary armament, eſpecially as he was informed, that meaſures were taking at the Ruſſian court in favour of the pretender to his crown. He had given orders, therefore, to his admiral, to prevent her Imperial majeſty's fleet from coming out.

The czarina, in her anſwer to this letter, declared, That ſhe had never entertained a thought of diſturbing the Britiſh nation, by eſpouſing the intereſt of the pretender, and was ſo far from having any hoſtile intentions againſt Britain, that ſhe had ordered her port-towns in Livonia to furniſh the Britiſh fleet with all manner of proviſions.

There is no doubt but the Britiſh fleet had other reaſons for viſiting the Baltic, than the preventing the Ruſſian invaſion of England in favour of the pretender. If they had intended it, ſo weak a naval power, and ſo diſtant from our ſhores as Ruſſia lies, could never have expected any ſucceſs in ſuch an enterprize: nor can it be imagined, what motives they ſhould have to attempt it, while our traffic with them was more beneficial to them than that of any other nation: the true reaſon, therefore, of ſending the Britiſh fleet to the Baltic, is ſuppoſed to have been to protect the Danes and Swedes. The Danes had ſold Bremen and Ferden to Hanover, and Britain had guaranteed their poſſeſſion of Sleſwick, the property of the duke of Holſtein; and the Swedes, in their diſtreſs, offered to confirm Bremen and Ferden to Hanover, on condition that the Engliſh fleet protected the reſt of the Swediſh dominions; which were ſubſtantial reaſons for ſending Sir Charles Wager into the Baltic, but not proper to be owned at that time; and, therefore, ſome other plauſible pretence for it was to be given out, and nothing could be more popular than the defending the nation againſt the pretender. We never failed to be threatened with him, when the people were diſpoſed to grumble at the exceſſive charge they were put to in ſuch expeditions; the oppoſing the pretender ſilenced every complaint; he was of excellent uſe when a ſum of money was wanting. The Ruſſians making great preparations by ſea for ſome expedition the next year, another Britiſh fleet was ſent into the Baltic, commanded by Sir John Norris, but the czarina falling ſick, no attempt was made either on the Daniſh or Swediſh coaſts, and our fleet returned to England. The czarina apprehending ſhe ſhould not live long, appointed prince Peter, the ſon of the czarowitz, and grandſon of the emperor Peter the Great, to ſucceed her, and died on the 17th of May, 1727, in the 39th year of her age. Peter II. at his acceſſion, was in the 12th year of his age, being born on the 22d of October, in the year 1715. He was immediately proclaimed emperor on the death of the late empreſs, in which proclamation it is ſhewn, that he had a right to the Ruſſian throne by hereditary deſcent, as well as by the appointment of the late emperor and empreſs. The mother of this emperor, Peter II. was the princeſs Charlotta Chriſtiana Sophia, of Brunſwick Wolfenbuttle, ſiſter to the conſort of the late emperor of Germany, Charles VI. It was by the particular direction of Peter the Great, that the late czarina appointed Peter to ſucceed her, for otherwiſe ſhe would have transferred the empire to one of the princeſſes her daughters, of which ſhe left two, viz. Anna Petrowna, then 19 years of age, married to Charles Frederick, duke of Holſtein Gottorp, and Elizabeth Petrowna, 13 years of age, and unmarried.

Prince Menzikof, who was prime miniſter of Ruſſia at the death of the empreſs, attempted to prevail on the young emperor to eſpouſe his eldeſt daughter, at which the nobility of Ruſſia were ſo incenſed, that they reſolved on ruining him, and cauſed him to be brought to trial, wherein he was charged with being the cauſe of the death of the late czarowitz, his Imperial majeſty's father, with cauſing the firſt conſort of Peter the Great to be continued in priſon, and with embezzling the public revenues, with cauſing ſeveral great men to be deprived of their honours and eſtates, and with a boundleſs ambition, as appeared in his deſign of marrying his daughter to the emperor; for all which he was ſentenced to be baniſhed to Siberia, and his great eſtate confiſcated.

The relations of the young emperor next proceeded to give the late czarina, the firſt conſort of the emperor Peter the Great, her liberty, and reverſe the ſentence of her divorce. They alſo repealed a law made by Peter the Great, which ſubverted the right of primogeniture, and the natural order of ſucceſſion in the Imperial family, and the reſt of the Ruſſian families, and made void the proceſs againſt the late czarowitz, the preſent emperor's father, and reſtored the noblemen who had been baniſhed to Siberia, under the adminiſtration of prince Menzikof: and having concluded a peace both with Sweden and Denmark, they proceeded to the coronation of the czar at Moſcow, on the 7th of March, 1727-8.

Prince Dolgoruki ſucceeding Menzikof in the poſt of prime miniſter, appeared to have no leſs ambition than his predeceſſor, contriving to get his eldeſt daughter eſpouſed to the preſent emperor, and was congratulated thereupon, and their nuptials appointed to be celebrated; but the czar died of the ſmall-pox, on the 29th of January, 1729-30, three days before the marriage was to have been ſolemnized; whereupon the ſenate, and great officers of the crown, cauſed the princeſs Anne, ducheſs dowager of Courland, to be proclaimed empreſs. She was the ſecond daughter of the late czar John, elder brother of Peter the Great; Katherine, her eldeſt ſiſter, having been married to Charles duke of Mecklenburg.

The court reſiding at Moſcow on the death of the czar, prince Dolgoruki, and three others, were appointed to attend the empreſs Anne, and convoy her to Moſcow. Theſe gentlemen arriving at Mittau, the capital of Courland, congratulated her ſucceſſion; but inſiſted on limiting the prerogatives of the crown, and

veſting part of the legiſlative authority in the ſtates, which ſhe conſented to, and ſigned the capitulation they had provided for her, the principal articles of which were, that ſhe ſhould not make peace or war, or raiſe taxes, without the concurrence of the ſtates; that ſhe ſhould not marry, appoint a ſucceſſor, or diſpoſe of any conſiderable office, without the like aſſent. But the czarina appeared to have ſo many friends on her arrival at Moſcow, that the nobility and great officers attended her with an addreſs, declaring, that monarchical government was moſt agreeable to the Ruſſians, deſiring that her Imperial majeſty would accept of the ſovereignty entire, and with the ſame authority it was enjoyed by her predeceſſors; and the articles ſhe had ſigned at Mittau were thereupon cancelled, and both the clergy and laity took the oaths to her majeſty in as abſolute terms as they had done to Peter the Great, without either reſerves or limitations.

Prince Dolgoruki, his ſon, and ſeveral of their relations and friends, were ſoon after baniſhed, and their eſtates confiſcated, being principally concerned, it is ſuppoſed, in putting limitations on the prerogative, as mentioned above; but the declaration publiſhed on this occaſion, charges Dolgoruki and his ſon with behaving inſolently to the late czar Peter II. and endeavouring to marry him to Dolgoruki's daughter, and with embezzling the public treaſure.

Auguſtus II. king of Poland, dying in February 1733, N. S. the empreſs of Ruſſia, and the emperor of Germany, by their joint intereſt, cauſed the elector of Saxony, his ſon, to be advanced to the throne of Poland, though Staniſlaus, father-in-law to the French king, became a candidate for that crown, and was ſupported by all the power of France; at which Lewis was ſo incenſed, that entering into a confederacy with Spain and Sardinia, he invaded the German emperor's dominions both in Italy and Germany, expelled the Auſtrians from all their Italian dominions, and took Philipſburg upon the Rhine, though the czarina ſent 30,000 of her troops as far as the Rhine, anno 1735, to the aſſiſtance of the Germans; but a peace being concluded, the dominions of the Auſtrians were reſtored, both in Germany and Italy, except Naples and Sicily, which were yielded to don Carlos, the king of Spain's eldeſt ſon, by the princeſs of Parma. This war with France and Spain was no ſooner ended, but a rupture happened with the Turks, anno 1736, in which the Ruſſians and Auſtrians were confederates, and the Ruſſians were very ſucceſsful the two firſt campaigns on their ſide, over-running both Crim and Little Tartary; but the Auſtrian army being almoſt deſtroyed by a peſtilential fever, the emperor made a ſeparate peace, and the Ruſſians were obliged to relinquiſh all the places they had taken in this war.

Nadir Sha, or Kouli Khan, as he is uſually called, becoming very powerful, and recovering all the places the Turks had taken on the frontiers of Perſia, the czarina, without waiting to be attacked, reſigned all the provinces Peter the Great had poſſeſſed himſelf of in Perſia, on the weſt of the Caſpian Sea, about the ſame time (1738.)

The empreſs Anne died on the 28th of October 1740, having nominated for her ſucceſſor prince John, an infant, ſix months old, ſon of Anthony Ulrick, duke of Brunſwick Wolfenbuttle, and of Anne his wife, daughter of Charles, duke of Mecklenburg, and of the princeſs Katherine, eldeſt daughter of the late czar John: and during the minority of the infant emperor, ſhe appointed her favourite, count Biron, duke of Courland, to be regent; the mother of the young emperor, the princeſs Anne of Mecklenburg, looking upon herſelf much better entitled to the regency, and even to the throne itſelf, as her ſon could have no title to the Ruſſian throne but by her, ſhe ordered count Munich to take the duke of Courland priſoner, and cauſing him to be tried for high treaſon, he was condemned to die; but his ſentence was afterwards changed to a Siberian baniſhment, and ſhe aſſumed the regency herſelf, in which change at court the general, count Munich, being moſt inſtrumental, was mightily careſſed by the princeſs at firſt; but ſhe ſoon removed him from all his poſts, for what reaſon does not appear, though it is probable the regent might imagine he aſſumed too great a ſhare in the adminiſtration; however, the diſplacing this great man contributed, no doubt, to her own ruin. While the ſoldiery were under his command, ſhe had not much to fear from them, but he was no ſooner diſplaced, than they began to cabal in favour of the princeſs Elizabeth, the youngeſt daughter of Peter the Great, by his laſt conſort the empreſs Katherine; and on the 5th of December 1741, all the aveſues to the palace, and the chief poſts in the city, were ſeized by the guards, who, with the friends of the princeſs, aſſembling in the palace, proclaimed her empreſs of Ruſſia. The late regent and her conſort, the duke of Brunſwick, and their infant ſon, were made priſoners, as were alſo count Munich, and Oſterman, the chancellor. The Dolgorukis, the duke of Courland, and other ſtate priſoners, were recalled from Siberia, and their ſentences revoked. In the mean time count Oſterman, Munich, and ſeveral more, that were not thought well affected to the preſent government, were tried for high treaſon, and condemned to die; but when they had been brought to the ſcaffold, and prepared for their execution, it was declared, that the reigning empreſs had changed their ſentence into that of baniſhment.

It was reſolved at firſt, that the late regent, the princeſs Anne, ſhould be ſent, with her conſort and her ſon, to Germany; but upon ſecond thoughts it was judged more politic to keep the royal family in their power, to prevent rivals attempting any change in the government; and though they were on their journey to Germany, they were ordered to be ſtopped, and detained priſoners at Riga; and when the Auſtrian and Pruſſian miniſters interceded for their liberty, the czarina anſwered, That ſhe had given directions that the family of the late regent ſhould be treated agreeable to their rank, and ſhe ſhould convince the world of the regard ſhe had for them.

As the duke of Holſtein, who was deſcended from her eldeſt ſiſter, might be put upon inſiſting on his right to the Ruſſian throne, ſhe invited him to reſide in her court, and adopted him her heir, and cauſed him to profeſs himſelf of the Greek church, without which he could not ſucceed to that empire; and thus having all the royal family in her power that could make any pretenſions to the Ruſſian throne, her empire ſeemed pretty well eſtabliſhed.

The war with Sweden ſtill continuing, general Lacy was ſent to command the army in Finland, anno 1742, who having blocked up the Swediſh forces in Helſing fort, would grant them no better terms than that they might embark for Sweden with part of their baggage, but that their artillery and magazines ſhould be delivered up to the Ruſſians; and the whole province of Finland was reduced under the dominion of Ruſſia that campaign.

The Swedes, in hopes of obtaining better terms from the czarina, had made choice of her nephew, the duke of Holſtein, to ſucceed to that crown; but he having profeſſed himſelf of the Greek communion, had rendered himſelf incapable of it; for it is one of the fundamental laws of Sweden, that their ſovereign muſt be of the Lutheran perſuaſion. And indeed, the crown of Sweden was ſcarce worth the accepting, after it was made entirely dependent on the ſtates, and the poſſeſſor obliged to acknowledge the people his ſovereign.

In the mean time, the czarina having adopted the duke of Holſtein her heir, cauſed him to be ſtiled grand duke of Ruſſia, and married him to the princeſs Katherina Alexowna, the daughter of Chriſtian Auguſtus, prince of Anhalt-Zerbſt, who bore him a ſon that was chriſtened by the name of Peter, and afterwards became the unfortunate Peter III. who, for ſome unpopular attempts to make innovations, fell a martyr to political factions.

By a treaty concluded between Ruſſia and Sweden, the czarina inſiſted on retaining that part of Finland, which lies eaſt of the river Kymen, and the lakes to the northward of it; but reſtored all the reſt of Finland to the crown of Sweden, in which ſtate it remains at this day.

By a treaty between his Britiſh majeſty and the czarina, entered into the 12th of June, 1747, her Imperial majeſty agreed, that during the war between Great Britain and France, in conſideration of a ſubſidy to be paid her, ſhe would keep on the frontiers of Livonia, next to Lithuania, a body of 50,000 foot, and 40 or 50 gallies upon the ſame coaſt, to act wherever his Britiſh majeſty

ſhould require, and in ſuch places, as his majeſty and his allies ſhould think proper.

Signed, HYNDFORD,
C. R. BESTUCHEF,
WORONZOW.

Of which ſubſidy 100,000 pounds were paid down at the ratification of the treaty.

Sir Charles Hanbury Williams, the Britiſh miniſter at Dreſden, thereupon demanding a paſſage for the Ruſſian troops through Poland, in the beginning of the year 1748, his Poliſh majeſty anſwered, that this did not depend on him; and as there was no diet ſitting, he could determine nothing in relation to this affair. However, the Ruſſians began their march through Poland, in April, 1748, at which the French being alarmed, preliminary articles of peace were ſigned ſoon after, and a convention was entered into between Great Britain, France, and the States-general, with reſpect to thoſe troops, of the following tenor, viz.

We, the underwritten miniſters plenipotentiary of his Britannic majeſty, his moſt Chriſtian majeſty, and the lords, the ſtates-general of the United Provinces, at the conferences at Aix-la-Chapelle, have agreed, that in order the more ſpeedily to reſtore a general pacification, and to give reciprocal proofs of the ſincere deſire their Britannic and moſt Chriſtian majeſties, and the lords the ſtates-general have to execute the preliminaries of the 30th of April laſt; his Britannic majeſty, and the States-general, immediately after the ſignature of the convention, ſhall ſend orders to the auxiliary corps of 37,000 Ruſſians in pay, and actually in march through Germany towards the Low-Countries, to return immediately towards Ruſſia; and that the ſaid corps of Ruſſian troops ſhall return thither as ſoon as poſſibly they can, according to the conditions of the treaty concluded and ſigned at Peterſburg, the 19th of November laſt, betwixt his Britannic majeſty and the States-general on the one ſide, and her Imperial majeſty of all the Ruſſia's on the other; and that it ſhall not be permitted to the ſaid Ruſſian troops, upon any pretext, to march any further towards the Low-Countries: and that his moſt Chriſtian majeſty, immediately after the ſignature of this convention, ſhall ſend into the interior parts of France, a like number of regular troops, now in the Low-Countries, as well infantry as horſe and dragoons, of which a liſt ſhall be given at the ſame time to the miniſters plenipotentiary of his Britannic majeſty, and the States-general at Aix-la-Chapelle; which troops, or a like number, his moſt Chriſtian majeſty ſhall reform in a month after he knows, in an authentic manner, of the actual departure of the ſaid body of Ruſſian troops towards Ruſſia; and his ſaid moſt Chriſtian majeſty ſhall communicate to his Britannic majeſty and the States-general this reform within a month. His Britannic majeſty and the ſtates-general of the United Provinces engage, moreover, that the ſaid auxiliaries ſhall not be employed in the ſervice of any other power, while they are in their pay; and that in caſe they cannot return home to their own country before the firſt year for which they are engaged, and during which, according to treaty, they are ſtill to remain in their pay and ſervice; it is expreſsly ſtipulated, that they may not be employed under any pretext whatſoever, either againſt his moſt Chriſtian majeſty or his allies, after the reform abovementioned is made and executed in the troops paid by his ſaid moſt Chriſtian majeſty. In witneſs whereof, &c.

Signed,

SANDWICH, F. H. WASSENAER,
ST. SEVERIND ARRAGON, G. HASSELAER,
W. BENTINCK, W. BORSELLE.

In purſuance of this convention, the Ruſſian troops were ordered to halt in Germany, and ſoon after to march back again into their own country: but it ſeems to have been a very great overſight on the part of the allies, that the Ruſſians were not permitted to join the confederate army, and remain in the Netherlands, until the French had executed their part of the treaty; as nothing but downright force could ever induce that people to execute their treaties according to the true meaning of the articles, and we had tamely ſubmitted to give hoſtages for the performance of our part, without inſiſting on hoſtages from them. This was ſurely the moſt inglorious tranſaction that ever Britain could be upbraided with ſince it was a nation.

Many political, and ſome private reaſons determined the empreſs Elizabeth to take part with the houſe of Auſtria, againſt the king of Pruſſia, in the year 1756. Her arms alone gave a turn to the war, and her conqueſts were ſuch as portended the entire deſtruction of the Pruſſian power, which was ſaved only by her critical death, Jan. 5, 1762. When ſhe was ſucceeded by Peter III. grand prince of Ruſſia, and duke of Holſtein Gottorp. This prince was a great admirer of the king of Pruſſia, which was diſpleaſing to his people in general; he had many diſagreeable peculiarities, and, what was worſt of all, aimed at innovation, which even Peter the Great durſt not attempt. Hence a conſpiracy was formed againſt him; ſo that he ſcarce knew an interval between the loſs of his crown and life. He was ſucceeded by his wife, who was the principal in the conſpiracy, and who now reigns by the title of Catherine II. The moſt remarkable domeſtic occurrence of her reign was the death of prince Iwan, who loſt his life in an ill-concerted conſpiracy which had been entered into by ſome officers in order to advance him to the throne; and the moſt particular public tranſaction was the late war with the Ottoman Porte, of which we have given a relation in the hiſtory of Turkey, in the firſt volume of this work. The part this empreſs took in the diſmemberment of Poland, will, of courſe, be related in the ſucceeding chapter.

CHAP.

CHAP. VIII.

POLAND.

IN order to give a proper idea of what Poland was, and what it is, we muſt neceſſarily trace what it was anciently, what it hath recently been before the late diſmemberment, and then by a recapitulation of hiſtorical events delineate, to what it is now reduced by inteſtine broils, and the interpoſition of three formidable neighbouring powers, who have alienated ſome of its moſt valuable provinces and diſtricts, unpeopled a great part, and impoveriſhed the whole country.

Before the late diſmemberments Poland was a very conſiderable country, extending about 700 miles in length, and 680 in breadth; the ſituation being between 46 and 57 deg. north lat. and 16 and 34 deg. eaſt long. and the boundaries, Livonia, part of Ruſſia, and the Baltic Sea, to the north; another part of Ruſſia to the eaſt; Hungary, Turkey, and Little Tartary, to the ſouth; and Germany to the weſt.

SECT. I.

Natural Hiſtory of Poland.

THE very name of Poland ſeems connected with its natural hiſtory, as it is derived from Polu, a Sclavonian word, implying a country proper for hunting.

From its ſituation the climate is rather temperate, and the air not exceſſive cold; yet ſometimes the lakes and rivers are frozen ſo, that coaches and carts paſs over them for five or ſix months together. The ſoil alſo is generally fertile, fit for tillage and paſture, and produces a vaſt quantity of corn and cattle, even enough to feed the populous nation of Holland, who yearly ſend vaſt fleets to Dantzick to buy the corn and oxen ſent down thither from the ſeveral parts of Poland. Lithuania in particular produces

Honey,	Salt,
Wax,	Woad,
Hemp,	Salt-petre,
Flax,	Vitriol,
Leather,	and
Pot-aſhes,	Quickſilver.

With theſe ſtaple commodities they purchaſe thoſe of other nations, viz.

Wines,	Martens,
Cloths,	Tin,
Stuffs,	Steel,
Wrought ſilks,	Iron ware,
Tapeſtry,	Brandy,
Jewels,	and
Sables,	Spices.

The country of Poland, in general, produces alſo all kinds of fruits and herbs, and a good breed of horſes. There are vines in many places, whoſe grapes are grateful to the taſte, eſpecially if the ſummer and harveſt be favourable; but the wine is generally very ſharp, when drawn off. In the mountains there are mines of lead, ſilver, copper, and iron; but the moſt conſiderable of all are the ſalt-mines in Leſſer Poland, which are the chief riches of the country, and bring moſt money into the exchequer: they work in thoſe mines as the colliers do in our coal-pits. The ſalt is generally of a blueiſh colour, but ſome of it white and tranſparent. They have alſo ſome veins of ſal-gemmæ. The woods are well ſtored with hares, rabbits, ſquirrels, deer, foxes, bears, wolves, and boars. The Maſovian foreſts have plenty of elks, wild aſſes, wild oxen, called uri, and buffaloes, whoſe fleſh, when ſalted, the Poles eſteem a great dainty. In the Ucrain there are wild horſes alſo, whoſe fleſh is equally eſteemed by the nobility. The wolf, reſembling a hart, or the European lynx, called lupus cervarius, and by the natives ris, with ſpots on its belly and legs, affords the beſt furs in Poland. The quails in Podolia have green legs: it is ſaid their fleſh is unwholeſome, and, if immoderately eaten, breeds the cramp.

It is a plain flat country, rather inclining to marſh lands, ſo that no conſiderable woods or mountains are found here, except thoſe that make the frontier to Hungary, which is a craggy ridge of 300 miles in length, and called the Crapach, or Carpathian mountains. The eaſtern part of the country, indeed, is full of woods, foreſts, lakes, marſhes, and rivers, which afford a delightful proſpect to that part of it which is open. As for its rivers, the moſt conſiderable are the Viſtula, the Niemen or Cronus, the Nieper or Boryſthenes, the Nieſter or Tyras, and the Bog or Vegus; and the only lake worthy of obſervation is, the great lake Gopto, or the White Lake, which, it is affirmed, will dye thoſe who bathe in it of a ſwarthy complexion.

One of the moſt ſingular productions of Poland is manna, of which it may not be improper here to give an account.

Manna then, according to natural hiſtorians, is a kind of gum, which flows ſpontaneouſly from ſeveral ſorts of trees, and afterwards congeals into grumes in the form of an eſſential ſalt; it not only proceeds from the aſh and quicken-tree, but alſo from the larix, pine, fir, oak, juniper, maple, olive, fig-tree, &c. It flows in July and Auguſt, from about the nervous fibres of the leaves, which being dried in the air concrete into whitiſh grains of the ſize of wheat; inſomuch that in Auguſt the greater leaves of the aſh-tree look white, as if they were covered with ſnow; however, this is very ſcarce, on account of the difficulty of gathering it. The virtue of manna is well known, it being a mild laxative purge, and is thought to diſſolve groſs humours, and to abate their acrimony; whence it is good in catarrhs and coughs, proceeding from an acrid phlegm. It is alſo good in diſorders of the breaſt and lungs, when ſtuffed with clammy humours. It is uſed in the pleuriſy, inflammation of the lungs, and tenſion of the belly, from a thick hot bile.

SECT. II.

The geographical Deſcription of Poland.

THIS country, conſidered in its moſt extenſive light, is divided into the 12 following grand diviſions:

1. Poland, properly ſo called.	7. Polachia.
2. Poliſh Pruſſia.	8. Poleſia.
3. Lithuania.	9. Red Ruſſia.
4. Samogitia.	10. Podolia.
5. Courland.	11. Volhinia.
6. Warſovia.	12. Ucrania.

Moſt of theſe provinces are divided into diſtricts, called palatinates; and the latter are again ſubdivided into ſtaroſties, or bailiwicks.

I. PO-

I. POLAND, *properly ſo called.*

POLAND, properly ſo called, is divided into

Upper, or Little Poland, and
Lower, or Great Poland.

UPPER *or* LITTLE POLAND.

UPPER, or Little Poland, hath Great Poland and Warſovia on the north, Hungary on the ſouth, Red Ruſſia on the eaſt, and Sileſia on the weſt, extending, from eaſt to weſt, about 200, and from north to ſouth, about 120 miles. It contains many woods, but is fertile in ſome places, and in general well watered. There is but one mountain in Little Poland, and that is abſurdly called Mons Calvus, or Bald Mountain, though on the ſummit of it there is a monaſtery.

Little Poland is divided into

The palatinates of { Cracow, Sendomir, and Lublin.

And theſe three palatinates form together the dioceſe of Cracow, which contains 1018 churches, including 11, which are collegiate.

The palatinate of Cracow has Sileſia on the weſt, the palatinate of Sendomir on the eaſt, Hungary on the ſouth, and Siradin on the north. There is a ſort of manna in this country, which they gather in May and June, ſweep it off the graſs with ſieves, together with the dew, and make ſeveral diſhes of it. This palatinate contains, beſides four diſtricts, three duchies, and one county. The four diſtricts are, 1. Cracovia, ſubdivided into Xianzen and Proſſovia. 2. Lelovia. 3. Briecz. 4. Sandecz. The three duchies are Oſwieczin, Zalor, and Severia, which are part of Sileſia: and the county is that of Scepaz, which belongs to Hungary, and contains 13 towns.

Cracow, or Cracovia, the metropolis of this palatinate, and of the kingdom of Poland, is ſeated on a rocky bank of the river Viſtula, about the middle of the palatinate, 36 miles eaſt from the confines of Sileſia, 40 eaſt from Germany, 44 north from the confines of Upper Hungary, and 680 north-weſt from Conſtantinople. It had its name, as is ſuppoſed, from one Cracus, or Gracchus, a perſon of great reputation, and, as the Bohemians boaſt, one of their princes, whom the Polanders intreated to take upon him the government, after they were weary of the twelve waywodes that ſucceeded king Lechus I. but others make it the Cortodunum of Ptolemy. It is very populous, and the largeſt and beſt built of any town in Poland, the houſes being of free-ſtone, four or five ſtories high, and covered with boards cut in the form of tiles. The public buildings are magnificent; among which are the cathedral of St. Staniſlaus, the church of St. Mary in the grand place, ſurrounded with four rows of very fine buildings, with 50 other churches, and 17 religious houſes in the caſtle, city, and ſuburbs, together with the noble, well-built monaſteries of the Jeſuits and Dominicans. There were 32 proteſtant temples here formerly, as they were then called; but they are all demoliſhed. The only remaining places of worſhip, differing from the ſtate, are two Greek churches, and a Jewiſh ſynagogue. There was a magnificent palace of the king of Poland, which, with an ineſtimable collection of pictures and books, antiquities and rarities, were all conſumed in the late war, by an accidental fire; and was one of the greateſt loſſes which Poland had ſuſtained for ſeveral ages. This city was made the ſee of an archbiſhop, at the firſt planting of chriſtianity here, in the year 964, but about 100 years after, upon ſome difference with the pope, it was reduced to be epiſcopal, and made ſuffragan to Gneſna; yet the biſhops have ſtill the title of archbiſhops, though there are ſcarce any remains of their antient honour, but a rich pall, and being chancellor of the univerſity, which contains 11 colleges; where all kinds of ſciences are taught. This univerſity was begun by Caſimir the Great, finiſhed by Uladiſlaus Jagello, and had its privileges confirmed by pope Urban. Cracow is in the moſt mountainous part of the country, without either commerce or court, which latter generally reſides at Warſaw, as being more in the heart of the kingdom: yet it is a noble, large, populous city, full of gentry, and a wealthy clergy, is honoured with the ſeſſion of the ſupreme court of judicature, the keeping of the royal enſigns or regalia, and is the place of the king's coronation. It comprehends, 1 Cracow; 2. Stradomira, or Stradonia, which lies betwixt Cracow and the bridge; 3. Cleparia; and, 4. Caſimir, joined to the other parts by a wooden bridge over the Weiſſel. The firſt, which, is the moſt antient quarter, is encompaſſed with a ditch and wall flanked with round brick towers; and in it ſtands the caſtle, a mile in compaſs, founded on a rock, with noble buildings of ſtone, round a ſquare court, and galleries ſupported by marble pillars. The king's apartments are adorned with very curious paintings and ſtatues. It was rebuilt by king Sigiſmund the elder, who added the north gallery, which affords a proſpect over all the neighbouring country. Within the caſtle ſtands the cathedral, where the kings of Poland are crowned and interred; and here likewiſe the relicks of St. Staniſlaus, the ancient biſhop and patron of the nation, are carefully kept, and highly venerated.

Near this city are ſome admirable ſalt mines which were diſcovered in 1548. They produce a great annual revenue to the crown, and the proprietors are likewiſe obliged to make a yearly preſent to every city in Poland. The ſalt is of four kinds; and on one ſide of the mines runs a ſtream of brackiſh water, as a fine freſh one does on the other ſide.

The other towns of this palatinate are as follow:

Zator, which is ſituated 22 miles ſouth-weſt from Cracow, contains only wooden houſes, but is defended by a ſtrong caſtle.

Siveria is the capital of a duchy of the ſame name, has two caſtles to defend it, the one ſituated on an iſland in the midſt of a lake, and the other on the ſummit of a rock; and is celebrated for the mines of ſilver and lead in its neighbourhood.

Biecz, which is 33 miles ſouth-eaſt of Cracow, is a walled town watered by the river Rapa, from the ſurface of which ſulphur is made.

Sandrecz, 24 miles ſouth of Cracow, is a ſtrong walled commercial town, celebrated for mines of gold and copper in its neighbourhood, and for having a collegiate church and ſeveral monaſteries.

Lelow, on a little river of the ſame name, is ſurrounded with an old wall, defended by a ſtrong caſtle on a hill, and has mines of ſilver and lead in its neighbourhood.

Oſwieczin, ſituated on the ſouth ſide of the river Sala, 12 miles from the borders of Sileſia. The houſes are built only of wood, and the caſtle, which defends it, of clay. It is the thoroughfare from Cracow to Vienna; and hath a very great trade in ſalt.

Czentochow, on the river Warta, near the confines of Sileſia, is celebrated for remarkable good beer. Without the walls there is a monaſtery of hermits, where a picture of the Virgin Mary is depoſited, and which thoſe hermits affirm to have been painted by St. Luke himſelf. This hath drawn a great concourſe of pilgrims hither, who have made rich preſents to the hermits; yet theſe treaſures are not lodged in the monaſtery, but in a ſmall fortreſs, to defend which the hermits keep a garriſon of 300 men.

Near the little town of Slacovia, 25 miles north-weſt from Cracow, is a ſilver mine. In Proſzovice, 10 miles north of Cracow, a provincial diet is held; and Ilcuſſia, 20 miles weſt of Cracow, is famous for ſilver and lead mines, and the beſt bread and beef in Poland.

Near Veliſca, 25 miles eaſt from Cracow, are excellent mines of rock ſalt; but one misfortune is, that the miners, who work underground, ſoon grow blind from the acrimony of the ſalt; and at Lubawla, 14 miles ſouth of Sandecz, there is a very ſtrong fortreſs.

The ſenators of this palatinate are the biſhop, palatine, and caſtellan of Cracow, with four other inferior caſtellans.

The juriſdiction of this palatine is very large, and extends ſeveral ways, not only over the citizens and countrymen, but alſo the nobility and gentry of the palatinate. The prætor, or mayor of Cracow, is named by the king; but the caſtle is principally under the command of the palatine, who has ten deputies, or burgraves,

by whom, in times of peace and war, a ſtrict guard is kept, both night and day; and they muſt always be choſen out of the gentry.

The palatinate of Sendomir, or Sandomir, has that of Cracow on the weſt and ſouth-weſt; Hungary on the ſouth; Maſovia and Great Poland on the north; and Red Ruſſia, and the palatinate of Lublin, on the eaſt. It is divided into eight diſtricts, and has nine ſenators; viz. the palatine and caſtellan of Sendomir, and the caſtellans of Wiſlicz, Radom, Zawichoſt, Zarnow, Malagoſch, Polovicz, and Sechow. It abounds with mines of gold, ſilver, copper, iron, lead, ſteel, and marble; and has its name from its capital, viz.

Sendomir, which is on the weſt ſide of the Weiſſel, near its confluence with the San, 70 miles north-eaſt of Cracow, and 75 ſouth of Warſaw. It is pleaſant, and defended by a ſtrong caſtle on the ſouth ſide of the town, on a ſteep rock, beſides walls and outworks built by Caſimir the Great, who died here of a ſurfeit by eating too much fruit, which, about this ſpot, is reckoned the beſt in Poland. The moſt remarkable ſtructures in the town are, the Dominican monaſtery, a collegiate church, which is very rich; a ſchool where the Jeſuits teach; and other religious houſes. The chief court of judicature for the palatinate is kept here. The town was plundered by the Tartars in 1240 and 1259, taken by the Swedes in 1655, and reſtored next year to the Poles; but diſmantled by king Auguſtus in 1704, becauſe he was not able to keep it. The town ſtands on an aſcent, from whence there is a fine view of the Weiſſel. The inhabitants are reckoned very polite. Here are two churches, much frequented by pilgrims, both which ſtand in the midſt of a foreſt.

The towns are,

Kunow, 40 miles north of Sendomir, noted for quarries of marble, of all ſorts and colours.

Schydlowiecz, 40 miles north-weſt of Sendomir. It is defended by a ſtrong caſtle and wall, has ſtore of timber, iron, and ſteel, in its neighbourhood; many fair edifices, and good ſtore of fiſh.

Viaſden, a new-built town, of good trade, much frequented, and well fortified.

Optatow, 15 miles north-weſt of Sendomir, ſtands in a pleaſant country on the river Pilcza. The diet of the palatinate met here in 1705, to declare againſt king Auguſtus. It has ſeveral famous religious ſtructures.

Radom, the capital of its diſtrict, 43 miles north-weſt of Sendomir, is built on a plain encompaſſed with a ſtrong wall, and other fortifications, and on a rivulet that falls into the Weiſſel.

Iliza, a neat town, built of brick, belonging to the biſhop of Cracow, who has a ſtately palace in it. It ſtands on a river that falls into the Weiſſel, 70 miles north-eaſt of Cracow, furniſhes all Poland with earthen ware, and is defended by an old caſtle.

Solecia ſtands on the Weiſſel, and is celebrated for its caſtle, repaired by its antient duke Chriſtopher Zboravius.

Bozentin, a fine ſtrong city, near the bottom of the Bald Mountain, where the biſhop of Cracow has a very neat palace, and delightful gardens. In the neighbourhood there is plenty of iron.

Kielcz, 10 miles weſt of Bozentin, is famous for mines of copper and lapis lazuli, and a good collegiate church, under the biſhop of Cracow.

Chencin, 12 miles eaſt of Kielcz, noted for mines of lead and ſilver, and quarries of marble; belongs to the king, is the ſeat of juſtice for its diſtrict, and is defended by a caſtle on a rock.

Racow, or Racovia, is noted for having been formerly a neſt of the Socinians and Arians, and the centre of their religion. It was pretty populous, and had a conſiderable academy, till about 1660, when it was ſuppreſſed to prevent the ſpreading of thoſe errors.

Lagovia is a city famous for making earthern ware, and belongs to the biſhop of Cujavia.

Corzin is the capital of its diſtrict, a new-built town of timber, with a caſtle, ſeated near the river Viſlock, and ſurrounded every way with marſhes.

Viſlicza, or Wiſlicz, a city and caſtellany, watered by the Nida, ſtands on a rock, 51 miles eaſt of Sendomir. It is alſo built of timber, but has a cathedral of hewn ſtone, with beautiful cloyſters for the canons. The adjacent country abounds with ſerpents and inſects.

The palatinate of Lublin hath that of Sendomir to the north-eaſt; Naſovia to the north, Podlachia to the weſt, and Lithuania to the eaſt. The whole palatinate independent of the cottages of the peaſants, contains near 2000 noblemen and gentlemens ſeats. It is governed by four principal perſons, viz.

The palatine,
The caſtellan, and
Two ſenators.

The chief rivers of this palatinate are the Weiſſel and Viepers.

The city of Lublin, from whence the palatinate receives its name, is ſituated in a fruitful and pleaſant country 130 miles north-eaſt from Cracow, and 55 miles ſouth of Warſaw. It is a ſmall town, but has very great trade, and is particularly celebrated for four great annual fairs or marts, which continue a month each, and are reſorted to by merchants from many parts both of Europe and Aſia. It is a biſhopric, ſuffragan to the archbiſhop of Cracow. The Jews ſynagogue here is the fineſt in the whole kingdom, and the city beſides contains ſeveral churches, convents, a college, and the chief tribunal for Little Poland. It is a healthy place, though ſurrounded by moraſſes, which are indeed its chief defence, though Caſimir the Great walled it and ſurrounded it with a ditch. It hath likewiſe the ſecurity of a citadel, which communicates to the town by a bridge.

Caſimir is a town built of timber among the rocks near the Weiſſel, at the diſtance of about 26 miles from Lublin. It is a large city, with a beautiful palace and extenſive gardens, belonging to the archbiſhop of Gneſna. The Weiſſel ſometimes overflows and lays above half the town under water. This is the town where Charles XII. king of Sweden, cauſed general Patkul to be broke alive upon the wheel.

Urzendow, 28 miles ſouth of Lublin, is a conſiderable town, but built of timber.

Lulow, about 56 miles from Lublin, is built likewiſe of wood, in a plain, defended by bogs and paliſadoes, and has a conſiderable juriſdiction.

LOWER *or* GREAT POLAND.

GREAT Poland is bounded on the north by Pomerania and Poliſh Pruſſia; on the ſouth by Little Poland; on the weſt by Sileſia and Brandenburgh, and on the eaſt by Maſovia. It is near 200 miles in length, and about 100 in breadth. Though called *Great Poland*, it is rather ſmaller than *Little Poland*, for it did not receive its appellation of *Great* from its extent, but from having been firſt ſettled into a kingdom by *Lechus the Great*, the original founder of the Poliſh monarchy.

It is in general a level campaign country, has pleaſant rivers, lakes, and ponds, and is well furniſhed with all manner of fiſh and fowl. The moſt conſiderable of its rivers is, the Warta, which paſſes through great part of it. Its hills abound with ſheep and cattle, and its vallies with corn.

The ſubdiviſions of this country are as follow:

The palatinate of Poſanania is ſituated to the eaſtward of Sileſia and Brandenburgh, to the ſouthward of Pomerania, to the weſtward of Pomerellia, and to the northward by Kaliſch.

The ſenators of this palatinate are, the archbiſhop of Gneſna; the biſhop, palatine, and caſtellan, of Poſnania; and ſix other caſtellans. There are ſeveral other officers in this palatinate, both civil and military. The Staroſtas, or governors of cities, have ſome of them juriſdiction, others none, as it is likewiſe all over the kingdom. Some of its towns are walled, but the houſes in general are of timber, except the public edifices, which are of ſtone or brick.

Poſnania, the capital of this palatinate, is ſituated in a plain, amongſt ſeveral little hills, by the river Warta, 28 miles weſt of Gneſna, 43 north-weſt of Kaliſch, 135 ſouth of Dantzic, and 143 weſt of Warſaw. It is thought to be inferior to no city of Poland, except Cracow. It is the ſee of a biſhop, ſuffragan of Gneſna; and is defended by a good caſtle, a double wall, and a deep ditch. It is famed for its trade, well built, and

has a cathedral. The biſhop's palace, and an univerſity, are in its ſuburbs, encompaſſed by a moraſs and a deep lake, but incommoded ſometimes by the overflowings of the river. There is a fine college and monaſtery in the city, in the former of which they have many ſcholars. The inhabitants make as handſome a figure in their houſes and dreſs, as any in Poland; and their Staroſta, or chief magiſtrate, who is choſen annually out of the Echevins, or aldermen, is dignified with the title of general of Great Poland. Moſt of them are Papiſts, but here are many Jews who have greater privileges than the citizens. In 1704, the Saxons laid ſiege to it, but were ſoon obliged to raiſe it, by the approach of the Swedes. In 1716 the Swedes attacked the Saxons here, contrary to a ſuſpenſion of arms, and made them priſoners of war in the caſtle. The public buildings are generally of free-ſtone, of which the moſt conſiderable is the caſtle, that ſtands on a ſmall eminence between the rivers Warta and Proſna; but its moſt ſtately edifices are on the other ſide of the Warta, in the ſuburbs. The ſuburb is commonly called Valiſovia, and built ſo ſtrong, that, like the town, it is able to withſtand a ſiege. There are three very famous fairs kept in this city, much reſorted to by the German traders and gentry. The firſt is kept about the beginning of Lent, and laſts a month; the ſecond and third at Midſummer and Michaelmas, each of which continues five weeks. In St. Magdalen's, which is the principal church of the city, is ſhewn the tomb of the duke Mieceſlaus, who introduced chriſtianity into Poland. Here are ſeveral other churches, beſides monaſteries; the ſtreets are ſpacious, and the town-houſe a piece of fine architecture.

Koſen, about 33 miles ſouth-weſt of Poſania, is ſituated among marſhes, and is defended with a broad deep ditch and a double wall.

Miedzyrzecze, on the frontiers of Sileſia, is about 60 miles ſouth-weſt of Poſnania. It is a timber built town, erected in a plain among rivulets and marſhes, and defended by a caſtle.

Slupeza, ſituated on the Warta, is defended by a ſtrong caſtle, ſurrounded by a wall, and is ſituated 30 miles ſouth-eaſt of Poſnania.

Liſſa, which is 33 miles north-weſt of Poſnania, was plundered and burnt by the Ruſſians in 1707, ſo that out of 3000 houſes, only 17 were left ſtanding.

Frauſtadt, on the frontiers of Sileſia, 10 miles ſouth-weſt of Liſſa, is only remarkable for the victory obtained near it over the Saxons by the Swedes, which proved ſo fatal to king Auguſtus, that it permitted Charles XII. to enter Saxony, and left Poland and Lithuania to his mercy.

The palatinate of Kaliſch, or Kalis, on the eaſt of the river Warta, hath five ſenators, viz.

The palatine.
The caſtellan of Kaliſch.
——————— Land.
——————— Naklo.
——————— Kamin.

Kaliſch, the principal city from whence the palatinate hath its name, was anciently mentioned by Ptolemy, and is ſituated on the river Proſna, which falls into the Warta, 20 miles eaſt of Sileſia. It lies among marſhes, and is fortified only with a brick wall, and low towers. Here are the ruins of a ſtrong caſtle, which was deſtroyed by the Teutonic knights. It has a magnificent college of Jeſuits, and ſome religious houſes. It was taken by the Swedes during the wars of the laſt century. The Saxons and Poles defeated the Swedes near this place, in October 1706, juſt as a treaty had been ſigned, whereby king Auguſtus renounced the crown to king Staniſlaus, his electorate of Saxony being then over-run by the Swedes, and no other way left to relieve it.

The moſt conſiderable city, however, is not that from which the palatinate receives its name, and which, on that account, and that only, is called the principal city; but Gneſna, or as the Germans term it Gniſen, which is now deemed the capital of Great Poland, and was formerly the metropolis of the whole kingdom, and the reſidence of the king. It was built, as is generally reported, by king Lechus I. founder of this monarchy, and called Gneſna, from an eagle's neſt found there, which, in the Poliſh language, is called Gneſiad. The kings of Poland were crowned, and the regalia kept here, till 1320, when they were removed to Cracow. It ſuffered very much by a dreadful fire in 1613, and has been declining ever ſince; ſo that it is now only conſiderable for being the ſee of an archbiſhop, who is primate of all Poland, legate of the Holy See, and, in caſe of the king's death, regent till a new king be choſen, whom alſo he claims the right of declaring and crowning. He can reverſe all proceedings in any of the biſhops courts, and it is death to draw a ſword in his preſence. A golden croſs is carried before him when he goes to the diet, or to the king; and when he ſits, his chaplain holds it behind his chair. His marſhal, who is a ſenator, carries a ſtaff before his coach, and ſalutes none with it but the king. He viſits no ambaſſadors, though they viſit him. During the inter-regnum, he may coin money in his own name; the revenues of the crown belong to him, and he has then the ſame officers with the king; but at all times he has drums beating, and trumpets ſounding, within and without, before he ſits down to table; and he may viſit the king when he pleaſes. The canons muſt all be of noble birth.

There is lodged in the cathedral a great treaſure of gold, ſilver, and curious enamelled veſſels, bequeathed to it by Sigiſmund III. and ſome other kings. The tomb of one of the archbiſhops is caſed with ſilver, and the pillars are of Corinthian braſs.

The palatinate of Siradia is ſituated to the north and ſouth of the Warta, and contains

Siradia, the capital town, which is ſmall but populous, and has a caſtle to defend it.

Wielun, the ſeat of the Staroſta, Caſtellan, and Provincial diet.

Petrikow, a tolerable well-built neat town, about 80 miles from Cracow. Formerly the kings were elected, and the diets held here; and at preſent one of the great tribunals of the kingdom, for determining differences among the nobility, and appeals from inferior courts, ſits in this town; as does alſo a provincial court, and the ſynod of the clergy.

The palatinate of Lencicia is ſituated eaſt from Kaliſh, or Siradia, and has Little Poland towards the ſouth. It is divided into three diſtricts, and hath five ſenators, viz. the palatine and caſtellan of Lencicia, and three other caſtellans.

The principal town, called Lencicia, is 80 miles weſt of Warſaw, and 130 miles north of Cracow. It is ſurrounded by a brick wall and a ditch, defended by a caſtle, ſituated on a rock; has a great annual fair, and is the ſeat of one of the little diets.

Piontkum, 10 miles eaſt from the abovementioned town, is ſituated on the Warta, and celebrated for a fine monaſtery and good beer.

The palatinate of Rava lies eaſt from that of Lencicia, and hath four ſenators, viz.

The caſtellan of Sochaezow.
The caſtellan of Goſtinin.
The caſtellan of Rava.
The palatine of Rava.

Rava, the capital of this palatinate, ſtands on a river of the ſame name, upwards of 40 miles to the ſouth-weſt of Warſaw. It is ſituated in the midſt of a plain, built of wood, tolerably populous, and defended by a caſtle, which is at once the depoſitory of ſome of the crown revenues, and a ſtate priſon. The caſtle itſelf is a large ſtone building, flanked with four towers, and ſurrounded by a broad ditch full of water.

Louitz is a ſmall neat town on the river Rava, about 23 miles from the city of Rava. It hath a caſtle ſurrounded by the river; is adorned with a ſtately church, and the palace of the archbiſhop of Gneſna.

Volhoria is a populous town, where the biſhop of Cujavia has a noble palace.

The palatinate of Brezeſtry, to the north of Lencicia, is fertile, ſends five members to the diet, and hath its name from a little town 60 miles to the eaſt of Gneſna. It lies on a cauſeway amongſt marſhes, and is built of brick and wood.

Cruſwick, 30 miles weſt of Brezeſty, has a brick caſtle in the middle of it; and in the ſuburbs ſtands the church of St. Peter, built with free-ſtone, together with a college of 24 canons.

Radziew

Radziew is ſituated on a lake, 28 miles north-weſt of Brezeſty; and the houſes in general are built of timber; hence, like many other towns of Poland, it is ſubject to conflagrations.

Uladiſlaw is a palatinate, whoſe capital city, of the ſame name, is built among marſhes, near the Weiſſel, in the midway between Ploczko and Thorn, 14 miles north-eaſt of Brezeſty, 20 ſouth-eaſt of Thorn, and 75 north-weſt of Warſaw. It is the ſee of the biſhop of Cujavia and Pomerania, ſuffragan of Gneſna, who always crowns the king, in caſe of the death, indiſpoſition, or obſtinacy, of the primate. The cathedral is an antient Gothic ſtructure, but rich in plate, ornaments, and relics; and encompaſſed with the houſes of the canons and prebendaries, and a large free-ſchool. The chief ornament of the place is, the biſhop's ſtately palace, built by Matthias Golanciew, who was 42 years biſhop of this ſee, and founded the church of St. Vital the martyr. The houſes are generally of brick, as is alſo the caſtle on the Weiſſel, which is well-fortified. Though the adjacent ſoil is marſhy, and ſo ſcarce of fuel, that the inhabitants ſuffer very much for want of it; yet it is fruitful in corn, and ſends great quantities to Dantzic.

The palatinate of Inowlocz, or Inowladiſlaw, extends from the lake of Goplo, and the city of Cruſwick, to the Weiſſel and the confines of Pomerania, and has Pruſſia on the north, the Weiſſel on the eaſt, Kaliſch on the ſouth, and lies north-weſt from Brezeſty. It is divided into three territories, and ſends four caſtellans to the diet, beſides the palatine.

The chief town, of the ſame name, is on the river Notez, 38 miles weſt of Uladiſlaw. It is ſmall, but defended by a ſtrong caſtle.

Bydgoſt is a walled town, in a plain, on the river Barde, by which goods are brought up to it from the Weiſſel, particularly from Uladiſlaw, from which it is 24 miles diſtant. It is noted for a trade in Salmon.

Dobrin is by ſome made a diſtinct palatinate of the province of Maſovia, and by others a territory belonging to that of Brezeſty. It lies on the eaſt of the Weiſſel, between Cujavia and Pruſſia, abounds with fruit, and fiſh of all ſorts, was formerly the occaſion of many quarrels between the Teutonic knights, Pruſſia, and Poland, and is divided into three diſtricts. Its ſenators are, the three caſtellans of Dobrin, Ripin, and Slouſk.

The town, of the ſame name, is built of timber, on a rock, near the Weiſſel, over-againſt Uladiſlaw. It had formerly a ſtrong caſtle, which was demoliſhed by the Teutonic knights.

Ploczko, or Ploſkow, on the weſt ſide of the country, is by ſome alſo reckoned a palatinate of Maſovia, from which it lies rather to the eaſt, between the Weiſſel and Ducal Pruſſia. Its ſenators are, the biſhop, palatine, and caſtellan of Ploſkow; and it is divided into four diſtricts.

Ploſkow, its chief town, ſtands on a high bank of the Weiſſel, from whence there is a proſpect of a pleaſant and fruitful country. It is 15 miles ſouth of Dobrin, near 30 eaſt of Brezeſty, 44 ſouth-eaſt of Thorn, 40 north-eaſt of Lencicia, and 50 north-weſt of Warſaw. It has been a biſhop's ſee a long time, is very populous, has a good trade by its river, and is defended by a caſtle. It has a cathedral, with other churches and monaſteries, well endowed, eſpecially that of the Benedictines, in the ſuburbs; where, among other relicks, they keep the head of St. Sigiſmund in a gold ſhrine, given by king Sigiſmund III.

II. POLISH PRUSSIA.

POLISH Pruſſia hath been uſually particularized by the appellation of Royal Pruſſia, on account of its belonging to the crown of Poland; and to diſtinguiſh it from Ducal Pruſſia, which belonged to the houſe of Brandenburgh, but which hath, for ſome time paſt, been erected into a kingdom. The preſent or modern diſtinction, therefore, is into *Poliſh Pruſſia*, and the *kingdom of Pruſſia*, and it is more than probable that, in a few years, all diſtinction will be ſunk, and the two Pruſſias be entirely united, and called by the general term of *the kingdom of Pruſſia*. And this we have the greateſt reaſon to think, as his preſent Pruſſian majeſty hath, in the late diſmemberment of Poland, ſeized upon the opulent, commercial, and fine cities of Dantzick, Thorn, and Elbing, which are all in *Poliſh Pruſſia*. It is therefore not unreaſonable to ſuppoſe, that he deſigns to annex the whole province to his own regal dominions.

Poliſh Pruſſia was formerly a diſtinct political ſtate from Poland itſelf, and no farther connected than by a perpetual alliance. In the year 1466, however, the inhabitants put themſelves under the protection of Caſimir IV. when it was expreſsly ſtipulated, that Poliſh Pruſſia ſhould have nothing to do with the kingdom of Poland though it had with its ſovereign; and that the king ſhould perſonally, and alone, come among them, hold diets, give orders, and determine all matters relative to Poliſh Pruſſia. Some of the cities and towns of this province, and particularly Dantzick, had very peculiar privileges; though we cannot think that they are of any very great uſe to them at preſent, as the now reigning monarch of Pruſſia is ſo ſingularly ſkillful in promoting revolutions, forming innovations, and bending old laws, and long-eſtabliſhed cuſtoms, in ſuch a manner as to coincide exactly with his own will.

Poliſh Pruſſia is in length 118 miles, and in breadth 104 where broadeſt. It is bounded by the kingdom of Pruſſia on the eaſt, Pomerania on the weſt, Poland, properly ſo called, on the ſouth, and the Baltic on the north. The ſouthern parts, excepting in the neighbourhood of Dantzick, is barren, but level and open; but the other parts are over-run with mountains, lakes, and woods. The lakes yield plenty of excellent fiſh, and the woods afford

Wild boars,	Wax,
Roe-bucks,	Honey,
Game,	Timber.

This province is divided into four palatinates, viz.

Pomerellia,	Marienburg, and
Culm,	Warmia.

The inhabitants of Poliſh Pruſſia have a diſtich which characterizes ſix of their principal cities and towns, and which may be thus tranſlated.

"Dantzick the rich, Culm the delightful, and Ploczko the long;
"Marienburg the handſome, Thorn the devout, and Elbing the ſtrong."

The palatinate of Pomerellia hath Pomerania on the weſt; the river Weiſſel on the eaſt; the Baltic on the north; and Great Poland on the ſouth.

This palatinate had formerly princes of its own; then belonged to the knights of the Teutonic order; afterwards fell under the dominion of the ſovereigns of Poland, and at preſent is likely to become an appendage of Pruſſia. It has a palatinate, and four provincial judges; lies in the dioceſe of Cujavia, and contains the following places.

The city of Dantzick, which is not only the capital of the palatinate, but the metropolis of Poliſh Pruſſia, is ſituated on a branch of the Viſtula, about four miles from the Baltic, 154 north-weſt from Cracow, in 54 deg. 20 min. north lat. and 19 deg. 7 min. eaſt long.

The numbers of times which this city hath changed its maſters, in the ſeveral competitions for the crown of Poland, and the amazing ſums that have been at various times extorted from it, are ſcarcely credible. Its ſituation is now as deplorable as ever, from one of the partitioning powers who have ſo recently diſmembered Poland. Perhaps no better idea can be given of its recent circumſtances, than by extracting ſome paſſages from a letter, written by a late ingenious traveller, and dated Dantzick, 31ſt Auguſt, 1774. In which that gentleman ſays, "About an Engliſh mile and a half before I got to the town of Dantzick, I came to the laſt Pruſſian guard, and entered the territory of the republic, which is at preſent diminiſhed on every ſide, and inveſted by the huſſars and grenadiers of an abſolute prince. Freedom, it is true, yet reigns within theſe limits, though narrow, and waves her ſacred banner on the ramparts. But how long this may continue is certainly matter of uncertainty and

and doubt. If the melancholy fate of Elbing, or Marienburg, can form a preſage; if the unfeeling rapacity ſhewn in the diviſion of Poland, its feudal parent, and once its protector; if the general train of policy, I ſhould rather ſay of unreſtrained avidity, exerciſed by the court of Berlin in Poliſh Pruſſia, enables one to determine, its final extinction is not far off. To what happy or valuable purpoſes indeed can the poſſeſſion of perſonal independence ſerve, when the vital ſpirit which once ſupplied it is fled? Their commerce, their revenues, their riches, are already either ſeized on, or burthened with impoſts and duties which muſt eventually deſtroy them.—The city itſelf, which no king of Poland ever dared to enſlave, now awaits in trembling expectation the hour of its deſtruction, and implores, perhaps, in vain the powers of Europe to ſave her from a new enemy, a ſovereign whoſe claims are equally unexpected and unbounded, and who, though apparently reſtrained from open violence by political motives, watches only the favourable moment when treachery or intrigue may put him into poſſeſſion.—Moſt or all the ſuburbs, which are very populous and extenſive, are already occupied by Pruſſian ſoldiery, who on one ſide are cloſe to the very fortifications, a paliſado only ſeparating them from the Dantzick guards." The king of Pruſſia has at length effected his purpoſe, and ſeized this city, but how he means to act to the inhabitants, or in what light he deſigns to conſider them, is uncertain.

Dantzick is large, populous, and rich, carries on a vaſt trade, and hath long been conſidered not only as the chief mart and magazine of Poland, but as one of the greateſt granaries in the world; therefore, London and Amſterdam excepted, it is reputed to excel in opulence and commerce any other city in Europe.

This city is divided into three parts, which are governed by three diſtinct ſenators, viz. the Voorſtadt, or Fore City; the Altſtadt, or Old City; and the Rechteſtadt, or the Emperor's City; all encompaſſed with high walls, ſo broad that coaches eaſily go round upon them. The fortifications are of a vaſt extent, but being commanded by two hills on the ſouth-weſt, they cannot ſtand a ſiege, A canal goes through the city, which is generally covered with merchant ſhips. It is watered by the rivers Motlaw and the Rodaun, on which are ſeveral mills. One, on the Rodaun, yields the ſtate above 4300l. ſterling per annum, beſides what it brings the proprietors. The houſes are partly ſtone, and partly brick, and generally ſix or ſeven ſtories high. The public buildings are very fair. St. Mary's church is a ſtately fabric, with 48 altars, 3722 windows, and a front, made at Antwerp, that coſt 5000l. Here is a magnificent town-houſe, with a very lofty ſpire. The arſenal, the exchange, the ſquare of St. Dominic, and the college, are noble ſtructures. There are 20 pariſhes in the city and ſuburbs; three magazines, well furniſhed with ammunition and other ſtores, and many granaries of ſeven and nine ſtories high, with funnels to let the corn down from one to the other, which ſaves a great deal of labour and charge. They are encompaſſed with water, ſo that ſhips lie cloſe to them to take in their lading; and no houſes are ſuffered to be near them for fear of fire. The chief export of the place is in corn brought from Poland; of which it is computed, that 730,000 tons, or 365,000 laſts of wheat, are ſhipped from hence one year with another. The citizens have the ſole privilege of buying up the corn as ſoon as it enters the harbour. The magiſtrates ſet a price upon it; but that the country people, who are the ſellers, may not be impoſed upon, and delayed, the citizens are obliged to buy up the whole quantity which the boats bring in, let it be what it will. Though this city takes off a great quantity of the woolen manufactures of Great Britain, yet the Dutch ſending ſo many ſhips for corn to Dantzick, which muſt go empty away if they have no goods to carry, ſo that the freight coſts them nothing, have the chief trade of courſe. Dantzick is the chief market to which the Dutch, and alſo the Scots, ſend their pickled herrings, which are ſo good a merchandize in Poland, that it is ſaid, the Dutch ſell at Dantzick, Elbing, and Koningſberg, 14,000 tons of herrings every year, beſides the great quantities which Scotland alſo ſends thither. The Dutch ſend juniper ſpirits hither, together with ſalt, ſulphur, whale-fin, and train-oil; and would ſend more of the latter, were it not for the great quantities of oil which the Dantzickers raiſe from the ſmaller ſort of ſturgeon and other fiſh, and from linſeed, rapeſeed, &c. Beſides corn, of which there is not ſuch a quantity exported any where as here, the Dantzickers export pot-aſhes, ſturgeon, Poliſh linen, ſail-cloth, and great quantities of ſpruce canvas, which is uſed for ſails for ſmall ſhipping in England, and even in Spain and Italy. The Dutch fetch great quantities of Poliſh ſheep's wool from hence, which is the beſt in all the northern world, the Engliſh and Iriſh only excepted, and which they employ in their cloth manufacture: the French alſo bring ſome of it away, and would bring more, if they did not find means to get it upon eaſy terms from England and Ireland. The Poliſh wool is exported likewiſe to Germany and Sweden. The Dantzickers have a wine of that ſort they call Tokay, but it is no other than the Poliſh wines of the mountains of Cracow and Podolia: and they import great quantities of Hollands gin, which is much drank in Poland. Some of the beſt eaſt country plank, as we call it, or oaken plank for building ſhips, is brought from this city as well as Koningſberg and Stetin, and comes down the Viſtula and Oder, out of Great Poland. The Dutch cargoes, beſides thoſe already mentioned, generally conſiſt of Engliſh woollen manufactures, and the ſugars and tobaccos of the Engliſh colonies, with the French ſilks, wines, and brandy. One half of the port cuſtoms belonged to the kings of Poland ſince the reign of Sigiſmund Auguſtus, till his preſent Pruſſian majeſty thought proper to convert them to his own emolument. The harbour of Dantzick is not deep, ſo that very large ſhips cannot come up to the city. One of the ſuburbs of Dantzick is called Scotland, and the Scotch had great privileges allowed them in conſideration of their gallant defence of the town under one of the family of Douglas when it was beſieged by the Poles. It is ſaid there have been uſually upwards of 30,000 Scotch pedlars at a time in Poland, ſome travelling on foot, ſome on horſeback, &c. Indeed, in king Charles the Second's time, they amounted to 53,000, when Sir John Denham, and Mr. Killigrew, were ſent to number and tax them by the poll, which they did by particular licences from the king of Poland, bringing home 10,000l. ſterling, beſides defraying the expences of their journey and commiſſion.

A gentleman who was lately at Dantzick ſays, "In the great church there is a vaſt pillar hollowed, which it is pretended was antiently uſed to immure eccleſiaſtics guilty of heinous crimes. I cannot indeed readily conceive any other uſe to which it could have been put, and it is well known, that ſpecies of puniſhment was common in many parts of Europe. I looked down to it from above, two iron bars which croſs the opening at the top, eaſily permitting it. The depth is, I imagine, 40 feet, and the ſquare dimenſions within about ſeven.—As liberty of religion is publicly allowed in Dantzick, there are churches of all kinds, Lutheran, Calviniſt, and Catholic; there are beſides, convents for religious of both ſexes. It is computed, that the inhabitants, including all in the ſuburbs, are not leſs than 80,000. The environs are uncommonly beautiful."

Before the late diſmemberment of Poland, though the town was under the protection of Poland, yet it was governed by its own magiſtrates in form of a republic. They had four proconſuls or burgomaſters, out of whom the king named a burgrave to repreſent him in the ſenate, and ſign ſentences of death. The ſenators continued for life; and four of them are Calviniſts. There were 100 burghers choſen to inſpect the conduct of the ſenate, and join with them in chooſing the miniſters. The magiſtrates determined all criminal cauſes without appeal, and all civil cauſes not exceeding 1000 livres. The 100 burghers, who joined with the ſenate in impoſing taxes, repreſented the grievances of the people, and maintained their privileges. When the king came hither, he was only allowed to bring a few guards, and was treated by the city for three days. They had a ſecretary always at court to take care of their intereſts, and the right of coinage. Their money, which they could coin without the king's leave, had the king's effigy on one ſide, and the city arms on the other. We are, however, unacquainted with the innovations deſigned to be made by his Pruſſian majeſty.

Here is a college, with profeſſors in all faculties; but they do not give the degree of doctor. The juriſdiction of this city is above 40 miles round. The eſtabliſhed religion has been Lutheraniſm ſince 1525. The Calviniſts are numerous, and are allowed the freedom of their worſhip; as are alſo ſome Anabaptiſts and Papiſts. This city is noted for having been the birth-place of that eminent geographer Philip Cluverius.

There is an inland ſea or bay here, called the Friſchaff, which lies parallel with the Baltic coaſt for 60 miles in length; but is of uneven breadth, being from five to 10 miles over. It begins at the territory of Dantzick, where there is a very large inlet from the Dantzick branch of the viſtula, and which makes the port of Elbing, juſt oppoſite to the mouth of that river, Elbing ſtanding on another entrance of it, a little farther eaſt. This bay is famous for ſturgeon, a vaſt quantity of which is taken here, cured at Koningſberg and Dantzick, and ſent to all the trading ports of Europe, eſpecially England and Holland. Peter the Great, the late czar of Muſcovy, having brought a fine yacht hither from Holland, took great delight in working it in this bay; and, in order to acquire the mariner's art, did every part himſelf, being ſometimes at the helm, ſometimes before the maſt, and ſometimes at the topmaſt-head, &c.

Oliva, a ſmall ſea-port, five miles north-weſt of Dantzick, is famed for a benedictine abbey, where a peace was concluded in 1660, betwixt the emperor, the king of Poland, and the elector of Brandenburg, on one part; and the king of Sweden on the other; by which Livonia was quitted to Sweden; and Smolenſko, Severia, and Kiovia, to the Ruſſians.

In ſpeaking of the Benedictine abbey of Oliva, a late traveller ſays, "The abbot's palace and gardens adjoining are very elegant, but his revenues, which amounted to 10,000 ducats (or near 5000l.) per annum, and the lands of the convent, which he enjoyed in full ſovereignty, are now all ſeized by the king of Pruſſia, who allows him only 1200 ducats, as a penſion during life, and about one-fourth of that ſum to keep the gardens in order."

Putzig is a ſmall town with a ſtrong caſtle, which was a royal demeſne.

Dirſchou is a ſmall but ſtrong town on the Viſtula, where a provincial court of judicature is held.

Schoeneck is another ſmall town, with a caſtle on the river Ters. Stargard is a ſmall town on the ſame; and Meve is a town, with a caſtle at the conflux of the Ters and Viſtula.

Munde, or Weiſſelmunde, is a ſtrong fortreſs, at the mouth of that branch of the Weiſſel which runs by Dantzick, and can hinder the entrance of ſhips.

Pantſko, on a gulph of the ſame name, 18 miles north-weſt of Dantzick, has a ſtrong caſtle, which was taken by the Swedes in 1626, and next year retaken. The Swedes beſieged it again in 1655, but were obliged to raiſe the ſiege.

The ſecond palatinate of Poliſh Pruſſia, viz. Culm, lies on the eaſt ſide of the Weiſſel, betwixt that river, Great Poland, and Ducal Pruſſia; and has four ſenators, viz. the biſhops of Culm and Warmia, and the palatine and caſtellan of Culm.

The city of this name is 23 miles north of Thorn, and 60 ſouth of Dantzick. It was built and well fortified by the Teutonic knights, anno 1223, and was one of their chief fortreſſes againſt the Pagan Pruſſians. It is pleaſantly ſituated on a hill, at the foot of which runs the Weiſſel, and has ſtill the name of a Hans-Town; but has loſt its trade, and is much decayed ſince the Swediſh wars, wherein it fell to the Poles, and was the ſee of a biſhop under the biſhop of Gneſna.

The city of Thorn, the moſt ancient of any in Poliſh Pruſſia, is likewiſe the handſomeſt and beſt built. The ſtreets are broader, and the houſes more elegant than thoſe of Dantzick. The name is derived from the German word Thor, which ſignifies a door or gate, becauſe the Teutonic knights by building it, opened to themſelves a door into Pruſſia, and the device on the city ſeal is a gate thrown open.

In the year 1454 this city, in conjunction with the reſt of Poliſh Pruſſia, threw off the oppreſſive yoke of the Teutonic knights, and put itſelf under the protection of Poland, on condition that it ſhould enjoy its ancient rights and privileges, which were equal to thoſe of Dantzick.

It had heretofore the right of coining money, chuſing its own magiſtrates, determining civil and criminal cauſes, ſending repreſentatives to the general diets, purchaſing fiefs and eſtates, &c. &c. But ſince the king of Pruſſia has ſeized it, its rights and privileges depend entirely upon his will.

The German and Poliſh languages are ſpoken here in their utmoſt purity; the territory appertaining to the city are of conſiderable extent, and at a village about ſix miles from the city all perſons who reſort thither may drink as much beer as they pleaſe gratis. The town is defended by a double wall and moat; the wooden bridge over the Viſtula is the longeſt in Europe, as an half hour is required to walk over it at a tolerable pace; and at the ſame time it is the moſt expenſive, as one-third of it is ſure to be annually carried away by the floods. In fact it conſiſts, properly ſpeaking, of two bridges, as the iſland Bazar divides it in the middle. The ſtadthouſe hath none in Europe which excels it, except that of Amſterdam. Great quantities of ſoap and gingerbread are made here and exported. The aſparagus that grows wild in the neighbourhood is not inferior to what is cultivated in other places. In this city the celebrated aſtronomer Copernicas was born in the year 1472.

The Lutheran college hath five profeſſors, with a teacher of the Poliſh language, a fine library, and a printing-houſe.

The biſhop of Culm, whoſe dioceſe and ſpiritual juriſdiction extend to this city, having, towards the end of the laſt century, eſtabliſhed an annual proceſſion with the hoſt on Corpus-Chriſti day; the year 1724 will ſcarce ever be forgot by the citizens of Thorn, for the execution of a terrible decree that year from the chancery at Warſaw, at the inſtigation of the Jeſuits, and the falſe depoſitions of their partizans; by which ſeveral Proteſtant magiſtrates, and others of note, were not only put to death, and others fined, whipped, and impriſoned, on account of a tumult, by reaſon ſome of the citizens children did not kneel down at the proceſſion; but St. Mary's church was taken from the Proteſtants, and given to the Papiſts; their ſchools deſtroyed; the form of the city government utterly ſubverted; the burghers forced to ſubmit to a new ſet of magiſtrates, who were all Roman Catholics; and, in a word, the inhabitants were ſtripped of all their privileges that had been ſo dearly purchaſed, and afterwards confirmed by the peace of Oliva. During this, many of the inhabitants fled to Dantzick for refuge, but thought fit to retire from thence elſewhere, for fear the Poles ſhould oblige the magiſtrates of that city to deliver them up. The Jeſuits college having been broke open and plundered in the aforeſaid tumult, they demanded 22,000 florins of the city, which paid down one half in hand, and mortgaged the city lands for the other; though the damage they ſuſtained did not exceed 1000 florins, and their whole college was not worth the ſum total of their demand. Mean time, the commiſſion for the execution of the horrid ſentence, which even the then pope thought too cruel to be conſiſtent with the principles of chriſtianity, ſtaid about a fortnight, and coſt the city 40,000 florins: five or ſix ſoldiers were quartered upon every Proteſtant burgher, who was even obliged to maintain them in ſuperfluities, on pain of being treated with inhumanity; ſo that the miſery and calamity upon this occaſion in Thorn is almoſt inexpreſſible.

The leaning tower in this town is much admired, for though the outſide is built obliquely from the ground, ſo that it ſeems ready to fall, yet the floors and ceilings within are perfectly horizontal, and the walls perpendicular to the horizon. In the univerſity library two of Cicero's epiſtles are preſerved on wax, and greatly admired by the curious.

Schonſee is a ſmall town, where the provincial diet of the palatinate is held.

Graudenz is a pleaſant town, ſtrongly walled, and defended by a caſtle. It is ſituated at the conflux of the Viſtula and Oſſa, 36 miles weſt of Thorn, 46 ſouth of Dantzick, and 110 north-weſt of Warſaw.

Straſburg on the Dribent is a little town, 32 miles from Culm.

The palatinate of Marienburg is bounded on the north by the Baltic, and ſurrounded on the other parts by the province of Pomerellia and the Friſchaff. It is an open, level, populous, and fruitful country, producing corn, cattle, graſs, &c. in abundance. The air is good; the fuel generally uſed is either turf, ſtraw, or ſtubble, and the few woods harbour very fierce wolves. The inhabitants are principally Lutherans, or Roman Catholics, and the palatinate has only two ſenators, viz. the palatine and caſtellan of Marienburg.

The city of Marienburg ſtands in 54 deg. 5 min. north lat. and 19 deg. 39 min. eaſt long. on a branch of the Viſtula, at the diſtance of 18 miles ſouth-weſt of Elbing, 25 ſouth-eaſt of Dantzick, and near 72 north of Thorn. It was founded by the Teutonic knights, and formerly deemed their principal city. The caſtle, which was erected in 1281, is a brick ſtructure, fortified on one ſide with a treble ditch, defended on the other by ſtrong ſtone walls, and ſecured by high towers at the flanks. In 1410 Uladiſlaus took the town, but could not reduce the caſtle; the Teutonic knights, however, not being able to pay a garriſon to defend it, ſurrendered it to king Caſimir in the year 1460. In 1626 it was taken by the Swedes, when 12,000 Poles marching to recover it, the Swedes ſallied out, engaged, routed, and killed 4000 of them.

In 1640 it was burnt by the Germans, and the place was reſtored to the Poles in 1660, by the treaty of Oliva. The prince of Conti partly garriſoned the place in 1697, but was ſoon obliged to quit it. In 1703 it was ſeized again by the king of Sweden, but reverted afterwards to the crown of Poland. Here is a magnificent church, dedicated to the Virgin Mary; but the town is meanly built, moſt of its houſes being of wood, and the inhabitants poor. The adjacent ſoil is fruitful, and well cultivated, as is the neighbouring iſland of the ſame name, formed by the river; but the dykes, to preſerve it from inundations, are very expenſive. The beſt mead in Poliſh Pruſſia is made here. There is an iſland near this city, called Zulnara or Zulna, which is a very rich ſpot, and divided into two parts; viz. 1. The greater, which lies next to Marienburg; and the leſſer next to Dantzick.

Elbing, on a river of the ſame name, that riſes out of the lake Drauſen, is 18 miles to the north-eaſt of Marienburg, 35 eaſt of Dantzick, 95 north of Uladiſlaw, and 133 north-weſt of Warſaw. It is the metropolis of the palatinate, and the only port, except Dantzick, in all Poliſh Pruſſia. It was built in 1239 by the burghers of Lubeck; had the ſame laws, privileges, and arms, as their city; and was one of the Hans-Towns, as well as a free and imperial city, and one of the moſt conſiderable towns on the Baltic. It afterwards fell into the hands of the knights of the Teutonic order, who oppreſſing the people, they ſhook off their yoke in 1454, demoliſhed the caſtle, and ſubmitted themſelves, on certain conditions, to the king of Poland. In 1525 this city ſubmitted to Albert marquis of Brandenburg, the firſt duke of Pruſſia, who in 1542, founded the univerſity. In 1577, when Stephen king of Poland beſieged Dantzick, he made Elbing the ſtaple of trade, at the ſame time that the Engliſh, who had a conſul here, made it the ſtaple for their cloth, which they have ſince removed to Dantzick. It was taken by the Swedes in 1629, but in 1636 they reſtored it. In 1655 it ſubmitted to Charles Guſtavus, king of Sweden; but it was reſtored to the Poles, by the peace of Oliva, in 1660. On the 14th of October, 1698, general Brandt, with a body of horſe, of the elector of Brandenburg's forces, came into the neighbourhood, with a deſign to put a garriſon into this town, on account of an agreement formerly made between the then king of Poland and the elector of Brandenburgh, at the treaty of Velaw and Bydgoſt, that this city ſhould be put into the hands of the elector, as ſecurity for payment of a debt of 400,000 dollars, due to him for the aſſiſtance which he had given to Poland in the war againſt Sweden; neither of which having been performed, he came now to demand it: but the city not receiving his garriſon, he blocked it up, and prepared to bombard it; upon which the citizens, not willing to let things run to extremity, and deſpairing of relief from Poland, which was then in great confuſion, ſubmitted upon articles, and 1200 Brandenburgers entered the place on the 11th of November, and kept poſſeſſion of it till the beginning of the year 1700, when the Poles agreed to pay the money; and, till it could be raiſed, put the crown jewels into the elector's hands. Accordingly the Brandenburgers quitted the city; but in 1703 it was taken by the Pruſſians, and the ſame year Charles XII. of Sweden, demanded 300,000 crowns of them; forced the magiſtrates to lay a bridge of boats for his troops to march over againſt the Pruſſians, who appeared for defence of this city; and the king himſelf being admitted into the town, he diſarmed the garriſon and burghers, quartered 2000 ſoldiers upon them, made ſtables of their ſhops and parlours, and demanded 100,000 rixdollars more of them, to ſave the town from being deſtroyed. The magiſtrates repreſented to him, that they admitted him upon his word of honour, had never given him any provocation, and expected protection from him, ſince he was of their own religion; otherwiſe they would have admitted the Pruſſians, who promiſed to defend the town: but all was in vain; they were obliged to pay the money, or ſuffer the town to be deſtroyed, which, upon the ſaid payment, was delivered to the Poles. In 1710 the Ruſſians took it by ſtorm, made the Swediſh garriſon priſoners of war, and found in the place 185 cannons, 12 iron mortars, and 128 mortars of braſs, with proportionable ammunition.

The laſt revolution relative to this city happened in the late diſmemberment of Poland, concerning which a late traveller ſays, "On the 13th of September, 1772, his Pruſſian majeſty's general took poſſeſſion of it in the name of his maſter, and drove out the Poliſh garriſon of 200 men, who attempted to make ſome defence. The black eagle has now ſupplanted the croſs, their antient arms, and appears over every gate of the city. They already feel the rigor and rapacity of this new govetnment, which threatens to ſwallow up all Poliſh Pruſſia, and to extinguiſh freedom and commerce, in one general inundation."

With reſpect to the city itſelf, it is divided into the Old and New Towns, or rather the Upper and Lower Towns, which are both fortified, and, with Thorn and Dantzick, form a repoſitory for the archives and treaſures of Poliſh Pruſſia. Its ſtreets are broad and ſtrait, and the fortifications very regular. Its principal commerce is in ſturgeon, butter, cheeſe, mead, and corn. The Catholic and Lutheran are the two religions of the place. It is ſituated in a level country, like Holland, and is as fruitful and populous as any part of that province, Amſterdam excepted. The boors in the neighbourhood have as good houſes and apparel almoſt as the noblemen in Courland; ſo that a boor is hardly to be diſtinguiſhed, by his habit, from a burgher.

An ingenious traveller ſays, "The city itſelf contains about 15,000 inhabitants. The architecture of the houſes is the moſt groteſque and ſingular I have ſeen in Europe. They terminate in a point, and almoſt all the upper ſtories are untenantable, being deſigned for granaries, and not for reſidence. It was formerly fortified in the Gothic taſte, and ſurrounded by a trench. But even theſe feeble ramparts are, in a great meaſure, demoliſhed ſince it hath become ſubject to its new maſter. I was permitted, by particular requeſt, to ſee the treaſure lately diſcovered here, and about which ſo much has been ſaid in the public prints all over Europe. They are contained in three large coffers, in a vaulted apartment of the town-hall, where they had lain untouched a number of years. There is not any ſpecie, the whole being plate, or ornaments worn by the prieſts in the celebration of divine ſervice. The exquiſite delicacy of the workmanſhip conſtitutes their chief value, the intrinſic worth not exceeding 25,000 ecus, or 6000l. ſterling. In the ſame chamber where theſe holy relics have been diſcovered were likewiſe ſeveral ſwords which belonged to the Teutonic knights. I examined them with great attention, and am almoſt induced to believe they are merely weapons of oſtentation, deſigned, like Alexander's mangers and armour in India, to impreſs poſterity with falſe ideas of their perſonal ſtrength and proweſs. Nothing can be more rude and barbarous than their conſtruction, two pieces of iron form the garde, and round the gripe is a bandage of ſtraps of leather croſſed, but they are really objects of wonder and curioſity."

Chriſtburg is a conſiderable town, with an old caſtle, on the river Sergamen, which diſcharges itſelf into the Drauſen, oppoſite Elbing.

Stum

Stum is a ſmall town with a caſtle, where the diet of the palatinate, and a court of judicature is held.

The fourth palatinate of this country is Warmia, Warmeland, or Ermeland, which joins to that of Marienburg, and lies north-eaſt from Elbing; being ſurrounded, in a manner, by the kingdom of Pruſſia. It is a biſhopric, the people of which are exempted from the royal juriſdiction, and governed by the laws of Pruſſia under their biſhop, who is a prince of the empire, the chief of the Pruſſian ſenators, and has his ſeat at Heilſberg, a ſtrong place, built in 1240, on the river Aller, north-eaſt from Elbing, and 32 miles ſouth of Koningſberg. His cathedral is at Frawenburg, on the Friſchahaff, where it receives the river Schon, and has a good harbour, 10 miles north-eaſt from Elbing and Pillau. The famous Copernicus was a canon of this cathedral.

The chief town of this palatinate is Braunſberg, or Braunſlaw, on the river Paſſar, near the bay of Friſchahaff, 25 miles north-eaſt of Elbing, and 50 eaſt of Dantzick. It is a populous place, much frequented and eſteemed, and is famed for a good trade, and an univerſity, or rather a college, built by cardinal Hoſius. The town has been mortgaged ſince 1667, to the electoral family of Brandenburg; but his preſent Pruſſian majeſty has paid himſelf in full, by ſeizing upon the whole.

In this manner will Pruſſia, from a ſmall ſtate, become an extenſive and mighty empire, till perhaps it grows too unweildy to ſupport itſelf, when, like many other ſtates, it may decline as rapidly as it aroſe.

" When empire in its childhood firſt appears,
" A watchful fate o'erſees its tender years,
" Till grown more ſtrong, it thruſts and ſtretches out,
" And elbows all the kingdoms round about.
" The place thus made for its firſt breathing free,
" It moves again for eaſe and luxury;
" Till ſwelling by degrees it has poſſeſs'd
" The greater ſpace, and now crowds up the reſt;
" When from behind there ſtarts ſome petty ſtate,
" And puſhes on its now unweildy fate;
" Then down the precipice of time it goes,
" And ſinks in minutes which in ages roſe.

III. LITHUANIA.

THE extenſive country of Lithuania, which the natives themſelves call Letwa, was united to Poland in 1501. It has Ruſſia on the eaſt, Great Poland on the weſt, the Baltic on the north, and Red Ruſſia, Volhinia, and Podolia on the ſouth.

Lithuania is in length about 360 miles, and 340 in breadth where broadeſt. It was formerly almoſt filled with woods, and it ſtill contains a great many conſiderable foreſts. It abounds in

Honey,	Pitch,
Wax,	Tar,
Timber,	Boars,
Buffaloes,	Elks,
Wild horſes,	Uris,
Wild aſſes,	Woodcocks, &c.

The numerous lakes likewiſe produce great quantities of fiſh; but the great numbers of lakes and foreſts occaſion the air to be thick and foggy. Here are many flocks and herds, and buck wheat as well as other grain is pretty plentiful, ſo that proviſions are cheap, though agriculture is greatly neglected; but money is ſo ſcarce, that ten per cent. is the uſual intereſt.

The nobility affect great pomp and ſplendor, and are exceedingly fond of retaining a numerous train of domeſtics. The Roman Catholic is the eſtabliſhed religion, but Lutherans, Calviniſts, Jews, Turks, Greeks, Socinians, &c. are to be rated.

Lithuania was governed by its own duke till it was united to Poland by the marriage of its great duke Jagello to Hedwig the dowager of Lewis king of Poland and Hungary; but each country ſtill retained its own laws, cuſtoms, privileges, dialect, &c. In a diet held at Lublin, in the year 1569, it was more firmly compacted with Poland than before, and a decree was made, that both countries ſhould form but one ſtate under the ſame prince.

In their courts of juſtice, the tenth part of what is adjudged in all real actions goes to the judge's bar, and is immediately paid into court. The judge claims half the damages given in perſonal actions, and a Lithuanian nobleman is permitted to compound for murder by paying a fee. The common people, the Germans and the burghers in the royal towns excepted, are ſlaves; and ſo exceedingly illiterate, that ſome of them even retain many of their antient idolatrous ſuperſtitions.

The poor people here have only Monday to themſelves, and ſometimes their lords even deprive them of that. If they are condemned to death, they muſt either execute themſelves, or they are executed with the moſt excruciating torments. They wear a coarſe aſh-coloured habit, and for their legs they have buſkins of bark, and generally ſpeak the Sclavonic, which is the language uſed in all their courts of judicature. They have a great mixture of Poliſh, and alſo of the Latin, which laſt is as common here as in Poland, and ſpoke by people of all ranks, inſomuch, that Michalon, one of their authors, makes no doubt of their being deſcended from the old Romans; and the rather, becauſe the Lithuanians had, not long ſince, the ſame cuſtoms and ſuperſtitions, as burning the dead, divining by augurs, &c.

The bread they commonly eat is a coarſe black ſort, made of rye, the ſooty wheat unwinnowed, and barley-ears, all ground together. They have fleſh, fiſh, and fowl; and what cattle or poultry they think they ſhall not be able to keep in the winter, they uſually kill in autumn, and preſerve in ſalt.

In every houſe in the country they have four or five hand-mills to grind their corn: while they are at work they have a conſtant ſong. They have alſo a ſort of very long wooden trumpet, which, when they ſound, almoſt deafens by-ſtanders.

Their peaſants have waggons or carts, all of wood, and made very light, by raddling or interweaving boughs with each other; and their coverings are commonly the ſame, not much unlike the colliers or lime-burners carts in England. The wheels are of one flat and intire piece of wood; and as the axletrees are never greaſed, a number of them together make an intolerable ſqueaking noiſe.

Their houſes are built round, and therefore they call them towers. They are narrow, and open at top, to let out the ſmoak and ſtench; and generally covered with boards, ſtraw, or bark of trees. In theſe the people and their cattle live together, by which both often receive injury.

One of the employments of the men in the winter is, to ſtuff beds with chopt feathers and ſtalks that grow in the marſhes; and part of the womens buſineſs within doors is, to weave coarſe cloth. For fear of the incurſions of the Tartars, the Lithuanians ſecure all their corn, ſtraw, ſalt meat, and, in ſhort, all their proviſions, in caves, which they dig in the foreſts, and hide the entrance with the bark and branches of trees.

The firſt palatinate of Lithuania is Vilna, which comprehends three large diſtricts, and is divided into two equal parts by the river Wilia. It has only three ſenators, viz. the biſhop, palatine, and caſtellan of Vilna; and its name is derived from the capital, not only of this palatinate, but of Lithuania, viz.

Vilna, which the inhabitants call Vilenſki, and the Germans Wilde. It ſtands at the conflux of the Vilia and Wiln, 70 Engliſh miles north-eaſt from Grodno, 152 eaſt from Koningſberg, and 100 ſouth from Mittaw; 131 ſouth from Riga, 217 north-eaſt from Warſaw, and 235 eaſt from Dantzick. It was founded in 1305. It is a large populous town, with a good trade, but chiefly carried on by foreigners, the natives being poor and lazy. The houſes are ſo ſmoaky, and the inhabitants, who are ſlaves to their noblemen and their bellies, eat ſo much garlick and onions, that half of them are blind before they grow old. They are much given to quarrels, and, if they murder a foreigner, pay only 16 dollars. The ſtreets are badly paved, dirty, and ſwarm with beggars; for here is no hoſpital. Moſt of the houſes are low and mean, and built of wood, except thoſe of ſome foreign merchants, the great duke's palace, the cathedral and churches, all built of ſtone; as are alſo the

Bernardine

Bernardine monaſtery, the univerſity, and the Ruſſian company's warehouſe, where they keep their ermines, ſables, &c.

As it is the moſt conſiderable ſtaple for trade, ſo it is the ſeat of the chief court of judicature for Lithuania, which ſits yearly at this place and at Minſk, by turns. All the inhabitants, except the members of this tribunal, are under the juriſdiction of the palatine, who is governor of the city.

Here are a ruinous old caſtle upon a hill, and another much more beautiful, of a modern ſtructure, at the lower part of the town; and in the duke's palace there is a well-furniſhed arſenal, or armory, and a good library. The cathedral, dedicated to St. Staniſlaus, ſtands in the lower caſtle: it has a large ſilver tomb of St. Caſimir, who was canonized by pope Leo X. Its revenues are conſiderable; and though the archbiſhop is a Roman Catholic, he challenges juriſdiction over all the biſhops of Poliſh Ruſſia who are of the Greek religion; which is, however, diſputed by the biſhop of Kiow. Here is a great bell that requires 24 men to ring it, which was given by king Sigiſmund III. who alſo gave the ſilver tomb, and an altar of the ſame metal. The college here was founded in 1579, by king Stephen, with profeſſors of divinity, law, philoſophy, the Hebrew language, and philology; and honoured with the title of an univerſity by pope Gregory XIII. The town is noted for making very good guns, and other inſtruments of war, chiefly by German artificers.

The ſuburbs are as big as the town, and full of the like timber cottages, which have not partitions, but conſiſt only of one room, common to the family and their cattle. Both the caſtles are built of bricks, and flanked with towers. The fortifications are but indifferent, and its gates are only ſhut in time of war. The proteſtants had a church and college here formerly, but were deprived of both by a decree of the diet of Poland, which, nevertheleſs, left the Greeks in poſſeſſion of their monaſteries, churches, and the free exerciſe of their religion. The town is inhabited by Poles, Ruſſians, Germans, Tartars, and other nations; as well as by the Lithuanians. The Tartars, who lie along the banks of the river Vaca, which does not run far from Vilna, have waggons for the ſervice of travellers. They live according to their own laws, without giving cauſe of complaint, and own the king of Poland for their ſovereign. Great numbers of them reſide in the villages of a valley three miles from hence, in the way to Koningſberg. Foreign merchants ſeldom come hither but in the winter, when the marſhes are frozen, and they can bring their goods on ſledges over the ſnow. There was ſo great a famine in theſe parts in 1571, that in Vilna alone there died of it no leſs than 25000: here was a great tumult in 1581, on account of the biſhop's zeal in burning the books of the Lutherans, Calviniſts, and Ruſſians: in 1610 the Ruſſians, to be revenged for the miſchief done by the Poles at Smolenſko, took this place, and ſet fire to it, by which 4700 houſes were reduced to aſhes, together with ſeven Catholic, and three other churches; ſo that the queen of Poland had but juſt time to eſcape, with her attendants, in boats; of which ſome, nevertheleſs, were drowned. In 1644, the ſcholars raiſed a great tumult, which could not be appeaſed till major Oginſki came with 400 ſoldiers, of whom ſeveral, together with the major himſelf, were killed in the ſkirmiſh.

Braſlaw, near a great lake on the confines of Courland, 80 miles north-eaſt from Vilna, and 88 ſouth-eaſt from Riga, is built of timber, but defended by a caſtle on a rock, and has a large juriſdiction.

Wilkomitz is a town ſituated on the river Swiera; it is built of timber fortified, has an ancient caſtle, and a large juriſdiction.

The palatinate of Troki has Novogrodeck to the ſouth, Samogitia to the north, Vilna to the eaſt, and the kingdom of Pruſſia to the weſt. It is divided into four diſtricts, but has only two ſenators, viz. The palatine and caſtellan of the city which gives name to it.

Troki, which gives name to the palatinate, is a large town built of wood, and ſituated among lakes, marſhes, &c. It has two caſtles, and was formerly the reſidence of the dukes of Lithuania.

Birze is a town belonging to prince Radzivil, and gives name to a ſmall diſtrict.

Kowno, or Conno, is a tolerable neat town ſituated at the conflux of the Wilia and Niemen, famed for its trade, its mead, and a liquor called lippitz. On a hill called Friedenſberg, not far from this town, is a convent of monks of the order of Camaldoli.

Calvarie is a ſmall town near the Pruſſian frontiers, inhabited principally by Jews, who carry on a very extenſive trade.

Merecz is a ſmall town, where king Uladiſlaus generally reſided. It is ſituated on the river Merecz, and is defended only by a caſtle built of wood.

Grodno, the largeſt town in Lithuania, next to Vilna, is ſituated on the river Niemen, 160 miles north-eaſt of Warſaw. Here is a fine palace, a caſtle, a college, a Jews ſynagogue, a Carmelite nunnery, three Greek, and nine Roman Catholic churches. Beſides theſe here are two other palaces, the one belonging to prince Radzivil, and the other to the Sapietian family. Very few of the ſtreets of this city are paved; and a great part of the town was conſumed by fire in the year 1753. It is a place of good trade, has a provincial diet, a court of judicature, &c.

The ſecond diviſion of Lithuania, or Lithuanian Ruſſia, contains White Ruſſia, and is about 340 miles in length from eaſt to weſt, and 240 in breadth from north to ſouth. It is bounded by Vilna, Troki, and Lublin, on the weſt, Volhinia on the ſouth, and part of the Ruſſian empire on the north and eaſt. It includes Black Ruſſia, or the palatinate of Novogrodeck, and contains the following places.

Novogrodeck, a conſiderable town, 68 miles ſouth of Vilna, is ſituated on a hill. It contains a provincial diet, a high court of judicature, an inferior court, a college, ſeveral Roman Catholic and Greek convents, and ſeveral churches.

Nieſwiez is a town on the river Uſza, which belongs to the Radzivil family, and contains a palace and a college.

Rozana is an agreeable town 55 miles ſouth-weſt of Novogrodeck. The Sapiehan family have a ſeat here.

Konim is a town on the river Izura, 35 miles weſt of Novogrodeck, where a provincial diet is held.

Sluck is a large town built with wood, which, with the duchy of the ſame name, belongs to the Radzivil family.

Lucowitz, 40 miles ſouth-eaſt from Novogrodeck, is only remarkable for a caſtle fortified in the modern manner.

Wolkowiſko, near the borders of Polachia, 35 miles weſt from Novogrodeck, is ſituated on the river Roſt, and contains a court of judicature.

The ſeven foregoing towns are in Black Ruſſia, and the following palatinates are in White Ruſſia:

The palatinate of Minſki, which is ſituated in the center of Lithuania, is about 180 miles in length, and 115 in breadth. It has two ſenators, viz. the palatine and caſtellan of the town of Minſki.

Minſki, the capital of the palatinate, is a large well built town defended by a deep ditch, a ſtrong caſtle, and other fortifications. It is ſituated in a marſhy ground 100 miles ſouth-eaſt from Vilna. It was once a dietine town, but its conſequence is now much decayed.

Boriſſaw, ſituated on the river Berezina, is about 50 miles ſouth-eaſt from Minſki. It is built of timber, has a ſtrong caſtle, and is regularly fortified.

Brodzieck, 40 miles to the ſouth of Boriſſaw, but ſituated upon the ſame river, is well fortified, and defended by a ſtrong caſtle.

Rohaczow is a large good town on the Nieper, where it receives the Odrucz, or Odnitz, 125 miles ſouth-eaſt of Minſki. Its territory is bounded on the north by the palatinates of Minſki and Miciſlaw, on the eaſt by the dominions of the Ruſſian empire, on the ſouth by the territory of Rzeczyca, and on the weſt by the palatinates of Minſki and Novogrodeck.

The palatinate of Miſciſlaw, or Miſlaw, lies eaſt from Minſki, on the frontiers of Ruſſia, between the river Peripet to the ſouth, and the Boriſthenes to the eaſt, which runs quite through it. It is for the moſt part over-run with woods, or overflowed with water; but what plain land it has is generally fruitful. It likewiſe abounds with cattle of all ſorts, and excellent fowl; it is divided into two large diſtricts, which are thoſe of

Miſciſlaw and Modzeria; and has two ſenators, viz. the palatine and caſtellan of Miſciſlaw.

Its capital, of the ſame name, is a ſmall timer built town on the river Sos, 32 miles ſouth from Smolenſko, 72 eaſt from Mohilow, and 196 from Minſk. The Ruſſians received a great defeat near it in 1514, but in 1660 they took it, and maſſacred all the inhabitants.

Mohilow is a large well-built populous town, ſituated on the river Dnieper, 70 miles ſouth-weſt from Miſciſlaw. It is a great mart for furs, and reckoned one of the ſtrongeſt towns of Lithuania, and contains a very fine college.

The palatinate of Witepſk is ſituated north from Miſciſlaw and Minſki, and has Ruſſia on the eaſt, from which it is parted by the Dwina. Two ſenators repreſent it, viz. the palatine and caſtellan of Witepſk, its capital.

The city of Witepſk is ſituated near the conflux of the Witzhu and Dwina, 200 miles north-eaſt of Vilna. It is defended both by art and nature; has two ſtrong caſtles; is large and populous, but built with timber. Commerce is carried on from hence to the city of Riga, by means of the Dwina.

Orſka, or Orſa, is a large timber-built city, at the conflux of a river of its own name with the Nieper, 26 miles north from Mohilow, 70 weſt from Miſciſlaw, and 40 ſouth-weſt from Witepſk. It is defended on one ſide by the Dnieper, and on the other by palliſadoes, and a ſtrong caſtle built of ſtone, which is waſhed by the river Orſa.

The palatinate of Poloczk, or Poloczko, lies in the north-eaſt part of Lithuania, being north-weſt from that of Witepſk, and has part of Ruſſia on the north and eaſt. It is divided into two diſtricts, and has two ſenators, viz. the palatine and caſtellan of

Polocz, its capital, which ſtands on the river Dwina, at its conflux with the Poleſa, or Polotta, 66 miles ſouth-eaſt from Braſlaw, and 120 ſouth from Pleſkow. It is a large and populous town, defended by two caſtles, one on each river. In 1562, John Baſilowitz, great duke of Moſcovy, took it, and carried away moſt of its inhabitants. It remained in the hands of the Ruſſians till the year 1579, when it was recovered by Stephen Bathori, who built and endowed a very fair foundation here for the Jeſuits.

IV. SAMOGITIA.

THIS province is of a triangular form, and ſituated between Courland, Semigallia, and the kingdom of Pruſſia. The length, from eaſt to weſt, is near 190 miles; and the greateſt breadth, from north to ſouth, about 90. The ſoil is marſhy, as the name itſelf, in the language of the country, implies; it contains many rivers and lakes, and has ſome good paſture and corn lands. Some parts are mountainous, and the woods contain prodigious ſwarms of bees; the honey is excellent, and the wax remarkable for its purity and whiteneſs.

There is a breed of horſes here, which are ſmall but ſprightly, ſwift and hardy. Though their arable ſoil is very ſtiff, the inhabitants are ſo dull and ſtupid, that they uſe none but wooden plough-ſhares; becauſe when one of their ſtaroſtas thought to introduce iron ſhares, in a ſeaſon which happened not ſo kindly as uſual, they imputed the cauſe of it ſolely to the change of this tool; ſo that he was forced to let them have their wooden ſhares again, for fear of an inſurrection.

In 1404, Vitoldus, duke of Lithuania, gave this country to the Teutonic knights; but in 1408, it was taken from them by Uladiſlaus Jagello, king of Poland; after whoſe death, in 1446, by a treaty with Poland, they were again put in poſſeſſion of this duchy. In 1525, when Albert of Brandenburg was made hereditary duke of Pruſſia, it fell to the crown of Poland; but in the late wars with Sweden it was almoſt ruined.

The ordinary people here live in cottages, which ſtand, for the moſt part, near lakes and rivers, and are covered either with thatch or boards. They are low, and built longways, with the hearth in the middle; mean furniture, and but one room for themſelves and cattle. The better ſort drink out of horn cups, and eat off of wooden platters. Moſt of the inhabitants differ but little in manners, habit, or language, from the Lithuanians. Though chriſtianity, which was firſt preached here by Meinardus in 1200, prevailed in many places, yet ſome of them ſtill retain part of the old Pagan idolatry, the moſt ridiculous of any in Europe, eſpecially in the deſerts, where they worſhip a four-footed ſerpent, by the name of Givoſit. About the end of October, men, women, children, and ſervants, meet at a place appointed, where a cloth being ſpread upon ſtraw, ſeveral loaves are ſet in due order, and between every two a large pot of beer; then beaſts of divers kinds, both male and female, are brought in, and ſacrificed; after which, they cut off a bit from every part, which they ſcatter about the room, and then eat and drink heartily. The peaſants of this country differ, in ſhort, but little from thoſe of Lithuania; however, they have ſome peculiarities worthy of remark. 1. They are not ſo laborious as the Lithuanians, and conſequently have not ſuch plenty of proviſions, &c. therefore, inſtead of bread, they uſe green turneps, as big as a man's head, which grow wild without ſowing. 2. They have a peculiar way of making mead, metheglin, and beer, by quenching ſeveral red-hot ſtones in them ſucceſſively after it has been boiled a whole night, in order to make their bellies ſoluble. This drink they put into veſſels made of the bark of trees. 3. They reward thoſe that drink hard with preſents of a frock, ſhirt, handkerchief, &c. 4. They live to ſo extraordinary an age, that it is no rarity to ſee perſons here 100 or 120 years old. 5. They are, generally ſpeaking, more robuſt, bold, and nimble, than the Lithuanians; and they plough, ſow, and harrow, all at the ſame time; ſo that the ground, having been but once improved by burning, will bear crops ſeven or eight years together, without dunging. When they burn the woods on the lands, if they meet with high trees, they do not cut them down, but only prune off their ſide branches, to let in the rays of the ſun upon the ground, which they perform with great dexterity.

In times of war they bury their corn under ground, in repoſitories made for that purpoſe; previous to which they ſmoak it, which makes the corn keep ſeveral years.

This province has three ſenators, viz.

The Biſhop, Caſtellan and Staroſt } of Samogitia.

Rozien, the capital of this province, is but an inconſiderable, ſmall, and ill-built town, ſituated about 70 miles to the north-weſt of Vilna, and 100 ſouth of Riga.

Midnick is rather a better built town than Rozien: it is ſituated on the river Wirwitz, about 25 miles to the northward of Rozu, and is the ſee of a biſhop, ſuffragan to the archbiſhop of Gneſna.

That ſmall part of this province, called Poliſh Livonia, is of very little importance, and contains only one place that deſerves the name of a town, viz. Duneburg, which is a ſtrong, well-fortified place, ſituated on the Dwina, 28 miles north from Braſlaw, and 60 to the eaſt of Birze.

V. COURLAND.

THE duchy of Courland, called by the inhabitants Kur-Semmer, is a large tract of land projecting into the ſea. It is bounded on the weſt by the Baltic, on the eaſt by Lithuania, on the north by the Gulph of Riga, and on the ſouth by Samogitra. The length is 200, and the greateſt breadth 80 miles. Many parts of the country are woody, and ſome ſwampy, but when thoſe ſwamps are drained, the ſoil is remarkably fertile, and yields grain, flax, paſture, &c. in abundance. This duchy is likewiſe well ſupplied with fiſh, and abounds in iron-ore, minerals, quarries of ſtone, chalk, ſtucco, timber, amber, &c. with which the inhabitants trade to Riga, Libaw, Windaw, Memel, &c.

Horſes and cattle are very plentiful here, and one of their modes of agriculture is to let the water remain upon the low ground for two or three years, and then drain it; when the ſoil is found to be exceedingly enriched.

Lutheraniſm

Lutheraniſm is the eſtabliſhed religion.

Roman Catholis, Calviniſts, and
Greeks, Jews,

are tolerated, yet excluded from public employment, but

Arians, Armenians, and
Socinians, Anabaptiſts,

are not permitted to ſettle in the duchy.

The nobility are diſtinguiſhed by the appellations of old and new; the former only are permitted to enjoy offices of ſtate, but neither are admitted to ſit in the diet of Poland. Both, however, have an unlimitted power over their wretched tenants and vaſſals, which extends even to life and death. The duke is the patron of ſome of the churches, and the nobility of others. When ſtate neceſſity requires, the nobility are obliged to appear on horſeback properly armed, but they are not under any neceſſity to march beyond the frontiers. The duke of Courland, as his country is a fief of Poland, is obliged, on the election of any new king of the latter, to ſend an enjay for re-inveſtiture. He is permitted to appear in all the regalia allowed to ſovereign princes in Germany, to coin money in his own name, &c. But in extraordinary caſes the nobility may appeal to the Poliſh court. He keeps a court with all the proper officers of ſtate, and is able, with the aſſiſtance of his nobility, to raiſe an army of 20,000 men.

In the year 1558, Ketler, the laſt great maſter of the Teutonic knights, was by the king of Poland made hereditary duke of Courland, on condition of his quitting Riga and Livonia, and holding the duchy as a fief of that crown. His deſcendants continued in poſſeſſion of Courland till 1737, when the family being extinct by the death of Ferdinand the laſt of the Ketlers, the Courlanders choſe for their duke, Erneſt Count Biron, a native, and Chamberlain to Anna Iwanowna; and he was afterwards inveſted by the king of Poland. In 1740, however, he was baniſhed with all his family to Siberia, where he continued ſome years, but at length was recalled and reinſtated in his honours and dominions. During his diſgrace, Courland was governed by four great officers of ſtate, till prince Charles of Saxony got footing in the duchy by means of his father the king of Poland, till the change in the ſovereign of Ruſſia obliged him to evacuate it. The duke Biron died only ſix years ſince, that is, about the year 1772, and was ſucceeded by his ſon, who at that time was about 50 years of age, and who is now the reigning duke.

The judges here are four captains or ſuperintendants, viz. two for Courland, properly ſo called, and two for Semigallia; but from theſe an appeal lies to the high council, in which the duke in perſon preſides, and even from this council a ſecond appeal may be made to the government of Poland, if the caſe is ſufficiently important; and diſputes between the duke and his nobles are decided only by the king of Poland in perſon.

Every two years a diet is held at Mittaw, to which repreſentatives are ſent from every pariſh.

This duchy is divided into Courland Proper on the weſt ſide, and Semigallia on the eaſt ſide of the river Maſſa; and each of theſe into two captainſhips.

The firſt captainſhip of Courland Proper is Goldingen, ſo named from its chief town, which was formerly one of the hanſe. It ſtands on the river Wetaw, which falls into the Baltic 30 miles off, and is 70 ſouth-weſt from Riga. It is not conſiderable at preſent, but for its large juriſdiction, though it is adorned with a very fine caſtle.

Windaw, called by the inhabitants Kieſc, hath an harbour near the mouth of the Baltic, 90 miles north of Memel, and 40 miles north-weſt from Goldingen. It is reckoned the capital city of a palatinate of the ſame name, has a caſtle, formerly the reſidence of the Livonian knights, and the place where the ſtates of Courland held their aſſemblies, which made it populous; but it is now much decayed, being only ſupported by building ſhips for the duke, and by its trade in pitch, tar, wax, &c. exported from it.

Libaw lies on the coaſt 30 miles ſouth-weſt from Goldingen, and 42 north of Memel, has a good road and harbour, where ſome of the duke of Courland's ſhips are alſo built, and poſſeſſes the greateſt trade of any of his towns.

Piltyn, or Pilten, on the river Anger, 18 miles north-weſt of Goldingen, is a palatinate as well as the ſeat of a biſhop of Courland, whoſe gentry being Proteſtants, put themſelves formerly under the king of Poland's protection; but on his endeavouring to force a Popiſh biſhop upon them, they ſubmitted to the duke of Courland, and are the richeſt gentry in his dominions.

The captainſhip of Tuckum is ſo called from its chief town, which is about 50 miles eaſt of Goldingen.

Semigallia, the eaſtern diviſion of Courland, has Livonia Proper on the north, Samogitia on the ſouth, and the palatinate of Ploſcow on the eaſt.

Mattaw, on the river Muſſa, 32 miles ſouth of Riga, is the capital of Semigallia, and indeed of the whole duchy, as well as the ſeat and burial-place of its dukes, who have a magnificent caſtle, which is fortified by two baſtions, encompaſſed by marſhes, and has always a ſtrong garriſon. The town is alſo well fortified, though meanly built, the houſes being partly of brick, partly of timber, and ſome of mixed materials: it is large, and the ſeat of the diets of the duchy. It was ſeveral times taken by the Swedes, particularly by Guſtavus Adolphus in 1621, and again in 1701, and alſo by the Ruſſians in 1705, but as often recovered. The Aa river, on which the caſtle ſtands, paſſes by this city to the Dwina, with a deep channel, which might be navigable, if the people of Riga had not, for their own intereſt, choaked up the mouth of it.

A very late traveller in ſpeaking of Mittaw ſays, "The town of Mittaw is not very antient, a private gentleman of Courland founded it in the year 1426. It occupies at leaſt as much ground as Riga, but as the ſtreets are more ſpacious, and the buildings more ſcattered, it cannot properly be regarded as equal in ſize. The inhabitants are only between three and 4000; moſt of the houſes are of wood, and very mean in their appearance; it is horridly paved, and, which is ſtill more ſingular, the nobleſſe have oppoſed and prevented the duke's intention to repair this defect from motives of caprice and obſtinacy."

Bauſke, 17 miles ſouth-eaſt of Mattaw, is another ſtrong town on the river Muſſa, or Pluſſa, with a caſtle built on a rock, which has a large garriſon. It was taken by the Swedes in 1701, with the king of Poland's magazines, valued at 300,000 crowns, and he demanded 60,000 from the duchy, beſides vaſt quantities of proviſions. In 1705 the czar ſurpriſed this town by ſtratagem, and forced the Swedes garriſon in the caſtle to ſurrender, juſt after a victory he had obtained over them near Muhrendorf in this duchy. The Swedes repoſſeſſed it, but quitted it, with the whole duchy, in 1709, after levying great ſums from the inhabitants.

We cannot conclude our account of Courland better than by tranſcribing the following paſſage from an ingenious modern traveller.

"This duchy (ſays he) is an exact reſemblance of Poland in miniature; the ſame ariſtocracy, the ſame turbulence, the ſame political evils exiſt in both. If the duke ſhould have male iſſue by his preſent marriage, it is probable Ruſſia will preſerve the inheritance in the Biron family, as they are the creatures of its own production, and dependant on it; but, on a contrary event, the fate of Courland is very precarious. Poland is already diſmembered and divided; Pruſſia inveſts it on one ſide, and between that kingdom and the empire of Ruſſia, this little province may have the fate of its feudal parent from the ambition or avidity of one or the other monarch. The rights of humanity, of juſtice, and of liberty, have been ſo trampled on and deſpiſed in the partition of Poland, that no future action of a ſimilar nature can ſurprize in the preſent age. The duke is a lover of letters, and has lately begun an academy in Mittaw, which is almoſt compleated, and where profeſſors will be entertained at his own expence for the inſtruction of the young nobility and perſons of condition in the duchy. This is a very laudable foundation, and does him great honour."

VI. WARSOVIA.

THE province of Warſovia, or the duchy of Warſaw, is the moſt conſiderable part of the king of Poland's dominions, being the regal reſidence, and the part where

where the moſt conſiderable of the nobility reſide. It has the kingdom of Pruſſia on the north, Upper Poland on the ſouth, Lower Poland and Gujavia on the weſt, and Polachia, which parts it from Lithuania, on the eaſt. It is about 120 miles in length from ſouth-weſt to north-eaſt, and about 90 in breadth. It has the benefit of ſeveral navigable rivers, eſpecially the Weiſſel, which runs through the ſouth part; and the Bug, which paſſes quite acroſs from eaſt to weſt. The country is plain, fruitful, yielding plenty of corn, cattle, fiſh, and fowl. It was formerly governed by princes of its own, but in 1526, fell to the king of Poland. The people, who are generally warlike, ſpeak the ſame language with the Poles, only they differ in a few guttural accents; and their manners, habits, and religion, are much the ſame. It is divided into three palatinates, of which Maſovia Proper is ſubject in ſpirituals to the biſhop of Poſen, and has eight ſenators.

The capital of this province, and indeed the metropolis of all Poland, is

Warſaw, on the weſt ſide of the Weiſſel, 120 miles to the eaſt of Gneſna; 151 ſouth from Koningſberg; 154 ſouth-eaſt of Dantzick; and 133 north of Cracow. It is a large, handſome, populous, and trading city, defended by a double wall and a ditch. The kings of Poland uſually keep their court here, in a noble large ſquare palace, built by Sigiſmund III. and beautified by his ſucceſſors; and the grand diets of the kingdom have their ſeſſions here. The city is divided into four parts, viz. the old and new towns, the ſuburbs of Cracow, and the Brag. The chief church, dedicated to St. John the Baptiſt, is very fine; as are the arſenal, the caſtle, the market place, and other public buildings. There is a wooden bridge of excellent workmanſhip over the river, and beyond it the king's palace, called Viaſdow, where the general diet meets. It was built by Uladiſlaus VII. and ſtands amidſt delicate gardens and groves; and not far from it, in the ſuburb called Cracow, there is a ſmall chapel erected by the king of Poland, in token of a victory over the Moſcovites; wherein is a ſepulchral monument of Demetrius Suiſcius, great duke of Moſcovy, who, being taken priſoner, died a captive in Poland.

Goods are brought to this city by the neighbouring rivers, and ſent from hence to Dantzick. The king of Sweden took poſſeſſion of this city in 1704, put a garriſon into the caſtle next year, when he demanded 2400 florins a week for their ſubſiſtence; but in 1706, king Auguſtus recovered both the town and caſtle, and the town paid him 50,000 rixdollars to be exempted from plunder. In 1705, the Swedes defeated the Saxons and Lithuanians near this city, when the Saxon general Patkul was taken priſoner; and next year Staniſlaus, king Auguſtus's rival, was crowned here with his queen. In 1707, the Moſcovites plundered the palaces and gardens of the king and nobility here, and ſent the ſtatues, &c. to Moſcow. Next year a plague raged here, that is ſaid to have carried off near 30,000 people; and a fire broke out, which continued burning nine days, and almoſt reduced the whole city to aſhes. In 1712 king Auguſtus returned hither, and held a general diet, which re-acknowledged his title; and in 1715 he ordered this city to be fortified with intrenchments, to prevent ſurprize by the Swedes, and their confederates.

The baron de Pollnitz ſays, he obſerved the ſame politeneſs here as at Paris; that the king maintains a ſet of French comedians, and frequently gives balls and concerts, with noble feaſts, for the entertainment of the nobility: and that the ladies, eſpecially, are paſſionately fond of muſic and plays; are very amiable, witty, and ſprightly; and have a moſt delicate taſte for every thing that paſſes under the name of diverſion.

About half a league from this city, near the village of Wola, there is a plain, where the nobles meet, and incamp in tents, for the election of a king; and about a league from the city there is another palace, that was built by king John Sobieſki, with the name of Villa Nova.

Czerſko, or Czeſtochow, is a ſmall city on the weſt ſide alſo of the ſame river, 18 miles ſouth from Warſaw. It is the capital of its palatinate, and is reckoned the ſtrongeſt city in this part of the country, it having a fortreſs, wherein is kept that rich treaſure called the Virgin's; and the nobility ſend their beſt effects hither in time of war. It was beſieged, in vain, by Charles Guſtavus, king of Sweden.

Wiſchgrod ſtands in a plain, and is defended by a ſtrong caſtle near the Weiſſel, where it receives the river Bug, 17 miles from Ploczko, and 33 north-weſt from Warſaw. The buildings are of timber.

Lumſa, or Lombze, is a large city on the navigable river Narew, with good buildings, 20 miles from Novogrod, and about 100 north-eaſt from Warſaw.

Pultovia, or Pultowa, on the ſame river, is 27 miles north-eaſt of Warſaw. It is noted for being the reſidence of the biſhop of Plocſko. The town is walled and well-built, with ſtately public edifices, and a ſtrong caſtle.

VII. POLACHIA.

POLACHIA hath Warſovia on the weſt, Lithuania on the eaſt, the palatinates of Poleſia and Lublin on the ſouth, and the kingdom of Pruſſia on the north. It is 120 miles long from north to ſouth, and 30 in breadth from eaſt to weſt. The chief places are

Auguſtaw, a handſome town on a lake founded and named, from king Sigiſmund, Auguſtine.

Bielcz, a large town on the river Biela, where the Jews carry on a great trade.

Bialyſtock, a ſmall town, of which great part was deſtroyed by fire in the year 1753. In the neighbourhood is a very fine ſeat and gardens belonging to the Banicki family.

Tykoczin is a conſiderable town, with a handſome caſtle, on the river Narew. In 1705, in this town, Auguſtus II. king of Poland, inſtituted the order of the White Eagle.

VIII. POLESIA.

THE palatinate of Poleſia lies ſouth of that of Novogrodeck, betwixt Red Ruſſia on the ſouth-eaſt, Lublin on the north-weſt, Mazovia on the weſt, and that of Novogrodeck on the north. It is overgrown with woods, has many lakes and pools; is 230 miles from eaſt to weſt, 80 from ſouth to north; and has two ſenators, viz. the palatine and caſtellan of its capital, which is,

Brieſcia, a large wooden city, which has a bridge over the river Bug, on the confines of Lithuania, 50 miles ſouth of Bielſk, and 95 eaſt of Warſaw. It is fortified with a caſtle built on a rock, and waſhed by the river Muchavecz. Here is an academy, the moſt famous in Europe for Jews, who frequent it from Italy, Germany, Moravia, Sileſia, &c. and take degrees. Without the city there is a royal palace of modern architecture, with variety of pleaſant gardens.

Pinſko is another timber-built city, 75 miles eaſt of the former, on the river Peripet, which, paſſing by divers towns in Ruſſia, falls into the Boriſthenes. It is a pretty large town, the inhabitants are very induſtrious, make ſeveral trading journeys into Ruſſia and Germany, and are generally of the Greek perſuaſion, there being a biſhop of that ſect reſident among them. This town has ſuffered much by the ravages of the Coſſacks.

Biala, 20 miles ſouth-weſt of Brieſcia, is famed for a palace belonging to prince Radzivil, which is now a Gymnaſium, or college for the inſtruction of youth.

IX. RED-RUSSIA.

Red Ruſſia is bounded on the ſouth by Hungary and Moldavia, on the eaſt by the Tartarian deſerts, on the north by White Ruſſia, and on the weſt by Little Poland. It is near 180 miles in length, and upwards of 100 in breadth, fertile in ſome parts, but mountainous in others, and in general well watered through the whole.

Red Ruſſia is divided into three palatinates, viz. Lemberg, Chelm, and Belz.

The palatinate of Lemberg is ſituated in the ſouth part of Red Ruſſia, eaſt of Cracow, and north of Hungary, and has nine ſenators.

The city of Lemberg, or Leopold, is the capital of the palatinate of the ſame name, and alſo of all Red Ruſſia. It is a large opulent city, ſituated among hills on the river Peltew, at the diſtance of 135 miles ſouth-

east from Warsaw. It is the see of an archbishop, who is deemed both a spiritual and temporal lord. This city is large, well built, and well fortified, having two castles, one within the walls, and one without, on a rising ground, that commands the town; both which, together with the city, were founded by Leo, duke of Russia, about anno 1289. The churches are generally fair and well built, and abound with costly ornaments of all kinds. Here is an academy, supplied by professors from that of Cracow, where learned men are much encouraged. The Armenian Roman Catholics have dwelt here time out of mind, and are wholly governed by their own prelate: they enjoy great privileges, on account of the considerable commerce they maintain with the Persians, and other eastern nations. They are not only provided with fish for their own consumption, from the many ports belonging to it, and from the neighbouring rivers, but salt great quantities for exportation. Barbels are taken in great numbers in Roxolania. Here is kept a very famous winter fair, to which the Hungarian, Moldavian, and Turkish merchants resort in great numbers.

Javarow, 35 miles west from Lemberg, is famous for a natural bath, whose virtues are described by a Polish physician, named Sixtus Leo.

Premislaw is a populous, pleasant, trading, and well built city, and an episcopal see on the river Saa, 53 miles west from Lemberg. The Russians have a bishop here, and the Jesuits had a college. The city is defended by good strong walls, and a castle built on a rock on the other side of the river: it has several famous yearly fairs. The king has a very spacious park near it, full of all kinds of wild beasts, and strongly walled in, that they may do no mischief. The country abounds with castles, to keep off the Turks and Tartars, the chief of which is said to be that called Crassici, built on the river Saa.

Jaroslaw, on the same river, 62 miles west from Lemberg, and 110 east from Cracow, is defended by a castle, and famed for a fair on Lady-day, the most famous in Poland, frequented by merchants, with their goods from Persia, Constantinople, Venice, Russia, and Holland. There are usually brought hither at that time, 400,000 black cattle, and 200,000 horses. There is a college here, and without the town a stately nunnery.

Resovia stands on the river Wistoch, six miles south-west from Lansut, and has a strong castle, an annual fair, and a linen manufactory, carried on by the descendents of the Germans, whom Casimir the Great took prisoners, and settled here to manage it.

Lencut, or Lansut, 85 miles west from Lemberg, has a strong castle, and several magnificent churches.

The south-east part of Red Russia is called Pocutia, or the district of Halicz. It has the mountains of Transylvania on the south and west, and Moldavia on the east, and gives rise to the river Niester, which divides it into two parts.

Halicz is a town situated 42 miles south-east from Lemberg. It was once the metropolis of a kingdom, then the capital of a duke, and afterwards the see of an archbishop, which hath since been translated to Lemberg, so that now it is greatly fallen from its antient splendor, though it is still a large town. The castle is strong, the houses are of wood, the inhabitants are remarkably clownish, and the situation is at the conflux of the Niester and Prut.

Coloni is a town built of wood on the river Prut, 88 miles south-east from Lemberg. It is much frequented on account of the fine salt, with which it furnishes all the rest of Red Russia and Lithuania, there being many springs here, and none at all in these provinces, except only in the district of Premislaw.

Crosna, on the river Wislock, 84 miles south-west of Lemberg: it is the staple of Hungary, whose wines, and other merchandize are brought hither, and disposed of at these fairs, which are more frequented than those of their neighbourhood.

Sniatyn, on the river Prut, and the confines of Wallachia and Moldavia, 40 miles south-east of Halicz, is by some reckoned the capital of Pocutia. It is a wooden palisadoed town, watered by the Prut, and had formerly fairs, which the Wallachians made their magazine, from whence it became well furnished with cattle, honey, and wax, and an excellent breed of horses.

The palatinate of Chelm contains the town of Chelm, from which it receives its name. It is the see of a bishop, suffragan to the archbishop of Lemberg, and situated 110 miles south-east from Warsaw. The bishop, whose see it is, does not reside here, as a Greek bishop, a staroста and a castellan do.

Krasnostow, a town on the Vieprz, has a court of judicature, and is the residence of the bishop of Chelm, and of a staroста.

The palatinate of Belz contains Horodla, where a provincial diet and court of judicature are held, and a staroста resides.

Rava, a small town where the king Augustus entertained the czar Peter the Great in the year 1698 for three days successively.

Belz, a considerable town, from which the palatinate receives its name. Here a palatine, castellan, and staroста reside, and a provincial diet and a court of judicature are held.

Zamoski is a town strongly fortified, has many considerable privileges, contains a charitable foundation called Mons-Pietatis, and several churches, and was originally founded by the celebrated Zamoski, great chancellor of Poland, in a very pleasant plain on the banks of the Vesne.

X. PODOLIA.

PODOLIA, or Caminiec Podolski, is watered by the river Smortzick, and is situated about 110 miles below the Dniester. The principal places are the following.

The city of Caminiec Podolski, the capital of the province, is 224 miles east from Cracow, and 230 south-east from Warsaw. It is a populous well built city, surrounded with high rocks, besides being fortified with walls, a deep, broad, and steep ditch filled with water by the river which surrounds it, and by a very strong castle, so that it is the strongest place on this side, and used to be reckoned one of the keys of Poland. In the reign of king Sigismund III. it was taken by the Cossacks. It has been attacked several times by the Walachians, Turks, and Tartars. In 1669 it suffered miserably by fire, and in 1672 was taken by the Turks, who kept possession of it, and thereby often made inroads into Poland, and carried away vast numbers of captives, till it was agreed to be surrendered by the peace at Carlowitz in the year 1609, and evacuated next spring to the Poles, when the diet resolved, that this town and Podolia should be free from taxes for 10 years. It is the see of two bishops, one a Papist, the other an Armenian. The Greeks of Podolia pleaded to be restored to their churches, but were denied.

The Lower Podolia, which is the east part, and also called the palatinate of Braclaw, from its chief town, on the river Bog, 40 miles from the confines of Moldavia. It was taken by the Turks in 1672, but restored by the treaty abovementioned in 1699.

Winnicza is a town on the same river, 54 miles north-west from Braclaw. In 1560 it was taken by the Cossacks. It has a court of justice and a college.

Zbaras, a little city on the frontiers of Lower Volhinia, 10 leagues north from Braclaw, which was besieged in vain by an infinite number of Cossacks and Tartars for two months in 1649.

Human, about five leagues west from the frontiers of Lower Volhinia, was besieged and taken in 1675 by the Turks, who committed great barbarities here contrary to the capitulation, ravished the fair sex, murdered the old people and young children, and carried into slavery all that were able to walk.

XI. VOLHINIA.

VOLHINIA lies east of the palatinate of Chelm, is 310 miles in length from south-east to north-west, and 190 miles in breadth where broadest, and is divided into Upper and Lower Palatinates.

The Upper, which is also called the Palatinate of Lusuc, or Lucko, from its chief town, has Chelm and Belcz on the west, Polesia on the north, Podolia on the south, and the Ukrain on the east. It is a plentiful country, near 200 miles in length, and 100 in breadth. Its chief town stands on the river Ster, near a lake,

which encompaſſeth part of the caſtle, 90 miles north-eaſt from Lemberg. It is a large city, built of timber, and the ſee of a biſhop, ſuffragan to the archbiſhop of Gneſna, but is chiefly inhabited by Jews, Armenians, and other eaſtern people, who traffic in theſe countries. The cathedral and chapter-houſe are in one of the caſtles, there being two built on hills near this city. Here alſo reſides a Ruſſian biſhop.

Pilaveze is a ſmall city on the river Bug, two leagues from Chmielnich.

Krzemenec, the capital of the diſtrict of Cremen, is a ſmall timber built city, on a hill near the river Icua, or Ikwa, 35 miles ſouth-eaſt from Luſuc, with a wooden caſtle, founded on a rock, and mud walls. It has been often plundered by the Tartars.

Ulodimir, or Woldzimiers, is another wooden town, with wooden fortifications, built among the marſhes, 48 miles weſt from Luſua. It is the reſidence of a Ruſſian biſhop, with a conſiderable juriſdiction. It lies on the river Lug, which falls a little lower into the Bog.

Brodi is a town with ſtrong fortifications, a collegiate church, and a public academy.

Olika is a town, with the title of a duchy, belonging to the family of Radzivil, adorned with a fair cathedral, and an academy for all ſorts of arts and ſciences, 20 miles eaſt from Luſuc.

Conſtantinow, adorned and defended by a well-fortified caſtle, ſtands near the ſource of the river Slucz, 75 miles north from Caminiec.

The Lower Volhinia, commonly called the palatinate of Kiow, together with Lower Podolia, comprehended in the Ukrain, lies eaſt from the Upper Volhinia; and the river Boryſthenes, or the Nieper, paſſes through the middle of it, from north-weſt to ſouth-eaſt, dividing it into two parts, of which only the weſtern is now ſubject to Poland; the eaſtern being under the Ruſſians; the former is fruitful, but the latter, which however abounds with ſalt-petre, is a mere deſert, by reaſon of the neighbourhood of the Tartars.

XII. UCRANIA.

THIS is a large country, bounded on the north by part of Poland and Ruſſia; on the ſouth by Little Tartary; on the eaſt by the Ockzahow-Tartars; and on the weſt by Moldavia. The name Ukrain is Sclavonic, and ſignifies a frontier, which it really is againſt the Turks and Tartars. This is the country of the Coſſacks, who have their name from Koſa, a ſcythe, their uſual weapon; or Coſa, which, in the Ruſſian language, ſignifies a free-booter, or plunderer. They were originally a crew of diſſolute rovers, that aſſembled together, from the frontiers of Ruſſia, Volhinia, and Podolia, to practiſe piracy on the Black Sea. Their chief habitation was betwixt the rivers Nieſter and Nieper; but they extended themſelves a great way eaſt from the latter. The Coſſack language is a dialect of the Poliſh, and is full of diminutives and pleaſant expreſſions. Their common people are of the Greek church; but the better ſort are generally Romans, or Proteſtants. Their firſt conſiderable appearance, as an united body, was in 1548, in the reign of Sigiſmund I. king of Poland, when they called themſelves volunteers, and aſſembled, to the number of 6000, for defence of the country againſt the Turks and Tartars, whom they frequently intercepted at the paſſes of the Nieper, when returning with their prey. Being ſoon joined by multitudes to ſhare their booty, they could, with ſhallow boats, paſs thoſe rocks in the mouth of the Boryſthenes, that hinder the navigation from the Ucrain to the Black Sea; and, during the ſummer, they roved all over that ſea, and its coaſts, making deſcents upon Natolia, and pillaging and ſpoiling wherever they came, even to the walls of Conſtantinople. Stephen Bathori, king of Poland, formed them into an orderly militia; and, intending to uſe them againſt the Tartars, gave them the town and territory of Trethimirow in this palatinate, (which they made their magazine) appointed a general over them, and gave them many privileges; and for ſome time they did the Poles great ſervice, by oppoſing the Tartars: yet being ſenſible of their ſtrength, they began to ſet up for themſelves; and in the year 1589 rebelled; but their general being taken and executed, it was for a time quieted. About the year 1600 they were ſo powerful, that the Poles were forced to raiſe a large army againſt them, who often worſted them, and took their generals; but ſtill they continued mutinous: wherefore their privileges were taken away, and they continued in a ſtate of enmity, till about the year 1640, when king Uladiſlaus VI. making war upon the Tartars, collected them together, and ſet over them for a general Chmielniſki, who was afterwards a bitter and formidable enemy to Poland; for the Coſſacks being oppreſſed by the Poliſh nobility, their landlords, and on complaint receiving no redreſs, they aſſembled in vaſt numbers; and, calling in the Tartars, furiouſly attacked the Poles; but king John Caſimir made ſuch a ſtand againſt them, that in 1649, the Tartars accepted a peace. Chmielniſki, having obliged the prince of Moldavia to join him, it produced another war in 1651, wherein the Tartars and Coſſacks were worſted, and ſince that time they have not been ſo conſiderable.

In 1677, this country was reſigned by the Poles to the Turks, with liberty to the Coſſacks of this part to chuſe their own general, or prince, dependent on the ſultan, who kept poſſeſſion of it till the year 1699, when by the peace of Carlowitz it was reſtored to the Poles. The only towns of note, on the weſt ſide of the Nieper, are,

Bialacerkiew, about 40 miles ſouth of Kiow; and

Trethimirow, on the Nieper, 59 miles above Kiow, a ſtrong place, and defended by a caſtle. It is the ſame which was given to the Coſſacks by king Bathori.

Czykaſſy, which uſed to be the chief retreat of the Coſſacks, ſtands near the ſame river, 80 miles above Kiow. It was burnt by the Poles in 1636, but has been ſince repaired.

SECT. III.

Of the Perſons, Cuſtoms, Manners, &c. of the Poles.

THE ſharpneſs of the air in the greateſt part of the Poliſh territories greatly invigorates the conſtitutions of the people, while coarſe food, and hard exerciſe contribute to the encreaſe of their ſtrength and hardineſs. They are above the common ſize, better made than the Ruſſians, of a fair complexion, and have uſually yellow or ſandy hair. Their general character, however, is that of an illiterate, vain, brutal, and bigotted people. Scarce any of the common people can write, and indeed very few of them can read. They have but very imperfect ideas of morality, or the ſocial virtues; and the ſcenes of tyranny and oppreſſion, in which the preſent generation were born, and through which they are ſtill ſtruggling, ſeem to have debaſed all the faculties of their minds, and to have inured their ſouls to inhumanity.

With reſpect to the ſuperior people of Poland, like thoſe of Ruſſia, they are rather ſatisfied with a trifling and ſuperficial knowledge of things, than to carry their literary purſuits to any great height.

The Poles, like moſt of the northern nations, and like all governments where the feudal laws, or at leaſt their remains, prevail, are divided into four diſtinct claſſes, viz.

1. Nobles.
2. Clergymen and lawyers.
3. Merchants and burghers.
4. Farmers, labourers, ſoldiers, &c.

A late writer ſays, "From the connections which they (the Poliſh nobility) have had for above an hundred years paſt with France, they appear, at firſt view, to be very polite and well bred; but there is no nation in Europe where this claſs of people is ſo much debauched and corrupted as they are at preſent in Poland, having no controul upon their actions; and as the monks and inferior clergy, who are their confeſſors, depend in ſome meaſure upon them, ſo that they have always abſolution, they give a looſe to their paſſions, and to tyranny and oppreſſion add luxury and brutality."—It is true their independency, and the arbitrary power which they have over their ſlaves, together with their want of a moral education, contribute greatly to that ſtate of degeneracy

in which they are at preſent. They regard themſelves as ſo many little ſovereigns in their reſpective fiefs, and look upon their fellow creatures as their perſonal property.

The clergy are illiterate and ſuperſtitious, but have a great aſcendancy over the common people; and as they have very conſiderable authority in the diets, their power is as great in temporal as ſpiritual matters. In mentioning the Poliſh clergy, a late traveller ſays, "There is no part of Europe perhaps, where they have made a greater abuſe of their power, conſidering the obſtinacy and independency of the nobles, than in this kingdom; they have uſurped the greater part of the property, as well as of the authority of the ſtate; they have been the principal cauſe of reducing ſeveral millions of people, though they were their fellow-creatures and Chriſtians, to ſuch a ſtate of ſlavery and oppreſſion, as is a diſgrace to every civilized and well-regulated ſociety."

The only traders of Poland, who have any ſkill in mercantile affairs, are the citizens of Dantzick, and the Jews who are ſcattered throughout the kingdom. The Poliſh mechanics are very aukward, and the artiſans in general are but little acquainted with modern improvements. A recent writer ſays, "There are undoubtedly men of good natural talents among the citizens and trading part of the Poliſh nation; but in the firſt place they are kept very poor by the Jews, who being protected by the nobility, carry on almoſt all the inland trade of the kingdom; ſecondly, they are not properly inſtructed in their reſpective trades; and thirdly, they are kept in a ſtate of oppreſſion, and are in many reſpects denied the common rights of mankind.—The farmers and labourers, who form the bulk of the people, are in ſuch a deplorable and wretched ſituation, as would draw tears of compaſſion from every humane and well-diſpoſed perſon. The ſituation of the negroes, in many of our Weſt-India plantations, is ſuperior to theirs. They have no other ideas but thoſe of tyranny and ſlavery. The wretchedneſs of their ſituation makes them indolent and careleſs about life, as they have reflection enough to perceive, that coarſe food and raiment are all they can expect in this life; but thoſe among them, to whom nature has given any talents, have ſenſibility enough at times to feel the weight of their oppreſſion, which deſtroys all kind of emulation, and through reſentment prevents them from doing any more for their oppreſſors, than they are forced to do by acts of violence."

The nobility, merchants, and ſuperior tradeſmen of Poland, dreſs after the faſhions of the Engliſh and French, though in a few trivial articles they retain ſome of their original modes. The ladies abhor painting, but in general are very coarſe and indelicate in their manners; and the common people go dreſſed in the ſkin of bears, and ſometimes are reduced to the neceſſity of living in caves, and holes in the ground, being ſo wretchedly poor as to be incapacitated from even building a ſmall hut.

The Poliſh tongue, which is a dialect of the Sclavonic, is not copious; and is at the ſame time harſh and hard to pronounce; for it ſo abounds with conſonants, that ſome words have ſeven or eight without any vowel; yet in ſpeaking they ſound them with vowels.

Their diet is generally freſh meat, fowl, and fiſh; and they drink the ſtrongeſt of rheniſh, French, Spaniſh, Italian, and Hungarian wines; brandy, aquavitæ, aniſeed-water, and other ſpirits. Their ſauces, &c. are ſo enriched with ſpices, that ſome of the nobility ſpend great ſums in that commodity; and their uſual breakfaſt is, a hot-pot of beer, with eggs, ſugar, and ginger. They hang the carcaſes of elks at their gates till they ſtink, then dreſs and eat them, as a great curioſity, to be met with no where but at the tables of the chief nobility; yet their butchers meat is delicious, and they have plenty of good fiſh. When they are invited to another's table, they muſt carry their ſpoons, knives, &c. with them; and their linen too, if they would be cleanly: for they have no napkins, but a broad piece of ſtarched linen ſewed round the table-cloth, that their ſervants may not ſteal it. The ladies carry napkins with them, and put up as much ſweetmeats and dried fruits as they pleaſe. The maſters reach meat from the table to the ſervants, who eat it as they ſtand by the chairs: and the maſter of the feaſt is reckoned a niggard, if he does not make his gueſts drunk.

M. Pollnitz ſays, the Hungarian wine, though very dear, is drank in common; but he obſerves, it is the cuſtom for the maſter of the houſe, and his intimates, to drink the beſt wine, while the other gueſts that are invited are obliged to put up with the common ſort. The houſes are generally low, for they ſeldom lie above ſtairs. Some of them are of brick and ſtone, but the greateſt part of wood. The kitchen is on one ſide of the court, the ſtable on another, the dwelling-houſe is on a third, and the gate in the front. The richer ſort have hangings of tapeſtry, or arras, and beds with taffata curtains; but ſeldom any accommodation to lodge ſtrangers.

The inhabitants of Poland were converted from Paganiſm to Chriſtianity, by Aldebert, archbiſhop of Gneſna, about the year 964, and ever ſince the religion of the church of Rome hath been predominant here, except in Red Ruſſia, where many of the people adhere to the Greek church. Some of the Greek church ſubmit to that of Rome, and are called Uniti, or Uniats, but have their worſhip in Greek. They have alſo Armenians, who comply with the church of Rome, but have their worſhip in their own language.

The king, though a Papiſt, is obliged, by his coronation oath, to tolerate Lutheraniſm in Poliſh Pruſſia, where there are whole cities of Lutherans, as Dantzick, Elbing, Thorn, and Marienburg; and ſome Calviniſts, eſpecially in the ducal Pruſſia. Fauſtus Socinus was of this nation; and his followers from him, called Socinians, grew numerous in the laſt century: but king John Caſimir made an edict againſt them, which was inforced by his ſucceſſor king John Sobieſki, who drove them quite out of the kingdom. The generality of the Papiſts here are very great bigots, and their intereſt is ſtrengthened by the preſidences of their biſhops in the grand and petty diets. The inferior clergy have a place alſo in all courts of judicature; and the great ſecretary of the kingdom is always a churchman. The regular clergy, as they call the monks, are more eſteemed than the ſecular; and the Mendicant friers have the privilege to enter the privateſt room of any houſe without knocking at the door. The ſecular clergy are generally rich, but openly debauched; and are neither rebuked for it by their ſuperiors or the people. The inferior clergy ſeldom attend their office in the church, but give poor ſcholars two-pence a day to officiate for them; nor do the biſhops correct the inferior clergy for their miſbehaviour.

The common people may be drunk without rebuke on their faſt days, provided they abſtain from fleſh, &c. and they will not eat butter and cheeſe on ſuch days, though the pope give them a diſpenſation; as he did in cardinal Radzioufki's time; for which they called that pope a heretic. At the elevation of the Hoſt the people knock their heads againſt the pavement, or benches, hard enough to be heard at a diſtance. Their churches are fine, and well adorned; and the prieſts affect rich veſtments. The prieſts at Leopol have a cape they wear at maſs, ſo thick embroidered with pearl and jewels, that it is a perfect burden. In winter, the ladies, and ſome of the men, have furred bags in churches, that they may preſerve their feet from the exceſſive cold.

Moſt of their diſeaſes proceed from their drunkenneſs, to which they are ſo addicted, that they have a proverb ſignifying, "That a man may as well drink water as wine, if he does not feel the effects of drinking." The diſtemper peculiar to the Poles, is that called the Plica; in which the hair of the head is matted together and entangled in one night's time, in ſpite of all care to prevent it. If it be cut off, it occaſions a dimneſs of ſight, if not a total loſs of it, together with an eruption of puſtules all over the body, and pains in the head and limbs; yet foreigners, who have been infected with it, ſay, they have cut off their hair without any bad conſequence. The Poles are not much troubled with other diſeaſes; and the ſcurvy, malignant fevers, and pleuriſies, are ſeldom of ſuch ill conſequence here as in other countries.

The baptiſmal and matrimonial ceremonies in Poland are the ſame as in other Roman Catholic countries, but the funerals of the people of quality are ſo pompous and magnificent, that they look more like triumphs. The corpſe is carried in a hearſe or chariot drawn by ſix horſes,

horſes, all covered with black. The coffin has a large black velvet pall over it, with a croſs of red ſatin in the middle, and ſix long black ſilk taſſels, ſupported by ſix of the deceaſed's domeſtics in cloſe mourning. Several prieſts, monks, and others, walk before the hearſe with wax tapers; and immediately before it come three men on horſeback, who carry the arms of the deceaſed, one his ſword, another his lance, and the third his dart; and as ſoon as the funeral ſervice is over, they ride furiouſly into the church, break the arms of the deceaſed upon the coffin, and the body is interred; after which there is a feaſt, where both clergy and laity drink to exceſs. When women of quality mourn, they wear courſe black ſtuff, and their linen is not much better than canvas; and the greater the quality, the coarſer are the mourning weeds. When the king dies, he is laid on a bed of ſtate, and a certain number of ſenators, eccleſiaſtical and temporal, are appointed to attend his corpſe. The republic defrays the funeral expences out of the revenue of the crown. The queen has the ſame honours paid her, when ſhe dies, as the king; and all the ſenators, deputies, &c. that repair to the diet for the election of a king, muſt be in black.

By the laws of Poland the eſtate of the father is equally divided among the children, except any of them go into a monaſtery, in which caſe their parts are divided amongſt the reſt; and the younger children here, as in other Popiſh countries, are encouraged by their parents to take the vow upon them, that their eſtates may be preſerved entire to the eldeſt ſon.

Their method of hunting bulls and bears is this: they ſurround the wild bulls with a great number of horſemen, of whom every one rides up and darts an arrow at him, upon which the creature purſues him, during which another darts him behind; whereupon he faces about to purſue the latter; and thus by turns they ſo harraſs him, that the beaſt, being quite tired with purſuing ſo many aſſailants, falls down, and is eaſily taken. Another way of taking them is by felling a great number of trees, and thereby incloſing them, when each hunter, having his poſt, throws darts at him; and as the bull runs towards his enemy, the hunter from behind gives him his death-wound; but if he breaks through the incloſure, the next hunter holds out a piece of red cloth, againſt which the beaſt having an antipathy, he forthwith leaves that perſon, and runs at another, who, being provided for him, commonly kills him. When they go a hunting for bears, they take thoſe of the biggeſt ſize with nets; and, when they have hampered him, all the hunters ride about him, and having pinned down his head and feet with great wooden forks, they ſo bind him about with ſtrong hempen cords, that he is not able to ſtir; then they roll him into a great wooden cheſt. The knots of the cords are ſo contrived, that with one pull they may be untied. The bear is kept thus till they have a mind to hunt him, and then they let him out of a trap-door made for the purpoſe.

SECT. IV.

Of the Conſtitution and Government of Poland.

SINCE the diſmemberment of Poland, no regular form of government can be ſaid to exiſt in that unhappy country, for the three partitioning powers, who act in conſort, direct every thing as they think proper, while the king of Poland, the ſenate, and diet, are only the tools to execute what theſe command. It is, however, incumbent on us to give an account of the conſtitutional form of government which pervaded the whole kingdom before it was diſmembered, and which, in ſome meaſure, ſtill ſubſiſts in that part of it which the partitioning powers permit the king of Poland, as yet, to enjoy.

The conſtitution of Poland is the only perfect remains of the Celtic government, viz. the union of a republic with regal dignity. This government was once one of the freeſt and moſt regular imaginable, though, at preſent, it is one of the moſt tyrannical and oppreſſive. "Every gentleman (ſays a learned writer) has a right to give his voice at the election of a king, and even to be elected himſelf; but this is one of the ſources of all their evils, and of the vitiated ſtate of their preſent government. The throne, ſince the extinction of the family of the Jagellons, has been always put up to the beſt bidder; and as there have been few of the Poles rich enough to buy it, it has often been ſold to ſtrangers."

The Poles have no written laws older than the reign of Caſimir the Great; viz. the 14th century; before which time they were governed by the cuſtoms of their anceſtors: but he brought in the Magdeburg laws, now called the conſtitution of Poland; yet Lithuania, Volhinia, and Pruſſia, have ſtill their own municipal laws; thoſe of the Royal and Ducal Pruſſias, in particular, being called the laws of Culm.

Concerning the form of government in Poland, it is to be obſerved, that the Poles live under one head, who bears the title, and lives in the ſplendor becoming a king; but if you conſider his power, as it is circumſcribed within very narrow bounds, he is in effect no more than the prime or chief regent in a free commonwealth; ſince he can do nothing without the bounds of that authority which the laws of the land have given him, and the nobles take care to maintain.

For the adminiſtration of juſtice, civil and criminal, ſeveral courts, as uſual, are held in Poland; but the moſt conſiderable are the parliaments, compoſed of a certain number of gentlemen, clergy, and laity, who are choſen in each palatinate, the lay members once in four years, and the eccleſiaſtical once in two years. Of theſe parliaments there are two for the kingdom, and one for the duchy: thoſe for the kingdom ſit at Lublin in Upper, and Petricow in Lower Poland: and that for the duchy is held once year at Vilna, and the other year at Minſki, or Novogrodeck, by turns. Theſe courts receive appeals from inferior courts, and from them lies no appeal, except to the king and ſenate.

A king of Poland can neither marry, nor divorce a wife, without conſent of the republic. If he marries after his coronation, the queen cannot be crowned without his aſking their conſent, nor even then, unleſs ſhe be a Roman Catholic. When ſhe is to be crowned, the king muſt conduct her to the church, and preſent her to the archbiſhop of Gneſna, or the biſhop who anoints her with the conſecrated oil, and puts the crown upon her head, the ſceptre into her right hand, and the globe of gold into her left. The queens of Poland have no officers but a marſhal and a chancellor, neither of whom are ſenators, but only judges of the differences that happen among her domeſticks. They anſwer the harangues that are made to the queen when an ambaſſador makes her a compliment in his maſter's name, or when a preſent is made to her at the marriage of a maid of honour. The king furniſhes the queen with money to defray the charge of her houſhold; but after his death ſhe muſt maintain herſelf, and all her retinue, with the revenue which the king beſtows upon her, with the conſent of the republic, both for her dowry, and for her marriage-preſent. Theſe revenues are called the Reformation, and conſiſt of the reverſion of a certain number of ſtaroſties, which ſhe cannot enjoy till they become vacant by the death of the preſent poſſeſſors: and ſometimes thoſe who poſſeſs the ſtaroſties that are in her reformation, outlive her: but if the king dies before the queen's reformation be ſettled upon her, the republic allows her a yearly penſion out of the crown-lands.

The titles of the king are, king of Poland, great duke of Lithuania, duke of Ruſſia, Pruſſia, Maſſovia, Samogitia, Kiovia, Volhinia, Podolia, Podlachia, Livonia, Smolenſko, Severia, and Czernichovia.

All his revenue is clear to himſelf; for he pays no troops, not even his own guards; all the public expences being provided for by the ſenate; and all the officers of the houſhold are Poliſh gentlemen, who ſerve without ſalary, in expectation of ſome office.

A king of Poland may remit fines and capital puniſhments; and, upon invaſions or rebellions, can ſummon the nobility to his ſtandard. He can engage mercenary troops, create officers of the militia, diſband armies, and puniſh thoſe who tranſgreſs their duty. He appoints the governors and magiſtrates of towns, makes archbiſhops, biſhops, abbots, palatines, caſtellans, marſhals, counſellors, and treaſurers; who are all ſenators. He alſo appoints judges and magiſtrates of the provinces, ſecretaries, maſters of requeſts, and all ſuperior and inferior officers of the court. He can ennoble plebeians who

ſignalize themſelves either in peace or war, and grant the uſe and occupation of royal caſtles, towns, and villages, to ſuch as deſerve well of himſelf and the republic. He diſpoſes of the eſtates of thoſe who are proſcribed, or die without heirs. All the laws, leagues, negotiations, and embaſſies, muſt be in his name, and paſs under his ſeal; as do all letters patents, &c.

The ſenate conſiſts of 16 biſhops, beſides the primate, who is chief, and about 130 laymen named by the king, and are for life; viz. the ten great officers of ſtate of the kingdom of Poland, and duchy of Lithuania; to whom are added, the palatines and the leſſer ſenators, who are the caſtellans and lieutenants of the palatinates, and the deputies of the nobility. They are created by the king, after they have taken an oath to preſerve the liberties of the republic, by virtue whereof they controul the king, when he invades their privileges: and as this court is looked upon to be the bulwark of the commonwealth, againſt the attempts of the king, therefore four of the ſenators are always about his perſon, on pretence of being his counſellors, though, in truth, they are but ſpies on him. None of the ſenators can go out of the kingdom, without leave of the republic, not even for change of air, or to drink the waters, &c. for their health. In the general diets they ſit on the right and left hand of the king, according to their dignity, and not according to the ſeniority of their reception; and it is they who, with the king, approve and ratify all the conſtitutions which the nobility propoſe to them by their deputies: ſo that the ſenators are, as it were, mediators between the king and the nobility, to preſerve and defend the authority of the republic.

There are but 16 biſhopricks in Poland, of which Smolenſko and Kiovia are uſurped by the Ruſſians, and Caminiec by the Turks; but they are generally of a great extent, and endowed with conſiderable revenues.

The chief ſecular ſenators are, in number, 36, viz. 32 palatines, who are, properly, governors of provinces; three caſtellans, viz. of Cracow, Vilna, and Troki; and the ſtaroſt of Samogitia. It is obſerved, that though the quality of caſtellan and ſtaroſta is inferior to that of palatine, theſe four laſt-mentioned poſſeſs almoſt the firſt rank among the lay ſenators. The office of a palatine is, to lead the troops of his palatinate to the army, to preſide in the aſſemblies of the nobility in his province, to ſet a price upon goods and merchandize, to ſee that the weights and meaſures be not altered, and to judge and defend the Jews. He has a vice-palatine under him, who muſt take an oath to him, and who ought to have an eſtate in land, which they call Poſſeſſionatus.

The caſtellans are the next in dignity to the palatines, and there are two ſorts of them in the kingdom, who are uſually diſtinguiſhed by the title of great caſtellans, and petty or ſub-caſtellans. The number of the former, both in the kingdom and duchy, amount to 32, and that of the latter to 49; and they are all ſenators, lieutenants, or deputies of the palatines, and heads of the nobility, in their reſpective juriſdictions.

The Poliſh diets are of two kinds, viz. either ordinary or extraordinary. The ordinary diets meet every ſecond year, but the extraordinary diets only upon particular occaſions when ſummoned by the king. They ſit but ſix weeks, and one diſſenting voice impedes the paſſing of any law, or coming to any final reſolution concerning what hath been propoſed by the throne. Here are not only general diets, but dietines or provincial diets, and when the nobility enter into an aſſociation, either during an inter-regnum, or while the king is living, it is termed a confederacy. Indeed, to the great misfortune of the country, confederacies have been too frequent, as anarchy and confuſion are uſually their certain conſequences.

Every gentleman is a ſovereign prince in his own eſtate, and has power of life and death over his tenants, who are perfect ſlaves, without laws or privileges to protect them. They dare not leave their maſter's lands to go to another's, unleſs he violates their wives or daughters, ſo that they are often glad of that plea. If a gentleman actually kills one of his own ſlaves, he only pays 15 livres; and if he kills another's, he is only obliged to furniſh another, or as much money as will buy one, and to maintain the deceaſed's family. If one gentleman kills another, he cannot be executed without the king's conſent, ſo that they frequently eſcape. No ſoldiers can be quartered upon the gentry, and if any officer does it, he is ſentenced to die, or elſe declared infamous by the diet: nor can the king himſelf lodge at a nobleman's houſe without aſking his leave. Mean time, their houſes are ſuch ſanctuaries for delinquents, that though they may be arreſted there, they cannot be taken from thence without the maſter's leave. By the conſtitution of Poland, the gentry cannot be arreſted till convicted by juſtice, ſo that he muſt be firſt ſummoned to the tribunal, where he is to be tried: if he does not appear, he is declared contumacious; and if he does appear, and is convicted, he is then arreſted, and impriſoned, in order to be afterwards ſentenced, according to the laws and the nature of his crime. If a foreigner dies without iſſue, his eſtate falls not to the king, but to the lord of the manor. The product of the gentry's lands may be exported without paying cuſtom, and a certificate upon oath exempts the purchaſer from paying it. Neither the king nor the republic confers the title of prince on any but the ſons of the royal family; and though five or ſix of the chief families have, perhaps, the title of princes of the empire, it gives them no ſort of precedency. When their gentry travel into France or Germany, they aſſume the title of counts and barons, that they may have the eaſier acceſs to perſons of quality, eſpecially in Germany, where they ſcarce think any one a gentleman under a baron, and, conſequently, not worthy of their converſation. They never had any order of knighthood before that of the Immaculate Conception, erected by Sigiſmund III. with ſome privileges above the reſt of the gentry, who ſo much deſpiſed it, that the order ſoon came to nothing. King Auguſtus, in 1705, created that called the order of the White Eagle, in remembrance of his happily meeting the diet in Lithuania, when the Swedes and Staniſlaus thought to have intercepted him. The badge is a white eagle, crowned with diamonds. He conferred it on ſeveral lords, but the ſenators are diſtinguiſhed by wearing a golden croſs, with a badge in the middle of it.

His late majeſty, on the 26th of September 1736, (which was the anniverſary of his birth) created eight knights of a new order, in honour of St. Henry, of which he aſſumed the title of grand maſter. The badge of this order is a red ſtar with eight points, in the middle of which there is a repreſentation of the emperor Henry, and upon each ray or point appears the electoral ſword of Saxony. The ſtar is appendant, by a ſilver ſtring, to a ribband of crimſon velvet. Many of the gentry have ſuch large territories, that they can raiſe from 5000 to 10,000 men apiece, and maintain them, which makes them ſo proud, that when great mens lawſuits are decided by the diet, or other tribunal, the execution of the ſentence muſt be left to the longeſt ſword; for the grandees ſometimes raiſe five or 6000 men of a ſide, plunder and burn one anothers towns, beſiege caſtles, and fight it out, rather than ſubmit to the ſentence of a bench of judges. They eſteem themſelves, eſpecially the ſenators, above any German prince; want nothing of ſovereign power but the liberty of coining money, which is reſerved to the republic, and ſome of them are hereditary ſovereigns of cities, with which the king has nothing to do.

SECT. V.

Of the Commerce, Trade, Manufactures, Revenues, Reſources, and Military Strength of Poland.

THERE is no ſtate in Europe where manufactures are ſo badly conducted, trade ſo much neglected, and commerce ſo abſurdly regulated, as in Poland; for not only the laws of the ſtate, but even the diſpoſitions of the people, are diametrically oppoſite to commercial improvements; for, ſays a learned writer, "By the fundamental laws of the ſtate, no merchant, or manufacturer, is at liberty to purchaſe any landed eſtate, or to acquire any real property in the kingdom; and the pride and arrogance of the nobility and clergy are ſuch, that they look on thoſe uſeful members of ſociety with the greateſt contempt, and will, in many reſpects, ſcarcely give them the preference to their ſlaves. Hence it is, that their manufactures are in ſuch an unimproved ſtate,

and that all their inland commerce is carried on by Jews and foreigners, who take every opportunity to cheat and defraud thoſe who are ſupporting them.—The meaſure which the king of Pruſſia has lately taken to diſtreſs Dantzick, and to interrupt the exportation of the natural productions of Poland, will not at all anſwer the end which he has propoſed: this prince may be a great general as well as a tyrant, but he is not a great politician; acts of violence will never make his ſubjects enter into commerce, nor force the Poles, and the inhabitants of Dantzick, to commit all their property to his direction. If the other ſtates of Europe ſuffer him to conquer this city, he may then obtain the end which he propoſed, namely, the being maſter of all the exports of Great Poland, and of regulating the price of the grain of that kingdom as he thinks proper; but as long as this port continues free, he will never be able to carry his point. In the treaty of commerce, which he has lately concluded with the republic of Poland, it is ſtipulated, that all the merchandize imported from the ports and towns of Pruſſia into Poland, are only to pay two per cent. duty, but ſuch merchandize as are landed at Dantzick, and from thence brought into Poland, are to pay 12 per cent. It will appear, at firſt ſight, that the Poles were forced into this treaty, otherwiſe they would never give the preference to ſtrangers, who were taking every meaſure to oppreſs them; but ſtill it will not anſwer the king of Pruſſia's deſign. Dantzick is an excellent port, and there is a navigation by the Viſtula from thence to the interior parts of the kingdom, whereby all kinds of merchandize may be imported and exported with great facility. It is true, that as the Viſtula paſſes through Pruſſia, the king may lay a heavy duty upon ſuch merchandize, and thereby diſtreſs the Poles, Dantzickers, Hollanders, and all who are concerned in this trade; but as he has no good ſea-port which has a communication with the Viſtula, his ſubjects will never be able to import and export heavy merchandize to and from Poland, without the greateſt inconveniencies, except they paſs by the port of Dantzick."

The revenues of Poland are not eaſily to be aſcertained, as they fluctuate according to the reſolutions of various diets. The regal revenues accrue from certain lands inveſted in the crown, from the different cuſtom-houſes of the kingdom, and from ſalt-works. But ſince the diſmemberment of the kingdom, the ſalt-works, and ſome of the crown lands, have been ſeized by the empreſs queen of Hungary, many of the cuſtom-houſes by the king of Pruſſia, and a few of the crown lands, with the cuſtoms of Mohilow, by the empreſs of Ruſſia; therefore, how the crown revenue will from henceforward be eſtabliſhed, muſt depend upon ſome future diet, and the permiſſion of the partitioning powers.

By the antient laws of Poland, the nobility, upon all great occaſions, were to take the field on horſeback, together with their adherents; and when this rule was properly carried into execution, a body of 100,000 men might be raiſed. This army was always called the Poſpolite; but from a variety of cauſes it uſually moved with great difficulty, and was generally without diſcipline, ſubordination, or experience. The Poliſh army, however, of late years, hath not been ſo numerous, yet previous to the late diſmemberment, the peace eſtabliſhment was 36,000 men, that is, 24,000 for Poland, and 12,000 for Lithuania, two-thirds of which were cavalry. In ſpeaking of the two bodies of troops that form the Poliſh army, an ingenious modern traveller ſays, "They are commanded by two generals, who are independent of each other; and though they are named by the king, they are not obliged to give an account of their operations but to the republic, and have an abſolute authority over the troops. The colonels are likewiſe abſolute maſters of their regiments, and it is their buſineſs to find ſubſiſtence for them, and to pay them as well as they can; but being rarely paid themſelves, they deſtroy the country, and ruin the farmers, to ſatisfy their avarice, and that of their troops.—The Poliſh nobility appear with more magnificence in the fields than in their towns; their tents are more elegantly ornamented than their houſes. The cavalry, which is the greateſt part of the army, is chiefly compoſed of gentlemen; they have fine horſes, and their ſaddles, bridles, &c. are richly ornamented.—The very contraſt to their cavalry is their infantry; for as much as the former is magnificently ornamented, the latter is badly cloathed, badly armed, and often without any uniforms: this corps is recruited from among the meaneſt of the people, and they reſemble an army of vagabond Tartars. The Poliſh troops have but very little diſcipline among them; they attack with great fury, but if they are repulſed they immediately retire with great precipitation, and there is no poſſibility of rallying them."

We are informed, however, that the members of the laſt diet have agreed continually to ſupport an army of 30,000 men, for the defence of thoſe parts of the kingdom, which the partitioning powers have ſtill ſuffered them to retain; and that the troops that compoſe this army ſhall be better diſciplined, more regularly paid, and indeed placed upon a foundation ſuperior to what hath ever yet been known in Poland. For the payment of this army, the ſupport of civil government, and other contingencies, they have likewiſe come to the reſolution of regularly taxing

Spirituous liquors,	Salt,
Foreign merchandize,	Chimnies,
Stamped papers,	Playing-cards,

and all kinds of luxuries. They have likewiſe doubled the poll-tax upon the Jews. The ſtaroſties, who heretofore paid but one quarter of their revenues annually, muſt now pay three-eighths; and the clergy, who had always hitherto found means to exempt themſelves from paying taxes, are now aſſeſſed in proportion to the other claſſes of people.

With reſpect to trade, the chief exports and imports are carried on by foreign merchants reſiding here; for the gentry are abſolutely forbid to follow trade of any kind, on pain of forfeiting their honour; at the ſame time the commonalty want funds, and a ſpirit of induſtry as well as an inclination to manufactures; inſomuch that their cloaths are all made abroad, or by merchant taylors who travel to the noblemens houſes. Beſides, ſuch of the Poles as have any fortunes, ſpend too much of their revenues in coſtly habits, and other articles of luxury, to be able to undertake any conſiderable traffic; nor have they any good port, except Dantzick, for improving the trade of ſo large a country. The inland communication is likewiſe very bad, not ſo much from the nature of the country as from the want of neceſſary improvement.

Their inns are only long ſtables built up with boards, and covered with ſtraw. They have windows, but no furniture. There are chambers at one end, but ſo annoyed with vermin and ſtench, that ſtrangers chuſe rather to lodge in ſtables among the horſes, or in the common room, which is the only part where they have a fire: but if it be a holiday, they can expect no reſt; for the boors ſpend the whole day and night too in drinking, ſinging, and dancing.

The coins of Poland are,

			s.	d.
The	Gold ducat, - -	worth	4	3
	Silver dollar of Dantzic, -	about	4	6
	Rix-dollar of Thorn, -		4	5
	Rix-dollar of Sigiſmund III. and Uladiſlaus IV. -		4	6

To conclude, we underſtand from the moſt intelligent and moſt recent travellers, that the kingdom of Poland hath been, for many ages, miſerably neglected by its legiſlators, and that the preſent ſpirit of improvement hath unfortunately been exerted too late. "If the Poles (ſays a gentleman who was in that kingdom not long ſince) had agreed to a plan of this kind ſome years before, they might, in all probability, have ſaved their country, and made a reſpectable figure among the ſtates of Europe, but now it is too late; their beſt provinces are ſeized upon by ſtrangers, and all their operations are dictated by thoſe powers which united to annihilate their ancient form of government; and as theſe great powers have guaranteed to each other reſpectively the ſeveral diſtricts which they have ſeized in Poland, I ſee no poſſibility that the Poles will ever be able to recover themſelves, in the preſent ſituation of things: how far ſome future

future arrangement of the political affairs of Europe may change their unhappy ſtate, time alone will determine."

SECT. VI.

The Hiſtory of Poland.

THE Poles were antiently a tribe of Scythians, who lived in tents or covered waggons, rambling from one country to another, till Lechus, their firſt ſovereign we read of, taught them to build towns, of which Gneſna, in the province of Great Poland was the firſt; and this he made the ſeat of his government, aſſuming the title of duke, about the year 550. Their hiſtorians relate, that Lechus was ſucceeded by his poſterity for 150 years, but give us no account of their names or adminiſtration, only mention, that the family of Lechus being extinct, the government was divided between twelve palatines, who were ſovereigns of ſo many diſtricts, and independent of each other. About the year 700, one Cracus, either by force, or by conſent of theſe petty princes, became ſovereign of the whole, and he it was that built the city of Cracow. He left two ſons, viz. 1. Cracus, 2. Lechus, and a daughter named Venda. Lechus murdering his brother Cracus, the people excluded Lechus, and advanced Venda to the throne. The line of Cracus being extinct, Poland was again governed by twelve palatines, who agreed, in the year 760, to elect Leſcus their ſovereign, with the title of duke.

Boleſlaus Crobry firſt aſſumed the title of king in the year 999, and about this time chriſtianity was firſt eſtabliſhed in Poland, theſe people being pagans till then; and from this time it appears to have been an hereditary monarchy, his poſterity ſucceeding to the throne for ſeveral generations, among whom was Caſſimir the Firſt.

Boleſlaus II. marrying Viciſlava, the daughter and heireſs of Red Ruſſia, that province was united to Poland, anno 1059. It is related, that Staniſlaus, biſhop of Cracow, refuſing to give Boleſlaus the ſacrament on account of his vicious life, he cleft the biſhop's ſkull with his ſabre before the altar.

Caſſimir II. conquered Pruſſia, and united it to the kingdom of Poland, anno 1178, and built Dantzick, which he made the capital of his dominions, it being till then only a little fiſhing town.

The kings of Poland, among whom was Caſſimir the Third, were abſolute ſovereigns until the reign of Lewis, anno 1370, but then the Poles inſiſted on limiting the prerogative, probably becauſe Lewis was king alſo of Hungary, and they ſuſpected he would favour his native country to their prejudice. Lewis being ſucceeded by his daughter and heireſs, Hedwigis, anno 1382, ſhe married Uladiſlaus V. great duke of Lithuania, on condition he ſhould become a chriſtian, and their iſſue ſhould ſucceed both to the crown of Poland, and the duchy of Lithuania, which have been united ever ſince.

Uladiſlaus, their ſon, ſucceeded them, who was alſo king of Hungary. This prince was killed in a battle with Amurath, the Turkiſh emperor, and leaving no iſſue, was ſucceeded by his brother Caſſimir IV. between whom and the knights of the Teutonic order, who had been placed in Pruſſia by the pope, there were continual wars, until it was agreed, that the knights ſhould remain poſſeſſed of Eaſtern or Ducal Pruſſia, the grand maſter taking an oath of fealty to the king of Poland. In this reign the repreſentatives of the ſeveral palatinates or provinces were firſt ſummoned to ſit in the diet, or aſſembly of the ſtates, the great officers of the crown and dignified clergy only enjoying that privilege till then. In this reign alſo the learning of Latin was ſo much encouraged, that it became the language of the common people. Sigiſmund ſucceeded to the crown, anno 1507, in whoſe reign Luther's doctrine was received at Dantzick, and ſome other towns in the north of Poland, whoſe diſciples were perſecuted at firſt by the adminiſtration; but the court found themſelves obliged to connive at it afterwards for fear of a revolt.

In the reign of Sigiſmund II. the Ruſſians invaded Livonia, then poſſeſſed by the Teutonic knights, who called in the Poles to their aſſiſtance; other provinces called in the Swedes, and theſe three powers contended for the dominion of Livonia many years.

Henry of Valois, duke of Anjou, was elected king of Poland anno 1574; but his brother Charles, the French king, dying, he quitted Poland, and ſucceeded to the crown of France anno 1577.

Stephen Batory, prince of Tranſilvania, was elected king of Poland on the abdication of Henry. In his reign the ſupreme courts of juſtice were firſt erected, before which time the king and council were the laſt reſort in caſes of appeal.

Sigiſmund III. ſon of John, king of Sweden, was elected king on his renouncing Lutheraniſm, anno 1587.

Uladiſlaus, his ſon, ſucceeded him, anno 1632, and invading Ruſſia, took the capital city of Moſcow; and on a treaty that enſued, he obliged the Ruſſians to confirm the provinces of Smolenſko and Zernigof to Poland.

Uladiſlaus leaving no iſſue, was ſucceeded by his brother John Caſſimir, anno 1648, though he was then a cardinal. In this reign the old Coſſacks being diſobliged, renounced their allegiance to the Poles, and became ſubjects to the Ruſſians and Turks.

Charles Guſtavus, king of Sweden, conquered Poland, but loſt it again in ſix months; after which John Caſſimir introduced an army of 30,000 Germans to defend the kingdom againſt the Swedes; but the Poles ſuſpecting he intended to render himſelf abſolute, depoſed him; whereupon he retired into France, and was made abbot of the abby of St. Germains.

Michael Wiſnoweiſki being elected anno 1670, the Turks conquered Podolia in his reign, but were defeated by John Sobieſki, who was elected king on the death of Wiſnoweiſki. This prince raiſed the ſiege of Vienna anno 1683.

Upon the death of Sobieſki, there appeared a great many candidates for the throne, but the prince of Conti had the greateſt number of electors for him, and was declared king by the primate: the reſt of the candidates, however, joining Auguſtus, elector of Saxony, and making his party much ſuperior to that of the French, the elector was proclaimed king, anno 1697, and the prince of Conti obliged to return to France again. The elector of Saxony was obliged to profeſs himſelf a Roman Catholic before he became a candidate for that throne, which the electreſs refuſing to do, ſhe never bore the title of queen in Poland.

The prince of Conti's party had made ſuch a ſtrong oppoſition againſt the elector of Saxony, that he was not univerſally recognized until May 1698, and then it was on the following conditions.

1. That he ſhould endeavour to bring over his conſort to the Catholic religion.
2. That he ſhould diſmiſs all the Lutheran clergy out of his army.
3. That he ſhould not demand of the Poles the great ſums his election had coſt him.
4. That he ſhould pay all the arrears due to the army of the crown.
5. That he ſhould employ his Saxon troops in the recovery of Podolia, at his own expence.
6. That he ſhould afterwards ſend his Saxon forces out of the kingdom.
7. That the revenues of the crown lands ſhould be employed towards the ſubſiſtence of his houſhold.
8. That he ſhould confer no places or preferments on foreigners, nor upon Polanders that were not Roman Catholics.

The king, the year following, marched his army into Podolia, but it was too late for action; however, the next year, Podolia was reſtored by the Turks to the crown of Poland, by the treaty of Carlowitz, when a peace was made between the Auſtrians and Poles on one ſide, and the Turks on the other, anno 1699.

The Poles having thus recovered their territories from the Turks, repreſented to the king, that there was now no further occaſion for foreign troops, and deſired his majeſty would ſend back his Saxon forces into Germany; and he was, in a manner, compelled to iſſue his orders, that the Saxons ſhould begin their march; the cardinal-primate declaring, that he would not appear at the diet, till the kingdom was purged of armed hereſy: the king, however, found excuſes for delaying their march till the next year; and then obſerving, that Livonia antiently belonged to Poland, he offered to employ his Saxons in the recovery of that country, which the Poles readily acquieſced

acquieſced in; eſpecially when they ſaw he had entered into a confederacy with the Danes, Brandenburgers, and Pruſſians, who had all the like pretenſions of recovering their reſpective territories, of which they had been forcibly diſpoſſeſſed by the Swedes: and the time for this ſeemed extremely favourable, now the king of Sweden, Charles XII. was a minor. The king of Poland, therefore, having procured the concurrence of the republic for entering into this war, commanded count Fleming to march at the head of 16,000 men, and lay ſiege to Riga, the capital of Livonia: he publiſhed a declaration at the ſame time, promiſing protection to ſuch of the inhabitants of this country as ſhould join his forces, and endeavour to reſcue themſelves from the oppreſſions of the Swedes, and ſent a detachment of 1500 horſe, alſo, into Livonia, commanded by general Patkul, a native of that country, to encourage the nobility to revolt, promiſing to reſtore them the lands they had been diſpoſſeſſed of by the kings of Sweden: but theſe declarations had no effect; the Livonians continued faithful to the Swedes from the beginning to the end of the war. General Flemming, therefore, having taken Dunamunder fort, which defended the mouth of the river Dwina, inveſted that city; but the Swedes marching to its relief, general Flemming thought fit to riſe from before it.

The king of Poland having augmented his army on the ſide of Livonia to 22,000 men, inveſted Riga again in Auguſt, 1700, determining to lay it in aſhes if he did not take it; but he was diverted from bombarding it by the Engliſh and Dutch, who repreſented, that they had great quantities of merchandize in the place, which muſt be deſtroyed, if he perſiſted in that reſolution: and much about the ſame time, the Ruſſians inveſted Narva. In the mean time, the confederate fleet of Great Britain and Holland coming to the aſſiſtance of the young king of Sweden, blocked up Copenhagen, and compelled the king of Denmark to abandon his allies, and make peace with Sweden; after which, that young monarch tranſported an army of 20,000 men to Narva, and defeated the Ruſſians, who were beſieging that town with 100,000 men; from whence he marched the whole length of Livonia, and compelled the Saxons to raiſe the ſiege of Riga.

In June, 1701, the Saxons encamping on the ſouthern bank of the Dwina, to defend Poland, the Swedes attacked them in that ſituation, and obtained an entire victory; the general of the Saxons, the duke of Courland, being killed at the beginning of the engagement, to which misfortune the Swedes themſelves aſcribe that victory, as he was eſteemed a moſt accompliſhed general: for the Saxon troops, upon the left, did not charge at all for want of orders; and the other generals, after the death of the duke of Courland, immediately prepared for a retreat, which they did in good order, into Lithuania, the king of Sweden not purſuing them, but marched to Mittaw, the capital of Courland, which he treated as an enemy's country, obliging the inhabitants to pay him 60,000 crowns in money, and furniſh his army with proviſions: and both Saxons and Ruſſians were ſo diſcouraged at this defeat, that they retired to their reſpective countries. In Mittaw, the king of Sweden poſſeſſed himſelf of all the Saxon magazines, and in the Dunamunder fort, which he retook, he found a fine train of artillery, which the king of Poland had brought with him from Dreſden, conſiſting of 90 pieces of braſs cannon for battery, and 16 large mortars: and the king of Sweden having now no enemy in the field to oppoſe him, left a body of 12000 men in Livonia, and prepared to march into Poland; but being called into Lithuania by prince Saphiea to defend him againſt the family of the Oginſki's, who had defeated the Saphieas in ſeveral battles, and behaved very cruelly to the conquered, killing many of that noble family in cold blood; the king of Sweden marched into Lithuania, in behalf of prince Saphiea; and Oginſki was at that time ſo powerful, that he ventured to give battle to his victorious troops, but was defeated; after which, king Charles declared, that he would not withdraw his army out of the country, until the Poles had depoſed king Auguſtus, and elected another ſovereign; and wrote to the primate and the ſtates to that effect.

He ſoon after began his march towards Warſaw, leaving only 8000 of his troops in Lithuania, to protect prince Saphiea. His majeſty meeting with no oppoſition (the Saxons being retired into Germany) arrived at Warſaw the 26th of May, 1702, with an army of 18,000 men; king Auguſtus, and the Poles his adherents, retiring to Cracow, where he gave orders to his Saxon forces to return into Poland again: ſome regiments alſo his ally the czar ſent him, and 600,000 crowns in money, with which he bribed the officers of the crown army to join him. In the mean time, his Swediſh majeſty diſarmed the burghers of Warſaw, and obliged them to raiſe 30,000 rix-dollars for the ſervice of his army; and here he determined to quarter his forces, till he ſaw what meaſures the Poles would take; and when he found they would not conſent to the depoſing king Auguſtus, he marched at the head of 12,000 men in order to encounter him at Cracow, and on the 19th of July, 1702, the two armies engaged. The duke of Holſtein, who commanded the left wing of the Swediſh army, was killed at the firſt diſcharge of the Saxon cannon: however, the Swedes were at length victorious; the Poliſh horſe, who compoſed the right wing of king Auguſtus's army, running away with ſuch precipitation, that they diſordered the Saxon troops, who made a good retreat, but loſt their tents, baggage, forty-two pieces of cannon, and their military cheſt, in which were 200,000 rix-dollars; and the next day the Swedes took poſſeſſion of Cracow, and obliged the burghers to pay them 60,000 crowns; and the ſame night the magnificent caſtle of Cracow was burnt, whether by the Swedes, or by accident, does not appear. In the mean time Oginſki, being joined in Lithuania by great reinforcements, defeated Steinboch, the Swediſh general, who had been left there with 8000 men to defend Saphiea, drove the Swedes out of that duchy, and ruined the houſe of Saphiea. The 12,000 Swedes alſo, that were left in Livonia under the command of count Slippenback, were defeated by the Ruſſians, who immediately deſtroyed all the open country with fire and ſword.

Thus did the Swediſh king abandon his friends and faithful ſubjects to the fury of their enemies, while he purſued Auguſtus to the utmoſt bounds of Poland. However, he, at length, gained his point, and prevailed upon the primate to aſſemble a diet in January, 1703-4, which conſented to the depoſing of their ſovereign; and the king of Sweden thereupon propoſed the advancing prince James Sobieſki, eldeſt ſon of the late king Sobieſki, to the throne; and king Auguſtus, on the 14th of February following, was voted to be depoſed for violating the laws he had ſworn to maintain; reſolving, that the ſubjects were thereby abſolved from their allegiance.

King Auguſtus, however, employed ſome of his adherents to ſurprize prince James Sobieſki, who made both him and his brother Conſtantine priſoners, and hurried them away into Saxony; whereupon his Swediſh majeſty propoſed Staniſlaus Leſinſki, palatine of Poſnania, to the diet; who proclaimed him king of Poland, on the 12th of July, 1704. He was a young gentleman of none of the greateſt families, but one that wanted neither ſenſe or courage, or any of thoſe qualities requiſite to act the part his Swediſh majeſty deſigned him for: and the primate and grandees, who had withdrawn themſelves from the diet, refuſing to concur in the advancement of Staniſlaus, being given to underſtand, that their lands would be deſtroyed with fire and ſword, if they perſiſted to oppoſe him, they returned in a few days, and congratulated Staniſlaus on his acceſſion; and it was obſerved, that no gentleman ever acted the king with a better grace than he did, on his advancement.

Auguſtus, in the mean time, aſſembled his troops, in order to recover his throne, and being diligently attended by his Swediſh majeſty, as he bent his march to the ſouthward, Auguſtus returned on a ſudden with a detachment of of 4000 men to Warſaw, and ſurprized that city, with abundance of the grandees in the Swediſh intereſt, making the Swediſh garriſon priſoners of war: he obliged the citizens alſo to pay him 50,000 rix-dollars, for his reſtraining the ſoldiers from plundering them; and he raiſed more money by plundering the eſtates of the primate and other great men, who had declared againſt him. In the mean time, the king of Sweden laid Lemberg and other towns in the ſouth of Poland under contribution, whereby he raiſed ſupplies for the

ſubſiſtence

ſubſiſtence of his army. Thus were the miſerable Polanders harraſſed perpetually by one ſide or other, under pretence of their diſaffection: but Auguſtus receiving intelligence, that his Swediſh majeſty intended to invade his German dominions, commanded his forces to march into Saxony, and followed them ſoon after in perſon. In the mean time, a Poliſh gentleman, in the intereſt of Auguſtus, performed many ſurprizing actions, though he was not bred to arms; his name was Smegielſki: he firſt ſurpriſed the provincial diet of Sendomir, ſeizing the caſtellan, and ſeventy more of the members, having only ſome Coſſacks and his own tenants and ſervants under his command; and he afterwards ſet fire to a caſtle, in which were 600 Swedes, and burnt them. He poſſeſſed himſelf of Warſaw and Cracow, and having encreaſed his forces to 7000 men, took the town of Marienburg by ſtorm, putting to the ſword moſt of the Swediſh garriſon, plundering every where the eſtates of thoſe that were adherents to Staniſlaus. The Ruſſians alſo entered Poland, and joined the adherents of Auguſtus, plundering thoſe who were in the intereſt of Staniſlaus; but a body of Saxons, in their march to Poland, being defeated by the Swedes, gave king Charles an opportunity of invading the German dominions of Auguſtus, where he made himſelf maſter of every town in Saxony, except Dreſden, and raiſed prodigious ſums by the contributions he levied: and when his Swediſh majeſty had given king Auguſtus all theſe provocations, he had the aſſurance to viſit him in Dreſden with a ſmall retinue, and take his leave of that prince before he returned into Poland: but the Swedes met with a conſiderable check in the ſame year 1706; for king Auguſtus having aſſembled an army of 8000 Saxons, 6000 Poles, and 18,000 Muſcovites, attacked the Swediſh army, conſiſting of 22,000 men, commanded by general Mardefield, and entirely defeated them, taking all their cannon and baggage, and among the priſoners, general Mardefield himſelf: and now it was expected, that king Auguſtus would ſoon be reſtored to his throne; but ſoon after this ſucceſs, a courier brought him the articles agreed on between his commiſſioners and the king of Sweden, for the evacuation of Saxony, which Auguſtus found himſelf obliged to ratify: the chief articles whereof were, that Auguſtus ſhould renounce all claim to the throne of Poland, under his hand and ſeal, and acknowledge Staniſlaus to be the lawful king: that he ſhould reſtore the records of the kingdom, and the regalia, which he had carried into Saxony: that he ſhould renounce his alliance with the czar, and give him no aſſiſtance for the future: that prince James and prince Conſtantine Sobieſki, and all the Swediſh priſoners, ſhould be ſet at liberty: that all Swediſh deſerters and traitors ſhould be delivered up to the king of Sweden, particularly the general count Patkul: that all Ruſſian ſoldiers, trophies of war, ſtandards, colours, &c. ſhould be reſtored; and, that Auguſtus ſhould write a letter to Staniſlaus, congratulating his acceſſion to the throne of Poland: and when all this was done, the Swediſh forces would evacuate Saxony; which treaty was ſigned the 8th of April, 1707, and complied with in every article by Auguſtus.

The new primate, however, appeared to be an implacable enemy to king Staniſlaus, and having aſſembled a diet, prevailed on them to admit the czar with his whole army into Poland, who made a dreadful havock on the perſons and eſtates of thoſe that adhered to Staniſlaus, and prevailed on the crown army to enter into a league offenſive and defenſive with him; and the Poles, at the ſame time, held a ſecret correſpondence with Auguſtus, knowing he only ſubmitted to a force he could not reſiſt, and would attempt the recovery of his throne, the firſt favourable opportunity that ſhould preſent itſelf; and the czar, in the mean time, continuing to plunder the adherents of Staniſlaus, carried off all the fine ſtatues, paintings, and libraries, he found in the Poliſh palaces, and great mens houſes, and ſent them into Ruſſia.

His Swediſh majeſty having raiſed recruits, and augmented his army to 54,000 men while he lay in Saxony, returned into Poland in the month of September 1707, when he cauſed count Patkul abovementioned to be broke alive upon the wheel. He was a native of Livonia, and conſequently a ſubject of Sweden, and had a conſiderable ſhare in the invaſion of his native country in the beginning of the wars; on which account his Swediſh majeſty was determined to make an example of him. The Ruſſians, in the mean time, had ſo entirely plundered Poland, that the Swedes could not find any thing to ſubſiſt on there, and were forced to remain a year in Poland, and ſend to Silelia and other countries for proviſions to furniſh their magazines; which having done, the Swedes followed the Ruſſian army in the Ucrain, as they retired into their own country; and arriving at Mohilow on the river Nieper, the king ſeemed to be in ſuſpence, whether he ſhould march directly to Moſcow, or continue to purſue the czar and the Ruſſian army; for it appeared neceſſary for him to remain ſome time here, till he ſhould be joined by general Lewenhaupe, who was marching after him with a vaſt quantity of ammunition and proviſions, which had been collected for the invaſion of Ruſſia; but either weary of waiting, or thinking he might loſe the opportunity of joining the Coſſacks commanded by Mazepo, who had invited him thither, he continued his march into Ruſſia before Lewenhaupe had joined him, leaving that general orders to follow him. Lewenhaupe had with him 6000 waggons loaded with ammunition and proviſions, and a fine train of artillery with 14,000 men to guard them, which his Swediſh majeſty thought ſufficient to defend them againſt any detachment the Ruſſian army could make. He marched on, therefore, to Czernicow, where he received the diſagreeable intelligence, that Lewenhaupe being advanced with the convoy almoſt to Mohilow, where he received advice, that prince Menzikoff, or the czar in perſon, was marching towards him with 30,000 men, he ſlighted the intelligence to that degree, that he did not think it worth while to entrench himſelf, though he had a whole day's time to have done it; but being ſurrounded by the Ruſſians next day about three in the afternoon, though he defended himſelf well that day, was obliged the next to retire, and leave all his cannon, baggage, and ammunition behind him, having loſt 7000 men: he marched away, however, with the reſt, and joined the king, the Ruſſians not purſuing him beyond the Nieper: but the loſs the Swedes ſuſtained appeared to be irreparable; for beſides their artillery, the Ruſſians took 6000 barrels of powder, 1000 waggon loads of arms and muſket balls, 20,000 ſacks of meal, and other neceſſaries, beſides a great ſum of money. The reſt of the year, 1708, was ſpent in ſkirmiſhes, and beating up one anothers quarters; but the Ruſſians had ſo entirely cut off all communication between the Swediſh army and Poland, that they could receive no intelligence from thence, inſomuch, that though the Swediſh generals and the Poles that adhered to king Staniſlaus, had raiſed great bodies of troops to join the Swedes in Ruſſia, his Swediſh majeſty knew nothing of it, but depending only on the troops he had with him, laid ſiege to the city of Pultowa in June 1709, where he was attacked by the Ruſſian army, commanded by the czar in perſon, and totally defeated; whereupon he fled over the Nieper into Turkey.

Auguſtus, notwithſtanding he had ſo ſolemnly renounced all claim to the crown of Poland, no ſooner heard of the victory his ally the czar had obtained at Pultowa, but he prepared to re-aſcend that throne, and entering that kingdom at the head of 8000 horſe, on the 10th of Auguſt 1709, marched directly to Warſaw, publiſhing a manifeſto at the ſame time, containing his reaſons for this conduct, and in the concluſion invited the Poles to join him, and reſtore peace to their country, promiſing an indemnity to all that ſhould make their ſubmiſſion in three months, and promiſing likewiſe to diſmiſs all his Saxon forces as ſoon as the war ſhould be at an end.

Staniſlaus, and the Swediſh general Craſſau, being at this time encamped near Kaliſh with 18,000 men, retired into Swediſh Pomerania, being apprehenſive they ſhould ſoon be attacked by the united forces of the Ruſſians and Poles: and thus an end was put to the war in Poland; but a ſtate as bad or worſe than war ſucceeded, for the Ruſſians ſtill continued to plunder the country, and quartered their troops on the miſerable inhabitants, ſometimes on pretence of ſecuring the nation againſt the incurſions of the Swedes from Livonia, and at others upon pretence of reimburſing the czar the expences he had been at in their defence; and theſe outrages they continued to commit until the year 1714. Another occaſion of the complaints of the Poliſh grandees was, that

the king remained in his German dominions, and ſuffered his Saxon troops in Poland to diſtreſs the inhabitants, computing that the damages ſuſtained by quartering thoſe troops, and the contributions they raiſed, amounted to near 3,000,000l. ſterling: the Poles, meeting with no redreſs of their grievances from the king, had recourſe to arms, and fought ſeveral battles with the Saxons; and a treaty being afterwards ſet on foot between king Auguſtus and his Poliſh ſubjects, it was agreed, that his majeſty might remain three months out of the kingdom every year; that the Saxon miniſters ſhould not intermeddle in the affairs of Poland; that the king's Saxon guard ſhould not exceed 1200, and that they ſhould be maintained at his own charge; that no foreign troops ſhould be ſuffered to remain in that kingdom; and that, while the king was abroad, he ſhould not have the diſpoſal of any poſt or place in the government. Still the Ruſſians continued in the kingdom, raiſing contributions till the year 1720, which occaſioned a difference between the czar and king Auguſtus, and the czar endeavoured to give the Poles a jealouſy, that Auguſtus was about to make the crown hereditary in his family. The king, on the other hand, charged the czar with a deſign of uniting ſeveral of the provinces of Poland to Ruſſia, particularly Courland and Samogitia, requiring him to evacuate Livonia, which the Poles inſiſted belonged to them. The czar was alſo required to make the Poles ſatisfaction for all the outrages his troops had committed ſince the battle of Pultowa; but it does not appear he ever made any: on the contrary, having entirely ſubdued Livonia, he determined to keep it, and had always ſuch a body of troops in Courland, that he influenced all future elections of their dukes, who have been either miniſters or favourites of the Ruſſian court.

The Ruſſians having withdrawn their forces from Poland, this kingdom enjoyed peace many years after, if they could be ſaid to remain in peace, while the diet and ſtates were perpetually wrangling about the ſucceſſion of their crown. They ſeemed ſtill apprehenſive, that the king would find means to render it hereditary, and many propoſals were made to diſappoint him: At length the chaſtizing the proteſtants of Thorn in Regal Pruſſia diverted them a little from that conſideration. This town of Thorn was inhabited chiefly by Lutheran Proteſtants, though there were ſome Roman Catholics amongſt them, and a college of jeſuits.

Theſe fathers complained to the government, that on the 16th of July, 1724, being one of the feſtivals of the Bleſſed Virgin, as they were carrying the hoſt in proceſſion about St. James's church, a Lutheran burgher came to ſtare at them with his hat on, uttering ſeveral blaſphemous expreſſions, which provoked one of the ſtudents to reprimand him, and pull off his hat. The Lutherans then aſſembled, beat the ſtudent, and carried him to the guard-houſe; and when they applied to the magiſtrates to releaſe him, they ordered another of their ſtudents to be taken into cuſtody. The Catholics thereupon ſeized on a Lutheran ſtudent, by way of repriſal, and carried him to the jeſuits college: that the populace, at the inſtigation of the magiſtrates, broke open the college gates, the chapel, and oratories, demoliſhed the altars, broke down the images, eſpecially that of the Bleſſed Virgin, which they carried off and burnt publicly: that the mob afterwards returned to the college again, broke open the gates a ſecond time, beat and abuſed the ſtudents, and plundered them of their goods, and would have murdered the fathers, if the commandant of the city, who, till then, refuſed his aſſiſtance, had not compelled the populace to leave the college.

The Proteſtants, on the contrary, related, that during the aboveſaid proceſſion, ſome of their children going to ſee it with their hats off, according to cuſtom, a ſtudent of the jeſuits college would compel them to kneel, and giving them ill language, proceeded to beat them, and two hours after the proceſſion was over, inſulted them again, and having wounded ſome of them with ſtones, the ſoldiers took one of them, and carried him to the guard; but the preſident, at the requeſt of the rector of the college, ſet him at liberty. Another ſtudent being carried to the guard, his comrades inſiſted he ſhould be releaſed alſo, which the preſident refuſing till he had ſpoken with the rector, the reſt of the ſtudents came to reſcue him by force with their ſwords in their hands; which not being able to effect, they ſeized on a Lutheran ſtudent, dragged him to their college, and having thrown him into a canal and beat him ſeverely, they ſallied out with their ſabres, and wounded ſeveral people who came to the Lutheran's aſſiſtance. The preſident thereupon ſent the town guard to the college, and drove the ſtudents in; and the preſident demanding the Lutheran ſtudent, the rector refuſed to releaſe him till the jeſuits ſtudent was ſet at liberty, and while the exchange was making, ſome of the town militia were ordered to poſt themſelves before the jeſuits college, to protect them from the enraged people; but the ſtudents throwing ſtones, and firing upon the mob, it was not poſſible to reſtrain them from breaking into the college; but at that very inſtant the town-clerk came and obliged the populace to retire, and the riot ſeemed to be at an end; but the ſtudents in the jeſuits college firing again upon the people, they forced open the gate again, plundered the college, and committed great diſorders, until a detachment of the garriſon, and the town-militia, came again to the aſſiſtance of the jeſuits, and diſperſed the people.

The aſſeſſorial tribunal of Warſaw having heard the cauſe, pronounced a ſentence of the following tenor, which was confirmed by the general diet.

1. That the preſident and vice-preſident of Thorn, not having endeavoured to ſuppreſs the tumult, ſhould have their heads cut off, and their eſtates confiſcated.

2. That ſome others of the principal rioters ſhould be beheaded.

3. That others, who prophaned and burnt the ſacred images, ſhould have their right hands cut off, and afterwards be quartered and burnt.

4. That others of them ſhould be fined, and employed in erecting a ſtone column, with the ſtatue of the Bleſſed Virgin on the top of it.

The king of Pruſſia being acquainted with this ſentence, wrote to the king of Poland to prevent the execution of it; but the republic of Poland underſtanding that other Proteſtant powers were about to interpoſe in the affair, determined to haſten the execution before any farther application was made to prevent it, ſent prince Lubimirſki down to Thorn with a detachment of the army, to ſee the priſoners executed; and when Mr. Finch, the Britiſh miniſter, applied to the diet to ſave theſe unhappy men, they were ſo enraged, that they threatened his life; and on the 7th of December, 1724, the ſentence was executed, whereupon the king of Pruſſia wrote to all the Proteſtant powers in Europe to join with him in ſeeing the treaty of Oliva performed, and the Proteſtants of Thorn, and other parts of Poland, reſtored to their rights; to which they all decreed, declaring, that if the Poles would not do them juſtice, they would compel them by force of arms; and the Poles refuſing to hearken to pacific meaſures, the quota of troops every prince and ſtate ſhould ſend to this religious war was agreed on. But the Vienna and Hanover treaties being now negotiating, the obtaining juſtice for the Proteſtants of Poland was never thought of afterwards.

About the years 1728 and 1729, the Proteſtants of Poland preſented a memorial of their grievances to the kings of Sweden and Pruſſia; wherein they obſerved, that ſince the treaty of Oliva, where their rights and privileges were confirmed, the Roman Catholics had taken 128 churches, and 46 ſchools in Poland from the Proteſtants; and they were entirely driven out of thoſe they uſed to enjoy in common with the Roman Catholics: that moſt of the revenues appointed for the maintenance of their miniſters had been given to convents; that in the towns where the magiſtrates were formerly a mixture of Proteſtants and Catholics, the Proteſtants were now totally excluded from the magiſtracy; that the Proteſtants had their children frequently taken from them, and educated in monaſteries, where they were made Roman Catholics; that the Proteſtants were double taxed, in which reſpect they were worſe treated than the Jews.

Under theſe diſcouragements the city of Dantzick offered the Proteſtants a ſafe retreat, and the privileges of their city; and many of them thereupon accepted the favour.

Still the Poles appear to have been highly diſſatisfied with their king, on account of keeping a body of Saxon troops in Poland, and abſenting himſelf from thence, reſiding

ſiding moſt in his German dominions; and the diet aſſembling at Grodno, anno 1729, there appeared ſuch heats, that the members drew their ſabres, and the majority were with difficulty reſtrained from cutting the minority in pieces; and, at laſt, broke up in confuſion, after they had made a proteſt of the following tenor.

1. Againſt every thing that ſhould ſtrike at the liberty of a free election. 2. Againſt the incorporating Saxon ſoldiers with the Poles. 3. Againſt a ſtrict alliance with the houſe of Brandenburg. 4. Againſt the king's reſiding out of the kingdom, without the conſent of the ſenators and grandees; and, 5. Againſt the diſtribution of ſeveral offices, which had been made to foreigners without their conſent.

In February 1732-3, died Auguſtus II. king of Poland; whoſe death having been expected ſome time, the emiſſaries of France had bribed ſeveral of the leading men in favour of Staniſlaus, whoſe daughter the French king had married. On the other hand, the emperor and Ruſſia made intereſt to advance Auguſtus, the ſon of the late king, to that throne, who was the only legitimate iſſue of his late Poliſh majeſty; but he had ſeveral ſons and daughters by his miſtreſſes; among whom count Maurice of Saxony, (the celebrated count Saxe) was the eldeſt, his mother being Aurora, counteſs of Coningſmark: his ſecond natural ſon was count Rotoſſki, lieutenant-general, and colonel of the guards of the crown of Poland, whom he had by a beautiful Turkiſh ſlave, that was taken priſoner very young. He had another ſon by the counteſs of Coſſel, the wife of count Hoym, who carrying her to Dreſden as ſoon as he was married, the king took her to his bed, and her huſband thereupon obtained a divorce: but this lady ſoon loſt the king's favour and her liberty, by threatening the king, if ever he entertained another miſtreſs, ſhe would piſtol him: and the king, who was well acquainted with her paſſionate temper, apprehending ſhe would keep her word, ſhut her up in priſon, where ſhe remained till his majeſty died.

Another reaſon of his confining her, it is ſaid, was, that ſhe refuſed to releaſe him from the promiſe he had made to marry her, if the queen died before him. The king had ſeveral other miſtreſſes, and children by them; but thoſe abovementioned were the chief. The French having gained over the primate to their intereſt, he ſent circular letters to the ſeveral palatinates, requiring them to take ſuch meaſures as might exclude all foreigners from the Poliſh throne; by which he intended to recommend Staniſlaus, and exclude the elector of Saxony: he exhorted them alſo to exclude all heretics from poſts in the civil government or the army, and to baniſh all ſuch as they ſuſpected of private attachments to any foreign prince, and not to permit the miniſters of foreign princes to come with their guards to the election; pointing again at the elector of Saxony. He wrote alſo to ſeveral powers, to deſire their protection, and entreated the emperor of Germany and the empreſs of Ruſſia, that they would not interpoſe in the election, but leave the Poles to make a free choice of their future ſovereign. The elector of Saxony, and ſeveral of the foreign miniſters, thereupon charged the primate with partiality; and the Ruſſian miniſter declared, that Staniſlaus could not offer himſelf a candidate, but ought to be excluded by the treaty made between the Saxons and the republic, anno 1706: that the late emperor, Peter the Great, being guarantee of that treaty, the czarina thought herſelf to be under an indiſpenſable obligation to prevent the infraction of it, and that ſhe would ſupport that treaty with all her force.

The French ambaſſador, the marquis of Monti, on the other hand, aſſured the republic, that his maſter would aſſiſt with all his forces, to procure Staniſlaus to be elected. The German emperor at the ſame time wrote to the primate, that he would defend the right of the Poles to a free election againſt all enemies whatever. In the interregnum diet it was reſolved to expel from it all the members that were not Roman Catholics. The czarina, Great-Britain, and Pruſſia, exclaimed againſt the excluſion of the Greeks and Proteſtants; and the czarina's miniſter declared, ſhe would ſee juſtice done them: however, they remained excluded to the end of the ſeſſion; and the Roman Catholics, which remained in the aſſembly, took an oath of the following tenor, viz.

"I A. B. do ſwear, that I will name and chuſe for king, a Polander by birth; I will not form any cabal in favour of a foreigner, but will vote for the excluſion of all foreigners whatever; and look upon all that vote for ſuch, as enemies to their country."

They demanded alſo of the Ruſſian miniſter, if the Ruſſian troops had orders to enter Poland before the election: he replied, he was not, by his inſtruction, authoriſed to anſwer them; and charged the party of Staniſlaus with inviting the Turks and Tartars to invade Ruſſia; to which ſome of the members ſaid, they ſhould be obliged to do ſo, if they had no other way to defend themſelves.

The Ruſſian general Laſci entered Poland on the 10th of Auguſt, 1733, at the head of 50,000 men. The primate, however, proceeded to the election on the 25th of the ſame month, though many more of the members abſented themſelves from the diet; and on the 12th of September, a majority of thoſe that remained voting for Staniſlaus, the primate went to the quarters of the French ambaſſador, where Staniſlaus arrived incognito two days before, and bringing him into the field, declared him king, and ſung Te Deum in the cathedral, as is uſual at ſuch elections.

The next day Staniſlaus ſent a deputation to thoſe that were aſſembled in behalf of the elector of Saxony, to propoſe an accommodation, which they anſwered with a proteſt againſt his election; and on the 16th of September marched and joined the Ruſſians with 10,000 men, of which Staniſlaus receiving advice, abandoned Warſaw, and, accompanied by the primate, the French miniſter, and moſt of that party, arrived at Dantzick on the 2d of October. In the mean time, the palatine of Kiow, who commanded the numerous garriſon of Warſaw for king Staniſlaus, beſieged the Saxon palace in that city; but after a brave reſiſtance, the Saxons were obliged to ſurrender, upon condition, that the furniture, and every thing in it ſhould remain untouched, and 12 of the elector's domeſtics ſhould remain there to look after it. The palatine afterwards plundered the palace of the Ruſſian miniſter, and the houſes of all thoſe that were in the intereſt of the Saxons. The party of Staniſlaus being thus poſſeſſed of Warſaw, and the place where the election of a king is uſually made, the elector of Saxony's adherents proceeded to elect and proclaim Auguſtus king in the fields of Cracow, on the 6th of October, by the name of Auguſtus III. king of Poland; and the Muſcovites and confederated Poles ſoon after took poſſeſſion of Warſaw, the garriſon having abandoned it, and the adherents of the new king plundered the houſes of the adherents of Staniſlaus in their turn, though they found but little of value, the owners having had full time to remove their effects.

King Auguſtus being in Saxony at the time of his election, on receiving advice of his advancement to the throne of Poland, ſet out for that kingdom with his queen and an army of 15,000 Saxons, and arrived at Cracow on the 4th of January 1733-4, and was crowned there the 17th of the ſame month by the biſhop of Cracow.

In the mean time, Staniſlaus and his party introduced a garriſon of near 20,000 men into Dantzick, including the French and other foreigners, and greatly augmented the fortifications; and having prepared for a vigorous defence, the town was inveſted by the Ruſſians, commanded by count Laſci, on the 20th of February 1733-4; and about the middle of March, count Munich was ſent thither with a reinforcement to command the ſiege. The beſiegers having bombarded and ſet fire to the town, and cut off all communication between the ſea and Dantzick, ſo that they could receive no ſupplies either of forces or proviſions, general Munich ſummoned them to ſurrender, and they deſired a ſuſpenſion of arms for 48 hours, to conſult the burghers, which was granted, in which time the garriſon took an opportunity of repairing their works, and the French landed near 3000 men under fort Wetchſelmund, and endeavoured to force their way into the town, but were repulſed and obliged to retire; and both the French, and the Swedes that joined them, returned to the French ſquadron that brought them over to Sweden.

The garriſon again deſired a ſuſpenſion of arms on the 26th of June, which was granted them for three days, during

during which time, general Munich being informed that king Staniſlaus had made his eſcape out of Dantzick, he renewed hoſtilities, and bombarded the town with great fury; and the citizens underſtanding they ſhould receive no more relief from France, agreed to ſurrender on the firſt of July 1734, and conſented to pay 1,000,000 of crowns to Ruſſia towards the charges of the war; and the Poles, that were in Dantzick, agreed to acknowledge king Auguſtus their rightful ſovereign. The Dantzickers alſo agreed to pay 1,000,000 of crowns more for aſſiſting Staniſlaus to eſcape, who very fortunately arrived in the king of Pruſſia's territories ſoon after he left Dantzick.

The French being diſappointed in ſetting Staniſlaus upon the throne of Poland, entered into an alliance with Spain and Sardinia, and invaded the emperor's dominions both in Italy and Germany; looking upon him as the principal occaſion of their ill ſucceſs in Poland.

The king of Poland entered into a confederacy with Bavaria, Pruſſia, and the French, againſt the houſe of Auſtria, anno 1740, in hopes of coming in for a ſhare of the late emperor Charles the Sixth's hereditary dominions, in which he did not ſucceed. He afterwards changed ſides, and entered into an alliance with the empreſs queen againſt Pruſſia, in which he was defeated, the capital of his German dominions plundered, and he was forced to fly into Bohemia. But in this great diſtreſs he appears to have been ſo little in favour with his ſubjects the Poles, if they deſerved the name of ſubjects, that they gave him no manner of aſſiſtance or countenance, but left him to make the beſt peace he could with Pruſſia.

Auguſtus died at Dreſden in 1763, when count Staniſlaus Poniatowſki was unanimouſly choſen king by the name of Staniſlaus Auguſtus. He was born in 1732, and crowned king of Poland in 1764. While a private nobleman, he reſided ſome time in London, and is a member of the royal ſociety. As he was peculiarly favoured by the empreſs of Ruſſia and ſome proteſtant powers, the papers which he ſigned, at the time of his election, were deemed too favourable to the proteſtants in general, and the Greeks in particular. Hence the army, which the empreſs of Ruſſia had in Poland, gave a pretence for various confederacies to be formed againſt the king by the Roman Catholics; and the conſpiring nobles, at length, were ſo unnatural as to throw of all allegiance to the ſovereign, and to put themſelves under the protection of the grand ſeignior. This mad ſtep of ſome of the Poliſh nobles occaſioned the Ottoman Porte to declare war againſt Ruſſia, and to invade Poland with a powerful army. Since which time, that unhappy country has been a ſcene of confuſion, rapine, horror, oppreſſion and bloodſhed. Hurried on either by blind zeal, or miſtaken bigotry, the confederates precipitated the ruin of their devoted country, and ſome of the neighbouring powers, invited by their incautious enthuſiaſm, took an advantage of this abſurd civil war, and, under the maſk of friendſhip, diſmembered this once powerful kingdom. So far was diſſimulation uſed in the diſmemberment, or partitioning of Poland, as the powers concerned think proper to term it, that they all expreſsly deny having had the leaſt intention to ſeize any of the Poliſh provinces, or in anywiſe to divide that country. In the act of renunciation tranſmitted to the court of Warſaw in the year 1764, and ſealed with the ſeal of the Ruſſian empire, the empreſs of Ruſſia ſays, "She did by no means arrogate, either to herſelf, her heirs and ſucceſſors, or to her empire, any right or claim to the diſtricts or territories which were actually in poſſeſſion, or ſubject to the authority of the kingdom of Poland, or great duchy of Lithuania; but that on the contrary, her ſaid majeſty would guarantee to the ſaid kingdom of Poland and duchy of Lithuania all the immunities, lands, territories and diſtricts, which the ſaid kingdom and duchy ought by right to poſſeſs, or did now actually poſſeſs; and would at all times, and for ever, maintain them in the full and free enjoyment thereof, againſt the attempts of all and every perſon or perſons who ſhould at any time, or on any pretext, endeavour to diſpoſſeſs them of the ſame."

The king of Pruſſia, in the ſame year, ſigned an act, in which he declared, "That he had no claims, formed no pretenſions on Poland, or any part thereof; and that he renounced all claims on that kingdom, either as king of Pruſſia, elector of Brandenburg, or duke of Pomerania." In the ſame inſtrument he guarantees the rights and territories of Poland againſt every other power whatever. The empreſs queen of Hungary likewiſe, in the year 1771, wrote a letter, with her own hand, to the king of Poland, in which ſhe gave him the ſtrongeſt aſſurances, "That her friendſhip for him and the republic was firm and unalterable; that the motion of her troops ought not to alarm him, that ſhe had never entertained a thought of ſeizing any part of his dominions, nor would even ſuffer any other power to do it."

Yet theſe very ſovereigns, ſo liberal in their proteſtations of protection, and warm in their profeſſions of friendſhip, are the perſons who have jointly invaded the unhappy kingdom of Poland, diſtreſſed its inhabitants, ſeized on its moſt valuable revenues, diſmembered its palatinates, duchies, &c. and partitioned out ſome of its richeſt cities and provinces among themſelves. Such is the political faith of princes! and hence may be aſcertained the dependance that is to be placed upon their moſt ſolemn promiſes.

Since theſe illuſive declarations were made, and fallacious proteſtations were given, the partitioning powers publiſhed each a manifeſto, in which they reſpectively laid claim to certain of the Poliſh territories. In theſe pretenſions the king of Pruſſia ſhewed himſelf a deep politician, by contriving to lay claim to the moſt valuable ſhare, and thereby obtaining the richeſt, moſt populous, and moſt commercial parts. It was in the year 1770, that theſe falſe and pretended friends threw off the maſk and began to avow their intentions. The Pruſſian conſul, having received his political leſſon, took occaſion to quarrel with the magiſtrates of Dantzick, and having been palpably the aggreſſor, was, according to his inſtructions, the firſt to complain. The king of Pruſſia pretended to be highly offended, but inſtead of coming to an explanation, or hearing both parties, he determined to be at once judge, jury, and executioner. He, therefore, to make a deciſion, not by the ſword of juſtice, but by the ſword military, ſuddenly ſurprized the city with a ſtrong body of troops, fined the magiſtrates 100,000 ducats for what he termed their inſolence, ſeized upon 1000 men to recruit his army, and having thus executed his intentions firſt, he began very calmly to argue the matter with the magiſtrates afterwards; and having coolly remonſtrated with them on their imprudence, as he called it, told them to do ſo no more, and he would freely forgive them. Amazing condeſcenſion, and truly characteriſtic of the moderation of an *arbitrary prince!*

This, however, was a trifling prelude to what was to follow; for in the enſuing year, the Pruſſian troops entered Great Poland, and carried off from that province and its neighbourhood above 12,000 families; and about the latter end of the ſame year, his Pruſſian majeſty publiſhed an edict, commanding under the moſt ſevere penalties, that all perſons ſhould take in payment for forage, proviſions, corn, horſes, &c. the money offered by his troops and commiſſaries. This money was either ſilver bearing the impreſſion of Poland, and worth only one third of its nominal value, or ducats ſtruck in imitation of Dutch ducats, but above 17 per cent. inferior in value to the real ducats of Holland. With this very baſe money he bought up a ſufficient quantity of forage and proviſions, to ſtock his magazines and ſupply his army for two years; and the poor inhabitants, after having been thus obliged to part from their property much below its value, were, through neceſſity, compelled to come to repurchaſe corn from thoſe magazines, and to pay good ſubſtantial money for it; for the Pruſſian commiſſaries abſolutely refuſed to receive again the ſame coin which they had paid from this curious though not very honeſt manœuvre; the king of Pruſſia cleared 7,000,000 of dollars.—The country being thus ſtripped of money and proviſions, the next plan of his Pruſſian majeſty was to clear it of its inhabitants. To encreaſe the population of his own dominions, at the expence of Poland, had long been his aim. To this end he enacted, that every city, town, village, &c. in the places which his troops poſſeſſed, ſhould furniſh a certain number of marriageable young women, and the parents were ordered to give as a portion, a featherbed, four pillows, a cow, two hogs, and three ducats in gold. This cruel order was

rigorouſly

rigorously executed. The parents were ſtripped to ſupply extorted portions for the children raviſhed from their arms. The young women were inhumanly dragged from their parents, their friends, and their connections; and being bound hand and foot like criminals, were carried off, in ſpite of the lamentations of themſelves and relations, in carts, waggons, &c. After this cruel exertion of arbitrary power, the exactions from the abbeys, convents, cathedrals, nobles, &c. were ſo great and unreaſonable, that the nobles fled from their eſtates, and retired into foreign countries, and the prieſts abandoned their churches. At length the treaty of partition was declared, and poſſeſſion taken, by the reſpective powers of the provinces uſurped, when Poliſh Pruſſia, and ſome diſtricts bordering upon Brandenburg, were allotted to the king of Pruſſia; almoſt all the ſouth-eaſtern parts of the kingdom, with the rich ſalt-works of the crown, fell to the empreſs queen of Hungary; and the empreſs of Ruſſia took poſſeſſion of a large territory about Mohilow. "Future ages (ſays an able writer) will regard this meaſure with the greateſt indignation; thoſe who projected it, with horror; and thoſe who acquieſced in it, with contempt."

CHAP. IX.

The KING of PRUSSIA's DOMINIONS.

THE kingdom of Pruſſia, including all its members, hath, ſince the beginning of the preſent century, held a moſt reſpectable rank in the continent of Europe, and its ſovereign is now conſidered as a very powerful monarch. We ſhall therefore bring the whole of the countries that compoſe this ſovereignty into one point of view, and then conſider them ſeparately.

The Pruſſian monarchy is compoſed of 21 principal diviſions.

Situated in		
1. Ducal, now Regal Pruſſia		Poland.
2. Brandenburg		Upper Saxony.
3. Pruſſian Pomerania		
4. Swediſh ditto		
5. Magdeberg		Lower Saxony.
6. Halberſtat		
7. Glatz		Bohemia.
8. Minden		Duchy of Weſtphalia.
9. Ravenſburg		
10. Lingen		
11. Cleves		
12. Meurs		
13. Mark		
14. Eaſt Frieſland		Circle of Weſtphalia.
15. Lippe		
16. Gulick		
17. Tacklenburg		
18. Gelder		Netherlands.
19. Neufchatel		Switzerland.
20. Part of Sileſia		
21. The countries lately diſmembered from Poland.		

I. *The Kingdom of* PRUSSIA.

THE country, formerly known by the name of Ducal Pruſſia, but now termed the kingdom of Pruſſia, properly ſo called, is bounded on the north by part of Samogitia; on the ſouth by Moſovia and Poland Proper; on the eaſt by part of Lithuania; and on the weſt by Poliſh Pruſſia and the Baltic; the length being 160, and the breadth 112 miles. The name of Pruſſia is derived from the word Boriſſi, the appellation formerly given to the ancient inhabitants of the country.

Autumn in this country is uſually wet, and winter ſevere; yet the air is tolerably wholeſome, being purified by high winds.

Pruſſia produces

Corn,	Cattle,
Flax,	Horſes,
Hemp,	Sheep,
Fruit,	Deer,
Hops,	Bears,
Paſturage,	Wolves,
Game,	Lynxes,
Foxes,	Wild boars, &c.

The Baltic, with the rivers and lakes, plentifully ſupply the inhabitants with fiſh; and on the ſhore of the former great quantities of amber are found, incloſed in which are often ſeen ſpiders, flies, gnats, minerals, leaves, fiſhes, frogs, ants, drops of water, pieces of wood, &c. &c. Theſe ſingularities are mentioned by Mr. Pope in the following lines:

"Pretty in amber to obſerve the forms
"Of hair, of ſtraws, of dirt, of grubs, of worms;
"The things we know are neither rich or rare,
"But wonder how the devil they got there."

Of this very remarkable ſubſtance we ſhall give the following account from a modern writer on natural hiſtory.

Amber is a hard bituminous ſubſtance, brittle, ſomewhat tranſparent, and of a yellow or citrine colour, though ſometimes it is whitiſh and ſometimes brown. The taſte is ſomewhat acrid and bituminous, with a little aſtringency; the ſmell, when warm, is fragrant and bituminous; and when rubbed it will attract ſtraws and bits of ſticks by its electrical virtue. It is found in large quantities in Pruſſia, which is the country where it is chiefly got, particularly in the Baltic Sea, near the ſhore of Sudavia, where it is found ſwimming upon the water, and is taken in nets. However, this bitumen is not a production of the ſea, for its water only ſerves to waſh it off from the bowels of the earth, and remove it to places near the ſhore. The veins of this bitumen have been found, by the order of the king of Pruſſia. In digging for them they firſt met with ſand, which being taken away, a ſtratum of clay appeared, and ſtill deeper there was the mineral of vitriol, which being expoſed to the open air, it was covered with an efflorеſcence of green vitriol. Still deeper there was a ſandy mineral, out of which, with proper inſtruments, they got amber in various places. By this means, in the Marche near Kuſtrin, as alſo in the Tract of Stolpen and Dantzick, it

was met with among ſand, and found collected in heaps; whence it appears they were greatly miſtaken, who took it for the roſin of trees that dropped from them into the ſea. It ſeems to proceed from the bituminous foſſile wood, juſt mentioned, by the aſſiſtance of the ſubterranean heat; which, at firſt, is probably like petroleum, and after paſſing through the mineral of vitriol, by the mixing therewith, becomes coagulated into a hard body. There is no doubt that it has been liquid, becauſe it is often found in a round form, containing ſeveral ſorts of inſects therein; beſides, the oil which is obtained from amber is, for virtue and ſmell, like petroleum. Charlton, who was a very great naturaliſt, has ſometimes found real petroleum included in pieces of amber, which is a farther reaſon to prove what is aſſerted. The greateſt plenty of this bitumen is found near the ſhore of Sudavia, after a violent north wind, attended with a tempeſt. Sometimes amber is ſo tranſparent, as to ſerve to make burning glaſſes, one of which is kept in the cabinet of the landgrave of Heſſe Caſſel. Amber, properly prepared, becomes a medicine for opening the obſtructions of the bowels, and promoting all ſorts of excretions; and conſequently is a very uſeful remedy in chronical diſeaſes. It is likewiſe ſaid to be very efficacious in curing cold diſorders of the brain, and particularly in pains of the head, ſleepy and convulſive diſeaſes, as well as in hyſteric and hypocondriac fits. The doſe is from a ſcruple to a dram in a poached egg, or any other proper vehicle. The volatile ſalt of amber is diuretic, and accounted a ſpecific in hyſteric and convulſive diſeaſes. The doſe is from 10 grains to 30. The oil is commended in nervous diſorders, particularly in the gout, palſy, and catarrhs, by anointing the parts therewith. It is given inwardly from two to 20 drops.

A kind of manna is likewiſe found here, and an inſect of whoſe eggs that beautiful red colour called St. John's Blood is made. Wood, pit-coal, wax, honey, pitch, &c. abounds, and of the aſhes of ſome kinds of wood glaſs is made. Independent of lakes and canals, ſeveral fine rivers water the country, which afford good inland navigation; great damages however are ſometimes done by their inundations.

Previous to the year 1719, the inhabitants of Pruſſia (Ducal Pruſſia only) capable of bearing arms, amounted to 635,998 perſons. Since that period 17,000 Saltzburgers, and the ſame number of German Swiſs, and French coloniſts, have ſettled in this country; and theſe emigrants have, ſubſequent to their coming into this kingdom, erected and founded as follows:

11 Towns,	86 Seats,
400 Villages,	1000 Schools;
50 Churches,	

hence the number of inhabitants at the preſent time muſt be deemed very conſiderable.

Moſt religions are tolerated; the Lutherans and Calviniſts, however, prevail. In the 13th century, the knights of the Teutonic order made a conqueſt of the whole country, in which they committed the moſt inhuman barbarities; for inſtead of converting which they pretended was their view, they extirpated the natives, and put the Germans in their place.

In 1454 one half of Pruſſia revolted from the knights, and put itſelf under the protection of Poland. This occaſioned an almoſt continual war betwixt that country and the order, till the year 1525, when by a treaty concluded at Cracow, it was agreed that Albert Margrave of Brandenburg, the 34th and laſt maſter of the order, ſhould have the Eaſtern part, under the title of a duchy, and that it ſhould deſcend to his and his brother's male heirs, as a fief of Poland; but in 1657, the elector Frederic William had the ſovereignty confirmed to him and his heirs, on condition of its returning to the Poles in caſe of the failure of heirs male. In 1701 it was raiſed to a kingdom by the elector Frederic, who was in a ſhort time after univerſally acknowledged as king of Pruſſia. At the time of his coronation at Koningſberg, he inſtituted the order of the Black Eagle. The enſign is a gold croſs like that of Malta, enamelled with blue, and worn at the end of a broad orange-coloured ribbon which paſſes over the left ſhoulder; the ſovereign is grand maſter, and the number of knights is always thirty.

Another order is that of Merit, founded by his preſent Pruſſian majeſty in the year 1740. The mark is a golden croſs, with eight points, enamelled with azure, and on the uppermoſt point is the letter F crowned; on the three lowermoſt points this motto, *For Merit*; and on the four other points, which form a St. Andrew's croſs, are ſo many ſpread eagles in gold. This ſtar is fixed to a black ribbon, which they put about their necks, and it hangs down their breaſts.

The preſent king of Pruſſia hath brought the trade of this country into a very flouriſhing ſituation, by the inſtitution of an excellent police. The imports are trivial, and the exports many, conſequently the balance is great in favour of the country. The manufactures, exports, &c. being

Iron work,	Glaſs,
Paper,	Gunpowder,
Copper,	Cloth,
Braſs,	Camblet,
Linen,	Silk,
Gold lace,	Stockings,
Silver ditto,	Amber,
Naval ſtores,	Linſeed,
Fiſh,	Hempſeed,
Oatmeal,	Mead,
Tallow,	Caviar, &c.

With theſe commodities upwards of 500 ſhips are annually laden, the moſt of which go from Koningſberg.

This country only brings his Pruſſian majeſty a very conſiderable revenue, amber alone producing 26,000 dollars annually: the other revenues ariſe from crown demeſnes, duties, cuſtoms, tolls, ſubſidies, &c. The king of Pruſſia is abſolute in this as well as all his other dominions, in political, civil, eccleſiaſtical, and feudal matters.

As the king of Pruſſia uſually reſides at Berlin in his electorate of Bradenburgh, this country is governed by a regency, conſiſting of four great officers of ſtate, viz.

The great { Maſter, Burgrave, Chancellor, Marſhal.

Theſe are aſſiſted by counſellors of ſtate, deputies from the nobles, and deputies from the commons. Here are likewiſe

A board of commerce,
A board of navigation,
A college of war,
A demeſne chamber, and
Several tribunals of juſtice.

The military eſtabliſhment here, as in all other parts of his Pruſſian majeſty's dominions, is very conſiderable. Each regiment is quartered upon a particular diſtrict, and all the young men of that diſtrict being regiſtered, they are obliged to join the regiment whenever commanded ſo to do.

There was a double diviſion of this country; the one into German and Lithuanian Pruſſia; German Pruſſia containing 280 pariſhes, and Lithuanian Pruſſia 105 pariſhes; but its modern diviſion is into the provinces of Samland, Nantangan, Oberland, and Little Lithuania.

The province or circle of Samland lies near the gulph of Courland, and is celebrated for the vaſt quantities of amber which are found upon the coaſt. The principal places of this province or circle are,

Konigſberg, or Koningſberg, the capital not only of this province but of the whole kingdom of Pruſſia, is ſituated on the river Pregel, in 54 deg. 42 min. north lat. and 21 deg. 35 min. eaſt long. It is well fortified, has ſeven bridges over the Pregel, and was founded by Offocarus or Premiſlaus I. king of Bohemia, in the year 1255, when that king came to the aſſiſtance of the Teutonic knights againſt the pagan Samlanders. It conſiſts properly of three towns formed by ſo many branches of the river, with the reſpective ſuburbs to each. Some geographers have told us, that "this is a beautiful city," but with reſpect to beauty, the moſt authentic travellers are unanimous in its diſpraiſe. In particular, an ingenious Engliſh writer, the lateſt we know of, who hath viſited theſe parts ſays; "This is a vaſt city, I do not believe it is leſs than Copenhagen, and it contains 50,000 inhabitants,

inhabitants, excluſive of 8000 ſoldiers; it is a great collection of houſes, and ſtreets without elegance, beauty or order; the buildings are in a vile taſte, and moſtly old. Here is an academy founded by one of the firſt dukes of Pruſſia, but our grammar ſchools in England are in general much ſuperior to it. A profeſſor ſhewed me the library and other apartments; there is nothing worth looking at, except the original ſafe-conduct (paſsport) given by Charles V. to Martin Luther, when he attended the diet of Worms in 1521, and ſigned by the emperor's hand: this merits preſervation. Koningſberg has a conſiderable trade in hemp and flax; but it is ſeven German, or 35 Engliſh miles from Pillaw the ſeaport, at the embouchure (mouth) of the river Pregel, ſo that only very ſmall veſſels can come up to the town. The preſent king of Pruſſia has not ſhewn any attachment or fondneſs for this part of his dominions, nor has he viſited the city ſince the year 1753, though he comes annually to make a general review of the troops at Graudentz near Marienwarden on the Viſtula, not far removed from hence." The three diviſions of Koningſberg are Alſtadt, or the whole town, Lobenicht and Kneiphoff. In the city and ſuburbs are a great many gardens, public and private. The town houſe and exchange are tolerable buildings, and the palace erected by the margrave Albert is a magnificent pile, and very capacious, as it contains many courts, public offices, &c. The gardens and parks are great embelliſhments to it. The citadel, called Fredericſburg, erected in 1657, is a regular fortification, of a ſquare form, and ſurrounded by broad ditches. This city was formerly a Hans town, and its trade is ſtill very conſiderable, and near the palace is the Collegium Fredericianum. Beſides the ſeveral hoſpitals and alms-houſes, here is a charitable fund, from which above 800 perſons receive weekly penſions.

Pillaw is a well fortified town, with an excellent harbour, ſituated at the mouth of the bay or lake called the Freſche-Hoff, 30 miles to the weſt of Koningſberg. The larger veſſels, conſigned to Koningſberg, deliver and take in their cargoes here, as the Freſche-Hoff hath not a ſufficient depth of water to carry them up to Koningſberg; hence Pillaw is a place of conſiderable trade, and the town and harbour are defended by a ſtrong fort well planted with cannon. The peninſula in which Pillaw is ſituated is, from its fertility and pleaſantneſs, termed the paradiſe of Pruſſia.

Wogram is a ſmall village in the neighbourhood of Pillaw, where ſturgeons are boiled and packed up, and caviar is made of their roes; the greateſt part being exported to England.

The Curiſche Nerung, or peninſula Curonenſis, is a narrow ſlip of land which ſeparates the Baltic Sea from the bay called Curiſche-Hoff. It is a barren, narrow, ſandy tract, of which a late traveller thus makes mention. "The road lies over a ſpit of ſand about 83 miles in length, and not more than a ſingle one in breadth in many places; in none does it exceed three. This extraordinary bank of ſand terminates a little to the northward of the town (Koningſberg) from which it is ſeparated by a haven of near half a mile in breadth. When the weather is fine, and the ſea ſmooth, one may drive along it with great pleaſure, as the ſands cloſe to the margin of the water are hard and firm. Unhappily for me, it not only blew very hard, but the wind being weſterly, drove the waves a long way higher on the beach than uſual. I landed on the ſand about two in the afternoon, and reached the firſt poſt-houſe, as night cloſed in. A more terrible one I hardly ever remember: it not only rained without intermiſſion, but the wind, which had increaſed the whole day, blew a hurricane. The ſea being driven by its fury a long way beyond the uſual bounds, neceſſitated the poſtillions to drive through the very ſurf, which many times compleatly covered the fore wheels of the carriage, and roared like thunder in my ears. In ſuch a ſituation I could not take much repoſe, and more than once apprehended I ſhould have been inevitably overturned into the ſea, the ſide of the little ſand hills which bound the ſhore being ſo ſhelving and ſteep, that it was with the utmoſt precaution and care the carriage was prevented from turning over. Morning came moſt welcome after ſuch a night, and about eight o'clock I got to a miſerable naſty hovel called an inn, where I found the poor inhabitants employed in boiling pumkins, which appeared to be one chief article of their food. The women looked more like witches than human creatures, without any ſort of head-dreſs except their hair, and ſcarce covered to the knees. Here, among horſes, in a large ſtable, I ate my breakfaſt, and drank my coffee, very compoſedly. I reached the ſouthern termination of the ſound, where it joins the continent, about noon, and gladly found myſelf once more on firm ground, after having drove two and twenty hours along the ſhore of the Baltic, and often amid its very waves."

Walau, ſituated at the conflux of the Pregel and Alle, was founded in the year 1336: it conſiſts of two principal and five croſs ſtreets, but does not contain above 300 houſes.

Great and Little Frederic's canals near this place, which much facilitate the inland navigation of the kingdom, belonged to the Waldenburg family till the year 1713, when the king of Pruſſia purchaſed the property of theſe canals and their reſpective tolls.

The province, or circle of Nantangan, adjoins to Samland; is fertile and populous, and contains the following places:

Angerburg, which is ſurrounded by palliſadoes, and defended by a ſtrong caſtle, ſituated on a lake where the river Angerhap has its ſource, is celebrated only for its church, which is capacious, beautiful, and well endowed.

Raſtenburg, a handſome town, with a caſtle on the river Guleer, is encloſed with a wall and rampart.

Gardawen, on the river Omet, has two caſtles to defend it, and an elegant palace with fine gardens. It was founded in 1325, and in its vicinity is a lake, which contained a floating iſland that once afforded paſturage for an hundred head of cattle; but now it is ſeparated, and the reſpective parts daily diminiſh by the waſhing of the waters. As the neighbouring people pretended to prognoſticate the nature of approaching weather from the motions of this iſland, it was termed the Gardawen Almanac.

The province, or circle of Oberland, which was formerly very conſiderable, is at preſent equally fertile, but leſs populous than it has been. It contains the following places.

Oſterrode, a conſiderable town on the lake of Dribentz, but remarkable only for its ſalt-works.

Holland is a well fortified, handſome town, near the river Weeſke. It is defended by a caſtle, and has a free fiſhery on the Drauſen lake; contains ſome excellent ſalt-works, a magazine for corn, forage, &c. and has ſeveral fine ſeats in its neighbourhood.

Mohrungen, a ſmall well-built town, ſituated upon a lake to which it gives name, is exceedingly well fortified.

Marienwarden is a conſiderable town, neatly built, and pleaſantly ſituated near the Viſtula, and on the borders of Pomerania. The cathedral is a ſtately Gothic ſtructure, and the palace not much inferior. The trade is conſiderable, and the ſalt-works important, and for corn and forage there is a great magazine. The czar Peter the Great had an interview with Frederic the Firſt, king of Pruſſia, at this place, in the year 1709.

The province of Little Lithuania is 114 miles in length, and in general about 50 in breadth. It is very woody, and was almoſt depopulated by the peſtilence in 1710; but king Frederic William reſtored it, by encouraging a great number of foreigners to ſettle in it, ſince when it has been extremely well cultivated, and abounds with all the neceſſaries of life.

Memel is a well-fortified town, on the lake Curiſche-Hoff, about 80 miles from Koningſberg. The trade, which is conſiderable, conſiſts chiefly in flax, linſeed, thread, and hemp. Here are likewiſe a brewery, and a ſoap manufactory, with a ſalt factory, royal magazine, and a ſtrong citadel to defend the whole.

Tilſet, the moſt capacious and opulent town in Pruſſia next to Koningſberg, is famed for the cattle fed, and the excellent butter made in its neighbourhood. This town contains a ſalt factory, and is defended by a caſtle.

Inſterburg is a town of ſome conſideration, at the conflux of the Inſter with the Angerap, inhabited by about 3000 families. It is defended by a caſtle, contains a grainery, ſalt factory, and high court, and has a conſiderable trade for beer and corn.

Stallupehenen

Stallupehenen is a ſmall new-built town, with a charter granted in the year 1722. The inhabitants carry on a great trade in cattle, but wood is ſcarce, and freſh water ſcarcer ſtill.

Ragnit is a ſmall town, ſurrounded by palliſadoes, and defended by a ſtrong caſtle.

II. BRANDENBURG.

THE electorate of Brandenburg has Poland on the eaſt; Luneburg on the weſt; Pomerania on the north; and Sileſia, with the electorate of Saxony, on the ſouth. Its length is 200 miles, and its greateſt breadth about 100. In winter the climate is exceedingly cold, and the ſoil in general not fruitful, as it is in a great meaſure ſandy, though under the reigns of the late and preſent ſovereigns, a variety of methods have been taken to improve it. The productions, which are the moſt plentiful, are buck wheat, millet, flax, woad, tobacco, herbs, allum, ſalt-petre, amber, iron, ſtone, &c. Abundance of cattle and ſheep are bred here, and the woods not only ſupply the inhabitants with fuel, but with timber, charcoal, tar, and wood-aſhes, not only for domeſtic uſes, but for exportation. The ſilk manufactory is likewiſe carried on here with great ſucceſs.

The principal rivers of Brandenburg are, the

Elbe,	Oder,
Prignitz,	Havel,
Warta,	Spree.

The rivers and lakes abound with fiſh, and are united by canals. About 10 years ago Brandenburg contained

120 Towns.
2500 Villages.
800,000 Inhabitants.

But his preſent Pruſſian majeſty has greatly encreaſed not only the manufactures, but the number of people, villages, and even towns in his dominions, and more particularly in the Brandenburg territories.

The electorate of Brandenburg is divided into three parts, viz. The New Marck, The Middle Marck, and the Alt or Old Marck.

Brandenburg is very cold, and the winter ſharp for ſeven or eight months; but they have plenty of firing. It is not very fruitful, by reaſon of its cold and watry ſoil; but it has large foreſts abounding with deer. The Old Marck, however, has plenty of herbs and fruit, and the New Marck has ſome corn and paſture, wherein are fed great flocks of ſheep, and ſome black cattle. They boaſt, indeed, in ſome parts, of their wine; but the Saxons deſpiſe it to a proverb. The country people are generally poor, and have ſorry houſes of accommodation. La Foreſt ſays, that if they were as much given to trade, as to drinking and feaſting, they might make conſiderable profit of their ſheep, and breed more black cattle; yet they are univerſally owned to be very brave: The commodities are chiefly exported by the Elbe and the Oder, betwixt which there is a communication by a canal, which ſaves their paying toll in the Sound. The country is alſo watered by other good rivers, particularly the Spree, the Havel, the Netze, the Uker, and the Warta; and it has many lakes, (the chief of which is the Ukerzee) the beſt ſtocked with fiſh of any in Germany.

The New Marck has Sileſia on the ſouth, the Middle Marck on the weſt and ſouth-weſt, Poland on the eaſt, and runs out to Pomerania on the north. The Oder divides it from the Middle Marck, and the Uker Marck. It is about 100 miles in compaſs. It belonged a good while to the knights of the Teutonick order, till the 13th century, when it was purchaſed by the Brandenburg family; but they had not peaceable poſſeſſion of it till the 16th. Buno, in his notes on Cluverius, ſays, that moſt of this marquiſate was ſold to the emperor Charles IV. by Otho of Bavaria, for 200,000 pieces of gold. This diviſion abounds more than any of the others in corn and paſture, and has vineyards on the banks of the Oder, but they are of no great account. Sometimes the Boors find here quantities of old coin, and precious ſtones, which they ſell for trifles.

The principal places in New Marck are,

Cuſtrin, or Kuſtrim, its capital, 13 miles north of Frankfort, and 45 eaſt of Berlin. It was but a fiſhing village till 1537, when it was walled with ſtone, and otherwiſe fortified, and is reckoned the key of the New Marck. Guſtavus Adolphus beſieged it in vain in 1631. It is ſtrong both by art and nature, being ſituated in a marſh, at the conflux of the Oder and Warta. It has an arſenal well furniſhed, and a citadel which is reckoned impregnable. The burghers have neat houſes, well furniſhed, and the market-place is the beſt in all the marquiſate. Beſides the town-council, there is a council of the regency here for this diviſion, and a court of bailiwick.

Falkenburg, on the river Frage, or Rega, 38 miles ſouth of Colberg, 50 eaſt of Stetin, and 107 miles north-eaſt of Berlin, on the frontiers of Pomerania, is only noted for its ſtrong caſtle.

Drieſſen is another town with a fortreſs reckoned impregnable, near the Poliſh frontier, at the conflux of the Netze and the Trage, 80 miles north-eaſt of Berlin. On the Poliſh ſide it is defended by a large marſh, which reaches almoſt a muſquet-ſhot from the town; and its two rivers part at the entrance of the place, and incloſe it. The fortification is a regular pentagon, with ditches. The Swedes took it by the treachery of one of the inhabitants in 1639, but reſtored it by the peace in 1659.

Landſperg, on the river Warta, over which it has a bridge 20 miles eaſt of the Oder, and 68 eaſt of Berlin. It is very conveniently ſituated for trade, which conſiſts much in caſting of iron ordnance.

Sunneberg, or Sonneberg, on the ſame river, 50 miles eaſt of Berlin, was the reſidence of the bailiffs of the order of Malta, till the electors ſeized it in the 16th century, and aſſumed the power to preſent their bailiffs, and diſpoſe of their commanderies.

Schwedt, upon the Oder, 47 miles north-eaſt of Berlin, is the appendage of one of the ſons of the family, who has a pleaſant garden and palace here; and from hence Philip, great uncle to the preſent king of Pruſſia, was denominated prince of Brandenburg Schwedt.

The Middle Marck lies in the middle of the marquiſate, and is the largeſt of the three diviſions, containing about 100 miles from the banks of the Elb to the Oder. It has Preignitz on the north, together with Mecklenburg, the Ucker Marck, and the New Marck; which laſt diviſion bounds it likewiſe on the eaſt, together with Sileſia: on the ſouth it has Luſatia, and the duchy of Saxony; and, on the weſt, the duchy of Magdebourg.

The chief towns are,

Lebus, on the Oder, 40 miles eaſt of Berlin. It was formerly a biſhopric, founded by Miceſlaus, the firſt chriſtian prince of Poland, about the year 965. It embraced the reformation in 1555, and in 1628, it was united to the dominions of Brandenburg, by the elector, who was its biſhop, and, as ſuch, chancellor of the univerſity of Frankfort. The ſee, which has ſince been ſecularized, was ſuffragan to the archbiſhop of Gneſna, in Poland. The town ſtands between two hills, on one of which are the ruins of the old caſtle of the biſhop, which was burnt.

Franckfort on the Oder is about 253 miles north-weſt of Vienna. The Oder, over which there is a large timber bridge, divides it into two parts. It is ſaid to have been founded in the year 146, by Sunno, a prince of the Franks, who drove out the Vandals, and planted a colony here of his own people. In 1253, it was rebuilt, and inlarged one third by the elector John I. In 1379, the elector Sigiſmond gave it great privileges, upon its entering into the league of the Hans Towns; and Joachim I. founded an univerſity here in 1506, ſupplying it with learned profeſſors from Leipſic; ſince which time it has bred many learned men. The proteſtant religion was eſtabliſhed here in 1538. It was once a free and imperial city; but now exempt, and not ſo important as formerly. Nevertheleſs it has a conſiderable trade, chiefly in linen cloth and felts, by the Oder, and the canal betwixt that river and the Elb; and has three great fairs a year. The ſtreets are wide, the houſes well built, and the market-place is ſpacious and ſtately. This city has ſtood the ſhock of various revolutions. It was put under the ban of the empire by the emperor Charles IV. and, to pacify him, the inhabitants were forced to pay him down 12000 marks of ſilver. In 1631 the Swedes took it by ſtorm, when they

they put all the inhabitants to the ſword, to revenge the maſſacre of 2000 Swedes, whom the emperor's general, count Tilly, had inhumanly put to death. However, it was reſtored to the elector by the peace of Weſtphalia. Without the gates there are the ruins of an ancient Carthuſian monaſtery, of which Johannes ab Indagine, ſaid to have wrote 300 tracts on various ſubjects, was prior.

Munchenburg, ſituated between Franckfort on the Oder and Berlin, is a ſmall town, inhabited chiefly by the deſcendants of thoſe French Proteſtants, who left their country on the repeal of the edict of Nantz.

Furſtenwald, a pleaſant little city on the north ſide of the Spree, contains an electoral palace, and is the ſeat of a bailiwick.

Berlin is not only the capital of the electorate of Brandenburg, but of the whole Pruſſian dominions, and may with juſtice be deemed one of the fineſt and largeſt cities of Germany. It is the royal reſidence, conſiſts of five towns united together, but has received aſtoniſhing improvements of late years. The ſtreets are handſome, long, and capacious; here are ſome very elegant ſquares, and many fine palaces. One of the principal public edifices is the royal palace, a prodigious pile, but irregular, as it was erected at different times, and by various architects. It is decorated with admirable paintings, and beautiful tapeſtry, and furniſhed with a greater quantity of plate than any other court in Europe. It contains likewiſe a fine cabinet of rarities, natural and artificial, an excellent collection of medals, a diſpenſary, and one of the fineſt libraries in Europe. Among the other principal ſtructures are, the

Council-Houſe, in King-Street.
Calviniſt Gymnaſium, in St. Eſprit-Street.
Great Garriſon Church, and Provincial Council-Houſe, in Spandace-Street.
Jews Synagogue, in Heydereuter's-Street.
Royal Magazine, in Cloyſter-Street.

In the laſt mentioned place a great quantity of rough wool is kept, to be regularly delivered out to poor manufacturers, that it may be ſpun and wove, and afterwards dyed and ſold by the managers of the Orphan-houſe at Potſdam, to which charity the profits are appropriated. In Stralau-ſtreet there is a fine hoſpital, in which above 800 children are educated gratis. The Lutheran Gymnaſium, or School of Atheltic Exerciſes, is ſituated in the Grey Cloiſter; and at the King's Gate is the Court of Cadets, in which young noblemen and gentlemen are inſtructed in all the exerciſes neceſſary to qualify them for a military life. All the above, except the royal palace, are in Berlin, properly ſo called; the palace itſelf is in the quarter called Old Coln, and in the ſuburbs are the magnificent garden of count Reuſſen, the beautiful houſe and garden called Monbijou, and the houſe and garden of Belvidere. The hoſpital of invalids is a ſtately and magnificent building, and above a thouſand perſons are maintained in it, conſiſting of officers and ſoldiers, with their wives and children; and theſe, beſides lodging and fuel, have a certain allowance weekly of money, bread, &c. There are ſeveral bridges over the river Spree, and in particular one which is exceedingly elegant and magnificent: it conſiſts of five arches, and has a fine metal ſtatue on it of the great elector Frederic William. In the magnificent and noble Calviniſt church of Old Coln, is the burial-place of the royal family; near which are the riding academy, the royal ſtables, a ſchool of exerciſes, and many other buildings, public and private. In the ſugar-houſes of Berlin as much ſugar is refined as ſerves the whole Pruſſian dominions. Many other manufactures are carried on here, particularly one of porcelain, inferior in no reſpect to that of Meiſſen, except in the paintings. The great population and improvement of this city, as well as other parts of the Pruſſian dominions, have been aſcribed to the emigration and influence of the French refugees, who introduced a variety of arts, manufactures, &c. before unknown in the Pruſſian territories. The canals cut to Berlin from the Havel, the Oder, and the Elbe, greatly promote the trade of the city, and ſupply the inhabitants with plenty of fiſh; and as the preſent king of Pruſſia has always made a point of embelliſhing and aggrandizing this metropolis, it is no wonder that it ſhould be the admiration of all who viſit it. The following inſtitutions add to the beauty of the capital, as well as to the benefit of the inhabitants: the

Academy of Sciences.
Academy of Belles Letters.
College of Phyſic and Surgery.
Anatomical Theatre.
Tapeſtry Manufactory.
Opera-Houſe.
Arſenal.
Several well-regulated Hoſpitals.
Many Lutheran, Calviniſt, and two Roman Catholic Churches.

Independent of theſe there are a variety of pleaſant gardens, walks, &c. The police of Berlin is exceedingly well regulated, and the inhabitants more ſecure from the depredations of robbers, than in moſt other cities. Round the environs of Berlin there are many pleaſant villages, canals, pleaſure-houſes, gardens, &c. Among the palaces, in the vicinity belonging to the ſovereign, are thoſe of Schonhauſen and Charlottenburg. The firſt is about the diſtance of two miles from Berlin, ſituated on the river Panka, which waters its fine gardens.

Charlottenburg ſtands on the Spree, ſo that one may go to it in a boat, though the common way is through the park, at the end of the great walk from the new town: and when the king is here, all the road hither from Berlin is lighted with lamps on both ſides. It was formerly called Lutzenbourg, and but a ſmall village, till the electreſs, wife to Frederic I. liking the ſituation of it, began to build here; and after her death the works were carried on by the elector, who cauſed the place to be called Charlottenburg, in remembrance of his conſort, whoſe name was Sophia Charlotte. This caſtle, or palace, is one of the moſt conſiderable ſtructures in Germany, the apartments being grand and ſplendid, and the furniture very rich. There is one cloſet furniſhed with the choiceſt porcelain, and another with luſtres, a tea-table, and all its equipage, of ſolid gold. It has a ſumptuous chapel, adorned on every ſide with gold and painting; and a moſt beautiful garden next to the river, with one of the moſt magnificent orangeries in Europe, not only for the number and diſpoſition of its trees, but the greatneſs of the building, where they are kept all the winter.

Oranjeburg, ſo called by its founder Frederic I. in honour of his mother, who was born princeſs of Orange, is charmingly ſituated near the Spree, about 16 miles north-weſt of Berlin. The apartments of this palace are grand; the rich furniture has been removed to Berlin; and its fine porcelain, which was not to be matched in Europe, paſſed into the hands of the elector of Saxony. The miles from hence to Berlin, and from thence to Potzdam, are diſtinguiſhed by mile-ſtones. Near this ſeat lies a ſmall city of the ſame name, ſurrounded by beautiful meadows, watered and divided by many canals drawn out of the Havel, and bounded by woods, acroſs which are cut ſeveral long viſtas.

Spandaw, eight miles north-weſt of Berlin, ſtands at the conflux of the Havel and the Spree; but is of no more note, than for being uſed as a priſon for ſtate criminals.

Brandenburg, 23 miles weſt from Berlin, had its name from its founder Brennus, a general of the Gauls, 416 years before our Saviour; and others from Brandon, a Franconian prince, who they ſay built it, A. C. 230. Whichſoever it was, it is certainly a very ancient city, and gave name to, and was formerly the metropolis of the Marquiſate. It ſtands on the banks of the Havel, which divides it into the Old or Upper Town, and that called the New. It was erected into an epiſcopal ſee under the metropolitan of Magdeburg, by the emperor Otho the Great, A. D. 946, but aboliſhed at the reformation in 1563; and being ſecularized with the whole country in 1628, the elector George William appropriated it to himſelf. In the great church are many monuments of princes. The ſtreets of the Upper Town are built croſs-ways, and centre in a fine market-place, where is a Statua Rolandina, which was an image ſet up in many

German cities, as a teſtimonial of the great privileges granted them by the emperors. This town is well ſupplied with fiſh from a neighbouring lake 10 miles long. It lies in the road from Berlin to Magdeburg; has a conſiderable trade, and a garriſon, conſiſting of a battalion of grenadiers. Though it has no fortification except a few round towers along the walls of the New Town, yet it is ſtrong by its ſituation among marſhes, and has a hill on one ſide covered with vineyards, on the top of which is St. Mary's, an handſome church, formerly one of the richeſt abbeys, and beſt built churches in Germany. It has two high ſquare towers, which are ſeen a great way off. Though the walls are very antient, the ſtreets are, for the moſt part, handſome and regular. The Havel brings great boats hither from the Elbe, with all ſorts of merchandize, from the towns on that river.

The Alt, or Old Marck, has Mecklenburg on the north, Magdeburg on the ſouth, Saxe-Lawenburg and part of Lunenburg on the weſt, and the Middle Marck on the eaſt. Some authors call it The Galilee of Germany, becauſe it abounds in fruits and herbs. It is divided into four petty provinces, called Oſtland on the eaſt, Zermundland on the weſt, Angerland on the ſouth, and Zenland on the north. The Elbe ſeparates it on the eaſt from Preignitz.

The chief places are,

Stendal, or Stendel, the metropolis, on the river Ucht, in a pleaſant plain by a large foreſt 20 miles ſouth of Havelburg, 28 north of Magdeburg, and 37 north-weſt of Brandenburg. It is a Hans town, a neat well built city, and ſtrongly fortified. The courts of civil judicature for the Old Marck are held here. The inhabitants have a pretty good trade in corn and linen cloth, and make a good profit by travellers, it being in the road from Magdeburg and Erfurt to Hamburg and Lubeck. It was built by the emperor Henry I. in 920, and fortified by Albert furnamed the Bear, in 1150. It was ſo ruined by the civil wars in Germany, that it had much ado to recover it.

Soltwedel, a large town on the weſt ſide of the Jetze, a little below its conflux with the Dune, 36 miles north-weſt of Stendal, in the road from thence to Lunenburg, and 50 north-eaſt of Zell. This city, and the neighbouring territory, had formerly princes of their own, who did great things againſt the Huns. It is divided into the Old and New Towns, the former ſaid to have been built by Claudius Druſus, the latter by the emperor Henry I. Their chief trade is in beer, which they export. It was antiently known by the name of Heliopolis, and it is ſuppoſed, that in the Pagan times here was a temple dedicated to the ſun.

Gardeleben, or Gardelegen, in Latin Gardelegia, 13 miles ſouth-weſt of Stendal. Some derive the name from the pleaſant gardens in the neighbourhood, where there is an old fort called in their language Iron Jaws.

Tangermund, or Angermund, on the Elbe, at the mouth of the Anger, was firſt a caſtle built by the emperor Charles IV. who bought this Marck, and reſided here. It fell ſome time after into the hands of the dukes of Pomerania, from whom the elector Frederic I. took it in 1420. It is a place of pretty good trade in corn, and other commodities conveyed to Hamburg, and other places, by the Elbe.

Oſterburg, 17 miles north of Stendal, at the conflux of two rivers, is a ſmall town, which ſuffered much by fire in 1491; but is noted for a good corn market.

Werben, antiently Varinum, at the conflux of the Elbe and Havel, 20 miles north-eaſt of Stendal, was built by the emperor Henry the Fowler, on the ruins of the old Caſtellum Vari. In 1631 it was taken by the Swedes, after which Guſtavus Adolphus ordered the caſtle, which commands the town, to be built, thinking it might be made one of the ſtrongeſt places in Germany. In 1636 it was taken by the Imperialiſts and Saxons, who were forced that ſame year to ſurrender it again to the Swedes; and next year the Imperialiſts retook it; but in 1640, the Brandenburghers got poſſeſſion of their fort; and, upon a ſuſpenſion of arms next year betwixt them and the Swedes, wherein it was agreed, that it ſhould be demoliſhed, the elector's peaſants pulled it down.

Havelburg, 41 miles north-weſt of Brandenburg, was in 946 made a biſhoprick, ſuffragan to Magdeburg, and its biſhop reſided at Witſtock, a town of Preignitz, but aboliſhed at the reformation; ſince which the religion here has been Lutheran.

Potzdam is a large town, ſituated on an iſland about four miles to the ſouth-weſt of Berlin. The caſtle built here firſt rendered it conſiderable, ſince which the town has continually encreaſed, and received a variety of embelliſhments. It contains many ſtrait ſtreets, with canals in the middle, and trees on each ſide. The palace is magnificent, and the houſes in the vicinity very beautiful. Before the caſtle is a ſquare adorned with Roman columns, which hath a very fine garden. The garriſon is exerciſed in the area in the front, and near it a large foreſt paled in for hunting. The foreſt itſelf contains a royal ſeat with viſtas in form of a ſtar. About the town are alſo many vineyards, and the market-place contains a ſtately obeliſk of variegated Sileſian marble, with a pedeſtal of white marble, and marble buſts of the kings on each ſide. Two thouſand ſoldiers children are maintained, cloathed, and educated, in the orphan houſe. Here is a foundery, manufactures for velvet, ſilk, gold and ſilver lace, &c. Several elegant churches, one of which contains a fine ſet of chimes; and ſtables for the horſe guards, of which, with the foot guards, and other battalions, the garriſon conſiſts.

Not far from Potzdam is the palace of Sans-Souci, on the top of a mountain, from whence there is a delightful landſcape, comprizing a view of the town, neighbouring country, rivers, lakes, woods, vineyards, groves, &c. The palace, though not very capacious, is very magnificent, and the furniture, though not ſuperb, is elegant. The paintings, ſtatues, gardens, &c. contribute to make the whole a moſt delightful place. The ſmall but excellent library is kept in an apartment wainſcoted with cedar, and adorned with foliage of gold, and the elevated ſpot on which the palace is ſituated has plantations of vineyards, and is cut into terraces.

Excluſive of the above principal diviſions, Brandenburg contains ſome other inferior diſtricts, circles, and towns, which are as follow:

The diſtrict of Preignitz, bounded by the Elbe and Havel, the duchy of Mecklenburg, and a part of the Middle Marck, extends about 40 miles in length, and 30 in breadth, and contains the following places:

Perlburg, on the river Stepenitz, is the capital, gives name to a circle, has an inſpector's ſeat, and contains about 400 dwelling houſes.

Wittenberg, a ſmall town on the river called the Old Elbe.

Prizwalk on the Domnitz gives name to a circle, and an inſpection. This circle has likewiſe three other ſmall towns, viz. Freinſtein, Putlitz, and Meienburg, with two foundations for Proteſtant ladies.

Kyritz on the river Jagelitz, and in the neighbourhood of ſeveral lakes, gives name to a ſpiritual inſpection, and to a circle.

Lenzen, a ſmall town which has a toll and ferry on the Elbe, is ſituated near two lakes, and gives name to a circle and inſpection.

Witſtack is a ſmall town ſituated on the river Doſſe, which gives name to a circle and inſpection, is accommodated with a chryſtal and glaſs-houſe, and formerly contained a palace of the biſhop of Havelberg.

Welſnack is ſituated on the Kartau, and pilgrimages were formerly made to it.

The other ſmall towns, diſtricts, circles, &c. are the following:

Werder, a ſmall town upon an iſland in the Havel.

Sechauſen, a ſmall town ſurrounded by the river Aland. It gives name to a principal riding and circle.

Diſtorf was antiently an Auguſtine nunnery, but is now a Lutheran cloiſter. It conſiſts of 12 ladies, ſix of whom are noble, and the other half deſcended from burghers.

Buck is a little town on the Elbe.

Arendſee is a ſmall open town ſituated on a lake, and gives name to a circle and riding. It formerly had a Benedictine cloiſter, which is now converted into a Proteſtant nunnery, and contains ſix Proteſtant ladies under the ſuperintendance of a lady abbeſs.

Arneburg, a ſmall town on the Elbe, has ſome traffic, and gives name to a circle and riding.

Nuendarf was formerly a Ciſtercian, but is now a Proteſtant nunnery.

Betzendorf, a ſmall town with a caſtle, and Apenburg, another ſmall town in the neighbourhood, belong to the Schulenburg family, and form a diſtrict.

Kalbe is a town which, together with its juriſdiction, belongs to the family of Alvenſleben, and is ſituated on a ſwampy iſland in the Milde.

Beſides theſe there are ſeveral villages, hamlets, &c. or the ruins of towns, which are either too inconſiderable to mention, or do not contain any thing worthy of obſervation.

III. PRUSSIAN POMERANIA.

THE duchy of Pomerania is bounded by the Baltic Sea on the north, by the principality of Mecklenburg on the weſt, by part of Poland and Brandenburg to the ſouth, and by Pruſſia to the eaſt. It is above 200 miles in length from eaſt to weſt, and from 50 to 80 in breadth. The ſoil in many parts is ſandy and barren, and the arable lands near the ſhore are frequently overwhelmed with ſand, yet in other parts there is corn enough both for conſumption and export, beſides good paſtures filled with cattle, and many large woods and foreſts which abound with deer, wild boars, hares, foxes, wolves, wild horſes, wild bulls, &c. and fowls of all ſorts. Here are alſo beavers, and ſuch plenty of water fowl, that they reckon 20 ſorts of ducks. They have great plenty of ſalt and freſh water fiſh, particularly ſalmon, and very large lampreys, eſpecially in the bay of Stetin, and lake of Laſſen. About Grypſwald and Rugen they have good herring fiſhing, and in the lake Madduje, near Colbatz, there is a large broad fiſh called Muſcum, found no where elſe in Germany. There are many fair and fertile meadows betwixt the branches of the Oder, and great quantities of fruit of all kinds. They have no wine of their own growth, but excellent mum, and beer of ſeveral ſorts, particularly, the bitter beer of Stetin, the mum of Gripſwald, and the ſtout of Wollin, which mariners tranſport elſewhere: and as there are ſcarce any mountains in the country, it has no mines but ſome few of iron in the Upper Pomerania. It abounds with amber, eſpecially on the coaſts of Brandenburg Pomerania, where it is not only thrown up by the ſea, and found among the ſea-weeds and ſands, but alſo dug out of the rocks and mines. There is a particular lake in this country, that communicates with the ſea, where they gather it in nets when the ſea begins to flow, and ſometimes draw up pieces as big as one's fiſt. At firſt taking up it is ſoft, but ſoon hardens, by the air, into a ſtony ſubſtance. It is of ſeveral colours, white, yellow, black, and red. The ſort found in Pomerania is a dark yellow. It is ſuppoſed to be an oil diſtilled from rocks, like petroleum; and that the inſects, which are ſometimes found incloſed in it, are entangled there while it is liquid; and that what is taken in the ſea, and in the adjoining lakes and rivers, is broke off from ſome rock or vein under ground, by floods and tempeſts. In ſome places it is found in a matrix of wood, which the ſkilful know at firſt ſight.

This duchy is well watered by rivers and lakes. Among the former are, the Oder, the Pene, the Rega, the Perſant, the Wiper, the Stolp, the Rekenitz, and the Barte. The Rekenitz ſeparates Pomerania from Mecklenburg, forming a large lake near Damgarten, and falling into the Baltic at Dars. The Barte riſes near Stralſund, and falls into the ſea at Bardt. The Oder, ſoon after its entrance into Pomerania, divides into ſeveral branches; and, after having paſſed by Garts, Griffenhagen, Schwedt, and Stetin, flows into the Damniſh lake, and then into Damantzkt, and at laſt dilates itſelf into a freſh water lake, or ſea, called the Great Friſche Haff, which is an excellent road for ſhipping, 30 miles in length, and 10 in breadth, abounds with fiſh, and falls into the Baltic by three currents, viz. the Divenow, the Swyn, and the Penemund, through which ſhips paſs to Stetin. Beſides the abovementioned, there are many more rivers in Pomerania which fall into the Baltic.

The people are reckoned as ſtout and nimble as any in Germany, but are charged, on the other hand, with being intemperate in drink, credulous, and prodigal. This character is given of the antient inhabitants, that they were ſtrangers to deceit or robbery, locked up nothing, were hoſpitable to all ſtrangers, and ſo kind to one another, that there were no beggars among them: but in the Pagan times, if fathers had more children than they could maintain, they were allowed to kill the females, though not the males. This, however, ſeems very inconſiſtent with their character of being ſo charitable to each other.

The coaſt of Pomerania begins 16 miles eaſt of Roſtock; and as the iſle of Rugen bears due ſouth from the Sound, and the Baltic Sea is very open and wide between them, this has been the conſequence, viz. that the ſeas between the iſles of Iceland north, Bornholm eaſt, and Regen ſouth, have been generally the ſtage of war between the Swediſh and Daniſh fleets.

The nobles of this duchy, as well as the ſeveral towns, had formerly very particular privileges, which his preſent Pruſſian majeſty hath greatly abridged. The inhabitants are about half a million in number, being principally of German and Sclavonian deſcent, a dialect of the latter being the language of the country. Lutheraniſm is the eſtabliſhed religion, but Calviniſts and Roman Catholics are tolerated.

The duchy contains an univerſity, ſeveral colleges, grammar ſchools, &c. Here are ſeveral manufactories, and great commerce is carried on by means of the Baltic and the ſeveral navigable rivers. This duchy was formerly conſidered as divided into Anterior and Hinder Pomerania; but it is moſt ſuitable to conſider the whole under the diſtinct heads of Pruſſian Pomerania, and what hath been uſually called Swediſh Pomerania, though all the former, and the greateſt part of the latter, belong to the king of Pruſſia.

In Pruſſian Pomerania the principal places are as follow:

Stetin, or Old Stetin, which, conſidered as the capital of all Pomerania, is ſituated on an elevated ſpot near the Oder, about 74 miles north-eaſt of Berlin. It is a capacious and handſome town, and ſo well fortified, that it is deemed one of the ſtrongeſt places in Europe. It contains many manufactories, hath great trade, and exports prodigious quantities of

Corn
Timber
Linen, and
Naval ſtores.

The proſpect of the river, and the iſlands formed by it, is very agreeable, and the neighbouring hills have a very romantic appearance. The principal buildings are the

Colleges for education,
College of phyſicians,
Tribunals of juſtice,
Board of health,
Chamber of commerce,
Court of admiralty,
Royal gymnaſium, or ſchool of exerciſe,
Superintendency,
Arſenal,
Caſtle,
Free-ſchool,
Dock.

Though this town is ſituated 40 miles from the ſea, ſhips of conſiderable burden come up to it, and ſmaller veſſels may go much higher.

The inhabitants are remarkable for their courteous behaviour, and have been celebrated for the valorous defence of their city againſt the Imperialiſts, who beſieged it four months, in 1659, in vain; and again in 1677, when it held out five months, from July to December, againſt Frederic William the Great, then elector of Brandenburg; who, after one of the moſt remarkable ſieges that has been known in Europe, whereby moſt of the city was burnt to the ground, at the expence of 30,000 granadoes, 24000 hand-granadoes, 150,000 cannon-ſhots, and 98000 pounds of powder, and the garriſon reduced from 3000 men to 700, was obliged to grant it very honourable terms of capitulation.

The account of this ſiege, and its deſperate defence, is ſo amply recorded in hiſtory, that all we ſhall obſerve farther of it is, that the burghers were even more reſolute, if poſſible, in the defence of it, than the Swediſh garriſon: for, on the 15th of Auguſt, when moſt of their ſhips in the river had been ſunk and ſhattered, and

the

the cathedral, with many of the houſes, burnt, the elector offered them honourable terms, which they refuſed: on the 22d, when the town had ſuffered much more, he took pity of the inhabitants, and made them another offer; but they were obſtinate, made it death for any to talk of a ſurrender, ſecured their wives and children in places prepared for them under-ground, and made vigorous ſallies, but were repulſed. The 6th of September he ſent a trumpet to forewarn them of their danger, and to offer them larger privileges than they had; but they ſtill refuſed. He ſummoned them again on the 22d, after being joined by 8000 Danes, but to no purpoſe. The elector, having undermined their wall, filled the ditch, &c. ſummoned them again on the 1ſt of November, and threatened their ruin if they refuſed his new offers; but they replied, they would hold out till the end of the year, and hoped to have the ſame terms then: and though the town was in ruins, and 1400 citizens killed, beſides ſoldiers, they continued reſolute, and made vigorous ſallies. On the 20th, and alſo on the 30th of that month, there were quarrels betwixt the garriſon, which was for capitulating, and the burghers, that oppoſed it; in which ſeveral fell on both ſides. The king of Sweden having ſent the town a new charter, the elector ſummoned them again, December 19, and offered to confirm their new privileges, with an exemption from taxes for many years, but ſtill they refuſed, and made ſeveral ſallies; but next day, finding no hopes of relief, they propoſed an honourable capitulation, which, if not granted, they declared they would die ſword in hand, and be buried in the ruins of the city. The elector generouſly complied, and ratified all the privileges granted them by their ſaid new charter: but the burghers, inſiſting on too high terms for the garriſon, hoſtilities were renewed with vigour on both ſides, till the 26th, when they accepted the elector's terms, who, on the 6th of January following, entered the town in triumph. He continued their magiſtrates, who, with the judges and miniſters, ſwore fealty to him; and, of his own accord, exempted their fiſhery from taxes for eight years, on condition that they ſhould rebuild their churches; and he promiſed to rebuild the great one himſelf. He alſo continued the univerſity, the ſchools, and religion, as they were. The beſieged had a fine train of artillery, but wanted powder, ſalt, and wood.

Politz, a ſmall town ſituated near the Triſchen-Haff, is celebrated only for its hop-trade.

Anklam, or Anclam, on the river Pene, 17 miles ſouth-weſt from Gripſwald, and 31 north-weſt of Stetin, a well-fortified town, taken by the elector of Brandenburg, in 1676, together with Demin on the ſame river, but both reſtored three years after by the treaty of St. Germain. Anklam, however, was retaken by the Pruſſians in 1715. It was formerly called Tanglim, and ſome authors will have it to be the ſeat of the Angli mentioned by Tacitus, who advanced from hence to the Elbe, and from thence to the iſland of Great Britain. It made a good figure once among the Hans Towns. It is advantageouſly ſituated amidſt good arable lands, and excellent paſture, with the conveniency of fiſhing, and of exporting their commodities abroad by the river Pene. It has four pariſh churches, and a yearly fair on the ſecond Sunday after the birth of our lady. It ſuffered by ſeveral fires in the XIVth century, when its churches, with a monaſtery and a town-houſe, were burnt; but the town was rebuilt with more beauty.

Paſſewalck, antiently Pozdewalck, ſtands between Prentzlow and Turgelow, on the weſt ſide of the river Ucker, by which the inhabitants ſend their goods through the Haff to the Baltic. It has two parochial, and two other churches. There is an excellent ſort of beer brewed here. It is a provoſtſhip, with ſpiritual juriſdiction over 10 pariſhes. When Pomerania and the marquiſate were under different ſovereigns, this place, being on the confines of both, was frequently a bone of contention.

Gartz is another town on the ſame confines, and is one of the paſſes of the Oder. It was walled in 1258, by Barnimus I. duke of Pomerania. It has eight pariſhes under its juriſdiction, and ſeveral yearly fairs. It was a great ſufferer during the long wars in Germany; for its ſituation rendered it always a place of importance to the poſſeſſor.

Ukermunde ſtands where the Uker river falls into the Groſs Haff. It was walled in 1190, and Bogiſlaus III. duke of Pomerania, cauſed a caſtle to be built here. In 1469 it was beſieged by the elector of Brandenburg, aſſiſted by the Mecklenburgers, but they were obliged to abandon it. There is a fine walk of fair trees from hence through the middle of a great foreſt, which goes almoſt 20 miles, and within a league of Stetin.

Demin, a town ſituated near the river Pene, gives name to a circle, and has a tolerable trade by means of ſome neighbouring lakes.

Trepts, a town on the Tollen Lake, has three annual fairs, and is defended by a ſtrong caſtle.

Stolpe, a fortified town, with an antient caſtle, is 22 miles north-eaſt from Rugenwald. Its agreeable ſituation, in a valley on a river of the ſame name, tempted the dukes of Pomerania to build a caſtle here; and therefore ſome of them are, in ſeveral hiſtories, ſtiled dukes of Stolpe. Its river is formed by ſeveral ſtreams, which, meeting in the lordſhip of Butow, on the Poliſh frontier, make one channel, which runs from the ſouth-eaſt to the north-weſt; and, after watering this town, Winterſhagen, and Stolpmund, falls into the Baltic.

Neuwarp is a ſmall town, on a lake in the bailiwic of Uckermunde.

Torgelo is a caſtle on the Ucker, where the great foreſter of the duchy of Stetin reſides.

At Verchen, on the lake of Cummerio, is a convent of ladies; and in the ſame bailiwic, a ſmall town, named Jarmen, ſituated on the river Pene.

Penkum, a ſmall town between the river Rando and a lake, is remarkably pleaſant.

Griffenhagen on the Oder is pleaſantly ſituated, and gives name to a circle.

Dam on the Plone, a river, which a little below it falls into a lake of the ſame name. This place, ſome time ſince, fell to decay, but a ſteel manufactory, lately eſtabliſhed, has in ſome meaſure revived it.

Bahn, a ſmall town near the former, only remarkable for being the ſeat of a provoſt.

Piritz, a town which is ſituated in a fine corn country, and gives name to a circle and provoſtſhip.

The iſle of Uſedom lies weſt from that of Wollin, and is formed by the Pene, where it falls into the Baltic along with the Oder; ſo that one of the mouths of the Oder, which runs betwixt this and Wollin, is called the Swine; and the other, beyond Uſedom, the Pſin. Upon the deſtruction of Wollin the town of Uſedom was reſorted to by the Daniſh and Poliſh merchants, and became a place of good trade, being very large, and well fortified; but ſince 1473, when it was burnt down by an accidental fire, it has been only an inconſiderable ſea-port. It received chriſtianity by the preaching of the biſhop of Bamberg, who baptized many of the nobility who were aſſembled at the diet here in 1128. The iſland is about ſix miles in length, abounds with wild-boar, deer, and hares, and was the park where the dukes of Pomerania kept their game. In 1630, the Swedes, to the number of 3000, landed here, and took it without reſiſtance; but in 1637, 2000 Imperialiſts came upon it by ſurprize, and put them to the ſword; but, finding their countrymen were preparing to re-take it with vengeance, they conſumed all the proviſions that were in the iſland, and then abandoned it. Mr. Hubner, who obſerves, that the harbour is commanded by two forts, ſays, the town was built in the room of Vineta, formerly a large and wealthy city, but covered with an inundation, notwithſtanding which he ſays the houſes and ſtreets are ſtill plainly ſeen in clear weather.

Wollin is the eaſternmoſt of the two iſlands formed by the three mouths of the Oder. It is 25 miles long, 15 where broadeſt, and is divided by the Swine from Uſedom. The town, which ſtands at that mouth of it called Druenow, is five or ſix miles ſouth-eaſt of Rugen, 25 miles north of Stetin, and 25 ſouth-weſt of Wolgaſt. It was built out of the ruins of Julinum, once a very famous town; and was one of the largeſt cities in Europe, and its greateſt mart, next to Conſtantinople, being inhabited by Danes, Swedes, Ruſſians, Jews, and merchants of all nations, who had their ſeparate ſtreets, and houſes of exchange; and ſaid to have been ſo powerful, as ſingly to maintain a war againſt Denmark, and to have taken its king Suinotte priſoner three ſeveral times: but, having

having been partly deſtroyed by lightning, and partly by the arms of Woldemar, king of Denmark, it was in 1170 totally demoliſhed, and has been but an inconſiderable town ever ſince, its commerce having been transferred to Lubeck and Dantzic.

Neumark, a country town in the diſtrict of Colbatz. Wolten and Werben are ſmall towns in the ſame diſtrict, the latter being a provoſt's ſeat.

Bernſtein gives name to a bailiwic, and is ſituated on the confines of the diſtrict of Newmark.

Fidicho on the Oder is the laſt town on the Stetin territory.

Stargard on the Ihna, 22 miles from Stetin, is a capacious, handſome town, containing ſeveral churches, in one of which the Calviniſts are allowed the exerciſe of their religion. Here are, beſide a college, a free-ſchool, a houſe of correction, various manufactories, and a conſiderable trade. In ſpeaking of this town, a late traveller ſays, "The ſtreets are crowded with ſoldiery, and nothing is ſeen but regiments. The poſtillions who drove me, the friſieurs, the very peaſants, are all military under this government."

Golno, the ſeat of a provoſtſhip, and bailiwic, is ſituated on the Ihna.

Greiffenberg on the Rega is a provoſtſhip, and gives name to a circle.

Trepto on the Rega has ſome manufactories, a foreign trade, and a ſalt ſpring near.

Camin on the Dweno, 32 miles north of Stetin, is a conſiderable town. It has a foundation for ladies, a provoſtſhip, and three yearly fairs, by which, with its commerce and fiſheries, it is likely to become opulent.

Belgarden, or Belgart, on the ſame river, is a little town, with a good trade, five miles ſouth-eaſt of Corlin, 16 from the Baltic, and 56 north-eaſt of Stetin. In ſome public acts it is called Belgrad, and Belgradia. It is a very antient town, of which we find no certain account till the preaching of the goſpel in theſe parts, which was about the 11th century. It was heretofore very conſiderable, both for the number and valour of its inhabitants; but has been a great ſufferer by wars and conflagrations; particularly, in 1506, when it was quite burnt down to the ground. The houſes were indeed ſoon rebuilt, but not with their former grandeur. The church was alſo re-edified, but no ſooner was its tower up, than it was thrown down by lightning; and after the treaty of Weſtphalia, when the town began to recover from all its diſaſters, one third of it was conſumed by a fire, and the other two thirds were burnt down the year following.

New Stetin is ſituated between the Willern and ſome other lakes, having been built in the beginning of the fourteenth century after the model of Old Stetin. It is commanded by a caſtle, but received great damage by the ravages of the Ruſſians during the late war.

Maneriſlies, a village which gives name to a bailiwic, contains a well-endowed religious foundation for ladies.

Near the above are the following towns, or their remains, which were left by the ravages of the late war:

Satzig	Ravenſtein
Zachan	Maſſo
Jacobshagen	Stepenitz
Buto	Lebe
Lauenburg	Lupo
Stolpemunde	Stolpe on the river Stolp.

But none of theſe are now conſiderable, or deſerve any particular deſcription. Here are beſide many inconſiderable villages and hamlets.

Ratzbur on the Zarn, not far from the confines of Poland, which, in 1758, was, together with 19 neighbouring villages, ſacked and burnt by the Coſſacks and Ruſſians.

Rugenwald is the capital of Wenden duchy on the river Wiper, 18 miles north-eaſt from Coſlin, and 20 from Camin. It is ſuppoſed to take its name from the antient Rugii, who founded it, and were ſettled in theſe parts before they removed to the iſle of Rugen, to the banks of the Danube, and towards Italy. It is a well-built town, adorned with a handſome caſtle, and has 24 pariſhes in its diſtrict.

Slage, or Slaguen, ſtands on the ſame river, a few leagues above Rugenwald, but is a ſmall, ill-built town, with no other fortifications than an old wall round it, and a ditch of running water.

Coſlin, 18 miles north eaſt of Colberg, is a very pleaſant town, with a good air, the uſual reſidence of the biſhop of Camin. It being but a league from the Baltic, the inhabitants can eaſily export their corn, and import what commodities they want from abroad. The Friſche Haff lake is a treaſure to them, for they often, in the winter, bring up an hundred tun of fiſh there, at one draught of the net. It is not only ſurrounded with the tides at high-water, but has a ſtream called Neſenbach, which turns mills for ſeveral uſes. The adjacent country is fruitful, and interſperſed with ſeveral little hills, on which ſtood formerly popiſh chapels, much frequented by pilgrims. In 1480 it was roughly treated by Bogiſlaus X. duke of Pomerania, for a mutiny of the inhabitants. Here are a pariſh-church, and two others, one of which, near the caſtle, was heretofore a nunnery: there is alſo a college, which has ſent forth many good ſcholars. On St. Simon and Jude's day, in 1504, the town was burnt down, but ſoon rebuilt; and in 1535, it ſuffered very much by peſtilence. Here are three annual fairs, viz. the Saturday after Lady-Day, the Thurſday after the fourth Sunday in Lent, and All-Saints Day.

Corlin is the capital of a bailiwick very near Belgard, and has a very good caſtle on the river Perſant, 13 miles eaſt of Colberg, and 12 weſt of Coſlin. At the entrance of the town there is a wooden bride over a river, formed by the conflux of three ſmaller ones. It is a very pleaſant place, and has belonged to the biſhops of Camin ever ſince 1240. It has two annual fairs, viz. on the Saturday before Palm-Sunday, and on Aſcenſion-Day. In 1643 it held out againſt a ſiege by the Imperialiſts.

Colberg, or Colburgh, is the capital of that called the duchy of Caſſubia, and ſtands at the mouth of the Perſant, near the Baltic ſhore, 30 miles north-eaſt from Camin, and 55 from Stetin. Salt is made here, of which great quantities are ſent abroad, to the great enriching of the town and the king of Pruſſia, to whom the town came by the treaty of Munſter. Its harbour, which is a good one, though ſomewhat too narrow, is defended by a ſtrong caſtle. It was antiently called Colobrega, and was the moſt conſiderable town belonging to the biſhop of Camin, who had it in exchange for Stargard, with 3500 marks into the bargain. Zeyler ſays, there would be more ſalt made here than there is, if they had but more fuel. It is large, hath ſome trade, contains four churches, one of which is collegiate; has a foundation for ladies, and a grammar ſchool.

Near the above are Frederickſburg, a market-town, which gives name to a bailiwic. Gulzo, a market-town, which gives name to a diſtrict; and Naugarten, a ſmall town, ſituated on a lake, from which a lordſhip receives its appellation.

IV. SWEDISH POMERANIA.

THAT part of Pomerania called Swediſh Pomerania comprehends the iſland of Rugen, which has already been deſcribed in page 85 of the ſecond volume of this work. The iſland of Hiddenſee, which is remarkable only for a light-houſe, a few ſmaller iſlands of two little importance to merit mention, and ſome places on the Continent, the principal of which are as follow:

Stralſund, the largeſt and richeſt town in Pomerania, the ſixth in rank of the Hans Towns, and a free imperial city, ſtands near the banks of the ſea, over-againſt the iſland of Rugen, 19 miles north of Gripſwald. Some derive the name from Sunno II. king of the Franks, its ſuppoſed founder; but it more probably comes from the narrow ſea betwixt it and Rugen, all ſtreights, in the old German language, being called Sundt. The firſt certain account of it is, that being for the moſt part deſtroyed, it was magnificently rebuilt, enlarged, and peopled with Germans by Jaromar, the prince of Rugen, about 1209; and that moſt of it being afterwards burnt by the Danes, the ſituation was altered by his ſon about 1230, when it was rebuilt, ſoon grew populous, and was fortified. In the civil wars of Germany, count Wallenſtein, the imperial general, beſieged it in vain; not long after which, the citizens put themſelves under the protection of Guſtavus Adolphus king of Sweden. The elector of Brandenburg took it

in 1678, after deſtroying 1500 houſes by bombs, and was the only prince that ever took it by force till then, the citizens having baffled the attempts of ſeveral princes to ſubject them, and having at one time oppoſed the united forces of Denmark, Sweden, and ten other princes; but he reſtored it, with other towns of this county, next year, by the treaty of St. Germains. In 1711, the kings of Poland and Denmark beſieged it in vain. In 1715, the king of Sweden, Charles XII. arrived here from his long confinement in Turkey, after his defeat at Pultowa, animated the garriſon to hold out a vigorous ſiege againſt the king of Denmark and Pruſſia, aſſiſted by the Ruſſians and Saxons; but notwithſtanding his continually ſupplying them with men and proviſions from the iſle of Rugen, the town was forced to ſurrender on terms, after four months ſiege. It was, however, by the treaty of peace in 1720, relinquiſhed again to the Swedes.

It enjoys great privileges, the chief of which are, that the magiſtrates are empowered to determine all cauſes among themſelves without an appeal; to coin money, and raiſe troops for ſea and land ſervice; to make leagues and confederacies for advancing their trade; to chuſe what prince of the empire they pleaſe for their protector; and, in caſe of a naval war by the empire, they are not obliged to venture their ſhips farther abroad than is conſiſtent with the ſafety of the city; nor are they obliged to give more than they pleaſe in the contributions which the other towns in the duchy are taxed at. It ſuffered much by a fire in 1680, as well as by its ſieges above-mentioned, but is now a flouriſhing city. It lies in a ſort of peninſula formed by the ſea and the lake Franeken. The ſea, from hence to Rugen, is about a mile over; and there are ſix gates, with as many bridges, leading to them from the city, to which the merchant ſhips in the harbour are faſtened. On the land ſide it is regularly fortified with bulwarks and fiſh-ponds, two muſquet-ſhots in breadth, beſides large ditches, and natural marſhes, only paſſable by four cauſeways and bridges, leading from four gates, and all fortified; which make approaches to it very difficult. It has an excellent haven, where ſhips come up into the very town; and is ſo well ſituated for trade, that it has a very great and gainful commerce both by ſea and land; for it is to be obſerved, that here begins the export of thoſe ſtaple commodities which all Europe ſends for to the Baltic, as corn, and naval ſtores, viz. hemp, flax, &c. but eſpecially corn, of which great quantities are exported, this being the firſt city in the Baltic, to which the Dutch trade for it. Here are alſo great quantities of honey and wax, tar, pitch, roſin, hides, tallow, and linen; eſpecially canvas, of which a good ſort is made here. The ſtreets are broad, and the buildings beautiful, the private houſes being of ſtone, and uniform; and the town would be much larger, but it is ſo ſurrounded with the ſea on one ſide, and freſh-water lakes on the other, that there is no room for extending the limits.

Barth, which is upwards of 70 miles north-eaſt of Stetin, ſtands on a ſmall bay 10 miles from Stralſund. It gives name to a ſmall principality, and is celebrated for an excellent kind of beer. It is defended by a ſtrong caſtle, and has a foundation for ladies, firſt began in 1733.

Kenz, a ſmall village in the neighbourhood of Barth, is much frequented for its mineral waters.

Damgard, near Rekenitz, is an open town with a caſtle.

Trebeſis is an old, but important frontier town, with a caſtle and bailiwic, towards Mecklenburg, ſituated near the river Trebel, betwixt Roſtock and Gripſwald. About the cloſe of the 12th century, Ratibor duke of Pomerania took it from the people of Rugen, and converted it to chriſtianity.

Gruim is a ſmall town ſituated near that laſt mentioned.

Franburg, a little place, gives name to a diſtrict; and Richtenberg, a town on the Trebel, gives name to a bailiwic.

Grieffswalde is ſituated at the bottom of a gulph oppoſite to the iſle of Rugen. It is conſiderable, handſomely built, ſtrongly fortified, poſſeſſes a good trade, has great privileges, and produces a large revenue. Here is an univerſity, a grammar ſchool, and a German ſeminary; and the three paſtors of the town are theological profeſſors. In the neighbourhood are ſalt ſprings, which are not of any utility for want of fuel. The town has a good harbour, with a great many ſhips belonging to it. Here are two annual fairs on St. James's, and All Saints days.

Eldena is a large village, whoſe territory formerly belonged to the Ciſtertian monks, now belongs to the univerſity of Grieffswalde and forms a bailiwic.

Wolgaſt, a town near the river Pene, has a pretty good trade. It gives name to a county and lordſhip, as it did anciently to a duchy; and ſeveral of the dukes of Pomerania are interred in its parochial church.

Gutſkow is a town on the river Pene, 8 miles ſouth of Gripſwald, and 10 weſt of Wolgaſt, between Anclam and Loytze, and the capital of a county of the ſame name, which formerly included Gripſwald, Loytz, and the abbey of Eldenow. Upon the death of its laſt count without iſſue, the dukes of Pomerania, to whom it devolved, ſeized it, and had the inveſtiture thereof by the emperor; but it afterwards belonged to the Swedes, though now to the king of Pruſſia.

Its town was the firſt in theſe parts that received chriſtianity upon its being preached by Otton, biſhop of Bamberg, called the apoſtle of Pomerania, who built a church here in the room of its Pagan temple; and it was then a town of ſome eminence, but it was taken and plundered by the Danes and the people of Rugen in 1357; and, after the demolition of its caſtle by the inhabitants of Stralſund and Gripſwald, in 1386, it dwindled to a village. Here was once alſo a collegiate church, on whoſe ſynod ſeveral pariſhes depended, as to ſpiritual juriſdiction, which are now ſhared between Wolgaſt and Gripſwald, and Grotſkow itſelf depends now on the ſynod of Gripſwald.

Loytz ſtands on the Pene river, between Grotſkow and Demain. The Pomeranians took it firſt from the counts of Grotſkow, and afterwards from the princes of Mecklenburg. It has four fairs a year, viz. the Monday before Lent, the Monday before Whitſuntide, a fortnight after Midſummer, and a fortnight after Michaelmas.

Laſſau, on the Pene, was formerly a conſiderable town, and is ſtill populous, but the fortifications were long ago demoliſhed. It gives name to a lake formed by the eaſtern branch of the Oder, between Wolgaſt and Uſedom.

V. MAGDEBERG.

THIS duchy has Mecklenburg and Brandenburg towards the north; Anhalt and Halberſtadt to the ſouth; Upper Saxony to the eaſt, and the duchy of Brunſwic Wolfenbuttle to the weſt. It is level, watered by the Elbe, in ſome places woody, in others marſhy or ſandy; but, in moſt parts, ſo exceedingly rich in ſalt, that this duchy alone is capable of ſupplying all Germany with that commodity. It was formerly an archbiſhopric, erected at the requeſt of the emperor Otho I. with ſubjection to none in ſpirituals but the pope; and its prelate was primate of all Germany till the reformation, when the canons, having embraced Luther's doctrine, choſe the elector of Brandenburg's ſon adminiſtrator of the archbiſhopric; after which it remained in the adminiſtration of a ſecular prince till 1648, when it was eſtabliſhed by the treaty of Munſter, that after the death of the then adminiſtrator, the whole country ſhould devolve on the elector of Brandenburg as a ſecular eſtate, and a dukedom. It is accordingly now ſubject to that elector, who is ſaid to have advanced his annual revenue at leaſt 600,000 rixdollars.

Magdeburg, its capital, which was formerly one of the Hans Towns, and reckoned the chief city of all Germany, as it is now the metropolis of the circle of Lower Saxony, ſtands on the Elbe, 39 miles ſouth-weſt of Brandenburg. It is as antient a city as moſt in Germany: the name ſignifies Maiden Town, which ſome aſcribe to the worſhip paid in it to Venus, till her image and temple were deſtroyed by order of Charlemagne, who, being in love with its ſituation, built St. Stephen's church there, with its treaſure, together with a fort to curb the Saxons. The town was firſt built about the year 940, by Otho I. who made it Imperial, and was enlarged by his empreſs Edgitha, daughter to our Saxon king Edmund,

who,

who, ſome ſay, founded it; but others, with more probability, that ſhe received it from him as part of her dowry in marriage. The firſt tournaments in Germany were appointed here by the emperor Henry the Fowler, to which none were admitted but thoſe of noble extraction both by father and mother, and of a clear reputation, eſpecially in their conduct to the ladies; with an excluſion alſo of all uſurpers, traitors, oppreſſors of widows and orphans, hereticks, murderers, and cowards.

The ſituation of this city is very fine, having an outlet on all ſides to ſpacious plains that are all very fruitful in corn, as well as an inlet of riches by the river Elbe; but there are few towns in Germany that have ſuffered ſo much as this by war, and other misfortunes. In 1013 it was almoſt intirely ruined by Boleſlaus, king of Poland, and reduced to aſhes in 1180, by a fire. In 1214 the emperor Otho IV. came and deſtroyed its ſuburbs, with its three churches of St. Peter, St. James, and St. Catharine, which were afterwards, however, rebuilt. It has been ſeveral times put under the ban of the empire, and puniſhed with long ſieges, particularly in 1547, when, depending on aſſiſtance from John Frederic, elector of Saxony, the citizens turned out the canons; and in 1549, and 1553, when, for refuſing to receive the interim of Charles V. it not only loſt the title of archbiſhopric, and was put under the ban of the empire, but was beſieged at leaſt a year by Maurice, elector of Saxony, who was ſent to reduce it; but, being himſelf a Proteſtant, ſpun out the ſiege; and having prevailed on the Magdeburghers to ſurrender at laſt, on a promiſe to join his Proteſtant brethren in the war againſt the emperor, was as good as his word, and made uſe of this garriſon to reinforce his army in the war he then declared againſt the emperor. But this city was the greateſt ſufferer in that called the thirty years war; becauſe, for ſo long a time, Germany was ravaged on all ſides: for in 1631, the emperor's general count Tilly took it by ſtorm, after a long ſiege, maſſacred the inhabitants in a moſt barbarous manner, and burnt and deſtroyed the whole town, except the cathedral, and a few inconſiderable houſes, or rather cottages, of fiſhermen; ſo that 16 churches and chapels, many of them covered with lead, and one with copper, were reduced to aſhes; and of 40,000 burghers, not above 400 eſcaped, and theſe had no ſupport. The general having ordered his ſoldiers to ſpare neither age or ſex.

The electors of Brandenburg have much aſſiſted this city, and repaired its fortifications, which have been carrying on many years, are very ſtrong, and have rebuilt one ſtately church. The jeſuits have alſo a very fine one, the three religions being tolerated here according to the treaty of Weſtphalia, and the town is populous and extenſive, and has a flouriſhing trade. The cathedral is a very fair and magnificent ſtructure, built after the Engliſh model, was founded in 1210 by archbiſhop Albert I. and dedicated (as the former that was burnt) to St. Maurice. Here is that called Otho's chapel, where he is repreſented in Baſſo Relievo over the altar, with his empreſs Edgitha, and the figures of 19 caſks of gold which had been ſpent by them upon the former cathedral. This church has 49 altars, and the high altar in the choir is of one ſtone of divers colours, curiouſly wrought, nine Hamburgh ells long, four broad, and one thick. Here is a fine large organ, the maſter-pipe of which is 33 feet long, and ſo big, that a man can ſcarce claſp it, and is valued at two ton of gold. Behind the high altar are the tombs of the emperor Otho, and the empreſs Edgitha, whoſe bones were removed hither from the ruins of the old cathedral. In the front of the choir there is a fine marble ſtatue of St. Maurice, the patron of the church, having a ſhield in one hand with the Imperial eagle, and in the other, the ſtandard which the citizens march to the field with in time of war. Among other ornaments, here are the ſtatues of the five wiſe virgins ſmiling, and the five fooliſh ones lamenting; both very well done. In the ruins of the cloyſter of the Auguſtin friers, of which order Martin Luther was one, there are a chamber, bedſtead, and table, which appear by an inſcription over the door, in German verſe, to have belonged to that reformer. The elector Frederick I. built a houſe in this city, which faces the great ſquare before the cathedral, and is oppoſite to the citadel he built, which is divided from it by the Elbe.

This river brings up a great many merchant ſhips from Holland, Hamburg, &c. to its quay, and forms an iſland before the town, which has ſome works of earth caſt up, with ſeveral houſes, and large warehouſes of fir-timber for building ſhips, that is carried to Hamburg, and there bought up by divers merchants. The iſland is joined both to the country and the town by two bridges. Over-againſt the town-houſe there is inclоſed, in a ſort of cage, an equeſtrian ſtatue, erected by the city in honour of Otho, accompanied with the ſtatues of his two wives, Edgitha abovementioned, and Adelais; and ſeveral figures of armed men, holding the arms of his chief hereditary domains. In the great market-place there is the ſtatue of Roland, of the ſame nature with thoſe Charlemagne cauſed to be ſet up in all the towns which he either founded or repaired. The late elector erected an academy of cadets in this, as well as Berlin, and other towns, where the young gentlemen are inſtructed in the rudiments of war. The great ſquare before the elector's palace has few equal to it for extent and fine houſes that encompaſs it, which are all uniform, and three ſtories high. There is an arſenal full of cannon and ſmall arms, and though not ſo magnificent as that of Berlin, may be ranked among the chief elſewhere. The chapter of Magdeburg meets in the cathedral, is on the ſame foot as before the reformation; and the canons muſt all make proof of their nobility; though this is a punctilio with which the elector, who confers all its prebends and dignities, ſometimes diſpenſes.

Halle, 24 miles north-weſt from Leipſic, is a large town, ſituated on the Saole. It received its name from the ſalt-pits diſcovered here, previous to the birth of our Saviour, which were beſtowed by the emperor Otho the Great on the archbiſhopric of Magdeburg. His ſon, named likewiſe Otho, gave the place a charter, called it Halle, and made it an imperial city. The town contains four ſalt-ſprings, many boiling-houſes, &c. The toll of the ſalt brings a very conſiderable revenue to the king of Pruſſia, who engroſſes as much as poſſible into his own hands. The renters of the boiling-houſes are called plarmers, and muſt be freemen of the city; but the workmen are termed hallers; and theſe ſtill retain the Sclavonic dreſs, cuſtoms, manners, language, &c. The principal of the ſalt made here is conveyed by the Elbe to Brandenburg, Pomerania, Sileſia, Pruſſia, Franconia, &c. where it is diſpoſed of by the king's factors. Theſe ſalt-ſprings, and the univerſity, have rendered Halle a flouriſhing place. The univerſity was founded in 1694, by Frederic the Firſt, king of Pruſſia. We have a circumſpect account, that from the year of the foundation to the year 1744, the number of ſtudents amounted to 29,220; of whom

2	were	Princes.
120		Counts.
2,253		Barons and gentlemen.
12,278		Students of divinity.
12,626		Ditto of law.
1,941		Ditto of phyſic.
29,220		

Since which time, to the preſent period, the improvement has been ſtill more rapid, and the number of ſtudents conſiderably encreaſed. This is ſuperior to the univerſity of Leipſic, with reſpect to the abilities of the profeſſors, the diſcipline of the ſtudents, and the cheapneſs of living. Here are

A Library, conſiſting of above 10,000 volumes.
A Lutheran and Calviniſt Gymnaſium.
A free ſecular Calviniſt Nunnery.
Three Lutheran Churches.
Many Calviniſt ditto.
A Popiſh Chapel.
A Jews Synagogue.
Several Chapels, Hoſpitals, &c.

Excluſive of the ſtudents, garriſon, &c. the inhabitants only are computed at upwards of 14,000. The magiſtrates have a large eſtate, an extenſive juriſdiction, great power, and many privileges. The orphan-houſe is a laudable inſtitution, and the correction and work-houſe

are

are of infinite utility. Here are various manufactories for

Gloves,	Silk ſtockings,
Stuffs,	Woollen ditto,
Fuſtians,	Cloths,
Flannel,	Linen,
Porcelain,	Tobacco-pipes,
Gold,	Silver,
Ribbons,	Starch,
Metal buttons,	Red and yellow leather, &c.

Here are many plantations of mulberry-trees, for the purpoſe of feeding ſilk-worms, and the improvement of the ſilk manufactory. The German language is ſpoken here in its utmoſt purity, and the manners of the inhabitants are courteous and polite.

Calbe on the Saole was a tolerable town previous to its deſtruction by fire in 1713, and in re-building it was conſiderably improved.

Great Salze, a town only famous for two ſalt-ſprings. Engeln on the Bode is the capital of a lordſhip. Troſe on the Elbe belongs to the corporation of Great Salze. New Holdenſleben is ſituated on the Ohre; and Newſtadt, or New Magdeburg, is a handſome town diſtinct from Old Magdeburg.

Sudenburg, though a town of itſelf, hath been conſidered as a ſuburb of Magdeburg. Elmen is famed for an inexhauſtible ſalt-ſpring. Stasfurt on the Bode has two ſalt-ſprings, and 32 boiling-houſes. Wolmerſtadt on the Ohre is defended by a caſtle. Schonebeck on the Elbe is a toll town; and Acken on the Elbe has a ferry.

Oebsfeld on the Aller is the capital of a bailiwic. Berg is a convent under the direction of a Lutheran abbot, and ſix conventuals. Burg on the Ihle has a conſiderable woollen manufactory. Sandau and Jericho are both tolerable towns on the Elbe. Loburg gives name to a bailiwic, as does Mockern, a ſmall town belonging to the family of Munckhauſen.

Neumarket, to the north of Halle, is in the bailiwic of Giebickenſtein.

Glauche, near Hallis, is in the ſame bailiwic, is celebrated for an orphan-houſe, in which 200 orphans are conſtantly maintained and educated, and many other perſons occaſionally relieved. In the ſchool are taught Hebrew, Greek, Latin, French, theology, logic, mathematics, phyſic, geography, hiſtory, writing, arithmetic, ſinging, and epiſtolary correſpondence. Here are two inſpectors, 50 preceptors, a diſpenſary, laboratory, muſeum, printing-preſſes, &c. Excluſive of the preceptors, officers, and orphans, on the foundation, above an hundred other ſtudents, and poor ſcholars, are allowed their dinner and ſupper, inſomuch that with perſons occaſionally admitted, near 700 perſons eat together in one large hall. Independent of the above here are four German ſchools, under the direction of two inſpectors, and 110 preceptors. Near the orphan-houſe is an academy, where young gentlemen are taught, at their own expence, every polite and laudable branch of erudition.

With reſpect to the other towns, Lebegum is remarkable for a coal mine, Wettin for the ſame, Connern for its antiquity, Rotenburg for a copper mine, Giebichenſtein for giving name to the bailiwic; and Alſleben for being conſidered as a part of the duchy, though ſituated on the other ſide of the Saole.

VI. HALBERSTAT.

THIS is a ſmall province, bounded on the ſouth by the principality of Anhalt; on the weſt, by the archbiſhopric of Hildeſheim; on the eaſt, by part of the electorate of Saxony; and, on the north, by Brunſwic Wolfenbuttle. It is 30 miles in length, and 35 in breadth, has a good ſoil, yields plenty of corn, and the foreſts have ſtore of veniſon. The largeſt park is the Hackel, in the middle of the country. The north-weſt part is full of fens and marſhes, through which dykes and roads are caſt up towards Brunſwic, Helmſtadt, &c.

Halberſtat, its principal town, which gives name to the country, was heretofore an imperial city. It ſtands on the river Hotheim, or Hotteim, 25 miles ſouth-weſt of Magdeburg. It was made a biſhopric by Charlemagne in 780, when the ſee was transferred hither from Oſterwick. Hiſtorians give an account of 48 of their biſhops, moſt of them of the houſe of Brunſwick, and more remarkable for being ſoldiers than ſcholars. Their 15th biſhop Ramhard defeated the emperor Henry V. in the woods of Welfo. Their 18th, Utric, was routed by Henry the lion, duke of Brunſwic, who took and burnt the town, with the citizens and clergy that fled to the cathedral. Their 29th, Albert of Brunſwic, fought 20 battles, and gained moſt of them, over his rivals, who were ſet up againſt him by the popes. Their 31ſt was Albert a great philoſopher, who being defeated by Gerard the eloquent, biſhop of Hildeſheim, it occaſioned a jeſt here, That rhetoric was too hard for logic. Their 44th, Henry Julius of Brunſwic, was choſen when but two years old, on condition, that the dean and chapter ſhould have the government for 12 years, and pay their infant-biſhop an annuity. In 1591 he introduced Luther's reformation. He was ſucceeded by his three ſons, one after the other, the laſt of whom, Chriſtian, took part with the Proteſtants in the civil wars of Germany, and was a great, but unfortunate warrior. Their 48th and laſt biſhop was Leopold William of Auſtria, who, being put in by the Imperialiſts, reſtored popery; but the Swedes, retaking the town, reſtored Lutheraniſm, and kept poſſeſſion of both city and dioceſe, till the biſhopric was ſecularized, and given to the elector of Brandenburg by the treaty of Weſtphalia; and now it bears the title of a principality.

The town is well built, the ſtreets ſtrait and uniform, and many of the buildings fair and ſtately: but the moſt remarkable is an inn called the Commis, or factory, reckoned the largeſt in Europe, and to have the beſt, and moſt accommodations for ſtrangers; ſo that in the time of the civil war, Wallenſtein the emperor's general kept his court in it for ſome months, and found lodgings in it for all his attendants and guards. The trade here is inconſiderable, by reaſon of the ſmallneſs of the river; but as it is the ſeat of the regency of the principality, and of the courts of juſtice, it is much frequented. Its cathedral, which is a free-ſtone pile, adorned with remarkable ſtatues, and worth ſeeing, belongs to a chapter wherein the Catholics and Proteſtants are equally admitted, and both are allowed their public worſhip. Behind its choir there is an image of the Virgin Mary, with 72 titles of honour. The Catholics have ſeveral convents in the town, of which that of the Recollets is the moſt beautiful, and their church is very fine: upon the whole, it is a ſtrong and populous city, has ſix gates and a town houſe. The houſes which are on the hill, or about it, are called the town; thoſe below it, the ſuburbs. On the top of an hill, in an eſplanade, ſtand two churches with the canons houſes.

Gruningen, 10 miles to the eaſt, on the river Felke, is a ſmall town with a large caſtle, formerly the reſidence of the biſhops of Halberſtat. Here is a curious chapel gilt all over the inſide, with fine galleries, &c. This town gives name to a bailiwic, as does Aſcherſleben, a town on the Bode, containing a Benedictine nunnery and a convent of Auguſtine monks.

Aſcherſleben on the Erne is the ſecond town in the province, and contains three churches, one of which is common both to Lutherans and Calviniſts.

Weferlingen on the Aller, is a market town, and contains a Lutheran abbey.

Ermſleben on the Selke gives name to a circle and bailiwic. Dardeſſen is a walled town on a hill. Zilly a ſmall town which gives name to a bailiwic. Horenburg on the Ilſe does the ſame, and is likewiſe celebrated for its hop trade. Oſterwick on the Ilſe has ſeveral woollen manufactories, and Reinſtein, formerly a ſtrong caſtle, gives name to a county and circle.

VII. GLATZ.

THE county of Glatz has for its boundaries Sileſia, Moravia, and Bohemia, and is ſeparated from them all by mountains almoſt inacceſſible, ſo that it is a country very difficult to be entered. Its length is about 30 miles, and its breadth 20, and it is beautifully diverſi-

fied

fied with villages, hills, dales, meadows, fields, ſtreams, &c. and produces

Wheat	Game
Paſture	Fiſh
Wood	Pit-coal
Quarry-ſtones	Marble
Jaſper	Topazes
Cornelians	Mineral waters, &c.

It is watered by ſeveral ſtreams, particularly the Neyſz, and is, upon the whole, an exceeding fertile and plentiful country.

Since Glatz became ſubject to the king of Pruſſia, the diets have been diſcontinued. It was not conquered by the Pruſſian monarch, but ceded to him in the year 1742. For the government of Glatz there is a regency; but an appeal, in either civil or eccleſiaſtical matters, lies to the courts at Berlin; and the offices are ſubordinate to the war and domain chambers at Breſlaw. The language is German. The principal manufactures are thread and cotton; but the favourite employments of the inhabitants are tillage and grazing. The people in general were Roman Catholics till the country came into the poſſeſſion of the king of Pruſſia; ſince which he has eſtabliſhed Lutheraniſm. The principal places are the following:

Glatz, the capital, is ſituated near the Neyſz, on the declivity of a hill. It is ſtrongly fortified, contains an old caſtle, which hath been much improved by the Pruſſians, and a new one which they have lately erected; the latter is admirably ſituated on a hill oppoſite to the former, with a river between them. Here are commodious barracks for the garriſon; and the adjacent country may be laid under water by means of ſluices. The town contains a college, two convents, ſeveral churches, and enjoys a tolerable trade. From the ſummit of the old citadel the whole county may be ſeen, which, as well as the town, hath been aſtoniſhingly improved ſince the Pruſſians became poſſeſſed of it.

Laudec, on the Biela, contains ſome warm baths.

Habelſchwerdt is a walled town on the Neyſz.

Reinerz is an open town, remarkable for a mineral ſpring, and its manufactures of cloth, pluſh, and paper.

Wimſchelburg is ſurrounded by walls, and has a great trade in thread and woollens, as Neurode, a little open town, hath for cloth, ſtuffs, and ſnuff; and Hunſdorff, a ſmall town, is remarkable for a copper-mine.

In this country there is a high mountain, which ſerves as a weather-glaſs to the whole country:

For by the clouds that on its head appear,
The knowing ſwains predict when ſtorms are near;
And, from th' appearance of its top, explain
When ſnows will fall, or tell th' approach of rain.

VIII. MINDEN.

THE principality of Minden, which was given to the elector of Brandenburg at the treaty of Munſter, lies betwixt Oſnaburg and Schaumburg, and is 20 miles from eaſt to weſt, and 25 from north to ſouth. The ſouthern parts abound with corn, and export much; but the northern are full of woods and hills, and have plenty of game.

Minden, its capital, is a neat, well-fortified town on the weſt ſide of the Weſer, 30 miles eaſt of Oſnaburg. It was made a biſhopric by Charlemagne, and continued ſo as ſuffragan to the archbiſhop of Cologne, till 1638, when it was ſecularized by the treaty of Munſter. In Charlemagne's time a caſtle was built at the foot of its bridge over the Weſer; of which ſome remains, with other antiquities, are yet viſible. In 1529 the reformation took place here with ſuch vehemence, that the chapter was obliged to leave the city; for which the inhabitants were, in 1538, put under the ban of the empire; and in 1547 they were, in conſequence, obliged to ſurrender their town to Charles V. They were almoſt ever after in continual troubles and revolutions on the ſcore of religion during the wars in Germany. The city was taken by the Imperialiſts under count Tilly, in 1628, and by the duke of Brunſwic Lunenburg in 1634. It was taken the firſt time by ſtorm, when Tilly put near 3000 men, ſoldiers, and inhabitants, to the ſword. In 1636, the Swedes undertook to protect the proteſtant inhabitants againſt the perſecution of the chapter, and kept poſſeſſion of it on that account till 1650, when, in purſuance of the treaties of Weſtphalia, this once imperial city, and one of the Hans Towns alſo, was delivered to the elector of Brandenburg, who keeps a garriſon here. The majority of the inhabitants are proteſtants; but the cathedral, a noble and large, though dark ſtructure, which is ſaid to have been king Wittikind's palace, who, on his converſion, turned it into a church, is in the poſſeſſion of the Roman Catholics; as are likewiſe the churches of St. John, and St. Simeon, with a large monaſtery adjoining to the latter. This place is noted for a particular ſort of pale beer, much eſteemed in Germany, ſomewhat likewiſe oat-ale. It is a walled town, defended by ſome half-moons, but commanded by a neighbouring hill. It has two chapters, one of canons, and the other of canoneſſes, into which the ladies muſt make proof of their nobility to be admitted.

This city was taken in the late war by the French, and the garriſon of 1500 men made priſoners. The French afterwards ſtrongly and advantageouſly encamped themſelves near it. When prince Ferdinand of Brunſwic, by ſome admirable ſtrokes of generalſhip, drew them from their excellent and impregnable ſituation; and on the 1ſt of Auguſt, 1759, engaged their army. The allies advanced towards the centre of the French army, which was compoſed almoſt wholly of horſe, but it was the flower of their cavalry who anticipated the ſhock of the allies by beginning the engagement. The brunt of the battle was almoſt wholly ſuſtained by the Engliſh infantry and ſome corps of Hanoverians, which ſtood the reiterated charges of ſo many bodies of horſe, the ſtrength and glory of the French armies, with a reſolution, ſteadineſs, and expertneſs in their manœuvres which were never exceeded, perhaps never equalled. They cut to pieces, or entirely routed theſe bodies. Two brigades of foot attempted to ſupport them, but they vaniſhed before the Engliſh infantry. Waldegrave's and Kingſley's regiments diſtinguiſhed themſelves in a particular manner this day; nor were their commanders leſs diſtinguiſhed. The enemy's horſe, which compoſed their centre, being entirely diſcomfited; and their right having made no ſort of impreſſion, they thought of nothing but a retreat. At this point of time the prince ſent orders to lord George Sackville, who commanded the whole Britiſh, and ſeveral brigades of German cavalry, to advance. But the orders were not ſufficiently preciſe, or they were not ſufficiently underſtood by the Engliſh commander; ſo that during the delay occaſioned in waiting for explanations, the critical minute paſſed away. The Britiſh cavalry loſt their ſhare in the glory of the action, and the victory was leſs deciſive than it would otherwiſe have been. The loſs of the French, in this action, amounted to about 7000 men, killed, wounded, and taken, among whom were ſeveral officers of conſiderable rank. The loſs of the allies did not exceed 2000, about 1200 of which were Engliſh; for as the Engliſh had the greateſt glory in the action, ſo they were the greateſt ſufferers.

Peterſhagen was a ſmall village till 1722, when it obtained the privileges of a town. It has a Lutheran church, a brewery, diſtillery, and is defended by a caſtle.

Hanſberg gives name to a diſtrict; has a brewery, diſtillery, three vaſſals ſeats, royal farm and caſtle. In 1722 it was made a city and magiſtracy.

Lubeck is a fortified town inhabited by Lutherans, the magiſtrates having both civil and criminal juriſdiction within the diſtrict. Here are a ſchool, alms-houſe, ſugar-houſe, chapter-houſe, &c. The trade conſiſts of

Cattle	Linen
Yarn	Beer
Woollen	Spirits.

IX. RAVENSBURG.

THE county of Ravenſburg lies ſouth from Oſnaburg and Minden, north-weſt from Lippe, and north from Rheda. It is 38 miles long, and 40 broad. It belongs to the king of Pruſſia; is for the moſt part rocky and mountainous, and has its name from its capital.

Ravenſburg is ſituated, together with its ſtrong fort, on a hill near the river Heſſel, 18 miles ſouth of Oſnaburg: and here it may be proper to obſerve, that moſt of the antient ſeats of the German princes and nobility are thus ſituated upon hills, which is the reaſon that ſo many counties and lordſhips of Germany terminate in berg, i. e. a hill; as the reaſon why ſo many of its towns end in burg, or borch, is, becauſe both theſe monoſyllables ſignify a town. The following are the principal places:

Bilevelt, or Bielfeldt, formerly a Hans town, 10 miles ſouth-eaſt of Ravenſburg, at the bottom of a great hill, and defended by the impregnable fort of Sparenburg. It made a brave reſiſtance againſt the French, when they attacked it from a neighbouring hill with granados and fire-balls; for the burghers covered their houſes with webs of linen (their chief manufacture) dipped in milk, which prevented their doing much damage. Their linen is bleached on the adjacent hills where it is watched by boys, who, on the approach of travellers in the night-time, make a hideous howl. The town lies in the road from Minden to Munſter.

Hervoden, or Herfurt, is a town pleaſantly ſituated, and famed for the manufacture of linen, 22 miles ſouth-eaſt from Oſnaburg. It is a pretty large place, and divided into three parts, called the Old Town, the New Town, and Radewich, by the rivers Elſa, Aa, and Werne. It was formerly an imperial city, but it is ill built, and chiefly noted for a famous nunnery founded in 832, the abbeſs of which formerly held this city in ſubjection, till Anne counteſs of Limburg, and abbeſs of this nunnery, gave up the city to William duke of Juliers, in the year 1547. The eſtate belonging to it was formerly a county, and converted in the year 790 to the uſe of a friers convent, where this abbey now ſtands. It embraced the reformation about two centuries ago, and is perhaps the only one of its kind in Europe, becauſe the abbeſs and all the nuns are Calviniſts. One abbeſs was the learned princeſs Elizabeth, of the Palatine family, ſiſter to the princeſs Sophia of Hanover, whoſe literary correſpondence with M. Deſcartes that great man has publiſhed in his works, which ſhew that ſhe was the miracle of her ſex: there belong conſiderable eſtates to it in the neighbourhood of this city, as alſo another nunnery on a hill near the town, which is a ſort of nurſery to the abbey, and where the young ladies are taught needle-work, &c. It was founded in the year 1101, and is under the immediate direction of a deaconeſs, with a treaſureſs, and all the officers that belong to collegiate churches; but otherwiſe ſubject to the abbeſs of Hervoden, who, as princeſs of the empire, has all the hereditary officers common to electors. She has her ſeat at the diet among the prelates of the Rhine; and ſhe has princes or counts, for vaſſals, who pay her homage, by kneeling at the foot of her throne, in preſenting her with gold and ſilver. The revenue of this abbey is worth about 3000l. a year. There are no vows or unreaſonable reſtraints impoſed on the nuns, who commonly are ladies of the firſt quality. The king of Pruſſia, as count of Ravenſburg, is protector of the abbey; and, if we miſtake not, one of the princeſſes, his ſiſter, was a few years ago declared coadjutrix to the preſent abbeſs. His majeſty has alſo a garriſon in the town.

Engeren, thought to have been the capital of the Angrivari, was the reſidence of king Wittikind, who founded the collegiate church of St. Denys, and was buried in it.

Ulotowe, on the Weſer, 20 miles ſouth-eaſt of Hervorden, and 30 eaſt from Ravenſburg, is the capital of an antient barony, with a caſtle formerly count Waldeck's, and lies convenient for trade.

Schideſche is a ſmall hamlet, with a foundation for 17 Roman Catholic, Lutheran, and Calviniſt ladies.

Ravenſburg, from which the country took its name, was only an old caſtle on a mountain, ſome veſtiges of which ſtill remain; Verſmold is a ſmall town, where a conſiderable linen trade is carried on; and Bunde is another ſmall town, famed likewiſe for its linen manufactory, and alſo for a mineral ſpring.

X. LINGEN.

THIS province is ſituated between the biſhoprics of Munſter and Oſnaburg, is 15 miles long, 10 broad, has a fertile ſoil, and produces plenty of pit-coal and ſtone. Calviniſm is the eſtabliſhed religion, but here are many Lutherans and Roman Catholics. On the death of William king of England, the whole country was ſiezed by the king of Pruſſia, and incorporated with Tecklenburg.

The principal places are Lingen, the metropolis, which ſtands on the river Ems, 10 miles ſouth of Meppen, and 45 north of Munſter. It came to William prince of Orange by his lady the heireſs. The Ems here is very broad, and bears large veſſels that get into the ſea near Embden. It once had a caſtle, and other fortifications; but the former was blown up many years ago by the magazine's taking fire; and of the latter there only remain its ditch, and a drawbridge at each gate. The ſands about this place keep the air dry, and free from fogs. King William erected an academy here, beſides which he founded five places in a Latin ſchool for poor ſcholars, and did every thing he could to promote the Proteſtant religion in this country, which was at that time entirely Popiſh; but the profeſſors of it were obliged to have their marriages and baptiſms in the Proteſtant church; and a prieſt could not lie here one night without leave from the magiſtrates, as a puniſhment for the revolt whereto they excited the people about the year 1674, which was ſuppreſſed by the prince of Orange in perſon. There is a good library at the academy, together with a printing-houſe.

Rheda is a ſmall town, with a caſtle near the Ems; and Ibbenbukren is an inconſiderable town, but near it are quarries of ſtone, and ſeveral coal-pits.

XI. CLEVES.

THE duchy of Cleves is bounded by Juliers on the ſouth, Zutphen on the north, Gelderland on the weſt, and Munſter on the eaſt. It is 40 miles long, about 15 broad, and in general fertile, pleaſant, and well watered by the Rhine, Roer, Emſer, Lippe, Iſſel, &c. Dykes are cut as a ſecurity againſt inundations, and the country abounds in

Corn,	Game,
Fruits,	Fiſh,
Black cattle,	Horſes.

The inhabitants are fond of trade, and the rivers and lakes afford them many commercial opportunities. The moſt remarkable places are

Cleves, the metropolis, 55 miles weſt from Munſter. It has its name from its ſituation for moſt part among cliffs, and on the declivity of a hill, between the Rhine and the Maeſe, in one of the fineſt countries of Germany. It is thought, by Cluverius, and others, to have been the antient Colonia Ulpia Trajana; and over the ſouth gate of the town there is an inſcription, denoting, that Julius Cæſar founded a caſtle here; that Auguſtus garriſoned it; that Ulpius Trajanus made it a colony, and Ælius Adrianus a city. It is now ſmall, but pleaſant, well-built, and well-peopled, having ſeveral fine houſes belonging to perſons of quality; but thoſe of the ordinary burghers are mean. The caſtle is large, and charmingly ſeated on the top of a hill, but irregular, and not very ſtrong. From an antient Gothic ſtructure, called the Swan Tower, there is a noble proſpect of the neighbouring country, and, in particular, of the Rhine, which lies three miles from it to the north, and there divides itſelf into two branches, both commanded by the fort Schenk. There are ſtately apartments in the caſtle, which was the palace of their antient dukes, and where the king of Pruſſia reſides when he comes to this city, which ſubſiſts chiefly by the reſidence of his deputies, who govern the duchy, and by the meeting of the ſtates, who aſſemble in the caſtle. The governors of the country, and the magiſtrates of the city, are Calviniſts, and have a large handſome church, beſides the chapel of the caſtle; but the public churches here, and in moſt parts of the duchy, are in the poſſeſſion of the Papiſts, by virtue of an agreement with the duke of Newburg and Juliers, who was thereupon obliged to allow the Proteſtants a liberty in his dominions. The river Hel, which runs by the foot of the caſtle, is navigable, by ſmall veſſels, to the Rhine. On the weſt ſide of the city are thoſe called prince Maurice of Naſſau's parks, with many

pleaſant

pleaſant ponds, canals, fine water-works, grottoes, &c. Above them lies the high hill of Sternberg, from whence may be ſeen Utrecht, though 50 miles off, with near 40 other cities and great towns, 12 of which are ſeen through ſo many walks cut in the woods. The prince's houſe ſtands in a wood on the eaſt ſide, and, among other rarities, has a noble collection of old Roman urns, and divers other monuments of antiquity. Beſides the great church, a monaſtery of Capuchins, and another of Franciſcans, are the only public buildings in the city. On the road, two leagues from this city, there is the palace of Moiland, where the king of Pruſſia reſided in 1734, as he returned from the imperial army on the Rhine; and from hence to Santen, which is five leagues, there is one continued range of walks.

Craneburg is a ſmall town with a Roman Catholic collegiate church; Gennep a ſmall town on the Niers; Udema a little village pleaſantly ſituated, and Gock a town which formerly belonged to Guelders, but in 1473 was incorporated with Cleves.

Emmerick, or Embrick, is a large, rich, beautiful town, pleaſantly ſituated on the eaſt ſide of the Rhine, four miles eaſt of Cleve. It is very antient, one of the Hans Towns, and has a pretty good trade. It was formerly poſſeſſed by the Dutch, but, on the emperor's perſuaſion, they reſigned it to the duke of Cleves in 1600, on condition that the Spaniards ſhould reſtore Rhinberg to the elector of Cologne; which they not performing, the Dutch re-poſſeſſed it, and fortified this and ſeveral other towns of the duchy as a frontier againſt the Spaniards: but they afterwards reſtored them to the elector of Brandenburg. It was taken by the French in 1672, but reſtored in 1674 to the elector, who had mortgaged it to the Dutch. Overagainſt it, in the Rhine, there is a large iſland, at the corner of which, next to the town, there was a fort, which commanded the river. The governor and magiſtrates, and many of the burghers, are Calviniſts, and have a church here; but the reſt are poſſeſſed by the papiſts according to agreement.

Rees, nine miles higher, on the ſame ſide of the Rhine, and eight miles eaſt of Cleves, was a fortified town, and taken and reſtored by the French in the ſame manner as Emmerick, but lately diſmantled. The Proteſtants have a church here, where they have preſerved an excellent ſculpture in gilt wood, containing the hiſtory of the life of Chriſt.

Santen, nine miles weſt of Weſel, and 13 from Cleves, in a valley between hills, half a league from the Rhine, is a large town, ſo antient, that Cluverius ſuppoſed it to be the Vetera Caſtra of Tacitus, which was for ſome time the reſidence of Julius Cæſar. The place is much decayed, but has a great church, like a cathedral, with 30 fine altars, and the goſpel hiſtory carved exquiſitely in timber; fine altars, abundance of reliques, and, as the prieſts ſay, a MS. by St. Paul's own hand. The town is walled, but has no fortifications. This was the place where the proviſional treaty was made in 1614, for the partition of the ſucceſſion of Juliers, Berg, and Cleves, between the families of Brandenburg and Newburg.

Burich is a ſmall town on the Rhine, oppoſite to the mouth of the Lippe; Dinſlaken a little village in the circle of the Weſel; Orſoy a ſmall but ſtrong town on the weſt ſide of the Rhine; Holt a little town with an ancient citadel; and Iſſelburg, an inconſiderable town on the Iſſel, from which it takes its name.

Calcar, on the river Men, between Santen and Cleves, five miles ſouth-eaſt of the latter, and north-weſt of the former, ſtands on the weſt ſide of the Rhine, overagainſt Rees. It was built and fortified by the dukes of Cleves, for a defence againſt any ſudden invaſion from Cologne or Guelderland. It ſoon grew populous and rich, by a trade in linen; but ſince one of its dukes built a vaſt granary here for the boors to bring their corn to, it has been more conſiderable for making malt and beer. Its moſt ſtately buildings are, the town houſe, St. Nicholas's church, and a monaſtery of Dominicans; the latter of which has a good library. It has a ſtrong caſtle, and a fine market-place, but the ſtreets are narrow, and it is ſurrounded with water and moraſſes. The road from hence to Cleves is through a barren country, in which are ſome caſtles.

Between this town and Santen ſtands Marienboom, a rich monaſtery, with a Latin inſcription on the wall next the road, expreſſing their gratitude to Frederick William, elector of Brandenburg, for accepting their great collection of MSS. in 1650, inſtead of turning them out, and ſecularizing their revenues.

Weſel, called Nether Weſel, to diſtinguiſh it from Upper Weſel, in the electorate of Treves, ſtands on the eaſt ſide of the Rhine, near the mouth of the river Lippe, 10 miles eaſt of Santen, and 18 ſouth-eaſt of Cleves. It was formerly a Hans Town, and alſo Imperial, but exempted, by the dukes of Cleves, from the contributions paid by thoſe towns to the military cheſt of the empire, according to the Matricula. It is not only the largeſt and beſt built town of the duchy, but populous, and well ſeated for trade. It grew rich by the concourſe of merchants who fled hither from the perſecution in the Spaniſh Netherlands, and was garriſoned by the Dutch, to whom it was mortgaged by the elector of Brandenburg, but taken and plundered by the French in 1672, when they alſo exacted heavy contributions from the inhabitants, which forced many of them to retire; but it was reſtored in 1674 to the elector, after the French had diſmantled it. Though the place ſubmits to the king of Pruſſia as its ſovereign, it is governed by its own laws. Both the town and its two ſuburbs are full of ſoldiers, and well fortified, after the modern way, with baſtions, half moons, and ditches; and in the middle of the courtins there are galleries which run into the ditch, and have ſeparate places for the men and women in caſe of a ſiege. As the place has been fortifying almoſt ever ſince the acceſſion of the late king of Pruſſia, it may well be reckoned one of the ſtrongeſt towns in Europe. It has a good citadel towards the Rhine, a ſmall harbour for veſſels that trade on that river, an arſenal well ſtored with all neceſſaries for defence or deſtruction, and ſeveral churches and monaſteries. The porch of the great church is remarkable for the birth of Peregrine Bertie (afterwards earl of Lindſey), whoſe mother, the ducheſs dowager of Suffolk, and Mr. Bertie, her huſband, being forced to fly beyond ſea from queen Mary's perſecution, were reduced to ſuch difficulties here, becauſe they durſt not make themſelves known, that they could not get any better accommodation. There is an hoſpital in this town, founded and richly endowed by a chancellor of this duchy and his ſon, for the aged and decrepid. The country from hence to Duiſbourg is a plain and a gravelly ſoil.

Lobith is a ſmall town on the Rhine, with a toll houſe; and Eltenburg is a little town near the Rhine, with an Imperial foundation for ladies.

Deuſburg on the Roer is 31 miles ſouth of Cleves. It was formerly an Imperial city, and one of the Hans Towns; has a Proteſtant univerſity, a commandary of the Teutonic order, two monaſteries, a nunnery, and two pariſh churches, and is well fortified.

XII. MEURS.

THIS little principality is ſurrounded by the archbiſhopric of Cologne and the duchies of Cleves, Berg, and Guelders. It is watered by the Rhine, and yields plenty of corn, cattle, and veniſon, ſubſequent to the death of the laſt count and his daughter Walpurgis; it came to the houſe of Naſſau Orange, and on the death of William III. king of Great Britain, to the electoral houſe of Brandenburg, which in 1648 had annexed the lordſhip of Friemoſheim, that had been held by the count of Meurs as a fief of the abbey of Werden, or Verden, to the duchy of Cleves. As prince of Meurs, the king of Pruſſia has a ſeat and voice in the college of the princes of the empire, and the diets of the circle. The revenue is upwards of 30,000 rix-dollars; and the principal places are,

Meurs or Mors, a compact, ſmall, well fortified town, where the provincial colleges hold their meetings. Here is a caſtle, a Calviniſt church, and a Latin ſchool.

Crefeld, a ſmall town defended by a citadel, and containing manufactures of ſilk, linen, velvet, &c.

XIII. MARK.

THE county of Mark is reckoned the largeſt in Weſtphalia, being 40 miles both ways. It is ſituated between the Lippe and the Roer, divided into 15 bailiwics,

wics, and ſubject to the king of Pruſſia. It is thought to have its name from being the antient boundary between Germany and Gallia Belgica. It lies weſt from the duchy of Weſtphalia, north from that of Berg, and ſouth-eaſt from Cleves.

This country in itſelf is fertile and rich, as it yields

Grain,	Flax,
Pulſe,	Hemp,
Fruit,	Wood,
Coals,	Iron,
Lead,	Copper,
Silver,	Stone,
Salt,	Cattle,
Game,	Fiſh, &c.

The principal manufactures are in iron and ſteel; people of all perſuaſions are tolerated here, and the government is inveſted in the ſame colleges as that of Cleves. The principal places are as follow:

Hamm, the capital of the county, on the river Lippe, 55 miles north-eaſt of Cologne, was antiently one of the Hans towns; but though the adjacent country abounds with corn, hemp, and flax, it is a poor place, that ſubſiſts chiefly by lodging travellers between Brandenburg, &c. and the Netherlands. It was taken by the French in 1673, but reſtored next year to the elector of Brandenburg.

Camen, on the Zeſick; Schwerte, on the Roer; and Weſthoven, which was formerly an Imperial borough, are all very pleaſant, but at the ſame time very inconſiderable towns.

Syberg has a church ſeated on a rock where a caſtle belonging to the Saxons formerly ſtood.

Soeſt, or Souſt, on the river Arſe, 12 miles eaſt of Hamm. It is a populous city, ſeated in the neck of this county, which ſhoots into Weſtphalia; of which circle, ſome reckon it the largeſt city, except Munſter. It is fortified with a double wall, whereon are 30 watch towers, and a large deep ditch. It has 14 pariſhes, and many churches, beſides chapels, one of which is collegiate, and under the juriſdiction of the archbiſhop of Cologne. It has many privileges, particularly the liberty of hunting and killing veniſon in any of the neighbouring counties. It has alſo a court of judicature within itſelf, from which there lies no appeal, except to the chamber of Wetzlar. It has as many gates as pariſhes, but it is in ſo ruinous a ſtate, that very few of the ſtreets are paved. It was taken and plundered in 1622 by Chriſtian duke of Brunſwic, who is ſaid to have then carried off, among other booty, the twelve apoſtles in maſſy ſilver. It has ſuffered much at ſundry times by war and fire, ſo that it is a very poor place. Here are ſeveral convents, and a famous nunnery in particular, called Paradiſe. The Lutherans poſſeſs two of the pariſh churches, and a nunnery, which, like other Proteſtant nunneries in Germany, is a ſort of free boarding-ſchool, raiſed on the antient popiſh eſtabliſhments, where young ladies, generally of the beſt families, are educated; and ſome ſpend their lives in them, but take neither the vow, nor the habit; nor are they tied down to many rules. They pretend here to an antient body of laws, called Jus Soatenſe, which is allowed generally to have been the foundation of that antient body of laws now called Jus Lubecenſe, after having received conſiderable improvements from the Saxon laws, and from thoſe of Wiſby.

Lipſtadt is a conſiderable town on the river Lippe, from which it derives its name.

Hohen-Limbourg a borough on the Lenne, is a fief of the county of Mark, and under the protection of the regency of Cleves.

Hoerde on the Emſcher, is a ſmall town defended by an old caſtle, and containing a Lutheran and Calviniſt church. The inhabitants are chiefly employed in nail making, and near the town there is a free ſecular foundation for an abbeſs, and 15 other ladies, partly Proteſtant and partly Roman Catholic. There is alſo a commandery belonging to the Teutonic order.

Hagen on the Volme is a ſmall town, containing a Lutheran, Calviniſt, and Roman Catholic church, and manufacture of cloth. The inhabitants likewiſe make ſword-blades, paper, knives, hammers, charcoal, &c. In the diſtrict are found two ſorts of alabaſter, viz. white with red veins, and black with white veins.

Plettenberg on the Elſe is remarkable for the ſtone quarries in its neighbourhood, and has ſome iron and woollen manufactories.

Schwelm, a trading town, with a Latin ſchool, a foundation for Proteſtant and Roman Catholic ladies, a Lutheran, Calviniſt, and Popiſh church, and a medicinal ſpring.

Hattingen on the Roer has a Latin ſchool; Blankenſtein, on the ſame river, a decayed caſtle; Caſtiop, a Roman Catholic, Lutheran, and Calviniſt church; Nienrade on the Lenne is ſurrounded by mountains; Bockuna is ſituated in a very fruitful ſoil; and Limdenſcheid has a Latin ſchool, and ſome trade in iron and wire.

Herdicke on the Roer has a free ſecular foundation for Roman Catholic and Proteſtant ladies, and a Lutheran, Calviniſt, and Roman Catholic church.

Iſerlon, or Lon, is a tolerable town, containing three Lutheran, one Calviniſt, and one Roman Catholic church. It has ſome trade, and its manufactures are of ſilk, braſs, iron, and wool.

Dortmund, 26 miles weſt of Soeſt, and 37 north of Cologne, was one of the Hans towns, and reckoned the capital of the county of Mark, as it was of its bailiwic, which the lords of it ſold to the inhabitants: whereupon, with the emperor's conſent, they took the title of an imperial city, which the elector of Brandenburg took away. The eſtabliſhment here is Lutheran. Though it is a ſmall place, it is rich and populous, having a pretty good trade, and communication with the Rhine, by its river Empſer, almoſt in the middle between the rivers Lippe and the Roer, ſcarce ſix miles from both. It has an univerſity, which was erected in 1543.

Unna, which was another of the Hans towns, and now ſubject, with the above, to the houſe of Brandenburg, ſtands in a large plain, 14 miles eaſt of Dortmund. It is not ſo large as Hamm, though a place of ſuch trade, (before the wars betwixt the families of Brandenburg and Newburg, about the ſucceſſion to the duchy of Cleves) that it was reckoned one of the richeſt cities of Lower Germany.

Altana is large and populous, but being ſurrounded by mountains on all ſides, there is but little arable ground near, ſo that the inhabitants are ſupplied with grain from other places. It has a Lutheran and Calviniſt church, a caſtle on a high rock, and ſome trade in iron and wire.

XIV. EAST FRIESLAND.

EAST FRIESLAND, otherwiſe called the earldom of Embden, has the German ocean on the north; the gulf Dollert, with the mouth of the river Ems, on the weſt, which parts it from the province of Groningen; the biſhopric of Munſter on the ſouth; and the county of Oldenburg on the eaſt. Count Emmo II. eſtabliſhed the Augſburg confeſſion here. He was ſucceeded by his ſon Rodolphus Chriſtianus, who being a zealous Lutheran, and falling into a controverſy, on that and ſome other accounts, with the citizens of Embden, who were Calviniſts, they diſpoſſeſſed him in 1595, wherein they were aſſiſted by the ſtates general of the United Provinces, under whoſe protection they put themſelves; and in 1606 a peace was concluded at Delfzyl, between that city and the count, by the interceſſion of James I. of England.

The emperor Charles VI. the laſt count of East-Friesland, dying without iſſue, the king of Pruſſia claimed and ſeized that country.

The air is thick and moiſt, the country low and marſhy, the inundations frequent and dangerous; but the paſtures are rich and fertile. Here are abundance of horſes, ſheep, horned cattle, &c. and plenty of meat, butter, cheeſe, milk, &c. The great number of dykes are ſignally ſerviceable to the country, which, however, produces but little corn; but beſides what we have already mentioned, here is great plenty of veniſon, fiſh, wild and tame fowl, herbs, &c. and they are well provided with turf for fuel. The chief river is the Eons; the languages ſpoken by the people of East-Freſian, are high and low Dutch. The prevailing perſuaſion is Lutheran, and the trade is very conſiderable in

Horſes	Linen
Horned cattle	Rape-ſeed
Butter	Barley
Cheeſe	Wool.

The principal places are,

Embden, ſituated on the north ſide of the Ems, and on the bay called Dollart, 24 miles diſtant from Groningen to the north-eaſt, and 55 from Bremen to the ſouth-weſt. It is a rich, large, and populous city, fortified towards the land by a double ditch, regular bulwarks, and baſtions; and on the ſouth by a ſtrong wall, and the river. The iſland Neſſa, which lies in the Dollert bay, over-againſt this city, makes the harbour as large and convenient as any on the German coaſt. They have alſo artificial canals, by which they can bring large veſſels into the heart of the town; and by opening their ſluices they can lay the neighbouring country under water, and make the town inacceſſible. Their houſes are generally neat and high, and the town-hall very magnificent. They are very induſtrious, and much addicted to trade, zealous aſſerters of their liberties, and excellent ſoldiers. They make good proviſion for their poor, and allow freedom of worſhip to all but Papiſts. In 1750 the king of Pruſſia eſtabliſhed an Eaſt-India company here. It is divided into three parts, the Old Town, the Faldern, and the Suburbs. The moſt remarkable buildings are the town-houſe, library, and cathedral church.

Norden is ſituated on a little gulph, about 15 miles diſtant from Embden to the north. It is a pleaſant, well-built, and populous town, but not walled in; and its harbour is not deep enough to receive ſhips of any great burthen.

Aurich, about 10 miles from Embden to the north-eaſt, is defended by a ſtrong caſtle, the reſidence of the count or prince of Eaſt Frieſland. This is the place where the ſupreme court of judicature for this country is held. It is the capital of a little diſtrict called Auricherland, which is marſhy, and full of woods.

Jemgum is an opulent borough, with an harbour on the Ems; Hoge a town that gives name to a diſtrict; Leer a large, well-inhabited town, on the Leda, with a conſiderable linen manufactory; and Gretſyhl is a borough town, ſituated on the German ocean, with a ſtrong caſtle to defend it.

Eſens, about 14 miles diſtant from Aurich towards the north, and 25 from Embden to the north-eaſt, ſtands on a river of the ſame name, which a little below falls into the ſea.

Witmund, about five miles from Eſens to the eaſt, was formerly a place of good trade, but is now much decayed. It was anciently the capital of a great barony, which, together with Eſens, was held of the counts of Eaſt Frieſland, to whom it devolved by marriage.

XV. LIPPE.

LIPPE is a narrow county, ſituated between Paderborn on the ſouth, and Ravenſburg on the north. In general it is mountainous and heathy, but has ſome corn land. The inhabitants are Calviniſts. This country hath ſeveral proprietors, viz. the king of Pruſſia, the king of Great-Britain, the counts of Lippe Schawenburg and Lippe Detmold, and the biſhop of Poderborn. The principal places are as follow:

Lemgau, formerly a Hans town, contains a Lutheran academy, two Lutheran and one Calviniſt church, a palace called Lippehof, a foundation for ladies, the abbeſs of which is always a counteſs of the houſe of Lippe.

Detmold on the Warra has a ſtrong caſtle; Blomberg is no ways remarkable; Horn contains a palace; Sabz-Uffen is celebrated for a ſalt-ſpring; Barndorf is a borough, and has a palace; Swalenberg has a caſtle; and Lipperod gives name to a diſtrict.

Lipſtadt, which partly belongs to the county of Mark, and the county of Lippe, hath already been deſcribed in the former.

Alverdiſſen is a borough town, with a caſtle belonging to a branch of the houſe of Lippe.

Sternburg is a caſtle appertaining to a diſtrict which belongs to the king of Great Britain. The neighbouring country is extremely fertile, and the people who profeſs Calviniſm are remarkably induſtrious.

XVI. GULICK.

THE duchy of Gulick, or Juliers, lying between the Maes and the Rhine, has Cleves and Gelders on the north; Cologn upon the eaſt; the palatinate on the ſouth; and the Netherlands on the weſt, being 60 miles long and 30 broad, abounding in corn, paſture grounds, and good neat cattle, and an excellent breed of horſes; the ſoil alſo produces woad, or wad for dying.

Juliers, or Gulick, the capital city, antiently called Juliacum, and, according to tradition, built by Julius Cæſar, ſituated on the river Roer, 25 miles weſt of Cologn, in ſix deg. of eaſt long. and 51 north lat. is a little fortified town, defended by a caſtle, in which was the palace of the antient dukes.

The other towns, or rather villages, are ſo very trifling as not to be worthy of mention.

XVII. TACKLENBURG.

THE county of Tacklenburg lies eaſt from Lingen, and weſt from Oſnaburg, and is about 30 miles long, and 10 broad; its antient counts had large dominions, now parcelled out to others. In 1560 it fell to the counts of Benthem, and ſince to the king of Pruſſia.

Its capital of the ſame name, 10 miles weſt of Oſnaburg, and 23 north of Munſter, has a ſtrong caſtle and a fort.

XVIII. GELDER.

THAT part of Gelderland in the Netherlands, which is called the High Quarter, or Upper Gelderland, has Dutch Brabant, and part of the biſhopric of Liege, on the weſt; part of the duchy of Cleves on the north; part of the ſame duchy, and of the electorate of Cologne, on the eaſt; and part of the duchy of Gulick on the ſouth: ſo that it is entirely divided from Dutch Gelderland. Its greateſt length from ſouth to north is about 35 miles; its breadth is unequal, and about 24 miles where broadeſt.

This country continued in the poſſeſſion of the Spaniards after the commonwealth of the United Provinces was ſettled; but was conquered by the allies, during the late war, occaſioned by the death of king Charles II. of Spain, about his ſucceſſion. The king of Pruſſia, for whom it is very conveniently ſituated, laid claim to it; and, by the treaty of Utrecht, it was agreed, that he ſhould keep the city of Gelder, the prefectorſhips, towns, boroughs, fiefs, lands, quit and other rents, in that part of the high quarter of Gelderland, which he was actually in poſſeſſion of, which was yielded to him, his heirs and ſucceſſors, of either ſex, for ever; together with the country of Keſſel, and the bailiwic of Krickenbeck. By the barrier treaty, concluded at Antwerp in 1715, the emperor gave up to the ſtates-general for ever, the city of Venlo, with its diſtrict, fort St. Michael, fort Stevenſwert, with its territories and diſtrict, and ſo much ground as was neceſſary to enlarge its fortifications on the other ſide of the Maes. The principal places are the following:

Gelder, from which the whole province has its name, is 20 miles diſtant from Cleves to the ſouth, and eight from Venlo towards the north. It ſtands in a plain, on the river Niers, which, dividing itſelf here into two branches, forms an iſland in which this city is ſituated. It receives the Niers into its trenches, lies in the midſt of marſhes, and is ſo well fortified beſides, that it is reckoned one of the ſtrongeſt places in the Netherlands. It has an antient caſtle, formerly the ſeat of its governors, and is ſuppoſed to have been built by Wichard, the firſt lord of this country, who erected it into a principality, after the death of Charles the Bald. The heireſs being afterwards married to Otho of Naſſau, who was created count by the emperor Henry IV. about the year 1069, one of his deſcendants was made duke by the emperor Lewis of Bavaria, in 1339; but his poſterity failing, it came to the count of Egmont, who ſold it to Charles duke of Burgundy, by whoſe daughter it came to the houſe of Auſtria. It was taken by the confederates in the beginning of the war in the Low Countries, but betrayed to the Spaniards in 1587. The Dutch beſieged it in 1637, 1639, and 1640, but without ſucceſs. The French ſeized it in the beginning of the laſt war; but it was retaken by the Pruſſians, after a blockade of 15 months, and 14 days bombardment. And, by the treaty of Utrecht, it was yielded to the king of Pruſſia, in

exchange for the principality of Orange, to which he had a right, as heir to king William III. and which the French king had ſeized upon.

Keſſel, a large borough, with a fine caſtle, is the capital of a country, or diſtrict, which was yielded to the king of Pruſſia by the treaty of Utrecht. This borough lies on the Maes, about 13 miles diſtant from Gelder to the ſouth. It is ſuppoſed to be the Caſtellum Menapiorum, mentioned by Ptolemy, and the capital of the people called Menapii.

Stralen is about four miles diſtant from Gelder towards the ſouth. It was formerly fortified; but the French having taken it in 1672, demoliſhed its fortifications. It belongs now to the king of Pruſſia, and is the capital of a ſmall territory. Near it lies the village of Zant, ſuppoſed to be Antonine's Sablones, or Sabulones.

Wachtendonck ſtands on the little river Niers, five miles above Gelder to the eaſt; it is well fortified, but its chief ſtrength conſiſts in the marſhes that ſurround it, and in its ditches, filled with the waters of the Niers. In the beginning of the wars in the Low Countries, it was taken by Lewis count of Naſſau, brother to the prince of Orange, in an hard winter, by marching ſome troops over the ice, which the garriſon had neglected to break. In 1588 it was furiouſly battered by count Manſfield, general of the Spaniards; and it is obſerved, that bombs were uſed, for the firſt time, at this ſiege: notwithſtanding which, the beſieged defended themſelves ſo bravely, that the Spaniards were going to retire after three months ſiege, when the town was betrayed to them by the governor, juſt as it was upon the point of being relieved.

XIX. NEUFCHATEL.

THE principality of Neufchatel is bounded by the biſhopric of Baſil, and the territory of Biel, towards the north, by the lake of Neufchatel towards the eaſt, by the canton of Bern on the ſouth, and by Franche Compte or Burgundy on the weſt; being about twelve leagues in length from north to ſouth, and ſix in breadth from eaſt to weſt. The air of this country near the lake is temperate, but very ſharp in the mountainous parts of it: the ſoil is ſtony, but produces the beſt wine in Switzerland; by the ſale whereof to foreigners the natives make great advantages.

The language is French, and the inhabitants reſemble that nation more in their manners and cuſtoms than the Germans, having more vivacity than the reſt of the Switzers, with a great ſhare of vanity. They are, in a manner, a free independent people, notwithſtanding they have always had a prince for their head; for nothing is determined but by the concurrence of the three eſtates. They have alſo the privilege of chuſing their own magiſtrates and ſtandard-bearer, and are ſubject to no taxes but what they lay upon themſelves; and the whole country is of the reformed religion, except the two villages of Creſier and Landeron, the inhabitants of which are Roman Catholics. Upon the death of the ducheſs of Nemours, the laſt counteſs of Neufchatel, as heireſs of the houſe of Longueville, the ſtates of the country were inclined to ſubmit themſelves to the late king of Pruſſia, as heir by his mother to the houſe of Orange, which derived its title to Neufchatel from the marriage of one of its princes with the heireſs of the houſe of Chalons, the direct ſovereign of theſe two countries. Several competitors alſo aroſe at the ſame time, who claimed as heirs in blood to the houſe of Longueville; but the ſtates rejected their claim, and adjudged it to the heirs of the houſe of Chalons, and the king of Pruſſia accordingly took poſſeſſion of it. The chief towns in the county of Neufchatel are, Neufchatel, the capital; and Landeron.

Neufchatel, called by the Germans Newburg, is ſituated at the north-eaſt end of the lake to which it communicates its name, about 20 miles north-weſt of Bern, and 15 north-weſt of Friburg. The town is well built, and adorned with ſeveral handſome fountains: it is governed by a council of 60 burghers, and enjoys large privileges, among which the moſt conſiderable is, that they are comburghers or fellow-citizens with the canton of Bern, which is not only their protector, but umpire of all the differences between them and their ſovereign; and this canton ſupported them in their religious and civil rights, while they were under the dominion of popiſh princes. The counts of Neufchatel were formerly allied to the cantons of Bern, Lucern, Soleure, and Friburg; but ſince the inveſtiture of the king of Pruſſia, the popiſh ſtates do not ſeem fond of renewing the alliance, and they may be looked upon now as allied only to Bern.

Landeron, ſituated near the lake of Biel, is remarkable for the ſtrength of its ſituation, and a noble caſtle, the reſidence of the prince.

XX. SILESIA.

AS ſome parts of Sileſia have been ceded to the king of Pruſſia, and others have been ſeized upon by him at various times, and under different pretences, he now poſſeſſes the principal places in the whole; it may therefore, with great propriety, be deemed a Pruſſian province, and as ſuch deſcribed in this place.

The duchy of Sileſia extends on both ſides of the Oder from the Carpathian mountains, where it riſes, to the borders of Brandenburg. It is ſeparated from Bohemia and Moravia on the ſouth-weſt and ſouth; by the mountains called Riſſenbergen, and bounded by Poland on the eaſt; Luſatia and part of Bohemia on the weſt; Brandenburg on the north, and Hungary on the ſouth.

From north-weſt to ſouth-eaſt it is about 225 miles, and about 100 where broadeſt; but it is much contracted at both ends.

On the ſide next to Bohemia there are many barren mountains, but the reſt of the country is good ſoil, abounding with corn, wine, ſweet cane, or Galengal, madder, and flax: and on the mountains which divide this duchy from Moravia, there are mines of ſilver, the richeſt in Germany, which were mortgaged by the emperor Charles VI. upon the advance of money from Great Britain, &c. by the title of the Sileſian loans, at five and ſeven per cent. There are others of copper, lead, iron, quickſilver, ſalt, ſalt-petre, and chalk.

The chief mountains are, 1. Jottenberg, or the Sileſian Weathercock, ſo called becauſe the neighbouring people prognoſticate what weather will enſue from the appearance of its ſummit. Here are the ruins of an old caſtle, demoliſhed by the citizens of Breſlaw, becauſe it was a ſhelter for robbers. From this hill they dig a fine dark greeniſh marble. 2. Gratzberg, or Gradiſberg, on which duke Frederic built a caſtle, now a watch-tower, 3. Spitſberg, with a beacon near the former. 4. Georgenberg, in the duchy of Schweidnitz, famous for the Terra Sigillata firſt diſcovered by Montanus, an eminent phyſician and chymiſt, who wrote a Latin treatiſe on its virtues.

The chief river is the Oder, which riſes near a town of that name on the borders of Moravia, and traverſes this duchy from ſouth to north-weſt. Many ſmaller rivers riſe here, and fall into the Oder, increaſing it to a large navigable ſtream before it paſſes into Brandenburg. Its rivers abound with freſh water fiſh, as do alſo its ponds and lakes, eſpecially lampreys, which are taken in vaſt quantities in the Neiſſiſh lake, &c. Its meadows alſo have cattle, and its foreſts veniſon, with all the wild and tame beaſts and fowl that are in any part of Germany. The number of inhabitants are computed at a million and a half, being a mixture of Germans, Moravians, Poles, &c. The language is in ſome places German, and in others Sclavonic. Since the country fell under the dominion of the Pruſſians, no diets have been held, but all the other privileges of the inhabitants have been confirmed to them. The eſtabliſhed religion is the Proteſtant, but Roman Catholics, Jews, Greeks, &c. are tolerated. The principal manufactures are,

Woollens	Hats
Linens	Glaſs
Cottons	Gunpowder
Thread	Iron wares.

Chriſtianity was planted here, as in Poland, about the end of the 9th, or beginning of the 10th century; but at firſt the Chriſtians worſhipped in private, for fear of their magiſtrates, till about 965, that the court itſelf turned to chriſtianity, when no leſs than nine biſhoprics were erected in this country. Soon after Luther's appearance they embraced the Augſburg confeſſion, for which they had a charter granted them by the emperor Rodolph

Rodolph II. in 1609, but Ferdinand II. repealed their charter, and very much reſtrained the exereiſe of their religion, which, though reſtored by the treaty of Weſtphalia, was again invaded by the Auſtrian family, till Charles XII. king of Sweden, obliged the emperor Joſeph to allow it them again, with freſh conceſſions. Theſe however have been virtually revoked at ſome periods ſubſequent to that time; but now being under the dominion of a Proteſtant power, they are fully confirmed in the free exerciſe of proteſtantiſm.

The exciſe revenue here is only levied in walled towns, and fluctuates; but in the reſt of the duchy, the contributions are fixed, and the ſame both in peace and war. The whole revenue from Sileſia and the county of Glatz is very conſiderable, and is managed by the domain offices of Breſlaw and Glogau.

Many Sileſians of the higher rank have diſtinguiſhed themſelves for their political and military talents, learning, wit, &c. but the lower claſs of people are in general very dull and ſtupid. "They have, ſays an excellent author, more of Mars than Mercury in their compoſition, and their parts are more ſolid than ſhining."

Sileſia is divided into Upper and Lower, and theſe are again ſubdivided into principalities and lordſhips. Both the property and juriſdiction of ſome of theſe belong immediately to the king, and others to his ſubjects and vaſſals.

LOWER SILESIA.

LOWER Sileſia is divided into

The principalities of
- Breſlaw
- Brieg
- Schweidnitz
- Jauer
- Lignitz
- Wolaw
- Glogaw
- Neyſze
- Oels
- Sagan
- Munſterberg
- Trachenberg
- Carolath

And the lordſhips of
- Wartenberg
- Miltſch
- Goſchietz

1. The principality of Breſlaw is a pleaſant and fruitful country, in the middle of Sileſia, lying on both ſides of the Oder, with the duchies of Wolaw and Oels, and the barony of Wartenberg, on the north; the duchy of Brieg on the eaſt; part of Brieg and the duchy of Schweidnitz on the ſouth; and part of Schweidnitz and the duchy of Lignitz on the weſt. Its firſt duke was Boleſlaus, a Poliſh prince, ſo created by the emperor Frederic I. in 1163, but the following princes not being able to defend themſelves againſt the Tartars and Poles, were forced to put themſelves under the protection of the king of Bohemia, to whom Buno ſays, the emperor Frederick II. gave it as a fief of the empire; but it was ſubject to the houſe of Auſtria before its late ceſſion to the king of Pruſſia.

Breſlaw, the capital of all Sileſia, is ſituated at the conflux of the Oder and Olaw, at the diſtance of 150 miles north-eaſt of Berlin, and 147 north of Vienna. It is a rich populous town, and, including the ſuburbs, of great extent. It contains many large uniform ſquares, capacious ſtreets, ſtately public edifices, handſome private houſes, &c. The fortifications are not ſo ſtrong as might be reaſonably expected from the importance of the place; though the king of Pruſſia has of late paid conſiderable attention to them. Breſlaw contains ſeveral Roman Catholic and Lutheran churches, one for the uſe of the Calviniſts, and another for the Greeks; two ſynagogues for the Jews, a college, a palace for the biſhop, two Lutheran gymnaſiums or ſchools of exerciſe, a noble univerſity, and a magnificent exchange. This city is next in dignity to Berlin and Koningſburg, being the third in rank in all the Pruſſian dominions. The magiſtracy is Lutheran, the trade and manufactures conſiderable, and the monaſteries and nunneries magnificent and well endowed. Here are likewiſe ſeveral good public libraries, two armories, a college of phyſicians, a mint, &c. Many yearly fairs, excellent markets, and other advantages, which induce various foreign merchants to reſort hither. The abundance of water is a great convenience to this city; the houſes are all built with ſtone, and there are two iſlands near it formed by the river Oder, in one of which is a church whoſe tower was burnt by lightning in 1730, and in the other iſland called Thinn the cathedral is ſituated. This city was taken by the king of Pruſſia in 1741, and retaken by the Auſtrians in 1757, but they did not keep it long, for the king of Pruſſia made himſelf maſter of it again the ſame year, and hath retained it ever ſince.

In this principality are many other towns and villages, but none ſufficiently conſiderable to merit a particular deſcription. Indeed it may not be improper to mention, that at the village of Leuthen, in 1757, the Pruſſians obtained a ſignal victory over the Auſtrians.

2. The principality of Brieg is one of the largeſt and moſt fruitful in all Sileſia, it is watered by the Oder and Olau, and yields

Corn	Madder
Paſture	Oak
Tobacco	Pine
Beech	Stone, &c.

It is an immediate principality, and beſides many ſmall towns, villages, hamlets, &c. contains ſix which give name to as many circles, viz.

Brieg, its capital, ſtands on the Oder, over which it has a bridge above Breſlaw, and below Oppelen, 16 miles ſouth-eaſt from the former, and 17 north-weſt from the latter. It is one of the handſomeſt towns in Sileſia, is well-fortified, and has a college, where the profeſſors are Lutherans; and an academy, where the nobility learn their exerciſes. The ſtreets are uniform, the houſes generally of ſtone; and St. Nicolas's church is a high, ſtately, old fabrick, with two towers. Moſt of it, except the public buildings, was burnt by the Huſſites in 1428, and, in 1740, the king of Pruſſia obtained a victory over the Auſtrians at a little village called Molwitz, near this place.

Olau, ſituated on a river ſo called, gives name to a circle, is defended by a caſtle, contains a copper flatting-mill, and is celebrated for the quantity of tobacco raiſed in its neighbourhood.

Strehlen, a walled town on the Olaw, giving name to a circle, and having large ſuburbs, a manufactory of cloth, and, in its neighbourhood, a quarry of green marble.

Reichenſtein and Silberberg are mine towns. The firſt gives name to a circle. The mines produce gold, ſilver, and lead ore.

Creutzburg gives name to a circle, and is defended by a caſtle.

Nimptch is a town with a caſtle on the Lohe, in the circle to which it gives name; it is ſituated in a commandery belonging to the knights of St. John.

3. The principality of Schweidnitz is ſituated between thoſe of Lignitz and Breſlaw on the north, that of Brieg on the eaſt, Bohemia on the ſouth, and that of Jawer on the weſt. Its capital, of the ſame name, ſtands on the river Weiſtritz, 12 miles ſouth-eaſt of Jawer and Lignitz, and 44 ſouth-weſt of Breſlaw. It has its name from the great herds of ſwine kept here before the foreſt was cut down in 1070, and has a wild boar for its arms. It is ſituated on a riſing ground, with a view over a delightful and fruitful country. Its walls, which ſeem to be very antient, are built of brick, and fortified with ramparts on round towers: here is a caſtle, a fine ſquare, and a college of jeſuits, who have a church, one of the largeſt and fineſt in Sileſia, with a prodigious high tower, and a clock that is heard a great way off, with chimes that ſtrike the hours. It is beautified with many other fair ſtructures, beſides its churches; and has an armoury, wherein there is a monſtrous great gun, able to carry a ball of 320 pounds weight.

Striga, one of the towns of the laſt-mentioned duchy, eight miles north of its capital, ſtands on the river Polſnitz, and is noted for excellent beer, and that remarkable mineral called Terra Sigillata.

Lanſhut is a conſiderable town at the conflux of the Bober

Bober and Zeider, having a flourishing linen trade, and giving name to a circle, in which is situated the Cistercian abbey of Grissau, richly endowed. The abbot is vicar general of Silesia, and wears a mitre.

Reichenbach, on the Peil, is a small town, with manufactures of fustian, canvas, and linen, a commandery of the order of St. John, and a prior, dedicated to St. Barbara; and Balkenhayn is a small town with a castle near it.

4. The principality of Jawer or Jauer has Bohemia on the south, Upper Lusatia on the west, the duchies of Sagan and Glogaw on the north, and those of Lignitz and Schweidnitz on the east. The river Bober, which rises in it, runs through it from north to south.

Jawer, its capital, lies in a pleasant valley, and a good air, near the rocky mountains which divide Silesia from Bohemia, 10 miles south of Lignitz, and 27 west of Breslaw. It is not so big as Schweidnitz, but has strong walls, with high ramparts, and deep ditches. It has a fair parish-church, with a convent of Bernardines, and a great citadel, in which resides the bailiff or lieutenant of both the duchies of Jawer and Schweidnitz. There is a fine town-house in the middle of a large square of houses, built with galleries for people to walk under. It suffered much by the civil wars in 1648, when the church was burnt down, but has been since rebuilt in a more stately manner.

Bunzlaw, a small town on the Bober, gives name to a circle, and is noted for a beautiful brown earthen ware, and an excellent quick spring of a mineral nature.

Lawenberg, on the Bober, gives name to a circle, contains a Franciscan convent, with a commandery of the order of St. John and a Lutheran oratory; a darkish kind of amber is found here; and within the circle is a linen manufactory.

Hirochberg is one of the handsomest, largest, and most thriving towns in Silesia, situated at the conflux of the Bober and Zaken. It has a large trade, a great bleachery, and a capital linen manufactory; and in the circle, to which the town gives name, are mines of iron and copper, warm baths, manufactures of linen, glass, silk damasks, &c.

5. The principality of Lignitz is capacious, fertile, and well watered by several rivers, the chief of which is the Katzbach. It contains many large woods, and is celebrated for producing a fine breed of horses and plenty of Madder.

Lignitz is situated on the Katsbach, a rivulet, two German miles north from Jawer, and six west from Breslaw. It was walled round, made a city, and adorned by Boleslaus, the first duke, who resided here about 1170, when it was the chief city of Silesia, next to Breslaw. It was farther beautified and fortified by Boleslaus the Bald. Frederic II. another of its dukes, encompassed it with a ditch in 1532, to secure it against the frequent incursions of the Turks; and Henry XI. augmented the ditch, and made new works to strengthen it. It is, in short, a large town, has a noble strong castle, a stately town-house and hospital, and is famous for a victory obtained near it, over the Imperialists, in 1635. It contains several churches, Roman Catholic, Lutheran, &c. a college, military academy, and the palace of the ancient princes, with the chapel in which they were buried. Here are many meal, sawing, tan, paper, fulling, and powder mills, and a considerable trade in linen and madder.

Goldberg, on the Katsbach, is a considerable town which took its name from a gold mine that was formerly worked here, and contains a Franciscan convent with a commandery of the order of St. John. In the neighbourhood is a hill called Spitzbergen, or the sharp-pointed hill, which, at a distance, resembles a pyramid, and is of a green colour.

Haynaw is an inconsiderable town, though it gives name to a circle. Luben gives name to a circle, and has a cloth manufactory; and Parchwitz is a small town on the Katzbach, which has a manufactory of cloth, and gives name to a district.

6. The principality of Wolaw is, in general, woody and marshy, yet has a few corn lands. The rivers are the Katzbach and Oder; and the circles are six in number, to which the following towns give name:

Wolaw, the capital, containing a Carmelite convent and church, the Cistercian abbey of Leubus, a palace, and a Lutheran church and school.

Winziz, a small town, containing a Roman Catholic church and a school.

Rautden, a small open town; Steinau, on the Oder, remarkable for its cloth manufactory; Ratzen, on the Bartsch, celebrated for its two mineral springs; and Herrenstadt, on the same river, which had a Roman Catholic and Lutheran church till 1739, when the whole was burnt down by the Austrians.

7. The principality of Glogaw is the largest in Lower Silesia. It is watered by the Oder, Bartsch and Bober yields abundance of corn, wine and wood, has several woollen manufactories, and is divided into six circles, to which the following towns give name.

Glogaw, the capital, has the epithet of Great to distinguish it from another town of the same name in Upper Silesia. It is the seat of several courts, offices, &c. has a college, a Lutheran, a Calvinist, and several Roman Catholic churches and convents, and is strongly fortified and well garrisoned. It was taken in 1741 by the Prussians, and its fortifications considerably augmented, and in its circle is a lake, the fishery of which is farmed out and brings a considerable sum annually.

Gurau, which in 1759 was burnt by the Russians; Sprottau, at the conflux of the Sprotte and Bober, is remarkable for its iron works; Grunberg, famous for its vineyards; Schuibus, on the Schwemme, important on account of its cloth manufactory and strong castle; and Treystadt, remarkable for a castle, a convent, a Lutheran and Roman Catholic church, a cloth manufactory, and a millstone quarry, which belongs solely to the king.

8. The principality of Neysze is remarkable for its northern districts, being more fertile than the southern. In some parts of it tobacco is cultivated, and it is watered by the Olaw, the Neysze, the Billaw, and the Oppa. The principal places are,

Ottmachaw, on the Neysze, where the bishop has a palace and a court of regency.

Neysze stands on the river of its own name, 10 miles to the south of Grotkaw, and 26 east of Glatz; and is noted for a great trade in bed-ticking. It is watered also by the river Bielan, and is the ordinary residence of the bishop of Breslaw. It is as big as Lignitz or Brieg, and much more magnificent, with spacious suburbs. Most of its houses are very high, and built of free-stone, forming fine streets and public squares. It is encompassed by a good wall, and a ditch full of water, has several churches and convents, is commanded by a fort on a neighbouring hill, erected in 1743 by order of the king of Prussia, and defended by a strong garrison.

Grotkaw is eight miles north-east from Munsterberg, and 18 west from Oppelen. It is but small, and the houses mostly built of timber; but the bishop's palace, the church, and town-hall, are of stone. It has good gates and walls, with a triple ditch. It stands in a fine plain, near a forest, in a good air, and a fruitful soil, between Brieg on the north, and Munsterberg on the south-west. It has a large parish church. This town, and its principality, were sold in 1341 by the dukes of Lignitz and Brieg, to the bishop of Breslaw. It has been subject to divers misfortunes. In 1490, and in 1549, it was burnt down, the last time by lightning, so that only the parish church, and a few houses escaped. In 1438 it was plundered by the Poles. Duke William of Troppaw took it in 1445, and it suffered very much in the Swedes war with the empire.

9. The principality of Oels is sandy and barren, and divided into four circles, and hath the following towns:

Oels, which, though the capital and the seat of the colleges, is very small. Bernstadt, a little town on the Weyda; and Constadt, a small open town of very little consideration.

10. The principality of Sagan abounds with wood and iron, and contains,

Sagan, near the frontiers of Lusatia, remarkable for an abbey, a Ducal palace, a Lutheran church, a Roman Catholic church, a college, and several iron and copper mills.

Priebus, a town on the Neysze, which gives name to a circle; and Naumburg, a small open town on the Bober, which likewise gives name to a circle.

11. The principality of Munsterberg is very mountainous,

tainous, notwithſtanding which it yields abundance of grain, flax, hemp, wood, hops, cattle, ſheep, &c. It is watered by the Neyſze and Olaw, and contains

Munſterberg, the capital, 20 miles north-eaſt of Glatz, and 30 ſouth-eaſt of Schweidnitz: it ſtands in a fruitful plain at the head of the river Olaw, which falls into the Oder at Breſlaw, 32 miles to the ſouth. It takes its name from a monaſtery built here by the emperor Henry I. who founded the city; but has nothing remarkable, except its old caſtle, which is a ſtrong fortreſs; the ſchool, and a handſome town-houſe.

Henrichau only remarkable for a Ciſtercian abbey; Frankenſtein on the Pauſo, which contains a palace, a convent, two churches, a Ciſtercian abbey, ſeveral offices, courts, &c. and Wartha, a little town on the Neyſze, which has a well-endowed priory.

12. The principality of Trachenberg abounds in grain, cattle, and timber; but contains only Trachenberg, a ſmall town on the Bartſh, and Praſnitz, an inconſiderable town, which however contains a palace.

13. The principality of Carolath is tolerably fertile, but contains only Carolath and Beuthen, which are both very inconſiderable towns, ſituated on the Oder.

14. The lordſhip of Wartenberg contains only Wartenberg, a ſmall town with a palace, a Roman Catholic and Lutheran church, and a Calviniſt meeting-houſe.

15. The lordſhip of Militſh is only remarkable for its large foreſts, which are the property of the king, and for one town of the ſame name, which is ſituated on the Bartſch, and contains a Lutheran and Roman Catholic church.

16. The lordſhip of Goſchutz is ſurrounded by the principality of Oels, and contains only two inconſiderable towns.

UPPER SILESIA.

THE principal places in Upper Sileſia are

The principalities of { Oppelen, Troppau, Jagerndorf, Ratibor, Teſchen, Bilitz }

And the lordſhip of Pleſs.

1. The principality of Oppelen is very barren, and full of lakes, but contains 12 circles: the towns from which they receive their names are

Oppelen, on the north bank of the Oder, over which it has a bridge, 36 miles from the frontier of Poland, 40 north of Troppaw, 30 above Breſlaw to the ſouth-eaſt, and 16 ſouth-weſt of Brieg. It is the capital of the principality, contains a college, ſeveral convents, and in the circle to which it gives name there is a royal foundery for caſting bombs; Roſenberg a ſmall town, containing a convent, whoſe abbot is mitred; Lublinitz an open town; Great Strelitz a ſmall walled town, containing a Ciſtercian convent; Toſt a little open town; Gleowitz a ſmall walled town; Schlawentitz a market town; Koſel a fortified town, with a palace, Roman Catholic church, and convent; Little Glogaw a ſmall walled town; Neuſtadt a town on the Prudnitz; Zulz a town containing many Jews; and Falkenſtein on the Steira, a town belonging to the family of Zrerotin.

2. The principality of Troppau is watered by the Oppa, is very fertile, and contains

Troppau on the Oppa, the capital of Upper Sileſia. It is a walled town, and contains ſeveral churches, convents, a college, a palace, &c. and Hildſchin a ſmall town, walled and fortified.

3. The principality of Jagerndorf is likewiſe fertile, and contains ſeveral mineral ſprings: the principal towns are

Jagerndorf, which takes its name from the great number of huntſmen that formerly lived in it, there being plenty of game in the neighbouring woods. It is called, by Latin authors, Carnovienſis, or rather Cornovienſis, from its arms, viz. a pair of horns betwixt two ſtones; and was given by Lewis, king of Hungary and Bohemia, to George, marquis of Brandenburg, who built a caſtle, and other fortifications, to defend the town; and though diſpoſſeſſed of it by the civil wars in Germany, kept up his claim to it till the emperor gave him the circle of Schwibus, in Lower Sileſia, for an equivalent. From hence the preſent king of Pruſſia formed that claim which was the pretence of his invading Sileſia. The capital of its own name, on the river Oppa, is a ſmall town defended by a caſtle, and other fortifications, erected by the aforeſaid marquis, and is 14 miles weſt of Troppau, above 30 miles ſouth-eaſt of Munſterberg.

Leobſchutcy a walled town, which gives name to a circle; and Katſcher a ſmall open town, containing a Roman Catholic church.

4. The principality of Ratibor has a ſoil tolerably fertile in corn and paſture, and abounds in lakes, ponds, ſtreams, &c. It forms a circle, the inhabitants of which are Poles, or deſcendants of Poles; and the only place worth naming is Ratiſbor on the Oder, which contains ſeveral convents, a palace, a bridge over the river, &c.

5. The principality of Teſchen is full of lakes, moors, mountains, &c. The only places worth naming are Teſchen, a walled town, with a palace, Lutheran and Roman Catholic church, a college, two convents, &c. and Skozow, a ſmall open town on the Viſtula.

6. The principality of Bilitz is tolerably fertile, but contains no place worthy of obſervation except Bilitz, a little walled town on the Biala, defended by a caſtle.

7. The lordſhip of Pleſs contains only

Pleſs, a little city and caſtle near the river Weiſſel, with the title of a barony. It is pretty well defended by its rivers and marſhes, but has a large caſtle, which is ſaid to have as many windows as there are days in the year, and ſtands in a great ſquare, encompaſſed by pretty houſes, inhabited by merchants. The Roman Catholics have a church here, and the Lutherans, who are the majority, another.

* * * * * * * *

With reſpect to the countries acquired by Pruſſia in the late diſmemberment of Poland, we have already given an account of them in our deſcription of the latter unfortunate country.

* * * * * * * *

As the cuſtoms, manners, &c. of the various perſons who compoſe the Pruſſian ſovereignty, as well as the natural hiſtory of the different countries, have been deſcribed in their reſpective places, we ſhall only have occaſion to ſay a few words here relative to the Pruſſian dominions in general.

The eſtabliſhed religion is Lutheraniſm, but Calviniſm is greatly encouraged, and Greeks, Jews, Roman Catholics, &c. tolerated. The nobility are, in general, deſcended from the ancient Germans, but the peaſantry are of a mixed breed, and either vaſſals to the king or nobles. The manufactures of Pruſſia are daily advancing and improving, particularly thoſe of ſilk, linen, cloth, camblets, glaſs, iron, copper, paper, gunpowder, braſs, &c. Pruſſia is by nature well ſituated for trade, and the late acquiſition of maritime territories has greatly encreaſed the revenue, and added to the power of his Pruſſian majeſty. But, ſays an excellent writer, "It is hard to ſay whether his ſubjects have been greater gainers by his encouraging and promoting commerce, manufactures, agriculture, population, order, and the regular diſtribution of juſtice, or ſufferers by the wars, in which his ambition hath involved them, and the prodigious ſtanding army he keeps conſtantly on foot, to maintain his conqueſts, and extend them as opportunity offers. Such an army muſt be a great burden, as well as their labour being loſt in a great meaſure to the country."

The king of Pruſſia's title runs thus: Frederic king of Pruſſia, margrave of Brandenburg, of the Holy Roman empire; arch-chamberlain and elector, ſovereign and ſupreme duke of Sileſia; ſovereign prince of Orange, Neufchatel, and Valengin, of the county of Glatz, Gelders, Magdeburg, Cleves, Juliers, Berg, Stetin, Pomerania, the Caſſubi and Wends, Mecklenburg and Croſſen; duke burgrave of Nuremburg; prince of Halberſtadt, Minden, Camin, Wenden, Schwerin, Ratzeburg, Eaſt Frieſland, and Meurs; count of Hohenſtein, Tecklenburg, Lingen, Buren, and Leerdarn; lord of Ravenſtein, &c. &c. As an elector he poſſeſſes the ſeventh place; as arch-chamberlain carries the ſceptre be-

fore the emperor at his coronation; and poſſeſſes five voices in the college of princes of the empire.

We ſhall now make an extract from the writings of the ingenious Mr. Hanway, as what we mean to quote contains many intereſting particulars.

Berlin abounds in elegant ſtructures and regular ſtreets, and is computed near one third as big as London, yet it has not above one eighth part of the inhabitants; from whence it may be eaſily accounted why graſs is found growing in many of their capital ſtreets. The inhabitants were formerly computed at 80,000, now they are reckoned at 110,000, including the garriſon of 10,000; all the Pruſſian dominions, Sileſia excepted, hardly contain 2,000,000 of people. This acquiſition of 20,000 inhabitants and ſubjects is imputed to the good conduct of the king, in granting privileges and lands, ſufficient to induce many to eſtabliſh themſelves in this capital; and conſidering this country is ſo extreamly deſpotic and military, without any foreign trade, and ſurrounded by neighbours who want little or nothing of them, manufactures here may be ſaid to flouriſh. They make woollen cloth ſufficient for the army, and great part of home conſumption; and Sileſia is well known to produce a great ſupply of linens, which are ſent all over Europe, and alſo to America. Their export of woollen cloth to Ruſſia was once conſiderable, but at preſent is very ſmall; ſo many thouſands of French manufacturers having found protection in this country: gold and ſilver lace, and wrought ſilks are hardly to be bought in any place ſo cheap: they talk of prohibiting thoſe of France.

The number of troops in the pay of the king of Pruſſia is generally computed at 120,000; his officers inſiſted they were 140,000. I have ſeen a liſt which makes them yet more numerous; but believe they do not exceed this number if they reach it. This prince has a body of 80 ſquadrons of Huſſars, each of 130 men. I ſaw many of them in the towns I paſſed through, and was ſurprized by what means they could be collected, ſo youthful, comely, ſtrong, and well-ſhaped: but the king has his emiſſaries all over Europe. Whilſt I was at Dantzic, a young man, of whom I had ſome knowledge, had procured himſelf a lodging in priſon; his debt, which was about 20l. was immediately offered to be paid, provided he would enter into the Pruſſian ſervice.

The arms of the huſſars are a light muſket and ſabre, both which are kept in admirable order. Their cloathing is of coarſe red cloth, made cloſe to their bodies, and ſtrengthened at the elbows by leather in the ſhape of a heart; their breeches are of well-dreſſed ſheep ſkins; their boots ſhort and light, but the ſoles of them durable; their caps are ſtrengthened in the ordinary, ſo as to ſtand a cut. They are the only denomination of ſoldiers in the Pruſſian ſervice who have no chaplain. Beſides the huſſars, the king has a ſmall body of men whom they call hunters, who are reputed the moſt faithful couriers in his army, and are oftentimes promoted for their fidelity in hazardous enterprizes. The Auſtrians are ſaid to have employed men under this denomination among their ranks, with pieces loaded with ſingle balls, to mark out the officers of the enemy, in which they are very dextrous. This, which is confeſſedly an unwarrantable practice, induced the Pruſſians, according to the report of the latter, to take the ſame method; when theſe hunters are taken priſoners, no quarter is granted on either ſide.

The Pruſſian ſoldiers in general are remarkable for their very ſhort cloathing, which at firſt view ſeems to be frugality to a degree of ridiculouſneſs, but is moſt plainly calculated for many wiſe ends.

The king's guards, and ſome few other regiments, are cloathed annually, but in general the army has new regimentals twice in three years only. The late king required the ſoldiery to wear white ſpatterdaſhes winter and ſummer; but his preſent majeſty obſerving the inconveniency as well as inelegance of it, gives his men black for the winter; theſe are made of fuſtian, or a thick kind of linen cloth. The ſoldiers have alſo breeches of woollen cloth in this ſeaſon, whereas in ſummer they are of white dimity or linen, which are very light and clean. They obſerve an uniformity about their heads, by wearing pig-tails, which are eaſily kept in repair; they are generally powdered, but always ſo when on duty; and this modern elegance in dreſs not only ſerves to preſerve the natural hair or wig, but gives the ſoldier a reſpect for his own perſon; and the rank in which he is taught to conſider himſelf compenſates in ſome ſort for the ſmallneſs of his pay.

Their arms, on the other hand, are reputed incomparably the largeſt and moſt weighty of any in Europe, though ſome of the fuzileers, who are ſmaller bodied men, have their arms proportioned. As to the cleanneſs of them, it is hard to believe how far this is carried; a ſoldier can hardly find time to be idle or wicked. Notwithſtanding the great weight of their arms, the tactick art is carried here to the higheſt perfection; and nothing can give more pleaſure to thoſe who have any idea of the harmony of this ſort of motion, than the exerciſe of the Pruſſian ſoldiers, which they go through twice a day: when the weather is bad, it is performed under cover, for which proper places are appointed. The leaſt motion of the head, not according to art, is corrected; ſo that a ſoldier in this ſervice muſt apply diligently to his duty, or he will paſs his time very ill.

Two thirds of the army, according to their eſtabliſhment, ſhould be compoſed of foreigners; and this reaſon, as well as the ſmall number of inhabitants in the Pruſſian dominions, make it obvious how difficult it muſt be to recruit an army; ſo that however formidable this prince may appear, if we conſider his country as little plentiful in reſources of wealth as of inhabitants, that ſtrength muſt be deemed artificial in a great meaſure, which has ſo great connection with foreign dependencies: however, all the world muſt allow that the ſtrength derived from the acquiſition of Sileſia, which conſtitutes a great part of this prince's power, is more natural; whether it is more ſtable, ſhall not be our buſineſs to enquire.

The pay of a common ſoldier in this country is eight groch (fourteen-pence) a week, and of this three-pence is ſuppoſed to go in waſhing and materials for cleaning their arms, for which they are ſo much diſtinguiſhed; but they are allowed bread.

Upon this calculation 120,000 men coſt but 364,000l. ſo that if we reckon thrice this ſum, in order to include their ammunition bread, the pay of officers, and cloathing, it does not much exceed 1,000,000 ſterling; ſuch is the incredible force of diſcipline and oeconomy; but this is a leſſon with which we are not well acquainted in Great Britain. One remarkable proof of this oeconomy is, that the Pruſſian army, as well as the officers of the crown, receive their pay before it is due: Sileſia, according to ſome calculations, ſupports near 40,000 men; from whence we may judge how reluctant the houſe of Auſtria muſt have been to part with it. The ſubſidy, which the king receives from France, is ſaid to be no leſs an object than 300,000l. value in our money.

The revenues of the houſe of Brandenburg, including the king's late conqueſt, are computed at 8,000,000 of dollars, (1,400,000l.) but I think this ſum exceeds the reality. Theſe revenues ariſe from a tax of about half the rent of the lands, and near 40 per cent. on the value of all eatables, ſoap, candles, &c. and yet what muſt appear moſt ſtrange to us in England, the advantages ariſing from the national oeconomy, and the regularity which runs through every branch of the government, and particularly in the parſimony of the court, makes the people's chains ſit eaſy, and ſecures their property enough to animate their induſtry.

The Hiſtory of Pruſſia.

WITH reſpect to the origin of the Brandenburg family, we ſhall uſe the king of Pruſſia's own words. "The houſe of Brandenburg (ſays that monarch) or rather that of Hohenzollern, is ſo ancient, that its original is loſt in the darkneſs of antiquity. I might indeed relate the fables, or the conjectures, that have been formed of its extraction; but fables ought not to be preſented to the public in this judicious and learned age. It is of little importance, that genealogiſts make it deſcend from the houſe of Colonna, and that, by a groſs miſtake, they confound the ſceptre in the arms of the family of Brandenburg, with the column which that Italian houſe bears in eſcutcheons. In ſhort, of little importance is it, that the counts of Hohenzollern are made to deſcend from Witikind, from the Guelphs, or from any other houſe;

mankind I think are all of a race equally antient. After all, the reſearches of a genealogiſt, or the labours of the learned, who inveſtigate the etymology of words, are things of ſo ſmall and trifling a nature as to be beneath the notice of men of ſenſe; we ought to have remarkable facts and objects capable of fixing the attention of reaſonable beings."

The ancient Pruſſians were certainly a very brave and warlike people, and refuſed to ſubmit to the neighbouring princes, who, on various pretences, attempted to reduce them to ſlavery. In particular, they made a noble ſtand againſt the kings of Poland, and in the year 1163 the Poliſh monarch Boleſlaus IV. was by them defeated and ſlain.

They remained Pagans in opinion, and independent in circumſtances, till the time of the cruſades, when the German knights of the Teutonic order, about the year 1230, attempted to convert them by force of arms. Several bloody wars enſued, in which the inhabitants of Pruſſia were almoſt extirpated by the zealous fury of the Teutonic knights; and the latter having ravaged the country with incredible barbarity, attempted to re-people it with Germans.

In 1466 a treaty was entered into between Caſimir king of Poland and the Teutonic knights, in which it was agreed, that the country now called Poliſh Pruſſia, ſhould continue a free province under the protection of the king, and that the knights ſhould poſſeſs the remaining on condition of acknowledging themſelves vaſſals to Poland. This treaty was however ſoon broken, another ſeries of bloody wars enſued, and the knights attempted to become independent of the Poles, but their attempts proved abortive.

In 1525, Albert margrave of Brandenburg, and the laſt grand maſter of the Teutonic order, concluded a peace, and entered into a treaty at Cracow, in which it was ſtipulated that the margrave ſhould be acknowledged duke of the eaſt part of Pruſſia, which on that account was called Ducal Pruſſia, but ſtill it was to remain as a fief of Poland. In this manner the ſovereignty of the Teutonic order ended in Pruſſia, after it had ſubſiſted near 300 years.

In the year 1657, the elector Frederic William of Brandenburg, ſurnamed the Great, had Ducal Pruſſia confirmed to him; and by the conventions of Welau and Bromberg, it was freed from its vaſſalage to Poland, and Caſimir, king of Poland, acknowledged its independency. The preſent king of Pruſſia, in his memoirs of the houſe of Brandenburg, ſays, that this Frederic William began his reign under the moſt deſperate circumſtances. "He was (ſays he) a prince without territories, an elector without power, a ſucceſſor without inheritance, and juſt in the flower of his youth; an age, which expoſed to the vivacity of paſſions, renders mankind almoſt incapable of direction; yet he gave marks of the moſt conſummate wiſdom, and of every virtue that could render him worthy of command.—He regulated his finances, proportioned his expences to his revenues, and got rid of thoſe ignorant or corrupt miniſters who had contributed to the miſeries of his people." And in another place this royal author, in ſpeaking of the ſame prince, ſays, "Europe in him beheld a prince, whoſe actions diſplayed the noble ſoul, and the ſuperior genius; one while tempered with prudence, another time bearing that character of enthuſiaſm which forces our admiration; a prince who conſtantly repaired his loſſes without foreign ſuccours; who formed all his projects himſelf, and put them in execution; who by his wiſdom retrieved a deſolated country; by his policy and prudence acquired new territories; by his valour aſſiſted his allies, and defended his people; a prince, in fine, who was equally great in all his undertakings." This great prince died April 29, 1688, of the dropſy.

Frederic William the Great was ſucceeded by his ſon Frederic, who was afterwards the firſt king of Pruſſia. This great titular alteration was chiefly owing to the influence of the Proteſtant powers; for as the reformed religion had been introduced into this country by the margrave Albert, and the electors were of that perſuaſion, the Proteſtant intereſt was made uſe of to raiſe Frederic to the dignity of a king, and he was accordingly ſoon acknowledged as ſuch, not only by the empire of Germany, but by all the other powers of Europe. His grandſon, the preſent king of Pruſſia, in the memoirs of his family, gives no very favourable picture of the virtues, or high opinion of the abilities of this prince; he, however, ſpeaks warmly in praiſe of his own father, Frederic William, who ſucceeded Frederic, the firſt king of Pruſſia, in the year 1713. This prince certainly had great talents, and uncommon courage, but he too frequently exerted both at the expence of that magnanimity and humanity which ever ought to embelliſh the heart of a monarch. He amaſſed ſo much money during his reign, that at his death, which happened in 1740, he left behind him the enormous ſum of 7,000,000l. ſterling, a treaſure which afterwards enabled his ſon, the preſent king of Pruſſia, to purſue the moſt important plans; and which, joined to his ſagacity, courage, and great military talents, raiſed him to be of the utmoſt conſequence in the political ſcale of Europe.

Frederic III. king of Pruſſia, who is now living, was born in 1712, married in 1733 to Elizabeth Chriſtina of Brunſwic Wolfenbuttle, and began his reign, January 31, in the year 1740, ſo that he was 28 years of age at the commencement of his reign. It may not be improper here to obſerve, that nothing remarkable of his early years hath been tranſmitted to us, except that he had an early taſte for literature and the polite arts, and ſhewed a particular paſſion for French breeding and delicacy of manners, in oppoſition to the inelegant cuſtoms that prevailed in his father's court. In particular, his father was fond of drinking to exceſs, a vice which the prince abominated; this and other correſpondent circumſtances, at length, determined him to leave his father in a ſecret manner, and, as it is generally believed, to retire to the court of England, where he propoſed to live under the protection of his uncle (king George II.) till either the death of his father, or ſome chance of conduct ſhould remove the difficulties of his return. Whatever the deſign was, it is certain that he had concerted it with a young officer of the gendarmes, named Katte, and two others. The ſecret, however, was diſcovered, and the prince, Katte, and one of the officers, were ſeized; but the other fortunately made his eſcape. A council of war was appointed to enquire into the conduct of theſe officers, which aſſembled at Koppenich. One of them was caſhiered, and condemned to three years impriſonment, another, being retired to foreign countries, was outlawed; but, with regard to young Katte, the votes were equally divided; one half of his judges were for finding him guilty of death, and the other half were for acquitting him; ſo that they were obliged to leave the deciſion of it to the king. The affair being at this criſis, young Katte wrote a pathetic epiſtle to the king, imploring his clemency, but in vain; the king ordered him to be beheaded. Several perſons of diſtinction intereſted themſelves in his fate and tried to ſave him. The king, however, remained inexorable, and the unhappy Katte was beheaded. The prince, who had been ſecured, was ſoon afterwards ſet at liberty; but, that he might feel the power of a king and father in its utmoſt rigour, he was, againſt his will, married to the princeſs Elizabeth Chriſtina, as already mentioned. He did not, indeed, oppoſe the commands of his father, he ſubmiſſively married the princeſs, but without profeſſing either eſteem or affection for her; and conſidering the claim of parental affection as fully ſatisfied by the external ceremony, he abſtained, during the life of his father, from her bed. Thus ſecluded from public buſineſs, in contention with his father, in alienation from his wife, his whole time was ſpent in literary acquiſitions and uſeful ſpeculations. Hence he acquired that fund of learning and knowledge of mankind which have ſince rendered him ſo conſpicuous. After the death of his father he did an act of juſtice to his princeſs, by receiving her as his wife, and acknowledging her as his queen before his whole court. With reſpect to the wars in which he has ſince been engaged, they are ſo connected with the political affairs of other countries, that we ſhall refer an account of them to our general hiſtory of Germany, which will be given at the concluſion of the enſuing chapter.

CHAP.

CHAP. X.

EMPIRE of GERMANY.

THE empire of Germany is bounded on the north by the German ocean, Denmark, and the Baltic; on the eaſt by Poland and Bohemia; on the ſouth by Switzerland and the Alps, which divide it from Italy; and on the weſt by France and the Low Countries. It is 600 miles in length, 500 in breadth, and is ſituated between 45 and 55 deg. north latitude, and five and 19 deg. eaſt longitude.

A geographical writer, in ſpeaking of the German empire, ſays, with great juſtice, "This country, for divers good reaſons, muſt challenge the ſpecial notice and ſtudy of the curious; it being the ſeat of a great people, and of many ſovereignties of different denominations, and under various forms of government; a country of large extent, and the ſcene of many and great actions; a country whoſe affairs and tranſactions are interwoven with thoſe of every nation in Europe, of which it may be termed both the head and centre; a country whoſe princes are every day forming alliances of marriage, &c. which pave their way to the principal thrones of Europe, ſeveral of which, viz. thoſe of Great Britain, Poland, Sweden, and Pruſſia, we ſee filled at this day by four of its princes; a country which, for the great work of the reformation begun there, the good ſenſe, conſiderable learning, and the many uſeful and ingenious inventions of the natives, highly deſerves of all her neighbours: To all this it may be added, that it is our original country; that from hence came our anceſtors, whoſe language, cuſtoms, laws, we in good meaſure ſtill retain, together with what conſtitutes the chief glory and happineſs of the Britiſh iſles, viz. their form of government. Upon theſe accounts no Engliſhman can call this country foreign, nor its natives foreigners to him. Indeed moſt nations in Europe have been either peopled from hence, or ſubdued by its armies; as happened to this iſland by the Saxons; to Gaul, by the Franks; to Italy, Spain, and Afric, by the Goths and Vandals: to thoſe glorious people almoſt all Europe, and part of Aſia and Africa, owed their freedom from thoſe chains wherewith the Roman power had ſo long bound them; and wherever any of their colonies ſettled, they eſtabliſhed juſt and mild government on the ruins of tyranny.

SECT. I.

Natural Hiſtory of Germany.

THE ſoil is exceeding fruitful, particularly on the banks of the Rhine and the Danube, where the air is very temperate; but in the northern parts it is cold, and the ground leſs fruitful. In thoſe provinces that lie next the ſea, and that abound with lakes and rivers, there is plenty of rain. In other parts, where the ſurface of the earth is drier, there are ſometimes conſiderable droughts. The north wind from the Baltic, and the bleak mountains of Sweden, bring froſts and ſnow: The eaſtern blaſts coming over a vaſt continent of three or four thouſand miles, from China and Japan, bring dry and unwholeſome weather: the ſouth, in the ſummer, brings refreſhing breezes from the Alps: but the ſouth-weſt wind, as with us, is both the moſt frequent and wholſome that blows in Germany. In general, this country, and Poland, are ſo like Great Britain, both in climate and ſoil, that no countries in Europe agree better with Engliſh conſtitutions. Beſides great plenty of corn, cattle, ſheep, wool, cloth, horſes, fiſh, &c. the earth affords mines of divers ſorts of metals and minerals, as iron, bitumen, nitre, ocre, copper, tin, lead, and even ſilver in ſome parts; alum, vitriol, quickſilver, ſalt, coal, &c. In general the ſurface is even, and though in ſome parts it is hilly, it is no where mountainous, except towards the ſouth and ſouth-weſt, where the Alps, and a few mountains in Alſace, ſerve as boundaries and bulwarks againſt Italy and France.

Their foreſts and waſtes afford many things, both for the ſuſtenance of the poor, and the delight and luxury of the rich; they yield plenty of wood for fuel and building, and abound with great variety of wild fowl, and all ſorts of veniſon; they alſo feed vaſt numbers of hogs, and ſome of them, as the foreſt of Ardenne, good mutton.

The rivers and lakes abound with fiſh in greater variety and perfection than any other country perhaps in the world.

The orchards are full of fruit-trees, and in the ſouthern provinces there is plenty of the more delicate ſort, as peaches, apricots, figs, olives, &c. in good perfection. They have rich wines, of which the Rheniſh and Moſelle, in particular, are exported in vaſt quantities to foreign nations; and not only equal, but are preferable, to ſome of the wines of Italy. The very mountains of the Alps, on the German ſide, are in many places cultivated to the top, and the valleys abound with paſtures and vines. In ſhort, no country, perhaps, in the world produces ſuch great variety of every thing conducing to the comfort of life as this; though others may exceed it in the goodneſs of ſome particular articles of product: nevertheleſs, even of theſe they have enough of every ſort; and they might ſtill have them in greater perfection, were the inhabitants induſtrious; or rather, did the landed men give encouragement to huſbandry and induſtry; for want of which, it is obſerved, that the people neither underſtand, nor take care to manure the ſoil, or to improve the native treaſure of the country; and that to this general neglect it is owing, that the ſovereign princes in Germany are ſufferers, as well as the ſubjects; and the landlord becomes bankrupt with his tenant: for to this ignorance and diſcouragement of huſbandry, on the one hand, and to the exceſſive vanity and paſſion of their great men for foreign luxury and finery, on the other; it may chiefly be attributed, that Germany exports leſs, and imports more, than any country perhaps in the commercial world.

There is that ſort of earth found in Germany called Terra Sigillata, which ſome call Terra Lemnia, becauſe it is alſo brought from the Iſle of Lemnos: it is a hard earth, with white, yellow, and red veins, and ſaid to be an antidote againſt all kinds of poiſons. There are good quarries of marble in Bavaria, Tirol, Liege, and other provinces; and for precious ſtones, as diamonds, agates, chryſtals, jaſpers of ſeveral colours, fine alabaſter, ſeveral ſorts of pearls, Turquois ſtones, rubies, &c. this country ſurpaſſes moſt others in Europe, there being vaſt collections of them in the cabinets and rarity-chambers of the emperor, the electors of Bavaria, Brandenburg, Hanover, Saxony, and other princes, and of many private men, as well as thoſe which are the ornaments of churches and images. They are dug for the moſt part out of the mines, and frequently found in the rivers. A remarkable natural curioſity, peculiar to Germany, is the Schiefferſtein, a blackiſh, glittering kind of ſtone or ſalt, which melted, yields much copper, and ſome ſilver. In one part of Saxony theſe ſtones are dug up in the fields. They exhibit a lively repreſentation by fair copper ſtrokes of

Engraved for Middleton's Complete System of Geography.

of fiſhes of divers ſorts, frogs, and other animals, that abound in a neighbouring lake; and many kinds of mineral are found in various parts of Germany.

The principal rivers of this country are the following:

1. The Danube, anciently called Iſter, riſes in the Black Foreſt in Swabia; runs through Swabia and Bavaria to Ratiſbon, and thence to Vienna. After dividing Hungary into two parts, it continues its courſe to Belgrade in Servia, and then, proceeding to Turkey, falls into the Black Sea by ſeveral channels. It is very broad, runs with a very rapid current, and hath three great cataracts; which are, 1. The Saw Ruſſel, or Swine's Snout, near Lintz; ſo called from a pointed rock hanging over, which hath under it a dangerous whirlpool; it is 92 miles from Vienna. 2. Der Strudel, near Greinon in Auſtria, where the falling of the water makes a horrid noiſe. And, 3. Der Wurbel, another very dangerous whirlpool, about a furlong from Der Strudel. The watermen of theſe parts have a method of paſſing them without much danger. As ſoon as this cataract is paſſed, a fellow comes on board from a chapel dedicated to St. Nicolas, on the bank of the river, with that ſaint's picture, and an alms-box for the paſſengers to throw in ſomething, as an offering to that ſaint for their deliverance.

This river carries market-boats, &c. of 10 or 15 tuns every week from Ulm to Vienna, which, with the turnings and windings, is a courſe of about 400 miles. It receives ten other rivers before it comes to Belgrade: it enters Hungary 35 miles beyond Vienna; and, before it leaves Germany, runs about 500 miles, and about 1000 more through Hungary and Turkey in Europe, before it falls into the Black Sea. Its whole courſe thither, from its fountain, is about 27 degrees; which, reckoning 60 miles to a degree, is 1620 miles, without including its turnings and windings, which muſt make it at leaſt one third more; ſo that it may well be affirmed to be longer than the Nile in Egypt, which in many particulars it reſembles. It has three heads; but which is the true one the German geographers themſelves are not agreed. Cluverius, whoſe authority ſeems the beſt in matters of this nature, places it in the Black Foreſt, at the foot of a little hill, and ſays, the fountain is walled in. The waters of this river are always muddy, and whitiſh; and the channel is kept almoſt as full in the ſummer, by the melted ſnow from the hills, as by the floods in the winter. Its waters have been found, by repeated experiments, to be medicinal, though not to the ſame degree as mineral ſprings; and, it is ſaid, that in thoſe places, where there are no natural baths, the people bathe with the water of this river warmed: theſe, with its other virtues, are aſcribed to its waſhing ſo many mines, and to its ſaline tinctures, which are ſo ſtrong, that a ſort of ſalt has been actually made of the water, which has ſupplied the want of better; yet it is freſh enough for drinking after it has ſtood ſome hours to ſettle.

The Danube abounds with all thoſe fiſh that are to be found either in our running or ſtanding rivers; and they are generally much larger, but not ſo ſweet as ours. There are ſeveral fiſh in it not common elſewhere, which ſeem to be of the ſalt-water kind, and are ſuppoſed to come from the Euxine. Of theſe, the moſt remarkable is the Hanſon, a griſly fiſh, ſomewhat like our ſturgeon, almoſt as big as a crocodile, ſome being 18 or 20 feet long. Shoals of them come about the fiſhermens boats at the ſound of a trumpet or horn. It is reckoned a dainty by the Auſtrians and Hungarians, and is only to be met with at noblemens tables.

2. The Rhine riſes from two ſprings in the Alps, which unite eight miles from the city of Coire; it ſoon after dilates itſelf into a large lake, called the Boden Sea, or lake of Conſtance; whence, paſſing weſtward to Baſil, it turns to the north, and runs between Swabia and Alſace into the Palatinate, receiving the Neckar at Manheim, and the Maine at Mentz; then it runs to Coblentz, where it receives the Moſelle: it afterwards waters Cologne, and paſſes on through the duchy of Cleve, receiving the Roer and the Lippe, and other ſmaller rivers, by the way; and paſſes into the Netherlands at Schenchenſchans, five miles below Cleve, where it is very broad, and its courſe very ſwift; but the navigation of it is interrupted by nine cataracts, the moſt dangerous whereof are two in Swiſſerland, one near Schaffhuyſen (where the whole river falls 75 feet) and the other near Lauffenburg. Here the watermen either hale their boats aſhore, and launch them on the other ſide, or elſe let them down by ropes. The direct courſe of this river is above 400 miles, and, including turnings, 600.

3. The Elbe riſes in the mountains near Hirchburgh, in Sileſia, upon the confines of Bohemia, through which it runs in eleven ſeveral ſprings; which, being united, paſs northward, between Miſnia and Luſatia, into Saxony. A little below Gluckſtadt it divides into two branches, which fall into the German ocean 60 miles below Hamburgh. It is very large and deep at that city; ſo that ſhips of four or five hundred tons ride at anchor in it. The courſe of this river, which is very winding, is as long as that of the Rhine. It runs above 500 miles through the north of Germany; as the Rhine does through the weſt, and the Danube through the middle and ſoutherly parts. The tide runs about 10 miles above Hamburgh, and the river is navigable, by ſmall veſſels, a great way up into Germany; which very much promotes the trade of the country, eſpecially by its communication with the Spre, in the marquiſate of Brandenburg, and the Moldaw in Bohemia. As the courſe of it is very ſlow, it abounds with ſuch fiſh as are common in ſtanding waters.

4. The Oder riſes in Moravia; and, after a current of 300 Engliſh miles through Sileſia and Brandenburgh, falls into the Baltic Sea: it runs in a pretty ſtrait courſe through the north-eaſt part of Germany: it is navigable for ſmall veſſels a great way above Stetin: Canals are cut betwixt this river and the Elbe, which very much promote the trade of the electorate of Brandenburgh. Before it falls into the ſea it forms ſeveral iſlands. This river, and the adjoining lakes, are full of fiſh; the bare cuſtoms on the ſalmon and lampreys, ſome of which are of a vaſt bulk, amount to a conſiderable ſum.

5. The Weſer riſes in the mountains of Thuringen, runs through Heſſe and Weſtphalia, and empties itſelf into the ocean 40 miles below Bremen, within twenty miles of the mouth of the Elbe: it runs above 250 miles, and is ſo full of fiſh of ſeveral ſorts, that here are ſome in ſeaſon for every month.

6. The Aller runs through the country of Lunenburg, and falls into the Weſer below Verden.

7. The Mein riſes near the borders of Bohemia, paſſes through Franconia, the electorate of Mentz, the ſouth part of the principality of Naſſau, waſhes the walls of Frankfort, and other conſiderable cities, and falls into the Rhine at Mentz. It is not over-ſtocked with fiſh, perhaps by reaſon of its clearneſs, occaſioned by the mines of gold and ſilver through which it paſſes, ſome degrees of muddineſs being neceſſary for the nouriſhment of all ſorts of fiſh.

8. The Inn is a large river that riſes on the frontiers of Swiſſerland, runs through Tirol and Bavaria, and falls into the Danube at Paſſau. Its courſe being among the Alps, it cannot be very navigable; and, as it waſhes ſeveral ſalt-pits and minerals, it cannot abound with fiſh.

"The vaſt paſſion (ſays a late writer) which the Germans have for hunting the wild boar is the reaſon why, perhaps, there are more woods and chaces yet ſtanding in Germany than in moſt other countries. The Hercynian foreſt, which, in Cæſar's time, was nine days journey in length, and ſix in breadth, is now cut down in many places, or parcelled out into woods which go by particular names. Moſt of the woods are pine, fir, oak and beech. There is a vaſt number of foreſts of leſs note in every part of this country; almoſt every count, baron, or gentleman, having a chaſe or park adorned with pleaſure-houſes, and well ſtocked with game, viz. deer, of which there are ſeven or eight ſorts, as roebucks, ſtags, &c. of all ſizes and colours, and many of them of a vaſt growth, plenty of hares, rabbits, foxes, bears, wolves, boars, &c.

SECT. II.

The geographical Deſcription of Germany.

GERMANY was divided into 10 great circles by the emperor Maximilian, the grandfather and predeceſſor of the celebrated emperor Charles V. and this

diviſion was confirmed in the diet of Nuremburg in 1552; but the circle of Burgundy, or the provinces of the Low Countries, being now detached from the empire, it is neceſſary, in deſcribing Germany, to confine ourſelves to the nine circles which now actually ſubſiſt, viz.

1. Upper Saxony,
2. Lower Saxony,
3. Weſtphalia. } In the north.

4. Upper Rhine,
5. Lower Rhine,
6. Franconia, } In the middle.

7. Auſtria,
8. Bavaria,
9. Swabia, } In the ſouth.

I. *Circle of* UPPER SAXONY.

THE circle of Upper Saxony is bounded on the weſt by thoſe of the Upper Rhine and Lower Saxony; on the eaſt by Pruſſia, and part of Poland and Sileſia; on the ſouth by Bavaria, Bohemia, and Franconia; and on the north by the Baltic. It is of conſiderable extent, and contains the following places.

The ELECTORATE *of* SAXONY.

THE electorate of Saxony has a rich and fertile ſoil, yielding

Corn	Hops
Fruit	Hemp
Flax	Anniſeed
Tobacco	Wood
Wild-ſaffron	Wine
Timber	Porcelain-clay
Coals	Fuller's-earth
Terra Sigillata	Sulphur
Marble	Allum
Serpentine-ſtone	Freeſtone
Vitriol	Amber
Salt	Quickſilver
Cinnamon	Brimuth
Antimony	Cobalt
Arſenic	Copper
Silver	Lead
Tin	Various kinds of precious
Iron	ſtones, &c.
Pulſe	

It likewiſe abounds in horſes, cattle, ſheep, veniſon, &c. &c.

The principal rivers are the

Elbe	Schwarze-Elſter
Mulde	Saole
Pleiſſe	White-Elſter.

Theſe, as well as the lakes and rivulets, all produce great quantities of fiſh, and the White-Elſter yields abundance of beautiful pearls. This electorate is, in general, well cultivated and populous. The provincial diets are held every ſix years, and the ſelection diets convened every two years; Lutheraniſm is the eſtabliſhed religion, though the different branches of the electoral family have uſually been Roman Catholics. With regard to eccleſiaſtical matters, the country is divided into pariſhes, ſubordinate to ſpiritual inſpectors, which latter are all accountable to the eccleſiaſtical council and upper conſiſtory of Dreſden. Roman Catholics and Calviniſts are tolerated in moſt parts of the electorate. Learning flouriſhes here, commerce is encouraged, and manufactures are arrived at great perfection, particularly thoſe of

Porcelain	Gold
Iron	Silver
Braſs	Cotton
Steel	Wool
Silk	Gloves
Caps	Hats
Tapeſtry	Dying, &c.

Among the electors of the empire the elector of Saxony is the ſixth in dignity, and great marſhal of the empire; his revenues are very conſiderable, yet the electorate is deeply in debt; the whole is divided into circles, which are as follow:

The electoral circle, or duchy of Saxony, is very near 40 miles in length, and almoſt as much in breadth; the ſoil is ſandy, and it contains

Wittenberg, the capital, on the eaſt ſide of the Elbe, 55 miles north-weſt from Dreſden. It is the ſeat of an aulic judicatory, a conſiſtory, a ſpiritual inſpection, and a general ſuperintendency. It is ſmall, well fortified, and contains an univerſity and a Latin ſchool. Martin Luther firſt preached here againſt the Pope's indulgencies, and in the cathedral of All Saints he was buried. The library appertaining to the univerſity is very valuable, but the Pruſſians taking the place in 1756 did great damage to the fortifications.

Kemberg is a ſmall town, whoſe inhabitants are celebrated for the cultivation of hops. Zahna, an inconſiderable town, has a ſeat and voice in the diets. Schmiedeberg is ſurrounded, in a romantic manner, by mountains; and Remhards contains a curious laboratory for making mechanical and optical machines, in particular, the camera obſcura.

By means of which, woods, hills, and dales, appear,
Flocks graze the plains, birds wing the ſilent air.
In darken'd rooms, where light can only paſs
Thro' the ſmall circle of a convex glaſs,
On the white ſheet the moving figures riſe,
The foreſt waves—clouds float along the ſkies.

Barby, on the Elbe, is defended by a caſtle; Gommern has a caſtle and ſuperintendency; Annaburg is a borough town on a little iſland; Herberg hath a woollen and a ſaltpetre manufactory; and Lichtenburg hath an electoral palace with pleaſure-gardens.

Here ev'n rough rocks with tender myrtles bloom,
And trodden weeds ſend out a rich perfume;
Here weſtern gales eternally reſide,
And all the ſeaſons laviſh all their pride;
Bloſſoms, fruits, and flow'rs, together riſe,
And the whole year in gay confuſion lies.

Grafenhaynchen	Belziz
Niemeck	Scyda
Schweidnitz	Jeſſen
Lieberwerden	Wahrenbruch
Ubigau	Schonewalde
Slieben	Prottin
Pretch	Bitterfield,

are all inconſiderable towns, yet have each a ſeat and voice in the diets.

Hohenbuckau is a hunting-ſeat belonging to the elector; Baruth, on the Gaila, is defended by a citadel; Somnecuvalde is a ſmall town with a palace; and Brehna is a little town which has a ſeat and voice in the diets, and antiently gave name to a county, of which it was the capital.

The circle of Thuringia is very fertile, abounding in corn, cattle, ſheep, horſes, timber, &c. It contains the following places:

Tenſtad, which gives name to a bailiwic; Pforte contains a ſchool, where 150 ſcholars are maintained and taught gratis; Frawenprieſnitz a market town, and Treffurt a town on a hill near the Werra.

Weiſenfels is a handſome town on the Saale. Above the town is a white rock, at the ſummit of which a fine caſtle is erected called Auguſtuſburg. This town likewiſe contains manufactories of ſilk and velvet, a Latin ſchool, and a gymnaſium, or ſchool of exerciſe.

"The wiſe, for health, on exerciſe depend,
"God never made his works for man to mend."

Roſbach is a village celebrated for the defeat of a formidable army of French and Auſtrians in the year 1757, by the preſent king of Pruſſia, in its neighbourhood. The other towns and villages of this circle are ſo very inconſiderable that they neither merit enumerating or naming.

The

The margravate or circle of Meiſſen is a plentiful country, as its fields are fertile in grain; its foreſts furniſh plenty of veniſon, its rivers are full of fiſh, and its hills abound with minerals. It contains likewiſe many conſiderable vineyards, but the wine is not generally admired; upon the whole, however, it is allowed to be one of the moſt fruitful and populous diſtricts in Germany, and its inhabitants have univerſally the character of being the moſt lively and poliſhed people in the whole empire. The principal places are the following.

Dreſden, the capital not only of Meiſſen but of all Saxony, is ſituated in 51 deg. north lat. and 13 deg. 36 min. eaſt long. It is 67 miles north of Prague, and 210 north-weſt of Vienna. The name is derived from three lakes in the neighbourhood, which in the country language are called Dreyen-ſeen. This city is one of the fineſt in Germany with reſpect to the pleaſantneſs of its ſituation, the beauty of its ſtructure, and the number and magnificence of its embelliſhments. It was originally fortified by Charlemagne, and ſince his time the works have been ſo greatly augmented and improved by its dukes and electors, that it is now a place of great ſtrength and importance. Many of its parts are defended by a double ditch, and the baſtions have ſtone facings. The houſes, which are built of free ſtone, are high and ſubſtantial; the ſtreets are ſtraight, ſpacious, elegantly paved, and well lighted; the cathedral church is a noble ſtructure, and ſeveral large ſquares give the whole city an uncommon air of magnificence. The ſtone bridge over the Elbe, which divides the city into old and new town, and conſiſts of 17 arches, is one of the nobleſt ſtructures in the univerſe. At the entrance of New Dreſden is a noble building called the palace of the Indies; it conſiſts of three ſtories, all the apartments of which are filled with the moſt curious Japan and China wares.

All the houſhold goods are Indian, and there is one ſet of furniture ſcarce to be paralleled, which conſiſts of feathers of various colours, all natural, but inlaid with ſo much art, that it might be taken for a fine flowered ſattin. A very pleaſant garden belongs to this magnificent palace, which runs down to the Elbe, and is adorned with ſtatues of white marble, that were purchaſed for the late elector at Rome, of the cardinals Annibal and Alexander Albani, nephews to pope Clement XI. beſides two noble obeliſks, and two very fine fountains. Near the palace of the Indies ſtands a magnificent ſtructure, built by the ſtates of Saxony, for maintaining two companies of cadets; all gentlemen of the country, who are here inſtructed in the ſciences fit for perſons of quality. In the ſame ſtreet there is an amphitheatre, or area, for the battles of wild beaſts, ſuch as lions, tigers, bears, and, in ſhort, all the fierceſt animals from the four quarters of the world; of which great numbers are kept for the purpoſe. Here is a hunting-houſe, where bears are kept, with fountains and ponds in which they waſh, and ragged poſts round them, by which they climb up to ſcaffolds on the top, where they dry themſelves. Here is a place called the Horn Gallery, which has ſeveral apartments well painted with all ſorts of hunting of wild beaſts and fowls. In the old town there is a large caſtle, and ſome of the fortifications ſtill to be ſeen, which were made by Charlemagne. In this quarter ſtands alſo that called the Prince's Palace, which was formerly a very fine building, but all of it has been conſumed by fire, except one part, containing very fine apartments nobly furniſhed, and accommodated by the elector to the modern taſte; but they belong only to the elector and electoreſs; for the electoral prince and princeſs live in a ſeparate palace, which communicates with it by galleries, where the rooms are ſomewhat too ſmall, but they are perfectly well diſpoſed, adorned with fine paintings, and moſt richly furniſhed.

The elector's palace, or caſtle, joins to the bridge at the entrance of the new town: it is an antient ſtructure, and makes but a mean appearance. The inſide, however, far ſurpaſſes the outſide; the apartments being noble and ſplendidly furniſhed. There is a great gallery which contains antique buſts, veſſels, pictures, and ſeveral other curioſities; a ſpacious hall, adorned with fine drawings of cities, pictures of giants, the habits of many nations, and divers large chambers full of a ſurpriſing collection of rarities, and the greateſt curioſities, both of art and nature, eſpecially pictures, of a very great value, and wonderful performances in clockwork. In this palace are two chapels, one for the Roman Catholics, the other for the Lutherans. The firſt was heretofore a theatre for the operas, but one of the electors turned it into a chapel, on account of the marriage of his only ſon with the eldeſt daughter of the emperor Joſeph. The ſecond, which was always the chapel of the proteſtant electors of Saxony, he left for the uſe of his wife, who conſtantly adhered to that religion. The treaſure of it is extremely rich, conſiſting of veſſels, and other moveables, of gold and ſilver, heretofore conſecrated and given to this chapel by the electors. In this palace is the regal treaſury, commonly called the Grune Gewolbe, or the Green Vault, compoſed of three arched rooms, which contain prodigious riches, and ſhine all over with gold and precious ſtones; ſo that it is one of the fineſt places in the world. Here are ſeveral ſets of brilliant diamonds, rubies, emeralds, pearls, ſapphires, and other precious ſtones: every ſet is complete, and conſiſts of buttons, buckles, loops for hats, &c. ſwords, hangers, ſword-belts, canes, muffs, ſnuff-boxes, watches, tweezer-caſes, pocket-books, in ſhort, all the jewels that can poſſibly be imagined, even to the furniture of a horſe; and they are ranged with admirable nicety, in caſes of cryſtal.

Near this palace there is a very fine garden called the Zwinger-Garten, which is reckoned the Thuilleries of Dreſden, though not large enough to deſerve the name. It is ſemicircled, in the ſhape of a horſe-ſhoe, with magnificent buildings of free ſtone that form arches, over which there runs an open gallery that unites three large pavilions, and has baluſtrades adorned with ſtatues. In the middleмoſt there is a fine grotto, and green-houſes for orange-trees, &c. The upper ſtory contains a very beautiful ſaloon, faced with marble, and gilded ornaments: the cieling is magnificent, the windows are of large plate-glaſs, and the reſt of the building which joins to this garden is of the ſame magnificence, but ſeems a little too much incumbered with carved work, which has more of the Gothic than the modern taſte.

Next to the garden there is nothing finer to be ſeen here than the elector's ſtables and the riding-houſe. Here is a great number of exceeding fine horſes, and ſome of all ſorts of the rareſt breed, which have iron racks and copper mangers. There is a curious fountain and pond near them, ſurrounded with baluſters, for the horſes to water and waſh in; and before the ſtables there is a long arched walk, painted with curious horſes, over which there is a gallery with the pictures of all the dukes and electors of Saxony in their robes and military habits; particularly, the two generals Hengiſt and Horſa, under whom the Saxons invaded England, are depicted here, after the romantic manner they are deſcribed by our monkiſh hiſtorians. In the chambers over the ſtables are kept the rich harneſſes, and other ſumptuous equipages, many of which are of the Turkiſh mode, plated with maſſy ſilver, and adorned with precious ſtones. Here are a great many other curioſities, particularly a gun which diſcharges 40 times ſucceſſively, without intermiſſion; a ſilver equeſtrian ſtatue, which, moved by a ſpring, carries a cup of wine, &c.

They boaſt of an arſenal here, with great quantities of all ſorts of arms, ſeveral ſuits of armour, and coats of mail, in ſilver and ſteel, that have been uſed by the electors in their wars, and repreſentations of Turkiſh and Hungarian parties of horſe and foot, with their commanders at their head, ſo contrived as to turn round; but this was ſtripped by the Pruſſians in the year 1756. There are five or ſix houſes here called hotels, which in Italy would paſs for palaces; but that called the Hotel de Hoym, which is in the occupation of a family of that name, is reckoned the moſt conſiderable of them all. A count de Hoym bought it of the velt-marſhal Fleming's widow, on her marriage to a Polander, who took her with him into his own country.

The ſuburbs of this city are very extenſive, but have no building of conſequence, except the palace in the elector's great garden, called the Turkiſh palace, from being furniſhed entirely after the Turkiſh manner.

The electors have other ſeats, viz. Pilnitz, Moritzburg, Auguſtuſburg (which lies in the circle of the mountains), and Anneburg; and the late elector built a very hand-

handſome ſeat at Warmſtorf, five miles from Leipſic, to hunt in ſpring and autumn: but ſome think thoſe of Pilnitz and Moritzburg are the fineſt houſes.

Within three miles of the city there is a bed or quarry of ſtones, which, according to the deſcription, ſomewhat reſemble the giants cauſeway in Ireland: they riſe about 17 ells above ground, repreſent columns with ſeveral corners, and are joined as if done by art. They have from four to ſeven columns apiece, are ſmooth on the outſide, look as if they were mixed with iron, are very weighty, and hard as adamant.

The people of Dreſden contend with thoſe of Halle for ſpeaking the beſt High Dutch. It has been obſerved of them in general, that there are none more devoted to pleaſures; ſuch as plays, maſquerades, balls, feaſts, running at the ring, races on ſledges, tournaments, hunting-matches, &c. of all which they have abundance, and plays and maſquerades are free for all people of faſhion, without any thing to pay. The citizens wives are more ſociable here than in any town of Germany, and fondly give themſelves the airs of quality, eſpecially in the article of dreſs, a luxury which has infected the wives of the mechanics, and even of the livery gentry.

Lommatſch is a town on the Jahne, with a ſeat and voice in the diets. Rieſſa is a market town on the Elbe. Pilnitz is a pleaſant village on the ſame river. Wilſobruff is an old town belonging to the Schoneberg; and Kotſkenbroda is a market town, celebrated for the vineyards in its neighbourhood.

Keſſeldorf is a ſmall village, near which in 1745 a bloody engagement was fought between the Saxons and Pruſſians, in which the former were defeated with great ſlaughter.

" Still preſſing forward to the fight they broke
" Thro' flames of ſulphur, and a night of ſmoke,
" Till ſlaughter'd legions fill'd the trench below,
" And bore their fierce avengers to the foe.
" High on the works the mingling hoſts engage,
" The battle kindling into tenfold rage,
" With ſhow'rs of bullets, and with ſtorms of fire,
" Bombs in full fury, heaps on heaps expire;
" The weſtern ſun now ſhot a feeble ray,
" And faintly ſcatter'd the remains of day;
" Ev'ning approach'd—but oh! what hoſts of foes
" Were never to behold that ev'ning cloſe."

Dipoldiſwalda, Rabenau, Dohna, Gottleulie, and Berggieſzhubel, have each a ſeat and voice in the diets, and the latter has a mine office, an acid ſpring, and a hot bath.

Liebſtadt and Barenſtein are both defended by caſtles, and in the neighbourhood of the latter is a tin mine; New Geyſznig contains a mine office; Hohenſtein is a Bohemian fief, and Neuſtadt has a linen and ſtocking manufactory.

Meiſſen, from whence the marquiſate is denominated, was built in 928. It was formerly its capital, but is now inconſiderable. It ſtands 12 miles north-weſt of Dreſden, and 46 ſouth of Wittenberg, on a river of its own name, on the left ſide of the Elbe, over which it had the beſt wooden bridge in the empire, till deſtroyed in the German wars. It was made a biſhopric about the middle of the 10th century, but ſecularized after the reformation, and ſubject to the elector ever ſince 1581. It lies partly in a valley, and partly on the ſide of a hill, on the top of which are the palace, a venerable old pile, in form of a caſtle, and the cathedral, in which are the tombs of many princes and noblemen. Here was a monaſtery formerly, which has been converted into a public ſchool, and the revenues applied for the maintenance of the ſtudents. Here is an admirable porcelain manufactory, which produces goods far ſuperior to thoſe brought from India, and indeed they are ſold much dearer.

Sebnitz and Wehlau have each a ſeat and voice in the diets; Schandau on the Elbe has a great trade in timber and corn; Altſtadt is a ſmall borough; Beſchofswerda on the Weſenitz has a great trade in white yarn; Stolpen on the ſame river had its caſtle demoliſhed by the Pruſſians in 1756, and in the ſame year at the village of Ebenheit, the capitulation was drawn up for the ſurrender of the Saxon army to the Pruſſians.

Hayn, or Haya, ſtands on the river Reder, 10 miles north-eaſt of Meiſſen. It was plundered and burnt by the Huſſites in 1429, and again burnt in 1538. It was formerly a flouriſhing town, and the ſeat of the margraves of Miſnia, the remains of whoſe palace are ſtill to be ſeen; and before the long wars in Germany, here was a great manufacture of woollen cloth.

Torgaw has a bridge, with ſtone pillars, on the Elbe, 20 miles ſouth of Wittenberg, and 40 north-weſt of Dreſden. It was built by John Frederic, the elector, in 1535, and beautified with a ſtately caſtle. It once had a very flouriſhing trade, and the electors of Saxony held their diets here; but it was ſo often harraſſed and oppreſſed by the Swedes in the German wars, that the face of this once fair city is quite changed. The caſtle, which is adorned with a beautiful church, has ſeveral very large and noble apartments worth ſeeing: there is one dining-room that will hold 78 tables, another 29, and a fine large hall adorned with the pictures of ſeveral emperors, kings, electors, and other princes; and in another room there are the pictures of their fools, or jeſters. In a gallery of this caſtle there is the genealogy of the Saxon family, with the pictures, arms, and abſtract of the lives of its princes; and there is a chamber lined throughout with looking-glaſs.

Mulberg, on the Elbe, about nine miles ſouth of Torgaw, and 28 north-weſt of Dreſden, is famous for the victory won by Charles V. over the Proteſtants in 1547, when Frederic duke of Saxony was taken by the duke of Alva, who commanded the Spaniſh auxiliaries. It is the capital of a bailiwic near the foreſt of Rederwack. Here is an antient caſtle, which was a few years ago repaired; this was yielded to the elector by the biſhop of Meiſſen, at the ſame time with the caſtle of Dreſkau, a little below it. Near this place, in 1730, the elector made a grand encampment for a month, which was 12 miles in compaſs, formed of 28,000 men, and viſited by the king of Pruſſia, and ſeveral other princes, beſides many other perſons of diſtinction.

Schilda	Dommitzſh
Belgern	Oſcchatz

are ſmall towns, with each a ſeat and a voice in the diets.

Dahlen belongs to the Bunau family; Strehla and Finſterwalda are Bohemian fiefs; Frederickſtal has a looking-glaſs manufactory, and Seinſtenburg gives name to a bailiwic.

Zeithayn is a village celebrated for having been the ſeat of the pleaſure camp formed by Auguſtus the Second at the expence of 5,000,000 of dollars. On the ſpot where the camp ſtood are ſix large pyramids, erected to commemorate the circumſtance.

Krahau, Muckenburg, Ortrand, are ſmall towns belonging to noble families. Eiſenberg is a market town; Lauſznitz and Monitzburg are hunting ſeats; Neuſalſa belongs to the Hoym family; and Radeberg on the Roder is defended by a caſtle, has a ſeat and voice in the provincial diets, a medicinal ſpring, is a Bohemian fief, and gives name to a diſtrict.

Pirna on the Elbe gives name to a diſtrict, has a ſeat and voice in the diets, and carries on a great trade in many articles.

Konigſtein on the Elbe has a ſeat and voice in the diets, a fuſtian manufactory, and is defended by an impregnable fortreſs on the top of a rock. On the ſide towards Dreſden there are ſtrong works and a triple battery of cannon. The caſtle can neither be undermined or raked with ſhot from the adjacent eminencies, and as it contains a well, magazines of all kinds of proviſions, paſture and arable land, gardens, &c. &c. it would be impoſſible to reduce it by blockade. It is the repoſitory of the archives, and the place of retreat of the electoral family in times of danger; and, beſides, commands the navigation of the Elbe.

Leipſic, or Leipzic, gives name to the circle whereof it is the capital. It ſtands in a charming fruitful plain (between the rivers Saale and Mulda), abounding with all neceſſaries and luxuries of life, particularly, large and rich meadows, mowed conſtantly twice, and ſometimes thrice a year, beſides pleaſant woods, and many fine orchards, with all ſorts of fruits, there being neither orchards nor gardens within the walls of the city. It is ſituated at the conflux of three other leſſer rivers, the Elſter,

Elſter, Pleiſſa, and Pardo, or Barde, 28 miles north-weſt of Meiſſen, 41 weſt of Dreſden, and 238 north-weſt of Vienna. It is ſuppoſed to have been built by the Vandals about anno 700, and to have derived its name from Lipzk, a lime-tree, with which the country once abounded. It was in this city that, in 1520, Luther diſputed with Eckius againſt the pope's ſupremacy, and it ſoon after embraced the reformation.

This part of the country having been the chief theatre of the long German war, this city was in two years taken five ſeveral times, and laſt by the Imperialiſts in 1633, but reſtored by the treaty of Prague in 1635. It is remarkable for three ſignal victories obtained near it by the Swedes over the Imperialiſts, viz. in 1631, when Guſtavus defeated Tilly; in 1641, and in 1642, when the archduke Leopold, and general Picolomini, were defeated by the Swediſh admiral Torſtenſon, who afterwards obliged the town to ſurrender. It is famous alſo for an univerſity, which was founded in 1409, by Frederic and William, dukes of Saxony, out of a detachment of the ſcholars from Prague, of whom there came hither not leſs than 2000 in one day, by reaſon of the quarrel between the Huſſites and papiſts. It has 24 profeſſors in four colleges, wherein the nations are diſtinguiſhed by ſeveral claſſes. It has bred many learned men, and been honoured with the dukes of Sleſwic and Holſtein, Stetin and Pomerania, the duke of Mecklenburg, and other ſovereign princes, for its rectors. It is not ſubject to the elector, but to the town. The library has abundance of MSS that belonged to the monaſteries demoliſhed at the time of the reformation, of which the moſt valuable, becauſe it is a rarity, perhaps not to be met with elſewhere, is Tretzer's Greek commentary on Homer's Iliads, in a fair character. There is a monthly book publiſhed here, being a ſort of Journal des Sçavans, or Memoirs of Literature; containing an account of remarkable pieces in all parts of learning, intituled, Acta Eruditorum Lipſiæ; which ſhew, that phyſic, anatomy, and the mathematics, are very much cultivated here; though divinity, eſpecially the controverſy with the Socinians, Papiſts, Jews, &c. is their chief ſtudy. It is ſaid, this univerſity has been lately eclipſed, in ſome degree, by the neighbourhood of Halle, its rival; yet it has always ſupported itſelf with reputation.

The city is the ſeat of a high court of judicature, where the elector himſelf is obliged to appear, when ſummoned. It was firſt opened about the year 1520, when Auguſtus, the then elector, eſtabliſhed the college, to conſiſt of a preſident, and ſix aſſeſſors; of whom, three are civilians, and the other three of the city council, with a regiſtering clerk.

Some call this city the jewel of the electorate of Saxony, not only for its fine ſtructures, but for the conſiderable revenue it yields to its ſovereign. The town itſelf is not large, but it is populous, with regular ſtreets, and ſtately houſes, generally five or ſix ſtories, but about the market-place eight or nine ſtories high, and ſubſtantially built of free-ſtone, adorned with great fine windows, but a little too much charged with ſculpture, and not duly proportioned. The town-houſe is a large noble ſtructure. St. Nicolas's church is very fine, and the beſt adorned within of any Lutheran church in Germany. The ground-floors of moſt of the houſes are warehouſes, where the merchants ſtore their goods for the fairs at New-Years-Tide, Eaſter, and Michaelmas, to which there is a vaſt concourſe of merchants from the moſt noted places in Europe, who are exempted from tolls. So many rich curioſities are then brought hither, and there is ſo great a vent for them, that at the fair of 1737, the goods entered at the cuſtom-houſe were computed to be worth near five millions. The king and queen of Poland, who were there together with the dukes of Saxe-Gotha, Weiſſenfels, Merſburg, &c. laid out vaſt ſums. The late kings of Poland and Pruſſia uſed often to be at theſe fairs; and the baron de Pollnitz ſays, that, at the New-Year's fair in 1709, he counted no leſs than 44 princes and princeſſes of ſovereign families. The Germa tongue is ſpoken here with ſo much purity, that the citizens boaſt they herein excel thoſe of Halle. The town is fortified with ramparts and a ditch, but they are not of ſo much importance as its ſtrong caſtle of Pleiſſenburg, on the river Pleſſe; which, however, when Charles XII. of Sweden, marched into Saxony, in 1706, the elector did not think tenable, and ordered the governor to ſurrender it, without hazarding a ſiege.

The ſuburbs are very large: the city has four magnificent free-ſtone gates, at each of which is ſet up a poſt, after the manner of the Romans; which kind of poſts are at the gates of all the towns, and even of the villages of the electorate; and from hence they count the leagues, which are divided at the end of every quarter of a mile by other poſts, not ſo big, upon all the great roads, ſhewing the diſtances. The gardeners of Leipſic are reckoned the beſt in Germany, and value themſelves upon forcing the products of nature more early than others. Their aſparagus is delicious, and extraordinary large. This place is particularly remarked for its larks, which are ſent all over Germany, Poland, Holland, and Denmark. In the woods are abundance of nightingales, of which great numbers are taken, and kept in cages. There are tolerable good ordinaries here, and at Dreſden; but the proviſion at the towns and villages in the road betwixt thoſe cities, though ſo much frequented, is ill-dreſſed, and the houſes naſty. There is a remarkable wood in this neighbourhood called Roſendahl, which, in the language of the country, ſignifies the vale of roſes; it conſiſts of 14 walks, all agreeably diverſified, with a great meadow in the middle, and each walk has a noble point of view.

Taucho, a ſmall town with a caſtle, belongs to the council of Leipſic; Rotha to the barons of Treiſe; Liebertwolkwitz to the counts of Vitzhum; Old Ranſtadt, the village where the peace was concluded between Auguſtus, king of Poland, Charles XI. king of Sweden, and Delitzſh celebrated for its ſtocking manufactory.

Landſburg, Zorbig, Duben and Eilenberg, are too inconſiderable for deſcription; Nawenhof, on the Borde, belongs to the Ponickau family; Brand belongs to the family of Badenhauſen; and Trebſen and Nerchau, both on the Mulde, belong to the family of Dieſkau.

Grimmia, on the Mulde, has a ſeat and voice in the diets, a ſchool for 100 ſtudents, and a ſuperintendency. It gives name to a diſtrict, and is celebrated for its manufactories of thread and flannel.

Mutſchen is a ſmall town with a caſtle; Wermſdorf, a market-town with a pleaſure-houſe; Colmen, a village with a hunting-ſeat; Leiſznig, remarkable for its ſalmon fiſhery; Dobeln is a manufacturing town; and Rochlitz has a ſeat and voice in the diets, ſeveral manufactories, a ſtrong caſtle, and a ſuperintendency. The other towns and villages are ſo much ruined and decayed as not to retain any thing worthy of deſcription.

The circle of Erzgeburg receives its name from its mountains, which are rich in mineral ores. And the moſt conſiderable places in it are the following:

Freyberg, the principal mine-town, on a branch of the Mulde, 13 miles to the ſouth-weſt of Dreſden, contains about 60,000 inhabitants, and is ſtrongly fortified. Near the principal church is a chapel in which many of the electors have been buried; and the town is ſo pleaſantly ſituated, that there is a Saxon proverb, which may be thus rendered into Engliſh:

Did Leipſic's wealth on me depend,
My fortune I'd at Freyberg ſpend.

It is the ſeat of ſeveral mine offices, a court of juſtice, ſuperintendency, &c. In the neighbourhood are ſeveral valuable mines of ſilver, copper, tin, lead, ſulphur, vitriol, &c. The wood for the mines is brought down the Mulde from Bohemia. Here is likewiſe a brewery, a lace and thread manufactory, a bell-foundery, cannon foundery, a gymnaſium, and a public library.

Brand is inhabited with miners; Grimthal is the place where the ſilver is ſeparated from the copper; Schellenberg has a ſeat and voice in the diets; Haynichen, Sayda and Seiſſen belong to the lords of Schoneberg; and Schopa contains a caſtle and ſmelting-houſe.

Oedern is a manufacturing town with a ſeat and voice at the diets; Chemnitz was once an imperial city, and is now a large town with a ſuperintendency; Fromkenberg has a ſeat and voice in the diets, a ſtuff manufactory, and gives name to a diſtrict; and Naſſau is a ſmall town on the Freyburg; Mulde, which gives name to a baillwic, has manufactories of cloth and leather, and is defended by a caſtle.

Granaten is a borough town near the wood of Tharaud; Travenſtein is a ſmall town with a caſtle; Rechenberg has a caſtle, and Altenberg is a ſmall open town having a ſeat and voice at the diets, a lace manufactory, a tin mine, and a cement ſpring. It gives name to a bailiwic, in which are the ſmall towns of Old Geyſzing, Glaſshutte, and St. Georgenfeld, and ſeveral tin, ſilver, and iron mines, mills, ſmelting houſes, &c. with an electoral foreſt and hunting ſeat.

"Soon as Aurora draws away the night,
"And edges caſtern clouds with roſy light;
"The healthy huntſman with a chearful horn,
"Summons the dogs, and greets the dappled morn;
"The jocund thunder wakes th' enliven'd hounds,
"They rouſe from ſleep, and anſwer ſounds for
"ſounds."

Zoblitz, a ſmall town in the diſtrict of Lauterſtein, has a ſeat and voice in the diets, an iron foundery in its vicinity, and is celebrated for the great quantities of aſbeſtos of divers colours, granites, &c. found in its neighbourhood, which likewiſe abounds with the ſerpent ſtone. This ſtone is of various colours, the red being the moſt valuable is claimed by the electors, but all the ſeveral kinds are worked into various trinkets and utenſils by the inhabitants.

Wolkenſtein, on the Zſchopa, gives name to a bailiwic, which contains the little towns of

Marienberg	Bucholz
Goſtadt	Irberſdorf
Geyer	Lengefeld, and
Thumb	Drebach
Annaberg	

the inhabitants of all which are either employed in the lace manufactory, or in mining, as this bailiwic produces great quantities of

Iron	Cobalt
Tin	Vitriol
Silver	Sulphur
Allum	Arſenic.

As ſome of theſe minerals have not hitherto been deſcribed, we ſhall here introduce an account of them.

Allum is either native or factitious, but the former ſort is at preſent very little known; and the latter ſort is uſually diſtinguiſhed by the name of the country from whence it comes.

Allum is of a very binding nature, and has always been looked upon as a great ſtyptic. That of the antients had a ſmell like aqua-fortis, but the factitious has none at all; and, when placed over the fire in an iron pan, it bubbles up and melts like water. When allum is ſet to cryſtalize, it concretes into a figure with eight ſides, which looks like a triangular pyramid, with the angles cut off; inſomuch that it is compoſed of four hexagon ſurfaces, and four that are triangular. From a chemical analyſis it appears, that allum conſiſts of an acid vitriolic ſalt, and an aſtrigent earth or bole intimately united. Allum is recommended for ſwellings of the gums, and againſt the fluxions upon the tonſils. When burnt, it will take down proud fleſh in wounds and ulcers; it is of no uſe internally, only it is ſometimes given with a large portion of nutmeg for the cure of the ague.

Cobalt is a foſſil body, which is heavy, hard, and almoſt black, not very unlike antimony; it has a ſulphureous, nauſeous ſmell, when kindled in the fire, and is commonly mixed with a portion of braſs, and ſometimes of a little ſilver.

Vitriol is either native or factitious, and, with regard to the colour, is diſtinguiſhed into white, blue and green. White vitriol is made into large lumps, which look almoſt like loaf ſugar, and has a ſweetiſh aſtringent taſte. It is found in mines, where it ſprings forth from the ſides, under the appearance of a woolly ſubſtance, which being diſſolved in water, muſt be boiled to a due thickneſs; and, at laſt, it will turn into a white maſs like ſugar. Sometimes there are found in the ſame mines pieces of vitriol, which are already cryſtalized, and appear tranſparent.

Blue vitriol is dry to the touch, and is formed into blue cryſtals, like ſapphires, of a rhomboidal form, but flat, and with ten ſides. It obtains its fine colour from copper, and has an auſtere taſte, with great ſharpneſs.

Green vitriol is of an herbaceous colour, and has various names, according to the different places from whence it is got. It abounds with iron, from whence it has its colour, and is either in large cryſtals of a rhomboidal form, or in bits compoſed of cryſtaline grains united together, which feel a little oily to the touch; it has a ſharp ſtyptic taſte.

Common ſulphur, or brimſtone, is either native or factitious, or rather depurated. Native ſulphur, commonly called ſulphur vivum, is either tranſparent or opaque; the tranſparent appears like a gem of a gold colour, though ſome is met with that is yellowiſh or greeniſh. The opaque is uſually met with in hard ſolid maſſes of a greeniſh ſhining colour, or under the form of an aſh-coloured clayey glebe, inclining to yellow.

Factitious ſulphur is prepared ſeveral ways; for in ſome places it is boiled in water, but in the hot baths, ſulphur is raiſed in vapours from the water, and ſticks to the cover of the ſpring in hardiſh lumps, that have the appearance of flour of ſulphur, and a great quantity of this is gathered every year. Sometimes it is extracted from a whitiſh clayey earth; and is as often obtained from the ſtone called the pyrites.

Arſenic, properly ſo called, is extracted from a mineral called cobalt. If this be mixed with calcined flints and pot-aſhes, the mixture, in a very ſtrong fire, will turn into a glaſs of a blueiſh colour, that when reduced to powder is called ſmalt. In the preparation of this glaſs a copious ſmoke is exhaled, or rather flowers, which ſticking to the ſides of the furnace, and collected together, appear in the form of a white powder, which, put into a crucible, and melted in an exceeding ſtrong fire, turns into a white, heavy, hard glaſſy maſs; and this is named white arſenic, which is a moſt dangerous poiſon. But when to ten parts of the former powder one of ſulphur is added, and melted as before, then yellow arſenic will be produced. Again, if two parts of the ſulphur are added to ten of the powder, and melted as before, it will turn to a reddiſh maſs, which goes by the name of red arſenic.

Stolberg has a cloth manufactory, and Grunhayn gives name to a bailiwic, which contains Elterlein, Zwonitz, and Schlottau, all of them mining towns. The miners here are remarkably civil, and exceedingly fond of ſhewing the ſubterraneous wonders of the mines to ſtrangers.

"Now thoſe profounder regions they explore,
"Where metals ripen in vaſt cakes of ore;
"Here, ſullen to the ſight, at large is ſpread
"The dull unweildy maſs of lumpiſh lead;
"There glimm'ring in their dawning beds are ſeen,
"The more aſpiring ſeeds of ſprightly tin.
"The copper ſparkles next in ruddy ſtreaks,
"And in the gloom betrays its glowing cheeks:
"The ſilver then with bright and burniſh'd grace,
"Youth, and a blooming luſtre, in its face;
"To th' arms of thoſe more yielding metals flies,
"And in the folds of their embraces lies;
"So cloſe they cling, ſo ſtubbornly retire,
"Their love's more vi'lent than the chymiſt's fire."

Schwargenberg is a ſmall antient town, defended by a caſtle, giving name to a bailiwic, and inhabited by miners and artificers in iron.

Schneeberg on the Mulde has a conſiderable trade in gold and ſilver lace, thread, ſilk, ſmalt, &c. Newſtadt, a ſmall mine town in the neighbourhood, has a ſeat and voice in the diets, and is ſituated under the lofty mountains of Gebirge, and in the neighbourhood of Eybenſtock, a ſmall mine town; the mines not only produce metals, but various kinds of jewels.

Joharm Georgenſtadt is a town famous for the mines in its neighbourhood, for a lace manufactory, and for the great quantity of emery made by its inhabitants.

Wieſenburg on the Mulde has a caſtle; Korchberg, in its neighbourhood, a cloth manufactory; Zſchorlaw a foundery and ſmalt mill; Werdau a ſtuff manufactory; Criminitzſchau on the Pleſſa a linen and ſtuff manufactory, with ſeveral dyers and callico printers; and Wildenfels a caſtle.

Zwickau on the Mulde, which gives name to a bailiwic and ſuperintendency, has a free ſchool, library, and caſtle, called Oſterſtein. It was formerly an Imperial city, and had a mint which was afterwards removed to Dreſden. It carries a great trade in

Wool	Cloth
Cards	Leather
Deals	Iron
Coals	Sandſtone
Marble	Corn, &c.

The circle of Vogtland contains the following places.

Oelſnitz on the Elſter, remarkable for a pearl fiſhery, and giving name to a ſuperintendency; Vogtſberg, a caſtle on a mountain, which gives name to a bailiwic; Adorf on the Elſter has a ſeat and voice in the diets; Mark-Neukerchen is inhabited by ſome of the beſt muſical inſtrument makers in Germany; Schoneck has many peculiar privileges granted by the emperor Charles IV. in the year 1370; and Elſterburg on the Elſter belongs to the Bunau family.

Plauen on the Elſter, 68 miles from Dreſden, is the capital of this circle, the ſeat of a ſuperintendency, and defended by an old caſtle. This place is ſo pleaſant, that many perſons of opulence retire hither to paſs their time in a kind of rural leiſure, or to divert that leiſure by various innocent amuſements, for, perhaps, to enjoy leiſure hours properly, is one of the moſt difficult things mankind can enter upon.

Yet of the various taſks mankind employ,
'Tis ſure the hardeſt, leiſure to enjoy.
For one who knows to taſte this godlike bliſs,
What countleſs ſwarms of vain pretenders miſs?
Tho' each dull plodding thing, to ape the wiſe,
Ridiculouſly grave, for leiſure ſighs,
(His boaſted wiſh from buſy ſcenes to run)
Grant him that leiſure, and the fool's undone.
The gods to curſe poor Demea heard his vow,
And buſineſs now no more contracts his brow:
No real cares, 'tis true, perplex his breaſt,
But thouſand fancied ills his peace moleſt:
The ſlighted trifles ſolid ſorrows prove,
And the long ling'ring wheel of life ſcarce ſeems to move.
Uſeleſs in buſineſs yet unfit for eaſe,
Nor ſkill'd to ſerve mankind, nor form'd to pleaſe,
Such ſpurious animals of worthleſs race,
Live but the public burthen and diſgrace:
Like mean attendants on life's ſtage are ſeen;
Drawn forth to fill, but not conduct the ſcene.

Netzſchkau is a town belonging to the counts of Bore; Mylau to the nobles of Planitz; and Keichenback is celebrated for its excellent ſcarlet dying.

The circle of Neuſtadt contains Neuſtadt on the Orta, which has a caſtle, mine office, and ſeat of ſuperintendency; Ranis an inconſiderable town, Berga on the Elſter, defended by a caſtle; Werdu a trading town; Muchenberſdorf a market; Lubenguma another market town; Triptis, Auma, and Ziegewrucks, which have each a ſeat and voice in the diets.

The circle or foundation of Merſeburg, lies betwixt Saxe-Hall and Naumburg. It was formerly a biſhopric (ſuffragan to Magdeburg) but ſecularized by the treaty of Paſſaw in favour of the houſe of Saxony. One of the dukes, who was adminiſtrator of it, having introduced Lutheraniſm here about 1562, it has been ſince applied as a portion for one of the younger ſons, to whom it gives the title of duke, who, with the revenues of other bailiwics, as well as of this once noble biſhopric, is enabled to keep a very genteel court.

Merſeburg, where the duke reſides, is a city in a charming ſituation, amidſt gardens and meadows, on the banks of the Sala, or Saal, 16 miles north of Naumburg, and 17 north-weſt of Leipſic. The emperor Otho I. who founded its ſee in 952, made it alſo an Imperial city. It is a pretty large populous town, and thought to derive its name from Mars, whom the Pagan Saxons worſhipped here by the name of Irmanſeul. The great church, which was the cathedral, founded by the emperor Henry II. a Gothic building, is worth ſeeing, were it only for the magnificent tomb of the emperor Rodolph, who died, after the loſs of a hand, in battle with his competitor Henry IV. and near it is a library of very antient MSS. It may be obſerved here, that part of the revenues of this, and the other biſhoprics, ſecularized in favour of the Saxon and Brandenburg families, is appropriated towards the maintenance of a number of canons belonging to each cathedral, and the reſt to the adminiſtrators of the reſpective princes. The city is well built, though not in the modern taſte. Its walls and its ſeven towers are of free-ſtone. The wars in the laſt century did great damage to this place, which was ſucceſſively the prey of the contending armies. Count Tilly took it in 1631, as the Swedes did afterwards, and the Imperialiſts and Saxons alſo maſtered it in their turn. It had formerly a very flouriſhing trade, and a very famous yearly fair from 1047, to the year 1200, when it was almoſt burnt down, and the merchants removed, with their effects, elſewhere. The baron de Pollnitz tells us, that when he was here, in the time of the late duke, he was carried into a hall hung quite to the top of it, with baſs viols; and that there was one, in particular, that reached from the floor to the cieling, ſo that there was a ladder ſet for thoſe who wanted to examine it throughout.

Zwenkau on the Elſter is a ſmall town with a caſtle; Skeuditz on the Elſter gives name to a bailiwic; Shaafſtadt is a ſmall town in the diſtrict of Lauchſtadt, and Lauchſtadt itſelf is celebrated for a medicinal ſpring.

Lutzen is a ſmall town with a caſtle, in the neighbourhood of which was fought the famous battle between the Imperialiſts and the Swedes, in which the former were defeated; but the celebrated Guſtavus Adolphus loſt his life.

Hark! the ſhrill trumpet ſends a mortal ſound,
And prancing horſes ſhake the ſolid ground;
The ſurly drums beat terrible from afar,
With all the dreadful muſic of the war:
From the drawn ſwords effulgent flames ariſe,
Flaſh o'er the plains, and lighten to the ſkies:
The heav'ns above, the fields and floods beneath,
Glare formidably bright, and ſhine with death;
In fiery ſtorms deſcends a murd'rous ſhow'r;
Thick flaſh the lightnings, fierce the thunder roar,
As when in wrathful mood almighty Jove
Aims his dire bolts red-hiſſing from above;
Through the ſing'd air, with unreſiſted ſway,
The forky vengeance rends its flaming way;
And, while the firmament with thunder roars,
From their foundations hurls imperial tow'rs.
So ruſh the globes with many a fiery round,
Tear up the rock, or rend the ſtedfaſt mound:
Death ſhakes aloft her dart, and o'er her prey
Gigantic ſtalking, marks in blood her way;
Mountains of heroes ſlain deform the ground,
The ſhape of man half bury'd in the wound;
And lo! while in the ſhock of war they cloſe,
While ſwords meet ſwords, and foes encounter foes,
The treach'rous earth beneath their footſtep cleaves,
Her entrails tremble, and her boſom heaves;
Sudden in burſts of fire eruptions riſe,
And whirl the torn battalions to the ſkies.
Thus earthquakes rumbling, with a thund'ring ſound,
Shake the wide world's firm baſe, and rend the ground;
Rocks, hills, and groves are toſt into the ſky,
And in one mighty ruin nations die.

The foundation or biſhopric of Naumberg is about 25 miles long, and 15 broad, lies betwixt Saxe-Altenburg on the north-eaſt, and Saxe-Gotha on the weſt, and was ſeized by the elector of Saxony in 1718, on the death of the laſt duke of Saxe-Zeits.

The city, which was once a biſhop's ſee, under the archbiſhop of Magdeburg, and an Imperial town, ſtands on the river Sala, or Saal, where it receives the Unſtrut, 15 miles ſouth of Merſeburg, and 75 weſt of Dreſden. This town is famous for its fairs, which are the moſt conſiderable in Saxony, next to thoſe of Leipſic. Hubner ſays, that in 1714, it was burnt down upon its fair day, which is June 29, and that here is a large caſtle built by one of the landgraves of Thuringia. Its antient cathedral is yet ſtanding, and the Lutherans have a chapter of canons, who muſt prove their nobility by 16 deſcents, both by the fathers and mothers ſide. The

ſuburbs

ſuburbs of this city are almoſt all vineyards, but the wine is very bad. The biſhopric was founded by the emperor Otho I. in 951, at Zeits, and tranſplanted hither in 982. Lutheraniſm was introduced here in the beginning of the 16th century by its biſhop, after whoſe death the elector took the adminiſtration. It was ceded to him by the treaty of Paſſaw in 1552, and it gave a title to a branch of the family, which was called Adminiſtrator; but the laſt turned papiſt in 1717, by which he was made incapable of enjoying the Proteſtant biſhopric; the emperor pleaded, that he ſhould enjoy half the revenue, which amounts in the whole to 70,000 crowns a year; but the chapter refuſed it, as contrary to the treaty of Weſtphalia. He was duke of Saxe-Zeits, recanted before he died, but did not live to be reſtored to the adminiſtration.

Weiſſenfels, on the ſame river, 10 miles eaſt of Naumburg, was antiently called Leucopetra, and gives title to a branch of the Saxon family.

Zeitz, on the Elſter, is the ſeat of a regency and other colleges, has a caſtle named Maurice Moritzburg, and a cloth manufactory.

Oſterfeld is a ſmall town between Naumburg and Zeitz; Regis is ſituated on the Pleiſſe; and Croſſen, on the Elſter, belongs to the Fleming family.

* * * * * * * * *

THE electorate of Brandenburg, together with the New Mark, hath already been deſcribed in our account of Pruſſia, to which we muſt refer the reader, and proceed to

The Principality of WEIMAR.

THE principality of Weimar lies on the eaſt ſide of the biſhopric of Erfurt, to the weſt of Naumburg, and between the river Saal and the county of Schwartzburg, is about 40 miles long, and 16 broad, and contains the bailiwics of Bercka, Jena, Orlamund, Dornſberg, and Tondorf; with the foreſts of Tanroder, of Brembach, the lake of Ilmenau, Roſta, the towns of Buſtet, Battelſtet, Almanſtet, and ſeveral others. Beſides what we have mentioned, which is properly the duchy of Weimar, the duke's other eſtates in Upper Saxony are thoſe of the branch of Saxe-Jena, which was extinct in 1691, viz. the bailiwics of Bomburg, Burget, Capolendorf, Apolda, &c. and the univerſity of Jena, of which this prince is joint ſovereign with the duke of Saxe-Eiſenach, with whom he enjoys many other things in common, ſuch as the reverſion of ſeveral eſtates, archives, tolls and mines. His revenues are computed at about 80,000 l. a year, with which he maintains 1000 regular troops in the fineſt order and liveries, and keeps a tolerable court. The chief places in this principality are the following.

Magdela a market-town; Butſtoff, on the Loſſe, where there is a ſuperintendency, and a conſiderable beaſt fair; Berka, on the Ilm, gives name to a bailiwic; Tanzoda is a ſmall town on the ſame river; Roſenburg, on the Loſſe, is defended by a caſtle; Buttleſtat contains a palace; Apolda belongs to the univerſity of Iena; New Mark is a little town in the bailiwic of Burgelin; Burgelin, itſelf, is a walled town with a caſtle and ſuperintendency; Dornburg, on the Saale, is a ſmall town, which has likewiſe a caſtle and ſuperintendency; Salza, on the Ilm, is famous for a ſalt-work; and Oldiſleben, near the Unſtruct, is ſituated on a hill, and gives name to a bailiwic.

The Principality of EISENACH.

THE principality of Eiſenach lies on the frontiers of Heſſe. It is mountainous, and the ſurface barren, but the hills are replete with mines of iron, copper, allum, vitriol, ſaline ſprings, &c. Lutheraniſm is the eſtabliſhed religion, and the principal places are,

Eiſenach, which gaves name to the principality, and is its capital. It is ſituated on the Neſſe, where that river receives the Horſel into it; and contains a gymnaſium, a ducal palace, a ſeat of high colleges, and a ſuperintendency. In a caſtle on a neighbouring mountain Martin Luther ſuffered 11 months impriſonment.

Willhemthal is a ſmall town with a palace and park; Rahla, famous for its mineral ſpring and hardware manufactory; Kreutzburg, on the Werra, remarkable for a ſtone bridge and ſalt-work; Markſula, a market-town on the Suhl, has a caſtle; and Gerſturgen, on the Werra, gives name to a bailiwic which includes Barka, a ſmall town on the ſame river.

Allſtett, a town of great antiquity, is defended by a caſtle, and gives name to a ſuperintendency and a bailiwic. The emperor Otho had a palace in this town, and held a diet here in 974. Many of his medals are now found in digging about the town and its environs.

" The medal, faithful to its charge of fame,
" Thro' climes and ages bears each form and name;
" In one ſhort view, ſubjected to our eye,
" Gods, emp'rors, heroes, ſages, beauties, lie.
" With ſharpen'd ſight pale antiquaries pore,
" Th' inſcription value, but the ruſt adore;
" This the blue varniſh, that the green endears,
" The ſacred ruſt of twice ten hundred years!
" To gain Peſcennius one employs his ſchemes,
" One graſps a Cecrops in extatic dreams,
" Poor Vadius, long with learned ſpleen devour'd,
" Can taſte no pleaſure ſince his ſhield was ſcour'd;
" And Curio, reſtleſs, by the fair one's ſide,
" Sighs for an Otho and neglects his bride.
" Oh! when ſhall Britain, conſcious of her claim,
" Stand emulous of Greek and Roman fame;
" In living medals ſee her wars enroll'd,
" And vanquiſh'd realms ſupply recording gold."

Remba belongs to the univerſity of Jene; Ringleben is a town on the Gera, which, together with Great Rudeſtet, gives name to a bailiwic which contains Marck Uppach, a country town; and Farnroda is a village defended by a caſtle, which gives name to a lordſhip.

Jana, on the Saale, 14 miles eaſt of Weimar, is a well-fortified town, pleaſantly ſituated amidſt vineyards. Here is an univerſity, with a library, obſervatory, phyſic-garden, &c. a conſiſtory, ſuperintendency, Latin and German ſociety, free-ſchool, and ducal palace. Both the town and univerſity have fine gardens, and good eſtates. The former gives name to a bailiwic, in which are Labedo, a ſmall town, about two miles from Jena; and Kirchberg, an old caſtle, which gives name and title to a burgrave.

The Duchy of COBURG.

THE duchy of Coburg, is placed in the circle of the Upper Saxony, though the inhabitants call themſelves Franconians; and it is by the Matricula deemed to be in this circle: it belonged formerly to the counts of Henneberg, but has been poſſeſſed by the dukes of Saxe Gotha ever ſince 1674. It is 43 miles in length, and 16 where broadeſt.

Its capital, of the ſame name, lies about 21 miles north-eaſt from Bamberg. It is one of the moſt antient towns in Germany, thought to be Ptolemy's Melocabium; is pretty large and well built, and defended by the duke of Saxe-Gotha's ſtrong caſtle on a neighbouring hill, where Luther, who reſided here for moſt part during the diet of Augſbourg, in 1530, to be at hand to inſtruct his adherents, was ſeveral times impriſoned for ſpeaking freely of his ſuperiors; and where he compoſed ſeveral hymns and epiſtles, which he dated ſome from the Deſert, and others from Gruboc, by a tranſpoſition of the letters, as it is thought, to conceal his confinement. Here is a college with 11 profeſſors of ſeveral faculties, called Caſimir college, becauſe founded in 1602, by John Caſimir the elector of Saxony, who had, in 1597, alſo built the houſe for the courts of juſtice. The court or palace where the dukes reſided is in the town itſelf, very near the great church. The Augſbourg confeſſion is the religion profeſſed in this duchy. In the citadel are old archives, wherein are preſerved many important inſtructions relating to the hiſtory of the reformation.

According to Hubner, the duchy of Coburg belongs, in part, to the duke of Hildburghauſen, or Hilperſhauſen, which is the name of a town with a fine caſtle, where he reſides, a grand building of free-ſtone according to the modern taſte. To him alſo belongs Holdburg, another ſmall town, with a fine caſtle, and ſeveral others of leſſer note.

Geſſimgſhauſen is a market-town on the Steinach; Rodach a ſmall town on a river of the ſame name, with a caſtle

a caſtle and ſuperintendency. Neuſtadtander-heyde, a own on the Rote, and Steinhead a ſmall town, near which was antiently a gold mine.

Schalkau is a town on the Itſch, which gives name to a bailiwic.

Senneburg gives name to a bailiwic, in which are two market towns named Indenbach and Murſchnitz: Neuhauſz gives name to a bailiwic; Eiſzfeld on the Werra contains a ducal palace and Latin ſchool, glaſs-houſe, vitriol manufactory, powder blue manufactory, has a ſuperintendency, and gives name to a bailiwic.

Koninſberg is a ſmall town ſituated on a hill, and defended by an ancient caſtle. It contains a ſuperintendency, and gives name to a bailiwic; Haſtaden is a market town, and Heldbury on the Kreck is defended by a caſtle, contains a ſuperintendency, and gives name to a bailiwic, in which is Ummerſtadt, a ſmall town on the river Rodach, with a hunting palace and a ſalt work.

The Principality of SAXE-GOTHA.

SAXE-GOTHA is bounded by Naumberg on the eaſt; the landgraviate of Heſſe and Saxe-Eiſenach on the weſt; the county of Eufurt and Halle on the north and north-eaſt; and Franconia on the ſouth. Its dukes are deſcended from the elector John Frederic the Magnanimous, who was depoſed by the emperor Charles V. in 1574, ſince which the youngeſt branch has enjoyed the electorate.

The eſtates of its ſovereign are (beſides the duchy of Gotha, which is about 30 miles long, and 12 broad, including the lordſhips of Tenna, Wachſenburg, and Ichterſhauſen) the bailiwic of Kranickfeld, the monaſtery of Volkenroda; and in the country of Altenburg, the towns of Altenburg, Orlamunda, Kala, Leuchtenburg, Schmoelle, Sichweighoff, &c. His titles are the ſame as thoſe of the duke of Saxe-Eyſenach, with the addition only of the lordſhip of Tonna, and they differ but little from thoſe of the elector of Saxony: and as of all the Saxon princes of the Erneſtine branch this duke is the moſt powerful, ſo of all the courts of Saxony, next to that of Dreſden, his is the moſt numerous and the moſt magnificent. He has all the officers of ſtate that are common to ſovereign princes. By the prudent management of his public finances, his ſubjects are the leaſt burdened with taxes of any ſtate in Germany; yet the revenues of the late duke were computed at a million of crowns, or 200,000l. a year, with which he kept on foot between two and 3000 regular troops. His guards are well cloathed, his liveries rich, and his tables ſerved with more elegance than profuſion.

Gotha, the capital city, is a large walled town on the river Leina, 12 miles weſt of Erfurt, and 20 eaſt of Eyſenach. It is ſituated in a fine corn country, about two days journey ſouth of Hanover. Its chief trade is in dyers woad, of which they have three crops, the third growing wild. This herb is reckoned ſuch a ſovereign balſamic, as to cure wounds almoſt with a touch if taken in time: it reſembles plantain, but has a longer leaf: the roots fatten barren ground exceedingly, and being brought over to England, thrive well in ſeveral places. Here are two churches and an hoſpital.

We read in Hubner's Geography, that after the year 1530, eight or 9000 men were employed 11 years in fortifying the old caſtle; that John Frederic elector of Saxony being taken priſoner by Charles V. it was by his order demoliſhed; but that when the elector was ſet at liberty in 1552, he rebuilt it, and made it larger; but that his ſon, having refuſed to deliver up Grumbach, and ſome others, who had taken refuge there, and were put under the ban of the empire, he himſelf was alſo put under the ban, and beſieged there by Auguſtus elector of Saxony, the executioner of the mandate; and the place, being taken in 1567, was demoliſhed a ſecond time at the expence of 55,559 florins, after a ſiege which coſt 953,634, when the duke was carried priſoner to Auſtria, his chancellor and Grumbach quartered, and the others hanged or beheaded; but duke Erneſt, ſurnamed the Pious, rebuilt it, cauſed both that and the town to be encompaſſed with ditches and ramparts, and gave it the name of Friedenſtein, or the caſtle of peace, in oppoſition to its antient name of Grimmerſtein, or the caſtle of Furies. It ſtands by itſelf on a hill, from whence there is a vaſt proſpect over a fertile plain. It contains a library, a cabinet of curioſities, a chapel, a mint, an armoury, a playhouſe, and a laboratory, and is embelliſhed with fine gardens, as is Frederickſhal, another ducal palace in the ſuburbs. Here are ſeveral churches, a military and other hoſpitals, an academy for cadets, various ſchools, a college, foundery, riding-houſe, green-houſe, water-works, porcelain, and other manufactories, &c. &c.

The other towns are

Waltherhauſen	Herbſleben
Hernia	Frederickſwerth
Frederichrode	Blaſſi Zell
Ichterſhauſen	Grafen Tonna
Kramchfeld	Ohrdorf.

The Principality of ALTENBURG.

THIS principality has Therunge on the north, Franconia on the ſouth and weſt, and Vogtland on the eaſt. It is well watered, has a fruitful ſoil, and rich mines. The inhabitants are Lutherans, and have fine ſuperintendants; and the principal places are as follow:

Eiſenburg, which gives name to a diſtrict and ſuperintendency; Carnburg on the Saale, which was formerly the capital of a country; Sulza on the Ilm, remarkable for its ſalt works; Roda on the Roda, a market town, containing a cloth and ſtocking manufactory; and Orlamunda on the Saale, a town much decayed from its priſtine grandeur.

Ronneburg, a ſmall town, gives name to a ſuperintendency and diſtrict, and has manufactories of woollen cloth, earthern wares, &c.

Altenberg on the Pleſſe, 37 miles weſt of Dreſden, is the ſeat of the chief offices for the diſtricts of the principality. The town which is large, and was once an Imperial city, contains a foundation for the education of young ladies of decayed families, a houſe belonging to decayed families, another belonging to the Teutonic order, an orphan houſe, a houſe of correction, a college, library, and muſeum. It gives name to a diſtrict which contains Lucca, Schmollen, Goſznitz, and Muſelwitz.

The Principality of SAXE-COBURG-SAALFELD.

THE moſt conſiderable places in this ſmall principality are

Saafeld, a handſome town on the Saale, contains the mint for the circle of Upper Saxony, a ducal palace, a grammar-ſchool, vitriol-houſe, ſmelting-houſe, ſeveral churches, manufactories of cloth, gold and ſilk ſtuffs, &c. Saalfeld-abbey, a Benedictine monaſtery, once ſtood on an eminence near this town, the abbot of which was always a prince of the empire, had the privilege of carriage, and a ſeat and voice in the diets.

Poſneck is a ſmall but populous town, full of potters, clothiers, and curriers; Lehſten is a town celebrated for having a quarry of excellent ſlate in the neighbourhood; and Grafenthal is a ſmall town near the river Zepten, in which are ſome iron and copper works, with a glaſs-houſe.

The territories belonging to the houſe of Hatzfeld, contain only Blankenhayn a ſmall town, and Wandefleben a market-town on the Apfelſtet.

The Principality of QUERFURT.

THIS little principality contains only the following places which are worthy of notice.

Querfurt, from which the principality receives its name, is a conſiderable town including the ſuburbs, with a caſtle on a hill in the vicinity; it is the ſeat of a ſuperintendency, and hath a great annual fair on the Wedneſday in the Eaſter week.

Heldrungen, a ſmall town which gives name to a diſtrict and ſuperintendency.

Dahrne, a ſmall town, is the ſeat of a ſuperintendency, and has a ducal palace in the neighbourhood.

Juterback, on the Angerback, is a ſmall town, near which, in 1644, a battle was fought between the Swedes and Imperialiſts, in which the former were victorious.

The Principality of ANHALT.

THIS principality is ſituated between the rivers Elbe and Saale, is 90 miles in length, and 35 in breadth where broadeſt. It is divided into the four branches of Deſſau, Bernburg, Zerbſt, and Cothen; and when the dominions were divided, it was agreed to ſubmit to the eldeſt of the family, who has the ſupreme government, and the only power to aſſemble the reſt, upon matters of conſequence. They have all but one vote in the diet, in which they generally depute one of their number to repreſent them. The right of ſeniority has been eſtabliſhed for ſome years in the branches of Bernbourg and Zerbſt, which are the moſt numerous. It appears certain, from hiſtory, that this family has been productive of mighty warriors, and many other famous men; and that they have matched into the greateſt families of the empire.

The eſtates of the prince of Anhalt-Deſſau are, the principality of Deſſau, with the town of that name, Worlitz upon the Elbe, Rudegaſt, Sunderſleben, Oranienbaum, a ſeat on the confines of the electorate of Saxony, Ragun, Jeſnitz, &c. The prince of Anhalt-Bernburg poſſeſſes the lordſhips of Bernburg on the Saal, and Ballenſtadt, Old Anhalt, from whence the family is denominated, Hartzgerode, Little Zeitz, where he reſides, and the abbey of Gernrode, for ladies, of which laſt the princes of Anhalt have the advowſon. The prince of Anhalt-Cothen has the town and territory of that name, between the Saale and Mulda, with Plotzkow, the bailiwics of Nienburg on the Saale, heretofore an abbey; Wolfen, the upper county of Warenſdorf, and Guſten. And the prince of Anhalt-Zerbſt poſſeſſes the town of that name, with the bailiwics of Lindau, Coſwitz, Roſwick, Roſla, Muhlingen in Magdeburg, Water-Nienburg, Dombourg, Meckern, and the lordſhip of Javern, or Yevern, in Oldenbourg: and he has the reverſion of the territory of Kniphauſen. It is computed, that the revenue of each is about 7000l. a year, except Deſſau and Zerbſt, which are believed to be worth more. There is no univerſity in this country; but prince Lewis of Cothen founded a learned ſociety, the members of which have been chiefly employed in tranſlations of antient Greek and Latin authors, and the improvement of the German language. He was the firſt preſident, and in a ſhort time above 20 princes, and 600 noblemen, entered into the ſociety, which is called the Fructifying Society, and has very much advanced the learning, and improved the language of the Germans. The people of Deſſau, according to the Preſent State of Germany, are Calviniſts, and the others Lutherans; but in the town of Zerbſt there are both Calviniſts and Lutherans. It is a good corn country, is watered with the Saale and the Mulda, and its principal trade is in beer.

The chief towns are,

Deſſau on the Elbe, at the influx of the Mulda, eight miles ſouth of Zerbſt, and 20 eaſt of Bernburg. It lies in a pleaſant fruitful country, is well fortified, and adorned with the prince's palace. In one of the chapels there is the tomb of one Rehebeck, an old miller, who, having followed Waldemar, marquis of Brandenburg, to the wars, where the latter was ſlain, the former perſonated him ſo artfully, that he was reſpected as the marquis himſelf. The trade of this town is in excellent beer, which is tranſported all over the country. It had a fine bridge over the Elbe, which the Imperialiſts burnt in 1631.

Zerbſt ſtands a little eaſt of the Elbe, 10 miles north of Deſſaw, and 46 north of Leipſic. It is very antient, and well fortified, according to the import of the name, which, in the Wendiſh dialect, ſignifies Fort. It is remarkable for little now but being the ſeat of its prince, and the ſame ſtrong beer brewery as at Deſſau, but it is ſaid to excel it; inſomuch that in Franconia it ſells dearer than wine.

Bernburg, a fortified town, in a fruitful territory, on the banks of the Saale, eight miles from the Elbe, 18 eaſt of Deſſau, and 20 ſouth of Magdeburg. The prince has a palace here, ſeparated from the town by the river. This place was ravaged by the Wendes in 1115, and it was taken in 1636, by the troops of the elector of Saxony, when they put the Swediſh garriſon to the ſword, and plundered the town.

Barbi belongs to a prince of the Weiſſenfels branch of Saxony, who has erected a noble caſtle in it, with commodious apartments, and crimſon velvet furniture, embroidered with gold. Here is a ſuperb ſaloon, which, with the cloſet and cieling, are finely painted. It has gardens delightfully ſituated by the ſide of the Elbe. It is obſerved by M. Pollnitz, that the duke of Barbi is the only Calviniſt prince of the Saxon family. The town ſtands near the influx of the Saale into the Elbe, betwixt Anhalt and Magdeburg.

Quedlinburg is a little ſtate in this circle, betwixt the principalities of Anhalt and Halberſtadt, which has the title of an abbacy from an abbey of great note, that was founded here by Henry I. who was buried in it in 936, and becauſe he ſpent much of his time here in taking birds, was ſurnamed the Fowler. It was after he had defeated 40,000 Hunns near Merſburg, that he began to build the church, to fulfil a vow which he had made for the proſperity of his arms; but, dying ſoon after he had dedicated the church to St. Servetus, his widow Matilda carried it on, his ſon the emperor Otho completed and richly endowed it, and his daughter Matilda was the firſt abbeſs. Succeeding emperors were alſo very kind to it, and declared themſelves its protectors; but, on the extinction of the then Imperial family, the protectorſhip paſſed into that of Anhalt, and thence into that of Saxony, in which it hath continued till the cloſe of the laſt century, when the late elector ſold the protection-fee of the abbey, and of the city of Northauſen, to the elector of Brandenburg, for 50,000l. when the latter garriſoned the town, and eſtabliſhed ſeveral courts in it. The abbeſs being a princeſs of the empire, and the firſt of thoſe princeſſes who only derive their title from their abbeys, complained of this to the diet, wherein ſhe has her deputy among the prelates of the Rhine, but without effect; ſo that now ſhe has little more than the ſhadow of power in the city, and the abbey itſelf has loſt much of its antient ſplendor: for the abbeſſes have not, as formerly, their hereditary officers, &c. The chapter has four dignitaries, viz. the abbeſs, the prioreſs, the deaneſs, and the canoneſſes, or nuns. All theſe ladies muſt be at leaſt baroneſſes, and prove their noble extraction for eight deſcents. The abbeſſes have commonly been of the Imperial or Electoral families. Thoſe of Brandenburg, Brunſwic, and Anhalt, poſſeſs fiefs which they hold of the abbey. No abbeſs can be choſen without the conſent of its hereditary protector, and the emperor's confirmation is ſufficient to render his election valid, without need of any from Rome; for that court has had nothing to do with the abbey ſince 1539; that Lutheraniſm was brought in by its abbeſs the counteſs of Stolberg. Here are no vows made; the canoneſſes, who receive and return viſits, know no reſtraints; both the abbeſs and her nuns may leave the abbey and marry; and ſince the reformation ſeveral of the abbeſſes have been widows. The revenue of this Lutheran abbey does not exceed 5000l. a year; its eſtate, beſides the little city of Quedlinburg, being only the villages of Ditfurt and Suderole; which laſt is claimed by the elector of Brandenburg, as belonging to his ſecularized biſhopric of Halberſtadt. The title of the preſent incumbent is ſaid to be Mary Elizabeth, by the grace of God, abbeſs of the Imperial and Secular abbey of Quedlinburg, born princeſs of Holſtein, &c. Her abbey has more the air of a little court than of a religious houſe. She gives audiences with all the affected pomp of ſecular princes, and is ſeated under a canopy ſurrounded by her chaplains and officers.

Quedlinburg, where ſhe reſides, is a little city on the river Bode, that was formerly a Hans town, and afterwards ſubject to the abbey; but the citizens rebelling againſt their abbeſs in 1745, they were made ſubject to the elector of Saxony, though now it is in other hands. It is eight miles ſouth-eaſt of Halberſtadt, and 49 north-weſt of Halle. It had formerly a caſtle on the top of a neighbouring hill, ſince demoliſhed. A famous council was held here in 1085. This town is ſo very near the frontier of Lower Saxony, that ſome geographers have placed it in that circle.

The free Imperial abbey of Walkenried belongs to the family of Brunſwic Wolfenbuttle, who poſſeſs it as a bailiwic;

bailiwic; but, on its account, pay an aſſeſſment to the empire, and to the chamber of Wetzlar. The only places of the leaſt importance, in the whole bailiwic, are, the town of Walkenried on the Zorge, and the town of Zorge, which latter contains two iron manufactories.

The Principality of SCHWARZBURG.

THE ſouth part of this principality, which is ſeparated from the north, is ſurrounded by Coburg, Altenburg, Eiſenach, and Erfurt; and the north part is encompaſſed by Thuringia, the electorate of Saxony, the counties of Stolberg, Hohenſtein, Eichsfelde, and the territory of the imperial town of Mulhauſen. In this principality are many fertile ſpots, yielding all kind of grain, roots, fruits, &c. The country likewiſe produces

Wine	Timber
Game	Veniſon
Silver	Copper
Salt	Alabaſter.

The rivers are the

Schwarze	Ilm
Saale	Gera
Helme	Zorgange
Wepper	Elbe.

The inhabitants amount to about 100,000; Lutheraniſm is the religion profeſſed, and the principal places are

Ehrich on the Helm; Kinglen a market-town defended by a caſtle; Haſzelben and Ebeleben, both market-towns; Grueſſen, on the Helme, and Scherenberg, which gives name to a bailiwic.

Sonderhauſen, on the Wepper, has a palace near it, the apartments of which are fine, and the gardens elegant. In the armoury is an image of Puſtrich, a Wandiſh idol, in ſhining black metal. Its head, on which the right hand reſts, is large and diſproportionate, with a hole in the top of it, and its belly is prominent and hollow. In lieu of a mouth a round hole is ſubſtituted; the legs are both mutilated, and the right is bent in a particular manner. The middle of the left arm, which reſts on the lap, is broken off. This town gives name to a bailiwic, and is the ſeat of the public offices. Keula is a ſmall town which gives name to a bailiwic, at which a foreſt begins that is 20 miles in length.

Arnſtadt, on the Gera, has a handſome ſtone bridge of ſix arches. On the ſame river are braſs and iron works, with ſeveral mills, and a ſalt-petre houſe near the town, in which are two palaces belonging to the prince, ſeveral churches, and a public ſchool.

Planen is a ſmall town on the Gera; Kefernburg, an old caſtle which gives name to a bailiwic; Auguſtenburg is a fine palace and a garden; Geren a market-town with iron works and a ſaw-mill; Langewieſen, on the Ilm, is a fief of Mentz; and Breitubach, on the ſame river, contains a palace.

The Territories of RUDOLSTADT.

THE principal places in theſe territories are Rudolſtadt, on the Saale, with a caſtle on an eminence in the neighbourhood, ſeveral colleges and courts, a Latin ſchool and ſuperintendency; and in the bailiwic to which Rudolſtadt gives name, there is a ſmall town called Teichel.

Blankenburg, on the Rhine, has ſome paper-mills and copper-mines; Konitz is remarkable only for its ſilver mines; Leutenberg has ſilver and copper mines, a copper mill, ſmelting-houſes, &c. Ehrenſtein is defended by a caſtle; and Ilm is a ſmall town on a river of the ſame name.

Frankenhauſen is environed on all ſides by hills, and gives name to a bailiwic; Arnſburg is an ancient caſtle; at Stranſberg there is the ruins of another caſtle; Hermingen, on the Helme, is very pleaſantly ſituated; Scholetheim is a market-town belonging to the Hopfgarten family; and Kalbra is ſurrounded by the plentiful diſtrict called the Golden Plain.

STOLBERG.

Stolberg county, which lies north of the lower county of Schwartzburg, eaſt of Hohenſtein, and weſt of Mansfeld, is about 20 miles long, and 10 broad; and gives name to counts of an antient, and once a very powerful family, whoſe domains lie diſperſed, but moſt of them are in the circle of the Upper Rhine; and they have right to the ſucceſſion of the counts of Schwartzburg. They are divided into the two chief branches of Iſenburg and Gudern, and the latter into thoſe of Stolberg and Ortenberg. They are ſovereign counts, of the Lutheran religion; and, beſides their large bailiwics in the circle above-mentioned, they have the county of Weringerode, in the principality of Halberſtadt, near the borders of which, among the mountains, ſtands the caſtle of Stolberg, which, it is ſaid, was built by Otho Colonna, a Roman gentleman, to whom the emperor Juſtin gave this part of the Hercynian Foreſt, in reward for his ſervices, and who gave it this name from the iron mines he met with in the foundation of it, which, in the German tongue, are called Sthalgrub.

MANSFELD.

MANSFELD is one of the four Hercynian counties, the other three being Stolberg, Hohenſtein, and Regenſtein. It has Stolberg and the upper county of Schwartzburg on the weſt, the principality of Anhalt on the north, the duchy of Saxe-Merſburg and Saxe-Hall on the ſouth, and part of Anhalt and Saxe-Hall, with the river Saale, on the eaſt. It is about 30 miles from eaſt to weſt, and 18 from north to ſouth. It abounds with ſeveral ſorts of minerals, very profitable to the inhabitants; particularly that called the Scheifferſtein, peculiar to this and the neighbouring provinces: it is a blackiſh glittering kind of ſlate, which, melted and bruiſed, yields much copper and ſilver. Hubenſack ſays, there is ſcarce the like in the world; that out of it the inhabitants melt copper, each hundred weight of which contains 10 or 12 ounces of pure ſilver; and that this ſtone is ſo common hereabouts, that it is every where dug up. He adds, that in theſe ſtones are lively repreſentations, in fair copper ſtrokes, of fiſhes of ſeveral ſorts, frogs, water-rats, and other animals, that abound in a neighbouring lake.

The pedigree of the counts of Mansfeld is thought to be derived from Burchard V. count of Quernfurt, to whom the emperor Frederic Barbaroſſa gave this country, for his ſervice in the Holy Land; and his ſucceſſors have enjoyed it ever ſince, but pay homage to the elector of Saxony. There have been ſeveral great men of this family, ſome of whom have been privy-counſellors to the emperors of Germany, and deputy-governors of Saxony; and the names of ſeveral of them ſhine in the annals of Germany and the Netherlands; but it is now divided into four or five branches, which makes them leſs conſiderable than formerly. Some of the young counts, in the 16th century, oppoſed ſeveral of the Lutheran doctrines, which gave riſe to a ſect called Mansfeldians. The two chief branches left are, thoſe of Bornſtet and Eiſleben: the latter lives now at the town of that name, and has nothing to depend on but the hunting, fiſhery, and patronage of the churches; the family being ſo deeply in debt, that the greater part of the eſtates which formerly belonged to it are ſeized by the creditors, and the remainder was ſequeſtered to the elector of Saxony, who mortgaged his part in 1715 to the late king George I. of Great Britain, for 600,000 rix-dollars; ſo that all the preſent count is poſſeſſed of is, only Bornſtet, with its diſtrict, two eſtates in Bohemia, and the ſmall principality of Fondi, in the kingdom of Naples.

The prince of this country being an hereditary count of the empire, we ſhall here, once for all, give ſome account of that dignity, referring the curious, for farther particulars concerning the riſe of this title, and the ſeveral ſorts of counts, to Selden's Titles of Honour, part II. and to the patent mentioned in Camden's Elizabeth, which was granted to Thomas Arundel, of Wardour, and his heirs, of both ſexes, for ever, by the emperor Rudolph II. when he created him a count of the empire. There we are informed, by Camden, that thoſe

counts

counts have a voice in the Imperial diet, may purchaſe eſtates in any part of the emperor's dominions, may liſt volunteers, and cannot be ſued by the emperor but only in the Imperial chamber: but that which properly relates to counts of territories, ſuch as thoſe of Mansfeld, is, that they were antiently created and inveſted by the delivery of one or more banners for ſeiſin of their territories, as dukes were inveſted; and the ſurrender of them was made by the re-delivery of thoſe banners to the emperor.

None of the towns or villages in this country are worthy of deſcription, except Eiſzleben, the capital of the county, which is divided into Old and New, and celebrated for the birth and death of the great reformer Martin Luther. It is populous, a great thoroughfare, contains many breweries, and has a caſtle to defend it.

The County of WERNIGERODE.

THIS county is ſituated on the borders of the principality of Halberſtadt, is 12 miles long, nine broad, partly level, and partly mountainous. The Blockſberg mountain here is reckoned the higheſt in Germany, and the ſnow generally covers it all the year round. The level parts of this county are fertile in

Grain	Fruit
Pulſe	Herbs
Flax	Timber, &c.

And the whole abounds in

Horſes	Cattle
Game	Salt-petre
Chalk	Cobalt
Lime ſtone	Freeſtone
Marle	Clay
Lead	Iron.

The eſtabliſhed religion is Lutheraniſm, and the principal places are

Wernigerode, which gives name to the county, and is defended by a ſtately caſtle adorned with admirable gardens, and containing a fine library, and many valuable archives.

The town conſiſts of three parts, viz. the Old Town, the New Town, and the ſuburb of Noſchonſade, containing in the whole about 800 houſes. It may be laid under water by means of the Zillicher Rivulet. The corporation has a property in ſome large woods, from which the burghers are allowed timber for building, and a certain quantity for fuel. The inhabitants are employed in breweries, diſtilling, and cloth and woollen manufactories. Along the Yilliche are ſeveral

Oil	Meal
Fulling	Sawing
Copper	And other mills.

Drubeck, a large village, has a foundation for ſix Proteſtant ladies, and Ilſenburg defended by a ſtrong caſtle. In the neighbourhood of the latter there are various mills, and in the baliwic of Haſſerode a colour mill and lead mine.

The Lordſhips of REUSSEN.

THESE lordſhips are ſurrounded by Erzgeberg, Vogtland, Neuſtadt, Culmback, Bamberg, Saalfeld, Leutenberg, Altenberg, and the Bailiwic of Zeitz. The plains are fruitful, the hills rich in minerals, and the rivers abound in fiſh. The people, who are Lutherans, employ themſelves in woollen and iron manufactures. The principal places are,

Greitz on the Elſter, a town encompaſſed with woods and mountains. It contains near 500 houſes, a handſome church, Latin ſchool, orphan houſe, and ſome woollen manufactories.

Zeulenroda conſiſts of between three and 400 houſes, has a manufactory of ſtuffs, ſtockings, &c. an allum mine, and an annual fair.

Burg is a caſtle on a rock, Trawrenth a market town, celebrated for its iron works, and Moſchlitz a market town, which has an allum mine work.

Gera is a handſome little town, ſituated in a pleaſant vale near the Elſter. It contains a gymnaſium and woollen manufactory.

Schlewitz has a woollen manufactory, and gives name to a lordſhip, which contains three market towns, viz. Tanna, Gorgwitz, and Market-Hohenleuben.

Lobenſtein on the Lemnitz, contains about 400 houſes, and Hirſchberg, in the lordſhip of Eberſdorf, belongs to the counts of Lobenſtein.

The great induſtry of the inhabitants of theſe lordſhips, render them very rich; for the people ſeem to make buſineſs their pleaſure, and to conſider labour as amuſement.

——Nature lives by toil:
Beaſt, bird, air, fire, the heavens, and rolling world,
All live by action: nothing lies at reſt,
But death and ruin: man is born to care:
Faſhion'd, improv'd, by labour; this of old
Wiſe ſtates obſerving, gave that happy law,
Which doom'd the rich and needy, ev'ry rank,
To manual occupation, and oft called
Their chieftains from the ſpade, or furrowing plough,
Or bleating ſheepfold. Hence utility
Thro' all conditions; hence the joys of health;
Hence ſtrength of arm, and clear judicious thought;
Hence corn, and wine, and oil, and all in life
Delectable. What ſimple nature yields
(And nature does her part) are only rude
Materials, cumbers on the thorny ground;
'Tis toil that makes them wealth.

The Lordſhips of SCHONBURG.

THE greateſt part of the inhabitants of theſe lordſhips are Lutherans, very induſtrious, and have ſeveral flouriſhing manufactures. The counts of Schoburg have a ſeat in the diet of the empire, and in that of the circle. The principal places are,

Waldenburg on the Mulde, famous for its brown and earthern wares; Hartenſtein gives name to a lordſhip; Stein on the Mulde is defended by a caſtle; Loſnitz has a cloth manufactory; and Wechſelburgh on the Mulde contains a noble ſeat.

Lichteinſtein	Penig
Remſa	Limzenau, and
Rockſburg	Burgſtadt
Glaucha	

are all ſmall towns, the latter having a ſtuff manufactory. The people of theſe lordſhips are particularly attentive to their religious duties, and ſeem to be unaffectedly pious in their demeanors.

Hail! heav'nly piety, ſupremely fair!
Whoſe ſmiles can balm the horrors of deſpair.
Bid in each breaſt unuſual tranſports flow,
And wipe the tears that ſtain the cheek of woe:
How bleſt the man who leaves each meaner ſcene,
Like thee, exalted, ſmiling, and ſerene!
Whoſe riſing ſoul purſues a nobler flight,
Whoſe boſom melts with more refin'd delight;
Whoſe thoughts, elate with tranſports all ſublime,
Can ſour at once beyond the views of time:
Till loos'd from earth, as angels unconfin'd,
He flies aërial on the darting wind;
Free as the keen-ey'd eagle, bears away,
And mounts the regions of eternal day.

The County of HOUSTERN.

THIS territory, though rather hilly, abounds in

Corn	Timber
Graſs	Iron
Cattle	Alabaſter, and
Deer	Jaſper,
Game	

which latter it may not be improper here to deſcribe.

The jaſper differs little from an agate, only it is ſofter, and will not bear ſo fine a poliſh, becauſe it conſiſts of groſſer particles; beſides, it is not ſo tranſparent, and is moſt commonly green; and the nearer it comes to an emerald, the higher is the value. However, it is of other colours, and on that account is divided into different ſpecies, among which are included the nephritic ſtones.

The

The white nephritic ſtone has a very fine, compact, firm texture, with a ſmooth gloſſy ſurface, and is of various ſizes; but the common ſort is two inches in diameter. The ſhape is very irregular like a common flint, and it is naturally of a fine white, with great brightneſs and tranſparency. It has ſometimes a blueiſh tinge, which makes it appear of a deep pearl colour, and upon that account is more valued by ſome; but when it is yellowiſh, it is not in great eſteem. It looks pretty much like marble, but breaks into fine gloſſy bits, and is conſiderably heavy, as well as very hard. It is often cut into ſmall cups and other toys, which are extremely bright.

The green jaſper is a bright ſemi-tranſparent ſtone, and of a cloſe, very hard, irregular texture. It has been found in maſſes of many feet in diameter, ſometimes no bigger than a horſe-bean. It is of a deep beautiful green, and almoſt always of the ſame colour throughout, though it has been ſometimes met with clouded with white. It is externally pretty, bright and gloſſy, and breaks into ſmooth pieces, ſeeming to be of a texture between flint and marble. It is conſiderably heavy, and its very great hardneſs renders it capable of a fine poliſh.

The ſoft duſky green jaſper is not ſo heavy nor ſo valuable as the former, and is generally found in ſtones of a flat ſhape, from two to five inches in diameter. The ſurface is pretty full of ſuperficial cracks, and the colour is always dull, with ſometimes a blueiſh and ſometimes a browniſh caſt. The moſt remarkable places are,

Honſtein, which at preſent is but a ruined caſtle, yet it gives name to the county and to a bailiwic; Ilfeld, a village on the Behr, that belongs to the elector of Brunſwic-Lunenberg, and contains a ſmall college; and Bleickrade, a ſmall town in the lordſhip of Lora, which, with the town of Kaettenberg, is now incorporated with the principality of Halberſtadt, and conſequently both towns belong to the king of Pruſſia.

Ebrich on the Zorge has ſeveral manufactories, and is the ſeat of a ſuperintendency; Sachſa is a ſmall town with a ruined caſtle, a flatting mill, a paper mill, and a gunpowder mill; Benneckſtein famous for its iron mills, and Great Bodungen, a market town on the Bode.

II. *The Circle of* LOWER SAXONY.

THIS circle is bounded on the north by the duchy of Sleſwich and the Baltic, on the ſouth by the circle of Upper Saxony and a part of that of the Upper Rhine, on the weſt by the circle of Weſtphalia and the North Sea, and on the eaſt by part of the circle of Upper Saxony. In ſome parts it is woody, ſandy, marſhy, &c. but in general it may be deemed a very fruitful country.

Some parts of this circle have already been deſcribed in the account of thoſe countries to whoſe ſovereigns they now appertain, ſuch as Magdeburg, Halberſtadt, &c. in Pruſſia; Holſtein in Denmark, &c. We ſhall therefore proceed to a deſcription of thoſe parts which we have not yet mentioned.

BRUNSWIC-LUNENBURG.

IN this country, though many places abound in heathy, marſhy, ſandy, and barren ſoils, yet ſeveral diſtricts are exceedingly fruitful in

Wheat	Barley
Oats	Rye
Peas	Beans
Vetches	Fruit
Roots	Hemp
Tobacco	Flax
Woad	Madder, &c.

Here are likewiſe great quantities of

Timber	Cattle
Honey	Game
Wax	Horſes
Pitch	Sheep
Fiſh	Minerals
Salt ſprings	Turf, &c.

Theſe territories have many manufactures of woollen cloths, ſtuffs, linen, thread, lace, cotton, carpets, gold twiſt, galoons, fringe, ſword-knots, taſſels, halberts, embroidery, tobacco-pipes, ſalt, fire-arms, colours, paper, gunpowder, hats, ſkins, tobacco, &c.

Lutheraniſm is the eſtabliſhed religion, but Roman Catholics are tolerated in ſome places, particularly at Hanover and Gottingen; and Calviniſts and Jews are tolerated throughout all the electoral territories.

It being incompatible with the limits of this work to trace the anceſtors of this illuſtrious houſe, we ſhall only obſerve, that the houſe of Brunſwic being united in the two ſons of Henry duke of Zell, in 1546 the branch of Brunſwic Wolfenbuttle, and Beveren, deſcended from Henry, the eldeſt of thoſe ſons; and the electoral branch of Brunſwic-Lunenburg, from William the youngeſt ſon; and that the anceſtreſs of both branches was Margaret queen of Scotland, wife of king Malcolm III. and ſiſter to Edgar Atheling the Saxon, who was the true lineal heir of the crown of England, both of the Daniſh and Saxon race; which Edgar dying without iſſue, the right of ſucceſſion to the crown fell to queen Margaret's poſterity, in whom centred at once the hereditary titles of the Scottiſh, Pictiſh, Britiſh, Daniſh, and Saxon royal families. Had we room, we could ſhew from hiſtory, how his majeſty is deſcended from the Scottiſh, Norman, and Welch royal families, after the conqueſt, and particularly from the Plantagenet family; from Margaret queen of Scotland, daughter to our king Henry VII. from the houſe of Lancaſter; from the Scots royal families of Baliol and Bruce; and, laſtly, from king James, the firſt monarch of Great Britain; ſo that his majeſty has in his veins the blood of all the royal families that ever reigned in this iſland. It might alſo be demonſtrated, that this family is one of the moſt antient and illuſtrious in Europe; that it is deſcended from, and has intermarried with moſt, if not all, the ſovereign families in Chriſtendom; that there have been two emperors of Germany, and an empreſs of Conſtantinople, of this family, not to mention the ſhare which the late queen Caroline might early have had in the Imperial throne of Germany, had it not been for her inflexible attachment to the Proteſtant religion; and that from this family are deſcended the kings of Sweden, Denmark, Poland, and Pruſſia, the electors of Bavaria and the Palatinate, the families of Heſſe, Baden, Mecklenburg, and ſeveral princes of the houſe of Saxony; to whom we might alſo add ſeveral mitred prelates, there having been 18 archbiſhops and biſhops of this family, all princes of the empire, beſides one cardinal.

The creation of the electorate, which is attached to the duchies of Hanover and Zell, was concerted at the congreſs at the Hague in 1692, by our king William III. of glorious memory, and happily effected by his influence, in conjunction with moſt of the Proteſtant princes of the empire, on purpoſe to counterbalance the acceſſion of the popiſh branch of the Palatine family to the electorate of the Rhine. It was oppoſed by ſeveral German princes, and particularly by the duke of Brunſwic Wolfenbuttle, out of envy; but the then emperor Leopold, in order to teſtify his gratitude to the Proteſtants for their aſſiſtance in the war againſt France, and, conſidering not only the perſonal merit of duke Erneſt, but the great dignity of the Brunſwic family, who had the firſt ſeat in the college of princes at the diet, and was one of the moſt conſiderable in the empire for antiquity, wealth, and power, ordered it to be put to the queſtion, in the college of electors at Ratiſbon; wherein it was reſolved, the 17th of October, 1692, that the electoral dignity ſhould be conferred on the ſaid prince Erneſt and his heirs. The college of princes immediately entered their proteſt againſt this reſolution, as contrary to the laws of the empire, becauſe done without their conſent. Nevertheleſs, in December following, the emperor gave prince Erneſt the inveſtiture, by delivering the electoral cap to his plenipotentiaries, and declaring him elector.

The extent of the particular dominions of the elector is thus ſet out by the author of the Preſent State of Germany.

	Miles long.	Miles broad
The principality of Grubenhagen	40	40
The duchy of Hanover, or Calenberg	40	12
The duchy of Lunenburg	80	50
The duchy of Saxe-Lawenburg	30	15
The duchy of Bremen, including Verden,	60	40
The county of Hoya	30	15
The county of Diepholt	30	10

The elector's pretenſions are only to the ſmall county of Eichfeld, (of which the elector of Mentz is poſſeſſed) as part of the principality of Grubenhagen: to the larger half of the biſhopric of Hildeſheim: to the fortreſs of Peyna, and to the county of Reinſtein, as a vacant fief.

His revenues ariſe, 1. From the ſalt-pits, or ſprings, within the walls of Lunenburg. 2. From taxes on land, cattle, merchandize, public houſes, and inns. But his greateſt revenues ariſe from the rich mines of ſilver, iron, and copper. The mines of Clauſthall, with thoſe of St. Andrew and Altena, yield near 200,000l. a year; but, whether this computation is to be underſtood as clear of all charges, is not ſpecified: ſo that, upon the whole, this elector's revenue is calculated to amount to at leaſt 400,000l. a year. In the year 1692, the elector had near 14,000 regular troops on foot. Now that the eſtates of the electorate are larger above one-half, by the addition of Lunenburg and Bremen, he may raiſe an army of betwixt 30 and 40,000 men, without greatly burthening his ſubjects. In the year 1729, he reviewed a body of 19,890 men; and in September 1735, that number was augmented to 22,000 regular troops. In 1687 there was an hereditary and perpetual union made between this electoral family and that of Saxony; which was renewed in 1731 and 1736, for the mutual guarantee of the peaceable poſſeſſion of their eſtates againſt all diſturbers and invaders.

BREMEN.

THE duchy of Bremen has the Weſer on the weſt; the Elbe, and part of Lunenburg, on the eaſt; the German Sea on the north; and part of Verden and Oldenburg on the ſouth. It is about 60 miles in length, and 40 in breadth, including Verden. It is divided into, 1. The land of Bremen, properly ſo called, which lies ſome miles round the city. 2. Wurſterland, along the coaſt from the Weſer to the mouth of the Elbe. 3. Hadeland, the north part of the duchy at the mouth of the Elbe, where the people are reckoned ignorant, but ſo fond of gay cloaths, that their neighbours have a proverb, that "there are no peaſants in Hadeland." Part of it belongs to Hamburg, and part to Saxe-Lawenburg. 4. Kedingerland, in which lies Stade. 5. Altland, a pleaſant fruitful tract, of about 14 miles in length. Betwixt Bremen and Stade the country is deſert, and either a barren ſand, or a moraſs; but the other parts towards the rivers are very pleaſant, and abound with fields, meadows, and orchards. The inhabitants, who formerly relied ſo much on their valour, that they ſcorned to build forts, are ſtill reckoned as good ſoldiers as any in Germany; and it is ſaid of the Wurſtlanders in particular, that they will fight and drink with the beſt men in Germany. The ſituation of the country between two ſuch navigable rivers, has turned the thoughts of the people in general to trade.

The emperor Ludovicus Pius gave this country to Anſgarius, the firſt archbiſhop of Bremen and Hamburg, whom he made metropolitan of Denmark, and all the known countries to the north. He died in 865, and his death is annually obſerved by the common people here with great ſolemnity. Denmark and Sweden were no longer dependent on this ſee, when Lunden was erected into an archbiſhopric: but this country continued ſubject to its archbiſhops, till, by the treaty of Weſtphalia, the archbiſhopric was ſecularized, converted into a duchy, and given to the Swede, for reſtoring the peace of the empire, and giving up other places which they had taken during the war. As their anceſtors had frequent wars with their archbiſhop in defence of their liberties, they pleaded for the ſame exemptions when made ſubject to the Swedes, who continued their maſters till 1712, when this country and Verden were conquered by the king of Denmark. This prince mortgaged it ſoon to the elector, who in 1715 had 250,000l. granted him by his parliament, to enable him to make the purchaſe of it. There was an oppoſition, indeed, made to it, in both houſes, and a clamour raiſed againſt it without doors; but, however convenient it might be for the elector of Hanover, whoſe family was poſſeſſed of Bremen once before, and to whoſe dominions it lay contiguous; the legiſlature wiſely judged it might be of the moſt dangerous conſequence to the crown of Great Britain, that any foreign prince, eſpecially a maritime power, ſhould hold the key, which the king of Denmark then had, of the Elbe and the Weſer. Any one who takes the pains to peruſe the maps of this part of the empire, will perceive, that, whilſt that king was in poſſeſſion of the duchies of Bremen and Verden, he was maſter of the ſea-coaſt from Denmark almoſt to the Seven Provinces. The maps ſhew, that the Elbe runs, for above 500 miles, through Bohemia, Saxony, Brandenburg, and the reſt of Germany; and that the Weſer paſſes, for about 250 miles, through Heſſia, Weſtphalia, Oldenburg, and ſome other countries of the empire: and the vaſt importance of thoſe rivers to our trade will be confeſſed by every one who conſiders that all our woollen, and other Engliſh manufactures, and almoſt all our commodities, both domeſtic and foreign, to the value of many hundred thouſand pounds a year, are by thoſe ſtreams conveyed to innumerable markets; and that by the ſame navigation a great part of our riches flows continually home to us; a trade too precious to have lain at the mercy of any foreigner, either to lock it up from us, or to lay what impoſitions he pleaſed on it, as might have been the caſe, if his majeſty had not got Bremen and Verden out of the hands of the king of Denmark. In 1717, this country ſuffered very much by inundations from the Elbe, the banks of which are in ſome places very low, and would be frequently overflown, were it not for the dykes. In 1720, the crown of Sweden conſented in form to the diſmemberment of this duchy from its other dominions, and confirmed it to the houſe of Brunſwic.

The common dialect of this, and a very large part of the lower circles of Germany, is a ſort of Lower Saxon, neither Dutch nor High German, but partaking of both, or rather the root of both; for it ſeems to have retained more of the antient Anglo-Saxon than of the Dutch or High-German: yet every one underſtands High-German, and it is the language of their printed books, ſermons, and written letters.

It is watered by many rivers. The Tech, the Umme, and the Hamma, join together, and fall into the Weſer; as do the Brept, the Lun, the Stotel, and ſeveral others; the Eſſa, the Schwingel, and the Oſte, fall into the Elbe. The moſt remarkable places in this duchy are,

Boxtehude, on the Eſſa, or Eſt, 15 miles weſt of Hamburg, and 48 north-eaſt of Bremen, in a pleaſant country, ſo fruitful as to be reckoned one of the granaries of Hamburg. It is a pretty large town, with broad ſtreets, and is ſurrounded with a ditch and wall, upon which there are old ruinous towers. Its river, which comes out of Lunenburg, and is navigable for boats up to the town, falls into the Elbe at Crantz, about four miles off, where the latter is about a mile over; and from hence there is a fine proſpect of Hamburg. The town, which firſt had its riſe from a nunnery of ladies of a family of that name, was of ſuch note formerly, as to be admitted into the Hanſeatic league, and ſtill retains the privileges of a city, with burgomaſters and ſenators. One of the dukes of Brunſwic attempted, in vain, to reduce this place in 1424, as did in 1552, one of the counts of Mansfeld, who, becauſe he could not take it, ſet fire to the neighbouring nunnery. During the civil wars of Germany, it was ſeveral times taken from, and re-taken by the Swedes; who being at length reſtored to it in 1679, kept it, with the reſt of the duchy of Bremen, till the whole country was conquered by the Danes, and then made over to the elector of Hanover.

Stade, which is reckoned the ſecond town in the duchy, next to Bremen, has a good trade, and a healthy air, in a fruitful country on the river Zwinga, or Schwingel, which falls into the Elbe two miles below it, 27 miles weſt of Hamburg, and 44 north of Bremen. This, beſides its having been a free imperial city, and one of the Hans Towns, was formerly endowed with great privileges; particularly, for being an aſylum or ſanctuary for all offenders, with a right of toll for ſhips paſſing up the Elbe; but became ſo poor, by Hamburg's outſtripping it, that it was forced to ſell its ſtock to that city, and put itſelf under the protection of the archbiſhop of Bremen, it having formerly been the capital of a marquiſate of its own name, which was annexed to that ſee by its marquis in the 13th century. After its abovementioned decay, our Engliſh merchants, upon

ſome diſguſt taken at Hamburg, removed hither, which revived its trade, ſo that it again became rich and populous, and is in good condition at preſent, though the Engliſh returned to Hamburg. The town is well built, and its town-hall, market-place, and churches, are handſome.

Bremerfurd, or Breme-Verden, is a walled town, with a good caſtle, that commands the neighbouring plains; and a palace, which was formerly the archbiſhop of Bremen's, on the river Oſte, that runs into the Elbe. It is 15 miles ſouth from Stade, and 28 north of Bremen; and the chief trade of it is by paſſengers betwixt thoſe towns. The chancery of the duchy is kept at this place.

Ritzbuttle is a bailiwic, conſiſting of a caſtle, with 14 villages, belonging to the Hamburghers, and ſituated on the coaſt where the ſouth Elbe falls into the north ſea not 10 miles from the utmoſt point of land of this country, and 32 north-weſt of Stade. Here the Hamburghers have a pretty good harbour, called Cuxhaven, which is of great benefit to ſhips coming on the Elbe in winter, when the river is full of ice. Here likewiſe their ſhips often ſtop, at their arrival from long voyages, for orders and news, and to know whether all is well with the city, before they venture up. Here are their privileged pilots, who, by their ſtatutes, are obliged to have a yacht always at ſea, near the outermoſt buoy, ready to put a pilot or two as occaſion ſhall require, on board of every ſhip coming into the Elbe. But, notwithſtanding this is one of the moſt dangerous rivers in Europe to come into, as all ſhips coming to Hamburg are obliged to pay half pilotage, whether they have pilots on board or not, they are ſeldom at ſea but in good weather, when they are leaſt wanted; which has occaſioned the loſs of many a rich ſhip within the river. The Hamburghers have another fort in this neighbourhood, called New-werck, or Nieu-wark, which ſerves for ſtrengthening the former, on the land-ſide, againſt the country. Adjoining to the bailiwic of Ritzbuttle is the little diſtrict of Hadeln, or Hadeland (the moſt northern part of this duchy) which, with its capital, Otterndorff, on the river Medame, and the town of Hadeln, came, in the 16th century, from the archbiſhops of Bremen to the houſe of Saxe-Lawenburg: but the male line of that houſe becoming extinct in the year 1689, and a diſpute ariſing about the inheritance between the female heirs and the king of Sweden, the emperor cauſed it to be taken into ſequeſtration, under which it ſtill remains. The caſtle of Otterndorff, which belongs to Saxe-Lawenburg, commands moſt of the diſtrict.

Carelſtat is rather a fortreſs than a town, on the river Geeſte; which, having filled its ditches, falls into the Weſer, 31 miles north-weſt of Bremen. It was founded by Charles X. of Sweden, taken by the dukes of Brunſwic in 1676, and reſtored by the treaty of Fontainebleau in 1679. The late Charles XII. in 1698, granted liberty of conſcience, with 30 years exemption from taxes, to all proteſtants that would ſettle here: but the inhabitants are few.

Bremen, the capital of the duchy, ſtands in a fruitful plain, 23 miles eaſt of Oldenburg, and about 460 north-weſt of Vienna. It is an antient, large, populous, flouriſhing free imperial city, and the third in rank among the Hans; of whoſe three renowned free imperial cities, viz. Hamburg, Lubeck, and Bremen, though it is reckoned the leaſt conſiderable, it is certainly much the oldeſt, it being noted for ſhipping when the monks, ſent by the pope to convert the Saxons, embarked here for England, which was 200 years before Hamburg was built, and above 500 before the building of Lubec. An archbiſhopric was founded here by Charles the Great, who made it the metropolis of the north. Henry V. granted the citizens great privileges, in reward of their valiant performances in the holy wars. It had ſeveral privileges alſo granted it by the emperor Wenceſlaus, for clearing the coaſt from pirates, and protecting the merchants trading on the Weſer; and no goods were allowed to go down the river, and paſs this city, without being firſt landed here. The inhabitants have the privilege alſo of fiſhing from the bridge of Hoye, four German miles above Bremen, down to the ſea; as likewiſe in the rivers Hunte, Ochtum, Wemme, and Leeſum, which flow into the Weſer. The city is well ſupplied with fiſh, both from its rivers, and the ſea; and they have every month ſeveral ſorts in ſeaſon. Among others, they catch great quantities of ſalmon and lampreys, the former of which, being dried and ſmoked, and the latter pickled, are in great eſteem throughout all Germany. Rudolph II. endowed them with the privilege that neither their perſons nor goods ſhould be liable to arreſt, attachment, or other impoſition, throughout the empire; and Charles V. gave them the right of coinage: but, on its receiving the reformation in 1552, and zealouſly defending it againſt one of their archbiſhops, that emperor ordered the city to be beſieged by the duke of Brunſwic; againſt whom it made ſo gallant a defence, that, after almoſt a year's continuance, he was forced to raiſe it. The archbiſhops did not embrace the reformation till 1585. This city pretends to a right of vote and ſeſſion in the diet ever ſince Charlemagne, which was confirmed to them, though the archbiſhop oppoſed it, by the emperor Ferdinand III. in 1641. Afterwards, on the ſecularization of the archbiſhopric in the reign of queen Chriſtina of Sweden, new diſputes aroſe, which came to a rupture in 1654; and though they were compoſed under Charles Guſtavus in 1658, they broke out again under Charles XI. who claimed the ſovereignty of the city, as well as that of the duchy, which had been yielded to the Swedes by treaty: but the ſenate totally diſclaimed it, on the baſis of the 10th article of the treaty of Oſnaburg, whereby it was declared a free imperial city; though the archbiſhopric, with all the rights belonging to it, was added, by the emperor and empreſs, to the crown of Sweden. The Swedes, nevertheleſs, not being ſatisfied, beſieged it above ſix weeks, but raiſed the ſiege, at the interpoſition of the neighbouring princes; and then followed the treaty of Hahenhauſen in 1666, by which the city was obliged to part with ſome of its antient privileges, and to wave its pretenſions to the right of ſitting and voting in the diet. It is governed by a ſenate, compoſed of four burgomaſters, or conſuls, and 24 ſenators, or common-councilmen, conſiſting of four diviſions, viz. one burgomaſter, and ſix ſenators, to each of the four wards. They are choſen out of the chief citizens, ſo that the government is a kind of ariſtocracy. This ſenate decides all cauſes, eccleſiaſtical, civil, and criminal; and from it there lies no appeal, except in the latter, where the ſum litigated exceeds 600 Rheniſh guilders of gold, or about 210 l. ſterling; in which caſe, there may lie an appeal to the imperial chamber of Wetzlar. If any of the members die, or become incapable, they muſt chuſe another in 24 hours; for which end, one elector is choſen out of each claſs by lot, and then ſhut up in a room, without ſeeing any one till the election is over. They have their own ſtatute-laws, which were enacted in 1281, but have been ſince amended. It has a juriſdiction of about 10 miles round, abounding with paſtures well ſtocked with cattle, and is bordered with territories belonging to his Britannic majeſty. The river Weſer, which is navigable about 30 miles from the ſea, runs through it, and divides the old city from the new; but there is a communication by a bridge of boats, and ſeveral wooden bridges. The river is not navigable for ſhips of burden farther than Fegeſack, ſix miles below the town, where there is a cuſtom-houſe, and where all ſhips load and unload: ſo that all goods are brought up from thence in flat-bottomed veſſels. It has a conſiderable trade to England, eſpecially with all ſorts of Weſtphalian linens, and ſends ſeveral ſhips, particularly to London, every year; here being a great conſumption of the Engliſh and woollen manufactures which they receive not only directly from England, but chiefly by way of Hamburg and Holland, and diſperſe again through the whole circle of Weſtphalia. It ſends ſhips likewiſe to France, Spain, Portugal, and Italy, and a great number to Davis's Streights. It has alſo a conſiderable inland trade, particularly to the great fairs and marts in Germany, to which, among other goods, it ſends large quantities of calicoes and ſugar, printed and refined here, though not to that perfection as at Hamburg. Its beer is very much eſteemed in Germany, and therefore exported in large quantities. Its other commodities are, minerals, timber, corn, cattle, and leather; in dreſſing of which, and cloth, they are very expert: ſo that both are ſent hither, for that purpoſe, from other countries. Its

duties

duties upon importation and exportation are very low, which is a great encouragement to its trade, and gives it an advantage over the Dutch in the countries betwixt this city and their republic. It is reckoned, in ſhort, the next port to Hamburg, in the whole empire, for commerce; and, in time of war, it alſo fits out ſhips of force to convoy their merchantmen. It generally ſends 25 or 30 ſhips a year to the whale-fiſhery in Greenland; and their harpooners, being eſteemed the moſt expert in all the country, are frequently hired both by the Dutch and Engliſh.

Both the old and new towns are pretty well fortified with high walls, a broad ditch, and a counterſcarp: the former has ſeveral towers on the walls, after the old manner; but the walls of the new town have eight fine bulwarks. It is, however, ſtronger by nature than art. Here is a garriſon of 600 men, beſides the guard kept, day and night, at the town-houſe, by 200 of the citizens. On the city wall, or ramparts, which are planted with rows of trees, there is a road for coaches, as well as foot-paſſengers, and a moſt agreeable proſpect of the river, and the adjacent country.

It has a grand arſenal, well ſtored with artillery, ſmall arms, and other utenſils and tools of war, both antient and modern. There is a leſſer, which is a ſort of armoury for the burghers, it being a ſpacious hall, where their council of trade meets, the walls of which are handſomely adorned with ſmall arms. At the entrance of it there is the figure of a warrior in complete armour, who, by ſome mechaniſm under the ſteps, as ſoon as you tread on them, lifts up the bever of his helmet with his truncheon to ſalute you.

From the gallery of the grand arſenal, which contains the greater part of the ſmall arms, ranged in a very beautiful manner, there is a paſſage to the Gymnaſium, or academy, built after the reformation, which was at firſt only a free ſchool, afterwards advanced to the title of an univerſity; which, by the munificence of ſeveral worthy citizens, makes as good a figure as ſome of the beſt in Germany, and has produced many great men.

The ſenate, council, or town-houſe, is a large Gothic ſtructure, built in 1405, and adorned on the outſide with ſeveral ſtatues of the emperors and electors, beſides thoſe of Plato, Ariſtotle, Cicero, and other antients; and a picture of the old and new towns. The council-chamber has the pictures of 12 German emperors, down to Leopold. The courts of juſtice, and other apartments here, are plainer than ſuits with the dignity of the offices they are put to; and the lower part, or hall, in which there are doors that lead to the courts of juſtice, is filled with toy and print-ſhops, and others for ſtationary and haberdaſhery wares, &c. like ours at Weſtminſter.

At one end of this building, but ſeparated by a ſtreet, there is a public ſtructure with a piazza and ſhops under it, which ſerves for an exchange, but is not near ſo much frequented as thoſe of London and Amſterdam, and only reſorted to by the merchants on poſt days.

Here are ſeveral hoſpitals, particularly one for ſuperannuated or diſabled mariners, and another for the ſick, lame, decrepid, and old poor people of both ſexes. It is a plain but commodious ſtructure, with a very handſome chapel. Adjoining to it is a houſe of correction for vagabonds and criminals, where lunatics are alſo kept, and ſuch as happen to kill a perſon inadvertently, the plea of chance-medley not being admitted in this country. Such a ſtrict diſcipline is kept in it, that it is obſerved, though there are at leaſt 100 profligate perſons in it, not an indecent word is heard out of their mouths, they being almoſt continually obliged to accompany the taſk-maſter in ſinging pſalms and hymns.

The new town on the ſouth ſide of the Weſer, in which ſtand the univerſity and the arſenal, conſiſts chiefly of gardens and little pleaſure houſes belonging to the principal merchants and other inhabitants of the old city, has larger and much more regular ſtreets than the latter, and they are moſt of them planted with rows of limes and wild cheſnuts.

The ſtreets of the old town on the north ſide of the river, in which are the cathedral and the ſenate houſe, centre in the market-place, wherein ſtands an old gigantic image, one of thoſe erected in many of the German cities, by order of Charles the Great, by the name of Statua Rolandina; on which is an antient inſcription, denoting it to be a teſtimonial of the liberty granted by Charles the Great to this city. On the oppoſite ſide of the market is a public houſe, which, at the ſame time, ſerves as a ſort of common hall for the ſeveral colleges or aſſemblies of the burghers and the council of trade. This old town is ſaid to have been walled 800 years ago. On the largeſt of its wooden bridges there is an engine that raiſes water, and diſtributes it all over the city; and there is a fort at the head of it, which is well guarded.

Under the ſenate houſe is a ſpacious wine cellar, wherein are five huge veſſels, each of which holds much above 100 hogſheads, whereof four are always kept full of Rheniſh wine, and the fifth is left empty, with a ſmall door at the head of it, to gratify ſuch as have the curioſity to enter it. There is one vault of choice old hock, the key of which is kept by the preſiding burgomaſter, and only a number of bottles left in the hands of the maſter of the cellar, to be ſold at about a dollar, or 4s. 6d. a bottle. The city coins a little piece of money of its own, called a groat, which is worth about a halfpenny; 163 of their yards make 100 Engliſh. The cuſtom, which afterwards became general in the other Hans Towns, of ſwearing new-comers by bread and ſalt, and making them free, on paying a fine of good liquor to the company, is ſaid to have been begun here.

Otterſberg, a little fortified town, 14 miles north-eaſt of Bremen, with a ſtrong caſtle or paſs on the borders of the biſhopric, was formerly the biſhop's ſeat. It was taken twice by the Imperialiſts, and once by the Swedes, in the German civil wars. It is a pretty large borough, on the river Wemme, from whence the road towards Bremen is very bad, ſandy, and full of the branches of the river, in the middle of which is a fort, with four baſtions, that commands a long dyke, or cauſeway, with ſeveral cuts in it, over which are bridges. On the other ſide of the town, 12 miles from it, ſtood the monaſtery of Cloſterzeven, charmingly ſituated, which is now a conſiderable borough, adorned with many fine gardens, and embelliſhed with a handſome church. This is the place where, in 1757, the convention was concluded between the duke of Cumberland and the duke de Richlieu, by the mediation of count Lyner the Daniſh governor.

Scharmbeck is a large village which gives name to a diſtrict, and has a woollen manufactory; Hagen gives name to a bailiwic; Stotel does the ſame; Bardel is the name of a village, where the nobility hold a meeting twice a year; and Neuenwalde is a village where there is a foundation for a lady abbeſs and 12 other ladies.

The bailiwic of Wildeſhauſen, on the Hemte, has but a very indifferent ſoil. In 1700 the crown of Sweden mortgaged this bailiwic to the electoral houſe of Brunſwic Luneburg, or Lunenburg; and in 1720, at the peace of Stockholm, made over all right and claim thereto, as well as to Bremen and Verden. The only place worth mentioning in this bailiwic is the town of Wildeſhauſen, from which the whole receives its name. It is ſituated on the Hemte, contains about 300 dwelling houſes, a few churches, and ſome other public buildings; about half the inhabitants are Roman Catholics, who are not allowed the uſe of bells, church muſic, or proceſſions; nor are they permitted to be baptized, married, or buried by their own prieſts, but muſt have thoſe ceremonies performed by a Lutheran miniſter. Here are ſtill to be ſeen the veſtiges of an antient abbey, and the ruins of an old caſtle.

LUNEBURG-ZELL.

THIS principality is bounded on the north by the duchy of Lawenburg, or Lauenburg and the Elbe; on the ſouth by Calenberg, Hildeſheim, and part of Brunſwic; on the eaſt by another part of Brunſwic, and the duchy of Mecklenburg; and to the weſt by Bremen, Verden, and Hoya. In many parts the ſoil is ſandy, heathy, and marſhy; the banks of the Elbe, Aller, and Jetze, are however fertile, and abound in

Wheat	Hops
Rye	Oak
Barley	Firs
Oats	Birch

Peas	Pulſe
Buck wheat	Beach
Flax	Pines
Hemp	Alder, &c.

Here are likewiſe plenty of horſes, cattle, ſheep, bees, veniſon, ſalt-ſprings, and lime-ſtone. The rivers Elbe, Aller, and Ilmenau, produce great quantities of fiſh, and being all navigable, are of great advantage to the country in a commercial point of view. The whole principality contains about 200 Lutheran churches, which are under the direction of two general, and 15 ſubordinate ſuperintendants. The manufactures are

Linen	Stockings
Ribbons	Starch
Hats	Refined ſugars
Bleached wax	Wooden wares
Gold wires	Barges ready built
Silver ditto	With boats and ſome ſmall ſhips.
Cottons	

On account of this principality the king of Great Britain has a ſeat and voice, both in the college of the princes of the empire, and the circle of Lower Saxony. The revenues ariſe from the demeſnes, tolls on the Elbe, contributions, duties on cattle, beer, wine, brandy, and other commodities; and the principal places are the following:

Luneburg, or Lunenburg, the metropolis of the principality, is a large city ſituated on the river Elmen, or Ilmanau, which is navigable from hence to the Elbe. It is 27 miles from Hamburg, and 68 from Hanover. It was formerly an Hans town, and an Imperial city, and at preſent is ſuppoſed to contain about 9000 inhabitants. The name hath been derived by ſome from Lina, the antient name of the Ilmanau; and by others from Luna, the moon, an image of which was worſhipped here by the inhabitants in the times of Paganiſm. Here were formerly ſeveral convents, out of the revenues of one of which, viz. the Benedictine, an academy for martial exerciſes was founded, where the youth of the principality are taught gratis

Dancing	Riding, and
Fencing	The French language.

Out of the ſame revenues a Latin ſchool, conſiſting of four claſſes, was likewiſe founded, and well endowed. The ſuperintendency of theſe, and the eſtates appropriated to their ſupport, is veſted in a landſchaft director, and an auſreiter, who are both ſelected from the Luneburg nobility. The firſt of theſe officers is the head of the ſtates of the principality, and the preſident of the provincial college. He aſſumes the title of excellency, and in public writings ſtiles himſelf, *By the grace of God, Landſchaft-Director, and Lord of the Manſion of St. Michael in Luneburg.* The public edifices are

Three pariſh churches	The ducal palace
Three hoſpitals	The town-houſe
A ſalt magazine	The academy
An anatomical theatre	The barracks for the garriſon

and the conventical church of St. Michael, in which the ancient dukes lie interred, and where the celebrated table taken from the Saracens by the emperor Otho, is depoſited. It is eight feet long, and four broad, was plated over with chaſed gold, and had a rim richly embelliſhed with precious ſtones of an immenſe value; but in 1698, a gang of robbers broke into the church, and ſtripped this magnificent table of a large diamond, 200 emeralds and rubies, and moſt of the gold. Here are many rich ſalt-ſprings, a fifth of the product of which belongs to the king of Great Britain. The ſalt is the beſt in Germany; the other articles, in which the commercial part of the inhabitants deal, are wool, honey, wax, lime-ſtone, flax, linen, beer, &c. and warehouſes are erected along the borders of the Elmenau, for the reception of goods from all parts of Germany, to be forwarded to Hamburg and Lubec.

Burgdorf on the Aw is walled, moated, has a caſtle, and gives name to a bailiwic and ſuperintendency.

Ahlden on the Old Leine has a palace, in which Sophia Dorothea, conſort of his Britannic majeſty George I. reſided after their ſeparation till her death, in 1726. It is the ſeat of a bailiwic, and has great trade in horſes and timber.

Ultzen, a neat, little, compact town, at the conflux of the Wiper, and two other rivulets, which form the river Elmenau, is 26 miles ſouth of Luneburg, and 33 north-eaſt of Zell. It was formerly called Lawenwald, i. e. Lion Foreſt, and had its preſent name from the neighbouring monaſtery of Oldenſtadt, formerly called Old Ulſen. It is ſaid, that the firſt Engliſh Saxons came to Britain from this place, and thoſe who returned hung up a gilt tin ſhip in the market-place, as a memorial of their ſucceſs, which continued there till 1646, when moſt of the town was burnt down, and never wholly rebuilt ſince; but the ſtreets are larger, and the houſes more ſplendid and regular than before.

Hudemuhlen is a ſmall town on the Aller; Rethem is ſituated on the ſame river, and gives name to a bailiwic; Garto belongs to the barons of Bernſdorf, as does Brome on the Ohre to the Wolfſburg family.

Eſſel on the Aller gives name to a diſtrict, wherein the noble family of Bothmar have three manors, and a village from which they take their name, with a church of their own, to which they appoint a miniſter.

Soltau, at the conflux of the Soltau and Bohme, gives name to a bailiwic, which abounds in wood, and contains manufactories of canvas, pluſh, lindſey-woolſey, woollen cloths, baize, ſtuffs, &c.

Klotze, Fullerſleben, and Giſhorn, give name each to a bailiwic and ſuperintendency, and the latter contains a ducal palace.

Wittingen is an old town in the bailiwic of Kneſebec; Hoſſering on the Hardau had formerly diets; Badenleick is ſituated on a lake; Wuſtro has a caſtle; Blekede is a ſmall town on the Elbe; and Dalenburg on the Netze was once deemed a city, but is now fallen greatly to decay.

Hitzacker is a ſmall town in a little iſland in the Jetze. The caſtle was formerly the reſidence of ſome of the dukes. Here is a great annual fair, and the bailiwic to which the town gives name contains the foreſt of Ghorde, which is about 16 miles in compaſs: it abounds with a kind of feathered game, deer, wild boars, &c. and on its eaſt ſide ſtands a royal hunting ſeat.

Zell is ſeated on a ſandy plain, near the conflux of the Aller and Fubſe, 24 miles north of Hanover, and 47 ſouth of Harburg. The town is antient, having a charter dated in 1203, wherein it is called Tſelle. It only conſiſts of three ſtreets that run parallel, but is well fortified, the ramparts being broad and high, and well mounted with cannon, but not regular. Here are held the chief courts of judicature for this duchy; and in 1485, its duke Henry built a palace near that called the Hanover Gate, which is a ſquare building, with four platforms at the four corners, moated round. Several coaches may go in front on the terrace round the town, which is adorned with trees planted all along; and the adjacent fine gardens, orchards, and grottos, form a very agreeable landſcape. There is but one church in the town, and that without a ſteeple. The French refugees have their church in the ſuburbs, which are very large. Here are ſtill a great many French Catholics, as well as Proteſtants, and the former have a chapel. All the buildings are of timber, except the churches, the caſtle, and the houſe of correction, which are of brick. The elector has a regency here, which judges all cauſes without any appeal but to the council of ſtate at Hanover. Betwixt this town and Harburg it is a ſandy road, with ſcarce any thing but heath. The poſt-ſtages, which are of four miles, are very ill ſerved, and the inns the worſt in Germany. Though there is a good deal of heath too betwixt this town and Hanover, yet the country is very well cultivated; for the inhabitants not only make turf of the heath for fuel, but it alſo ſerves for paſturage and manure. There is a trade from hence to Bremen by the river Aller.

In the neighbourhood of this town there is the caſtle of Ahlen, where the heireſs of Lunenburg-Zell, that was married to the late elector, and afterwards divorced, died, after 30 years reſidence, which was more a voluntary retirement, than any ſort of confinement; and where ſhe had the beſt of uſage and reſpect, and full liberty to go whither ſhe pleaſed; and here the late queen

of Denmark retired, after the ſevere treatment ſhe met with in the court of Denmark.

In the year 1757, during the late war, a moſt barbarous tranſaction reduced the inhabitants of Zell to great diſtreſs; for the duke of Richlieu, commander of the French forces, ordered not only the ſuburbs of Zell to be burnt, but even the orphan-houſe, which contained a great number of children, to be ſet fire to, when the whole was reduced to aſhes, together with a great number of the poor innocent infants.—A piece of cruelty ſcarce to be paralleled in hiſtory!

Bardewic on the Luke, four miles from Luneburg, though now only a ſtraggling village, was formerly a ſtrong populous city; it had nine churches, of which only the cathedral is left, wherein there is ſtill a college of eight reſidentiary canons, and a few vicars; but the biſhopric was transferred to Verden, and the diſtrict about the church transformed into kitchen gardens. Over the gate there are ſome barbarous Latin verſes, in an old Gothic character, which ſhew that the town was built 235 years before Rome, and deſtroyed by Henry the Lion in 1189. They write, that he took this revenge on the city becauſe it refuſed to acknowledge him, after he was proſcribed by the emperor Frederic I. Some think here was a college of the antient poets, called Bards.

Danneberg ſtands in the moſt eaſtern part of this duchy, on the river Jetze, ſix miles from its influx into the Elbe, and 33 ſouth-eaſt of Luneburg. It is the chief town of the rich and fruitful county of this name, which was given by its count in 1462, to Otho duke of Brunſwic-Wolfenbuttle, and yielded by the latter to the houſe of Luneburg-Zell, for their pretenſions to the city of Brunſwic. The Germans write it Daunenberg, conſiſtent with the etymology of its name, which ſignifies a Mountain of Fir-trees. This country lies along the Elbe, having Mecklenburg on the north, the marquiſate of Brandenburg on the eaſt and ſouth, and the duchy of Luneburg on the weſt.

Snackenburg, which belongs to this country, is a large trading town at the conflux of the Elbe and the Weckt, or Beſſe, 65 miles ſouth-eaſt of Luneburg.

Harburg on the Seeve, 50 miles from Zell, is a trading town, with a good harbour; it is well fortified, very populous, has a caſtle, garriſon, armoury, magazine, and barracks.

Lucho is an old town with a caſtle on the Jetze; Lune a village with a Lutheran convent, and a medicinal ſpring; and Medingen on the Elmenau has likewiſe a Lutheran convent, which was formerly a Ciſtercian monaſtery.

Winſen-an-der-Luke is a ſmall city on the Luke, over which it has two ſtone bridges. It contains a Lutheran abbey, has a voice and ſeat in the diets, is a great thoroughfare, and gives name to a bailiwic.

Ebſtorf is a town pleaſantly ſituated, and containing a convent which was formerly a Benedictine nunnery, but conſiſts now of a Lutheran abbeſs, a prioreſs, and 14 other ladies. The religious reſtrictions here are not very great, but love uſually fills the convent, as it is celebrated for being the retreat of ladies who have been diſappointed in their affections; and it is ſuppoſed that ſome of the beautiful recluſes here have, with the *Fair Penitent*, ſaid,

---

Oh! ſhut me in a cloiſter; there, well pleas'd,
Religious hardſhips I will learn to bear:
To faſt and freeze at midnight hours of pray'r,
Nor think it hard within a lonely cell,
With melancholy, ſpeechleſs ſaints to dwell;
But bleſs the day I to that refuge ran,
Free from the marriage-chain, and from that tyrant, man!

Wienhauſen is a village on the Aller, with another Lutheran convent; it conſiſts of an abbeſs, a prioreſs, and 23 other ladies.

Iſenhagen on the Iſe contains another Lutheran convent, but the nuns here, contrary to the other inſtitutions, may be of plebeian extraction.

Walſtrode, i. e. Walo's Croſs, on the river Bohme, 25 miles north-weſt of Zell, and 40 ſouth-weſt of Luneburg, is not far from the confines of the duchy of Verden. It was at firſt only a monaſtery, built by one Walo, but is now a Lutheran convent, conſiſting of an abbey, a prioreſs, and nine other ladies; and is likewiſe the ſeat of a bailiwic and ſuperintendency.

The Principality of GRUBENHAGEN.

THIS principality is ſurrounded by Calenburg, Wolfenbuttle, Wernegerode, Blackenburg, Hohnſtein, Klettenberg, &c. Some parts of it are fertile, and others very rich, producing

Wheat	Flax
Barley	Lime-ſtone
Peas	Alabaſter
Buck-wheat	Sound-ſtone,
Slate	Salt
Marble	Cobalt
Jaſper	Gold
Sulphur	Silver
Zink	Copper
Rye	Lead, and
Oats	Iron
Beans	

The mines and quarries being chiefly in the mountain and foreſt called the Hartz. The rivers are the Leine, the Oder, and the Ocker. The ſtates are compoſed of the abbey of St. Alexander, and that of the Bleſſed Virgin, at Einbeck. The noble proprietors of nine manors, and the cities of Einbeck and Oſterode, at which the diets are alternately held once a year. Lutheraniſm is the eſtabliſhed religion, and the manufactures and commodities of the country are

Flax	Thread
Linen	Timber
Sand-ſtone	Slate
Marble	Iron
Copper	Lead
Salt	Vitriol
Sulphur	Lapis calaminaris
Zink	Powder blue
Starch	Woollen goods
Printed Cottons	Fire-arms

On account of this principality the electors have a vote in the college of princes, both in the diet of the empire, and in that of the circle of Lower Saxony. The ſovereign's revenues ariſe from the produce of the demeſnes, and of the mines; and appeals lie from the courts here to the chancery of Hanover. The principal places are the following:

Enibeck, the capital of the principality, is ſituated at the conflux of the Ilme and the Leine, about 42 miles from Hanover. It is well fortified by towers, bulwarks, ramparts, a double ditch, and outworks; and is ſurrounded by a fine country, very fertile, particularly in corn. It was formerly a free Imperial town, and its magiſtrates ſtill poſſeſs ſome valuable privileges. It is large and populous, divided into three parts, called the Munſter, the Newſtadt, and the Markt; and has a tolerable trade, particularly in beer, woollen manufactures, and printed cottons. Formerly it was a biſhop's ſee, the cathedral and chapter of which ſtill remain. The latter conſiſts of

A Lutheran ſenior,
Nine canons,
One vicar, and
Four vicarii ordinarii,

who, together, ſend a deputy to the diet. The revenues of the ancient abbey of the Bleſſed Virgin are now enjoyed by a ſenior and nine canons, who have likewiſe a repreſentative at the diets. A large diſtrict belongs to, and is ſubject to the juriſdiction of Enibeck, which was a town ſo early as the year 1256, and formerly coined gold, ſilver, and copper money.

Wildeman is a mine town, ſurrounded on all ſides by lofty, rugged mountains; Lautenthal and Schulenberg are ſmall towns, containing ſmelting-houſes; and Cellerfeld is an open mine town, with a mint for coining money.

St. Andreaſberg is a mine town, with a manufactory of powder blue, and a ſilver ſmelting-houſe; and near it is a reſervoir, from whence, by a canal, water is conveyed

veyed to all the mine works. This town is ſo pleaſantly ſituated, that a perſon with a philoſophical turn of mind might retire hither, and with propriety exclaim;

Hail, ye ſoft ſeats! ye limpid ſprings and floods,
Ye flow'ry meads, ye vales and mazy woods!
Ye limpid floods, that ever murm'ring flow!
Ye verdant meads, where flow'rs eternal blow!
Ye ſhady vales, where zephyrs ever play!
Ye woods where little warblers tune their lay!
Here grant me, heav'n, to end my peaceful days,
And ſteal myſelf from life by ſlow decays;
With age unknown to pain or ſorrow bleſt,
To the dark grave retiring, as to reſt;
While gently with one ſigh this mortal frame,
Diſſolving, turns to aſhes, whence it came;
While my freed ſoul departs without a groan,
And joyful wings her flight to worlds unknown.

Altenau is a ſmall mine town in a valley, ſurrounded by high rugged rocks. It contains a ſilver ſmelting-houſe, the aqua fortis from which runs into the river Ocker.

Clauſthall is a large open mine town, conſiſting of near a thouſand houſes, and containing above 10,000 inhabitants. Here is a ſilver ſmelting-houſe, and a mint, where about 500,000 rix-dollars are annually coined. The place is defended by a garriſon of invalids, and contains two churches, an orphan-houſe, a grammar-ſchool, a mine-office, and a foreſt bailiwic-office. Though the reſt of the country is ſo pleaſant, the air of the Hartz foreſt, almoſt the whole year round, is ſo cold, and rain, hail, ſnow, fogs, ſtorms, &c. are ſo frequent, that the cultivation of the land cannot be purſued with any degree of ſucceſs. The mountain which part of the foreſt covers, conſiſts of

Oaks	Beech
Aſh	Aſpin
Alder	Birch
Pines	Firs.

And this amazing plenty of wood is of the utmoſt importance, as without ſuch a profuſion of timber the mining works could not be carried on. That part of the foreſt called Brunſwic-Luneburg-Hartz, is divided into Upper and Lower, and again ſubdivided into mine and foreſt bailiwics, part of which belong to the king of Great Britain, and part to the prince of Brunſwic. The inhabitants of the Hartz are compoſed of

Miners	Carriers
Smelters	Servants
Officers	Schoolmaſters, and
Handicraftſmen	Miniſters.
Wood-heavers	

Oſterode, a town ſituated not far from the Hartz, is divided into Old and New Town. It contains about 600 houſes, a large granary, three pariſh churches, and a grammar ſchool, has a manufactory of woollen cloths, and is defended by a caſtle, in which ſeveral dukes of Brunſwic and Luneburg have formerly reſided.

On an eminence not far from the above town, formerly ſtood the caſtle of Grubenhagen, which, as well as the principality itſelf, took its name from the noble family of Gruben, every branch of which is now extinct.

Salzder-Helden, on the Leine, contains ſome ſalt works, as does the ſmall neighbouring village of Salbeck, which is romantically ſituated and ſurrounded by a very pleaſant country,

Where on the trees ſweet honeyſuckles blow,
And ruddy daizies paint the ground below:
Where the ſhrill linnet charms the ſolemn ſhade,
And zephyrs pant along the cooler glade;
Or ſhake the bull-ruſh by a river-ſide,
While the gay ſun-beams ſparkle on the tide:
Oh! for ſome grot, whoſe ruſtic ſides declare
Eaſe, and not ſplendor, was the builder's care;
Where roſes feed their unaffected charms,
And the curl'd vine extends her claſping arms:
Where happy ſilence lulls the quiet ſoul,
And makes it calm as ſummer waters roll.
Here man may learn to check each growing ill,
And bring to reaſon diſobedient will;
To watch his incoherent breaſt, and find
What fav'rite paſſions rule the giddy mind.

Herberg has a caſtle, linen manufactory, and iron works.

Scharzfels is defended by a caſtle ſituated on a high rock. It contains a ſmall garriſon, and is ſometimes uſed as a ſtate priſon. The caſtle gives name to a bailiwic which contains

Stone quarries	Chalk pits
Iron works	Copper mines
Plenty of flax	A linen manufactory.

In the neighbourhood are fine caverns called the Scharzfel Caves, where the ebur foſſile and drop-ſtone are found.

Lautenbury, on the Oder, is a fief of the abbey of Quedlinburg, has mines of copper and iron in its neighbourhood, and is inhabited by miners.

Elbingerode is a pretty ſmall town, which gives name to a bailiwic, that abounds in

Pine	Marble
Slate	Iron ore
Warm baths	Jaſper, &c.

At the village of Lucaſhof is a mill for ſawing marble; at thoſe of Luderſhof and New Hutte are ſlatting-mills, and at Konigſhof ſtood antiently the palace of Konigſburg, where the emperors and princes of the Saxon race uſed antiently to reſide when they came to this part to partake of the diverſions of ſtag-hunting. This diverſion, however, is on the decline in Germany, and a fondneſs for muſic prevails in almoſt all their courts; ſo that the German ſovereign ſeems to have ſacrificed huntſmen to muſicians, and to have exchanged horns for fiddles; ſo capricious are the inclinations of man, and ſo fluctuating is that thing called taſte.

Thro' his young wood how pleas'd Sabinus ſtray'd,
Or ſat delighted in the thick'ning ſhade;
With annual joys the red'ning ſhoots to greet,
Or ſee the ſtretching branches long to meet:
His ſon's fine taſte, an op'ner viſta loves,
Foe to the dryads of his father's groves;
One boundleſs green or flouriſh'd carpet views,
And all the faded family of yews.
The thriving plants ignoble broomſticks made,
Now ſweep thoſe alleys they were born to ſhade.
But not our paſſions only diſagree,
In taſte is found as great variety.
Sylvius is raviſh'd when he hears a hound;
His lady hates to death the odious ſound:
Yet both love muſic, tho' in different ways:
He in a kennel, ſhe at operas.
A floriſt ſhall, perhaps, not grudge ſome hours
To view the colours in a bed of flowers;
Yet, ſhew him Titian's workmanſhip divine,
He paſſes on, and only cries, 'tis fine.

The Principality of CALENBERG.

THIS principality is bounded on the ſouth by Grubenhagon, on the north by Luneburg, on the weſt by Schawenburg and Brunſwic Wolfenbuttle, and on the eaſt by the biſhopric of Hildeſheim. It is 35 miles in length from north to ſouth, and 18 in breadth from eaſt to weſt. A conſiderable part of this principality is mountainous and barren, but other diſtricts are rich and fertile, and abound in

Corn	Black cattle
Pulſe	Veniſon
Tobacco	Marle
Beech	Iron Ore
Pine	Salt ſprings
Aſpin	Medicinal ſprings
Flax	Sheep
Fruit	Game
Oak	Turf
Alder	Coals
Birch	Freeſtone
Horſes	Milſtone, &c.

And

And the ſtreams abound with all kinds of fiſh. In the principality are three Proteſtant abbies and ſix convents, of which three are inhabited by men, and ſix by women. Lutheraniſm is the eſtabliſhed religion, and the Lutherans have 200 churches; the Calviniſts are permitted to have five, and the Roman Catholics ſix. The commodities and manufactures of the country are

Wool	Taſſels
Cotton	Gunpowder
Tobacco	Linen
Flax	Braſs
Silk	Leather
Iron	Gold lace
Copper	Silver ditto
Glaſs	Embroideries
Galloons	Stone wares
Funges	Carpets, &c.

In the year 1757 the French over-run this principality, and did great damage, though they were ſoon diſpoſſeſſed of it. The proprietor of it is entitled to a vote in the college of princes at the diet of the empire, and that of the circle. To the ſupreme tribunal of Hanover it nominates two aſſeſſors, and two to the high court of appeal at Zell. The revenues ariſe from demeſnes, exciſe, a military tax, ſtamp duty, card ditto, duty on corn, cattle, ſheep, magazines, &c. The principal places are the following.

Hanover, the metropolis, and the ſeat of the elector, as it always was of the dukes, after the removal of their court hither from Calenberg, on the death of George, the laſt duke of Brunſwic-Calenberg. It is pleaſantly ſituated in a ſandy ſoil, on the river Leine, which is navigable here for ſmall boats. It is 26 miles ſouth-weſt from Zell, 27 from Brunſwic, and 365 eaſt from London. It was antiently called Lawenroda, from a neighbouring caſtle, ſubject to the counts of that title; and had its preſent name in Henry the Lion's time, becauſe of a ferry here; Hanover, in the old Saxon dialect, ſignifying the ſame as Have-over in Engliſh. It is divided by the river into the new and old towns. Moſt of the houſes are of timber and clay, but there are many of brick and ſtone. The ſtreets are regular, broad, and well furniſhed with lanthorns, for the winter nights. It is regularly fortified, and the ravelins before the gates are well mounted with cannon. Here was once a monaſtery, ſince metamorphoſed into a palace, at one end of the city, near the ramparts, though they ſcarce deſerve that name. It is a large ſtructure of free ſtone, with ſeveral ſquare courts, and fine ſtair-caſes; but the whole is rather commodious than magnificent: it is, however, adorned with charming tapeſtry and paintings, and very richly furniſhed. Here is a cloſet of rarities, with a noble collection of medals, antient and modern, and a very fine chapel. When the court is here, there are frequent concerts, balls, and aſſemblies; and a French comedy uſed to be acted three times a week, at a pretty theatre in the palace, where all people are admitted gratis, the expence being defrayed by the elector. Here is alſo an opera-houſe, viſited by all foreigners, the paintings and contrivance being not inferior to any in Europe of the kind. The moſt remarkable of its churches are, 1. St. James's, in which there are two crucifixes, with fine pictures of the apoſtles, and many ſaints, though the Lutherans pay no adoration to them. 2. That of the Holy Croſs, much finer and neater than the other, having a double row of galleries round it from the altar, and upon the firſt the hiſtory of the goſpel in 53 parts, painted by the ableſt maſters. Beſides theſe, there are St. George's and St. Giles's churches. Here are four fairs a year, much frequented by foreigners. It was once a free Imperial city, and a Hans Town, when it had a flouriſhing commerce; but its chief trade now is in that ſweet, but muddy liquor, called Brewhan, which they ſend in great quantities to the neighbouring towns and villages. This liquor had the name from a famous brewer, one Conrade Brewhan, of this neighbourhood; who, having ſerved his time at Hamburg, came and ſet up here in 1526. Though it is not a large town, it is bigger than Zell. The Roman Catholic church here was granted to thoſe of that communion by Erneſt, the firſt elector, as one of the conditions demanded by the emperor Leopold, who inveſted him, and alſo engaged him to admit of an apoſtolical vicar in his dominions, and to permit him to reſide at Hanover. Here is a conſiderable number of Roman Catholics, but the nobility and gentry are almoſt all Lutherans. The princeſs Sophia cauſed a new church to be built here for the French refugees, to which our king William III. was alſo a benefactor. Beſides a houſe for orphans, there is one hoſpital within the town, and another without. This city has acquired a new luſtre ſince the acceſſion of the illuſtrious houſe of Hanover to the electoral college in the diet of the empire; but more eſpecially ſince its advancement to the throne of Great Britain, and is of particular note for the famous treaty concluded here in 1725, to counterbalance that of Vienna.

In the neighbourhood are ſeveral pretty ſeats, particularly one called the Fancy, or Whim; and another, Montbrillant, or Mount Pleaſant, which were built by two ſiſters-in-law, viz. Madame de Kilmanſec (late counteſs of Arlingten) and the counteſs of Platen. Theſe lead to the pleaſant palace of Herenhauſen (i. e. the houſe of the lord of the manor) a caſtle built on the river Leine, by order of the prince, who was the firſt elector, about the ſame diſtance north from Hanover as the palace of Kenſington is from St. James's. A ſtrait walk leads up to the houſe, which is adorned with charming gardens; a wilderneſs of evergreens; one of the largeſt and nobleſt orangeries in Europe; a perfect theatre cut out into green ſeats, with arbors and ſummer houſes on both ſides of it, for the actors to dreſs in, the whole ſet off with fine ſtatues, many of them gilt; and, above all, here are noble fountains, with very large baſons, beautiful caſcades, and water-works that throw the water up much higher than the famous fountain at St. Cloud in France, which was always looked upon as the moſt conſiderable of the kind till this was ſet up, by the direction of William Benſon, Eſq. whom his late majeſty took with him to Hanover, for that purpoſe, in 1716, made him ſurveyor-general of his works, and gave him the reverſion of the office of auditor of the impreſt.

Linner is a village which had antiently a caſtle and county of its own; Rehburg is the ſeat of a bailiwic, which yields grain, flax, hops, oak, beech, coals, &c. and has a medicinal ſpring; and Ricklingen is a parochial village, near which there is a ſtone monument erected to the memory of duke Albert of Saxony, who in 1385, in beſieging the caſtle, had his leg ſhattered in ſuch a manner as to occaſion his death.

Newſtadtam Rubenberge on the Leine, over which there are two ſtone bridges, has likewiſe a ſluice in the ſame river, gives name to a bailiwic and ſuperintendency, and was formerly defended by a caſtle.

Calenburg is an antient ducal palace, from which the principality took its name; and Barſinghauſen contains a Lutheran convent for ladies, and has a ſeat and voice in the diets.

Marienſee	Marienwarder
Wennigſen	Wulſinghauſen

have each Lutheran convents for ladies, and ſend repreſentatives to the aſſemblies of the ſtates.

Marienrode contains a convent of Roman Catholic monks; Munder is a town on the Hamel, with ſalt-works; Lockum is a village, with a Lutheran abbey; Eldagſen had formerly ſtrong fortifications, and a palace; and Pattenſen has ſtill the remains of its ancient moat, walls, rampart, &c.

Wunſtorf is a ſmall town, which formerly had counts, and gave name to a county. It is now the ſeat of a ſuperintendency, and of a Lutheran abbey, to which belong an abbeſs and four conventualiſts, who muſt all be of noble birth, together with ſeveral canons, the ſenior of whom is ſuperintendant. The abbey has a ſeat and voice in the diets of the principality, and was founded in 870 by a biſhop of Minden.

Hamelen is a very ancient city, 23 miles ſouth-weſt from Hanover, and 41 ſouth from Brunſwic. It is ſituated in a fine country on the river Hamel, from which it has its name. The Hamel diſembogues itſelf into the Weſer, on which an admirable ſluice was finiſhed in 1734, at a great expence. Over the Weſer there is likewiſe a bridge of nine wooden arches. The other public edifices are

An

An abbey	A town-house

A Calviniſt ditto.	A poor-houſe
An hoſpital	Barracks.

Here are woollen, ſilk, linen, and leather manufactories. The magiſtrates are allowed to coin money, and have very extenſive privileges, and civil and criminal juriſdiction, within their liberties, which contain many villages, foreſts, a ferry, &c. The abbot of Fulda, who was formerly ſovereign of the town, having ſold it to the biſhop of Minden; when the latter came to take poſſeſſion of it, the citizens oppoſed him, but were defeated, with great ſlaughter, near Sedemunde. This event is ſuppoſed to have given riſe to the following ridiculous ſtory of the piper and children, which Verſtagan, in his Reſtitution of Decayed Intelligence, thus records:

"There came into the town of Hamel, in the county of Brunſwic, an odd kind of companion, who, for the fantaſtical coat which he wore, being wrought with ſundry colours, was called the Pied Piper; for a piper he was, beſides his other qualities. This fellow, forſooth, offered the townſmen, for a certain ſum of money, to rid the town of all the rats that were in it (for at that time the burghers were with that vermin greatly annoyed). The accord in fine being made, the Pied Piper, with a ſhrill pipe, went piping through the ſtreets, and forthwith the rats came all running out of the houſes, in great numbers, after him; all which he led into the river Weſer, and therein drowned them. This done, and not one rat more perceived to be left in the town, he afterwards came to demand his reward according to his bargain; but being told that the bargain was not made with him in good earneſt, to wit, with an opinion that ever he could be able to do ſuch a feat, they cared not what they accorded unto, when they imagined it could never be deſerved, and ſo never to be demanded: but, nevertheleſs, ſeeing he had done ſuch an unlikely thing indeed, they were content to give him a good reward, and ſo offered him far leſs than he looked for: but he therewith diſcontented, ſaid he would have his full recompence according to his bargain; but they utterly denied to give it him. He threatened them with revenge; they bade him do his worſt: whereupon he betakes him again to his pipe, and going through the ſtreets as before, was followed by a number of boys out at one of the gates of the city, and coming to a little hill, there opened in the ſide thereof a wide hole, into the which himſelf and all the children, being in number 130, did enter, and being entered, the hill cloſed up again, and became as before. A boy that being lame, and came ſomewhat lagging behind the reſt, ſeeing this that happened, returned preſently back, and told what he had ſeen. Forthwith began great lamentation among the parents for their children; and men were ſent out with all diligence, both by land and by water, to enquire if aught could be heard of them; but with all the enquiry they could poſſibly uſe, nothing more than is aforeſaid could of them be underſtood. In memory whereof it was then ordained, that from thenceforth no drum, pipe, or other inſtrument, ſhould be ſounded in the ſtreet leading to the gate through which they paſſed; nor no oſtery to be there holden. And it was alſo eſtabliſhed, that, from that time forward, in all public writings that ſhould be made in that town, after the date therein ſet down of the year of our Lord, the date of the year of the going-forth of their children ſhould be added; the which they have accordingly ever ſince continued. And this great wonder happened on the 22d of July, 1376."

Bodenwerder is ſituated on the Weſer, over one branch of which there is a bridge, and at another a ferry; it has ſome trade, particularly in coarſe linens, and is ſubject to inundations.

Lauenau, a market-town, gives name to a bailiwic; Reher contains a braſs foundery and a powder-mill; Schwobber belongs to the family of Munch-hauſen; and Erzen, a market-town on the Humme, is the ſeat of a bailiwic.

Sprunge, a ſmall town with a great beer trade, gives name to a bailiwic, which contains ſome ſalt ſprings, woods, pit-coal, manufactures of glaſs, linen, earthenware, &c.

Lauenſtein is the capital of a bailiwic, in which are ſalt ſprings, a coal mine, a linen manufacture, and a glaſs-houſe. The town was formerly walled, and near it ſtood a caſtle, the remains of which are ſtill to be ſeen.

Hemmendorf, on the Saale, was the rendezvous of the ſtates before they agreed to meet at Hanover; Dorpe is famous for its manufactory of earthen-ware and black furniture for ſtoves; Salz-Hemmendorf is a borough with three ſalt ſprings, and 12 boiling-houſes; Dumgen has a manufactory of ſtone-ware; Grohnde has a ferry and toll; and Polle, on the Weſer, is the ſeat of a bailiwic, in which thread ſtockings are knit, lime made, veſſels for the Weſer built, and from whence large quantities of timber are carried to Bremen.

Gottingen is ſituated on the New Leine, which is a canal drawn from the Old Leine, and about 50 miles from Hanover. It is ſtrong, well built, and well paved. The ancient gymnaſium was, in 1734, converted, by his Britannic majeſty king George II. into an univerſity. Its library is the beſt in Germany; and here is alſo a fine obſervatory, an anatomical theatre, a phyſic garden, a ſchool for teaching midwifry, an academy of exerciſes, ſciences, and Belles Lettres, and a German ſociety, which are all included under, and belong to, the univerſity. The Latin ſchool has eight maſters, and is under very good regulations. The ſauſages made here are in great eſteem; and here are, an armoury, ſix Lutheran churches, one Calviniſt ditto, an alms-houſe with a church belonging to it, and an orphan-houſe. On a hill, in the territory belonging to the town, anciently ſtood an imperial burg and palatine town called Grone, which was the principal reſidence of the Saxon emperors after Otho the Great. The town's eſtate and juriſdiction are very conſiderable, conſiſting of ſeveral villages, woods, meadows, and paſtures. Formerly it was one of the Hans, and had a mint for coining. In the campaigns of 1757 and 1758 it was, for ſome time, in the hands of the French.

Norton, on the Leine, contains a Roman Catholic abbey; Lauenforde, on the Weſer, has a toll-houſe; Hedemunden, on the Werra, contains a linen manufactory; Sichelſtein, in Engliſh, ſickle-ſtone, formerly had a caſtle, oppoſite to which was another fortreſs called Senſenſtein, or Scythe-ſtone; and Bursfeld was anciently one of the moſt celebrated convents of Benedictine monks in all Germany; it had the permiſſion of holding a market, the power of coining, and the privilege of electing its own abbot.

Northeim, on the Rhume, has two ſtone bridges over two different branches of the river. It contains ſome manufactures, a pariſh church, a free-ſchool, and anciently there was a Benedictine convent for both ſexes, founded in 1051, by Otho, duke of Bavaria.

Hardegſen, on the Elpolde, has a caſtle, and is the ſeat of a ſuperintendency and bailiwic; Uflar is divided into Old and New, the former of which is walled; Dransfeld is a ſmall town between Goſſingen and Minden; and Moringen is another ſmall town on the river Mohr. It was formerly fortified, but the fortifications are decayed.

Munden is ſituated in a Vale on the Fulda, which, a little below, joins the Werra, and then the united ſtreams take the name of the Weſer. Theſe rivers, with the iſlands they form, and the neighbouring gardens, hills, woods, &c. afford a moſt enchanting proſpect. The public buildings are

Two Lutheran churches	
One Calviniſt ditto	
A bridge over the Werra	
A free-ſchool	
Barracks for a regiment of ſoldiers.	

The gardens within and around the town amount to the amazing number of 2000; and the manufactures are of ſilk, flax, and tobacco. This being the commercial centre for

Heſſe	Franckfort
Thuringia	Franconia
Nuremburg	Bavaria,

and all parts of Saxony; a great number of factors reſide here, and none, who are not freemen of Minden, are

are allowed to trade beyond this town; but muſt conſign their goods to factors here, and whatever is brought in any veſſel muſt, according to the ſtaple weight, be unladen here. On Tueſdays and Fridays a veſſel goes up the Fulda from hence to Capel, which none but freemen of Munden have a right to navigate. In the late war this town was, for ſome time, in the hands of the French.

The Principality of WOLFENBUTTLE.

THIS principality, which is part of the duchy of Brunſwic, is divided into two parts by the dioceſe of Hildeſheim, and the principality of Halberſtadt. The northern part is rather level, and produces conſiderable quantities of grain, flax, hemp, pulſe, fruits, cattle, ſilk, &c. And the ſouthern parts contain ſeveral mines and ſalt-works. The rivers are the Weſer, Leine, Ocker, Schimter, and Aller. The ſtates deputize repreſentatives to the diets, which are held at Brunſwic four times a year. Lutheraniſm is the eſtabliſhed religion; the chief manufactures are flax, wool, ſilk, tobacco, glaſs, lead, iron, ſteel, porcelain, wax, blacking, &c. The high colleges for this principality are

The privy council	Treaſury
Convent office	High court of juſtice
Chancery	Conſiſtory.

Brunſwic, the metropolis of the country, is 61 miles weſt from Magdeburg. It had its name from its founder Burno, duke of Saxony, who erected it in the year 861. It was once a Hans Town, and an Imperial free city. Though it is much decayed from its priſtine ſplendor, it is ſtill rich and populous. It is ſituated on the Ocker, contains handſome houſes, is well paved, and very ſtrongly fortified. It is about two miles in circumference, and divided into old and new town. The principal trade is in

Leather	Hops
Butter	Mum;

and the chief buildings are, the ducal palace, which is capacious, magnificent, ſplendidly furniſhed, and contains many fine paintings, an excellent library, and a cabinet of curioſities; an armory, a cavilier houſe, an academy for martial exerciſes, a college, a playhouſe, a cuſtom houſe, a houſe of correction, a council houſe in the old and new town, a mint, an orphan houſe, two gymnaſiums, a college of phyſic, an anatomy and ſurgery ſchool, a lazaretto, a caſtle, St. Leonard's hoſpital, a kind of college called the Templehof, which formerly belonged to the knights templers, and the following churches; one for the Calviniſts, one for the Roman Catholics, and ten for the Lutherans, among which is the cathedral, dedicated to St. Blaſius, which contains the ducal burial place, the records of the electoral family, and two large monuments of duke Henry the Lion and his ſecond conſort. The chapter of this cathedral conſiſts of

A provoſt	A ſenior
A dean	Ten canons,

and ſeveral inferior prebendaries and vicars; but the dean is the firſt member of the ſtates. The Lutheran foundation of St. Eyriac conſiſts of a dean, who is one of the ſtates, a great committee, and five canons. The convent of Riddaghauſen is about two miles from Brunſwic, the ramparts of the city are planted with mulberry trees, and the gardens belonging to the ducal palace are laid out in a very exquiſite taſte. Spinning was invented here in the year 1530, by one Jurgen, a ſtatuary and ſtone cutter. This was the firſt capital place that embraced the reformation. The road from hence to Wolfenbuttle is paved, and lined on each ſide with trees. The French got poſſeſſion of this city during the late war, in the year 1757, but evacuated it in 1758. The Lutheran convent of the Holy Croſs has a church of its own, and is ſituated without St. Peter's gate.

Lucklum is a village where there is a commander of the Teutonic order; and Scheppenſtadt on the Altenau is the ſeat of a ſuperintendency.

Salzdalum is a village which gives name to a bailiwic, and takes its own from a conſiderable ſalt-work in the neighbourhood. The ducal palace here has a fine large gallery, which contains above a thouſand pictures, by the moſt eminent maſters; and here is likewiſe a ſmall gallery, embelliſhed with many beautiful paintings. In the china cabinet are above 8000 pieces of exquiſite beauty, and in another above a thouſand enamels of Raphael de Urbino, admirably executed. The great gallery is 200 feet long, 50 broad, and 40 high, and the leſſer one 160 long, and 20 broad. In the latter, beſides the above cabinet, are ſix ſmall ones, for curioſities of art and nature. The garden, the chapel, &c. are extremely grand. Adjoining to the palace is a convent, which ſends repreſentatives to the diets; was founded by duke Anthony Ulrich and his ducheſs, dedicated to the Virgin Mary, and has a provoſt, a domina, and 15 ſiſters of noble families.

Wolfenbuttle, from whence the duchy is denominated, ſtands on the river Ocker, ſeven miles ſouth-eaſt of Brunſwic, 19 eaſt of Hildeſheim, and 26 north-weſt of Halberſtadt. It is the antient ſeat of the dukes, ſtrong, by its ſituation near marſhes, and ſo well fortified, that it is reckoned one of the ſtrongeſt towns in Germany; and here is an arſenal, well furniſhed. It is divided into two parts, one called Arx Guelphica, which is the ducal palace, ſo named from duke Ecbert, of the family of the Guelphs; the other Henrickſtat, from the founder duke Henry. The palace, which is the ſtrongeſt and moſt ſtately that belongs to the duke's family, has noble apartments, rich furniture, coſtly paintings, and a library reckoned one of the beſt in Europe, which was founded by the learned duke Auguſtus. The librarian's catalogue, publiſhed in 1604, numbered the volumes at 124,000; another in 1660, mentioned only 27,666 volumes, and 115,504 tracts, by 56,393 authors. There are 2000 MSS. particularly 438 folio's of French embaſſies, tranſcribed from the French king's library; 41 volumes writ by the founder himſelf, 12 of which are on muſic, beſides his commentary on Trithemius's Cryptography, and a very learned tract on the antiquity and myſtery of the game of cheſs. The new church here is an admirable piece of architecture, and 21 dukes and ducheſſes are interred under it: here is alſo an academy, and a muſeum. The town is not half ſo big as Brunſwic, and the houſes are of timber; but there are ſeveral pretty ſeats near it, in the road to Brunſwic. There is another palace of the duke's at Saltzdahl, (about a league from the town, and from Brunſwic) the road to which is lined with a very fine row of trees. This caſtle, built by duke Anthony-Ulric, is as magnificent a ſtructure as any that has been raiſed by ſovereign princes; and, beſides its immenſely rich furniture, there is a numerous, but choice collection of pictures, in a great gallery, which is one of the fineſt rooms in all Germany: and there are two cabinets, one full of the fineſt porcelain, the other of vaſes and urns, painted by Raphael.

Helmſtadt, which has its name from the elms about it, ſtands 20 miles eaſt of Brunſwic and Wolfenbuttle, and near the frontier of Magdeburg. It was built by Charles the Great, anno 782, and is of chief note for the Academia Julia, or univerſity founded and richly endowed about 1576, by duke Julius abovementioned, and his ſon Henry Julius, who alſo furniſhed it with a good library. It has very conſiderable privileges, particularly one granted by the emperor Maximilian II. that its rector is for ever to have the title and dignity of count palatine. The elector of Hanover, and the duke of Wolfenbuttle, are joint ſovereigns, and have the direction of it alternately. No univerſity in Germany has made a better figure, or had more learned Lutheran profeſſors, than this. The three faculties in which it confers degrees are, divinity, law, and phyſic. Among the manuſcripts in its library there is an antient Hebrew pentateuch, in two volumes, for which ſome Jewiſh rabbis offered a great ſum. The faculty of divines here was charged with giving their opinion in the caſe of the marriage of the princeſs of Brunſwic-Wolfenbuttle, with the late emperor Charles VI. that a Proteſtant princeſs might, with a ſafe conſcience, embrace the Romiſh religion; but they refuted it in 1708, by a public declaration, as a Popiſh forgery. The town is encompaſſed with walls, ditches, and ramparts, and has three churches, and a fine ſuburb, called Oſtendorff.

Ganderſheim is an abbey on the borders of the biſhopric of Hildeſheim, 18 miles ſouth-weſt of Goſlar, which

was founded by a duke of Saxony in the ninth century for ladies of noble families; and its firſt abbeſſes were ſucceſſively the founder's three daughters. As conſiderable as it was formerly, it is now greatly reduced, and depends on the duke of Brunſwic-Wolfenbuttle, who maintains an abbeſs, four canoneſſes, and eight canons. Though this abbey is in Lower Saxony, the abbeſs takes her ſeat among the prelates of the Rhine. It embraced the reformation in the 16th century, ſo that the abbeſs and nuns are Lutherans. There is a caſtle in its bailiwic, which is watered by the river Ganda, that runs into the Leine. The bailiwic is about two miles in compaſs, and contains about 20 villages.

Scheningen is a ſmall town, with a ſuperintendency and a Latin ſchool; and near it is a ſalt-work and a convent.

Konigſlutter is a town ſtanding on the rivulet of Lutter, celebrated for a peculiar kind of beer called Duckſtein. Here was anciently a benedictine monaſtery, which at preſent conſiſts of a Lutheran abbot, a prior, and four conventuals. In its church lie buried the emperor Lotharius, his empreſs Richenza, and duke Henry the Magnanimous. It takes precedence of all the other convents in the principality, and ſends a repreſentative to the diet and the grand committee.

Supplengenbury is a commandery of the order of St. John; Calvorde on the Ohre has an old caſtle; Vorſfeld, a market town on the Aller, is the ſeat of a bailiwic and ſuperintendency; Heſſen has a ducal palace; Marienburg contains a Lutheran nunnery; and Marienthal has a Lutheran monaſtery, and a free-ſchool.

Seeſen, the ſeat of a ſuperintendency and bailiwic, receives its name from an adjacent lake; Gittel is a ſmall town with an iron foundery; and Julius Halle is a ſalt-work in the bailiwic of Harzburg.

Between the Weſer and the Leine, the moſt remarkable places are

Holzmunden, which has a toll, and ſome iron and ſteel-works; Stadt-Oldendorf, the ſeat of a ſuperintendency; Amelunxborn contains a Lutheran convent; Eſcherhauſen is a market town on a hill; Otterſtein is a market town, which gives name to a bailiwic; Greene on the Leine is the ſeat of a ſuperintendency; Bevern is a market town on the Bever; and Turſtenberg has a manufactory of porcelain, and is defended by a ſtrong old caſtle on a rock.

The Duchy of MECKLENBURG.

THE duchy is bounded by Pomerania on the eaſt; by the biſhopric of Lubeck, and the territories of Brunſwic and Luneburg, on the weſt; by the Baltic on the north; and by the electorate of Brandenburg on the ſouth. It is ſituated between 53 deg. 10 min. and 54 deg. 40 min. north lat. and between 31 and 34 deg. 35 min. weſt long. from the iſland of Ferro, being 135 miles in length, and about 90 at its greateſt breadth. It is well watered by ſeveral fine rivers and lakes, and conſequently well ſupplied with fiſh. It is likewiſe extremely fertile and rich, and yields plenty of

Corn	Flax
Hemp	Fruit
Timber	Game
Paſture	Cattle
Sheep	Wool
Butter	Horſes
Cheeſe	Swine.

The peaſants here are in a ſtate of villainage, but the nobility enjoy very conſiderable privileges; the ſtates are compoſed of the nobility and towns, and the diets, which are ſummoned annually, are held alternately at Sternburg and Malchin. The inhabitants of this country are moſtly Lutherans, under the direction of their ſuperintendents. There are alſo ſome Calviniſts and Roman Catholics. The whole duchy is divided into three circles, viz.

The circle of Mecklenburg
——————— Wenden
——————— Stargard.

The principal places in which are as follow:

I. In the circle of Mecklenburg are Schwerin, the capital of the duchy, is a very pretty town, ſtands on a great lake of that name, 18 miles ſouth of Wiſmar, and 38 ſouth-weſt of Roſtock. It was the ſee of a biſhop, tranſlated hither from Mecklenburg in 1062, and ſuffragan to the archbiſhop of Bremen, but converted into a ſecular principality by the treaty of Oſnaburg, and granted to Adolphus-Frederic, duke of Mecklenburg, as an equivalent for Wiſmar, which was to remain to the Swedes. Henry the Lion, duke of Saxony, who fortified the town, built and endowed a cathedral here, and drove the Pagan Mecklenburghers, by thouſands, into a place of the lake of Schwerin, where the then biſhop baptized them; from whence that part of the lake is ſtill called the Font. The duke of Mecklenburg has his reſidence here at a caſtle, in which he impriſoned the burgomaſters of Roſtock in 1716, and, after ſix months confinement, ſet them at liberty, on renouncing their immunities and privileges, upon oath.

Parchin is ſituated on the Elbe, which divides it into old and new town. It had once a caſtle and a mint, and has ſtill two churches.

Rhena is a ſmall town on the Radegaſt; Sternberg, a ſmall town on a lake, is one of the places where the diets are held; and, Boitzenburg on the Baitze, has a priory and a toll on the Elbe.

Greveſmulen	Buko
Kropeliën	Bruel
Kriewitz	Wittenberg
Hagens	Grabo
Neuſtadt	Lyaz,

are all ſmall towns of ſo little conſideration at preſent, as not to merit any thing more than barely their names to be mentioned.

Domitz, 43 miles eaſt of Lunenburg, ſtands in an iſland made by the conflux of the Elbe and Elda, with a caſtle on the former, where the duke of Mecklenburg-Schwerin obliges ſhips to pay toll. This fort, which is ſaid to be the ſtrongeſt, if not the only one in the duchy, is acceſſible but by a timber bridge. In 1328 the elector Lewis of Brandenburg alienated this town to the count of Schwerin, with the cuſtoms, and all the country on both ſides the Elbe, for 7500 marks of Brandenburg coin. The ſaid country, for moſt part of it, returned back to the Brandenburg family by marriage, but the caſtle remained in the hands of the dukes of Mecklenburg, who are ſtill poſſeſſed of it, together with the cuſtoms, which are ſaid to amount, one year with another, to 80,000 rixdollars. In 1627 the Imperial general count Tilly took this town; but in 1631 it was re-taken by the Swedes. In 1637 the Imperialiſts and Saxons took it again. The Swediſh general, Bannier, attempted to recover it in 1639, and blocked it up part of the following year, but did not maſter it till 1643. Thoſe priſoners who are intended for long confinement, are generally ſent hither.

Gadebuſh, 22 miles weſt of Wiſmar, is remarkable for a great victory obtained near it in 1712, by the Swedes over the Danes.

Mecklenburg, which gives name to the duchy and title to the dukes, though formerly a large town, is now but an indifferent village. It formerly had three convents, and was the ſee of a biſhop, but gradually declined as Wiſmar roſe.

Eldena, on the Elda, has a hill containing allum, a ſalt work, and gives name to a bailiwic.

Dobberan, which was anciently a Ciſtercian monaſtery, is now only a hunting ſeat. In the church many great perſonages have been formerly interred.

II. *In the Circle of* WARDEN *are*,

Guſtrow, a pretty large town, well fortified, 17 miles ſouth of Roſtock, and 37 from Schwerin. It has a caſtle, which was the reſidence of the dukes of Guſtrow; after the extinction of which branch, the emperor adjudged this city, and its dependencies, in 1697, to the late duke of Mecklenburgh-Schwerin, who reinforced the garriſon; but the troops of Sweden and Lower Saxony refuſed to quit the place. The duke, however, continued there till April, when 3000 of the troops of the directors of the circle attacked and obliged him to ſurrender, and forced the duke and the Imperial miniſter to quit the

place,

place, into which they put a garriſon, and deſired the emperor to name commiſſioners to take the adminiſtration upon them till the ſucceſſion was ſettled, which was in 1701. Its caſtle, which is a grand edifice, with four fronts, is ſaid to be the fineſt in all the country, and is adorned with a moſt elegant garden.

Dobbertin is a Lutheran convent for ladies; Malcho is a ſmall town between the Plan and Calpin lakes; Krako is ſituated on a lake of the ſame name; and Plan is on a lake from which it receives its appellation.

Roſtock, a free Imperial city, and one of the Hans-Towns, ſtands on the river Warna, which falls eight miles below it into the Baltic Sea, and is 17 north of Guſtrow, and 25 north-eaſt of Wiſmar. It is an antient city, walled in 1160 by Burevinus, king of the Heruli, and, as appears by its charter dated in 1218, modelled by the laws of Lubeck. This town being, with the duchy, ſeized by the Imperialiſts in 1629, was retaken by the Swedes in 1631, and after the treaty of Munſter they built a fort here, and by their garriſon demanded a toll of all ſhips, which very much leſſened the trade of the town, and made many of the merchants remove the Mecklenburg miniſters, who endeavoured to have it redreſſed at the treaty of Nimeguen, but without effect. Moſt of the town was burnt in 1677, but is ſince rebuilt, with more magnificence. In 1712 it was ſeized by the Swedes, on pretence of its having furniſhed their enemies with proviſions; and in 1715, the duke of Mecklenburg, not being ſtrong enough to defend it againſt the Danes, agreed that they ſhould have a garriſon and magazine here, but nothing to do with the civil government.

The univerſity, one of the beſt and largeſt in Germany, was founded in 1419. The city, being at half the charges with the duke, chuſes nine of the 18 profeſſors; and out of them their Rector Magnificus, who appoints their meetings, takes care of their treaſury, &c. For theſe two laſt centuries this has been one of the moſt flouriſhing univerſities in Germany. The biſhop of Schwerin was, by charter, made perpetual chancellor, who deputes one of the eldeſt profeſſors vice-chancellor. The city is divided into the Old, New, and Middle Towns, conſiſting of 14 wide long ſtreets, beſides ſmaller, and many thouſand ſtately houſes. It boaſts of ſeven remarkable things, each ſeven in number: ſeven doors in St. Mary's church, ſeven large ſtreets centering in the great market-place, ſeven gates, ſeven bridges over the Warna, ſeven towers on the town-hall, ſeven great bells belonging to the town-clocks, which chime at certain hours, and ſeven vaſt lime-trees in their common garden. The chief commodity is beer, the ſame as formerly called Lubeck beer, which they export in great quantities; for ſome years ago they had 250 privileged brewers, who brewed, it is ſaid, as many thouſand tons a year, beſides what particular perſons brewed for their own uſe. So that the duke of Mecklenburg's revenue, from the exciſe on beer, is ſaid to be greater than from all other articles together. The river is navigable to the very walls; but large ſhips come no farther than Warnemunder, a little town, ſeven miles lower, juſt where the Swedes built their fort. The city is governed by 24 aldermen, choſen from the nobility, univerſity, and merchants. Four are burgomaſters, two chamberlains, two ſtewards, or bailiffs, for the river, to cleanſe that, and take care of the haven at Warnemunder; and here are two judges to determine all cauſes civil or criminal. Theſe 24 are called the upper houſe, determine all cauſes finally, coin money, chuſe officers; but, on matters extraordinary, a lower-houſe, of 100 common-councilmen, choſen out of the trades, is ſummoned to give opinion.

Goldberg, Penzlien, Stavenhagen, Tetero, Neukalden and Groyen, are all ſmall towns of very little conſideration; Wahren is ſituated on the lake Calpin; Robel, on the lake Muritz; and Malchien, on the borders of Pomerania, is one of the places where the diets are held.

Sulte is famous for its ſalt ſprings and boiling-houſes; the neighbouring town of Marlo does not contain any thing remarkable; Ribnitz is ſituated on a lake, and has a nunnery for ladies, of the order of St. Clere; Teſzien and Laoga are both ſituated on the river Reckenitz; Schwan, on the Warna, has ſeveral capital brick-works; Ivenach is a market-town near Stavenhagen; and Dargem contains a ducal palace.

III. *The Circle of* STARGARD *contains*

NEW BRANDENBURG, the capital of this circle, is ſituated on a lake. It ſends a deputy to the leſſer committee of the ſtates, has a grammar-ſchool, two churches, a ſuperintendent, and is celebrated for its hop trade. The neighbourhood is ſingularly pleaſant, and the inhabitants are all ſo remarkably healthy, that a ſtranger might be induced to think, that they had unanimouſly purſued, with great ſtrictneſs, the advice given by Dr. Armſtrong, in the following expreſſive lines:

Toil and be ſtrong, by toil the flaccid nerves
Grow firm, and gain a more compacted tone;
The greener juices are by toil ſubdu'd,
Mellow'd, and ſubtiliz'd; the vapid old
Expell'd, and all the rancour of the blood.
Come, my companions, ye who feel the charms
Of nature and the year; come, let us ſtray
Where chance or fancy leads our roving walk;
Come, while the ſoft voluptuous breezes fan
The fleecy heavens, enwrap the limbs in balm,
And ſhed a charming languor o'er the ſoul.
Nor when bright winter ſows with prickly froſt
The vigorous æther, in unmanly warmth
Indulge at home, nor even when Eurus, blaſts
This way, and that convolve the lab'ring woods,
My liberal walks, ſave when the ſkies in rain
Or ſnows relent, no ſeaſon ſhould confine
Or to the cloiſter'd gallery, or arcade.
Go climb the mountain; from the ætherial ſource,
Imbibe the recent gale: the chearful morn
Beams o'er the hills, go mount th' exulting ſteed;
Already, ſee, the deep-mouth'd beagles catch
The tainted mazes; and, on eager ſport
Intent, with emulous impatience try
Each doubtful trace. Or if a nobler pray
Delight you more, go chaſe the doe-rare deer,
And thro' its deepeſt ſolitudes awake
The vocal foreſt with the jovial horn.

Frienland is a town on a lake, which gives name to a bailiwic; Old Stargard gives name to a lordſhip and circle, and contains a ducal palace; Fuſterberg is a ſmall town, which anciently had counts of its own; and Wodſenberg is the principal place in a fertile territory, called Pomel, the inhabitants of which are ſome of the moſt humane and benevolent of human beings, and practice real charity without oſtentation.

Charity decent, modeſt, eaſy, kind,
Softens the high, and rears the abject mind;
Knows with juſt reins and gentle hand to guide
Betwixt vile ſhame and arbitrary pride.
Not ſoon provok'd, ſhe eaſily forgives,
And much ſhe ſuffers, as ſhe much believes:
Soft peace ſhe brings, wherever ſhe arrives;
She builds our quiet, as ſhe forms our lives,
Lays the rough paths of peeviſh nature even,
And opens in each heart a little heaven.
Each other gift which God on man beſtows,
His proper bound, and due reſtriction knows;
To one fixt purpoſe dedicates its power,
And finiſhing its act exiſts no more.
Thus, in obedience to what heaven decrees,
Knowledge ſhall fail, and prophecy ſhall ceaſe:
But laſting charity's more ample ſway,
Nor bound by time, nor ſubject to decay,
An happy triumph ſhall for ever live,
And endleſs good diffuſe, and endleſs praiſe receive.

Strelitz gives name to a branch of the ducal family, and is ſituated among marſhes. It conſiſts of Old and New, which ſtand at a ſmall diſtance from each other. The prince's palace, which is at the latter, is adorned with pleaſant gardens, and has a very elegant appearance.

Nemaro was anciently a commandery of the order of St. John, but is now a bailiwic; and Miro contains a ducal ſeat.

Wiſmar ſtands among fens on a bay of the Baltic, between Roſtoc and Lubec, 25 miles weſt of the former, and eaſt of the latter, and 55 weſt of Stralſund; eaſt long. 12 deg.

12 deg. 11 min. lat. 54 deg. 3 min. It is ſuppoſed to have been built in the 13th century out of Mecklenburg's ruins; for being of timber it was burnt in 1262, and rebuilt handſomely of ſtone, and its government modelled in 1626, upon the plan of Lubec; ſo that it ſoon became one of the chief Hans-Towns, ſtrongly fortified, and the harbour for their men of war. It was taken by the Imperialiſts during the civil war in 1629, but retaken by the duke of Mecklenburg and the Swedes in 1632, and by Munſter treaty given to the latter. It has been ſeveral times taken by the Danes, but again reſtored to the Swedes. Its magazines were blown up by lightning in 1690, moſt of the new city deſtroyed, with one of the new gates; the arſenal, churches, and houſes damaged, 30 people killed, and 200 wounded. It was in 1711 beſieged by the Danes, and in 1716 ſurrendered to the allies, Danes, Brandenburgers, Hanoverians, Saxons, and Ruſſians, who found in it 300 cannons, a vaſt quantity of bombs, grenadoes, and ammunition. But it was by treaty in 1720 reſtored to the Swedes, on condition that the walls and fortifications ſhould be demoliſhed. And in ſuch ſtate it now remains, though before it was reckoned the ſtrongeſt city, next to Copenhagen, on the Baltic coaſt.

* * * * * * *

It is here proper to obſerve, that the houſe of Mecklenburg is divided into two branches, viz. Schwerin and Strelitz. The latter commenced with duke Adolphus Frederic II. younger brother of the duke of Schwerin, and grandfather of the preſent duke of Strelitz Frederic IV. who was born May the 5th, 1738, and ſucceeded to the government Dec. 11, 1752. He was made a knight of the garter in 1764, and has three brothers and two ſiſters; the younger of the latter being our gracious ſovereign Sophia Charlotte, who was born May 19, 1744, and married the 8th of September, 1761, to his preſent majeſty George the Third, king of Great Britain, &c.

As her majeſty's ſhining virtues have endeared her to the Britiſh nation, we think it neceſſary here to give a ſmall ſpecimen of her literary accompliſhments, for which ſhe is as remarkable as for her other amiable qualities. The following elegant epiſtle was written by her to the king of Pruſſia during the late war, and has been equally admired for the humanity of the ſentiments, and elegance of the diction.

"May it pleaſe your MAJESTY,

"I AM at a loſs, whether I ſhould congratulate, or condole with you, on your late victory; ſince the ſame ſucceſs, which hath covered you with laurels, has overſpread the country of Mecklenburgh with deſolation. I know, Sire, that it ſeems unbecoming my ſex, in this age of vicious refinement, to feel for one's country, to lament the horrors of war, or wiſh for the return of peace. I know you may think it more properly my province to ſtudy the arts of pleaſing, or to inſpect ſubjects of a more domeſtic nature. But however unbecoming it may be in me, I cannot reſiſt the deſire of interceding for this unhappy people.

"It was but a few years ago, that this territory wore the moſt pleaſing appearance; the country was cultivated, the peaſant looked chearful, and the towns abounded with riches and feſtivity. What an alteration, at preſent, from ſo charming a ſcene! I am not expert at deſcription, nor can my fancy add any horrors to the picture; but ſurely even conquerors themſelves would weep at the hideous proſpects now before me!

"The whole country (my dear country!) lies one frightful waſte, preſenting only objects to excite terror, pity, and deſpair. The buſineſs of the huſbandman and the ſhepherd are quite diſcontinued. The huſbandman and the ſhepherd are become ſoldiers themſelves, and help to ravage the ſoil they formerly cultivated. The towns are inhabited only by old men, women, and children—perhaps here and there a warrior, by wounds or loſs of limbs rendered unfit for ſervice, left at his door; his little children hang around, aſk an hiſtory of every wound, and grow themſelves ſoldiers before they find ſtrength for the field. But this were nothing, did we not feel the alternate inſolence of either army, as it happens to advance or retreat in purſuing the operations of the campaigns. It is impoſſible to expreſs the confuſion which even thoſe who call themſelves our friends create. Even thoſe from whom we might expect redreſs, oppreſs us with new calamities. From your juſtice, therefore, it is that we expect relief. To you, even women and children may complain, whoſe humanity ſtoops to the meaneſt petition, and whoſe power is capable of repreſſing the greateſt injuſtice."

As the above epiſtle hath been elegantly paraphraſed, we ſhall ſubjoin ſome of the principal lines of the poetical verſion.

WHILE conqueſt ſeats you on the throne of fame,
And martial deeds immortalize your name,
On burniſh'd arms, while glory brightly beams,
And fields victorious fill the ſoldier's dreams;
Trembling I view, from whence the glory ſprings,
Of king-like heroes, or of hero-kings;
Shock'd I behold the ſource, whence dart thoſe rays,
Which ſhine on victors, and round conqu'rors blaze.
Hence I'm in doubt, while prompted to expreſs
My weak ideas on your late ſucceſs,
Whether congratulations to beſtow,
Or melt to tears, and ſwell the ſtream of woe;
For all thoſe laurels which your brows entwine,
Crown your ſucceſs, and bid your conqueſts ſhine,
Meant as immortal trophies to adorn,
Were from my country's bleeding bowels torn:
While, in what's truly brave, and greatly bold,
You outſtrip heroes dignify'd of old;
My native Mecklenburg, a prey to arms,
Is deſolated of her fertile charms:
No more her plains their plenteous verdure yield,
No longer Ceres decks the happy field;
Nothing is ſeen, or heard, where'er ye go,
But ſcenes of horror, and the ſighs of woe.
I know, great Sire, a patriotic theme,
In my weak ſex may unbecoming ſeem;
For, in an age ſo viciouſly refin'd,
By folly led, and to caprice reſign'd;
Perhaps you deem the very name of arms,
The thought of rapine, and of wars alarms,
Of ſlaughter by contending armies made,
Or burniſh'd ſwords for mortal ends diſplay'd:
Of mourning widows, and of bleeding ſwains,
Of burning towns, and deſolated plains:
Perhaps you deem ſuch thoughts unfit for thoſe,
Who ſhou'd their minds to ſofter themes compoſe;
Who ought to ſtudy only how to pleaſe,
And court the proſpect of domeſtic eaſe;
T'inſpect with care the finer art to charm,
And point the light'ning when their eyes they arm;
To practiſe ſmiles, by art to look ſerene;
Catch the free air, and dignity of mien;
To loſe themſelves in all that's idly vain,
The approbation of the world to gain:
If theſe, my Liege, are arts for females fit,
Who ſhou'd no other ſentiments admit,
I muſt for once tranſgreſs, and, unconfin'd,
Obey the dictates of a feeling mind;
I muſt, by ſoft humanity inſpir'd,
Expreſs the thoughts from ſhocking ſcenes acquir'd;
With truth, great Sire, permit me to unfold,
What I've beheld——ah!—what I yet behold;
And while the natives of my country bleed,
For the unhappy let me intercede.
A few years ſince, in Mecklenburg's domain,
Fair plenty ſmil'd on ev'ry fertile plain:
The placid years ſerenely fled away,
The fields were fruitful, and the groves were gay;
Now, my dear country, here the tear will flow,
Now, my dear country, is a waſte of woe;
Depopulation makes a frightful void,
The peaſant flies, or ſtaying is deſtroy'd;
Turn to what part I will my aching eyes,
And all the horrors of the war ariſe;
The devaſtations of the martial train,
With ſtreaming gore empurples ev'ry plain;
With native blood the ſilent rivers flow,
And on their boſoms ſtreaming purple ſhow;
While into camps the fertile fields are made,
And gloomy woods can ſcarce from danger ſhade;
Woods where ſequeſter'd families abide,
And die each moment while from death they hide;

place, into which they put a garriſon, and deſired the emperor to name commiſſioners to take the adminiſtration upon them till the ſucceſſion was ſettled, which was in 1701. Its caſtle, which is a grand edifice, with four fronts, is ſaid to be the fineſt in all the country, and is adorned with a moſt elegant garden.

Dobbertin is a Lutheran convent for ladies; Malcho is a ſmall town between the Plan and Calpin lakes; Krako is ſituated on a lake of the ſame name; and Plan is on a lake from which it receives its appellation.

Roſtock, a free Imperial city, and one of the Hans-Towns, ſtands on the river Warna, which falls eight miles below it into the Baltic Sea, and is 17 north of Guſtrow, and 25 north-eaſt of Wiſmar. It is an antient city, walled in 1160 by Burevinus, king of the Heruli, and, as appears by its charter dated in 1218, modelled by the laws of Lubeck. This town being, with the duchy, ſeized by the Imperialiſts in 1629, was retaken by the Swedes in 1631, and after the treaty of Munſter they built a fort here, and by their garriſon demanded a toll of all ſhips, which very much leſſened the trade of the town, and made many of the merchants remove the Mecklenburg miniſters, who endeavoured to have it redreſſed at the treaty of Nimeguen, but without effect. Moſt of the town was burnt in 1677, but is ſince rebuilt, with more magnificence. In 1712 it was ſeized by the Swedes, on pretence of its having furniſhed their enemies with proviſions; and in 1715, the duke of Mecklenburg, not being ſtrong enough to defend it againſt the Danes, agreed that they ſhould have a garriſon and magazine here, but nothing to do with the civil government.

I am not expert at deſcription, nor can my fancy add any horrors to the picture; but ſurely even conquerors themſelves would weep at the hideous proſpects now before me!

"The whole country (my dear country!) lies one frightful waſte, preſenting only objects to excite terror, pity, and deſpair. The buſineſs of the huſbandman and the ſhepherd are quite diſcontinued. The huſbandman and the ſhepherd are become ſoldiers themſelves, and help to ravage the ſoil they formerly cultivated. The towns are inhabited only by old men, women, and children—perhaps here and there a warrior, by wounds or loſs of limbs rendered unfit for ſervice, left at his door; his little children hang around, aſk an hiſtory of every wound, and grow themſelves ſoldiers before they find ſtrength for the field. But this were nothing, did we not feel the alternate inſolence of either army, as it happens to advance or retreat in purſuing the operations of the campaigns. It is impoſſible to expreſs the confuſion which even thoſe who call themſelves our friends create. Even thoſe from whom we might expect redreſs, oppreſs us with new calamities. From your juſtice, therefore, it is that we expect relief. To you, even women and children may complain, whoſe humanity ſtoops to the meaneſt petition, and whoſe power is capable of repreſſing the greateſt injuſtice."

As the above epiſtle hath been elegantly paraphraſed, we ſhall ſubjoin ſome of the principal lines of the poetical verſion.

WHILE conqueſt ſeats you on the throne of fame,
And martial deeds immortalize your name,
On burniſh'd arms, while glory brightly beams,
And fields victorious fill the ſoldier's dreams;
Trembling I view, from whence the glory ſprings,
Of king-like heroes, or of hero-kings;
Shock'd I behold the ſource, whence dart thoſe rays,
Which ſhine on victors, and round conqu'rors blaze.
Hence I'm in doubt, while prompted to expreſs
My weak ideas on your late ſucceſs,
Whether congratulations to beſtow,
Or melt to tears, and ſwell the ſtream of woe;
For all thoſe laurels which your brows entwine,
Crown your ſucceſs, and bid your conqueſts ſhine,
Meant as immortal trophies to adorn,
Were from my country's bleeding bowels torn:
While, in what's truly brave, and greatly bold,
You outſtrip heroes dignify'd of old;
My native Mecklenburg, a prey to arms,
Is deſolated of her fertile charms:
No more her plains their plenteous verdure yield,
No longer Ceres decks the happy field;
Nothing is ſeen, or heard, where'er ye go,
But ſcenes of horror, and the ſighs of woe.
I know, great Sire, a patriotic theme,
In my weak ſex may unbecoming ſeem;
For, in an age ſo viciouſly refin'd,
By folly led, and to caprice reſign'd;
Perhaps you deem the very name of arms,
The thought of rapine, and of wars alarms,
Of ſlaughter by contending armies made,
Or burniſh'd ſwords for mortal ends diſplay'd:
Of mourning widows, and of bleeding ſwains,
Of burning towns, and deſolated plains:
Perhaps you deem ſuch thoughts unfit for thoſe,
Who ſhou'd their minds to ſofter themes compoſe;
Who ought to ſtudy only how to pleaſe,
And court the proſpect of domeſtic eaſe;
T' inſpect with care the finer art to charm,
And point the light'ning when their eyes they arm;
To practiſe ſmiles, by art to look ſerene;
Catch the free air, and dignity of mien;
To loſe themſelves in all that's idly vain,
The approbation of the world to gain:
If theſe, my Liege, are arts for females fit,
Who ſhou'd no other ſentiments admit,
I muſt for once tranſgreſs, and, unconfin'd,
Obey the dictates of a feeling mind;
I muſt, by ſoft humanity inſpir'd,
Expreſs the thoughts from ſhocking ſcenes acquir'd;
With truth, great Sire, permit me to unfold,
What I've beheld——ah!—what I yet behold;
And while the natives of my country bleed,
For the unhappy let me intercede.
A few years ſince, in Mecklenburg's domain,
Fair plenty ſmil'd on ev'ry fertile plain:
The placid years ſerenely fled away,
The fields were fruitful, and the groves were gay:
Now, my dear country, here the tear will flow,
Now, my dear country, is a waſte of woe;
Depopulation makes a frightful void,
The peaſant flies, or ſtaying is deſtroy'd;
Turn to what part I will my aching eyes,
And all the horrors of the war ariſe;
The devaſtations of the martial train,
With ſtreaming gore empurples ev'ry plain:
With native blood the ſilent rivers flow,
And on their boſoms ſtreaming purple ſhow;
While into camps the fertile fields are made,
And gloomy woods can ſcarce from danger ſhade;
Woods where ſequeſter'd families abide,
And die each moment while from death they hide;

Who watch thro' fear, or thro'-reflection weep,
And from exhauſted ſpirits borrow ſleep;
Whoſe ſweeteſt reſt is but a troubled doze,
Who thank fatigue for ev'ry ſmall repoſe;
A famiſh'd babe perhaps lifts up its eyes,
And for aſſiſtance to the mother cries;
The fainting mother ready to expire,
Replies with tears and ſupplicates the ſire:
The ſire, unable to relieve their woe,
Can only anſwer with a briny flow;
And while his ſilent ſorrows grief expreſs,
Increaſe his own by ſharing their diſtreſs;
Thus wing'd by fear no huſbandman remains,
By cultivation to reſtore the plains;
No gentle ſhepherd tends his fleecy care,
Both join the war, and in the horrors ſhare;
And ſoldiers grown, a ſtrange reverſe of fate,
Deſtroy thoſe fields they us'd to cultivate;
With anguiſh'd age, the women ſit and wail,
As fears for huſbands, or for ſons prevail:
Perhaps a warrior here and there is found,
Debarr'd the field by many a rankling wound;
Or by the loſs of limbs, not want of will,
Deny'd the uſe of ſanguinary ſkill;
Round him the curious prattling children ſwarm,
Hang on his tongue, and as he ſpeaks grow warm;
Demand the hiſt'ry of each aching wound,
Devour each word and catch the martial ſound;
And while the ſoldier eagerly recites,
The rage of battle, and the blood of fights;
The ſteeds loud neighing, and the clank of arms,
The rumbling drum, that beats to war's alarms;
The clang'ring trumpet and the cannon's roar,
The dying groans and fields of ſtreaming gore;
The little auditors erect their creſts,
While a new ardor fires their youthful breaſts.
To you, therefore, great Sire, we make appeal,
Whoſe juſtice only can our ſuff'rings heal;
From you alone, great Sire, we hope relief,
'Tis your compaſſion muſt aſſwage our grief;
To you ev'n helpleſs females may complain,
Nor ſhed their tears, nor plead their cauſe in vain;
And trembling babes with tender looks implore
The royal hand to open mercy's door.
To you, whoſe kind humanity ſtoops down,
To ſhield the peaſant underneath the crown;
To guard the meaneſt who for juſtice preſs,
And give the humbleſt ſupplicant redreſs;
To you affliction ſpeeds with tearful eye,
Whoſe power relieves, and bids injuſtice fly.

The Imperial City of HAMBURG.

HAMBURG, the greateſt emporium of Germany, and the ſecond of the Hans Towns, ſtands on the north ſide of the Elbe, 27 miles north-weſt of Lunenburg, and 416 north-weſt of Vienna, eaſt long. 10 d. 11 m. lat. 53 d. 41 m. It owed its origin to Charlemagne, who, to ſtop the progreſs of the northern Sclavonians, built two forts on the Elbe, one of them at this place, and erected a church, the only one in Hamburg for above 350 years; it was firſt declared a free and independent city in 1220; the emperor Maximilian, in the diet of Augſbourg, in 1510, declared it free and Imperial; and ſince that time it has been inveſted with ſovereign power within its own juriſdiction; in 1641 it was accordingly ſummoned to the diet of the empire, though, as both Denmark and Holſtein proteſted againſt it, the Hamburghers have not yet enjoyed the right of ſitting and voting there; great privileges have, however, been granted them by ſeveral emperors; and, for their keeping a light-houſe at Helgoland, four German miles within the ſea, they are excuſed from paying toll at Stade to our king as elector of Hanover; and yet the kings of Denmark have ſince compelled them ſeveral times to pay tolls at Gluckſtadt.

The continual jealouſies between Sweden and Denmark uſed to be their chief ſecurity; but in 1712, on occaſion of the northern war, the Danes, Muſcovites, and Saxons, having their armies in the neighbourhood, made their ſeparate demands, with threats in caſe of refuſal; and they were obliged to compound with the firſt for 230,000 dollars, and with the ſecond for 200,000. Denmark has extorted money from it ſix times ſince 1645. At the firſt time it received 120,000 crowns; in 1679, 220,000; in 1686, 240,000, which they gave the Danes to buy off the ſiege; 200,000 at another time; 180,000 in the war with Sweden, and 246,000 in 1712. After which the late czar got 200,000 crowns of them on ſome other pretenſions. In 1713 the city was viſited by a plague. It is ſeated with all poſſible advantage for trade foreign and domeſtic. It has ſuch a port and river as nothing in Europe excels except the Thames. Beſides the Elbe, which enters the German Ocean here, they have a chanel opened to the Trave, for the ſake of a communication with Lubec and the Baltic, without being at the trouble and hazard of going about by the Eaſt Sea, round the coaſt of Jutland and the Scaw; and without the obſtructions of the toll, and other difficulties of the Sound; ſo that the veſſels in the Trave are within 40 miles of the Baltic, whereas it is 400 miles and more round Jutland, &c. Its trade exceeds that of any city which has no kingdom or republic annexed to it; and the exports and imports of it ſingly exceed thoſe of many great kingdoms even in Germany. The Elbe, and many great navigable rivers that fall into it, after a courſe through ſome of the largeſt, richeſt, and moſt trading parts of Germany, furniſh it with all the product and manufactures of Auſtria, Bohemia, and Upper and Lower Saxony. By the Havel and Spree it has trade with Brandenburg electorate; and by a canal from the Spree to the Oder, its commerce extends into Sileſia, Moravia, Poland, almoſt to Hungary; ſo that it has more manufactures, &c. for exportation than moſt cities in the world. The chief export, (chiefly to Great Britain) are of various linens of ſeveral countries; particularly Sileſia diapers, and the lawns of Miſnia and Luſatia; Germany linen from Oſnaburg, Lunenburg, &c. Hamburg dowlas, and other ſtrong linens, from Lower Saxony; coarſe linen, barras, crocus, hinderlands, and many other ſorts from Lower Germany; linen-yarn from the ſame countries; tin-plates, braſs, iron and ſteel wire, chiefly from Upper Saxony; clap-boards, pipe and hogſhead ſtaves, wainſcot boards, oak plank and timber, kidſkins, from Brandenburg; corn from many provinces, chiefly Brandenburg and Saxony. Of the number and articles which they import from abroad, the chief are the woollen manufactures of England. The value of ſuch from Yorkſhire only is ſaid to be above 100,000l. The article of Engliſh ſtockings comes to above 20,000l. per annum. And all Engliſh goods vended here amount to ſeveral 100,000l. annually. The Engliſh merchants, having great privileges, make an extraordinary figure here. They appear as a body, hold a court, with particular juriſdiction and powers among themſelves; and as they are called in London the Hamburg Company, ſo are they here called the Engliſh Hans or Society. They have a church and miniſter of their own. The Engliſh are numerous, this being really ſtill the ſtaple of the Engliſh trade. They have the ſame privilege to import herrings allowed the Dutch. The Hamburgers drive great trade to Ruſſia and Livonia; and for goods ſent to the north of the empire and to Poland they have great returns, not only in linen-yarn and fine flax, but in honey, wax, aniſeed, linſeed, drugs, &c. all by the Oder into the Spree, and ſo into the Elbe in the marquiſate of Brandenburg; and therefore the Danes cannot interrupt this trade, nor obtain any part of it, forth or back, &c. &c. Above 200 Engliſh ſhips alone come into this harbour in a year, though moſtly from Spain, Portugal, and Italy; from and to which the Hamburg merchants pay them double the freight they do for their own ſhips, becauſe the Engliſh being free from the Turks by their Mediterranean paſſes, they ſave more than that in inſurance. Indeed they in 1751 aimed at taking much of this trade into their own hands, on their own bottoms, &c. But happily the king of Spain ſo deeply reſented their treaty with the piratical ſtates of Barbary, and furniſhing them eſpecially with warlike ſtores, &c. that he not only inhibited commerce with Hamburg, but laid an embargo on their goods, &c. in Spain. But the difference was reconciled, and matters accommodated, on reſtraint however of any more ſuch trade with the Barbarians.

This city has good ſhare in the Greenland whale fiſhery; and the fins and whalebone is a manufacture managed by its people. It commonly ſends 50 or 60 ſhips a year

year in this trade; ſo that they export great quantities of oil and fins, though they buy from the Dutch more than their own ſhips ſupply. In war it fits out ſhips of force to convoy the merchantmen, and may be ſaid to be ſtrong both at land and ſea, being able to arm 12 or 14,000 men, and has a conſtant garriſon of near 2000. It exports great quantities of beer here brewed, and hath ſeveral manufactures, viz. weaving of damaſks, brocades, velvets, the richeſt ſilks, and ſugar-baking, here being as good loaf ſugar as is made in London, though indeed they are forced to buy their Muſcavado ſugars chiefly from Great Britain; callico printing employs numbers of people; and of late they have begun to print linens alſo. In ſhort, Hamburg is become a rich and powerful city, and without diſpute drives the greateſt inland trade, at this time, of any city in Europe, London and Amſterdam excepted. It has an undoubted right to a place in the diet of the empire. She has pretenſions alſo to her being ſuch a free city, as not to be ſubject to the empire as other Imperial cities are, and on that account always refuſes to pay contributions to the military cheſt in time of war: but then the Hamburgers, under colour of a particular treaty with the emperor, wiſely avoiding to embarraſs themſelves with the affairs of Germany, in caſe of a war, do the ſame thing in effect. The government is veſted in the ſenate and three colleges of burghers, and is a mixture of the ariſtocratical and democratical. Of the latter, becauſe all their taxes and impoſts are granted by the burghers, without whoſe conſent the ſenate cannot raiſe one penny, and becauſe the management of the finances is in 10 of the burghers. Of the former, becauſe they have a ſenate choſen out of the principal perſons of the republic, who alone have the power of aſſembling and diſſolving the convention of the burghers; to whom the burghers that are managers of the finances are accountable, who treat with foreign princes without the intervention of the burghers, and who are veſted with almoſt every act of ſovereignty but that of laying taxes and managing the finances.

The government thus conſtituted is under the protection of the emperor, for which the Hamburghers pay him 80,000 crowns a year. But how little this has availed them is too well known; and the protection they have from England, for the ſake of trade, is certainly their greateſt ſecurity. The ſenate conſiſts of four burgomaſters, of whom three are lawyers, and one a merchant (two of whom preſide alternately for a year) 24 ſenators, viz. 11 lawyers and 13 merchants; four ſyndics, who are all lawyers, and give their opinions as our judges do in the houſe of lords, but have no vote; and four ſecretaries, of whom the principal is called prothonotary: and all theſe are, upon every vacancy, choſen out of their own bodies. Here is alſo a court of admiralty, conſiſting of a burgomaſter, four ſenators, ſix merchants, and two maſters of ſhips, aſſiſted by a ſecretary, and a water-bailiff. Their law is the civil, or Juſtinian, and, in criminal cauſes, the ſtatutes of the emperor Charles IV. with which they have likewiſe their own ſtatutes, but both puzzled and obſcured by numberleſs comments, and contradictory precedents. The firſt or chief of the three colleges is that of the Ober-Alten (or principal Elders) which conſiſts of three members, choſen out of each of the five wards of the city; has great power, like that of the tribunes at Rome; can demand of the ſenate to call a convention of the burghers, and even impeach a ſenator, and require a conference with the ſenate on that or other occaſions. When the three colleges, conſiſting in the whole of 180 members, are aſſembled, and the ſenate at the ſame time, which is in all extraordinary caſes, particularly for laying taxes, the gates of the city are ſhut, a ſtrong guard is drawn up before the ſenate-houſe, and centinels poſted at all its avenues. Each ward debates and votes by itſelf, and, when the queſtion is put by the ſenate, the majority of the five determines it. Their eccleſiaſtical government, of which the ſenate is the head, is managed by a conſiſtory, or convocation of the paſtors, archdeacons and deacons (29 in all) of the five principal, and ſeven ſmaller churches or chapels.

In general the religion is Lutheran, and the Calviniſts were obliged to go to worſhip at Altena till within theſe few years paſt, that they have been allowed one or two churches within the walls of this city; but this is a favour not granted to the Roman Catholics, againſt whom they were ſo exaſperated in 1719, upon a public attempt of their prieſts to make proſelites in the city, that a mob ſtripped and demoliſhed a chapel that was building here by the imperial reſident, together with the ſaid miniſter's houſe; for which the Hamburghers being threatened by the emperor, Charles VI. with military execution, they were forced to find another houſe and chapel at their own expence, and to make good all the other loſs and damage, beſides paying a fine, and ſending two members of the ſenate, and two of the burghers, to Vienna, to beg the emperor's pardon; after which, he took the citizens into his ſpecial protection, and eſpouſed their cauſe heartily againſt the antiquated pretenſions of the Danes. They are obliged, however, to allow the Roman Catholics their worſhip in the ambaſſadors houſes. They have here what they call a private confeſſion, previous to the holy communion, though it differs in nothing from ours that is general, and the abſolution the ſame; but even the pooreſt of the people here are forced to give a fee to the prieſt for ſuch confeſſion; which cuſtom, not known in any other proteſtant city, is reckoned the more inexcuſeable in this, becauſe its churches are immenſely rich, and have great ſums of money at uſury, out of which they might afford the clergy a competent maintenance. But the fame of Hamburg is juſtly great for its care of the poor, here being more hoſpitals, in proportion to its bigneſs, than in any other proteſtant city in Europe: one, in particular, for orphans, like our Blue-Coat hoſpital in London, the yearly revenue of which amounts to betwixt 50 and 60,000 l. Sometimes they have above 300 infants abroad at nurſe, who, when able to dreſs themſelves, are taken into the houſe. The boys that are qualified are put out and maintained at the univerſity; the reſt are put out to trades; and the girls, after they can read, ſpin, knit, &c. are ſent to ſervice. The building is decent, but not very coſtly, and borders on one of the canals. There is a large ſamptuous hoſpital for receiving poor travellers that fall ſick, and another for the relief of maimed, antient, and decayed ſeamen; where alſo care is taken of the widows, as well as children, of thoſe who loſe their lives in the ſervice of the public. In that called the oldeſt hoſpital, 114 poor, old, blind, and dumb people, are maintained. There is St. Job's for thoſe poor that have the French diſeaſe; and a peſt-houſe for thoſe that have the plague, or other infectious diſtempers; to which even people of the beſt rank come for cure, but pay for it to the houſe. There are many leſſer hoſpitals, beſides theſe, for poor widowers, widows, orphans, &c. and great numbers of free-ſchools; beſides two workhouſes, or houſes of correction, where they manufacture rugs, and coarſe kerſeys, with which thoſe confined there are clothed, and where they alſo ſpin. In one of them, thoſe who have not performed their taſk are hoiſted up in a baſket over the table in the common hall, while the reſt are at dinner; that they may be tantalized with the ſight and ſmell of what they cannot taſte. Here are alſo ſocieties for making good loſſes and damage by fire. The houſes here are about 30,000. The churches are antient, large, and handſome fabrics, but open thoroughfares all day long, and in ſome there are bookſellers ſhops. Here are ſix lofty ſteeples, ſome of them covered with copper, which make a grand appearance, though the frames are only of timber. The great ſpire of St. Peter's is the higheſt in the city; that of St. Nicolas is ſupported by large gilt globes; St. Michael's ſteeple is 400 feet high; St. Catherine's has a ſtately front, with abundance of ſtatues in niches; and the ſteeple is formed of ſundry lanterns, diminiſhing gradually to the laſt, which ſupports a ſpire, like St. Bride's in Fleet-ſtreet, but much taller. Round the middle of its ſteeple is a crown richly gilt. Its pulpit is of white marble, curiouſly carved, and adorned with figures, and other ornaments of gold; and its organ, reckoned one of the beſt in Europe, has 6000 pipes. That called the thum, or dome, was the cathedral while the town remained an archbiſhopric, and was built about the year 830. The ſpire and tower that ſupports it, are near 360 feet high. There ſtill belong a dean and chapter to it, though ſecularized, from whoſe court there lies no appeal but to the imperial chamber at Wetzlar. Many of the counts of Schawenburg and Holſtein are buried here, whoſe names are writ in a fair catalogue, with their

other benefactors, and hung up in the body of the church. This cathedral, with the chapter, and a large number of houſes belonging to it, are under the immediate protection of his Britannic majeſty, as biſhop of Bremen, and independent of the city juriſdiction. There are five other very large churches here, and eight leſſer churches or chapels of eaſe. There is a Schola Illuſtris, or univerſity, here, well endowed, and furniſhed with ſix able profeſſors, of whom were lately the learned Fabricius, and M. Hubner the geographer. The ſenate-houſe and town-hall is an antient, large, and noble ſtructure, adorned with the ſtatues of emperors, and the nine worthies; and a building is lately added for their new bank. Their exchange is fine, but inferior to that in London; it is oppoſite to the ſenate-houſe. One part of the ſquare is planted with large trees, and the other covered with a hall, where the elders or council of commerce meet: at the other end of it is the public crane. On the ſtreet before the town-houſe the lawyers have a ſort of exchange, as the public miniſters have at an eminent toy-ſhop in the ſame neighbourhood. The emperor, and ſeveral princes of Germany, have their own poſt-houſes here, managed by perſons of their own appointment; but the poſt-houſe for England and Holland is the only one that can properly be ſaid to belong to the public. The Britiſh reſident and company have a ſtately hall built by themſelves; and the reſident has a power of judging ſuits and differences that ariſe among his countrymen. There is an opera or play-houſe here, chiefly for the entertainment of the reſidents and other foreign gentry, of whom here are ſome from moſt trading kingdoms in Europe. This city, which is almoſt of a circular form, and about ſix miles in compaſs, is naturally ſtrong, a great part of it lying upon iſlands. The walls and fortifications that lie open to view are covered with graſs, and planted with rows of trees, ſo high, that none of the houſes are to be ſeen without that ſide of the walls which is next to Altena. It has ſix gates, and three entrances by water, viz. two from the Elbe, and one from the Alſter. It is divided into the old and new city by a canal, and ſurrounded by a fine high wall, with 23 bulwarks, beſides other out-works and fortifications, in the modern way, and a very deep ditch: there is alſo a noble line, or out-work, with other works, from the largeſt baſon of the Alſter to the Elbe, about half a mile above the town: and on the other ſide of that baſon, about the midway betwixt that and the Elbe, below the town, there is a very fine fortification, called the Star-Sconce, ſo ſtrong, that the king of Denmark, with all his army, could not take it in 1686, after ſix weeks ſiege. In the New Town, towards Altena, there are large ſtreets of poor houſes, chiefly inhabited by Jews.

The two channels, called the North and South Elbe, into which that river is ſeparated, two or three miles above this city, having, with ſome ſmaller ones, formed divers beautiful iſlands towards Harburg that belong to his Britannic majeſty, re-unite in one channel, about ſix miles below the city. Towards the eaſt it is waſhed by the little river Bille, and towards the north by another little river called the Alſter, which forms a very large baſon juſt without the town, and another, though not ſo large as that, yet of at leaſt 1000 feet ſquare, within the walls of it; after which, it drives the public mills, and, paſſing by ſeveral ſluices and canals through the whole city, falls into the Elbe. Here are 84 bridges, 38 water-mills (beſides ſix wind-mills) and ſix ſluices; and it has likewiſe ſix large markets. As the tide here flows in canals through moſt of the chief ſtreets, and runs four leagues above the city, i. e. 22 from the river's mouth, the town is frequently damaged by ſpring-tides; and houſes and families have been ruined by tempeſts. There were two ſad inſtances in 1651 and 1719. Though the harbour is ſo commodious, and river ſo deep, that large merchant-ſhips come up to the walls, yet thoſe of extraordinary ſize anchor at the new mills four miles below, where they unload into ſmaller veſſels. The ſtreets are generally crooked, but pretty wide, and outſtrip all Germany for high and ſtately houſes, moſtly brick. They uſually reckon here by ſtivers and lubs, of which 48 make 4s. 6d. (or a dollar). It is the cuſtom when a citizen dies to leave the tenth of his eſtate to the city; and foreigners, not naturalized, pay annually for liberty to trade. It has a diſtrict for 12 miles round, abounding with excellent paſtures, with conſiderable villages and noble ſeats. It comprizes the bailiwics of Rutzenbuttle, Bilwerder, Ochſenwerder, and Eppendorf. Alte-game, New-game, Kirchwerder, and Roſlacke bailiwics, are enjoyed by the Hamburghers in common with the citizens of Lubec, as is a caſtle, and the little town and bailiwic of Bergedorf. This city's merchants are affable, but too nice in punctilio and ceremony; very frugal in their families, but as liberal in treating ſtrangers. They mightily affect gardens at the city gates, much in the taſte of Holland. Scarce a merchant or conſiderable ſhopkeeper but has his coach. The common carts are only a long pulley laid on an axle-tree between two wheels, and drawn by men, of whom 12 or more are ſometimes linked to thoſe machines, drawing two tons weight. Graduates at law are very numerous, though hardly a tenth of them employed in it. Every artificer who can perform a piece of work beyond his brother artiſts is made free of his company; a benefit not otherwiſe to be attained but by ſervitude, or marrying a freeman's widow or daughter, or at a very great expence. By the vigilance of the magiſtrates and their beadles, few or no beggars are to be ſeen in the ſtreets: which may be aſcribed alſo to the manufacture of knit-ſtockings ſufficient to employ all the poor. Officers are employed to carry wool to be carded, ſpun, &c. by the poor at their own habitations, and then fetch the work, paying them due wages. The ladies are generally attended to church by a ſervant maid with a book, hanging by a ſilver chain on one arm, and, if it be cold weather, with a braſs ſtove on the other. The hangman's houſe is the common priſon for malefactors. After ſentence (which is always pronounced on Fridays, as execution is done the following Monday) they are carried to a handſome upper room, where there is allowed a good bed, and all reaſonable comforts ſuiting their condition, and they are conſtantly attended by ſome clergyman by rotation. As no criminal is puniſhable without pleading guilty, they have five degrees of tortures to extort ſuch confeſſion, in proportion to the ſtrength of evidence to ſupport accuſation. The judges are always preſent, with a clerk to write down the confeſſion, at a table with the curtain drawn round it; ſo that they can hear and ſpeak to the tortured criminal without being eye-witneſſes of the cruelty. A walk runs by the great baſon of the Alſter from the play-houſe to the heart of the city, called the Maidens Walk, 1000 feet long, and 20 broad, railed and bordered by trees on each ſide. On one ſide is the water with ſeveral ſtairs, on the other a row of noble houſes. Many convents, &c. ſtill remain, but, being ſecularized, are now Lutheran; the tenure of one of them is ſtill continued by offering a glaſs of wine to every malefactor carried by to execution. People of the beſt faſhion carouſe in a cave, an odd kind of tavern, which has a prodigious ſtock and vent of old hock, &c. which is well regulated by a deputy of the magiſtrates, and brings in a conſiderable revenue. Corn is meaſured by the ſchepel, of which 83 make 10 quarters Engliſh. And 100 Hamburg ells make but 48 and a half in London. Hamburg and Lincoln are in the ſame latitude; but it is conſiderably colder in winter and hotter in ſummer at the former.

The Dioceſe of HILDESHEIM.

THIS dioceſe, which is ſituated between the rivers Lerne and Ocker, is bounded by Halberſtadt on the north-weſt, Lunenburg Zell on the north, Grubenhagen on the ſouth, and the other parts are circumſcribed by the duchy of Brunſwic. The bailiwic of Hunderſuch lies ſeparate from it, being incloſed by the principalities of Calenburg and Grubenhagen. This dioceſe is 40 miles long and 30 broad, and the ſoil is fertile in

Grain	Flax
Hops	Pulſe
Oak	Beech
Aſh	Birch.

It is likewiſe productive of

Salt	Iron ore
Stone	Horſes
Black cattle	Sheep
Hogs	Game, &c.

The ſtreams which water it ſupply great quantities of fiſh; the ſtates conſiſt of the clergy, nobility, and burgeſſes; the religion is Lutheraniſm; the manufactures are

Cloth	Stockings
Porcelain	Iron ware, &c.

And the principal places are,

Hildeſheim on the Innerſte, the capital of the dioceſe, is 15 miles from Hanover. It is an old-faſhioned, large, irregular town; the magiſtracy and burghers are in general Lutherans. The principal buildings are, the cathedral, ſeveral monaſteries and nunneries, many churches, the chancery, the nobility's hall, where the diets are held, the Jeſuits college, the Jews ſynagogue, the gymnaſium andriamim, and the Latin ſchool of St. Lambert. The magiſtrates poſſeſs civil and criminal juriſdiction, impoſe and collect duties, and apply them to public uſes, ordinances, &c. The town was antiently one of the Hans, and the capital of Henry the Lion; and in the neighbourhood there are two rich abbies.

Peina on the Fuſe has a garriſon, an epiſcopal palace, a capuchin convent, and a Lutheran church.

Weddingen is a commandery of the Teutonic order; Knieſtedt a village at the foot of a hill; Salz-Detfurt, a market town, with ſalt-works; Mark Olderdorf, a market town on the Ilme; Daſſel, a ſmall town, which formerly gave title to counts; Salzliebendall, a market town, which contains ſalt-works, and ſeveral convents; and Werle, which was antiently a palatinate town, but is now a mean village.

Lamſpringe is a ſmall town on the Lannue, where there is an Engliſh Benedictine ſeminary, whoſe abbot is poſſeſſed of the lower juriſdiction of the town, and is alſo patron of the Lutheran church.

Sarſtadt is a ſmall town on the Innerſte; Gronau on the Leine contains a Dominican convent, and gives name to a bailiwic; Bekenem is a ſmall town, whoſe benefice is in the gift of the elector of Brunſwic; Elze on the Saale is poſſeſſed of a high and low juriſdiction; and Alſeld on the Leine has ſimilar privileges.

The Imperial City of GOSLAR.

GOSLAR, though an Imperial city, and independent of the Brunſwic family, is uſually deſcribed in this country, becauſe it is ſurrounded with their dominions. It is a large antient city, 22 miles ſouth-eaſt of Hildeſheim, 25 ſouth of Brunſwic, 26 weſt of Halberſtadt, and 40 north-weſt of Gottingen. It was built in 1201, by the emperor Henry I. who had a palace here, and alſo fortified it. It ſtands on the ſouth ſide of the Goſe, which riſes to the ſouth-eaſt of Cellerfeld, and falls into the Ocker near the confines of Hildeſheim. It enjoys the ſame privileges as other free Imperial cities, beſides an exemption from tolls in all markets of the empire but three. In all Imperial writs it is called *Nobile Membrum Imperii*. The houſes are covered with ſlate. It is ſituated in a valley ſurrounded with mountains, in which are mines both of iron and ſilver, viz. thoſe of Steinberg, Hertzberg, Rameliberg, Klockenberg, &c. The inhabitants are employed either in digging them, or cleanſing, tempering, and vending the metals and minerals, of all ſorts, that are dug out of them. It has been the reſidence of the emperors, for the ſake, it is ſuppoſed, of hunting, and its treaſures under ground; and becauſe they have often aſſembled the ſtates here, it has been called a palatinate city.

The emperor Frederic II. anno 1235, with conſent of the ſtates of the empire, granted to Otho I. duke of Brunſwic, the tenth of its mines. The houſe of Brunſwic has pretenſions to this city, and ſeveral of its princes have endeavoured to eſtabliſh them by force of arms, but hitherto in vain. The protectorſhip of it is in the king of Great Britain, as elector of Hanover, alternately with the duke of Brunſwic-Wolfenbuttle. There is no religion tolerated here but the Lutheran. It was in this city that Barthold Schwartz, the Benedictine monk, is ſaid to have found out the art of making gunpowder.

The Imperial Lordſhip of SCHAUEN.

THIS lordſhip is ſituated between the principality of Halberſtadt, and the county of Wernigerode. It belonged formerly to the abbey of Walkenreid, but now belongs to the duke of Brunſwic.

The Imperial City of NORDHAUSEN.

NORDHAUSEN is ſituated on the Zorge, about 21 miles ſouth-eaſt from Goſlar. It was formerly one of the Hans-Towns, is celebrated for its curious works in alabaſter and marble, and carries on a great trade in the diſtillery branches. The inhabitants and magiſtracy are Lutherans; to the latter of whom the elector of Brandenburg, in 1717, transferred all his rights and prerogatives to this city, in conſideration of being paid the ſum of 50,000 rix-dollars. In the diet of the empire it has the tenth ſeat on the Rheniſh bench of Imperial cities, and the fourth among thoſe of Lower Saxony.

The Imperial City of MUHLHAUSEN.

THIS city is ſituated on the Unſtrut, 40 miles eaſt of Caſſel; it contains two Lutheran churches, with a Roman Catholic foundation for Auguſtine nuns. In the 14th century this city purchaſed of the emperor Lewis the office of Imperial judge within the city and its precincts. It poſſeſſes the ninth place on the bench of Imperial cities in the diets of the empire, and the third in thoſe of Lower Saxony. It was formerly one of the Hans-Towns, and has at preſent a tolerable trade.

BLANKENBURG *and* REINSTEIN.

THE two counties of Blankenburg and Reinſtein are uſually conſidered together as one. They are ſo called from their towns; and lie in the eaſt part of this duchy, about 24 miles from ſouth to north, but narrow at both ends, and not above nine miles where broadeſt. It was much larger once, when it included the county of Weringenrode on the weſt. Theſe counties (together with Queidlinburg, Hohenſtein, Stolberg, and Schwartzbourg, in Upper Saxony, where they are deſcribed) were formerly one province, and then called Hartzingow, i. e. the Hercynian County, having been a part of the antient Hercynian foreſt, now called Hartz, of which there ſtill remain great woods and parks, that abound with game. Beinſtein was claimed by the elector of Hanover as a vacant fief, but ſeized by the late elector of Brandenburg, as holding of his principality of Halberſtadt. Theſe counties are ſouth from Brunſwic, ſouth-weſt from Magdeburg, weſt from Halberſtadt, north from Thuringia, and eaſt from Hildeſheim. It is ſo cold a country that the ſnow lies on its mountains till Midſummer, and affords little corn; but the valleys are filled with cattle. The inhabitants are ſtrong and vigorous, and many of them live to 100 or 110 years of age. There are iron mines in their mountains, one of which, called Broeken, or Brockſberg, the Bructerus of the Latins, is reckoned the higheſt in Germany.

Betwixt Blanckenburg and Elbingerode is a remarkable cave called Buman's Hole, from its diſcoverer Buman, which has a narrow entrance, but none ever found the end of it, though ſome of the miners have affirmed, they have gone as far in it as Goſlar, which is 20 miles. Large bones of ſtrange creatures have been often found in it, which the neighbouring gentry keep for rarities; and, among others, the ſkeleton of a giant. There are two great rocks near the convent of Michaelſtein, and not far from Blankenburg, which repreſent two monks in their proper habits, as nicely as if they were carved out, and therefore are called the Monks Craigs. Many caſtles are found in theſe countries on the tops of inacceſſible rocks, and ſome actually hewn out of the rocks, but they are not regarded. The moſt remarkable of them is that near Brockſberg, which the inhabitants ſay was built 300 years before Chriſt, by the Chauci, a branch of the Saxons, who had an idol and temple of Saturn here, which were deſtroyed by Charlemagne, who called the place Hartzburg. A ſalt-ſpring being diſcovered at the bottom of this hill in the time of Julius, duke of Brunſ-

wic, he built a ſmall town for the workmen, called Julius Hall, which is now grown rich and large, by their trade in ſalt, copper kettles and pots, wire, &c.

The people of this country are ſaid to be the dulleſt dolts in all Germany, and mere bigots to the inſtitutions and cuſtoms of their anceſtors. This petty county was left by the late duke Anthony-Ulric, of Wolfenbuttle, to his ſecond and favourite ſon prince Lewis, to make him ſome compenſation for the right of primogeniture, which he had newly introduced into his family, to that ſon's prejudice: for the Brunſwic princes had been long uſed to a partition of lands in their families, till that cuſtom, ſo pernicious to great ones, was firſt aboliſhed by the Hanover branch. As this county neither gives its poſſeſſor the rank of a ſovereign prince, nor admittance into the college of princes at the diet of the empire; the then duke of Blankenburg, in order to procure himſelf both theſe privileges, made a treaty with the elector of Hanover, whereby the latter yielded him the vote and ſeat which he enjoyed in the diet for his duchy of Grubenhagen; and the duke engaged never to vote at the diet but in conformity to the ſentiments of the elector; but after his deceaſe the vote and ſeſſion for Grubenhagen reverted to the elector.

The only town worth notice is

Blankenburg, eight miles weſt of Quedlinburg, and 40 ſouth of Wolfenbuttle, on the frontier of the principality of Anhalt. It is but a ſmall town, the houſes ill-built and inconvenient. The duke, who has a caſtle here, has offered the inhabitants materials for building gratis, and done all in his power to inſpire them with taſte, and the arts, but without ſucceſs.

The County of RANZAU.

THIS county is about 10 miles long, and ſix broad, and has a ſoil tolerably fertile. It was formerly called the bailiwic of Barmſtedt, but after it had been ſold to Chriſtian Ranzau, ſtadtholder to the king of Denmark, it was erected into a county of the empire, by the emperor Ferdinand III. in conſequence of a ſettlement made by count Ranzau, that it ſhould devolve to the royal family of Denmark, upon the failure of male iſſue in his own. Barmſtedt, a ſmall market town on the Acce; and Elmſhorn, another market town on the ſame river, are the only places of any conſideration in the whole county.

* * * * * *

The principality of Ratzeburg belongs to the Strelitz family, but does not contain any place worthy of notice, except the town of Ratzeburg, where the regency, treaſury, and conſiſtory are held, but which belongs to the duchy of Saxe Lawenburg; and the ſmall town of Sconberg, which gives name to a bailiwic, and formerly contained an epiſcopal palace.

The principality of Schwerin is ſurrounded by the duchy of the ſame name, and the lordſhips of Wiſmar and Roſtock. It is 20 miles long, ſix broad, and was formerly a biſhopric, but ſecularized at the peace of Weſtphalia. The only places worthy of notice are

Butzo, a town where the biſhops formerly reſided; Wahrien, a ſmall place without trade; Schelffe, a town contiguous to Schwerin; and Rhun, which gives name to a bailiwic, and contains a convent for ladies who are nobly born.

HALDEN.

THE county of Halden lies along the Elbe, is eight miles in length, the ſame in breadth, and borders on the territory of Hamburg. It is very fertile, abounds in grain, fruit, cattle, and fiſh; has its own courts, eccleſiaſtical and civil, and was ceded in 1731 to the elector of Brunſwic. The inhabitants are Lutherans; the revenues amount to 10,000 rix-dollars; and the only town is Offerndorf, a ſmall place on the river Meden.

Duchy of SAXE-LAWENBURG.

THIS is the fartheſt province of his Britannic majeſty's German dominions: it is watered by the Elbe which divides it, and is bounded by Holſtein on the weſt and north, by Lunenburg on the ſouth, and Mecklenburg on the eaſt.

This county is not very fertile in grain, but abounds in

Flax	Wood
Paſturage	Cattle
Sheep	Fiſh, &c.

It is about 80 miles in length; its greateſt breadth is near 26 miles, and it contains about 30,000 inhabitants. The manors, entitling to a ſeat and vote in the diets, are 23 in number, and the ſtates are compoſed of the nobility and burghers. Lutheraniſm is the eſtabliſhed religion, and the clergy in general of this duchy may be placed as patterns for thoſe of moſt other countries; for their attention to their holy function, their humility, humanity, zeal, and benevolence, are ſuch, that they ſeem to merit, individually, the following character which Dryden gives of the good prieſt:

The tythes his pariſh freely paid he took,
But never ſu'd or curs'd with bell and book,
With patience bearing wrong, but off'ring none,
Since every man is free to loſe his own.
Yet of his little he had ſome to ſpare,
To feed the famiſh'd, and to cloath the bare.
For mortify'd he was to that degree,
A poorer than himſelf he could not ſee:
True prieſts, he ſaid, and preachers of the word,
Were only ſtewards of their ſov'reign lord:
Nothing was their's, but all the public ſtore,
Intruſted riches to relieve the poor;
Who, ſhould they ſteal for want of his relief,
He judg'd himſelf accomplice with the thief.
And ſtill he was at hand, without requeſt,
To ſerve the ſick, to ſuccour the diſtreſs'd.
He duly watch'd his flock by night and day,
And from the prowling wolf redeem'd the prey,
But hungry ſent the wily fox away.—
The proud he tam'd, the penitent he chear'd,
Nor to reprove the rich offender fear'd;
His preaching much, but more his practiſe wrought,
(A living ſermon of the truth he taught)
For this by rules ſevere his life he ſquar'd,
That all might ſee the doctrine which they heard;
For prieſts, he ſaid, are patterns for the reſt,
The gold of heav'n, who bear the God impreſt;
But, when the precious coin is kept unclean,
The ſov'reign's image is no longer ſeen:
If they be foul, on whom the people truſt,
Well may the baſer braſs contract a ruſt;
With what he begg'd his brethren he reliev'd,
And gave the charities himſelf receiv'd;
Gave while he taught, and edify'd the more,
Becauſe he ſhew'd by proof, 'twas eaſy to be poor.

Both the nobility and commons derive their privileges from an act called the Lawenburg Act, which was granted by George I. king of Great Britain, and confirmed in all its articles by his ſucceſſors. The Lutheran ſuperintendant, appointed by the king of Great Britain, is obliged to viſit the ſeveral pariſhes annually. Here are but few manufactures, but many commodities are tranſported from hence to other countries, particularly

Rye	Butter
Cheeſe	Wool
Timber	Wood, &c.

Here is a regency ſubordinate to that of Hanover, and a high tribunal, the members of which are appointed partly by the king and partly by the ſtates, but an appeal lies to Zell. The duchy has a conſiſtory of its own, and the colleges meet at Ratzeburg. The principal places are,

Ratzeburg, 12 miles ſouth of Lubeck, is ſituated on an iſland in a lake of the ſame name. It is the ſeat of a regency, conſiſtory, and chief court of juſtice; has a fine bridge, a beautiful walk planted with limes, a cathedral, a caſtle, and a ſtrong garriſon.

Lawenburg, on a hill near the Elbe, has a conſiderable trade, particularly in corn and wood. It is 35 miles eaſt of Hamburg, has a toll, and contains the veſtiges of a ducal palace.

Mollen

Mollen, a ſmall town 16 miles from Lubeck, is almoſt ſurrounded by lakes; Grunau is a market-town; Buchen a village, where diets are held; and Schwarzenbach gives name to a bailiwic which contains two copper mills, and a paper-mill.

The Circle of WESTPHALIA.

SOME derive the name of this country from Weiſſenphalen, i. e. a white horſe, the arms of its antient dukes, but others more probably from Weſtfield, or Weſtvelden, the country of its antient inhabitants the Weſt Saxons, on the weſt ſide of the Weſer betwixt that and the Rhine; as the country on the other ſide was called Ooſtvelden, or Eaſtfield. It ſtretches along the weſt ſide of the Weſer, from the German ocean on the north, to Heſſia on the ſouth; and between Lower Saxony on the eaſt, and the Netherlands on the weſt. The greateſt extent from ſouth to north is about 200 miles, and 150 from eaſt to weſt. The air, eſpecially in the north part, is very cold, and great part of the ſoil is marſhy and barren; however, it has plenty of corn and paſture; but the fruit is very ordinary, and ſerves chiefly to feed the hogs, of which this country has good ſtore of an excellent kind, ſo that the bacon they ſend abroad is very much eſteemed. The chief rivers are, the Weſer, the Ems, the Lippe, the Roer, the Aa, &c. The accommodations a traveller may meet with here, are well enough expreſſed in this diſtich, very common in Germany.

Hoſpitium vile Groof Broot, dun Bier, lange Milen,
Sunt in Weſtphalia; *Qui non vult credere* Loop Da.

That is,

Four things here will drive a traveller mad,
Long miles, ſmall-beer, coarſe bread, and lodgings bad.

Indeed Weſtphalia is confeſſed to be the moſt wretched part of all Germany; and a modern author ſeems to conclude, that the temper of the people is in a great meaſure influenced by its climate, the generality of them being not more amiable than the country. They are good ſoldiers enough, but have not talents in common with the other Germans; for they apply themſelves much more to breeding of horſes and hogs than to the cultivation of arts and ſciences. Three parts in four of this circle are a prey to the tyranny and avarice of certain petty princes both ſpiritual and temporal, who, having a great deal of vanity, and ſmall revenues to ſupport it, ſtudy how to rob their ſubjects rather than to right them. The Weſtphalian nobility are perpetually boaſting of their noble and antient pedigree, and that they fancy themſelves rich, but are in fact ſo poor, that a traveller would be glad of ſalt beef as well as ſour beer at their tables, and a piece of tapeſtry for their furniture, of no value but for its antiquity. There are in this country almoſt as many different religions as princes, there being Jews, Roman Catholics, and proteſtants, with their various ſubdiviſions; but the major part of the latter are Calviniſts.

When Charles the Great had conquered the Saxons, and planted chriſtianity among them, he erected ſeveral biſhoprics here, to which he gave lands for their ſupport. In the part we are ſpeaking of, we find three very conſiderable ones, who have ſovereign princes, and increaſed their dominions at the general partition that was made of the great dukedom of Saxony after the proſcription of Henry the Lion; and then it was, that the biſhop of Munſter inlarged his country, and that the archbiſhop of Cologne obtained that part of Weſtphalia which he ſtill holds, and by that tenure ſtiles himſelf duke of Weſtphalia. The elector palatine as duke of Juliers, and the king of Pruſſia as duke of Cleves, are alternately condirectors of this circle, with the biſhop of Munſter.

The territories contained in this circle are the following:

The Biſhopric of PADERBORN.

THE biſhopric of Paderborn, which is ſurrounded by the dominions of Hanover, Heſſe, and Munſter, has the county of Lippe on the north and weſt; Heſſe-Caſſel, and Waldec, on the ſouth; and Munſter, and the duchy of Weſtphalia, on the weſt. It is 40 miles from eaſt to weſt, and, in ſome places, 30 from north to ſouth. It is not very fruitful in corn, but abounds ſo much with cattle, that drovers come hither from the neighbouring countries to buy at their fairs; and they have rich ſalt ſprings, and ſome iron mines, with plenty of deer and other game. It is ſo populous, as to contain 25 market-towns, 54 pariſhes, 16 monaſteries, and 20 gentlemens ſeats, all ſubject to the biſhop, who is a prince of the empire, and whoſe ſee is one of the moſt conſiderable in Germany. The chapter is compoſed of 24 capitular canons, who are all obliged to ſtudy in ſome French or Italian univerſity, muſt be 21 years old, and muſt prove their noble extraction by four degrees upwards. The revenue of this ſee, which is a ſuffragan of Mentz, and now enjoyed by the elector of Cologne, is thought to be about 25 or 30,000 l. a year, and the biſhop is able to raiſe 3000 men. In this biſhopric is the famous field of battle, where Quintilius Varus, with the Roman army under his command, was routed by the Germans under Arminius, and the latted thereby freed from the Roman yoke.

In the tranſactions of the royal ſociety, publiſhed in December 1665, there is an account of a ſpring in this territory, which loſes itſelf twice in 24 hours; but returns with a great noiſe, and ſuch force, as to turn three mills not far from its ſource; for which reaſon it is called Bolder Born, i. e. the boiſterous ſpring. And there is another remarkable fountain, called Methorn, two miles from Paderborn, which is a treble ſpring; two whereof, not a foot and an half from each other, have very different qualities; the one, limpid, blueiſh, lukewarm, and containing ſal-armoniac, ochra, iron, vitriol, alum, ſulphur, nitre, and orpiment: the other, cold as ice, turbid, and whitiſh, with much the ſame contents, but ſtronger in taſte, and heavier than the other: It is ſaid to be a perfect cure for the worms: all fowls that drink it are immediately thrown into convulſions, but ſoon recovered by an infuſion of common ſalt and vinegar: the third ſpring, which is about 20 paces from the other two, is of a greeniſh colour, but very clear, taſtes both ſour and ſweet, and is ſuppoſed to be a mixture of the other two.

The city of Paderborn, which is one of the Hans-Towns, is a large, well-built, fortified, and populous city, 20 miles eaſt of Lippe, and about 60 ſouth-weſt from Hanover. This city was once imperial, till 1604, that Theodoric, its biſhop, became both its ſpiritual and temporal ſovereign. Some of its churches are magnificent. Its cathedral is a grand fabric, inferior to few in the empire. Otho II. gave a golden crucifix to it of 60 pounds weight, to the value of 60,000 guilders, or about 8000 l. ſterling. The biſhop's palace is no contemptible ſtructure; but the biſhops, when they vouchſafe to viſit this ſmall benefice, which is not very often, reſide ſeven miles off at Nienhus, a caſtle built in 1590. An univerſity was founded here in 1592, by the biſhop of Furſtenberg; and though this city ſtands not far from the Lippe, which joins with the Ulme, near Nienhus, yet it has its name from the Pader, a rivulet which has its riſe juſt under the high altar of its cathedral, and Born, i. e. a ſpring.

In 777 Charlemagne held a general convention here of the Franks and Saxons, where a great number, both of Saxons and Weſtphalians, were baptized. He built a church here that was deſtroyed by the Saxons, but rebuilt in 795, by Wittekind, the great duke of the Saxons, who then, it is ſaid, tranſlated the ſee hither from Heriſtell, five German miles off, where it had been firſt planted by Charlemagne. In 999 the cathedral, with its library, &c. and the beſt part of the city, was deſtroyed by fire; and it had the like misfortune in the years 1058, 1133, 1165, and 1340. This city was firſt walled round by its biſhop in the beginning of the 11th century. In 1530 the inhabitants attempted to introduce Lutheraniſm; but the biſhop executed 16 of the principal citizens who had embraced it, and forced the reſt to abjure it. In 1622 the biſhop of Halberſtadt, who was duke Chriſtian of Brunſwic, made a conſiderable booty here, and ſent the gold and ſilver images of the ſaints to the mint. In 1633 it was taken by William, landgrave of Heſſe, but delivered up to the emperor in 1636. In 1646 it ſurrendered to the Swedes and Heſſians, but the latter were ſoon drove out of it by Francis William, biſhop of Oſnaburg.

Neuhaus

Neuhaus is a borough with a caſtle; Altenbecken is a village with a remarkable ſpring; Salzkotten has its name from its ſalt-ſprings, and is the ſeat of the land diets; Lichtenau has the ſame privilege; Wunnenburgh takes its name from a victory obtained here by Charlemagne over the Saxons; and Buren on the Alure has a college.

Lippeſpning derives its name from the Lippe, near the mouth of which it is ſituated. It is cuſtomary for the popiſh inhabitants of theſe parts to aſſemble once a year, each with a lighted taper, and, headed by their prieſts, to repair to the woods and groves, to viſit images and relics placed there in little chapels, which, except upon theſe occaſions, are never opened.

Warberg, formerly an Imperial city, and one of the Hans, is the ſecond city in rank in the biſhopric, and the ſeat of a diet. In the neighbourhood are mines of iron and lead, and a ſtrong palatable beer is brewed by the inhabitants.

Brakel on the Bruckt was formerly an Imperial city, but is now greatly decayed; Drinkenberg has a citadel, and is a ſeat of the land diets.

Klemenberg	Wilbaſſen
Kalenberg	Neheim
Borchholz	Peckelſheim
Borrenrich	Dryburg,

have all ſeats at the land diets; Steinheim on the Emmer is pleaſantly ſituated.

Beverungen, near the conflux of the Bever with the Weſer, is famous for its ſalt-ſprings, and has ſome trade; Hurſtelle on the Weſer is at preſent of but little conſideration; Stoppleberg gives name to a ſeigniory; and Swalenberg belongs to a diſtrict.

Lude, on the Emmer, is celebrated for its mineral waters.

Oldenburg on the Houta has a good trade by barges, and the neighbouring farmers breed great quantities of cattle.

Biſhopric of MUNSTER.

THE biſhopric of Munſter has the county of Mark, and duchy of Weſtphalia, on the ſouth; Embden and Oldenburg on the north; the county of Bentheim, and the United Provinces, on the weſt; and Oſnaberg, Paderborn, and Ravenſberg, on the eaſt.

This is the moſt extenſive of all the biſhoprics in Weſtphalia, being 80 miles in length, and about 60 in breadth where broadeſt. It has ſome few fruitful plains, a few woods, and many quarries of ſtone, but is in general a ſterile country. The principal rivers (which abound in fiſh) are, the

Embs	Lippe
Vecht	Berkel.

Great numbers of black cattle are bred here. The provincial diets, which conſiſt of the clergy, nobles, and town deputies, are held at Munſter, and the greateſt part of the inhabitants are Roman Catholics.

The biſhop of Munſter, who is alſo uſually elector of Cologne, has a revenue from hence of about 70,000l. ſterling, and can maintain 8000 men; and by a cuſtom equally abſurd and unjuſt, is heir to all ſtrangers who die in his territories without children. The chapter of Munſter, beſides the biſhop, conſiſt of 40 canons, who muſt all be of noble deſcent. The principal places in the biſhopric are the following:

Munſter, the capital of the biſhopric, and of the circle, derives its name from a monaſtery erected here by Charlemagne. It is ſituated at the conflux of the river Aa, with the Embs, or Enns, 37 miles ſouth-weſt from Oſnaburg, and 450 north-weſt from Vienna. It is capacious, ſtrongly fortified both by art and nature, and of a circular form. Here is a noble city, called the Brille, which was erected by the celebrated biſhop Bernard Van Galen, to be a check upon the burghers; and the cathedral is a very ſuperb and noble edifice. Beſides theſe, there are ſeveral fine convents, and other beautiful buildings, ſurrounded by very pleaſant gardens. The biſhop was formerly nominated by the emperor, but ſince the beginning of the 13th century, the privilege of nomination is in the dean and chapter. This city is celebrated for three famous tranſactions, viz. I. The peace concluded here in 1648, which terminated a 30 years war. II. The revolution occaſioned by a number of enthuſiaſts, called *The Munſter Anabaptiſts*, who being headed by a taylor, denominated *John of Leyden*, from the place of his birth, diſpoſſeſſed the magiſtrates, took poſſeſſion of the city, turned out the burghers, and perpetrated the moſt horrid cruelties. At length, after a long ſiege, the place was taken, and John of Leyden, who had aſſumed the title of king, with ſeveral of his mock courtiers, were executed, and their bones hung up in iron baſkets on the top of the higheſt ſteeple in the city. III. The noble, but unſucceſsful efforts it made in defence of its liberties, againſt the tyranny and uſurpation of the biſhop Barnard Van Galen.

Beckhem and Ahlen, both ſmall towns on the Werſe; Telget on the Embs; and Warendoff on the ſame river, have all ſeats in the land diets; and the latter has a capital linen manufactory.

Coesfeld is the largeſt town in the biſhopric next to Munſter; Coppenburg is independent of the biſhop; Werne, near the Lippe, ſends deputies to the diets; Bocholt on the Aa has a conſiderable iron work; and Memmen is a town and fort at the conflux of the Haſe and Ems.

At Weerdt, on the Iſſel, the Proteſtants are tolerated; Vechla is a town and fort on a river of the ſame name; and Cloppenburg is a ſmall town, 22 miles north-eaſt of Meppen.

Biſhopric of LIEGE.

THE biſhopric of Liege is bounded on the north by Brabant; on the ſouth by Luxemburg and Champagne; on the weſt by Namur and Haniault; and on the eaſt by Limburg and Juliers. It is about 90 miles long, but very unequal in the breadth. The ſoil is fruitful, the air temperate, and the bowels of the earth rich in mines. The rivers are the Maeſe and Sambre, and the manufactures are

Beer	Arms
Serge	Nails
Leather	Iron
Pit coals	Marble
Lead	Mineral waters, &c.

The ſtates are compoſed of three bodies, viz.

The chapter of Liege.
The nobility of the country.
The deputies of the capital.

The biſhop is temporal and ſpiritual lord of the country, but in the latter capacity is ſuffragan to the archbiſhop of Cologne. The chapter conſiſts of 60 perſons, who muſt prove their deſcent to be noble for four generations, from both parents, or have diplomas from ſome celebrated univerſity. The moſt conſiderable places are the following:

Liege, the antient Leodium, called Luyck by the preſent inhabitants, is ſituated on the river Maes, 12 miles ſouth of Maeſtricht, 30 miles north-eaſt of Namur, and 50 miles ſouth-eaſt of Bruſſels, in 5 deg. 36 min. eaſt long. and 50 deg. 40 min. north lat. being about four miles in circumference; a populous, wealthy city; two branches of the river Maes, and other rivulets or canals, running through ſeveral of the ſtreets, and forming little iſlands. No city in Germany can equal it in fine churches or convents: there are not leſs than 100 churches, and a very numerous clergy belonging to the churches and monaſteries, which are ſo pleaſantly ſituated, and have ſuch endowments, that the city is ſometimes called the Paradiſe of the eccleſiaſtics; and among other religious houſes, here is one of Engliſh nuns, and an univerſity of great fame.

The fortifications of the town are not very ſtrong, and are commanded by the neighbouring hills; but the citadel is capable of making a good defence. Its biſhop, who was elector of Cologn, put it into the hands of the French, at the beginning of queen Anne's war; but the duke of Marlborough took it from them, anno 1702; and the French beſieging it again, anno 1705, they were obliged to raiſe the ſiege by the ſame general, on his return from the Moſelle.

The magiſtrates of Liege pretend that it is an Imperial city, or ſovereign ſtate; but they have ſuffered very ſeverely for diſputing the authority of their biſhop, who is, in fact, abſolute ſovereign of the city, as well as the biſhopric. He is choſen by the 60 major canons, who are, moſt of them, of noble extraction. This biſhop is one of the moſt conſiderable eccleſiaſtical princes in Germany, having within his dioceſe 52 baronies, 18 walled towns, and 400 villages full of people, with a revenue of 300,000 ducats per annum, and is able to maintain a body of 8000 men, without oppreſſing his ſubjects, who are generally Roman Catholics. Their trade with Holland is moſt conſiderable; great quantities of iron, ſtone, chalk, &c. are every day carried down thither by the Maeſe; and herrings, cheeſe, butter, and all kinds of grocery, are brought back in return.

There is a proverbial ſaying prevails here, of the following tenor, viz. that this city is the womens hell, the mens purgatory, and prieſts paradiſe. The women are compleat ſlaves; they draw their boats up the river inſtead of horſes; they dig, ſaw, carry all kinds of heavy burthens, and are, for the moſt part, naked. The prieſts have truly their paradiſe here; for the greateſt princes of Europe make intereſt to be of this chapter, becauſe the revenues and power of it are greater than any other can boaſt of. And as to the poor laity, if to have no money in their pockets, and their conſciences at the abſolute will and diſpoſal of the prieſts, may be called a purgatory, we ſhall not find this proverb to fall very ſhort of the truth.

Tongres, or Tungri, a very antient town, ſituated on the river Jecker, 10 miles north-weſt of Liege, and 10 weſt of Maeſtricht, a town of great fame in the time of the Romans: when Attila the Hun took it, he deſtroyed 100 churches, for it was very early made a biſhopric: but the ſee, upon its decline, was removed to Maeſtricht, and from thence to Liege.

Huy, or Hugum, ſituated on the eaſt ſide of the Maeſe, formerly called Benefactum, a town of great note antiently, and at preſent a ſtrong fortreſs, 15 miles ſouth-weſt of Liege: it was frequently beſieged during the wars in the Netherlands.

Dinant, ſituated on the river Maeſe, 12 miles ſouth of Namur: it was taken by the French, but reſtored to the biſhop of Liege by the peace of Ryſwick, anno 1697.

Bouillon, ſituated on the river Semoy, 30 miles ſouth of Dinant, and about 10 from the frontiers of Champain. It is a fortified town, and, with a ſmall territory annexed to it, gives the title of duke to the biſhop of Liege. Of this place the famous Godfrey was duke, who for his conduct and courage in ſubduing Jeruſalem, and taking it from the Saracens, in the 11th century, was made the firſt Chriſtian king of that city.

St. Tren, famous for its Benedictine abbey, the abbot of which names one half of the magiſtrates of the place, and the biſhop the other; and for ſeveral convents of nuns and friars.

Viſat is a fortified town on the Maeſe; Herſtal, a borough, with a caſtle on the ſame river; Borchlaen gives name to a county; and Hoorn is a ſmall town with a caſtle.

Tranchimon, ſix miles from Liege, gives name to a marquiſite; Verviers on the Weze has a conſiderable woollen manufactory; Cuivin, ſituated on a hill, is only noted for the ruins of an old caſtle; Thuin on the Sombre has a collegiate church, and ſome convents; Haſſelt on the Damer is a ſmall pretty town; and Lobbes, a Benedictine abbey, is immediately ſubject to the ſee of Rome.

Spa, or Spaw, is a ſmall but celebrated town, on the little river Weze, 20 miles diſtant from Liege towards the ſouth-eaſt, and ſeven from Linſburg towards the ſouth-weſt. The avenues to it are exceeding ſtony and difficult, and it is ſo ſurrounded by mountains that you cannot ſee it till you approach very near to it. The author of *Les Amuſemens de Spa*, ſays, in ſpeaking of this place, "It is true the roads thither promiſe nothing very delightful. In travelling to Spa, either by Liege or Aix-la-Chapelle, the way lies chiefly through uncultivated deſerts, and thoſe almoſt rocky. There are nothing but mountains on every ſide, which ſucceed one another, and over which travellers have made ſome imperfect traces of a road. The rains and the tempeſts which are frequent there, even make the paſſage ſometimes dangerous, by rolling down great ſtones from the precipices. The coachmen of the country are themſelves often at a loſs, becauſe the tracts are defaced between ſeaſon and ſeaſon. The town conſiſts of four ſtreets, in the form of a croſs, and may contain about 400 houſes, for the conveniency of thoſe that come to drink the waters. It was formerly but a little village, which, through the fame of its mineral ſprings, has been enlarged, and erected into a borough.

Here are five principal wells, which go down with ſteps, like that at Tunbridge: the chief well, called Pouxhon, or Pahon, in the market-place, is the moſt reſorted to, and has this inſcription upon it, which expreſſes the qualities of the waters:

Sanitati ſacrum:

Obſtructum reſerat, durum terit, humida ſiccat,
Debile fortificat; ſi tamen artebibas.

That is to ſay; "Sacred to health, theſe waters open obſtructions, concoct crudities, dry up exceſſive moiſture, and ſtrengthen what is weak, provided you take them with precaution." It is from this ſpring they draw that prodigious quantity of water that is tranſported into foreign countries, and eſpecially into England and Holland, ſealed up in bottles, with the town ſeal.

Next to the well of Pouxhon, there is a fountain of freſh water, which has its ſpring in a meadow, half a mile diſtant from the town. The bottom of it is of blue ſtone, and the top of braſs; it ſpouts its water out of the mouths of three frogs, whence the people call it, the Toad's Fountain.

The well called Geronſterre, or Geronſtar, is in a wood, about two miles diſtant from Spaw, towards the ſouth-weſt. It is covered with a dome of blue ſtone, ſupported by four pillars of red and white marble: it is conſiderably leſs plentiful of water than the former, and yet the moſt frequented. The three other wells, called the Saviniere, the Watroz, and the Tonnelet, or Little Tun, are not much uſed. The ſeaſons for drinking theſe waters are in the hot months of June, July, and Auguſt. Theſe waters have been known many ages ago, and ſome think they are mentioned by Pliny.

The Capuchins have at Spaw a very fine monaſtery, adorned with large gardens, where all the company walk who drink the waters.

Several princes who have been here have left proofs of their liberality; particularly Margaret de Valois, queen of France, daughter to Henry II. ſiſter to Henry III. and wife to Henry IV. was here in the year 1577. Henry III. king of Poland and France, was here in 1585; the famous Alexander Farneſe, duke of Parma, in 1591; and, at one time, king Charles II. of England, the king of Denmark, and the Great Duke of Tuſcany; and in 1717, Peter the Great, czar of Muſcovy, drank the waters here during ſeveral weeks.

The people are very good-natured, and ſpeak the ſame Walloon, or barbarous French, as at Liege. They are governed by a mayor, two burgomaſters, ſeven Echevins, and a recorder, named by the prince of Liege, and changed by him every year. The people employ themſelves in making boxes for ladies toilets, ſnuff, and other boxes, varniſhed after the manner of China wares, which they ſell to the company as they go from the wells.

This town, being reſorted to by people from all parts of Europe, on account of its waters, has been always allowed a neutrality during the hotteſt wars.

The country round it is not very fruitful in corn, being chiefly woods, mountains, and heaths; but it abounds with ſprings of mineral and ſweet water, and in ſeveral ſorts of game; and the little rivers which flow from the mountains produce plenty of trout, and other kinds of fiſh.

The czar, Peter the Great, erected a monument here, in commemoration of the benefit he received from drinking theſe waters; the inſcription upon which is as follows:

PETER THE FIRST, by the grace of God, emperor of the
RUSSIANS,
Religious, happy; invincible
Reſtorer of military diſcipline,
And firſt planter of all ſciences and arts among his people;
Who having, by his own induſtry,
Built a moſt powerful fleet of ſhips;
Having infinitely augmented his armies,
And having ſecurely ſettled, in the very blaze of war,
His realms, as well hereditary as acquired,
Went abroad;
And having ſearched into the manners
Of the ſeveral nations in Europe,
Came through France to Namur and Liege,
To theſe waters at SPA,
As to the haven of health:
And having happily drank of thoſe moſt healthful ſprings,
Particularly that of GERONSTERRE,
Was reſtored to his former ſtrength,
And his deſired health,
In the year 1717, 22d of July.
Thence returning through Holland
To his hereditary dominions,
Ordered this eternal monument of his gratitude to be
erected, 1718.

Biſhopric of OSNABURG.

THE biſhopric of Oſnaburg is ſituated between the Weſer and the Ems, being bounded by Minden on the eaſt, Munſter on the weſt, Diepholt on the north-eaſt, and Ravenſburg on the ſouth-weſt. It is about 45 miles long, and 25 broad, and produces

Rye	Turf
Paſturage	Coals
Cattle	Marble
Hogs	Horſes.

The inhabitants, who are partly proteſtants, and partly Roman Catholics, cure great quantities of, and deal conſiderably in hams, bacon, &c. By a treaty concluded here, in 1648, this biſhopric was to be an alternative between the Roman Catholics and Lutherans, and the Lutheran biſhop was always to be a younger prince of the houſe of Brunſwic Lunenburg, or, in caſe of failure thereof, of Brunſwic Wolfenbuttle; in conſequence of which ſtipulation, his preſent Britannic majeſty's ſecond ſon Frederic, born Auguſt 16, 1763, is now biſhop of Oſnaburg. But though this biſhopric is thus alternatively hereditary in this proteſtant family, it is not ſo with regard to its Roman Catholic biſhops; for they are choſen out of different families by a chapter of 25 canons, of whoſe prebends the revenues of 18 are enjoyed by the Romiſh eccleſiaſtics; thoſe of four are appropriated to the ſupport of a college; and the other three by the Lutheran canons, who are capable of electing, but not of being elected biſhops, as the Roman Catholics are. When they have a popiſh biſhop, he is ſuffragan to the archbiſhop of Cologne; but the proteſtant biſhop, who is a temporal prince indeed, has little to demonſtrate him an eccleſiaſtic, but the title; and it was agreed, by the treaty aforeſaid, that when there is a proteſtant biſhop, the archbiſhop of Cologne ſhould ſuſpend the exercife of his metropolitan juriſdiction, with regard to the proteſtants. Dr. Nicholſon obſerves, that, ſince the reformation, introduced here in 1634, the biſhop, whether papiſt or proteſtant, has little more than the name, the Lutherans not allowing the exerciſe of epiſcopal juriſdiction, and the papiſts being not ſtrong enough to obtain it for the biſhop of their own opinion. It is obſerved by hiſtorians, that Charles the Great, who founded this ſee, and dedicated the cathedral to St. Peter, and the two martyrs Criſpin and Criſpinian, exempted its biſhop from all manner of homage and ſervice, except in an embaſſy, at the emperor's charge, to negotiate any match that ſhould be propoſed betwixt the families of the eaſtern and weſtern emperors.

The revenue of this biſhopric amounts to between 20 and 30,000 l. and the biſhop is able to raiſe 2500 men, though he has only one hereditary officer, viz. a grand maitre, or ſteward. When there is a proteſtant biſhop, he keeps a neat little court at Oſnaburg; but when he is a Roman Catholic, who is generally ſome elector, or one who holds ſeveral other great benefices, the epiſcopal revenue is carried out of the country, and ſpent abroad, as it now is, at the court of Great Britain. The manufactures are coarſe linen, woollen and yarn; the diets are held at Oſnaburg, and the principal places are

Oſnabrug, or Oſnaburg, the capital, which was formerly an imperial city, and one of the Hans, but is now ſubject to the biſhop. It has its name from a bridge over the Oſe, which divides it with Old and New Town, and is ſituated 67 miles weſt of Hanover, in the midſt of a fine plain. It is a neat, well-built city, and adorned with ſeveral handſome public ſtructures. It is encompaſſed with walls and ditches, but commanded by a mountain within cannon-ſhot; upon which there is an abbey, or ſacred retirement for men of quality. The biſhop's palace, called Peterſburg, or St. Peter's caſtle, is well fortified, and ſeparated from the town by a bridge. It is a hexagon with a court in the middle, and at each corner is a turret. It was in one of the apartments of this palace that George I. expired, the 11th of June, 1727, in the arms of his brother, prince Erneſt, and, as ſome ſay, in the very room where he was born. The papiſts have the cathedral church, and the church and monaſtery of the Dominicans in the old city, and the collegiate church of St. John in the New. The Lutherans have the great parochial church of St. Mary in the old city, and have a voice in chuſing the magiſtrates of both; and therefore the government of the city is mixed. Here are three convents for monks, and five for nuns. The inhabitants, who are very induſtrious, not only breed abundance of hogs, and other cattle, but have a conſiderable trade in making linen; in brewing a palatable, though thick ſort of beer, called Buſe; and in making the beſt white bread in all Weſtphalia. In the cathedral are ſtill ſeen ſome ornaments of Charles the Great, among which are his crown of ſilver gilt, his comb, battoon, &c. As the exerciſe of both religions is equally free, neither papiſts or proteſtants are moleſted during the government of a biſhop of the oppoſite perſuaſion. The Brunſwic family having looked upon this city and biſhopric as part of their territories, it is obſerved, that when the poſſeſſion of it comes to their turn, they are more than ordinary careful of it, and leſs exacting on their ſubjects, than where the incumbents poſſeſs only for their lives, and chuſe to make the beſt of their poſſeſſion, without regard to the benefit of their ſucceſſors.

Iburg, or Iborg, about 10 miles ſouth of this city, is only noted for a commodious caſtle, in which its biſhop formerly reſided. It was taken and plundered by Philip the Great, of Brunſwic, in 1553.

Furſtenau gives name to a diſtrict, which contains 15 pariſhes, and formerly had a palace, where the biſhops reſided. In one of the pariſhes round Borſtel is a noble foundation for Lutheran ladies.

Weidenburg, on the Ems, is a ſmall town with a collegiate church, two nunneries, and a magiſtracy of its own.

Melle is a borough containing a Roman Catholic and a Lutheran church, and having a council and burgomaſter of its own.

Vorden has the ſame privileges as Melle, and contains a church common to both Lutherans and Roman Catholics.

Quackenberg, on the Hoſe, is a little town, with a Lutheran and popiſh church; and the revenues of the college of canons is divided between both religions; but one of the Lutheran canons of Oſnaburg is always provoſt of Quackenburg.

The County of HOYE.

THE county of Hoye, one of the elector of Hanover's domains, has Bremen on the north, Minden on the ſouth, Lunenburg on the eaſt, and Diepholt on the weſt. It formerly belonged to counts of an antient Saxon family, to whom it was given by the emperor Lotharius; but after the death of the laſt, in 1582, it was divided between the families of Brunſwic and Heſſe; Hoye, with Nyenburg, Liebenaw, and Bruckhauſen, became ſubject to the duke of Lunenburg; the forts of Seltzenaw, Ezenburg, and five more towns, to the houſe

houſe of Brunſwic; and Freudenburgh and Ucht to the landgrave of Heſſe; the latter of which gave their ſhare to the counts of Bentheim: ſo that now it belongs almoſt wholly to his Britannic majeſty.

Its chief town, of the ſame name, ſtands on the eaſt ſide of the Weſer, 25 miles ſouth-eaſt of Bremen, 36 north-eaſt of Minden and Diepholt, and 40 north-weſt of Zell. It is a ſmall but well-fortified town, with one of the ſtrongeſt caſtles in Weſtphalia.

Nyenburg, on the eaſt bank alſo of the Weſer, 10 miles ſouth of Hoye, is another well-fortified town, which ſuſtained ſeveral ſieges during the wars of Germany. It was formerly the reſidence of the counts of Hoye, and its territory abounds with all ſorts of grain, fruits, paſture, and cattle. It has a caſtle on the weſt ſide of it, with broad deep ditches, and a good rampart, which commands the Weſer, and great part of the town, which has ſtrong walls, with a double ditch, and other works, that almoſt ſurround it. It had a fine bridge over the Weſer, which, being ruined, is ſupplied by ferry-boats, to preſerve the commerce between the two circles of Weſtphalia and Lower Saxony, which conſiſts chiefly of corn, wool, flax, honey, wax, and cattle. It has a fine pariſh church, with all the ornaments that architecture can give it; in which are the monuments of many of the counts of Hoye.

Old Bruch-hauſen is a borough, with a caſtle and manor belonging to the ſovereign; Liebenau contains manufactures of lace and ſcythes; Drakenburg is a borough on the Weſer; and Harpſtedt is a borough on the Delme, with a territorial juriſdiction.

Baſſum is a borough belonging to the landgrave of Heſſe, but it contains a noble foundation for ladies, of which the king of Great Britain is the ſuperior; Keilingerode has a ſimilar foundation; and Suhlingen, the reſidence of a ſuperintendent, has four conſiderable yearly fairs.

County of VERNENBURG.

THE county of Vernenburg appertains partly to the archbiſhop of Treves, and partly to the count of Lowenſtein-Wertheim, both of whom it entitles to a ſeat and voice in the Weſtphalian college, and alſo in the diets of the circle. It is almoſt ſurrounded by the archbiſhop of Treves, and contains only one place worth notice, viz. the little borough town of Vernenburg, which is defended by a citadel.

County of STEINFURT.

THIS county, which is 15 miles long, and 10 broad, is ſurrounded by the biſhopric of Munſter. It belongs partly to the empire, and partly to the primate of Munſter; is watered by the Aa, and gives to its count a ſeat and voice in the Weſtphalian college, and in the diets of the circle. The only place worth notice is the town of Steinfurt, which ſtands on the Aa, and contains a Calviniſt and Roman Catholic church, a commandery of St. John, and a college for the ſtudy of the liberal arts, and of polite literature.

Duchy of VERDEN.

THIS duchy, which is in length 22 miles, and in breadth 18, is bounded by Hoye on the ſouth, Bremen on the north, Lunenburg on the eaſt, and the Weſer on the weſt. It is well watered, but the ſoil is poor. The inhabitants are Lutherans, and the whole belongs to the king of Great Britain, who, on account of this duchy, has a ſeat among the princes at the diets of the empire, and thoſe of the circle. The only places worthy of obſervation are,

Verden on the Aller, the capital, 50 miles ſouth-weſt from Hamburg, which was once an Imperial city, ſtrong and populous, but is now much decayed. It, however, ſtill contains a cathedral, three other churches, and a Latin ſchool.

Rotenburg on the Wumme, 15 miles from Verden, has ſome trade, is populous, and formerly contained a biſhop's palace.

The Abbey of CORVEY.

THIS ſmall diſtrict is bounded by Paderborn, Brunſwic, and Swalenberg. It is tolerably fertile, watered by the Weſer, and has a Benedictine abbey founded by the emperor Lewis I. The firſt monks having been taken from Corbie in Picardy, it is called Corbie, or Corvey abbey, which abbey is the only place deſerving of notice in the diſtrict, the abbot being a prince of the empire, and having a ſeat in the college of princes, and at the diets of the circle and the empire.

The Abbies of MALMEDI *and* STAVELO.

MALMEDI is a ſmall town ſituated amongſt high hills, on the little river Recht, 25 miles diſtant from Liege to the ſouth-eaſt, and nine from Limburg to the ſouth. They reckon here about 400 houſes, moſt of them inhabited by leather-dreſſers, or woollen-drapers. Here are ſeveral ſprings of mineral waters, which ſome phyſicians ſay are as wholſome and as ſtrong as thoſe of Spaw. This city, though within the territory of the prince of Liege, is nevertheleſs, for ſpiritual matters, under the juriſdiction of the archbiſhop of Cologne. The parochial church is dedicated to St. Gereon the martyr, and here is a convent of capuchins, and another of nuns of St. Sepulchre. But it is chiefly remarkable for its abbey of Benedictine monks, under the ſame abbot with that of Stavelo.

Stavelo (erroneouſly called Stablo by ſome) ſtands on the little river Ambleve, which ſomewhere lower falls into the Recht. It is about ſix miles diſtant from Malmedi to the eaſt, and nine from Limburg towards the ſouth. There are here about 400 houſes, and the inhabitants drive a pretty good trade, though this town, being quite open, has ſuffered very much during the wars. Here is a famous abbey of Benedictine monks, founded in the year 657, at the ſame time with that of Malmedi, with which it is united under the ſame abbot. But the jealouſy between theſe two religious houſes is the reaſon why they can never agree in the choice of a regular abbot from amongſt themſelves; ſo that ever ſince the year 1576, they have always choſen commendatory abbots.

The abbey church, which is at the ſame time parochial, is a ſtately building after the modern taſte; under it there is a Crypta, or ſubterraneous church, with five altars. The abbot of Stavelo, who is ſtiled a prince of the empire, is ſpiritual and temporal lord of this town, and of its territory, which is very large, including the town of Malmedi; and his yearly income amounts to about 12,000 crowns.

The trade of this town conſiſts in woollen cloth, and other ſtuffs, and chiefly in a great quantity of leather curried here. There are alſo ſome mineral ſprings, ſaid to be very wholſome.

The Abbey of WERDEN.

THE diſtrict belonging to this abbey is ſituated in the county of Mark. St. Ludger, whoſe eſtate it was in 778, founded the abbey for monks of the order of St. Benedict. The revenue is 20,000 rix-dollars; the king of Pruſſia claims the right of ſovereignty here, and the only remarkable place is Werden, a little walled town on the Roer, which, beſides the abbey, contains a Lutheran church.

The Abbey of St. CORNELIS MUNSTER.

THE diſtrict, or territory of this abbey, is ſurrounded by thoſe of Juliers, Limbourg, and Aix-la-Chapelle. The abbot has a ſeat at the diets of the empire, on the Rheniſh bench of prelates; but at thoſe of the circle he ſits among the princes.

The Abbey of ESSEN.

THIS abbey and its territory is ſurrounded by Berg, Cleves, Werden, and the county of Mark. The abbey was founded by Alfred biſhop of Hildeſheim in the year 877. The king of Pruſſia is hereditary protector; the

abbeſs ſtiles herſelf princeſs of the holy Roman empire; the chapter conſiſts of none but noble ladies; and the abbey has a ſeat in the diets of the empire and circle. The hereditary officers are the

Marſhal	Sewer
Steward	Chamberlain.

Eſſen is the only place of any conſideration in the territory; it is ſubject to the abbeſs as its ſovereign, but has very extenſive privileges. It is large, has ſome trade, a cloth manufactory, an academy, a gymnaſium, a commandery of the Teutonic order, and ſeveral Roman Catholic and Proteſtant churches.

Abbey of THORN.

THIS abbey is ſituated in the biſhopric of Liege and county of Hoarn. It is an Imperial free ſecular foundation, was erected in the year 1000, has a ſeat at the diets of the empire and circle, and a chapter which conſiſts of princeſſes and counteſſes of the order of St. Benedict.

Abbey of HERFORD.

THIS abbey is ſituated in Ravenſburg, was erected in the eighth century, has a ſeat at the diets of the empire and circle, gives title of princeſs and prelateſs of the holy Roman empire to its abbeſs, contains none but noble canoneſſes, and is a Lutheran foundation. The number of ladies is indeterminate, the abbeſs is ſuperior of the collegiate church of St. Mary of the oppoſite mountains, and the prebends are in her gift. The canoneſſes wear a ſcarlet ribbon with a ſilver border hanging from the right ſhoulder, and having a croſs at the end with the figures of Jeſus Chriſt and the Virgin Mary, and on the left breaſt is a ſtar with the ſame figures.

Duchy of BERG.

THIS duchy is 50 miles long, 20 broad, and takes its name from being mountainous. It is bounded on the weſt by the Rhine, on the eaſt by Weſtphalia, on the north by the county of Mark, and on the ſouth by the electorate of Cologne. Though mountainous in many places, in ſome parts it produces

Corn	Vines
Paſturage	Wood
Fruit	Herbs, &c.

and is rich in coals, iron, &c. The manufactures are cloth, iron and ſteel. The ſame regency and diet ſerves for this duchy and that of Juliers. The moſt conſiderable places in Berg are the following:

Duſſeldorp, at the conflux of the Duſſel, with the Rhine, is 20 miles from Cologne, and 57 from Munſter. It ſtands in the midſt of a fine fruitful plain. The Rhine runs againſt it with ſuch violence, that they have been obliged to make great works to break the current. It was an Imperial city, and had good trade before the removal of its fairs to Franckfort, when the Rhine is ſaid to have run by its walls; and it had a ſmall univerſity. It is large, pleaſant, well built, and defended by a citadel, which is ſeparated from it by a ſmall harbour formed by the Rhine, and conſiſts of two royal baſtions faced with brick; and in the other parts it is fortified by five baſtions, and caviliers on them. The public buildings towards the river make a fine appearance; particularly its ſtately palace, an old Gothic building, (with paintings by Van Dyke, Raphael, Paul Veroneſe, Reubens, Julio Romano, Titian, &c. Braſs antiques, ſtatues of marble, portable cabinets, &c.) which was the elector palatine's chief reſidence during the devaſtations of the palatinate by the French towards the end of laſt century. In the market-place, over-againſt the palace, is an equeſtrian ſtatue in braſs, on a pedeſtal of grey marble, of the elector John William, in armour, with the electoral bonnet on his head. Here are three weekly markets for corn, which is imported hither from the Low countries, and exported in great quantities to Cologne, and other parts of Germany. The elector's reſidence being fixed at Manheim, a regency is eſtabliſhed here: for the countries of Berg and Juliers, which bring in 1,000,000 of crowns a year to the elector, are governed by ſtates, without whoſe conſent he can lay no taxes. All religions are here tolerated; but the Catholics alone are admitted to civil employments. Though the poſſeſſion be the elector's, yet the title is diſputed by thoſe of Saxony and Brandenburg.

Ratingen has a ſeat and voice at the diets; Solingen is famous for its ſword blade manufactory; Neſſelrode gives name to an antient and noble family; Blackenberg is ſituated near a mountain; Siegberg is ſituated on the Sieg; and Mulkum is a ſmall town near the borders of Cologne.

Lenneſt has the firſt place and voice at the diets, and a cloth manufactory; Wipperfort on the Wipper, has a ſeat and voice at the diets; Beyenberg gives name to a diſtrict; Elverfeld has a manufacture of thimbles; Langenberg is a borough belonging to the Wendt family; and Kornberg is defended by a ſtrong caſtle.

Benſberg has a ſtrong fort and monaſtery, of the order of the Holy Croſs, which was built in 1298, and is the firſt of its kind in the empire. The caſtle or palace here was built in a foreſt on a hill, by the elector John William, and is worth ſeeing. It ſtands three leagues from the Rhine, between Cologne and Duitz. It is built of a very hard ſtone; and the ornaments, particularly the pillars that ſupport the gallery in the front, are a kind of grey marble, dug out of the neighbouring quarries. The apartments are large, well decorated with the fineſt paintings, and they have a proſpect of a vaſt length, viz. of the city of Cologne, the Rhine, and all the flat country; containing a great variety of beautiful ſcenes and enchanting landſcapes.

Principalities of NASSAU-SIGEN *or* SIEGEN, NASSAU-DILEMBURG, &c.

SIGEN, or Siegen, near which is an iron mine, ſtands on the river Siega, 15 miles from Dillemberg, and 30 north-eaſt from Naſſau, on the top of a rocky hill defended by a ſtrong wall, and regular fortifications; and gives name to a country, of which it is the capital, as well as title to another branch of the Naſſau family: It is thought to be Ptolemy's Segodunum. In 1559, the prince of Naſſau-Siegen's Pædagogium was brought hither from Herborn, and ſoon became ſo famous, that it was frequented by ſtudents from Germany, Poland, Livonia, Denmark, &c. to which an academy was added for training up youth in martial exerciſes. There is a caſtle here, in which the elector of Cologne keeps a garriſon as director of the circle; and not far from hence is a very good iron mine.

Dillemberg ſtands on the river Dilla, 16 miles weſt from Marpurg, and 32 north-eaſt from Naſſau, and gives name to a county: it has a good trade in cattle, and woollen goods; and two yearly fairs, viz. the day after Paſſion Sunday, and the Monday after St. Margaret's day. The counts of that branch, called Naſſau-Dillemberg, had their ſeat in a fine ſtrong caſtle that ſtands on the top of a neighbouring hill, where is a large arſenal, furniſhed with arms and ammunition for ſeveral thouſand horſe and foot; and the jaw-bone of a monſtrous whale caught near Catwick in 1598, which is worth ſeeing. The caſtle is ſurrounded by the town, which is built in a ſemicircle to the weſt, north, and eaſt; and there is a fine church where the counts of this branch are interred. The court guard is on the ſouth ſide of the caſtle, and adorned with pavilions, walks, and other embelliſhments.

Beilſtein, or Beilinſtein, 15 miles north-eaſt from Naſſau, 27 ſouth-eaſt from Siegen, and 12 miles ſouth of Herborn, gives name to a county which was the inheritance of the Hadamars, a younger branch of the family of Naſſau, and was the capital of it. It is an old town among rocky hills, but has a caſtle, and a church worthy of a traveller's view: it lies in the mid-way betwixt Coblentz on the weſt, and Marpurg on the eaſt.

Hadamar, a ſmall town, capital of a territory on the confines of the electorate of Treves, which had the title of a principality before the extinction of that branch of the Naſſau family, ſtands on the Lohn, 20 miles north of Mentz, and is defended by a good caſtle.

County

County of SAYN.

THIS county belongs reſpectively to the

Margrave of Brandenburg Anſpach,
Burgrave of Kirchburg,
Counts of Witgenſhein Hornburg, and
Elector of Treves.

The two firſt have a voice in the college, but all together have only one voice in the diet of the circle. Lutherans, Calviniſts, and Roman Catholics, have equally the free exerciſe of their religions, and the only places worth mentioning are,

Altenkirchen, the capital, and the ſeat of a regency. It is but ſmall, but contains a Lutheran and Calviniſt church, and is defended by a caſtle.

Freuſburg on the Sieg is defended by a fortreſs; as is the neighbouring town of Triedwald; Bendorf on the Rhine gives name to a diſtrict; and Hachenburg has a ſtrong caſtle.

County of WIED.

THIS county is divided into two parts, viz. New-Wied, or Lower County, and Wied Runkel, or Upper County. The only places here worth mentioning are, Runkel on the Lahn, a ſmall town, containing about 120 houſes, and a caſtle; Dierdorf, which is defended by a fortreſs; and New-Wied, a ſmall but regular town, on the Rhine.

County of SHAUENBURG.

THIS county is watered by the Weſer, and ſurrounded by Calenberg, Minden, Lippe, and Ravenſberg. It produces

Corn	Free-ſtone
Paſture	Lime-ſtone
Salt	Pit-coal
Allum	Gipſum
Cryſtals with gold	Copper
Silver	Iron-pyrites
Wood	Cattle
Sheep	Fiſh, &c.

It is 30 miles long, 20 broad, and the inhabitants are moſtly Lutherans. The county belongs partly to the

King of Great Britain,
Landgrave of Heſſe, and
Count of Shauenburg Lippe.

The two firſt have a diſtinct voice in the diets of the circle, and a joint voice in the college of the Weſtphalian counts of the empire. The principal places are,

Hagenburg with a caſtle, poſt-houſe, and manufactories of linen and buckram; Steinhude on the Steinhuder lake, with the ſame manufactories as the former, and a fiſhery; and Sadthagen, which is well fortified, has a caſtle, orphan-houſe, a ſtately mauſoleum, and a celebrated mineral ſpring.

Shauenburg, from which the county derives its name, at preſent exhibits only the ruins of an old caſtle; Viſbeck on the Weſer has a Lutheran foundation for an abbeſs, and 12 ladies; and Mollenbeck is the veſtige of an ancient cloiſter in a neighbouring wood.

Buckburg is remarkable for ſix things, viz.

A ſtrong caſtle
A beautiful church
An elegant town-ſchool
A well-endowed orphan-houſe
A large Calviniſt church, and
An admirable fountain in the market-place.

Rinteln, a fortified town between the Weſer and Exter, hath an univerſity, the profeſſors of which are partly Lutherans, and partly Calviniſts. Here is a regency, conſiſtory, ſuperintendency, and ſome trade is carried on by means of the Weſer. To the univerſity of Town belong the revenues of Egeſtorf, formerly a Benedictine nunnery.

Soltorf is famous for its fine white ſalt; Obernkirchen for a noble foundation for Lutheran ladies; Rodenberg for its caſtle and medicinal ſpring; and Oldendorf is a ſmall town on the Weſer, between Hamelen and Rinteln.

County of DELMENHORST.

THIS county, which is tolerably fertile, is ſurrounded by the Weſer, Oldenburg, Diepholt, and Wildhauſen. The government is veſted in the regency of Oldenburg, and the only place of any conſideration in it is Delmenhorſt, from which it takes its name. This town is ſituated on the river Delme, and has a ſtrong caſtle to defend it.

County of OLDENBURG.

THIS county is 40 miles long, 30 broad, and bounded by Eaſt Frieſland on the weſt; Delmenhorſt, and the Weſer, on the eaſt; Joyer and Jode on the north; and Munſter on the ſouth. It is ſecured by dykes againſt inundations, and produces

Paſturage	Turf
Cattle	Horſes.

The king of Denmark, to whom this country belongs, is entitled in right thereof to a ſeat and voice both in the Weſtphalian college of counts of the empire, and in the diets of the circle. The adminiſtration is by

A regency
Subordinate judicatories
A royal conſiſtory, and
A ſuperintendency.

The only places worth notice in this country are,

Oldenburg, a town regularly fortified, and ſituated at the conflux of the Hunte and the Haare; it has a caſtle which is now the reſidence of the royal ſtadtholder, and a church which was formerly the burial place of the counts of Oldenburg. The celebrated horn, called the horn of Oldenburg, was once kept in the caſtle, but is at preſent in the muſeum at Copenhagen.

Varel, ſituated in a wood, called *The Buſh of Varel*, was formerly the capital of a ſeigniory, and had a wing of its fine caſtle burnt down in 1751.

County of BENTHEIM.

THIS county is 40 miles long, 15 broad, ſurrounded by Munſter and the United Provinces, and abounds in

Wood	Veniſon
Stone quarries	Game
Grain	Cattle
Paſturage	Fruit
Honey	Fiſh.

It has linen and woollen manufactories. The count has a ſeat and voice in the college, and in the diets of the circle. The inhabitants are Lutherans, Calviniſts, and Roman Catholics. The principal places are,

Bentheim, from which the county takes its name, is a large borough town, 30 miles north-weſt from Munſter. It is defended by an old caſtle where the counts reſide, is ſituated in a wood, and has a Roman Catholic and a Calviniſt church.

Nienhus on the Dinkel had formerly a caſtle, which is now in ruins; Wietmarſen, a noble foundation for ladies, has a ſeat and voice at the land diets; Schuttorf on the Vechte is the oldeſt town in the county; Northhorn, ſurrounded by the Vechte, has a tolerable trade; and Frenſwegen, a cloiſter of regular canons of the order of St. Auguſtine, has a ſeat and voice at the land diets, and was formerly the burial place of the counts.

The Imperial City of DORTMUND.

DORTMUND, a large but ill-built town, is 34 miles from Munſter. It is an Imperial city, has a ſeat and voice at the diets of the circle, and alſo at thoſe of the empire. It was formerly one of the Hans-Towns, has four Lutheran churches, two monaſteries, and one nunnery. It is populous, rich, has a communication with the Rhine by means of the Empſer, and carries on a tolerable trade.

The Imperial City of AIX-LA-CHAPELLE.

THIS city is 15 miles north-eaſt from Limburg, 13 ſouth-weſt from Juliers, and 23 north-eaſt of Spa. It lies in a valley ſurrounded with mountains and woods; yet it enjoys a very wholſome air; and the hills are covered with vines. Its Latin name, Aquiſgrafium, is ſuppoſed to be derived from Serenius Granus, lieutenant-general of Gallia Belgica, who, having diſcovered the ſprings here, Anno 53, adorned them like the Roman baths, and built a palace near them; in confirmation whereof the natives ſtill ſhew, at the end of the town-houſe, a piece of antient architecture, which they call Granus's Tower, and ſay it was a part of his palace, though the building does not look ſo antient. According to Charlemagne's Pragmatic Sanction, this Granus was brother to Nero and Agrippa; and the Chronicle of Utrecht ſays, he was baniſhed hither by Nero. Attila, the Hun, having plundered and deſtroyed this city, it lay in ruins till the time of Charlemagne; who, hunting in the neighbouring woods, his horſe happened to ſtrike his hoof into one of the ſprings; which the emperor obſerving, and finding, by the ruins of ſeveral great buildings, that this muſt have been the old Aquis, he ordered the baths to be ſearched out; and rebuilt, founded, and endowed the collegiate church of St. Mary, in which he employed a great quantity of marble, that he ſent for from Rome and Ravenna; and was ſo charmed with the ſituation of the place, that he built a palace here, together with all that part of the city which is incloſed by the old wall; and made it the ſeat of his empire on this ſide the Alps; ordaining, that the future kings of the Romans ſhould be crowned here with an iron crown, as at Milan, with one of ſilver, and at Rome with one of gold; which though obſerved for a while, has been long ſince diſuſed. Both the palace and town were burnt in 882, by the Normans; but the church, having ſo much marble, ſtood its ground. After the town was rebuilt, it ſuffered much by other fires in 1146, 1172, 1224, 1236, and particularly in 1656, when 20 churches and chapels, and 5000 houſes, were burnt, but ſoon after rebuilt. In 1668, the famous treaty was made here between France and Spain. This town is called, by the French, Aix la Chapelle, from a chapel in the great church, where are abundance of reliques: It was noted for ſeveral councils, in the time of Charlemagne, and Lewis the Pious, about the proceſſion of the Holy Ghoſt, reformation of manners, the regulation of monaſteries, and againſt ſuch as had ſeized the patrimonies of the church. It ſuffered much during the civil wars of Germany, when moſt of the citizens were proteſtants; but the marquis de Spinola took the town in 1614, and re-eſtabliſhed popery: ſo that the proteſtants have not ſince been allowed any place of worſhip here, but go to church about two miles off, in that part of Limburg which is ſubject to the Dutch. Succeeding emperors continued to honour this city with their preſence, and to enlarge its privileges; ſo that it was made free and imperial. They were crowned here for 500 years after Charlemagne, as is expreſly ordained by the golden Bull of Charles IV. but ever ſince Maximilian I. when 37 emperors had been crowned here ſucceſſively, that ceremony has been performed at Francfort, which, being in the centre of the empire, is more convenient for the princes, but particularly for the ſpiritual electors, and for the elector palatine, who may ſend for their equipages, and return them back by the navigable rivers, the Rhine, Maine, &c. Nevertheleſs, the emperors, when crowned at Francfort, proteſt, it ſhall be without prejudice to the privileges of this city: for Charlemagne having himſelf been a canon of its cathedral, and ordered his ſucceſſors to be ſo, they take an oath as ſuch, when crowned; at which time the magiſtrates ſend Charlemagne's ſword, ſhoulder-belt, and the goſpel in golden letters, to the elector of Mentz; who gives ſecurity for reſtoring them to this city when the coronation is over.

According to a deſcription of this city, and its baths, in Latin, by Dr. Blondel, a phyſician here, which was printed at Maeſtricht in 1683, it recovered its loſſes in the above-mentioned fires, by the bounty of ſeveral emperors, and the great concourſe of people to its baths. Frederic I. built the outer walls, towers, and ditches, in 1172. The circuit of the whole city is a league and a half, and the inner town three quarters. The inner wall has 10 gates, and the outer 11. The town-houſe, or ſenate-houſe, which was built in 1553, and ſince repaired by the citizens, in hopes of having the congreſs there, and not at Soiſſons, is a noble ſtructure of free-ſtone, and one of the fineſt in Germany. It is adorned with the ſtatues of all the emperors ſince Charlemagne, and with curious hiſtory-paintings; particularly thoſe by Amiſſaga, highly valued; among which are, that of the reſurrection, and that of Charlemagne's giving the city their charter: the uppermoſt ſtory of it is one hall, 162 feet by 60; in which the emperors, who formerly received their firſt crown of iron here, as abovementioned, uſed to entertain the electors, and other princes who aſſiſted at the coronation. In the market-place, over-againſt the town-houſe, there is a large ſtately fountain, with four ſprings, that run, from above, into a copper ciſtern 30 feet in diameter, and weighing 12000 pounds: round the edges of it there is a Latin inſcription, importing the diſcovery of the hot ſpring by Granus, as above; as well as the renewing of the baths by Charlemagne; that the cold fountain did formerly run into the baths; and that the ſenate adorned it, with this ciſtern, in 1620. From this the water runs, by ſix pipes, into a ſtone ciſtern below, and from thence it is conveyed through the city. On the top of the fountain there is a large braſs ſtatue of Charlemagne in armour, richly gilt, with his face towards Germany. As the city lies in a valley ſurrounded with mountains and woods, there are 20 other public fountains of good clear water, beſides many private ones. Here are ten hot mineral fountains, and ſome cold ones, without St. James's Gate, beſides ſeveral in the adjacent fields; and the ſtreams that run through the town keep it very clean, and drive ſeveral mills. Here are 30 parochial or collegiate churches, beſides the cathedral, a large old-faſhioned Gothic pile, which was conſecrated by pope Leo III. in preſence of the emperor Charlemagne, and 365 biſhops. The ſteeple at the weſt end is adorned with ſeveral pyramids, and on the top there is a large globe and croſs. From this tower, which is much higher than the body of the church, runs a gallery, ſupported by a long arch, to a cupola near the middle of the fabric: the inſide is beautified with a vaſt number of pillars of marble and braſs, gilt ſtatues, braſs doors, and partitions, and a great deal of Moſaic work. Over the place where Charlemagne was firſt interred hangs a large crown of ſilver and braſs gilt, adorned with 16 ſmall towers, ſurrounded with 48 ſtatues, a foot high; and 32 leſſer ſtatues, all of ſilver; among which are commonly placed 48 candleſticks, and, at certain grand feſtivals, no leſs than 450 tapers: this crown was the gift of the emperor Frederic I. who, removing Charlemagne's body, interred it in a ſilver coffin, under the altar of the choir, and covered it with the white marble tomb-ſtone it had before, with the buſt of Proſerpina upon it, ſuppoſed to have been taken from the tomb of Julius Cæſar. Out of this tomb were taken a great many rarities and reliques, which the ſaid emperor had got from Aaron king of Perſia, the patriarchs of Jeruſalem, Conſtantinople, &c. Here is alſo the monument of the emperor Otho I. in black marble.

The four chief reliques ſhewn to pilgrims here, at the jubilee, once in ſeven years, are theſe: (1.) What they call the gown, or ſhift, ſaid to be worn by the Virgin Mary at the birth of Our Saviour, made of a ſort of flax that ſeems to be neither linen nor calico; and then it being only expoſed from the top of a high tower, it is not eaſy to determine what part of apparel it is. (2.) A coarſe linen cloth, ſaid to have been girt about Our Saviour on the croſs. (3.) A piece of the cord he was bound with. (4.) Some of the blood of the proto-martyr St. Stephen, richly inchaſed in gold and precious ſtones, on which the emperors are ſworn at their inauguration. Here is the picture of the Virgin Mary, with Our Saviour in her arms, emboſſed on a jaſper, about two inches broad, found in the emperor Charlemagne's tomb, and ſaid to be the work of St. Luke; alſo a MS. copy of the goſpels, in a cover of ſilver-gilt, found in the ſame tomb; and Charlemagne's ſword, put on by his ſucceſſors at their coronation, and uſed in the dubbing of knights, and conferring other honours: at the eaſt end of the cathedral Our Saviour is repreſented ſitting in

ſtate with a long robe, on a throne; round which are the four animals repreſented in Ezekiel's viſion: over his head is a circle of golden ſtars, and underneath it a ſymbol of the croſs which appeared to Conſtantine when he defeated Maxentius. Here is alſo a repreſentation of the 24 elders mentioned in the revelations, riſing from their ſeats, laying aſide their crowns, and falling down before the throne. The windows are curiouſly gilt, and the pavement is of chequered marble. There is an immenſe treaſure here, conſiſting of veſſels of gold, and ſilver-gilt, copes embroidered with pearl, and other rich veſtments. Over the chief altar there is a cheſt of ſilver and gold, of antique workmanſhip, and curiouſly engraved, in which are kept the four relicks abovementioned. At the entrance of the choir there is a pulpit covered with plates of gold and ſilver, and adorned with precious ſtones (eſpecially a very large agate), the gift of the emperor Henry II. The altar of the choir is covered with plates of gold alſo, repreſenting Our Saviour's paſſion, which, it is ſaid, was found in Charlemagne's ſepulchre. In the upper part of the church, over-againſt the prince's altar, between two pillars, is a throne, or chair, of white marble, ſuppoſed to have been placed there by the emperor Charlemagne, in which the emperors uſed to ſit when conſecrated, and receive the firſt obeiſance of the electors and the chapter of the cathedral, in quality of king of the Romans. It is not poliſhed, becauſe it was formerly covered with plates of gold, though they are not now to be ſeen.

The emperor, as duke of Brabant, and the elector palatine as duke of Juliers, are protectors of this city; and the latter names the mayor, or conſul, who is for life, and aſſiſted in the government by two burgomaſters, or joint conſuls, 14 echevins, or aldermen, who are alſo for life, and act as judges, and 120 common-council, that are elected, as are likewiſe the burgomaſters, by 15 trading companies of the burghers; and continue in their office two years.

Its baths are well known, and much frequented by the Engliſh, and moſt other Europeans. There are three within the inner walls of the old town, viz. the emperor's, the little bath, and St. Quirinus's. Charlemagne was ſo much delighted in the firſt, that he often invited his ſons, and his nobles, to bathe and ſwim there with him; for it was the cuſtom antiently to bathe there, an hundred, perhaps, together: but it is now divided into five bathing-rooms. The little bath joins to it, and the ſprings of both riſe ſo hot, that they let them cool 10 or 12 hours before they uſe them. They are impregnated with nitre and ſulphur; and ſometimes cakes of brimſtone and ſalt-petre, of a conſiderable thickneſs, are taken out of them. They are unpleaſant to taſte at firſt, and ſmell like a rotten egg. Near theſe baths there is a fountain of warm water, much reſorted to in ſummer mornings, and drank for chronical diſeaſes: thoſe in the new town, which are, the roſe bath, the poors bath, and St. Corneille's, are not ſo hot and clear as the former, and their ſmell is ſomewhat offenſive. Near the hot ſprings lie many cold ones, by which their heat might be tempered; and, with a little charge, they might be made the moſt delightful baths in the world. Dr. Blondel ſays, that bathing in theſe waters is good againſt all nervous diſorders; ſuch as convulſions, palſies, numbneſs, tremblings, ſciatica, gout, ſwellings, diſtempers of the bowels, vertigoes, tingling of the ears, nephritic diſtempers, moiſt and cold affections of the womb, barrenneſs, abortion, ſcabs, and dregs of mercury. Though they are propereſt for bathing, they are alſo drank, in ſeveral caſes, with ſucceſs, againſt hot diſtempers of the liver, ſpleen, reins, and bowels; obſtructions of the meſentery, pancreas, liver, ſpleen, and reins. They cure the yellow jaundice, and its effects, a cachexy and dropſy. They are good againſt inveterate and ſtubborn fevers, and tertian and quartan agues, and bleeding at the noſe. They cure the ſcurvy, gout, rheumatiſm, and other diſtempers proceeding from too much ſerum in the blood. They kill worms, dry over-moiſt parts, and help conception. They purge the urinary veſſels of all impurities, cure ſtranguries and ſtoppages, diſſolve and expel the ſtone and gravel. They are excellent againſt aſthmas, and the moſt inveterate colics, ſcirrhous ſwellings, ſcrophulous diſtempers, impoſthumes of the meſentery, diarrhœas, ulcers of the mouth, and diſtempers of the gums and teeth. The drinking of theſe waters is a relief alſo in melancholy, and hypochondriacal diſtempers. They recover loſt appetite, ſtrengthen weak and flatulent ſtomachs, and quench immoderate thirſt. From theſe virtues may be ſeen the agreement between the waters of this place and thoſe of the Engliſh baths: in fine, all thoſe baths, eſpecially ſome that are very lately repaired, are neat and commodious, the accommodations and proviſions good and reaſonable, and are frequented by a great variety of the beſt company.

About a furlong out of the ſouth gate lies the charming village of Borcet, or Porcet, which had its name from the wild hogs that abounded formerly in the neighbouring woods. Here alſo are many hot ſprings on both ſides of a ſmall cool rivulet, which runs through the town: they are conveyed by pipes and conduits into 14 houſes, in which are formed 28 baths: ſome of them are much hotter than thoſe in the town, and muſt be cooled 18 hours before they can be uſed. Their water is clear and pleaſant, without any diſagreeable ſmell. They are, for moſt part, five or ſix yards ſquare. There is one quite open to the air, called the Poor Man's Bath, which has a ſpring ſo hot, that the people ſcald pigs, and boil eggs with it; but it is obſerved, that they only harden the yelks, and not the whites. Theſe baths are not ſo ſtrong as thoſe in the city, and, by conſequence, the better for weak people; and thoſe of all ages and conditions bathe in them for their diverſion, without any danger. They are good againſt the ſame diſtempers as the others, and particularly againſt defluxions of the head and breaſt, moiſt and ſqueamiſh ſtomachs, dropſies, ſoft ſwellings, &c. and may be drank, as well as thoſe of the city; but the latter are more ſolutive, and thoſe of the village more ſtrengthening. The fountains are, in both places, ſo plentiful, that they are capable of filling, ſeveral times in a day, above 50 baths, of 60 or 70 tuns apiece; and moſt of them, but thoſe for the poor, are ſo contrived, that the old water is drawn off by ſubterraneous conduits, and the baths cleanſed from all impurities. It is computed, that from the baths in the city, and in this village, there flow 6000 tuns of water per day, which carry as many pounds weight of ſalt. The firſt ſeaſon for theſe baths is about the 18th of May, the ſecond about the 18th of Auguſt, and continues each time ſix weeks.

The village of Borcet is well built, has four handſome churches, and a nunnery of Bernardines, whoſe abbeſs is a princeſs of the empire; but there lies an appeal from her court to the echevins of the city.

The adjacent country abounds with corn, fruit, and paſturage; the woods there furniſh them with materials for fire and building, as the quarries do with ſtone. They have alſo rich coal mines, beſides others of iron, lead, vitriol, ſulphur, and lapis calaminaris; and are well ſupplied with neceſſaries by the Rhine and Maeſe. The territories of the city are large, and contain near 200 villages, incloſed on all ſides with mountains.

* * * * * * *

Beſides the places already deſcribed, the circle of Weſtphalia contains the following leſs conſiderable counties, ſeigniories, &c.

The county of Diepholt lies ſouth of Delmenhorſt, is 12 miles long, five broad, and contains a lake called Dummerſee, which abounds with fiſh and wild ducks. The ſoil is ſterile, the inhabitants profeſs Lutheraniſm; their trade is in coarſe linen and woollen, which they manufacture, and black cattle. Diepholt, the only town, is a borough, ſituated on the Hunte.

Pyrmont, famous for its mineral waters, lies on the borders of Hanover, near Lugde, 38 miles ſouth-weſt of Hanover, and 20 eaſt of Lemgow. It is the capital of a county, with a very ſtrong fort, formerly ſubject to its own lords, and now belongs to the prince of Waldeck. There is a great reſort of German and other nobility hither to drink the waters, which are preferred even to thoſe of Spaw, and exported abroad from Bremen, to which they are carried by the Weſer. In the neighbourhood are one or two ſalt-pits; and the king's iron and ſilver mines are not far off.

The county of Spiegelberg is held by the prince of Orange of the elector of Hanover; hence the civil and eccleſiaſtical judicatories are ſubordinate to thoſe of Brunſwic-

Brunſwic-Lunenburg, and the elector has a ſeat in the college, and at the diets. The only place in this county worthy of obſervation is Spiegelberg, an ancient caſtle in a mountain, in the vicinity of which there is an hoſpital for old women, and a caſtle to which pilgrimages are made.

The county of Rettberg is ſurrounded by Ravenſberg, Lippe, Paderborn, and Oſnaburg; its length is 17 miles, its breadth ſix; its count enjoys a ſeat and voice in the college, and in the diets of the circle; and its only town, called Rittberg, is ſituated on the Ems.

The little diſtrict of Gronsfeld was erected into a county by the emperor Rodolph II. and entitles its count to a ſeat in the college, and in the diets of the circle; as does the county of Reckum, which is ſeparated by the Maeſe from the duchy of Limburg.

The ſeigniory of Anholt belongs to the prince of Salm, who on its account enjoys a ſeat and voice in the college, and in the diets of the circle; as does the count Metteruich, for the ſeigniories of Wrurienburg and Bielſtein.

The county of Holzapfel belongs to the prince of Anhalt-Bernburg-Hoym; the ſeigniories of Wittem, Eyſs, and Schlenacken, belong to the count of Platterburg, and both entitle their proprietors to a ſeat in the college, and in the diets of the circle.

The counties of Blankenheim and Gerolſtein, the ſeigniories of Gehmen, Gimborn, and Neuſtadt, Wickerhad, Mylendonk, Reichenſtein, Kerpen, and Lommerſum, Schleinden, and the county of Hallermund, all entitle their reſpective proprietors to a ſeat and voice in the college, and in the diets of the circle. But the ſeigniories of

Dyck	Merchemick
Sconau	Wybre
Richold	Dreyſz
Jever	Kniphauſen,

do not entitle their lords to thoſe privileges.

IV. *The Circle of the* UPPER RHINE.

THIS circle is bounded by the Lower Rhine, which almoſt interſects it, and by Weſtphalia, Franconia, Swabia, Upper Saxony, Lower Saxony, Alſace, and Lorrain. It was antiently much larger than it is at preſent, as a great portion hath been diſmembered from it by France. The diets are held at Frankfort, the archives are kept at Worms, and it preſents two aſſeſſors to the chamber of Wetzlar. Its diviſions and ſubdiviſions are the following:

The Biſhopric of WORMS.

THE biſhopric of Worms is about 12 miles in length, and eight in breadth where broadeſt: it is interſected by the Rhine, and ſurrounded by the lower palatinate. In general it is barren, mountainous, and woody, though ſome few parts are fruitful in corn and wine. The Proteſtants here are miſerably oppreſſed. The chapter chuſes the biſhop, whoſe revenue does not exceed 2,500l. and who, in ſpirituals, is ſubject to the archbiſhop of Mentz.

Worms, the capital city, is ſituated on the weſt ſide of the Rhine, at the diſtance of 26 miles ſouth of Frankfort on the Maine; while the Imperial chamber was kept here, it was one of the moſt conſiderable cities in the whole empire. It is celebrated for the great diet held here in the year 1521, to which Luther came according to his ſummons, though his friends would fain have diſſuaded him, by putting him in mind of John Huſs, who was burnt by a decree of the council of Conſtance, notwithſtanding the paſſport granted him by the emperor Sigiſmond: but Luther, far from being terrified, ſaid, "That though he was ſure to be engaged with as many devils as there were tiles upon the houſes of Worms, he was reſolved to go." He came hither accordingly; made ſuch a bold anſwer and defence of his doctrine, that he was proſcribed, and obliged to abſcond; during which time he wrote that book called his *Works from the Deſart*. The Lutherans have only one church for their uſe; the Papiſts have all the reſt of the churches; and the Calviniſts have one at Newhauſel, half a league out of the city, where the Lutherans ſometimes ſcruple not to have their children baptized, contrary to the cuſtom of Frankfort. The town has no other fortifications but a double wall; and is as large as Frankfort, ill-peopled, and poor. It was often taken and retaken during the civil wars in Germany; but ſuffered moſt by the French, who in 1689 laid in aſhes, in a few hours, what had been the work of ages.

In 1698 the popiſh clergy, who had not been allowed to make proceſſions, except on the day after Eaſter, nor to carry the hoſt in public, would needs carry it in proceſſion through the ſtreets on Chriſtmas day: the magiſtrates ſent a notary to forbid it; but the prieſt, at the head of the proceſſion, ſtruck him over the head with a cenſer that he carried in his hand. Moſt of the burghers being Proteſtants ran to aſſiſt the notary; but a great number of popiſh peaſants, brought in for the purpoſe, fired upon them, which ſo incenſed the Proteſtants, that they drove the proceſſion back to the church from whence it came, and wounded ſeveral of the papiſts, particularly the inſolent prieſt. The papiſts complained of this as a breach of the treaty of Ryſwick betwixt France and the empire, which reſtored Worms, and its dependencies, to the biſhop. The Proteſtants pleaded the treaty of Weſtphalia in their own defence. Some of the principal authors of the tumult were ſeized, and a Palatine regiment quartered in the city to prevent diſturbances: at the ſame time the elector incloſed it with a wall.

The city is ſubject to the biſhop, but under the protection of the elector palatine. The Papiſts, who are very numerous here, have the cathedral; but the magiſtrates, and moſt of the inhabitants, are Lutherans. There is ſo much vacant ground in the town as, being planted with vines, yields annually 1500 fodders of wine, each containing 250 Engliſh gallons; which wine is ſo much eſteemed, that the magiſtrates make preſents of it, with ſome fiſh, to princes, and other travellers of quality: the preſent of the fiſh is to denote their right of fiſhery on the Rhine.

The churches of St. Paul and St. John are very antient: the latter is built of vaſt ſquare ſtones, in an irregular manner, with narrow windows and galleries round the outſide, juſt under the roof, and the walls are above 12 feet thick; ſo that it ſeems to have been deſigned for a fort rather than a church. The cathedral is a long, high, and ſtrong ſtructure, with a tower at each of the four corners: the ornaments are Gothic, and over one of the gates there is an hieroglyphic, being a figure of the ſize of an aſs with four heads, viz. thoſe of a man, an ox, an eagle, and a lion; the two firſt are looking upwards, and the two other downwards: it is ſuppoſed to be a repreſentation of the four beaſts in Ezekiel's viſion; or, as ſome think, of the hieroglyphics of the four evangeliſts: a woman ſits on its back; which they ſay repreſents the goſpel. At the entrance of St. Martin's church, over a moveable altar, there is a ſtrange picture well worth a traveller's view: it is about five feet ſquare, and at one corner of the top has a repreſentation of God the father ſpeaking to the Virgin, on her knees, in the middle of the picture, holding an infant repreſenting our Saviour, by the feet, with his head in the hopper of a mill, which the 12 apoſtles turn by the help of a wheel, and of the four-headed beaſt abovementioned; and the pope is drawn upon his knees hard by, receiving the hoſts which fall from the mill into a golden cup; one of which he preſents to a cardinal, who gives it to a biſhop, the biſhop to a prieſt, and the prieſt to a layman.

There are two public halls here, in one of which the magiſtrates aſſemble twice a week for matters of ſtate, and in the other for the adminiſtration of juſtice. It was in the former that Luther, being heated with the debate, and the fire that was near him, called for a glaſs of wine; which being brought, he was ſo eager in his diſcourſe, that he forgot to drink it, and ſoon after it broke to pieces on the bench, without any body's touching, or being near it; whence the Lutherans concluded, that there was poiſon mixed with the wine; whereupon they broke the bench, and ſtill keep the pieces as a memorial of his deliverance. A fine church was built here for the Lutherans not many years ago, in which the hiſtory of that great man is very well painted.

There is a mint here, which is a noble ſtructure, with a ſpacious portico, where a vaſt number of bones and horns hang between the arches; the former of which, they ſay, are thoſe of giants that lived among the antient Vangiones; and the latter, the horns of oxen that drew the ſtones which built the cathedral. The outſide of the houſe is adorned with many pictures, and particularly ſome of thoſe giants in armour.

Since this city was laid in aſhes by the French in 1693, it is little more than the ſhadow of its former beauty. The richeſt traders, conſidering how much both they and their anceſtors had ſuffered by reaſon of their lying ſo open to France, retired to Franckfort and Holland; ſo that its chief ſupport now is from the biſhop and chapter; the firſt of whom, however, being always a pluraliſt, and often an eccleſiaſtic elector, very ſeldom reſides here. The citizens, as are indeed thoſe of moſt other Imperial towns, are very complaiſant to ſtrangers. There is a ſenate, or ſupreme council here, compoſed of 25 members, whereof 13 are for life. There is the fineſt country in the world from this city to Oppenheim and Frankendale. The fine ſpacious plain in which it ſtands, abounds with corn, vineyards, and fruit-trees. A wine is produced here, which is called Lieben-Frauen-Milch, i. e. our Lady's Milk. The Rhine is about three or 400 paces from the town; but it is ſaid it formerly ran cloſe by its walls. Which way ſoever one approaches the town, the four towers of the cathedral are ſeen, which are all built of red free-ſtone.

Stein, though only a fortreſs on the river Weſchnitz, gives name to a bailiwic; and Leiningen is a town on a mountain, the citadel of which was deſtroyed by the French.

Neuhauſen	Hockheim,
Turkeim	and
Rhein	Dirmſtein,

are all boroughs, with Proteſtant churches; in which, however, the Roman Catholics are allowed to perform their religious duties.

The Biſhopric of SPIRE.

THE Rhine interſects this biſhopric, the other parts of which are ſurrounded by the territories of the elector Palatine, and the margrave of Baden Durlach. Some parts are mountainous and woody, and others level and fertile, in

Corn	Vines
Almonds	Cheſnuts.

It extends 32 miles in length, and 12 in breadth. The biſhop, though ſuffragan to the archbiſhop of Mentz as a prince of the empire, has a ſeat and voice in the diets thereof, and of the circle.

The Imperial city of Spire is ſituated on a delightful plain, on the eaſt ſide of the Rhine, 12 miles ſouth-weſt from Heidelburg. It was erected before the time of Our Saviour, and the ſee was founded in the fourth century. The magiſtrates, and many of the inhabitants, are Lutherans, but the Roman Catholics have many churches, convents, &c. It has a ſeat and votes in the diets of the empire, and thoſe of the circle, paying an aſſeſſment to the empire, and the chamber of Wetzlar. The French deſtroyed this city in the year 1689, who murdered, indiſcriminately, men, women, and children, deſtroyed ſeveral valuable marble monuments of emperors and empreſſes, and even ranſacked the graves, and ſcattered about the bones of illuſtrious dead. Previous to this devaſtation it was the ſeat of the Imperial chamber; ſince that time it has been built with additional beauty, but the Imperial chamber has been removed. At the diet held here in 1529, the word *Proteſtant* took its riſe, ſince which time perſons of the removed religion have been diſtinguiſhed by that appellation. It is ſingular, that the biſhop is not permitted to reſide in this city; and when he is choſen, before he is ſuffered to enter it, he muſt redreſs all complaints; and then ſitting on horſeback between the two outermoſt gates, with one hand on his left breaſt, he muſt give it his benediction; he then makes his public entry, and the citizens pay him homage. This city is under the protection of the elector palatine, and the fortifications are but very indifferent.

Philipſburg, eight miles to the ſouth of Spire, was at firſt but a little town; afterwards it was encompaſſed by a wall, and at length erected into a city in 1443. It is conveniently ſituated for commanding the adjacent country, and was therefore fortified with ſeven royal baſtions by Philip biſhop of Spire (who was alſo biſhop of Triers) in 1629, before the civil wars in Germany, and called by his own name. The elector palatine Frederic V. under whoſe ſovereignty and protection it was, ſuſpicious of the biſhop's deſigns in fortifying this place during a peace, ordered him to deſiſt; but he refuſed, alledging, that he had the emperor's placart for his warrant. Upon this the elector raiſed troops, and demoliſhed the fortifications; for which the emperor ſummoned him and his confederates before the chamber of Spire, and deſigned to proceed againſt them with the utmoſt ſeverity, which was one of the cauſes of the civil war in Germany. It has ſuffered ſeven memorable ſieges in the ſpace of 100 years. Spinola, the Spaniſh general, repaired the fortifications, and made it almoſt impregnable in 1633. It was taken the year after by the Swedes, who gave it to Lewis the XIIIth, and was retaken by the Imperialiſts in 1635. It was taken from them in 1644, by the French under the prince of Conde, who joined the German Proteſtants. The French kept it till 1676, by virtue of the treaty of Munſter; and Lewis XIV. added to the fortifications in 1666, ſo that they extended to the Rhine, which lies a quarter of a league from the town; and over the great gate put an inſolent Latin inſcription; in Engliſh thus,

"Lewis XIV. the moſt chriſtian king of France and Navarre, having finiſhed the wars in both Germanies, and reſtored peace every-where, cauſed this fortreſs to be ſtrengthened with theſe ramparts and walls at his own royal charge, as a monument of his own valour, and of the recovery of the Germans liberty. He completed it in 1666, for the terror of his enemies, the ſupport of his allies, and a ſecurity to the French, it being the ſecond bulwark of France on this ſide of the Rhine, and a key into Germany; the loweſt in ſituation, but not in ſtrength.

What he ſhuts, no man opens; and what he opens, no man ſhuts."

In 1676 the Imperialiſts retook it: and the emperor ordered the ſaid Latin inſcription to be eraſed, and another put up in its ſtead; in Engliſh thus:

"Leopold the emperor, pious, ſucceſsful, auguſt, conqueror, and triumpher, having undertaken a neceſſary war for aſſiſting his confederates, defending his ſubjects, curbing his enemies, and reſtoring peace everywhere, took this fortreſs by ſiege, that it might be a monument to poſterity of his breaking off the yoke of ſlavery from the neck of common liberty; and reſtoring it to Germany, from which it had been unjuſtly taken."

In the year of our ſalvation 1676.

"For the terror of his enemies, the defence of his ſubjects, and the ſecurity of Germany, he ſhut againſt the French, and opened to the Germans, this ſecond bulwark of France on this ſide of the Rhine, and key to Germany, as a happy omen of his like ſucceſs in recovering more.

What the French ſhut, the Germans open."

The Germans having then regained it, after a ſiege of four months, it was granted to them by the peace of Nimeguen. In 1688 the French took it again; but it was reſtored to the empire by the treaty of Ryſwick in 1697, with the fortifications on the right ſide; but thoſe on the left were demoliſhed. It was again taken by the French in 1734, after a long and bloody ſiege, in which the famous duke of Berwick (natural ſon of king James II.) was killed by a cannon ball, betwixt his two grandſons, as he went to take a view of the trenches; but they reſtored it upon the peace that followed at the beginning of the year 1736.

The biſhop of Spire reſides in the caſtle, a noble pile founded in 1513, in a plain ſurrounded with marſhes, by George, count palatine of the Rhine, and biſhop of Spire; and repaired in 1570 by biſhop Marquard de Hatſtein:

ſtein: the empire has the right of garriſoning it; but the biſhop has alſo ſome ſort of juriſdiction in it.

Bruxhall, or Bruchſal, is a large open town in this biſhopric on the river Saltza, with a caſtle, which is the ordinary reſidence of the biſhop, nine miles ſouth-eaſt of Philipſburg, and 12 north-eaſt of Durlach. Here prince Eugene kept his head-quarters during the ſiege of Philipſburg by the French in 1734.

Altrip, in the ſame dioceſe, though but a ſorry village, was formerly fortified, becauſe it commands a paſſage of the Rhine a little above Manheim. In the Notitia of the empire it is called de Alta Ripa, becauſe the bank of the Rhine is here very high. It was a place of ſuch importance to the Romans, that they kept a garriſon in it.

Eideſheim, Weibſtatt, and Rottenburg, are ſmall towns: the firſt is ſituated on the Hart, the banks of which yield good wine; and the latter is defended by a caſtle.

The Proveſtſhip of WEISSENBURG.

THIS rich provoſtſhip was originally an abbey of Benedictines ſituated in the ancient imperial city of Weiſſenburg in the Lower Alſace; but, in 1546, it was converted into a temporal provoſtſhip, and annexed to the biſhopric of Spire, on which account the biſhop has a ſeat and voice in the diets of the empire and circle.

* * * * * * * * * * * * * * * *

IT is neceſſary here to ſay a few words concerning the biſhopric of Straſburg, or Stratſburg, the cathedral and chapter of which are in the city of Straſburg, in Alſace, which is under the dominion of France; ſo that, in reſpect to that part of his dioceſe, the biſhop is ſubject to France; but, on account of his bailiwic on the other ſide of the Rhine, he retains the title and ſtate of a prince of the German empire, and has accordingly a ſeat and voice in the diets of the empire, and of this circle. But, in ſpirituals, he is ſubject to the archbiſhop of Mentz.

The Biſhopric of BASIL.

THIS biſhopric is extenſive, but the ſituation is in different dominions, as part of it lies in Switzerland, and part in this circle. It is bounded by Neufchatel, Bern, Sundgau, Mompelgard, Burgundy and Solothrun. The inhabitants are partly of the Roman Catholic, and partly of the Proteſtant perſuaſion; and the ſtates conſiſt of the clergy and nobility, with the towns and bailiwics. The biſhop, whoſe cathedral ſtands in the city of Baſil, is a prince of the empire, having, as ſuch, a ſeat and vote in the diet of the empire and of the circle; he is likewiſe an ally of the Swiſs. The only places in his dominions, which belong to this circle, are

Bellelay, an abbey whoſe abbot is mitred; Seehof, under the protection of the Canton of Bern; St. Uriſitz, on the Daux, which contains a provoſtſhip; Deſperg, a ſmall town on the Birſa; Bumtrut, on the Allen, containing a biſhop's palace, with a college and a capuchin cloiſter; Lauffen, a little town on the Birſa; Arleſheim, on the ſame river, is the reſidence of the chapter; and Schelingen a market-town on the Rhine.

The Territory of FULDA.

THE territory of the abbey of the town of Fulda, called Buchen by the Germans, was, by the Latins, called Fagonia, becauſe it was antiently a wilderneſs of beech-trees, but it is now improved to a rich ſoil, fruitful in every thing, particularly good wines. It lies ſouth of Heſſe, and north of Hanau, Reineck, &c. and is about 25 miles in length, and 12 in breadth. It belongs to the circle of the Upper Rhine, and is divided into 13 ſmall bailiwics. Some reckon it a part of Heſſe, others of Wetteravia; and ſome again make it independent, becauſe its abbot, who is elected by friars that muſt be all gentlemen by 16 deſcents, is lord of the town and country, and primate of all the abbots in Germany and Gaul, is a prince of the empire, ſits at the foot of the emperor's throne in all general diets, and depends immediately on the pope, to whom he pays 400 florins, or 40l. on his inſtallation. As the country borders on ſeveral Proteſtant ſtates, as Saxe-Gotha, &c. as well as Heſſe-Caſſel, there are ſeveral gentlemen here of that religion. The abbot is, moreover, perpetual chancellor to the empreſs, and puts the crown upon her head at her coronation. The revenue of this country is betwixt 20 and 30,000l. a year. The abbot is able to raiſe four or 5000 men. His chapter conſiſts of eight provoſts. He has all the four great officers, rich equipages and livery, and a ſpruce magnificent houſhold, and there is always a company of horſe-guards, and a regiment of foot-guards, well cloathed and mounted, to attend him.

Fulda, which is the capital of the country, ſtands on a river of the ſame name. It is contiguous to the abbey, which is of the Benedictine order, and one of the nobleſt in all Europe; it was founded, anno 744, by St. Boniface, and endowed with great privileges by ſeveral emperors. The great church, dedicated to that ſaint, is a ſtately free-ſtone pile of ancient architecture. The monks have three MSS. one of the New Teſtament complete, the four Evangeliſts diſtinct, and a Treatiſe on the Trinity, all ſaid to be written by St. Boniface, in a character much different from any now in uſe. It is an open town, but dirty, and not very well built. The palace is a ſtately pile alſo of free-ſtone, with apartments richly furniſhed, and, together with the abbey, may be reckoned among the nobleſt buildings in Germany. The baron de Pollnitz ſays, he was glad when he got out of this country, becauſe here he met with very hard drinkers, terrible bad roads, and diſmal lodging. It was formerly a free and imperial city, till it became ſubject to the abbot.

Hirchfeld, on the ſame river, 20 miles north from Fulda, and 30 ſouth-eaſt of Caſſel, is a ſmall but neat city, noted for another abbey, which is of as noble a ſtructure as any in the empire, being built upon an arch ſupported by 16 pillars, of one intire ſtone each. It was founded by Pepin, endowed by Charles the Great, and one of its firſt abbots was Alcuinus or Albinus his preceptor, who lies buried in it. Since 1606, when its laſt abbot died, the revenues have been kept by a branch of the family of Heſſe, as adminiſtrator, and it was ſecularized by the treaty of Munſter. Its diſtrict, which has the title of a principality, is about 12 miles long, and the ſame in breadth, and lies on the eaſt ſide of Heſſe, towards Thuringia.

The Maſterſhip of St. JOHN.

THIS Maſterſhip conſiſts only of the town of Heſterſheim, and a few villages belonging to the order of St. John. The grand maſter is a prince of the empire, and has a ſeat and vote among the princes in the diet of the empire and circle. Heireſham is a market-town and the reſidence of the Grand maſter.

Abbey of PRUM.

THIS abbey is ſituated in the foreſt of Ardemes, and was founded, in the eighth century, by Pepin king of the Franks, and was, in 1570, incorporated with the archbiſhop of Triers. Hence the archbiſhops became its adminiſtrators, and, as ſuch, have a ſeat and vote in the diets. Prum, from which the abbey takes its name, is an inconſiderable town on a ſmall rivulet.

* * * * * * * * * * * * * * * *

THE duchy of Suinnern was long poſſeſſed by a collateral branch of the palatine family; but, that failing, it devolved to the electors, who, on that account, ſit and vote in the college of princes, and, joined with the biſhop of Worms, are ſummoning princes for the circle. Suinnern, the principal town, which takes its appellation from a river of the ſame name, is 30 miles weſt of Mentz, and has ſeveral churches. The duchy contains, beſides Suinnern, the following little towns,

Laubach	Horrein, and
Argenthal	Sobernheim.
Monzingen	

The little duchy of Lauteren, in the laſt century, reverted to the electoral houſe, which is thereby entitled to a ſeat and voice in the diets: as did the bailiwics of

Lauteren and Veldenz, beſtowing, at the ſame time, ſimilar privileges. Veldenz is ſituated on the Moſelle, and Lauteren on the Glan.

The Imperial City of FRANKFORT *on the* MAINE.

THE Imperial and free city of Frankfort, was anciently called Francofordia, that is, *The Ford of the Franks*, for the Franks uſed to croſs the river here, in order to make their incurſions upon the Saxons, on which account the latter at length built this city, to reſtrain their ravages. It is now called Frankfort on the Maine, not only on account of its being ſituated on that river, but to diſtinguiſh it from Frankfort upon the Oder. It is 18 miles eaſt of Mentz, and 20 from the Rhine. It is ſpacious, populous, and opulent; one of the Hans-Towns, and the ſeat of the Imperial diet. The river interſects and divides it into two parts, which have a communication by means of an elegant ſtone bridge, conſiſting of 14 arches, with a tower at each end 400 paces aſunder; but the whole is under the juriſdiction of the ſame magiſtrates. The river is about half as broad as the Thames at London. The town is ſurrounded by walls, encompaſſed with deep ditches of running water, and fortified with 11 baſtions, ſuitable counterſcarps, outworks, &c. The Maine, Rhine, &c. render its ſituation admirable for trade, particularly for bringing great quantities of corn and wine from Franconia, and the palatinate. It has two annual fairs, one beginning 15 days before Eaſter, the other on the 15th of September: they are frequented by merchants with various commodities, particularly books from moſt parts of Europe, of which they diſtribute printed catalogues, ſo that there is greater choice here than in any town in Chriſtendom, during the mart, which laſts three weeks; but at other times the bookſellers have ſcarce any buſineſs to do. There are three marts every year, and the names of the foreign merchants are writ over the arch before the doors of their ſhops, which, when the marts are ended, are ſhut up. Moſt of the ſtreets are large, except two or three, which are full of merchants ſhops. The houſes are built ſome of red marble, others of timber plaiſtered, and painted or covered with ſlates.

On the north ſide of the city there is a ſpacious horſe-fair, or market, where a vaſt number of good horſes are ſold to the French king, and the neighbouring princes. The Jews are the chief jockeys. The city is round, and has no ſuburbs, but is much larger, richer, and more populous than Mentz.

The chief ſtructures are, 1. St. Bartholomew's cathedral, which, though too dark a pile within, is a ſtately venerable piece of architecture, built by Pepin, father to Charlemagne. In a long narrow chapel of this church, called the conclave, they uſed to chuſe the emperor: it has a very mean altar and benches for ſo celebrated a place; and the other chapel here, in which he is crowned, being a cloyſter of iron faſtened to the baluſtrades of the choir, looks like a great bird-cage, having no ornament but an ordinary crucifix of braſs. M. Blainville takes notice of a curioſity here of another ſort, viz. the tomb and white marble ſtatue (ſtanding in a niche of black marble) of John Charles, biſhop of Worms, who, as the inſcription ſays, was deſcended from the barons of Frankenſtein, who mount up their genealogy from father to ſon, for more than 1000 years backwards, of uninterrupted nobility. They ſay that this church was greatly enriched by Charlemagne, but that the emperor Lewis of Bavaria took away the greateſt part of its revenues, becauſe its chapter had ſided with the pope againſt him.

2. The town-houſe, where the emperor and electors meet in council after the election is over; but beſides the throne, it has only ſome benches covered with green cloth, and ſome pictures. The great hall, where the Imperial feaſt is kept on the coronation day, is not very regular though large: the floor is covered with black and yellow cloth, the livery of the houſe of Auſtria. On the cieling is painted the ſtory of Ganymede carried away by Jupiter's eagle, and of a raven tearing out the eyes of a perſon who had falſly accuſed another of murder. Before the houſe is a great ſquare, where, at this ſolemnity, an ox is roaſted, ſtuffed with veniſon, wild-fowl, and ſucking pigs; and thither one of the electors comes in perſon for a ſlice of beef, which he carries to the emperor, and, after he has dined on it, it is abandoned to the populace. Another of the electors carries him a glaſs of wine, which, on that occaſion, runs from a fountain in the middle of the ſquare. A third carries him a meaſure of oats from thence: and in this ſquare, after the coronation, another diſtributes the medals, &c. ſtruck upon the occaſion. Here is a veſtry, where the electors are ſhut up during the election; at which time the marſhal of the empire ſtands before the door with his ſword drawn, to prevent the princes from coming out till it is over.

3. Braunfeld, which was formerly the emperor's palace, and now the manſion-houſe of the Teutonic knights, where debtors have a ſanctuary for 14 days, after which they may be taken up.

4. The port, or harbour. And

5. The citadel, or fortreſs of Saxen-hauſen. There are ſeveral noble fountains in the city, and particularly three in the great market-place; and there are divers mineral ſprings and baths belonging to the city.

This city is governed by a pretor, 12 burgomaſters, 14 eſchevins, or aldermen, one of which is always a burgomaſter, and 42 common-council. The ſenate, which chuſes two burgomaſters annually out of their own number, is divided into three benches: the firſt is that of the eſchevins: the ſecond is of the literati, or learned, out of which the firſt bench is ſupplied in caſe of a vacancy: and the third is of tradeſmen, who never riſe higher. The grand bailiff, who is always preſident of the council, is choſe out of the eſchevins, and his office is for life as well as the eſchevins. Beſides theſe, there are ſyndics, whoſe power is very much limited.

The magiſtrates are choſen from among the nobility, but named by all the corporations of tradeſmen, except the taylors, becauſe one of them was chief in a revolt againſt the magiſtrates. The government here is quieter than in moſt of the Imperial towns; and their liberties, which they boaſt of holding originally from Charlemagne, ſeem better eſtabliſhed.

The magiſtrates, and moſt of the inhabitants, are Lutherans, and have five churches; in one of which is a good deal of painting and ſculpture, an altar of black marble, a marble pulpit, and reading-deſk; the figure of Chriſt, with a globe and a crucifix, both of alabaſter, &c. The altar-piece is a repreſentation of our Saviour's paſſion in the garden; and the cieling and the fronts of the galleries are painted with ſcripture hiſtories. The Roman Catholics are permitted to perform their religious duties in the cathedral, and have ſeveral chapels, and two convents, but they are not ſuffered to make public proceſſions. The Calviniſts have two churches about a league from the city, one for German, and the other for French refugees; but the ceremonies of baptiſm and marriage muſt be performed in the Lutheran churches. In the council held here in 794, 300 biſhops aſſiſted againſt the Naſtorian hereſy. This city was one of the firſt that had ſpirit enough to demand the free exerciſe of the Lutheran religion, which being refuſed by their magiſtrates in 1522, they depoſed them, and choſe another ſet; and in 1530, the Augſburg confeſſion was eſtabliſhed here. It was beſieged twice in 1552, by Maurice, elector of Saxony, and by Albert, margrave of Brandenburg, who took it; but it ſoon recovered its liberty, and has flouriſhed ever ſince. On the wall of the great bridge to Saxhenhauſen is an indifferent, though much celebrated picture, repreſenting a dead infant beſmeared with blood, and an inſcription beneath, denoting, that on Palm-Sunday 1475, a child, of two years and a half of age, called Simon, was murdered by the Jews. Under the child a Jew is exhibited in a black cloak, with a ruff ſtragling; a hog with his face towards the tail, which he holds in his hand inſtead of a bridle. A monſtrous large devil follows, and ſpits in his face; and a mob of women and little devils ſurround him, inſulting both him and his companion, whom another devil carries on his ſhoulders. The populace firmly believe this ſtory, yet it is well known to the learned, and more ſenſible part of the inhabitants of Frankfort, to be an abſolute forgery, deſigned meerly to prejudice the people againſt the Jews. This ſect have a ſynagogue here, but the walls are as black and ſmoaky as thoſe of a kitchen, and they are confined all night to their particular quarter, which is in a ſtreet about a mile in length, but very narrow

narrow and dirty, with a gate at each end of it that is ſhut every evening, and the keys carried to the magiſtrates. Their houſes are generally of timber plaiſtered, and four, five, or ſix ſtories high, but as naſty as a hog-ſty; yet in this little quarter, it is ſaid, there are three or 4000 ſouls. Their chief trade is buying and ſelling old ware, hawking toys at the inns, &c. and changing ſuch money as is not current here; but none of this can they do on Saturday, which is their ſabbath; nor on Sunday, which is ours: for if they were to appear in the ſtreets upon the latter, they would certainly be pelted by the mob, ſo much are they hated by the German populace; who, in 1614, roſe againſt their anceſtors, and pillaged them cruelly upon this account. The citizens of Frankfort quarrelled with their magiſtrates to ſuch a degree, that the mob beſet the antient ſenators in the council-chamber for four days together, and thereby forced them to quit the place, as well as their offices; and they could not get to be reſtored, notwithſtanding two mandates came from the emperor to that purpoſe. During this, on St. Bartholomew's day, a great mob vented their fury alſo on the Jews, who barricadoed the gates of their ſtreet, and made the beſt defence they could, wherein they killed and wounded ſome of the ring-leaders; which ſo exaſperated the reſt, that they broke upon their quarter, and forced them to their burying-place, and to abandon all that they could not carry thither to the ravage of the plunderers; who were, however, ſtopt in their riot early next morning, by the majority of the citizens, foot and horſe, well armed, who ſeized the plunderers, ſecured the effects they had taken from the right owners, and ſo put an end to the inſurrection. The Jews, however, who had intrenched themſelves in their burial-place, fearing the populace might riſe again, and force them out of it, begged, and obtained leave to retire out of town, with their families, and ſuch effects as were ſaved, or recovered from the plunderers.

This fatal day they afterwards called, the Day of their Tribulation, as they had called their quarter Little Jeruſalem: and, it is obſerved, that the day they were obliged to fly from Frankfort was a ſolemn faſt, which they had been uſed to keep, in memory of the deſtruction of the antient Jeruſalem by Nebuchadnezzar, and by Titus Veſpaſian. Mean time, the remains of theſe poor Iſraelites at Frankfort are obliged, under ſevere penalties, to fetch water, when any fire breaks out in the city, be it ever ſo diſtant from their quarter: in recompence, the magiſtracy permits them to chuſe 12 judges, out of their own body, to decide their own differences, who are called bawmeeſters; and thoſe who will not ſubmit to their deciſions, are allowed to appeal to the Lutheran tribunals. They are obliged to wear a piece of yellow cloth, that they may be known from the other inhabitants, though their habit is very diſtinguiſhing; for the men generally wear coarſe threadbare cloaks, flat-brimmed hats, old greaſy ruffles, and thick-pointed beards. The women wear over their cloaths ſhort cloaks of black crape, bound about their necks by claſps of gilt copper, and round their ſhoulders a ſparkling border of tinſel, a foot in breadth; and as for their head-dreſs, it is only a coarſe wrapper, ending at their forehead in two large horns, about four fingers broad, one of which is covered with black gauze, and the other with a bit of lawn dyed blue. The Jewiſh girls are diſtinguiſhed from the married women by their head-dreſs, which is nothing but a piece of red taffeta bordered with a gold gauze, with which their hair is gathered and tied. A great number of the Jeweſſes here wear ear-rings, which repreſent the ſigns of their houſes or ſhops, be they cat, dog, or any other animal. By their ſynagogue they have their hot and cold baths: the former are in two little rooms, where there are cauldrons to heat the water: the cold are in a ſubterraneous place, 30 feet deep, ſurrounded by an iron rail, where the women peep over, to ſee that ſhe who bathes plunges over head and ears into the water, according to their old law, which ordains, that every hair be purified. There is a place with ovens, for baking their victuals on their ſabbath-day, to which each family carries their pot, or pan, on the eve, and it is carried home next day, when the ſervice is over. Their timber houſes being ſo cloſe, and apt to catch fire, their quarter has been twice burnt down; becauſe, as baron de Pollnitz ſays, they refuſed the help they might have had to ſave their houſes, for fear of being robbed.

At ſeveral houſes in Frankfort there are pine-trees planted by the doors, denoting they are taverns, and cyphers painted on the door-poſts, marking the different prices of the wines in the cellars. Saxenhauſen formerly belonged to the elector of Mentz, but was bartered a little above 100 years ago, for the town of Hochſt, which depended on Frankfort: ſince this change, one of the city council muſt reſide at Saxenhauſen.

As to the three originals of the famous Golden Bull, of which two are preſerved at Prague and Nuremberg, the third is kept in an apartment of the town-houſe of Frankfort; but is never ſhewn to ſtrangers, except in preſence of two of the council, and the ſecretary. It is a little manuſcript, in quarto, conſiſting of 42 leaves of parchment, with a gold ſeal of three inches diameter, weighing 20 ducats, appended to it by a cord of yellow ſilk. It is written in Latin and Gothic characters, without diphthongs; and kept in a black box, together with two written copies of a tranſlation of it into the German language. This Bull, which they likewiſe call the Caroline Law, contains the rules and ceremonies to be obſerved in the choice of the emperor, ſettles the power and authority of all ranks of the nobility, and ſo binds the emperor and the princes to one another, by oath, that neither may with impunity inſtigate or attempt any thing to the detriment or danger of the commonwealth, the country, the empire, or its neighbours; and, amongſt other conditions for which the author of it is eſpecially commended, it decrees, "That whoſoever hereafter had a view to the Imperial dignity, ſhould be well acquainted with the languages, particularly the Latin, Italian, French, Tuſcan, and German; that, when he was emperor, he might be able to anſwer his ſubjects in the ſeveral languages, without an interpreter."

Though we have already ſaid ſo much of this famous city, we cannot omit the character given of it by baron Pollnitz. He ſays, "There are few places, upon the whole, more diſagreeable, and few towns in Germany, where the common people are more unpoliſhed; and that the burghers are not to be matched for affectedneſs. As moſt of the electors and princes of the empire have their agents here, to whom they give the title of reſidents, they are, for the greateſt part, merchants of this city, who ſolicit the title, in order to be exempt from the authority of the ſenate, and from the payment of the cuſtoms, and to qualify themſelves to place over their doors the arms of the princes to whom they ſend the news-papers."

While the empire was in the hands of the French, the princes were all obliged to appear in perſon, unleſs they were excuſed by the emperor and electors; but now moſt of them ſend their deputies to ſave charges, which makes their proceedings much ſlower, becauſe their deputies are often obliged to ſend for their inſtructions. To ſuch abbots and biſhops who are not deputies, the emperor does not write, but only to their directors, that they may give them notice: though, ſince Maximilian's time, many of the princes have forborn to ſend deputies, yet they are as much obliged to ſubmit to the reſolves of the diet as if they did. Sometimes, in caſes of great importance, the emperor not only ſends letters, but ambaſſadors, to require their preſence; and, in urgent affairs, thoſe who do not ſend, make their ambaſſadors plenipotentiaries. All the princes bear their own charge, or that of their deputies. When they arrive, they give notice to the hereditary marſhal of the empire, under the elector of Saxony, who aſſigns them lodgings according to their quality. If the emperor be preſent, they beg audience of him, ſhew him their ſummons, thank him for calling the diet, and promiſe concurrence for the good of the empire. If he be not there, the princes ſend gentlemen to notify their arrival to the director of Mentz; but if they are deputies, they ſend their ſecretaries with their full powers, as do alſo the deputies of the towns. When they are all come, the marſhal of the empire acquaints them when and where the emperor, or his commiſſary, is to tell them what he has to propoſe. There is no upper and lower houſe, but all aſſemble in one room: the emperor goes in his robes to the throne, which he aſcends by three ſteps. The electors ſit on a bench, which they aſcend by two ſteps, and the princes on other benches,

benches, not raiſed ſo high. If the emperor is preſent, the firſt thing they do is, to attend him to church, where prayers are put up for a bleſſing on their conſultations: when they are returned, the elector of Treves, in the name of the ſtates, thanks the emperor for calling a diet; and the ſecretary of the empire, receiving the propoſals from the vice-chancellor, reads them: after this, the colleges retire to their ſeveral apartments, and, when they have conſidered them, agree upon a day for meeting and imparting their thoughts to one another, which, when paſſed into a reſolve, they ſend to the emperor; and, if approved by him, it becomes a law or conſtitution of the empire. The princes are divided into benches, called the ſpiritual and the ſecular.

The archduke of Auſtria, and the duke of Burgundy, though ſecular princes, ſat formerly on the eccleſiaſtical bench, becauſe they were princes of extraordinary eminence, and the maſter of the Teutonic order does the ſame. The Lutheran princes were formerly excluded from the diet, till, by the treaty of Weſtphalia, they were allowed a place by themſelves, between the eccleſiaſtical and ſecular princes. All the eccleſiaſtical and ſecular members have not equal votes; for ſuch of both as have princely dignities, are allowed ſingle votes, but thoſe who have not, give their votes by companies, as the deputies of the towns of the bench of the Rhine, or of Swabia. The counts of Franconia and Swabia, which include thoſe of Saxony, are alſo allowed two benches, and two votes: the deputies of the imperial towns make up the third rank of members. The deputies of the city where the diet is held, ſit at a table by themſelves, and take an account of the voices of the other delegates, which are brought to them and regiſtered by the two regiſters of Ulm and Spire, the former repreſenting the cities in the circle of the Rhine, and the latter thoſe of Swabia: all the votes in this moſt auguſt aſſembly are ſaid not to exceed 250.

The emperor's throne is covered with cloth of gold, and the chairs and benches of the other princes and ſtates with cloth of ſilver, velvet, ſattin, ſilk, &c. according to their rank and quality. The elector of Treves ſits at the foot of the throne, as director of the electoral college. The electors of Cologne, Bohemia, Palatine, and Brandenburg, ſit on the right; thoſe of Mentz, Saxony, Bavaria, and Hanar, on the left: the eccleſiaſtical princes ſit under the electors on the right, and the ſecular princes under the electors on the left. The deputies of the towns, and of the bench of the Rhine, ſit under the eccleſiaſtical, and the deputies of the towns, and of the bench of Swabia, ſit under the ſecular princes. The deputies of Lubec and Oſnaburg ſit at the croſs bench, before the elector of Treves; and the marſhal of the empire ſits at a table, in the middle of the hall, before the croſs bench. The directoral table, with the officers attending it, is on one ſide, before the ſecular princes: thoſe princes, only, have a right to ſit in the college of princes, and to have a deliberative and deciſive voice, who contribute to the ſupport of the empire, according to the Matricula. The directors of this college are, the archbiſhop of Saltzburg, and the archduke of Auſtria, who preſide by turns, as freſh matters come upon the tapis. The votes of the ſecular and eccleſiaſtical bench, which are taken alternately, are gathered by the marſhal; after which, the archbiſhop of Saltzburg, and the archduke, draw the reſult, and report it to the diet. Such princes as poſſeſs ſeveral dominions, have a vote for each. The magiſtrates of the city, where the diet is held, are directors of the college of the towns. The abbeſſes, who are princeſſes, ſend deputies.

Though the point of precedency among the electors has been long ſince ſettled by the golden bull, yet the other princes, and the repreſentatives of the cities, have not agreed on the matter to this day; inſomuch that it occaſions perpetual quarrels, and the diet would ſometimes break up in confuſion, if ſome of them did not, for peace ſake, yield to the reſt; entering a proteſt, only, that ſuch an inſtance ſhould not be made a precedent. One fourth of a ſeſſion is ſaid to be generally ſpent in diſputes on this ſubject; a ſecond in drinking-matches; a third in diſputes with the emperor about their privileges; and ſcarce a fourth upon the buſineſs propoſed to them from the throne; the emperor alone having the power of propoſing what is to be debated in the diet.

There is another aſſembly of the empire, called the aſſembly of deputations; where the deputies, choſen for that purpoſe, determine things that have been referred to them by a diet; or when the elector of Mentz, in the emperor's name, ſummons the deputies, at the requeſt of the directors or captains of one or more circles, to take orders about their affairs, or to appeaſe controverſies which they are not able to decide themſelves.

* * * * * *

The lordſhip of Ollbruck belongs to the Waldbott-Baſſenheim family; that of Dochſtul belongs to the family of Oettingen-Baldern, and gives the proprietor a ſeat and voice in the diet of the circle; the lordſhip of Britzenheim, on the banks of the Nahe, belongs to the elector of Cologne, who, in conſequence of poſſeſſing it, enjoys a ſeat and voice at the diet of the circle; and the counts of Wartemburg, for the little county of the ſame name, have a ſeat and vote in the diets of the Upper Rhine, and in thoſe of the empire.

The Imperial City of WETZLAR.

Wetzlar, or Weſtlar, an imperial city on the borders of the county of Solms, 10 miles below Gieſſen, 18 miles ſouth-weſt from Marpurg, and 31 north from Frankfort, is an old town, which has nothing in it worth notice, but the great church: however, it is, at preſent, the ſeat of the imperial chamber, which was removed hither from Spire in the year 1689, by reaſon that city was taken and deſtroyed by the French. The provoſtſhip of the town belongs to the prince of Heſſe-Darmſtadt, to do juſtice in his name. It ſtands on the confluence of the rivers Lahn and Dillen.

The Imperial City of FRIEDBURG.

Friedburg, a rich and imperial city, 15 miles ſouth from Wetzlar, and 12 north from Frankfort. It is ſeated at the foot of a ridge of hills called De Hohe, and enjoys large privileges granted by the emperor Frederic II. The mart now held at Frankfort was kept here till the year 1340, when it was removed thither at the deſire of the merchants; and, in lieu of it, this city hath four annual fairs; one of which is held on the firſt Sunday after Trinity, in remembrance of the dedication of their church on that day, which brought pedlars thither with toys, but came at laſt to a ſubſtantial trade. Some of the emperors reſided here formerly certain months in the year. This town has ſuffered by terrible fires, particularly in 1383, when 900 houſes were burnt, and in 1447, when 700 more had the ſame fate. This laſt is ſaid to have been owing to a quarrel between two of the townſmen, one of whom ſet fire to the other's houſe, to be revenged on him. This was ſuch a loſs to the citizens, that they were forced to ſell or mortgage the villages in their territory, to defray the expence of rebuilding their houſes. This city, however, is ſaid, by theſe diſaſters, to have been diminiſhed one half; ſo that the church, which is now below the town, in the road, ſtood formerly in the middle of it. This town is noted for the depth of its cellars, there being, in ſome houſes, two or three one under another.

The Duchy of DEUX-PONTS.

THIS duchy is about 40 miles in length, and from eight to 25 in breadth, and gave title to its dukes, a branch of the palatine family, one of whom was Charles Guſtavus, king of Sweden; but it became extinct in 1732, in the perſon of Guſtavus Leopold. Since that time this duchy has been in ſequeſtration; the landgrave of Heſſe-Darmſtadt, and the abbot of Fulda, both Roman Catholics, being adminiſtrators. The elector palatine, as duke of Newburg, claimed this ſucceſſion; as does alſo the prince of Birckenfeldt, who is a proteſtant, and next claimant to the electoral dignity after the houſe of Sultzbach. The duchy, which is ſuppoſed to have been an antient fief of the biſhopric of Mentz, is divided into five bailiwics; one of which, called Biſchweiler, lies in Lower Alſace, where there are other lands belonging to the family. It is bounded with Lorrain, and the county of Saarbruck on the weſt; Alſace on the ſouth,

and every where elſe with the other parts of the palatinate of the Rhine. It is a mountainous barren country, but has ſome fertile vallies. It has two ſmall rivers that join near its capital city, from whence it has its name, and run ſouth to the Saare. Calviniſm was generally profeſſed in this duchy, till the Swedes became poſſeſſed of it, and then Lutheraniſm began to flouriſh, the king of Sweden giving ſome of the beſt livings and preferments to the Lutheran clergy, which created great animoſities between the two denominations: but the late king of Sweden dying without iſſue, and the duchy devolving on, or at leaſt being claimed by a popiſh family, the Proteſtant ſubjects thought fit to unite, left their common enemy, the Papiſts, ſhould make an advantage of their quarrels.

The city of Deux-Ponts, which in the German language is called Zweybruggen, and in the Latin Bipontium, from its two bridges over the ſmall rivers of Bliſe and Schwolb, whereon it ſtands, is 31 miles north-weſt from Landau, and 35 ſouth-eaſt from Triers. It is a ſmall but neat town, and was once defended by a good caſtle, ſince demoliſhed. It ſuffered much during the civil wars in Germany; and alſo in thoſe between France and the empire, when it was taken in 1676, by the French, but reſtored to the king of Sweden by the treaty of Ryſwick.

H E S S E.

THE langravate of Heſſe is ſituated on the north ſide of the river Maine: the whole country is bounded on the north by Weſtphalia; on the weſt by the duchy of Berg, and electorate of Triers; on the ſouth by the electorate of Mentz and Franconia; and on the eaſt by the duchy of Weimar and Thuringin. Its utmoſt extent from north to ſouth is about 100 miles, and the ſame from eaſt to weſt.

The air is cold but healthful; the water wholſome, and the ſoil fruitful, producing much corn; and, towards the banks of the Rhine and Lahn, grapes. Here are alſo large foreſts, with abundance of deer, and other game; and mountains, in which are ſome mines of copper and lead. This is ſuppoſed to have been the country of the antient Catti, (mentioned by Tacitus, &c.) who, in after ages, were called Haſſi.

The houſe of Heſſe, which is one of the moſt antient in Germany, is divided into two principal branches, viz. Caſſel and Darmſtadt. The former compriſes Heſſe-Caſſel and Heſſe-Rhinfels; the latter Heſſe-Darmſtadt and Heſſe-Hombourg.

The rights and prerogatives of the ſovereign princes of this houſe are great: they have three votes at the diet of the empire. They belong to the circle of the Upper Rhine; but Heſſe-Caſſel has a voice among the counts of the bench of Weſtphalia, for the county of Schaumburg. Cauſes not exceeding 1000 florins are determined by the courts of the country without appeal. Theſe princes have ſeveral privileges in common, ſuch as the right of protection and Imperial prefecture of the city of Wetzlar, which is at preſent exerciſed by Darmſtadt alone. The princes of Heſſe-Caſſel are not of age till they are 25, but thoſe of Darmſtadt are ſo at 18.

The eſtates of the landgrave of Heſſe-Caſſel are, 1. Lower Heſſe, in which are the county of Pleſs, Caſſel, and Zigenheim. 2. Marpurg, in Upper Heſſe and Frankenburg. 3. The principality of Hirſhfeld, a ſecularized abbey on the Fulde. 4. The lower county of Catzenellebogen. 5. The county of Schaumberg, except Buckeburg, which belongs to the county of Lippe. 6. Smalcald, in the county of Henneberg. 7. The bailiwics of Rottenberg and Saxenhagen. To theſe Martiniere adds, the bailiwics of Ucht and Freadenberg.

The landgrave of Heſſe-Darmſtadt, who is little inferior to the former, either in dominion or wealth, having a revenue of near 100,000l. a year, poſſeſſes, 1. The greateſt part of the upper landgravate, in which there are Gieſſen, Butzbach, Aendorf, Battenberg, Berg, &c. 2. The county of Nidda, which conſiſts of ſeveral bailiwics. 3. The lordſhip of Itter. 4. The upper county of Catznellebogen, in which lies Darmſtadt city; the land of Epſtein, Braubach in Lower Catznellebogen, and Kirnbach in Swabia. The ſucceſſion alſo of the county of Hanau was in 1736, upon the death of its count, awarded to the prince of Heſſe-Darmſtadt, as next heir, on condition of his paying 20,000l. by way of compenſation to the houſe of Caſſel. The king of Poland, as elector of Saxony, ought to have had his ſhare in the ſucceſſion; but his majeſty gave up his rights to the landgrave of Heſſe-Caſſel by a treaty.

The branch of Rhinfels poſſeſſes, 1. The greateſt part of the lower county of Catznellebogen, viz. Rhinfeld, St. Goar, fort Catz, Schwalbach and Gevernhauſen; the bailiwics of Riechenberg, Florenſtein, and Brau. 2. Rottemburg, and its diſtrict, Wanfried, Eſchwega, and Sontra in Lower Heſſe.

The branch of Hombourg poſſeſſes only, 1. Hombourg, and its territory. 2. Bingheim. 3. Wevelinghen and Helimſtadt, with its dependencies. The prince of Hombourg has moreover an appenage of about 1000l. a year from Heſſe-Caſſel, and 2000 from Darmſtadt.

The branches of Caſſel and Hombourg are Calviniſts; Darmſtadt Lutheran; and that of Rhinfelds profeſſes the Roman Catholic religion, which is, however, not tolerated in the dominions of the other three princes, except in the ſmall principality of Hirſhfeld. Theſe countries are adorned with ſeveral univerſities and academies. The ſituation of the country betwixt Upper and Lower Saxony, and the neighbourhood of Weſtphalia, occaſions the language of the people to be a mixture of High and Low Dutch. The laws moſt in force here are the Roman or Civil law, to which they join municipal laws of their own. The people are numerous and warlike, being raiſed and diſciplined by the younger ſons of the family, who are made lieutenants and captains of ſeveral diſtricts, and receive pay of the regent. In the prince of Heſſe-Caſſel's military ſervice are a general, two lieutenant-generals, a major-general, a colonel of the artillery, two commiſſaries-general of war, and one chief paymaſter, two troops of life-guards, one of white, and the other of black horſes, three other regiments of horſe, three of dragoons, and five of foot, one of which is guards, beſides the militia, which is commanded by a lieutenant-general. The landgrave has a privy council, or court, for the game and foreſts; a chancery, or ſecretary's office, a treaſury and conſiſtory, for eccleſiaſtical affairs; and another court, called the French commiſſion, relating particularly to the French in his dominions. All the privy counſellors are members of the conſiſtory, to whom are added a ſuperintendant, a metropolitan, one of the court preachers, and a ſyndic.

The principal places in the landgravate of Heſſe are the following:

Caſſel, the capital city of the Lower Heſſe, is ſituated in a rich pleaſant plain on the river Fuld, near the confines of the duchy of Brunſwic, 40 miles ſouth-eaſt from Paderborn, and 98 north-eaſt from Mentz. It is a place of good trade for wool and other merchandize; and to the weſt it is fortified with walls, ditches, and a ſtrong citadel. It is the ſeat of the landgrave, whoſe palace ſtands without the town, ſurrounded by bulwarks, with apartments contrived in the very ramparts, to lodge his family during a ſiege, out of the reach of bombs. The palace is of free-ſtone, very fine both within and without, and adorned with curious gardens and fountains. It is obſerved, as a reproach to the inhabitants, that, for want of induſtry, they ſuffer other nations to run away with the profit of manufacturing their wool. There is a gymnaſium, or academy, here, which has been much eclipſed by the univerſity of Marpurg. Here is a great arſenal of free-ſtone, with arms for 25,000 men; and in the room under it are 200 cannon, ſome of 64 pounders. From the palace there is a proſpect not to be matched in the empire, except from that of Cleves, it being of no leſs than 60 towns, the leaſt of which contains 300 houſes. The ſtreets of this city are ſpacious, and full of ſhops, and here are ſeveral fine markets, with good proviſions of all ſorts. The landgrave has a library well furniſhed with books and curioſities. In the great church are the monuments of the landgraves, in braſs, copper, and marble, of very good workmanſhip. The cathedral, dedicated to St. Martin, is capable of containing 4000 people. There are four other churches, which have two miniſters each, except the ſoldiers church,

church, which has but one. Here is a church likewiſe in the palace, for the worſhip of the court. There is a fine ſtone bridge over the river that divides the city into two parts, of which that called the New Town is very well built, with uniform houſes, and the ſtreets are pretty even and ſpacious. The landgrave, the founder of it, has alſo made one of the fineſt aqueducts here that is to be ſeen.

Kirchbain on the Wohra gives name to a bailiwic; Rauſchenburg does the ſame; and Wetter formerly contained an abbey, the revenues of which were allotted, by Philip the Magnanimous, to portion out the daughters of ancient noble families.

Roſenthal and Gernunden give name to bailiwics; Frankenaw is a ſmall town in the bailiwic of Heſſenſtein; and Louiſendorf, in the bailiwic of Geiſmar, is inhabited chiefly by French refugees.

Hania on the Wohra contains one of the four high hoſpitals of Heſſe, in which 400 poor and ſick are carefully attended and maintained, out of the revenues of the Ciſtercian convent. The governors of each of theſe hoſpitals are nobles, alternately nominated by the two princes of Heſſe.

Rodemburg, a good town on the river Fulda, 30 miles ſouth-eaſt from Caſſel, is pleaſantly ſeated, and has a collegiate church, with a dean and 20 canons, nobly endowed. This place ſtands in a valley between two hills in Upper Heſſe, and gives title to a branch of the Heſſian family. It is divided into the Old and New towns: in the old there is a caſtle which was demoliſhed in the year 1212, by the Imperialiſts, but rebuilt by William IV. landgrave of Heſſe, who, in 1574, adorned it with a fine garden, and a church built throughout with white marble, dug out of a quarry at Morſſen, a village juſt below the town on the ſame river.

Hombourg, 19 miles ſouth of Caſſel, is a town with a caſtle in the Upper Heſſe, which ſtands at the eaſt end of the foreſt and mountain of Hohe, pretty near to Frankfort, and is the reſidence of the branch of the family, from thence called Heſſe-Hombourg, which has the bailiwic, of which this is the head town, for its appenage.

Ziegenhein ſtands on the river Schwalm, in the lower landgravate, 30 miles ſouth from Caſſel. It is a ſmall but neat city, and gives name to a county, of which it is the capital; and was united, by Lewis the Pacific, the landgrave, to his domain, in 1543. The ſucceſſion to this eſtate was formerly diſputed by the counts De Hohenloe; but their claim being referred to the diet at Worms, it was adjudged in favour of the landgraves of Heſſe, who have enjoyed it ever ſince.

Geyſmer, which ſtands 12 miles north from Caſſel, is a ſmall town, but the capital of a bailiwic in Lower Heſſe.

Eſchwege, 24 miles from Caſſel, is a walled town, built by Charles the Great, deſtroyed by the Huns, and rebuilt with great ſplendor by Henry II. It ſtands on the bank of the river Werra, by which wood and coals, the principal commodities of theſe parts, are conveyed down to the Weſer, and from thence to the neighbouring counties. It is ſituated in the Lower Heſſe, near the confines of Thuringia; and has belonged, with its territory, to the landgrave of Heſſe Rhinfeld ſince 1387, when it was taken from the elector of Mentz.

Smalcald ſtands on a rivulet of the ſame name, on the eaſt ſide of the river Werra, and extends between the duchy of Weimar, and that of Saxe Naumbourg, but is diſjoined from the reſt of the lands of the landgrave of Heſſe-Caſſel. The town is 50 miles ſouth-eaſt from Caſſel, and has a good trade for iron ware, many mines of the neighbourhood furniſhing the inhabitants with plenty of that metal, which they work, and ſend to foreign parts. They alſo make and temper ſteel, from whence a village near it is called Stahlberg. This place was famous for the aſſemblies of the Proteſtant princes in 1530, 1531, 1535, and 1537, to make a league for the defence of the Augſburg confeſſion againſt the emperor Charles V. and the popiſh princes of Germany, which league grew ſo powerful, that they forced the emperor to a treaty held in 1557 at Paſſaw, by which Lutheraniſm was eſtabliſhed in ſeveral parts of the empire.

Marpurg ſtands in a pleaſant country on the river Lahn, 48 miles from Frankfort, and near 44 ſouth-weſt from Caſſel. It was once a free and Imperial city, afterwards ſubject to its own lords, and is now the chief town of the Upper Heſſe, and the ſeat of the ſupreme court of judicature, to which appeals are brought both from Caſſel and Darmſtadt. It has a ſtrong caſtle on a hill, and is otherwiſe well fortified. The great church is a ſtately building, and has many noble monuments. The univerſity here, founded in 1526, is one of the moſt conſiderable in Germany. The profeſſors are Calviniſts. The town is large and well built, with ſpacious ſtreets. It has a very large ſquare, adorned with a town-houſe of curious architecture. The caſtle is ſeparated from the town by the river. In the other part is a ſtately ſpacious building, the houſe of the commander of the Teutonic knights. The palace of the landgrave ſtands on a riſing ground, from whence there is a view over large plains and vallies, watered with rivulets; beſides hills and vineyards, of which there is a fine proſpect alſo, from its free-ſtone bridge over the river.

Lichtenau, a ſmall town, and Spangenberg, an antient caſtle, give name to bailiwics; Connefeld is a village, with a fine white alabaſter rock near it; Melſungen contains a ſeat belonging to the prince; Friedwald contains another princely ſeat; and Vach on the Werra, which gives name to a bailiwic, is a much frequented thoroughfare, between Leipſic and Frankfort on the Maine.

Waldkappel and Allendorf, both give name to bailiwics, the former having ſome coal-pits, and the latter containing ſeveral ſalt-works.

Grebenſtein on the Eſſe gives name to a bailiwic, and is famous for its bridge, where, in the open air, a court of judicature is held, called the *Bridge Court*, where every defendant is obliged to depoſit a fine, which, on his acquittal, is returned him, and the plaintiff immerſed in double the ſum.

Immehauſen	Karls-Haven,
Hermerſhauſen	Hof-Gieſmar,
Trendelburg	and
Sabbaburg,	Wolfhagen,

all give names to bailiwics. Liebenau is a ſmall town on the borders of the dioceſe of Paderborn; Felſburg gives name to a bailiwic, contains a palace belonging to the landgrave, and is defended by a caſtle; and Gudenſberg gives name to a bailiwic, which is remarkably fertile, and contains Nidenſtein, a very ancient town, and Merxhauſen, one of the four high hoſpitals of Heſſe.

Hornberg on the Efze gives name to a bailiwic, which contains Wabern, a village, only remarkable for a ſeat and falconry of the princes; Borken gives name to a bailiwic; Treyſa on the Schwalm has a ſtone bridge; and Newkirchen gives name to a bailiwic.

Treffurt, a town on the Werra, belongs jointly to Mentz, Saxony, and Heſſe.

Wanfried is ſituated at the confluence of the Werra and Frieda; Sontra gives name to a bailiwic; Wigenhauſon is in the bailiwic of Lugwigſtein; and Pleſſais a ruinated caſtle, which gives name to a lordſhip.

Frankenburg, on the river Eder, which is alſo called Frankenaw, and in Latin Francoberga, or Francorum Mons, is 25 miles north from Marpurg, and a large town, ſaid to be built by Theodoric, king of France, in 520. It ſtands 15 miles ſouth-eaſt of Waldeck, in the weſtermoſt bounds of the landgravate of Upper Heſſe, towards Weſtphalia. In 1590, ſome mines of ſilver and copper were diſcovered here, but they turned to little or no account. About ſix miles weſt is Sachſenberg, where are the ruins of an old fort built by the antient Saxons, to ſecure their frontier from any incurſion by the French garriſon at Frankenburg.

Alsfeld, 19 miles eaſt from Marpurg, is one of the antient towns of Heſſe, and had formerly very great privileges, even power over life, but loſt their charter in an accidental fire many years ſince; ſo that now they have only a memorial of it, by the chief magiſtrate's having a ſword carried before him. The town-houſe is an handſome building, and over the door is a monument in remembrance of the fire, with a Latin inſcription, denoting, "That when things are irrecoverably loſt, it is the beſt way to forget them." This was the firſt town in Heſſe that embraced Luther's reformation.

Gieſſen,

Gieſſen, a good town in Upper Heſſe, ſtands on the river Lahn, 11 miles ſouth from Marpurg, and 38 north from Frankfort. It is defended by a ſtrong wall, and regular fortifications, and hath a well-furniſhed arſenal. Its trade is dreſſing and ſelling of cloth. The royalty of the town is, according to ſome authors, divided betwixt the landgraves of Caſſel and Darmſtadt. It has four gates, and as many ſpacious ſtreets, with a ſquare, or market-place, in the centre. The compaſs of its ditch is about an hour's walk. It has but one great church, dedicated to St. Pancras, which ſtands in the middle of the town, with a high ſteeple, and a fine ring of bells. The governor reſides in the caſtle, at the eaſt end of it. It is governed by a council and a magiſtrate, beſides the officers of the landgrave. It has a fair between Eaſter and Aſcenſion day, which laſts a week. Round the neighbourhood are ſeveral caſtles, as Solms, Konigſberg, Fetzbourg, Gleiber, &c. It once had an univerſity, which began to flouriſh upon the deſertion of Lutheraniſm by the profeſſors at Marpurg, and their adhering to Calviniſm: but in 1625, the landgrave Lewis, who was a Calviniſt, put a ſtop to this univerſity, and recalled the ſtudents to Marpurg.

St. Goar, the capital of the lower county, is ſituated on the weſt ſide the Rhine, where a toll is paid, the produce of which belongs in common to the two ſovereign branches of the houſe of Heſſe, on a high rock; in the vicinity is the ſtrong fortreſs of Rhinfels.

Goarſhauſen is a ſmall town on the eaſt ſide of the Rhine oppoſite to St. Goar; Recchenburg is a caſtle on a high rock, with a mineral ſpring; Granan is an hoſpital for women, and one of the four called the high hoſpitals of Heſſe; and Langenſchwalback is a large village in the bailiwic of Hohenſtein, famous for its mineral waters, in which bailiwic there is likewiſe Harlſthalerlead, a celebrated medicinal bath.

Allendorf	Grimberg
Homberg	Kirdoff
Romrod	Grubenau
Ubrickſtein	Schotten,

give names to bailiwics; Lauterbach is a ſmall inconſiderable town; Nidda, on a river ſo called, gives name to a county which contains ſome glaſs-houſes and ſalt works.

Sturnfels	Liſberg
Bingenheim	Butzbach,

all give names to bailiwics, though the three firſt are only caſtles.

Upper Roſbach is a ſmall town that gives name to a bailiwic, but which will be ever famous for the great victory obtained here, over the French, by the king of Pruſſia, on the 5th of November, 1757.

Philipſec is a palace which was erected by the landgrave Philip III. Koningſberg gives name to a bailiwic; Bredencap is famous for its iron works, foundery, and a ſilver mine; Battenberg, on the Eder, gives name to a bailiwic, which contains another town, called Hatzfeld, ſituated on the ſame river; and Thal-Itter is celebrated for a copper mine.

Freyſtadt, on the Rhine, was erected ſo late as the year 1745, by the landgrave Lewis, and contains an aſylum for debtors; Great-Gerau is in the ſame bailiwic; and Jogerſburg gives name to a bailiwic, and contains a palace.

Hofheim, one of the four high hoſpitals of Heſſe, is ſituated in the bailiwic of Domberg; Reinheims is watered by the Gernſprenz; Great Umſtadt, on the Odenwalde, gives name to a diſtrict; and Epſtein gives name to a lordſhip.

Zwingenberg gives name to a bailiwic, and is ſituated on the Berge-Straſze, or Hill-ſtreet, a road ſo called, which extends 40 miles over the mountains from Darmſtadt to Heidelberg.

Branbach, on the Rhine, gives name to a bailiwic, is defended by two caſtles, and is celebrated for its mineral ſprings, and copper and ſilver mines.

Ems is a large village famous for its baths; and Old-Katzenellnbogen has a caſtle and ſome iron mines, and gives name not only to the village and pariſh, but to the county.

Darmſtadt is ſituated on a river of the ſame name, at the diſtance of 12 miles ſouth from Frankfort on the Maine; it is incloſed by paliſadoes, and defended by a ſtrong caſtle, which is the landgrave's palace; and, for better ſecurity of the country, there are two forts, one on the Rhine, named Markburg or Marienburg, and another on the Maine called Ruſſelheim. The palace is a princely ſtructure, and, had it been finiſhed according to its model, would have been one of the largeſt and moſt magnificent in Europe, fit for lodging the emperor and all the nine electors, and it would actually have been bigger than the town; but the magnificent works that were intended have been quite laid aſide. However, the parts that are finiſhed make a grand appearance; and they are beautified with a ſpacious garden abounding with all ſorts of fruits, and yielding annually great quantities of rich wines. He has, beſides, two fine pleaſure-houſes two miles from hence, Kranchſtein and Sensfeld. Though the town is not large, it makes a goodly appearance, moſt houſes being freeſtone, and very high. Though well fortified it has ſeveral times been ſurprized and taken; and the French ruined the fortifications. It was in this town the Germans firſt gave over tilts, on account that (in 1403) the Franconians and Heſſians having challenged one another to this exerciſe, ſeveral of the Franconian nobility and nine of the Heſſians were killed on the ſpot. The deer come ſometimes cloſe to the paliſadoes of the town, there being no province in Germany more proper for hunting, nor in Europe where there are more deer; the great plenty of which is very troubleſome to the poor peaſants, who are abroad day and night to watch their fields, the prince being ſo jealous of the game as to reckon it as bad as murder for any one to kill a deer. It is a flat even country, with a gravelly ſoil, which produces excellent pulſe, and is interſperſed with woods, through which are cut noble roads.

The County of SPONHEIM.

THIS county was antiently divided into hither and farther, the former of which is now commonly called the county of Sponheim, and the other that of Starkenburg. It is ſituated between the Rhine and the Moſelle.

In the hither county, of which three-fifths belong to the elector palatine, and the remaining two-fifths to the prince of Baden-Baden; the principal places are

Kreutznach, or Crentznach, the capital of the county, a well-built town, divided by the river Nahe into the Old and New Towns. The firſt emperors of the Franks had a palace here, in which they ſometimes reſided. Near the town is a caſtle, and, at no great diſtance up the river, two ſalt-works.

Spanheim, a large village, which gives name to the county, and has a Benedictine abbey in its neighbourhood.

Kirchberg, a ſmall town, with a caſtle, which once gave name to a county, and now to a bailiwic.

Naumburg, a caſtle, in which Eberhard, count of Sponheim, reſided, and from which he borrowed his title. It now gives name to a bailiwic.

In the farther county, of which one half belongs to the duke of Deux-Ponts Birkenfeld, and the other to the prince of Baden-Baden, the places worth mentioning are,

Birkenfeld, a ſmall town, which once gave the title of duke to a branch of the family of Deux-Ponts. This branch afterwards ſucceeding to the duchy of Deux-Ponts, added Birkenfeld in their title to Deux-Ponts.

Horſtein, a town, which gives name to a bailiwic.

Trarbach, or Tranerbach, a ſmall town lying on the Moſelle, and containing a church, common to the Roman Catholics and Lutherans, with a Lutheran gymnaſium. In the neighbourhood are many vineyards. The town was once very ſtrong, but the fortifications have been demoliſhed.

Starkenburg, a caſtle on the Moſelle, by the name of which this county is now generally diſtinguiſhed, the counts having reſided in it frequently.

The Principality and County of SOLM.

THIS principality and county is ſituated between Lorrain and Lower Alſace, and to diſtinguiſh it from the

county of the ſame name in the duchy of Luxemburg, it is called the Upper Country, and the other the Lower. The princes of Solm are now divided into two branches, viz.

Hoogſtrat, or Solm-Zuſalm.
Leutz-Loes, or Solm-Kirburg.

each of which poſſeſſes an equal ſhare of the eſtates belonging to the former counts, and vote alternately at the diets.

Principality and Houſe of NASSAU.

THE principality of Naſſau lies moſtly in the Watterau. The length of it is computed at about 50 miles, and the breadth thereof about 30. Though it is, in general, woody and mountainous, there are ſome fine paſtures and corn-lands in it, beſides excellent baths and mineral waters, and ſeveral mines of iron, lead, copper, and other metals. Moſt of the princes and inhabitants are Calviniſts. The principality is divided into ſeveral counties belonging to the different branches of the family, which is one of the moſt antient and illuſtrious of Europe, having produced, beſides many other great heroes, Adolphus, emperor of Germany, and king William III. of Great Britain. The elder line, or that of Walram, conſiſts, at preſent, of the branches of Naſſau-Saarbruck-Uſingen, Naſſau-Saarbruck-Saarbruck, and Naſſau-Weilburg. The repreſentative of the laſt of theſe married the late prince of Orange's only ſiſter. The other line, or that of Otho, which conſiſted formerly of the ſeveral branches of Naſſau-Siegen, which was popiſh, Naſſau-Dillenburg, Dietz, and Hadamar, is now reduced to that of Naſſau-Dietz, the repreſentative of which, William V. prince of Orange, enjoys all the territories that belonged to the other branches, and on account of them has ſeveral votes in the diet of the empire, and thoſe of this circle, and Weſtphalia. All the branches pay a matricular and chamber taxation; but thoſe of the elder line have no ſeat, or votes, in the college of the princes of the empire, being only members of that of the Imperial Wetterau courts. The chief places in this principality are,

Dietz, the capital of another county, belonging to another branch of the Naſſau family, of which the prince of Orange is the head, ſtands pleaſantly on the river Lahn, nine miles eaſt from Naſſau, and 19 ſouth-eaſt from Coblenz: it is walled, and has two fine caſtles, or towers, ſtanding upon two hills in the town. It has a bridge over the river, which communicates with Fregen-Dietz. It had a collegiate church ſubject to the elector of Treves; but ſince the reformation, the revenues have been applied to the univerſity of Herborn. The county in which this town lies is about 14 miles long, and 10 broad; it is ſtony and hilly, has plenty of veniſon and ſheep; but in the vallies there is corn and wine enough for the inhabitants. It is ſituated between the archbiſhopric of Treves, the lordſhips of Idſtein and Wiſbaden, and the lower county of Catzenellebogen.

Kirberg is a walled town, which gives name to a bailiwic, belonging jointly to Naſſau-Dietz and Uſingen.

Naſſau, a ſmall town on the Lahn, near which formerly ſtood Naſſau-berg, a very antient caſtle, which was the original ſeat of the family. From this caſtle the principality, family, town, and bailiwic, took their name; and the caſtle, according to ſome, derived its own from Naſgau, the original name of the country, ſignifying, as they ſay, in the German, a marſhy tract, ſuch as it antiently was; but, according to others, from Naſua, one of the German commanders, mentioned by Cæſar de bello Gallico, lib. 1. ſect. 37. Of the bailiwic, named from the town, a part belongs to Naſſau-Dietz, another to Naſſau-Wielburg, and another to Naſſau-Uſingen, and of that of Camberg adjoining, Naſſau-Dietz, and the elector of Triers, are joint proprietors.

Weilberg, a handſome town on the river Lahn, which gives name to a county, and title to the prince thereof, who has a fine palace and gardens in the town. Over the river is a ſtone bridge, and in the neighbourhood of the town is a large menagerie and a pleaſure-houſe.

Weilmunſter, a country town on the Weilbach, giving name to a bailiwic, which belongs to Naſſau-Weilburg, and contains ſome ſilver and copper mines, and a great deal of iron ore.

Lahnberg, a country town, which, with its bailiwic, is held in common by Naſſau-Weilburg, and Naſſau-Dietz.

Mehrenberg, a country town, which, with its bailiwic, belongs to Naſſau-Weilburg.

Kleeburg, a village, giving name to a bailiwic, part of which belongs to Naſſau-Weilburg, and part to Heſſe-Darmſtadt. To the latter belongs alſo the large country town of Reichelſheim, in the county of Weilburg, and other eſtates.

Kircheim-Poland, a ſmall town, which, with its bailiwic, belongs to Naſſau-Weilburg.

Gelheim	New Saarwerden
Hanſtetten	Uſingen
Idſtein	Bleidanſtatt
Burg	Schwalbach,

are all inconſiderable towns; but Wiſhbaden is a handſome, populous town, ſituated on the Rhine, and noted for its warm baths.

Bibarich, a village on the Rhine, contains a palace; Schierſtein is celebrated for its wine; Lahn on the Schutter gives name to a lordſhip; Otiweilar contains a Lutheran and Roman Catholic church; and Saarbruck on the Saar takes its name from a bridge over a river of the ſame name.

Homburg, a town ſituated in the Weſgau, and giving name to a bailiwic, which belongs to Naſſau-Saarbruck-Saarbruck. The ſame prince has a ſhare of ſome other diſtricts in this part of the principality of Naſſau. Of the principalities of Siegen and Dilemburg, which belong entirely to the prince of Orange, we have given an account under the circle of Weſtphalia, in which they lie.

The County of WALDECK.

THIS county terminates ſouthward on Heſſe, northward on the dioceſe of Paderborn, weſtward on the duchy of Weſtphalia, and eaſtward on Heſſe, and the bailiwic of Fritzlar, in the electorate of Mentz. Its length is computed at about 24, and its breadth at 20 miles. It yields iron, lead, copper, marble, ſlate, mineral ſprings, and abounds in grain, wood, and cattle. Gold is ſometimes found in the river Eder. The inhabitants in general are Lutherans. The ſtates conſiſt of the nobility and towns. There are ſome woollen manufactures, beſides thoſe of iron and paper, in the county. The title of the family of Waldeck runs thus: "Waldeck, prince of the ſacred Roman empire, count of Pyrmont and Rappolſtein, lord of Hoheneck and Gerolſeck, &c." The females, notwithſtanding, are only counteſſes. The prince has not yet obtained a ſeat and voice among the princes in the diet of the empire, but in that of this circle he has. To the empire, his aſſeſſment for Waldeck is four horſe, and 18 foot, or 120 florins, monthly, in lieu of them, and to the chamber of Wetzlar 67 rix-dollars, 74 kruitzers. The county is a fief of Heſſe-Caſſel, the ſucceſſion to which was firſt ſettled on the eldeſt ſon and his iſſue in the year 1697. Here are the uſual high courts and colleges, for the government of the county, and the adminiſtration of juſtice. As to the revenue of the county, it is ſaid to amount to above 100,000 rix-dollars per annum, and the prince generally maintains five companies of foot. The chief places here are,

Corbach, the capital of the county, divided into the Old and New Town, which contain a gymnaſium, with two churches, in one of which is a ſtately monument of marble and alabaſter, erected by the ſtates of the United Provinces to the prince of Waldeck, who was field-marſhal of their forces.

Lower Weldungen, a pretty large well built town, having the epithet of Lower, to diſtinguiſh it from Old Weldungen, a ſmall town with a caſtle, called Frederichſtein. In the choir of the church belonging to the former of theſe towns is a monument of alabaſter, erected by the republic of Venice to a prince of Waldeck, who

was commander of their forces. In its neighbourhood alſo are ſome mineral ſprings.

Mengeringhauſen, Sachſenhauſen, Rhoden, Sachſenberg, Landau, Freienhagen, Waldeck, Zuſchen, Furſtenberg, all ſmall towns. In Rhoden is a ſeat belonging to the prince. Near Waldeck ſtands an old caſtle, which gives name to the county, and title to the prince.

Arolſen, a regular well-built town, ſtanding not far from the river Aars, and containing a palace, which is the uſual reſidence of the prince, and a church for each of the three religions. Here is alſo the ſeat of the high colleges.

Adorf, a village in the bailiwic of Eiſenberg, in which are iron works, with two copper mines, and a Lutheran foundation for ladies. There are copper works in ſome of the other bailiwics; and at Kleinern, a village in the bailiwic of Waldeck, are two chalybeate ſprings.

HANAU-MUNZENBERG.

THE length of this county is 40 miles, but the greateſt breadth not above 12. It is fertile in

Corn	Wine
Wood	Fruit,

and produces likewiſe

Salt	Silver
Cobalt	Copper.

The rivers are the Maine, Kinzeg, and Nidda. The eſtabliſhed religion is Calviniſm, but Lutherans and Roman Catholics are tolerated. It is a populous manufactory and commercial country; and the chief places are,

Hanau, its capital, which gives name to it, is ſituated on the river Kenzig, which divides it into the Old and New Towns, both of which are fortified. The New Town, which was built at firſt by Flemiſh and French refugees, who had great privileges granted to them, is regular and handſome. The caſtle, in which the counts uſed to reſide, and which ſtands in the Old Town, is fortified, and has a fine flower-garden, with commodious apartments, but makes no great appearance. The Jews are tolerated here, and dwell in a particular quarter. The magiſtracy of the New Town, and the diſpoſal of all offices in it, belong to the French and Dutch congregations. Here is an univerſity, with ſeveral manufactures, particularly that of roll tobacco, and a very conſiderable traffic. A canal runs from the town to the Maine, on which river, near the town, is Philipſrue, i. e. Philip's Repoſe, a pretty country houſe, built by one of the counts of the name of Philip.

Hochſtadt, a ſmall town in the bailiwic of Buchert-hal.

Windecken, a ſmall town, with a caſtle, on the river Nieder, giving name to a bailiwic.

Bergen, a ſmall town, giving name to a bailiwic, which yields excellent wine. In the bailiwic are alſo Biſchofſheim and Seckbach, ſmall towns.

Rodheim, a large country town, giving name to a bailiwic, in which is alſo Holſhauſen, a ſmall town.

Dorheim, a town on the Wetter, giving name to a bailiwic, containing alſo Nauheim, a ſmall town, in which is a ſalt-work of conſiderable value.

Ortenberg, a ſmall town on the Nidder, containing an old caſtle, and giving name to a bailiwic.

Steinau, a ſmall town, which gives name to a bailiwic, containing alſo Scluchtern, an open little town on the river Kinz, in which was formerly a Benedictine convent, now converted into a college.

Lohthaupen	Schwarſenfels
Haſzlau	Bibenhauſen,

give name to bailiwics; Bieber is a thriving town, with ſilver, copper, iron, and cobalt mines and works; Aſſenheim, at the conflux of the Nidda and Wetter, has a caſtle; Reineck has another; Munzenburg on the Wetter is defended by a fortreſs; and Glenhauſen on the Zenzig, 16 miles north-eaſt from Hanau, was formerly an Imperial city, but now belongs entirely to the landgrave of Heſſe-Caſſel.

Territories belonging to the Princes of SOLMS.

THE houſe of Solms is divided into a great many branches, of which thoſe of Solms-Laubach-Sonnewald, and Solms-Laubach-Baruth, with their collateral branches, have their eſtates in Luſatia and the electorate of Saxony. The matricular aſſeſſment of thoſe of this circle is 252 florins, and, to the chamber of Wetzlar, about 130 rix-dollars. In the diet of the empire, and the college of the Imperial counts of the Wetterau, they have four votes, and the like number in the diets of this circle. The lines of Braunfels and Hohen-Solms are Calviniſt, that of Sonnenwald Catholic, and all the reſt Lutheran. In the territory of Solms-Braunfels, the places worth mentioning are,

Braunfels, a town ſituated on a high hill. Near it is a palace, ſtrongly fortified in the antient manner, and giving name to a bailiwic, which, with the town and caſtle, belong to the Braunfels branch, and contains, beſides other places, Leun, or Lein, a ſmall town on the Lahn; Altenburg, a Præmonſtratenſian convent for ladies, near which the higheſt court of the county is held annually in the open air, unleſs in ſtormy weather; and Burg-Solms, a village, in which ſtood formerly the antient family ſeat of the counts of Solms. This bailiwic has alſo ſeveral iron mines and woods in it, and abounds in grain and cattle.

Greifenſtein, a ſmall town, containing a ruinous caſtle, and giving name to a bailiwic.

Hungen, a ſmall town ſeated on the Horloff, in that part of the lordſhip of Munzenburg which belongs to this family. In the town is a palace of the counts, and without it a park for deer. In the ſame part of the above lordſhip ſtands alſo Arenſburg, a rich abbey of Bernardines, ſubject to the archbiſhop of Mentz, the revenue of which is ſaid to amount to 30,000 florins.

Wolfeſheim, Gambach, and Hohen-Solms, all give names to bailiwics, and the latter contains a palace; Utphe on the Horloff gives name to a bailiwic; Lech on the Wetter does the ſame, and is defended by a caſtle; Laubach on the Wetter gives name to a bailiwic, and title to a prince. In the neighbourhood of the latter town excellent fuller's earth is found in great abundance.

In the territory of Solms-Rodelheim the chief places are,

Rodelheim, a large country town on the Nidda, containing the count's palace, and giving name to a bailiwic, the greater part of which belongs alſo to a count.

Aſſenheim, a ſmall town, ſituated at the conflux of the Nidda and Wetter, and giving name to a bailiwic, of the greater part of which the count is alſo proprietor.

The County of KONIGSTEIN.

THIS county lies in the Wetterau, along a ridge of mountains called the Hohe. The elector of Mentz at preſent poſſeſſes nearly the whole of the county, a ſmall part only being held by the counts of Stolberg, who, however, claim the whole; accordingly a proceſs is depending before the aulic council about the title to it. In the mean time both theſe princes vote, on account of it, in the diet of the Upper-Rhine, and both are members of the college of the Imperial Wetterau counts. Of the matricular aſſeſſment for Konigſtein, Mentz pays 80 florins, and Stolberg 20. The only places in the county worth mentioning are,

Konigſtein, a ſmall open town, which gives name to it, and contains a caſtle on a high rock.

Upper-Urſel, another ſmall town.

Soden, a free Imperial village, in which are ſome ſalt-pans and a medicinal bath.

Vilbel, a ſmall town, giving name to a diſtrict.

Geudern, a town in which the count of Stolberg-Geudern reſides.

Ranſtall is a ſmall town belonging to the ſame count, and Ordenburg is defended by a caſtle.

The County of UPPER-ISENBURG.

THIS county is called Upper-Iſenburg, to diſtinguiſh it from Lower-Iſenburg in the Lower Rhine. It was made

made a county in 1442, having been only a lordſhip before. It contains wood, corn, and wine, is well watered, and belongs partly to the houſe of Iſenburg, partly to that of Heſſe-Darmſtadt, and partly to the counts of Stolberg. The houſe of Iſenburg, on account of its portion of this county, has a ſeat in the diets of this circle, and alſo among the Wetterau courts. The principal places are,

Birſtein, famous for its iron mines; Wennigs, a ſmall town; Langen-Diebach, and Offenbach, on the Maine, all belong to the prince of Iſenburg Birſtein.

Hayn-zur-Dreyeichen, in the Imperial foreſt of Dreyeichen; and New Iſenburg, a new regular built town, belonging to the abovementioned prince.

Budingen, though a ſmall town, is the capital of the whole county. It gives name to a diſtrict, which, with two others, belongs to the count of Iſenburg-Budingen, who has a palace in the town. In its neighbourhood is a park for deer, with ſome ſalt-works and vineyards.

Wachterſbach, a ſmall town, giving name to a diſtrict, which, with the town and two other diſtricts, belong to the counts of Iſenburg-Wachterſbach, who reſide in the town.

Meerholz, a village on the river Kinzig, in which the counts of Iſenburg-Meerholz reſide, and which gives name to a diſtrict belonging, with ſome others, to the ſame counts.

Of the WILD *and* RHINE-GRAVES, *and their Territories.*

THE Wild, or Wald, or Rau-Graves, in Latin *comites ſalutarii, foreſtarii ſilveſtres, & hirſuti*, were ſo called from their rough and woody territories, which, as well as thoſe of the Rhine-Graves, lay diſperſed about the Rhine, between Baſil and Bon. In the twelfth century, the territories of the former fell to the latter, from whom are deſcended the counts of Salm, of whoſe territory ſome account has already been given, the counts of Grumbach, the Rhine-Graves of Stein, and Wild-Graves of Dhaun and Kirburg. Each reigning houſe ſits and votes in the diets of this circle, and in thoſe of the empire, in the college of the Imperial counts of the Wetterau, paying each a matricular aſſeſſment, and alſo to the chamber at Wetzlar. The Wild and Rhine-Grave lands are moſtly fiefs.

In the territory of the counts of Grumbach the principal places are,

Grumbach, a town which gives name to a lordſhip or bailiwic, lying on the river Glan, and affording

Amethyſts	Agate
Cornelians	Mochas, &c.

Tronechen, on the Tron, gives name to a lordſhip which contains Talfang, a market-town, and 14 little villages.

The territories of the Rhine-Graves of Stein contain only Rhingrafenſtein and Wildenburg, which have both caſtles; Grehweiler, which has a palace, and the large village of Worſtall.

The Wild-Gravate of Daun contains Daun, an elegant ſeat on a hill near the Suinnern; Kirn, a town on the Nahe; Diemringen, a market-town which gives name to a bailiwic; and Puttlingen, from which a lordſhip receives its appellation.

Leiningen, or Linage, the capital of its county, ſtands eight miles ſouth-weſt of Worms, and north-weſt from Spire. This county, which borders upon Frankendale, is ſhared among four branches of the family, who take their name of diſtinction from the ſeveral parts of it in their poſſeſſion. The county of Linage, properly ſo called, is a fief of the biſhop of Mentz, and therefore it was united to France in 1681, but by the treaty of Ryſwic thoſe counts were re-eſtabliſhed in their antient ſtate, and they are therein expreſly ſtiled the counts of Leiningen. The principal places in it are New-Leiningen, Turcheim, Grunſtadt, and Lanſheim. The other branches of theſe counts, who are all Lutherans, are in poſſeſſion of Hartenberg in the middle of the Palatinate, nor far from Worms; Broich caſtle on the Rhine, near Duiſbourg; Dachſbourg, in the Weſtreich, in Alſace; and Weſterbourg, in Wetteravia.

The lordſhip of Reipoltzkirchen belongs to the count of Hilleſheim, on which account he has a ſeat and voice in the diets of the circle; as hath the count of Wied-Runkiel for the lordſhip of Kirchingen.

The county of Falkenſtein belongs entirely to the emperor; but contains only Falkenſtein, a ſmall town defended by a caſtle; and Winweiler, which gives name to a bailiwic, and has a fortreſs.

The County of WITGENSTEIN.

THIS county, which is about 18 miles in length, and 14 in breadth, is environed by the territories of Heſſe-Darmſtadt, Naſſau-Dillenburg, and the duchy of Weſtphalia. It produces little grain, but good paſture, and plenty of wood, with mines of ſilver, copper, and iron, and is watered by the rivers Lahn and Eder. The counts, who are of the ſame family as thoſe of Sayn, are divided into the two branches of Sayn-Witgenſtein, or Witgenſtein, and Sayn-Witgenſtein of Berleburg. The county entitles both branches to a vote in the college of the Wetterau counts, both at the diet of the empire, and thoſe of this circle. The revenue of the county of Witgenſtein, including that of the lordſhip of Homburg, which lies between the duchy of Berg, and the county of Mark, and belongs to the counts of Witgenſtein, is computed at 50,000 rix-dollars. In this county the only places deſerving notice are,

Witgenſtein, a caſtle, ſeated on a high mountain, the reſidence of the counts of Sayn-Witgenſtein, of Witgenſtein. Near it ſtands Laaſphe, a ſmall town on the Lahn.

Berleburg, a ſmall town on the little river Berlen, containing a fine palace, belonging, with the town, to the count of Sayn-Witgenſtein-Berleburg.

V. *The Circle of the* LOWER-RHINE.

THIS circle is bounded on the eaſt by Franconia, and the lower part of the circle of the Upper Rhine; on the weſt, by the upper part of the circle of the Upper Rhine, Lorrain, and Luxemburg; on the north, by the circle of Weſtphalia; and, on the ſouth, by that of Swabia. It contains, excluſive of the Palatinate, &c. the three archbiſhoprics and electorates of

Mentz
Triers, or Treves, and
Cologne.

THE diets of this circle are held at Frankfort on the Maine; and the elector of Mentz is the ſummoning prince and director of it. It is one of thoſe called the anterior circles; and its contribution to the empire has generally been equal to that of the Upper Rhine.

In deſcribing this circle we ſhall begin with

The Archbiſhopric and Electorate of MENTZ.

THIS electorate lies on the banks of the river Maine, between the electorate of Triers on the weſt, the Palatinate on the ſouth, Franconia on the eaſt, and the Wetterau on the north. It is about 60 miles in length, and 50 in breadth. Beſides the Maine, it is watered by three other principal rivers, namely, the Rhine, the Jaxt, and the Lahn. It is in general exceeding fertile, and produces great plenty of

Corn	Salt
Cattle	Flax
Wines	Tobacco
Fruits	Timber.

It hath ſeveral kinds of manufactures, particularly thoſe of woollen and linen cloth, glaſs mirrors, and porcelain, in which, and in wine, almonds, cheſnuts, flax, and tobacco, a conſiderable trade is carried on with the adjacent countries.

As this country is under the dominion of an eccleſiaſtic, almoſt the whole property of it belongs to prieſts, monks, and nuns; and all places and offices are poſſeſſed by the clergy. The predominant religion of the electorate is the Roman Catholic, but, in ſeveral places, there are ſtill many proteſtants.

The

The elector is chosen by the chapter, which consists of 42 canons, 24 of whom are capitulars. He is not only the first archbishop, but also elector of Germany, in consequence of his being arch-chancellor of the empire; and he always sits on the right hand of the emperor in all public conventions. He is visitor of all the courts of the empire, director of its posts, and guardian of the archives and matricula. He crowns the emperor, nominates a vice-chancellor of the empire, and holds a chancery at the imperial court: to him also all foreign princes and states direct what propositions they make to the empire, as well as apply for the redress of grievances. In spirituals he stands immediately under the see of Rome. The bishoprics still subject to his jurisdiction are those of

Worms	Wurtsburg
Spire	Eichstadt
Strasburg	Paderborn
Constance	Hildesheim
Augsburg	and
Coire	Fulda.

For the government of the country, and the administration of justice, the chief colleges are

The privy-conference	The aulic-council, and
The privy-chancery	The reversion-judicatory,

to the last of which appeals lie from the inferior judicatories.

The revenues of the elector are said to amount annually to about 100,000l. arising chiefly from the tolls on the Rhine and Maine, the tax on wine, and that paid by the Jews, the latter of which is very considerable. He is able to maintain five or 6000 men at all times; but, to save unnecessary expence, seldom keeps above half that number of regular troops; for his income, when he is only archbishop of Mentz, without commendams, (which is seldom the case) will not allow of any greater state or expences; and his household is suited rather to his sacred than his temporal character.

The most considerable places in this electorate are the following:

Mentz, which stands on the Rhine, near where the Maine falls into it, and is the capital of the archbishopric and electorate. It is called in Latin Moguntia, Moguntiarum; and in French Mayence. It is situated 15 miles west from Frankfort, 20 north from Worms, 48 from Heidelberg, 45 from Spire, 186 from Strasburg, 60 from Triers, and 74 from Cologne. It is a large and populous city; but most of the streets are narrow, and the common buildings very plain and irregular. The elector has several palaces in and about the city, most of which are ornamented with beautiful and extensive gardens. It was made an archbishopric in 729, by Pepin and pope Gregory III. The cathedral is a lofty vaulted building, and in it are some fine monuments erected to the memories of deceased electors. The vestments in which the electors say mass are extremely rich, and the canopy under which the host is carried in procession, is entirely covered with pearl. The elector's chief palace is built of reddish marble stone, embellished with ornaments, and is regular and magnificent, though but two stories high, and built after the old German manner. On the windows of this building, as well as on those of the cathedral, are painted a wheel, which is a part of the elector's coat of arms. Besides the cathedral, here are many collegiate and other churches, with several monasteries, nunneries, and hospitals. Here are likewise an university founded in the year 1482, by the elector Diether, a bridge of boats over the Rhine, manufactures of stockings and stuffs, and two yearly fairs. But the most considerable building in this city is the charter-house, which, for elegance and extent, is said to be one of the finest in Europe. It has apartments large and commodious enough to lodge a sovereign and his retinue, and is beautifully situated on an eminence fronting the Rhine. At the foot of this house stands the Favorita, a small but elegant electoral palace, with most delightful gardens.

Mentz has a flourishing trade, especially in Rhenish wines, of which the vineyards in this neighbourhood yield the best, particularly those of Hockham, from whence the finest sort of Rhenish wine has obtained the name of Old Hock. The city of Mentz claims the invention of the art of printing, which, if not invented, was at least much improved by John Fust, or, as others say, by John Guttenburg, about the year 1450. *

The next principal place in the electorate of Mentz is Aschaffenburg, situated at the conflux of the rivulet Aschaff and the Maine. Here is a fine castle, in which the elector frequently resides during the season for hunting in the Spassart, together with a collegiate church, a college,

* Printing is allowed to have been very antient in China—But then their manner of doing it is quite different from ours now; though it must be owned that the European printing, in its infancy, was much the same with the Chinese. However, as there was no correspondence between Europe and China till of late, as we may call it, it cannot be reasonably pretended, that the Europeans borrowed the art from the Chinese, or that they struck it not out of their own contrivance. The great difference between theirs and ours now is this: whereas we have but a small number of letters in our alphabets, by the various arrangements whereof we can form infinite volumes, so, by making our characters moveable, we are able to print the largest works with an inconsiderable quantity of letter (in comparison) the same which served for the first sheets serving also over and over again, &c. for the succeeding ones, by being regularly distributed into their proper boxes or cells in the compositor's cases; and so set, and distributed, and set again, again, and again, alternately. The Chinese, on the contrary, by reason of the prodigious number of their letters, find it more easy and less expensive to cut them on wooden blocks, making as many blocks as there are pages in the book they intend to print, and these of no farther use but for that single work. Who was the first inventor of printing in Europe, in what city, and what year, &c. is a question long disputed. Haerlem (for as to Strasburg, its pretensions are reckoned scarce regardable) and Mentz are the warmest in this point of the honour; but the latter has always had the majority of voices, many of whom will have John Guttenburg to have been here the inventor of printing. Others make Fust to have been the man. The reason assigned for it is, that his name appears in the most early printed books, as in the Latin Bible of 1462, Tully's Offices of 1465, and perhaps some of a prior date: and if either Guttenburg, or Koster of Haerlem, had either a greater or an equal share in the invention, it is more than probable they would not have allowed him to arrogate the whole to himself and his son-in-law Schoeffer, as he has done without their contradicting him, and asserting their own right. But account is given of books printed by Koster of an earlier date, some so early as 1430 and 1432. Upon the whole, then, it is no inconsiderable argument in Koster's behalf, that the rudest and most artless performances in printing seem to be his; some of which are to be seen in the king's library at St. James's, and in the Bodleian at Oxford. They have the marks of the utmost simplicity, and may be reasonably taken for his first essays, being coarse and aukward, the ink only common writing ink, which was unartfully spread upon wooden blocks cut in a very clumsy manner.—Whoever were the first printers, such was the art in its original state. But this method of printing being found inconvenient, it was not very long before improvement was thought of, viz. the making of single moveable letters, which was first done in wood, and afterwards in metal. And from this last invention we are to date the origin of the present art of beautiful printing, as practised throughout Europe. This ingenious contrivance of casting single types in metal is generally ascribed to the abovesaid Schoeffer, first servant, afterwards partner and son-in-law, of Fust, of this city Mentz; so that he was properly the first printer as well as letter-founder; and, strictly speaking, that Bible printed with moveable types, in 1450, or thereabouts, was the first thus printed book, thus done by fusile types, which was soon followed by the edition of Augustin de Civitate Dei, the Vocabulary called Catholicon, Tully's Offices, &c. From Mentz the art of printing spread itself in a short time, and it is supposed to have been brought into England, from Haerlem, in 1468, by W. Caxton. As to Fust (or Faust or Faustus) it is said that he carried a parcel of his printed Bibles to Paris, and offered them to sale as manuscripts; but the French, considering the number of the books, and their exact conformity to each other, even to a Point, that the best book-writers could not come up to such exactness, concluded there was witchcraft, or black art, in the case, and by indicting him as a magician, or threatening to do so, obliged him to discover the secret. Hence the origin of the Black-Artist, Dr. Faustus.

a college, and a large cloiſter. The town gives name to a bailiwic, in which are alſo Seligenſtadt, a town ſituated on the Maine, with a Benedictine cloiſter, the abbot of which ſtiles himſelf lord of Geiſalbach, Omerſbach, and Hofſtaden; together with Obernburg, a ſmall town, and Dettingen, a village on the Maine, remarkable for a battle fought near it in 1743, between the Engliſh and French.

Bingen is a pleaſant, neat, little town, ſituated on the weſt ſide of the Rhine. It had a fort in the time of the Romans, and has a caſtle at this day, which ſtands on a hill, and overlooks the town. It is 15 miles weſt from Mentz, and was formerly an Imperial city; but it is now ſubject to the dean and chapter of Mentz. It has a handſome ſtone bridge over the river Nahe, which runs through the town, and empties itſelf into the Rhine: a toll is levied here for whatever paſſes up or down the Rhine, which is twice as broad at this place, as the Thames at London. Not far from the town is the celebrated Bingerloch, where the Rhine is confined between two high rocks, which, with the water-fall occaſioned by the river Nahe's emptying itſelf there into the Rhine, makes the paſſage very dangerous. At a ſmall diſtance from hence, in an iſland or rock on the Rhine, is the famous Mauſethurm, that is, the Mice or Rats Tower, ſo called, as the people here will have it, from the following circumſtance: an archbiſhop, who had a great antipathy to beggars, and uſed to call them the rats that eat up the corn, was, by the juſt vengeance of heaven, ſo peſtered with rats and mice, that though he fled to this tower to avoid them, yet they purſued him acroſs the river, and at length devoured him. Others reject this ſtory as fabulous; and think the tower was ſo called, from the Germans giving the name of rats to the officers that were placed in it to levy the tolls, old buildings being generally called rats neſts.

Cronberg is a ſmall town ſituated on a mountain, the inhabitants of which are partly Proteſtants, and partly Roman Catholics. It once belonged to the landgrave of Heſſe. The diſtrict which it gives name to contains ſome fine woods, with great numbers of cheſnut and other fruit trees.

Eltvil, or Elfeld, a ſmall town, five miles weſt from Mentz, has a ſtrong caſtle, and is the capital of the Rheingau, a track lying along the Rhine, and very fruitful, eſpecially in excellent wines. There are ſeveral other ſmall towns and cloiſters in the Rheingau.

Miltenburg, a ſmall town on the Maine, containing a caſtle, a Franciſcan cloiſter, and gymnaſium. It gives name to a diſtrict, in which is Prodgelen, a ſmall town on the Maine.

Fritzlar, a pretty ſtrong town on the river Edos, containing two collegiate churches, with an Urſeline nunnery. It gives name to a territory which lies betwixt Lower Heſſe and the county of Waldeck, and has another ſmall town in it called Naumburg, or Numburg.

Beſides thoſe already mentioned, there are ſeveral other towns in this electorate, but they are all too inſignificant to merit any deſcription.

The Archbiſhopric and Electorate of TRIERS, *or* TREVES.

THIS electorate lies between Cologn, Berg, and Juliers, on the north; Lorrain and the Palatinate on the ſouth; Luxemburg on the weſt, and Wetterau on the eaſt. Its extent from north to ſouth is about 80 miles, and its breadth from eaſt to weſt about 60. It is watered not only by the Rhine and Moſelle, but alſo by the Saar and Kyll. On the banks of the two former the country is populous and fruitful in corn and wine, but elſewhere mountainous and woody, yet abounding in game and acid ſprings, as alſo in metals and minerals of various kinds. The ſtates conſiſt of the prelates or abbots, with the repreſentatives of the clergy, and of certain towns. The inhabitants are all papiſts, except in ſuch places as the elector poſſeſſes in common with other princes, where there are ſome Proteſtants. Under the archbiſhop are five archdeacons, and, ſubordinate to thoſe, 20 provincial deans. The antient Treveri, from whom the city of Triers and the electorate take their name, were a very warlike people: their general, Ambiorix, cut off a whole Roman army. They worſhipped Mars and Apollo, till Conſtantine eſtabliſhed Chriſtianity among them: but at what time the biſhopric and archbiſhopric were created is uncertain. The church of Treves, however, is commonly accounted the moſt antient in Germany. The chapter, which elects the archbiſhop from among themſelves, and makes him ſwear to a capitulation, conſiſts of 16 capitulary canons, all of whom are of noble deſcent. At every new election the pope receives large ſums for confirmation, the pallium, and for annats, or firſt fruits. The archiepiſcopal title is, "By the grace of God, archbiſhop of Treves, of the Holy Roman Empire throughout Gaul and the kingdom of Arles, arch-chancellor and elector, and alſo adminiſtrator of Prum." He is the ſecond elector in rank, and at the election of an emperor has the firſt voice. The tolls on the Moſelle and Rhine, his demeſnes, and his office of noble guardian of the Minors, with the taxes he lays on his ſubjects, are ſuppoſed to bring him in about 70,000l. per annum. For the government of this electorate, and the adminiſtration of juſtice, beſides the regency and reviſion court, there are the two aulic judicatories, to which appeals lie from the inferior courts. There are alſo two ſpiritual high courts. The hereditary officers are the marſhal, the chamberlain, the ſewer, and cup-bearer. Among other prerogatives, this elector has power to baniſh excommunicated perſons out of the empire, if they do not reconcile themſelves to the church within a year, and to take poſſeſſion of the eſtates of minors, till they are of age. He has alſo a right to reunite all the fiefs of his dioceſe, upon failure of heirs, to the domains of his church. His ſubjects may appeal to the chamber of the empire in all cauſes above 1000 florins. The regular troops he maintains, beſides a militia, amount to between 11 and 1200, beſides a life-guard of 40 men.

The moſt remarkable places in this electorate are the following:

Triers, or Treves, the capital of the archbiſhopric, is ſituated on the Moſelle, over which it has a handſome ſtone bridge. It is 60 miles weſt of Mentz, 52 ſouth of Cologne, and 82 north of Straſburg. This city vies with moſt in Europe for antiquity, having been a large and noted town before Auguſtus ſettled a colony in it. It was free and imperial till the year 1560, when it was ſurprized and ſubjected by its archbiſhop James III. The private buildings are very mean, and the city is neither well fortified or inhabited. The cathedral is a large Gothic edifice; and in it they pretend to have Our Saviour's coat, and St. Peter's ſtaff, to which they aſcribe miracles. Near the cathedral is the elector's palace, which was a few years ago rebuilt, and is a tolerable handſome building. Here are three collegiate and five pariſh churches, 13 monaſteries and nunneries, an univerſity founded in 1472, a houſe of the Teutonic order, and another of that of Malta, with ſome remains of the antient Roman theatre.

Near Triers is a ſmall town on the Moſelle, called Pfabzel, where, in the time of the Romans, ſtood a palatium. It gives name to a diſtrict, in which is Conz, a borough on the Saar, over which there is a bridge here called Conſarbruck.

Coblenz is the next capital place to Triers in this electorate. It is a large town, ſituated near the conflux of the Moſelle and Rhine, 35 miles north-weſt from Mentz, 40 ſouth-eaſt from Cologne, and 52 north-eaſt from Triers. It is well built and ſtrongly fortified; and has a bridge of boats over the Rhine, and another of ſtone, conſiſting of 14 arches, over the Moſelle. Here are ſeveral collegiate and other churches, beſides monaſteries and nunneries, a gymnaſium, an archiepiſcopal ſeminary, and a caſtle. The Romans had a fort at this town, and the firſt kings of the Franks frequently reſided in it.

On the other ſide of the Rhine, nearly oppoſite to Coblenz, is Hermanſtein, or Ebrenbreitſtein caſtle, an impregnable fort, well defended by out-works, on the ſummit of a ſteep rocky hill, which commands the city and the two rivers. It is eſteemed one of the ſtrongeſt citadels in Germany; and the aſcent to it is by a winding road cut out of the rock, in the courſe of which are four handſome gates. On the outermoſt gate there is a ſtatue of braſs, above 15 feet high, repreſenting the Virgin Mary with the infant Jeſus in her arms, and a lily in one hand. In the middle of the citadel is a ſquare, on one

ſide of which is the governor's houſe, and the other three are occupied by magazines and barracks. Among other curioſities here is a prodigious cannon, ſaid to be the largeſt ever ſeen. It is 18 feet and a half long, a foot and an half diameter in the bore, and three feet four inches in the breech. The ball made for it to carry weighs 180 pounds, and its charge of powder is 94 pounds. The inſcription on it only ſays, that it was founded in 1529 by one Simon. In another ſquare is a very fine fountain, being a large baſon of ſtone, in the centre of which ſtands a marble pillar on a braſs pedeſtal, with the elector's arms ſurrounded with four dolphins of the ſame metal. On the top of this column is a ſtatue of the Virgin Mary bruiſing the head of the ſerpent, which is alſo of braſs, about 12 feet in height. There is a well here, dug out of the rock, 280 feet deep, whoſe water is clear and exceedingly wholeſome. At the foot of the caſtle is an electoral palace, incloſed on one ſide by the Rhine, and on the other by a rock. It is but an indifferent building, and the apartments are low, incommodious, and much expoſed to the ſun; but they are adorned with beautiful tapeſtries and paintings, and the chapel is exceeding elegant. The garden, though ſmall, is embelliſhed with ſtatues, water-works, a charming orangery, and a bower, more than 300 feet in length, by the ſide of the Rhine, from whence, through the openings, which are well contrived for the purpoſe, are ſeen the Rhine, the Moſelle, the city of Coblentz, the bridge acroſs the Moſelle, the charter-houſe, and a very fine country to the diſtance of three or four leagues. The way to the charter-houſe, which is a handſome building, beautifully ſituated about two miles from the caſtle, is full of chapels in the manner of oratories, adorned with ſtatues repreſenting the principal actions of Our Saviour from his birth to his reſurrection. The church belonging to it is ſaid to be above 1200 years old.

Oberweſel is a good town, ſituated on the weſt ſide of the Rhine, at the foot of a hill, 21 miles ſouth from Coblentz, and 18 weſt from Mentz. It was once an Imperial and free city, but has been ſubject to the archbiſhop of Triers ever ſince the year 1312. It is a tolerable good town, with four churches, and a very large caſtle.

Limburg is a ſmall but thriving town on the river Lhan, over which it has a ſtone bridge. It contains a collegiate church with three cloiſters, and gives name to a bailiwic, in which is alſo Lower Brechen, a ſmall town, and Lower Salters, a village on the Emſbach. Near the laſt is the celebrated mineral ſpring, whoſe waters are ſo much uſed and exported, that, in 1755, 18,000 rix-dollars per annum were offered for a leaſe of it. In this bailiwic alſo ſilver hath been found.

Berncaſtel, a town on the Moſelle, containing a ſtrong caſtle and a Capuchin cloiſter, and giving name to a bailiwic, in which is a copper mine, and a place called Noviomagum, on the Moſelle, where Conſtantine the Great had a camp.

Wittlich, a town on the river Leſer, containing a Franciſcan cloiſter, and a caſtle, called Ottenſtein, and giving name to a bailiwic, in which is a college of canons regular, where adoration is paid to a celebrated image of the Virgin, and whither many pilgrimages are made. In this diſtrict the French were defeated by the Imperialiſts in 1735.

Welſchbillig, a ſmall town, near which is a cloiſter of the brothers of the Croſs.

St. Maximin, one of the oldeſt and richeſt abbeys in Germany. The abbot is the firſt among the provincial ſtates here, as well as in the duchy of Luxemburg, and arch-chaplain to the reigning Roman empreſs. The yearly revenues of the abbey are eſtimated at 6000 ducats. Beſides the bailiwic of St. Maximin, with the juriſdiction and regalia therein, to the abbey belong alſo the ſeigniory and burgravate of Freudenberg on the Saar, and other eſtates, with the ſuperiority, juriſdiction, and right of taxation in them.

Werheim, a borough, in which, and the bailiwic named from it, is belonging in common to the elector of Triers and the prince of Naſſau-Uſingen, both the Roman Catholic and Proteſtant religion are tolerated.

Munſter-Meinfeld, a ſmall town, giving name to a bailiwic, which yields ſome copper and gold, and contains Carden, a very antient borough on the Moſelle, with a collegiate church and a Franciſcan cloiſter.

Mayen, a ſmall town on the Nette, containing a caſtle, and giving name to a bailiwic, in which is alſo Montreal, a ſtrong little town on the Elz, together with Kayſerſeſch, a ſmall town, and the Benedictine abbey of Lock.

Boppard, a town and caſtle on the Rhine, where a toll is levied. It contains three cloiſters, and gives name to a bailiwic.

Engers is a tolerable good town, with a ſtrong caſtle on the Rhine, between Coblentz and Andernach, which gives name to a neighbouring territory. Here is a noble bridge, founded by Cuno, archbiſhop of Triers, who died in 1388.

The Archbiſhopric and Electorate of COLOGNE.

THE greater part of this electorate lies on the weſtern bank of the Rhine, where it runs near 100 miles in length, but the breadth is hardly any where more than ſeven or eight. It is bounded by the duchy of Cleves on the north, and the electorate of Triers on the ſouth; the duchy of Juliers on the weſt, and that of Berg on the eaſt. It is a pleaſant and fruitful country, (eſpecially that part ſituated on the Rhine) and produces excellent wine, corn, and moſt of the neceſſaries of life. The archbiſhop is the ſupreme lord of it, as alſo of a pretty large country in Weſtphalia; and is richer and more potent than either of the other two eccleſiaſtical electors. His dominions contain 52 towns, and about 17 boroughs. He has the ſecond ſuffrage in the electoral college, and crowns the emperor, when the ceremony is performed in his own dioceſe, or thoſe of his ſuffragans. His ſee was raiſed from a biſhopric to an archbiſhopric in the eighth century. His ſuffragans at preſent are the biſhops of Liege, Munſter, and Oſnaburg, and formerly alſo thoſe of Utrecht and Minden; but he has no authority in ſpirituals over the Proteſtants of the biſhopric of Oſnaburg, even when he is himſelf biſhop thereof. His title is, "By the grace of God archbiſhop of Cologne, and arch-chancellor of the holy Roman empire throughout Italy, as alſo elector and legatus-natus of the holy apoſtolic ſee, duke of Engern and Weſtphalia, &c." The right of electing the emperor, excluſive of the other princes, devolved on him, and the other arch-officers of the empire, about the end of the 13th century. The great chapter of Cologne is one of the nobleſt in Europe, conſiſting of 40 canons, who are generally princes or counts of the empire. Of theſe 25 chuſe the archbiſhop, and may advance one of their own body to that high dignity, if they are ſo inclined. The revenues ariſing from the archbiſhopric amount to about 130,000l. ſterling; but the elector is generally poſſeſſed of ſeveral other great benefices. He has his hereditary officers and his life-guards, conſiſting of halberdiers and yeomen, beſides a regiment of foot-guards, which make a handſome appearance.

The chief cities and towns in this electorate are as follow:

Cologne, the capital, and which gives name to the electorate, is ſeated on the Rhine, in the ſame latitude as the Iſle of Wight, 20 miles ſouth-eaſt from Duſſeldorp, 16 eaſt of Juliers, 40 north from Coblentz, 60 eaſt from Maeſtricht, 68 north of Triers, 70 ſouth of Munſter, 82 north-weſt of Mentz and Nimeguen, 100 from Bruſſels and Antwerp, and 120 from Amſterdam. It is one of the largeſt cities of Germany, and very conſiderable, on account of its buildings, number of inhabitants, and great trade in Rheniſh wine, and other commodities of Germany, which, by the means of the Rhine, are brought hither, and tranſported to Holland. It is a free city, being governed by its own ſenate, which orders and judges all civil matters and cauſes; but criminal are judged by the elector. It is called by ſome Second Rome, becauſe of its ſenate, buildings, and extent; and by others, the Holy City, becauſe of the many churches and religious houſes in it; here being, beſides the cathedral, which is a very magnificent, though unfiniſhed pile, 10 collegiate, and 19 parochial churches, alſo 37 monaſteries, and great numbers of chapels and hoſpitals. The walls of the city are flanked with 83 towers, and encompaſſed with three deep ditches,

beautified
